The price of the required product or service can be identified. The quantities of the product available can be identified. The quality of the product available can be identified. The delivery date of the product or service can be identified. The ability to supply the customer's requirements can be identified. The procedures for informing the customer of the degree to which the customer's requirements can be met can be identified. The reasons for informing the customer promptly of the ability/inability to meet the customer's requirements can be explained.

Criteria 16.3B.2.3

Alternatives proposed for any inability to completely satisfy customer requirements.

Assessor guide: observe that –

Where appropriate, alternative products and/or services are proposed to the customer.

Assessor guide: confirm that –

Alternative products and/or services that may meet the customer's requirements can be identified.

Element 16.3B.3 Action customer requirements**Criteria 16.3B.3.1**

Identified appropriate action to implement customer requirements is undertaken, for example filling or entering of order, corrective action to resolve complaints, or repair or service to customer equipment.

Assessor guide: observe that –

The appropriate action is taken to meet customer requirements.

Assessor guide: confirm that –

The procedures for actioning customer orders can be identified. The procedures for recording and actioning customer complaints can be identified. The procedures for initiating repairs and/or service to customer equipment can be identified. The procedures for initiating action to correct errors made while attempting to meet customer requirements can be identified. For a range of customer requirements, the appropriate action to be taken can be identified. The reasons for taking the action identified can be explained.

Criteria 16.3B.3.2

Customer requirements not able to be met immediately are recorded and follow-up checks undertaken according to standard operating procedure.

Assessor guide: observe that –

Customer requirements not able to be immediately met are recorded in accordance with standard operating procedure. Unmet customer requirements are followed up in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording customer requirements not able to be immediately met can be identified. The procedures for following up on unmet customer requirements can be identified.

Element 16.3B.4 Promote better customer service**Criteria 16.3B.4.1**

Methods of improving customer service are identified and reported.

Assessor guide: observe that –

Where appropriate, methods of improving customer service are reported/recommended in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting/ recommending improvement to customer service can be identified.

Range statement

This unit covers the knowledge and skills required for the provision of comprehensive assistance to customers across a range of products and services. Situations covered would be beyond simple sales or enquiries and could include the taking of one-off or special orders requiring detailed descriptions, the handling of complaints referred for more detailed assistance than the initial point of contact, work as a designated liaison officer etc. Customers can be internal or external. Customer liaison can be undertaken through telephone, written, e-mail or face-to-face contact. Typical applications of this unit would be found in warehouses, service and design departments.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with customer service or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 16.4A A Perform internal/external customer service

Band – Specialisation band A

Field – Communication

Unit Weight 2

Element 16.4A.1 Identify customer requirements

Criteria 16.4A.1.1

Customer requirements identified from verbal or written communication.

Assessor guide: observe that –

Assessor guide: confirm that –

The means by which customer requirements are identified can be given.

Criteria 16.4A.1.2

Degree to which customer requirements can be met is clearly communicated including details such as cost, delivery date, quantity or quality.

Assessor guide: observe that –

Customer requirements can be met is clearly and promptly communicated, using appropriate means.

Assessor guide: confirm that –

The cost of the required product or service can be identified. The quantities of the available product can be identified. The quality of the available product can be identified. The delivery date of the product or service can be identified. The reasons for informing the customer promptly of the ability/inability to meet the customer requirements can be explained.

Criteria 16.4A.1.3

Alternatives proposed for any inability to completely satisfy customer requirements.

Assessor guide: observe that –

Where appropriate, alternative products and/or services are proposed to the customer in accordance with standard operating procedures.

Assessor guide: confirm that –

Alternative products and/or services that may meet the customer's requirements can be identified.

Element 16.4A.2 Action customer requirements

Criteria 16.4A.2.1

Appropriate action taken to implement customer requirements.

Assessor guide: observe that –

Appropriate action taken to implement customer requirements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for actioning customer orders can be identified. The procedures for recording and actioning customer complaints can be identified.

Criteria 16.4A.2.2

Customer requirements not able to be met are recorded and followed up.

Assessor guide: observe that –

Customer requirements not able to be met are recorded and follow up checks undertaken according to standard operating procedures.

Assessor guide: confirm that –

The procedure for recording customer requirement which are not met can be identified. The procedures for following up on customer requirements which are not met can be identified.

Range statement

This unit covers the knowledge and skills required for the provision of assistance to internal/external customers across a range of products and services. Situations covered would go beyond simple sales and enquiries and could include taking one-off or special orders requiring detailed descriptions or handling of complaints. Customers liaison can be undertaken through telephone, written, e-mail or face to face contact. Typical applications of this unit would be found in service and design departments. This unit should not be selected when Unit 16.3B (Advanced customer service) has already been selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with customer service or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 17.1A A Assist in development and deliver training in the workplace

Band – Specialisation band A

Field – Training

Unit Weight 2

Notes - This unit is intended to equate with Workplace Trainer Category 1 This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.4C11 Assist in the provision of on the job training

Element 17.1A.1 Plan for delivery of on-the-job training

Criteria 17.1A.1.1

Objectives of training and competency to be achieved are identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The competencies to be achieved through the training can be identified.

Criteria 17.1A.1.2

Role in provision of training clarified.

Assessor guide: observe that –

Assessor guide: confirm that –

The role of the trainer in the provision of training can be described.

Element 17.1A.2 Deliver on-the-job training

Criteria 17.1A.2.1

Training objectives explained to trainee.

Assessor guide: observe that –

The trainer explains the training objectives and competencies to be achieved to the trainee.

Assessor guide: confirm that –

Criteria 17.1A.2.2

Training carried out using appropriate techniques: logical presentation; sound communication methods; explanation, demonstration; practice; feedback.

Assessor guide: observe that –

The training is carried out using appropriate techniques.

Assessor guide: confirm that –

The training techniques to be used in delivering the training can be identified. The reasons for selecting the chosen training techniques can be explained.

Criteria 17.1A.2.3

Trainee progress monitored and constructive feedback provided to trainee.

Assessor guide: observe that –

Positive feedback is provided to the trainee throughout the training program. Trainee progress is monitored and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording trainee progress can be given. The reasons for providing positive feedback can be given.

Element 17.1A.3 Review training program**Criteria 17.1A.3.1**

Training program evaluated according to standard operating procedure.

Assessor guide: observe that –

The training program is evaluated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for evaluating training programs can be given. The reasons for evaluating training programs can be explained.

Criteria 17.1A.3.2

Training data recorded according to standard operating procedure.

Assessor guide: observe that –

Training data is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The training records to be kept can be identified. The procedures for recording training data can be given.

Criteria 17.1A.3.3

Report on training according to standard operating procedure.

Assessor guide: observe that –

Reports on training completed and training required, are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing training reports can be given.

Criteria 17.1A.3.4

Promote training according to standard operating procedure.

Assessor guide: observe that –

Training is promoted within the workplace in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for promoting training in the workplace can be given. The reasons for promoting training in the workplace can be explained/

Range statement

Training is delivered in a one-to-one or small group situation. The training may be structured or informal and based on co-operation between trainer and other training personnel. Both underpinning knowledge and practical skills are covered by the training. Training may be applied to technical, induction, OHS, or other areas. Normal supervision of an apprentice is covered by Unit 2.4C11 (Assist in the provision of on the job training). This unit does not cover assessment. Assessor skills are covered in Unit 17.2A (Conduct workplace assessment).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the development and delivery of training or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 17.2A A Conduct workplace assessment

Band – Specialisation band A

Field – Training

Unit Weight 2

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Element 17.2A.1 Identify and plan assessment requirements

Criteria 17.2A.1.1

Area and purpose of assessment identified in consultation with appropriate personnel and person(s) being assessed.

Assessor guide: observe that –

Assessor guide: confirm that –

The area and purpose of the assessment can be identified. The persons to be consulted when determining the assessments to be carried out can be identified.

Criteria 17.2A.1.2

Appropriate competency standard(s) and assessment guides identified and selected as required.

Assessor guide: observe that –

All relevant competency standards and assessment guides are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The relevant competencies can be identified.

Criteria 17.2A.1.3

Evidence required to established competency determined in accordance with industry assessment procedure.

Assessor guide: observe that –

Assessor guide: confirm that –

The evidence required to establish competency can be identified. The reasons for identifying the evidence to be obtained can be given. The industry assessment procedure can be given.

Criteria 17.2A.1.4

Evidence required and assessment arrangements discussed and confirmed in an appropriate way with person being assessed.

Assessor guide: observe that –

The evidence required and the assessment arrangements are discussed and confirmed with the person being assessed.

Assessor guide: confirm that –

The reasons for discussing and confirming the assessment arrangements with the person being assessed can be explained.

Element 17.2A.2 Carry out assessment

Criteria 17.2A.2.1

Agreed assessment procedure implemented in a manner, time and location to maximise active participation from assessee(s).

Assessor guide: observe that –

The assessment is carried out in an appropriate manner at a time and location agreed to by all parties.

Assessor guide: confirm that –

The time and location of the assessment can be identified. The reasons for selecting the chosen time and location for the assessment can be given.

Criteria 17.2A.2.2

Evidence consistent with the agreed assessment procedure is gathered using appropriate and specified methods and tools and documented according to agreed industry or site procedures.

Assessor guide: observe that –

Evidence is gathered in accordance with the agreed methods and procedures. The evidence gathered is documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of gathering the evidence can be identified. The reasons for using the selected methods of obtaining evidence can be explained. The procedures for documenting the assessment can be given.

Criteria 17.2A.2.3

Evaluation and assessment decisions made in accordance with agreed assessment procedures.

Assessor guide: observe that –

The evidence is evaluated and assessment decisions made in accordance with the agreed assessment procedures.

Assessor guide: confirm that –

The procedures for evaluating the gathered evidence can be given.

Criteria 17.2A.2.4

Clear and appropriate feedback provided to person(s) assessed.

Assessor guide: observe that –

Clear and appropriate feedback is provided to the assessee.

Assessor guide: confirm that –

The need to provide clear and positive feedback to the assessee can be given.

Criteria 17.2A.2.5

Provide advice to assessee(s) on training needs, appeal mechanisms as appropriate.

Assessor guide: observe that –

Where appropriate, advice is provided to the assessee on training needs and/or the appeals procedures.

Assessor guide: confirm that –

The appeals procedure can be given. Where appropriate the further training required by the assessee can be identified.

Element 17.2A.3 Record results and review the procedure

Criteria 17.2A.3.1

Assessment results recorded in accordance with industry or site procedures.

Assessor guide: observe that –

Assessment results are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording assessment results can be given.

Criteria 17.2A.3.2

Records kept/stored in a manner appropriate to maintenance of confidentiality and safety.

Assessor guide: observe that –

Records are safely and securely stored in accordance with standard operating procedures.

Assessor guide: confirm that –

The need to keep records securely stored can be explained. The procedures for storing assessment records can be given.

Criteria 17.2A.3.3

Assessment procedure reviewed in co-operation with person being assessed and revised if appropriate.

Assessor guide: observe that –

The assessment procedure is reviewed in cooperation with the assessee. Where appropriate, the assessment procedure is revised in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reviewing assessments undertaken can be given. The reasons for evaluating assessment methods/procedures can be explained. The procedures for revising assessment procedures can be given.

Range statement

Appropriate assessment techniques will be selected based on assessor knowledge of the competency to be assessed or in conjunction with someone who is competent (technical expert). Methods may include observation, documentation, demonstration, projects, oral tests, computer based assessment, written tests, etc. Purpose of assessment may include recognition of prior learning, determination of award classification level or identification of training needed. Evidence gathered should address task skills, task management, contingency management application. Assessment methods and tools should address issues such as clarity, reliability, validity of results, fairness in assessment application and cost effectiveness of process. Assessment may be undertaken on an individual basis or in groups. This unit is intended to equate to national competency standards. Assessment Standard Unit: Conduct assessment in accordance with an established procedure and the Extension Unit: Plan and review assessment. This competency also meets the assessment skills required to be a recognised MERS ITAB workplace assessor.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with workplace assessment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.1A B Use hand tools

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Element 18.1A.1 Use hand tools

Criteria 18.1A.1.1

Appropriate hand tools selected according to the task requirements.

Assessor guide: observe that –

The appropriate hand tools are selected in accordance with the task requirements.

Assessor guide: confirm that –

The task(s) to be performed can be identified. The appropriate hand tools for the task(s) to be performed can be selected from a range of hand tools provided. The reasons for selecting the chosen hand tools can be explained.

Criteria 18.1A.1.2

Hand tools used to produce desired outcomes to job specifications which may include finish, tension, size or shape.

Assessor guide: observe that –

The appropriate hand tools are used to produce the desired outcomes to job specifications.

Assessor guide: confirm that –

The outcomes to be achieved by the use of hand tools can be identified. The job specifications to be achieved by the use of hand tools can be identified.

Criteria 18.1A.1.3

All safety requirements are adhered to before, during and after use.

Assessor guide: observe that –

All safety procedures are followed at all times and appropriate personal protective clothing and safety equipment are used.

Assessor guide: confirm that –

The safety procedures to be followed before, during and after the use of hand tools can be identified. The personal protective clothing and safety equipment to be used when using hand tools can be identified.

Criteria 18.1A.1.4

Unsafe or faulty tools identified and marked for repair according to designated procedures before, during and after use.

Assessor guide: observe that –

Where appropriate, unsafe or faulty tools identified before, during or after use are marked for repair in accordance with standard operating procedures.

Assessor guide: confirm that –

Common faults and/or defects in hand tools can be identified. The procedures for marking unsafe or faulty tools for repair can be given.

Criteria 18.1A.1.5

Routine maintenance of tools, including hand sharpening undertaken according to standard operational procedures, principles and techniques.

Assessor guide: observe that –

Where appropriate, hand tools are maintained/sharpened using appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The routine maintenance requirements of a range of hand tools can be identified. The procedures for maintaining/sharpening a range of hand tools can be identified. The techniques to be used in maintaining/sharpening a range of hand tools can be identified.

Criteria 18.1A.1.6

Hand tools are stored safely in appropriate location according to standard operational procedures and manufacturer's recommendations.

Assessor guide: observe that –

All hand tools are safely stored in the appropriate location in accordance with manufacturer's/standard operating procedures.

Assessor guide: confirm that –

The storage location of a range of hand tools can be identified. The procedures for storing a range of hand tools can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures involving the use of various hand tools, including but not limited to hacksaws, hammers, punches, screwdrivers, sockets, wrenches, scrapers, chisels, gouges, wood planes and files of all cross-sectional shapes and types. Applications may include hand tools used for adjusting, dismantling, assembling and finishing of items or components and the finishing, cutting, scraping of metallic and non-metallic material to size and shape. This includes simple tapping and threading. Routine maintenance tasks may include cleaning, lubricating, tightening, simple tool repairs, hand sharpening and adjustments using engineering principles, tools, equipment and procedures. This unit should not be selected if the hand tool is dedicated to a single operation or machine and if only a machine specific/customised tool is used. For using power tools used for hand held operations see Unit 18.2A (Use power tools/hand held operations).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the use of hand tools or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.2A A Use power tools/hand held operations

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Element 18.2A.1 Use power tools

Criteria 18.2A.1.1

Appropriate power tools selected according to the task requirements.

Assessor guide: observe that –

The appropriate power tools are selected in accordance with the task requirements.

Assessor guide: confirm that –

The task(s) to be performed can be identified. The appropriate power tools for the task(s) to be performed can be selected from a range of power tools provided. The reasons for selecting the chosen power tools can be explained.

Criteria 18.2A.1.2

Power tools used following a determined sequence of operations which may include clamping, alignment and adjustment to produce desired outcomes to job specifications which may include finish, size or shape.

Assessor guide: observe that –

The appropriate power tools are used to produce the desired outcomes to job specifications. Where appropriate, workpiece is clamped in accordance with standard operating procedures. Where appropriate, the power tool is aligned and adjusted to achieve the desired outcome.

Assessor guide: confirm that –

The outcomes to be achieved by the use of power tools can be identified. The job specifications to be achieved by the use of power tools can be identified. The need to secure workpieces when using power tools can be explained. A range of clamping/securing devices and their application can be identified. The adjustments that can be made to a range of power tools can be identified. The tools and procedures to be used in adjusting a range of power tools can be identified. The need to align power tools to achieve the required outcomes can be identified.

Criteria 18.2A.1.3

All safety requirements are adhered to before, during and after use,

Assessor guide: observe that –

All safety procedures are followed at all times and appropriate personal protective clothing and safety equipment are used,

Assessor guide: confirm that –

The safety procedures to be followed before, during and after the use of power tools can be identified. The personal protective clothing and safety equipment to be used when using power tools can be identified.

Criteria 18.2A.1.4

Unsafe or faulty tools identified and marked for repair according to designated procedures before, during and after use.

Assessor guide: observe that –

Where appropriate, unsafe or faulty tools identified before, during or after use are marked for repair in accordance with standard operating procedures.

Assessor guide: confirm that –

Common faults and/or defects in power tools can be identified. The procedures for marking unsafe or faulty tools for repair can be given.

Criteria 18.2A.1.5

Operational maintenance of tools, including hand sharpening, undertaken according to standard workplace procedures, principles and techniques.

Assessor guide: observe that –

Where appropriate, power tools are maintained/sharpened using appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational maintenance requirements of a range of power tools can be identified. The procedures for maintaining/sharpening a range of power tools can be identified. The techniques to be used in maintaining/sharpening a range of power tools can be identified.

Criteria 18.2A.1.6

Power tools stored safely in appropriate location according to standard workshop procedure and manufacturer's recommendations.

Assessor guide: observe that –

All power tools are safely stored in the appropriate location in accordance with manufacturer's/ standard operating procedures.

Assessor guide: confirm that –

The storage location of a range of power tools can be identified. The procedures for storing a range of power tools can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures involving the use of various power tools, including but not limited to electric or pneumatic drills, grinders, jigsaws, nibblers, cutting saws, sanders, planers, routers, pedestal drills and pedestal grinders. Applications may extend to loosening and fastening of items or components and the finishing, cutting, grinding of metallic and non-metallic materials and/or tool bits to size and shape. Routine maintenance tasks may include cleaning, lubricating, tightening, simple tool repairs and adjustments using engineering principles, tools, equipment and procedures to statutory and regulatory requirements. This unit should not be selected if the power tools used are dedicated to an operation or machine, ie. nut-runner, air drill, power driver etc. For using hand tools see Unit 18.1A (Use hand tools).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the use of power tools in hand held operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.3A B Use tools for precision work

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 18.3A.1 Use tools to produce precision work to specifications

Criteria 18.3A.1.1

Correct tools, processes and equipment selected according to outcome requirements.

Assessor guide: observe that –

All relevant drawings, specifications, instructions etc. are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The work to be undertaken can be identified. The specifications to be achieved can be identified. The appropriate tools, processes and equipment required to carry out the work to the required specifications are selected. The reasons for selecting the chosen tools, processes and equipment can be explained.

Criteria 18.3A.1.2

Work area prepared and made safe.

Assessor guide: observe that –

The work area(s) is prepared and made safe prior to the work being carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The hazards associated with using the selected tools, processes and equipment can be identified. The safety procedures to be followed to ensure the safety of the individual and other personnel can be given. The area(s) in which the work is to be carried out can be identified. Any hazards associated with carrying out the work in those area(s) can be identified.

Criteria 18.3A.1.3

Tools used according to acceptable engineering principles, methods, applications and procedures to produce specified outcome.

Assessor guide: observe that –

The appropriate tools are used to produce the specified outcomes in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for using the selected tools can be given. The engineering principles to be applied during the use of the tools can be explained.

Criteria 18.3A.1.4

Tools and equipment inspected for safe and proper working order before, during and after use.

Assessor guide: observe that –

All tools and equipment used are checked for safe and proper working order before, during and after use, in accordance with standard operating procedures.

Assessor guide: confirm that –

The manufacturer's specifications of the tools and equipment selected can be identified. The safe and proper function of tools and equipment selected can be identified. The procedures for checking tools and equipment for correct and safe operation can be given.

Criteria 18.3A.1.5

Unsafe or faulty tools/equipment identified, repaired where appropriate, or marked for repair and/or disposal, according to prescribed procedure.

Assessor guide: observe that –

Where appropriate, unsafe or faulty tools and equipment are marked for repair in accordance with standard operating procedures. Where appropriate, unsafe or faulty tools are repaired/maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

Common faults and/or defects in tools and equipment used/selected can be identified. The procedures for marking unsafe or faulty tools and equipment for repair can be given. The repairs/operational maintenance that can be made to the tools and equipment used/selected can be identified. The procedures for repairing/maintaining the tools and equipment used/selected can be given.

Element 18.3A.2 Tools and equipment stored appropriately**Criteria 18.3A.2.1**

Condition of tools/equipment checked and appropriately actioned.

Assessor guide: observe that –

The condition of all tools and equipment is checked for conformance to specifications and safe and proper operation prior to storage, in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking tools and equipment prior to storage can be identified.

Criteria 18.3A.2.2

Tools prepared for storage in appropriate location to standard workshop procedures and manufacturer's recommendations.

Assessor guide: observe that –

All tools and equipment are safely stored in the appropriate location in accordance with standard operating procedures.

Assessor guide: confirm that –

The storage location of the tools and equipment used/selected can be identified. The procedures for storing tools and equipment used/selected can be given.

Range statement

Work undertaken autonomously or in a team environment, using predetermined standards of quality, safety and workshop procedures involving the use of a variety of tools, instruments and power equipment to perform precision tasks. Where specifications are interpreted from engineering drawings, detailed/technical sketches and associated documents, Unit 9.2A (Interpret technical drawing) should be accessed. Skill applications involve precision tasks, including cutting out, drilling, fitting, tapping, filing, reaming, lapping, broaching, burnishing, scraping, polishing, hand held grinding, chiselling to achieve precision outcomes on a range of metallic and non-metallic materials. Inspection and preventative maintenance of tools and equipment involves the visual checking of leads, connections, sharpening of cutting equipment and the repair of associated tools. Tools covered by this unit include any tools required to achieve precision outcomes. Where precision measurement is required, Unit 12.3 A (Precision mechanical measurement) should be accessed. Where precision marking out is required, Unit 12.6 A (Mark off/out (general engineering)) should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the use of tools for precision work or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.4A A Maintain and overhaul mechanical equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.5A Bearings - fault diagnosis installation and removal

18.9A Levelling and alignment of machines and engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

18.7A Maintain and repair mechanical drives and mechanical transmission assemblies

Element 18.4A.1 Perform preventative maintenance tasks and adjustments

Criteria 18.4A.1.1

Preventative maintenance schedule read and task requirements determined..

Assessor guide: observe that –

The preventative maintenance schedule is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The preventative maintenance tasks to be undertaken can be identified. The purpose of preventative maintenance can be explained.

Criteria 18.4A.1.2

Using appropriate maintenance principles and techniques, routine maintenance tasks are performed on mechanical equipment, components or sub-assemblies using correct tools, equipment and procedures.

Assessor guide: observe that –

Preventative maintenance tasks are carried out using appropriate tools, techniques, equipment and procedures.

Assessor guide: confirm that –

The procedures for carrying out the maintenance tasks identified in the preventative maintenance schedule can be given. The tools, equipment, techniques and/or procedures to be applied in carrying out the preventative maintenance tasks can be identified. The reasons for selecting chosen tools, equipment, techniques and/or procedures can be given.

Criteria 18.4A.1.3

Mechanical equipment, components, sub-assemblies checked visually and with test equipment, using prescribed procedures and safety requirements to ensure correct function or determine malfunction.

Assessor guide: observe that –

All components of the system being maintained are checked visually and with test equipment to ensure correct function or to determine malfunction in accordance with safety and standard operating procedures.

Assessor guide: confirm that –

The safety procedures to be followed when carrying out preventative maintenance can be given. The procedures for checking/testing the components of the system being maintained can be given. The relevant test equipment and techniques required to test the components of the system can be identified. The correct function of the components of the system being maintained can be described. The visual checks to be undertaken can be identified.

Criteria 18.4A.1.4

Adjustments made to equipment or components to ensure specifications are met using acceptable fitting techniques and procedures, observing all safety requirements.

Assessor guide: observe that –

The system being maintained and/or its components are adjusted in conformance with specifications using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting the system being maintained and/or its components can be given. The safety procedures to be followed when adjusting the system and/or its components can be given. The adjustments that can be made to the system and/or its components can be identified. The operational specifications of the system and its components can be identified. The tools, techniques and equipment necessary to carry out the adjustments can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Element 18.4A.2 Diagnose and locate faults**Criteria 18.4A.2.1**

Equipment component function determined and understood by reference to engineering drawings, technical manuals and or consultation with appropriate personnel.

Assessor guide: observe that –

All relevant drawings, specifications, manuals and documentation are obtained in accordance with work place procedures. Where appropriate, relevant personnel are consulted with respect to the function and operational requirements of the equipment.

Assessor guide: confirm that –

The equipment function and operational requirements can be identified.

Criteria 18.4A.2.2

Maintenance reports checked, reviewed and faults diagnosed.

Assessor guide: observe that –

Relevant maintenance reports are obtained in accordance with work place procedures.

Assessor guide: confirm that –

Any recurring faults or failures can be identified. The likely causes of any recurring faults or failures can be given.

Criteria 18.4A.2.3

Consultation with operators and other relevant plant personnel is carried out to assist in locating faults.

Assessor guide: observe that –

Operators and other relevant personnel are consulted with respect to equipment faults, failures and out of specification operation.

Assessor guide: confirm that –

All relevant information likely to assist in locating the fault obtained from operators and other personnel can be identified. The reasons for consulting with operators and other relevant personnel can be given.

Criteria 18.4A.2.4

Where appropriate, test equipment selected and applied in accordance with defined requirements and procedures to assist fault location.

Assessor guide: observe that –

Where appropriate, test equipment is used in accordance with standard operating procedures to assist in fault location. Where appropriate, the test results are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment that is available to assist in fault detection/location can be identified. The test procedures, techniques and their application can be given. Where appropriate, the reasons for selecting the chosen test(s) can be given. The procedures for recording test results can be given.

Criteria 18.4A.2.5

Fault condition diagnosed and localised at component level using appropriate test equipment and procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The test results are used to identify the fault condition at the component level.

Criteria 18.4A.2.6

Faulty condition evaluated and appropriate corrective action taken.

Assessor guide: observe that –

The appropriate action is taken to rectify the fault in the system component(s) in accordance with standard operating procedures.

Assessor guide: confirm that –

The cause of the fault(s) can be identified. The means of correcting the fault(s) can be identified. The reasons for selecting the chosen means of correcting the fault(s) can be explained. The procedures to be followed in undertaking the corrective action can be given. The tools, equipment and techniques to be used in undertaking the corrective action can be identified. The reasons for selecting the chosen tools, equipment and techniques can be given.

Criteria 18.4A.2.7

Faults documented to standard operating procedures.

Assessor guide: observe that –

The faults detected and the maintenance activities carried out in correcting the fault are documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for documenting faults and maintenance activities undertaken can be given. The reasons for documenting faults and maintenance activities undertaken can be explained.

Element 18.4A.3 Repair or overhaul mechanical system**Criteria 18.4A.3.1**

Machine or equipment isolated safely or checked for isolation.

Assessor guide: observe that –

The machine or equipment is safely isolated or checked for isolation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for isolating the machine or equipment can be given. The procedures for checking the machine or equipment for isolation can be given. The reasons for confirming that the machines or equipment to be maintained/overhauled have been isolated prior to commencing work can be explained.

Criteria 18.4A.3.2

Faulty equipment, component or sub-assembly removed from system using appropriate engineering principles, tools, equipment and procedures.

Assessor guide: observe that –

The faulty component is removed from the system using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing the faulty component can be given. The tools, techniques and equipment to be used in removing the faulty component can be identified. The reasons for selecting the chosen tools, techniques, equipment and procedures can be given.

Criteria 18.4A.3.3

Replaceable items selected from manufacturer's catalogues and obtained by appropriate means.

Assessor guide: observe that –

The relevant catalogues are obtained in accordance with workplace procedures. The appropriate replacement parts are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate replacement parts can be identified. The procedures for obtaining replacement parts can be given.

Criteria 18.4A.3.4

Correct repair procedure, tools and equipment selected and prepared for use on serviceable items.

Assessor guide: observe that –

Assessor guide: confirm that –

Serviceable parts/items can be identified. The appropriate repair procedures can be identified. The tools, equipment and techniques to be used to repair the serviceable parts/items can be identified. The reasons for selecting the chosen repair procedure, tools, equipment and techniques can be given.

Criteria 18.4A.3.5

Using appropriate engineering principles, designated procedures, correct tools, equipment and safe workshop practices, serviceable items repaired or overhauled to manufacturer's or site specifications.

Assessor guide: observe that –

The serviceable items are repaired/ overhauled in conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of the serviceable parts/items can be identified.

Criteria 18.4A.3.6

Components checked with precision instruments to ensure conformance to specifications where applicable.

Assessor guide: observe that –

Where appropriate, repaired/ overhauled components are checked with precision instruments to ensure conformance to specifications.

Assessor guide: confirm that –

The precision measuring instruments to be used to check the repaired/overhauled components can be identified. The reasons for selecting the chosen precision measuring instruments and techniques can be given.

Element 18.4A.4 Fit and adjust mechanical equipment**Criteria 18.4A.4.0**

All electrical, safety and site requirements adhered to throughout maintenance cycle.

Assessor guide: observe that –

All relevant electrical, safety and site requirements are adhered to during the maintenance cycle.

Assessor guide: confirm that –

The electrical, safety and site requirements impacting on the maintenance to be carried out can be identified.

Criteria 18.4A.4.1

Fitting requirements determined and sequential assembly planning is carried out where applicable.

Assessor guide: observe that –

Assessor guide: confirm that –

The fitting requirements for assembling components can be identified. The appropriate sequence of assembly tasks can be determined and explained.

Criteria 18.4A.4.1

Maintenance report completed to standard operating procedures and conveyed to designated personnel.

Assessor guide: observe that –

The maintenance report is completed in accordance with standard operating procedures and conveyed to the appropriate person.

Assessor guide: confirm that –

The procedures for reporting/documenting maintenance undertaken/completed can be given. The person/authority to whom the report/documentation is to be given can be identified.

Criteria 18.4A.4.2

Sound fitting principles and techniques applied in the preparation and assembly of component parts using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety.

Assessor guide: observe that –

Components are prepared and assembled using appropriate fitting techniques and principles.

Assessor guide: confirm that –

The requirements of the assembly in terms of specifications, operational performance, quality and safety can be identified. Examples of situations where other assembly techniques may be used can be given.

Criteria 18.4A.4.3

Using acceptable maintenance practices correct gland packing, jointing, gasket materials selected and applied correctly in conformance to specifications and operational requirements.

Assessor guide: observe that –

Where appropriate, gland packing, jointing or gasket materials are applied using acceptable engineering practices.

Assessor guide: confirm that –

The purpose of using gland packing, jointing or gasket materials can be explained. The reasons for selecting particular jointing or packing materials can be given. Examples of other applications of jointing and/or packing materials can be given.

Criteria 18.4A.4.4

Correct lubrication requirements determined by appropriate means and attended to where applicable using mechanical or manual applications.

Assessor guide: observe that –

Where appropriate, suitable lubricants are applied to the assembly using acceptable engineering practices.

Assessor guide: confirm that –

The applications of different types of lubricants can be identified. The consequences of using inappropriate or no lubricant can be explained.

Criteria 18.4A.4.5

Appropriate wedges and levelling devices used to level mechanical equipment as appropriate.

Assessor guide: observe that –

Where appropriate, suitable tools, techniques and equipment are used to level mechanical equipment.

Assessor guide: confirm that –

The procedures for levelling mechanical equipment can be given. The tools, techniques and equipment required to level mechanical equipment can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.4A.4.6

Correct alignment and balancing functions performed where appropriate.

Assessor guide: observe that –

Where appropriate, suitable alignment and balancing functions are performed on the mechanical equipment.

Assessor guide: confirm that –

The procedures for aligning and balancing mechanical equipment can be given. The tools, techniques and equipment required to carry out the aligning and balancing functions can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.4A.4.7

Final adjustments are performed on mechanical equipment to align to operational specifications using acceptable engineering principles, fitting techniques and procedures.

Assessor guide: observe that –

Components are checked for conformance to specifications. Where appropriate, components are adjusted to achieve conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The types of adjustment applicable to the components being assembled can be identified. The consequences of not adjusting the components to conform to specifications can be given. The procedures for adjusting the components can be given.

Criteria 18.4A.4.8

Mechanical equipment tested for accuracy and correct operation where applicable, and returned to service to specifications using acceptable procedures.

Assessor guide: observe that –

Where appropriate, the mechanical equipment is tested for accuracy and correct operation. The mechanical equipment is returned to service in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing the mechanical equipment for accuracy and correct operation can be given. The tools, techniques and equipment required to test the mechanical equipment can be given. The reasons for selecting the chosen tools, techniques and equipment can be given. The procedures for returning to service mechanical equipment can be given.

Criteria 18.4A.4.9

Appropriate work and safety clearances obtained throughout maintenance cycle.

Assessor guide: observe that –

All appropriate work and safety clearances are obtained during the maintenance cycle.

Assessor guide: confirm that –

The work and safety clearances to be obtained during the maintenance cycle can be identified. The reasons for obtaining work and safety clearances can be explained. The authority/person from whom work and safety clearances are to be obtained can be identified.

Range statement

This unit should be selected where an integrated level of skills in maintenance and overhaul of most types of mechanical equipment required. This unit is meant to build on skills covered by the specialist prerequisites. Where individual skills are required, specialist units should be selected. Work is undertaken autonomously or in a team environment using predetermined standards of safety, quality and workshop procedures. Where applicable all replacement items are selected from manufacturer's catalogues in conformance to specifications and operational requirements. Specifications interpreted from engineering drawings, detailed technical sketches and sources of technical data. Where extensive system knowledge for safe shut down/isolation of machinery/equipment is required see Unit 18.11A (Shut down/isolate machines/equipment).

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and overhaul of mechanical equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.5A A Bearings - fault diagnosis installation and removal

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.5A.1 Perform routine bearing checks during operation and non-operation

Criteria 18.5A.1.1

Bearing installation inspected and task requirements determined by most appropriate means.

Assessor guide: observe that –

The bearing installation is inspected.

Assessor guide: confirm that –

The work to be undertaken can be identified. The reasons for identifying the work to be undertaken can be given.

Criteria 18.5A.1.2

Bearing installation checked during operation using standard procedures of listening, feeling, observing and/or correct and appropriate test equipment.

Assessor guide: observe that –

The bearing installation is checked for signs of malfunction using appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking bearings during operation using sensory means and test equipment can be given. The reasons for selecting the chosen techniques to check the bearing installation can be given.

Criteria 18.5A.1.3

Seal condition checked for seal and wear leaks using correct and appropriate means.

Assessor guide: observe that –

The bearing seals are checked for wear and leaks in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking bearing seals for leaks and wear can be given.

Criteria 18.5A.1.4

Lubricating devices checked for correct operation using correct and appropriate tools and techniques.

Assessor guide: observe that –

The lubricating devices are checked for correct operation using appropriate tools, equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking lubricating devices for correct operation can be given. The tools, equipment and techniques to be used in checking lubricating devices can be identified.

Element 18.5A.2 Diagnose bearing faults**Criteria 18.5A.2.1**

Visual and sensory inspection of bearing arrangement performed.

Assessor guide: observe that –

Bearings are inspected using sensory techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.5A.2.2

Where appropriate, given manufacturer's specifications and diagnostic equipment, bearings tested for correct operation or malfunction using acceptable techniques, tools and procedures.

Assessor guide: observe that –

Where appropriate, the bearing installation is tested for correct operation or to determine malfunction in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment manufacturer's specifications can be identified.

Criteria 18.5A.2.3

Using appropriate knowledge of engineering principles, faulty bearings identified for replacement.

Assessor guide: observe that –

Faulty bearings are identified for replacement.

Assessor guide: confirm that –

The reasons for deciding to replace/not replace given bearings can be given. The timeframe in which the bearing should be replaced can be identified. Where appropriate, the need for further monitoring of the bearing can be identified. The reasons for deciding to replace the faulty bearing immediately or at the next scheduled machine down time can be explained.

Criteria 18.5A.2.4

Where appropriate, causes of failure identified using correct and appropriate techniques and equipment.

Assessor guide: observe that –

Where appropriate, the failed bearing is tested using appropriate tests, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing failed bearings can be given. Common causes of bearing failure and their indicators can be identified. The tools, techniques and equipment to be used to test failed bearings can be identified. The reasons for selecting the chosen tests, tools, techniques and equipment can be given. The cause(s) of the bearing failure can be identified.

Criteria 18.5A.2.5

Where appropriate corrective action taken to avoid recurrences.

Assessor guide: observe that –

Where appropriate, corrective action is undertaken to avoid a recurrence of bearing failure.

Assessor guide: confirm that –

The corrective action to be undertaken for given causes of bearing failure can be identified.

Element 18.5A.3 Identify bearing requirements for replacement or installation**Criteria 18.5A.3.1**

Bearing installation inspected and task requirements determined.

Assessor guide: observe that –

The bearing installation is inspected.

Assessor guide: confirm that –

The work to be undertaken can be identified. The reasons for identifying the work to be undertaken can be given.

Criteria 18.5A.3.2

Using appropriate knowledge of bearings and engineering principles, operational function of bearings to be installed or replaced is determined and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The application of a range of bearings can be identified. The operational function of each given bearing can be given. The mounting and lubricating requirements of each given bearing can be given.

Element 18.5A.4 Remove bearings**Criteria 18.5A.4.1**

Correct and appropriate bearing removal techniques and tools determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for removing a range of bearings can be given. The tools, techniques and equipment to be used to remove given bearings can be identified. The reasons for minimising damage to shafts and housings during bearing removal can be explained.

Criteria 18.5A.4.2

Bearings removed from shafts or bearing housings using correct and appropriate technique, minimising damage to component.

Assessor guide: observe that –

Bearings are removed from shafts and/or bearing housings using the most appropriate technique in accordance with standard operating procedures.

Assessor guide: confirm that –

The type of bearing to be removed can be identified. The bearing removal procedure, tools, technique and equipment to be used can be identified. The reasons for selecting the chosen procedure, tools, technique and equipment can be given.

Criteria 18.5A.4.3

Condition of serviceable items such as shafts and housings inspected using correct and appropriate measuring and test equipment.

Assessor guide: observe that –

The shafts and housings are inspected using appropriate measuring and test equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for measuring and testing shafts and housings can be given. The tools, equipment and techniques to be used to measure/test the shafts and housings can be identified. The reasons for selecting the chosen procedures, tests, tools, equipment and techniques can be given.

Criteria 18.5A.4.4

Serviceable items repaired using correct and appropriate engineering, techniques, tools and equipment.

Assessor guide: observe that –

Serviceable shafts and housings are repaired using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Serviceable shafts and housings can be identified. The reasons for deciding that shafts and housings are serviceable/ unserviceable can be given. The procedures, tools, techniques and equipment to be used to repair housings and shafts can be identified.

Element 18.5A.5 Install plain bearings**Criteria 18.5A.5.1**

Standard replaceable items for plain, wrapped, flanged, split bush and thrust bearings selected from manufacturer's parts lists, catalogues or engineering drawings.

Assessor guide: observe that –

All relevant parts lists, catalogues, drawings, etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Replaceable items can be identified. The specifications of the replaceable items can be identified. The appropriate replaceable items for given situations can be identified. The reasons for selecting the chosen replaceable items can be given.

Criteria 18.5A.5.2

Correct and appropriate installation techniques and tools selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for installing plain bearings can be given. The tools, techniques and equipment to be used to install plain bearings can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.5A.5.3

Bearing sized to correct clearance using correct and appropriate technique, tools and equipment.

Assessor guide: observe that –

Plain bearings are sized to the correct clearance using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for determining the appropriate clearances for a range of plain bearings can be given. The procedures for "sizing" plain bearings can be given. The tools, techniques and equipment to be used to "size" the plain bearings can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.5A.5.4

Lubrication requirements catered for to meet specification and/or application requirements.

Assessor guide: observe that –

The plain bearing is lubricated in accordance with specifications and operational requirements.

Assessor guide: confirm that –

The lubrication requirements of given plain bearings can be identified.

Criteria 18.5A.5.5

Bearing fitted using correct and appropriate installation techniques, tools and equipment.

Assessor guide: observe that –

The bearing is installed using appropriate techniques, tools and equipment.

Assessor guide: confirm that –

The procedures for tensioning down plain bearings can be given.

Criteria 18.5A.5.6

Bearing tensioned down and run following standard operating procedures or manufacturer's recommendations.

Assessor guide: observe that –

Where appropriate, the bearing is tensioned down and run in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the plain bearing can be identified. The procedures for inspecting installed plain bearings can be given. The procedures for adjusting installed plain bearings to specification can be given.

Criteria 18.5A.5.7

Final clearance, adjustments and lubrication checked and correct and appropriate action taken where required.

Assessor guide: observe that –

The installed plain bearing is inspected for conformance to specifications using appropriate tools, techniques and equipment. Where appropriate, the plain bearing is adjusted to conform to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the plain bearing can be identified. The procedures for inspecting installed plain bearings can be given. The procedures for adjusting installed plain bearings to specification can be given.

Element 18.5A.6 Install anti-friction bearings**Criteria 18.5A.6.1**

Standard replaceable ball and roller anti-friction bearings selected from manufacturer's catalogues, spare parts lists or interpreted from engineering drawing to meet specifications.

Assessor guide: observe that –

All relevant parts lists, catalogues, drawings, etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Replaceable anti-friction bearings can be identified. The specifications of the replaceable items can be identified. The appropriate replacement items for given situations can be identified. The reasons for selecting the chosen replacement items can be given.

Criteria 18.5A.6.2

Bearing inside/outside diameters determined from specifications or manufacturer's catalogue and checked using appropriate measuring instruments.

Assessor guide: observe that –

The inside and outside diameters of anti-friction bearings are measured accurately using appropriate measuring instruments.

Assessor guide: confirm that –

The appropriate instruments to measure bearing diameters can be identified. The reasons for selecting the chosen measuring instruments can be given.

Criteria 18.5A.6.3

Shafts and housings size checked for correct fit and clearances using appropriate measuring instruments.

Assessor guide: observe that –

Shafts and housings are measured accurately using appropriate measuring instruments.

Assessor guide: confirm that –

The sources of information with respect to shaft and housing fits and clearances can be identified. The shaft and housing diameters are checked for conformance to fit and clearance requirements.

Criteria 18.5A.6.4

Correct and appropriate installation techniques selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for installing a range of anti-friction bearings can be given. The tools, equipment and techniques required to install given anti-friction bearings can be identified. The reasons for selecting the chosen installation technique, tools and equipment can be given.

Criteria 18.5A.6.5

Using appropriate engineering principles bearings fitted to shafts or housings using correct and appropriate tools, equipment, techniques to meet specifications.

Assessor guide: observe that –

Anti-friction bearings are fitted to shafts and housings using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.5A.6.6

Bearing sealed and capped where appropriate, to specifications.

Assessor guide: observe that –

Where appropriate, bearing seals and caps are installed in conformance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for installing bearing seals and caps can be given.

Range statement

Work undertaken autonomously using predetermined standards of quality, safety and workshop procedures involving the installation and replacement of plain, ball and roller bearings. Rotational plain bearings include plain bush, wrapped bush, flanged bush, split bush, self-lubricating and thrust bearings for radial, thrust and combination radial and thrust loading applications. Ball and roller bearings may include, but are not limited to, self-aligning ball bearings with cylindrical bore, taper bore (and adaptor sleeve), taper bore (and unthreaded adaptor sleeve); single row deep groove ball bearings, magneto bearings (separable ball bearings), single row angular contact ball bearings, double row angular contact ball bearings, spherical roller bearings, including narrow type and C design, spherical roller bearings (NV, N NS Type) double row cylindrical roller bearings, linear ball bearings, needle roller bearings, taper roller bearings, single thrust ball bearings, double thrust ball bearings, single thrust ball bearings with spherical housing washer and seating ring, spherical roller thrust bearings, radial bearings with cylindrical, tapered bore (and adaptor or withdrawal sleeve) and associated bearings for radial, axial and combination radial and axial applications. Tasks include routine bearing checks during operation, and non-operation bearing fault diagnostics, bearing removal, replacement, installation and lubrication using acceptable engineering principles, correct tools and equipment. Methods include the use of press, dowel, keys, keeper plate, heat, shrink and associated methods. The use of hydraulic and mechanical mounting and dismounting tools is included. All bearing replacements selected from spare parts lists, manufacturer's catalogues, engineering drawings and data sheets. All lubrication requirements attended to according to bearing manufacturer's specifications, standard operating procedures and lubricant supplier's instructions. Where no diagnostic skills are required and where straightforward removal and replacement of pre-manufactured bearings is undertaken, Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components) should be regarded as sufficient.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fault diagnosis, installation and removal of bearings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.6A A Dismantle/repair/replace/assemble and fit engineering components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.55A Dismantle, replace and assemble engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.6A.1 Dismantle and inspect engineering components

Criteria 18.6A.1.1

Components are inspected and task requirements analysed.

Assessor guide: observe that –

Assessor guide: confirm that –

The tasks to be performed can be identified.

Criteria 18.6A.1.2

Components are clearly marked to aid in reassembly.

Assessor guide: observe that –

The component parts are appropriately marked for identification purposes using work site procedures.

Assessor guide: confirm that –

The reason for identifying parts can be explained.

Criteria 18.6A.1.3

Appropriate tools and equipment selected and component/s prepared for dismantling.

Assessor guide: observe that –

The component is prepared for dismantling using work site procedures.

Assessor guide: confirm that –

The tools and equipment to be used to dismantle the components can be identified. The reasons for selecting the tools and equipment can be given.

Criteria 18.6A.1.4

Components dismantled using appropriate engineering principles, techniques, procedures, tools and equipment.

Assessor guide: observe that –

The components are dismantled using work site procedures and appropriate techniques, tools and equipment.

Assessor guide: confirm that –

The reason for utilising the selected technique to dismantle the components can be given. Two examples of situations where other dismantling techniques may be selected can be given.

Criteria 18.6A.1.5

Operational specifications for components obtained from appropriate source and interpreted and understood.

Assessor guide: observe that –

Operational specifications for the component/s are obtained.

Assessor guide: confirm that –

An alternative source of the operational specifications can be identified. The specifications relevant to the components to be repaired/replaced can be identified.

Criteria 18.6A.1.6

Damaged or faulty components assessed against operational specifications.

Assessor guide: observe that –

The component/s are visually and dimensionally checked against the operational specifications using work site procedures.

Assessor guide: confirm that –

The consequences of having components that do not comply with operational specifications can be explained.

Criteria 18.6A.1.7

Faulty components identified for repair, replacement, adjustment or manufacture.

Assessor guide: observe that –

Where required the component parts that are to be repaired, replaced or manufactured are marked appropriately using work site procedures.

Assessor guide: confirm that –

The reason(s) for identifying parts for repair, replacement or manufacture can be given. Two examples of situations where parts would be identified for repair can be given. Two examples of situations where parts would be identified for replacement can be given. Two examples of situations where parts would be identified for manufacture can be given.

Element 18.6A.2 Repair/Replace faulty components**Criteria 18.6A.2.1**

Faulty components repaired or adjusted to conform to specifications.

Assessor guide: observe that –

Repaired components are visually and dimensionally checked for conformance to specifications. Components are adjusted to achieve conformance to specifications where appropriate.

Assessor guide: confirm that –

The types of adjustment applicable to the components being repaired/fitted can be identified. Two examples of the consequences of not adjusting components to conform to specifications can be given.

Criteria 18.6A.2.2

Method of repair determined as appropriate.

Assessor guide: observe that –

Assessor guide: confirm that –

Appropriate methods of repair can be identified.

Criteria 18.6A.2.3

Where applicable replacement parts selected from manufacturers' catalogue and assessed against specifications.

Assessor guide: observe that –

Replacement parts selected conform to specifications.

Assessor guide: confirm that –

The features and/or dimensions upon which replacement parts are to be selected can be identified. The process of identifying replacement parts from "third party" supplier's catalogues can be described.

Element 18.6A.3 Manufacture parts/components**Criteria 18.6A.3.1**

Parts/component specifications determined by most appropriate means.

Assessor guide: observe that –

Assessor guide: confirm that –

Three potential sources of parts/components specifications can be identified.

Criteria 18.6A.3.2

Materials selected to meet specification requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The material properties required can be identified. The reason for selecting particular material(s) can be explained.

Criteria 18.6A.3.3

Materials marked out according to specification using most appropriate tools, methods and equipment.

Assessor guide: observe that –

Where required, material is marked out to specification using work site procedures.

Assessor guide: confirm that –

The reasons for selecting the marking out method, tools and/or equipment used can be explained.

Criteria 18.6A.3.4

New components drilled, scraped, filed, reamed, tapped, threaded etc. in conformance to specifications using appropriate workshop practices.

Assessor guide: observe that –

Where required, appropriate manufacturing operations are performed using work site procedures.

Assessor guide: confirm that –

The manufacturing operations to be utilised in the production of new components can be identified. The sequence of operations to be used in the production of new components can be determined and explained.

Criteria 18.6A.3.5

Completed components inspected for compliance with dimensions.

Assessor guide: observe that –

Component parts are measured and checked against specifications.

Assessor guide: confirm that –

The consequences of component parts not complying with specifications can be explained.

Criteria 18.6A.3.6

Where appropriate, component parts are marked for identification prior to assembly.

Assessor guide: observe that –

The component parts are appropriately marked for identification purposes, where required.

Assessor guide: confirm that –

The reasons for identifying parts prior to assembly can be explained.

Element 18.6A.4 Fit engineering components into assemblies or subassemblies**Criteria 18.6A.4.1**

Fitting requirements and sequential assembly planning is carried out where applicable.

Assessor guide: observe that –

Assessor guide: confirm that –

The fitting requirements for assembling components can be identified. The appropriate sequence of assembly tasks can be determined and explained.

Criteria 18.6A.4.2

Appropriate fitting principles and techniques applied in the preparation and assembly of component parts using fastening equipment and methods which ensures conformance to specifications, operational performance, quality and safety.

Assessor guide: observe that –

Components are prepared and assembled using appropriate fitting techniques and principles.

Assessor guide: confirm that –

The requirements of the assembly in terms of specifications, operational performance, quality and safety can be identified. Two examples of situations where other assembly techniques may be used can be given.

Criteria 18.6A.4.3

Using acceptable engineering practices, correct gland packing, jointing/gasket materials selected and applied correctly in conformance to specifications and operational requirements.

Assessor guide: observe that –

Where appropriate, gland packing, jointing or gasket materials are applied, using acceptable engineering practices.

Assessor guide: confirm that –

The purpose of using gland packing, jointing or gasket materials can be explained. The reasons for selecting particular jointing or packing materials can be given. Two examples of other applications of jointing and/or packing materials can be given.

Criteria 18.6A.4.4

Correct lubrication requirements determined by appropriate means and attended to where applicable.

Assessor guide: observe that –

Appropriate lubricants are applied to the assembly using acceptable engineering practices, where required.

Assessor guide: confirm that –

The applications of different types of lubricants can be identified. The consequences of using inappropriate or no lubricant can be explained.

Criteria 18.6A.4.5

Final adjustments are performed on component assembly to meet operational specifications using acceptable engineering principles, fitting techniques and procedures.

Assessor guide: observe that –

Components are checked for conformance to specification. Where appropriate components are adjusted to achieve conformance to specifications.

Assessor guide: confirm that –

The types of adjustment applicable to the components being assembled can be identified. Two examples of the consequences of not adjusting components to conform to specification can be given.

Criteria 18.6A.4.6

Out of specification modification/alterations approved by appropriate authority, recorded and documented to standard operating procedure.

Assessor guide: observe that –

Where appropriate, any approved modifications/alterations are recorded to work site procedures.

Assessor guide: confirm that –

The reasons for modifying/altering components/assemblies to an out of specification situation can be given. The need to have approval for out of specification modifications can be explained. The reasons for documenting out of specification modifications can be given.

Criteria 18.6A.4.7

Final component assembly inspected for compliance to operational specifications and returned to service according to standard operating procedure.

Assessor guide: observe that –

The final assembly is inspected and conformance to operational specifications checked. Where appropriate the final assembly is returned to service in accordance with work site procedures.

Assessor guide: confirm that –

Return to service procedures can be identified. The consequences of not following work site return to service procedures can be explained.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. This unit includes the fitting and maintenance of engineering components involving the dismantling, repair, replacement, assembling and final fitting of items, sub-assemblies and assemblies. All specifications interpreted from engineering drawings, detailed/technical sketches and associated data sheets. Tasks undertaken utilising engineering and maintenance principles, designated procedures, correct and appropriate tools, equipment and safe workshop practices. Where applicable replacement parts selected from manufacturer's catalogues in conformance with specifications and operational requirements. Appropriate fitting principles and techniques are utilised in the assembly of component parts using fastening equipment and methods which ensures conformance to specifications, operational performance, quality and safety. This includes the straight forward removal and replacement of pre-manufactured bearings and seals. Using acceptable maintenance procedures, appropriate lubrication, gland packing, jointing/gaskets, seals, materials are selected and applied in conformance to application requirements and specifications as applicable. Using acceptable workshop practices new components manufactured including by marking out, drilling, scraping, filing, reaming, tapping or threading to specifications. This unit does not address machining competencies and welding, if these are required, the appropriate units should also be accessed. Where additional or higher marking out skills are required, refer Unit 12.6A (Mark off/out (general engineering)). The knowledge and skills associated with the installation, removal, repair or replacement of mechanical seals is covered by Unit 18.12A (Mechanical seals - installation and removal). For high pressure fluid power seals see Unit 18.20A (Maintain hydraulic system components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the dismantling, repairing, replacing, assembling and fitting of engineering components, or other units requiring the exercise of the skills and knowledge covered by this unit. Competence in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, material and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any drawings, manuals, parts lists, catalogues and information relevant to the work. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

An individual would be expected to demonstrate competency in this unit at all times. The individual may be required to make judgements based on knowledge of the properties of engineering materials, surface finishes, tolerances, limits and fits, lubrication, seals, standard hardware items, bearings and standard engineering components. During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with

standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures.

Unit MEM 18.7A A Maintain and repair mechanical drives and mechanical transmission assemblies

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.9A Levelling and alignment of machines and engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

18.55A Dismantle, replace and assemble engineering components

Element 18.7A.1 Undertake maintenance checks of mechanical drives and mechanical transmission components

Criteria 18.7A.1.1

Principles of mechanical drives and mechanical transmission components understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of a range of mechanical drives and transmissions can be given.

Criteria 18.7A.1.2

The function of the main parts of the designated mechanical drive/transmission assembly understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The function of the main components of a range of mechanical drives and transmissions can be given.

Criteria 18.7A.1.3

Using appropriate maintenance principles, techniques, tools and equipment, mechanical drive/transmission components checked for wear, distortion, tensions, misalignment, fatigue, lubrication, slackness, tooth wear, breakages and other related malfunctions.

Assessor guide: observe that –

Mechanical drives, transmissions and their components are checked for conformance to specification and malfunction using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Examples of common malfunctions in mechanical drives, transmissions and their components can be given. The procedures for checking mechanical drives, transmissions and their components for malfunction can be given. The tools, techniques and equipment required to check the mechanical drives, transmissions and their components for conformance to specification can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.7A.1.4

Assembly identified as requiring further diagnosis, repair or adjustment and findings documented by appropriate means.

Assessor guide: observe that –

The outcomes of the maintenance checks are documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The mechanical drive/transmission is identified for further diagnosis, repair or adjustment. The reasons for deciding to repair, adjust or carry out further diagnosis can be explained. The procedures for documenting the outcomes of maintenance checks can be given.

Element 18.7A.2 Adjust mechanical drives and transmission assemblies**Criteria 18.7A.2.1**

Adjustment requirements determined by appropriate means.

Assessor guide: observe that –

Assessor guide: confirm that –

The extent of adjustment to be undertaken can be identified.

Criteria 18.7A.2.2

Adjustment method suitable for the type of drive or transmission assembly being serviced, determined from manufacturer's instruction sheets, standard workshop manuals/procedures or other appropriate means.

Assessor guide: observe that –

All relevant instructions, manuals, drawings, specifications, etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for adjusting different types of drives and transmissions can be given. The method of adjustment to be applied to given situations can be identified. The reasons for selecting the chosen method of adjustment can be given.

Criteria 18.7A.2.3

Adjustment tools and equipment selected according to the type of assembly being serviced.

Assessor guide: observe that –

Assessor guide: confirm that –

The tools, equipment and techniques to be used to adjust a variety of mechanical drives and transmissions can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.7A.2.4

Using appropriate maintenance principles, techniques, tools and equipment, drives/transmission components tensioned, aligned balanced or adjusted to manufacturer's/site specifications according to safe workshop practices.

Assessor guide: observe that –

Mechanical drives and transmissions are adjusted in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

Criteria 18.7A.2.5

Drive/transmission assembly checked after adjustment for correct operation or identified for further diagnosis or repair.

Assessor guide: observe that –

Adjusted mechanical drives and transmissions are checked for correct operation and conformance to specification in accordance with standard operating procedures. Where appropriate, mechanical drives and transmissions are identified for further diagnosis or repair.

Assessor guide: confirm that –

The procedures for checking adjusted mechanical drives and transmissions can be given. The reasons for deciding to identify the mechanical drive or transmission for further repair or diagnosis can be given.

Criteria 18.7A.2.6

Service report completed.

Assessor guide: observe that –

The service report is completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for completing service reports can be given.

Criteria 18.7A.2.7

Further diagnosis or repair requirements actioned by appropriate means.

Assessor guide: observe that –

Where appropriate, further diagnosis or repair is carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for referring mechanical drives and transmissions for further diagnosis or repair can be given.

Element 18.7A.3 Diagnose faults**Criteria 18.7A.3.1**

Service reports read and visual and sensory inspection of the drive/transmission assembly undertaken.

Assessor guide: observe that –

The mechanical drive/transmission is inspected for signs of malfunction.

Assessor guide: confirm that –

The service history of the mechanical drive/transmission can be identified.

Criteria 18.7A.3.2

Given manufacturer's specifications and where applicable diagnostic equipment drive/transmission assembly tested using sound maintenance principles and procedures.

Assessor guide: observe that –

The mechanical drive/transmission is tested using appropriate tools, techniques and equipment for conformance to operational specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the mechanical drive/transmission can be identified. The procedures for carrying out diagnostic tests can be given. The diagnostic tests to be carried out can be identified. The appropriate tools, techniques and equipment required to carry out the tests can be identified. The reasons for selecting the chosen tests, tools, techniques and equipment can be given.

Criteria 18.7A.3.3

Faults localised at the component level and identified for repair or replacement.

Assessor guide: observe that –

The faulty component(s) are identified and marked for repair or replacement in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for marking components for repair or replacement can be given. The reasons for identifying components for repair or replacement can be given.

Criteria 18.7A.3.4

Fault causes analysed and preventative measures to avoid re-occurrence developed, documented and actioned by appropriate means.

Assessor guide: observe that –

The appropriate preventative measures to be undertaken are documented in accordance with standard operating procedures. Where appropriate, the preventative measures are initiated in accordance with standard operating procedures.

Assessor guide: confirm that –

The likely causes of the fault/ failure can be explained. The preventative measures to be undertaken to avoid recurrence of the fault/failure can be given. The procedures for documenting preventative measures to be undertaken can be given.

Criteria 18.7A.3.5

Requirements for repair or replacement actioned by appropriate means.

Assessor guide: observe that –

The appropriate repairs/replacements are initiated in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 18.7A.4 Repair mechanical drives/transmission assemblies**Criteria 18.7A.4.1**

Service reports read and visual and sensory inspection of the drive/transmission assembly undertaken.

Assessor guide: observe that –

The mechanical drive/transmission to be repaired is inspected for signs of malfunction.

Assessor guide: confirm that –

The service history of the mechanical drive/transmission can be identified.

Criteria 18.7A.4.2

Task requirements ascertained.

Assessor guide: observe that –

Assessor guide: confirm that –

The work to be undertaken can be identified.

Criteria 18.7A.4.3

Tools and equipment selected according to the type of assembly being serviced.

Assessor guide: observe that –

Assessor guide: confirm that –

The tools, techniques and equipment to be used to service the mechanical drive/transmission can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.7A.4.4

Mechanical drive/transmission assembly dismantled using appropriate maintenance principles, techniques, tools, equipment and safe workshop practices.

Assessor guide: observe that –

The mechanical drive/transmission is dismantled using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.7A.4.5

Serviceable items repaired using appropriate maintenance procedures according to manufacturer's specifications and standard workshop practices.

Assessor guide: observe that –

Serviceable items are repaired using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Serviceable items can be identified.

Criteria 18.7A.4.6

Standard replaceable items selected using manufacturer's catalogues, spare parts lists, engineering specifications and obtained by appropriate means.

Assessor guide: observe that –

All relevant drawings, parts lists, specifications and manuals are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Replaceable items can be identified. Appropriate replacement parts are selected in accordance with specifications.

Criteria 18.7A.4.7

Component parts refitted to mechanical drive/transmission assembly using sound maintenance principles, techniques, tools and equipment in accordance with manufacturer's/site specifications.

Assessor guide: observe that –

The mechanical drive/transmission is reassembled using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 18.7A.5 Final adjustment and commissioning**Criteria 18.7A.5.1**

Using appropriate maintenance principles and procedures drive/transmission components tensioned, balanced, aligned or adjusted to suit specifications and operational requirements.

Assessor guide: observe that –

Mechanical drives and transmissions are adjusted in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The tools, equipment and techniques to be used to adjust a variety of mechanical drives and transmissions can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.7A.5.2

Drive/transmission assembly checked after adjustment and operational performance analysed.

Assessor guide: observe that –

Adjusted mechanical drives and transmissions are checked for correct operation and conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking adjusted mechanical drives and transmissions can be given.

Criteria 18.7A.5.3

Assembly commissioned on conformance to specifications.

Assessor guide: observe that –

The mechanical drive/transmission is commissioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for commissioning mechanical drives and transmissions can be given.

Criteria 18.7A.5.4

Service report completed by appropriate means.

Assessor guide: observe that –

The service report is completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for completing service reports can be given.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures involving the adjustment, repair, replacement of mechanical drives/transmission assemblies and associated components. Drive devices may include worm and worm wheel, line shafts, plumber blocks, pulleys, sprockets, belts, taper bush assemblies, roller chains, chain drives, mechanical and hydraulic couplings, compression couplings, disc type flexible couplings, spider type, chain couplings, universal joints, bevel gearing, rack and pinion gearing, dog toothed clutches, cone type clutches, expanding shoe type clutches, friction/plate type clutches, centrifugal clutches, toggle action linkages, magnetic clutches, sprag clutches, band type brakes and other associated drive components. Spare parts replacements selected from manufacturer's catalogues or engineering specifications. All adjustments, removal, repair, replacement and installation practices in conformance to safe workshop practices utilising appropriate maintenance principles, techniques, tools, equipment and procedures. Lubrication requirements attended to according to supplier's instructions and recommendations. Assemblies tested using appropriate methods for conformance to specifications and operational requirements. This unit should not be selected where either Unit 18.42A (Diagnose and repair manual transmissions) or Unit 18.44A (Diagnose and repair drive line and final drives) or Unit 18.43A (Diagnose and repair automatic transmissions) are also selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of mechanical drives and transmissions or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.8A A Balance equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.8A.1 Check balance

Criteria 18.8A.1.1

Principles of equipment balance testing understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of balancing can be explained. The reasons for testing equipment for balance can be given. The effect of out of balance components on machine/equipment operation and life can be given.

Criteria 18.8A.1.2

Most appropriate balancing check procedure selected.

Assessor guide: observe that –

Assessor guide: confirm that –

Several procedures for checking the balance of equipment can be identified. The most appropriate procedure to be applied to selected balancing situations can be identified. The reasons for selecting the chosen balancing check procedure can be given.

Criteria 18.8A.1.3

Component set up correctly and to site/manufacturer's procedure for balance check.

Assessor guide: observe that –

The component to be balanced is set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting up the component to be balanced can be given.

Criteria 18.8A.1.4

Balance/out of balance determined and compared to specification requirements.

Assessor guide: observe that –

The balancing equipment is operated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for operating the balancing equipment can be given. The specifications of the component to be balanced can be identified.

Criteria 18.8A.1.5

Out of balance readings recorded to prescribed procedures.

Assessor guide: observe that –

Out of balance readings are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording out of balance readings can be given.

Element 18.8A.2 Balance equipment**Criteria 18.8A.2.1**

Principles and methods of rigid and/or flexible rotation balancing understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of rigid and flexible rotation balancing can be explained. The methods of rigid and flexible rotation balancing can be described.

Criteria 18.8A.2.2

Techniques of single and/or multi-plane balancing used appropriate to application.

Assessor guide: observe that –

Assessor guide: confirm that –

The techniques of single and multiple plane balancing can be described. For given balancing situations the appropriate balancing technique can be identified. The reasons for selecting the chosen balancing technique can be given.

Criteria 18.8A.2.3

Equipment balanced utilising correct procedures.

Assessor guide: observe that –

Equipment is balanced using the appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for balancing out of balance equipment can be given. The precautions to be taken when adding or removing material to achieve balance can be given.

Range statement

Work undertaken with minimum supervision or team environment. Equipment may range from static balancing devices to sophisticated electronic dynamic balancing machines. Work may be undertaken in the field, on-site or in a workshop environment. Balancing may include the addition or removal of material. All specifications for machine operation and degree of balance to be supplied. Wheel and tyre balancing is covered in Unit 18.38A (Maintain and repair wheels and tyres).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the balancing of equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.9A A Levelling and alignment of machines and engineering components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.9A.1 Undertake levelling and alignment measurements/readings

Criteria 18.9A.1.1

Principles of levelling and alignment understood and utilised.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of levelling and alignment can be explained. The effects on equipment performance and life of non-level or out of alignment components can be given.

Criteria 18.9A.1.2

Task requirements determined by inspection of equipment to be levelled and/or components to be aligned.

Assessor guide: observe that –

The equipment to be levelled and/or components aligned are inspected.

Assessor guide: confirm that –

The tasks to be undertaken can be identified.

Criteria 18.9A.1.3

Correct appropriate levelling and/or alignment procedure selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for levelling and aligning equipment/components can be given. The appropriate levelling and aligning procedures can be selected for given tasks. The reasons for selecting the chosen levelling and/or aligning procedures can be given.

Criteria 18.9A.1.4

Correct and appropriate levelling or alignment devices/equipment selected and set up to standard operating procedures or manufacturer's recommendation.

Assessor guide: observe that –

The appropriate levelling/aligning equipment is set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment, tools and techniques to be used to align/level the equipment/components can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The procedures for setting up the levelling/aligning equipment can be given.

Criteria 18.9A.1.5

Measurements/readings taken accurately and recorded correctly to standard operating procedures.

Assessor guide: observe that –

All measurements are taken accurately and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording measurements taken can be given.

Element 18.9A.2 Perform levelling and/or alignment tasks**Criteria 18.9A.2.1**

Correct and appropriate engineering principles, techniques, tools and equipment selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The appropriate techniques, tools, equipment and procedures to carry out the levelling and/or alignment tasks can be identified.

Criteria 18.9A.2.2

Levelling realignment calculations performed using correct and appropriate method for levelling/alignment application.

Assessor guide: observe that –

Assessor guide: confirm that –

The calculations to be performed to enable the equipment/components to be aligned/levelled can be identified.

Criteria 18.9A.2.3

Equipment levelled to specifications using correct and appropriate technique.

Assessor guide: observe that –

The equipment is levelled and/or aligned to specification using the appropriate techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for levelling/aligning equipment/components can be given.

Criteria 18.9A.2.4

Levelling and alignment task completed to specifications.

Assessor guide: observe that –

The equipment/components are checked for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking equipment/components for conformance to specification for level and alignment can be given. The required measuring devices, tools and techniques can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures involving the levelling of equipment and the alignment of component parts. The use of appropriate engineering principles, techniques, tools and equipment is integral to all application tasks. Included is the use of a variety of tools and equipment not limited to: precision levels, spirit levels, line levels, optical levels, electronic levels, laser levels, dial indicators, special type dial indicator fixtures, magnetic bases, feeler gauges, bench centres, vee blocks, plumb and line, folding wedges, straight edges, shimpack materials, dumpy levels and other associated levelling and alignment equipment. Included is the setting up and use of alignment measuring devices and precision levelling devices. Level or out of alignment calculation performed using most appropriate means for the type of application being performed. Level and alignment specifications obtained from engineering drawings, data sheets or manufacturers specifications. All adjustments performed according to designated procedures in conformance to specifications.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the levelling and alignment of machines and engineering components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.10A B Equipment condition monitoring and recording

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

This unit covers the competencies required to undertake condition monitoring. This unit applies to specialist monitoring activities undertaken as a part of a preventative maintenance plan of program.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.1A Draw and interpret sketch
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

Element 18.10A.1 Undertake condition monitoring

Criteria 18.10A.1.1

Principles and methods of equipment condition monitoring understood and applied

Assessor guide: observe that –
Correct principals for monitoring are used and procedures followed

Assessor guide: confirm that –
Description of the application of principals and methods can be made for a variety of situations

Criteria 18.10A.1.2

Appropriate conditions monitoring technique selected to achieve required outcomes

Assessor guide: observe that –
Appropriate technique selected for the situation

Assessor guide: confirm that –

Criteria 18.10A.1.3

Checks undertaken correctly, safely and to standard operating procedures

Assessor guide: observe that –
Standard operating procedures are followed

Assessor guide: confirm that –

Criteria 18.10A.1.4

Results plotted and deviations from specification reported to appropriate authority/recorded

Assessor guide: observe that –
Results are properly recorded and deviation reports prepared and submitted

Assessor guide: confirm that –
Appropriate records can be identified for a variety of situations

Range statement

This unit applies where specialist monitoring activities are undertaken as part of a preventive maintenance or total productive maintenance plan or program. Work is undertaken autonomously or as part of a team environment. Techniques may include one or more of the following: built-in systems (software and site displays), vibration monitors, infra-red and ultraviolet non-destructive testing. Monitoring undertaken in workshop, laboratory or in situ environment; readings undertaken to the accuracy of monitoring equipment limitations or to site specifications where applicable. Results recorded/plotted to predetermined procedure and technique. All work and work procedures undertaken to standard operating procedures and/or equipment manufacturer's recommendations. All work and work practices undertaken to regulatory or legislative requirements. Where only routine maintenance checking and diagnostic skills are applied, other appropriate units should be accessed.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with equipment condition monitoring and recording or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.11A B Shut down and isolate machines/equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Element 18.11A.1 Shut down machine/equipment

Criteria 18.11A.1.1

Machine/equipment operational function determined and understood.

Assessor guide: observe that –

All relevant instructions, procedures and documentation is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The operational function of the machine/equipment can be described.

Criteria 18.11A.1.2

Shut down sequence undertaken safely and to standard operating procedures.

Assessor guide: observe that –

The machine/equipment is shut down safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The shut down sequence can be identified. The procedures for shutting down the machine/equipment can be given. The safety precautions to be taken when shutting down the machine/ equipment can be identified.

Criteria 18.11A.1.3

Machine/equipment depressurised/emptied/de-energised bled to standard operating procedures.

Assessor guide: observe that –

The machine/equipment is depressurised/emptied/de-energised/bled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for depressurising/emptying/bleeding fluids from the machine/equipment can be given. The reasons for depressurising/emptying/bleeding fluids from the machine/equipment can be given.

Criteria 18.11A.1.4

Safe shut down of machine/equipment verified.

Assessor guide: observe that –

The safe shut down of the machine/equipment is verified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for verifying machine/equipment shut down can be given. The reasons for verifying machine/equipment shut down can be given.

Criteria 18.11A.1.5

Safety/security lock off devices and signage installed to standard operating procedure.

Assessor guide: observe that –

All safety/security lock off devices and signage are installed in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety/security lock off devices and signage to be installed can be identified. The reasons for installing lock off devices and signage can be explained. The procedures for installing lock off devices and signage can be given.

Criteria 18.11A.1.6

Machine/equipment left in clean and safe state.

Assessor guide: observe that –

The machine/equipment is left in a clean and safe state.

Assessor guide: confirm that –

The reasons for ensuring the machine/equipment is left in a clean, safe state can be given.

Element 18.11A.2 Isolate machine/equipment**Criteria 18.11A.2.1**

Machine/equipment operational function determined and understood.

Assessor guide: observe that –

All relevant instructions, procedures and documentation is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The operational function of the machine/equipment can be described.

Criteria 18.11A.2.2

Isolation methods and points recognised and identified.

Assessor guide: observe that –

Assessor guide: confirm that –

The isolation methods and points for the machine/equipment can be identified.

Criteria 18.11A.2.3

Isolation undertaken safely and to standard operating procedures.

Assessor guide: observe that –

The machine/equipment is isolated in accordance with standard operating procedures.

Assessor guide: confirm that –

The isolation procedures for the machine/equipment can be given.

Criteria 18.11A.2.4

Safe isolation of machine/equipment verified.

Assessor guide: observe that –

The safe isolation of the machine/equipment is verified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for verifying machine/equipment isolation can be given. The reasons for verifying machine/ equipment isolation can be given.

Criteria 18.11A.2.5

Safety/security lock off devices and signage installed to standard operating procedure.

Assessor guide: observe that –

All safety/security lock off devices and signage are installed in accordance with standard operating procedures.

Assessor guide: confirm that –

The safety/security lock off devices and signage to be installed can be identified. The reasons for installing lock off devices and signage can be explained. The procedures for installing lock off devices and signage can be given.

Criteria 18.11A.2.6

Machine/equipment left in clean and safe state.

Assessor guide: observe that –

The machine/equipment is left in a clean and safe state.

Assessor guide: confirm that –

The reasons for ensuring the machine/equipment is left in a clean, safe state can be given.

Range statement

Shut down/isolation undertaken autonomously or as part of team work. Machines/equipment range includes manual, semi automatic and automatic machines of a stand alone, continuous production or process nature. Shut down/isolation means and includes isolation of mechanical, electrical drives, pipework (pressure) rotating equipment etc. utilising electrical lock off isolators, mechanical and power driven valves etc. Relevant regulations, Australian Standards and legislative requirements governing isolation and shutdown complied with. This unit requires extensive system knowledge that excludes the straightforward starting/stopping of machinery/equipment through the use of simple switching, including use of emergency switches.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the isolation and shut down of machines and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.12A A Mechanical seals - installation and removal

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.55A Dismantle, replace and assemble engineering components

Element 18.12A.1 Determine mechanical seal requirements

Criteria 18.12A.1.1

Principles of mechanical seals understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of mechanical seals can be explained. A range of applications of mechanical seals can be given.

Criteria 18.12A.1.2

Operational function of mechanical seal components understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The essential components of a range of mechanical seal designs can be identified. The function of the essential components of mechanical seals can be explained.

Criteria 18.12A.1.3

For new mechanical seal installation, specifications interpreted from engineering drawings etc.

Assessor guide: observe that –

All relevant drawings, instructions, specifications and data are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications of the mechanical seal to be installed can be identified. The procedures for installing new mechanical seals can be given.

Element 18.12A.2 Dismantle mechanical seal installations**Criteria 18.12A.2.1**

Mechanical seal assembly examined and correct and appropriate dismantling techniques, tools and equipment selected.

Assessor guide: observe that –

The mechanical seal assembly is examined in accordance with workshop procedures.

Assessor guide: confirm that –

The tools and equipment required to dismantle a mechanical seal assembly can be identified. The techniques for dismantling mechanical seal assemblies can be identified. The reasons for selecting the chosen tools, equipment and techniques can be explained.

Criteria 18.12A.2.2

Using correct and appropriate engineering techniques and safe workshop procedures mechanical seal assembly dismantled.

Assessor guide: observe that –

The mechanical seal assembly is dismantled in accordance with appropriate engineering techniques and safe workshop procedures.

Assessor guide: confirm that –

The hazards associated with the removal and dismantling of mechanical seals can be identified. The procedures for dismantling mechanical seal installations can be given.

Criteria 18.12A.2.3

All component parts examined for wear, including housing, shafts, primary sealing elements; secondary seals, seat assembly etc., to determine need for repair or replacement.

Assessor guide: observe that –

All mechanical seal components are examined for wear and checked for conformance to specifications. Where appropriate, mechanical seal components are marked for repair or replacement in accordance with workshop procedures.

Assessor guide: confirm that –

The failure patterns of mechanical seal components can be explained. Examples of worn or failed components can be identified. The mechanical seal components able to be repaired can be identified. The wear limits within which mechanical seal components are able to be repaired can be identified. The procedures for marking mechanical seal components for repair or replacement can be given.

Criteria 18.12A.2.4

Where applicable, serviceable items repaired by appropriate means.

Assessor guide: observe that –

Where appropriate, serviceable items are repaired using appropriate engineering techniques and safe workshop procedures.

Assessor guide: confirm that –

Criteria 18.12A.2.5

Primary sealing elements and secondary seals removed for replacement where required using correct and appropriate engineering techniques and tools.

Assessor guide: observe that –

Where appropriate, the primary sealing element and secondary seals are removed from the mechanical seal using appropriate techniques and tools in accordance with workshop procedures.

Assessor guide: confirm that –

The techniques for removing primary sealing elements and secondary seals from the mechanical seal can be identified. The tools required to remove primary sealing elements and secondary seals from the mechanical seal can be identified.

Element 18.12A.3 Select replaceable items**Criteria 18.12A.3.1**

Replaceable items selected using manufacturer's catalogues, spare parts lists, engineering specifications or sample, using standard operating procedures.

Assessor guide: observe that –

All relevant manufacturers' catalogues, spare parts lists, specifications are obtained in accordance with workplace procedures. Where appropriate, sample mechanical seals or components are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications of the mechanical seal or component can be identified. The appropriate replacement mechanical seal or component can be identified. The procedures for identifying replacement items can be given. The reasons for selecting the chosen mechanical seal or component can be explained.

Element 18.12A.4 Reassemble mechanical seal installations**Criteria 18.12A.4.1**

Using correct and appropriate engineering techniques and tools, mechanical seal components fitted together including seal head, secondary seals, seat assembly, shaft and housing.

Assessor guide: observe that –

The mechanical seal components are fitted to the shaft and housing using appropriate tools and techniques in accordance with workshop procedures.

Assessor guide: confirm that –

The procedures to be followed when fitting mechanical seals can be identified. The tools and techniques to be used in the fitting of mechanical seals can be identified.

Criteria 18.12A.4.2

Mechanical seal assembly tensioned and adjusted to manufacturer's specifications.

Assessor guide: observe that –

The mechanical seal is adjusted and tensioned in accordance with manufacturer's specifications and workshop procedures.

Assessor guide: confirm that –

The manufacturer's specified mechanical seal tension can be identified. The procedures for adjusting mechanical seal tensions can be identified.

Criteria 18.12A.4.3

Mechanical seal assembly tested using appropriate methods for compliance with specifications and operational performance.

Assessor guide: observe that –

The mechanical seal assembly is tested for compliance with specifications and operational performance in accordance with workshop procedures.

Assessor guide: confirm that –

The procedures for testing mechanical seals can be identified. The operational specifications and requirements of the mechanical seal can be identified.

Range statement

Work undertaken autonomously using predetermined standards of quality, safety and workplace procedures. Tasks involve the checking, installation, removal and replacement of a range of mechanical seals including carbon, stellite, neoprene and other associated materials. Skills covered by this unit include the knowledge of appropriate applications for a range of mechanical seals and the ability to remove, select, repair or replace all component parts of the seal. All removal and installation practices to be undertaken in conformance to safe workplace practices and procedures, using correct tools and equipment. Seal replacements selected from manufacturer's catalogues, spare parts lists or engineering specifications. Included is the fitting of mechanical seals in new installations according to specifications interpreted from engineering drawings. Lubrication requirements attended to according to supplier's instructions and recommendations or specifications. Mechanical seal assembly tested using appropriate methods for compliance with specifications and operational performance. For straightforward replacement of seals, see Unit 18.55A (Dismantle, replace and assemble engineering components) or Unit 18.6A (Dismantle/repair/replace assemble and fit engineering components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation and removal of mechanical seals or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.13A A Gland packing

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

Element 18.13A.1 Inspect glands and gland packing

Criteria 18.13A.1.1

Principles of gland packing understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of gland packing can be explained.

Criteria 18.13A.1.2

Stuffing box assembly and gland packing inspected and job requirements determined.

Assessor guide: observe that –

The stuffing box and gland packing are inspected in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting glands can be given. The tasks to be undertaken can be identified.

Element 18.13A.2 Remove gland packing

Criteria 18.13A.2.1

Using appropriate engineering techniques, tools and equipment, gland extracted or removed.

Assessor guide: observe that –

The gland packing is extracted/removed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing gland packing can be given. The tools, techniques and equipment required to remove gland packing can be identified.

Element 18.13A.3 Replace or top up gland packing

Criteria 18.13A.3.1

Correct and appropriate gland packing selected and cut to size and shape to conform with application and/or specifications.

Assessor guide: observe that –

The appropriate gland packing is cut to size and shape in conformance with specifications and standard operating procedures.

Assessor guide: confirm that –

The various types of gland packing and their application can be identified. The appropriate gland packing for given situations can be identified. The reasons for selecting the chosen gland packing can be given. The gland packing specifications can be identified. The methods of cutting gland packing to size and shape can be given.

Criteria 18.13A.3.2

The stuffing box is filled with packing material and the gland is reassembled using standard operating procedures or manufacturer's recommended procedure.

Assessor guide: observe that –

The stuffing box is filled with packing material and reassembled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reassembling the gland can be given.

Range statement

Work undertaken autonomously using predetermined standards of quality, safety and workplace procedures. Tasks involve the packing and repacking of stuffing boxes and glands with correct and appropriate packing materials selected to meet application or from specifications or to manufacturer's requirements. Packing materials include, but are not limited, to carbon, hemp, rubber, leather, teflon, felt, neoprene. Packing types include, but are not limited to, ribbon flat, square, round, moulded, dry and lubricated. Applications include, but are not limited to, packing for: high or low temperatures and pressures, solids, gases, liquids. All packing tasks to be undertaken in conformance to safe workshop practices and procedures using correct tools and equipment. Packing materials selected from specifications, manufacturer's catalogues or to conform to operational requirements of the system being serviced. Packing techniques to be applied according to standard operating procedures/supplier's instructions and acceptable engineering principles. All work and work practices undertaken to regulatory and legislative requirements. Skills undertaken to maintain simple gland top-ups in non-critical applications and routine gland maintenance are covered by Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gland packing or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.14A A Tool, gauge and die manufacture

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.13C5 Perform mathematical computations

7.6A Perform lathe operations

9.1A Draw and interpret sketch

12.6A Mark off/out (general engineering)

18.3A Use tools for precision work

18.55A Dismantle, replace and assemble engineering components

2.7C10 Perform computations - basic

6.7A Perform basic incidental heat/quenching, tempering and annealing

7.7A Perform milling operations

9.2A Interpret technical drawing

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

2.8C10 Perform computations

7.5A Perform general machining

7.8A Perform grinding operations

12.3A Precision mechanical measurement

18.2A Use power tools/hand held operations

18.15A Tool and die maintenance

Element 18.14A.1 Prepare to manufacture tool, gauge or die i.e. (tooling)

Criteria 18.14A.1.1

Determine tooling requirements from customer's components drawings, prints or sample component.

Assessor guide: observe that –

All relevant drawings, prints and/or sample components, specifications and instructions obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The customer's tooling requirements are identified.

Criteria 18.14A.1.2

Tooling type and design conceptualised and planned with reference to customer's specifications (written or verbal) for numbers, finish, quality and material. Production machine to be used to produce components is assessed and comprehended in tooling design.

Assessor guide: observe that –

Assessor guide: confirm that –

The type of tooling to be manufactured can be identified. The machine(s) in which the tooling is to be used can be identified. The tooling design concept can be explained in terms of customer specifications and proposed production machine(s). The performance requirements of the tooling can be identified.

Criteria 18.14A.1.3

Tool design is interpreted and visualised from tooling drawings, prints or plan and checked against customer requirements.

Assessor guide: observe that –

Where appropriate, the tool design is sketched or drawn in accordance with relevant standards and workplace procedures. Where appropriate, tooling drawings are obtained in accordance with workplace procedures. The tooling drawings are checked for conformance to customer specifications and production requirements.

Assessor guide: confirm that –

Criteria 18.14A.1.4

Selected production machine mounting requirements determined to ensure any special or additional provisions are incorporated in tooling design.

Assessor guide: observe that –

Where appropriate, the mounting requirements of the tooling have been incorporated into the tooling design.

Assessor guide: confirm that –

The method of mounting the tooling in the production machine into which it is to be installed can be identified.

Element 18.14A.2 Manufacture tooling**Criteria 18.14A.2.1**

Appropriate materials selected and obtained to meet tooling requirements for strength, durability, component finish, heat treatment qualities where necessary and accounting for materials availability.

Assessor guide: observe that –

Assessor guide: confirm that –

The physical properties of a range of tool steels can be identified. The appropriate materials for each component of the tooling to be produced can be identified. The reasons for selecting the chosen materials can be explained in terms of: - strength - durability - component finish - heat treatment requirements - availability.

Criteria 18.14A.2.2

Selected material tested for hardness as appropriate to aid selection of machine tools, hand tools and hand held power tools to be used to fashion or shape tooling components.

Assessor guide: observe that –

Where appropriate, tooling materials are tested for hardness in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for hardness testing materials can be identified. The effect of material hardness on machinability of the material can be explained. The appropriate machinery and tools to be used to fashion or shape tooling components can be identified. The reasons for selecting the chosen machinery and tooling can be explained.

Criteria 18.14A.2.3

Plan developed to sequence and stage manufacturing process, including establish datum, mark out, rough out (machine or fashion), stress relieve/heat treat, finish size, fashion and fit, assemble componentry.

Assessor guide: observe that –

A sequential plan has been prepared for the manufacture of the required tooling and where appropriate, the plan is documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for establishing a sequential plan for the manufacture of tooling can be given. Where appropriate, the procedures for documenting plans for the manufacture of tooling can be identified.

Element 18.14A.3 Perform machining operations**Criteria 18.14A.3.1**

Appropriate machines and machining process selected from a range of standard tool room machines to shape/produce tooling components to specifications.

Assessor guide: observe that –

The tooling components are shaped/ produced to specifications using appropriate machines and machining processes.

Assessor guide: confirm that –

The appropriate machines and machining processes to shape/produce the required tooling components can be identified. The reasons for selecting the chosen machines and machining processes can be given.

Element 18.14A.4 Use hand and hand held power tools**Criteria 18.14A.4.1**

A range of hand and hand held power tools are selected and used to fashion/manufacture tooling components to specification Where practical, components sample or section produced for testing.

Assessor guide: observe that –

The appropriate hand and hand held power tools are used to fashion/ manufacture tooling components to specification. Where appropriate, sample components or sections are utilised to test the tooling components being manufactured.

Assessor guide: confirm that –

The hand and hand held power tools to be used to fashion/manufacture the required tooling components can be identified. The reasons for selecting the chosen hand and hand held power tools can be given.

Element 18.14A.5 Assemble tooling components**Criteria 18.14A.5.1**

Using acceptable tool making techniques and procedures, components checked and fitted/assembled correctly to specifications.

Assessor guide: observe that –

All tooling components are assembled and fitted to specification, using acceptable tool making techniques and procedures.

Assessor guide: confirm that –

The procedures for fitting/ assembling the tooling components can be identified. The precautions to be taken when fitting/assembling tooling components can be given.

Element 18.14A.6 Trial tooling**Criteria 18.14A.6.1**

First-off component is checked with precision instruments against specification.

Assessor guide: observe that –

The first-off component/product is checked using appropriate precision instruments for conformance to specification.

Assessor guide: confirm that –

The appropriate precision instruments for checking the components produced can be identified. The specifications of the finished product can be identified.

Criteria 18.14A.6.2

Tooling is modified as necessary to produce components to specification.

Assessor guide: observe that –

Where appropriate, the tooling is modified using appropriate tool making techniques and procedures to ensure that the components/products produced comply with specifications.

Assessor guide: confirm that –

Where appropriate, the causes of any non-conformance to specification can be identified. Where appropriate the tool making techniques/procedures to be applied to return the tooling to specification can be identified.

Criteria 18.14A.6.3

Modified tooling is re-trialed and component produced
Conformance to specification is verified and reported
consistent with standard operating procedures.

Assessor guide: observe that –

Where appropriate, the first-off component/product produced by the modified tooling is checked using appropriate precision instruments for conformance to specification. The conformance of the component/ product to specification is reported/ recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting/ recording the conformance of the component/product produced by the tooling to specifications can be identified.

Criteria 18.14A.6.4

Where necessary all deviations or modifications to original tooling design, prints or plans recorded and reported consistent with standard operating procedures.

Assessor guide: observe that –

Where appropriate, modifications or alterations to original tooling design are recorded/reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording/reporting modifications and/or alterations to tooling design can be identified.

Range statement

Work undertaken autonomously or in a team environment; this unit is meant to cover skills required to manufacture and trial all types of production tooling. The tooling being produced may include, but not be limited to, the following types: press tools, jigs, fixtures, gauges, special purpose machines and equipment, forging dies, extruding dies, die casting (high & low pressure and gravity feed), plastic moulds (injection, compression, blow and foam) and glass moulds or dies requiring precision manufacture. A normal range of tool room equipment would be used which may include lathe, mills, copy/duplicator, grinders, EDM and wire cut equipment, precision measurement, hand and power tools. Where simple welding or brazing skills are required, see Unit 5.12A (Perform routine manual metal arc welding), Unit 5.50A (Perform routine gas metal arc welding) and Unit 5.6A (Perform brazing and/or silver soldering) as appropriate.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the manufacture of tools, gauges and dies or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.15A A Tool and die maintenance

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Notes - Where simple welding or brazing skills are required, see Unit 5.12A (Perform routine manual arc welding) and Unit 5.6A (Perform brazing and/or silver soldering).

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

6.7A Perform basic incidental heat/quenching, tempering and annealing

7.5A Perform general machining

7.6A Perform lathe operations

7.7A Perform milling operations

7.8A Perform grinding operations

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.3A Precision mechanical measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.55A Dismantle, replace and assemble engineering components

Element 18.15A.1 Identifies and analyses defects in tooling

Criteria 18.15A.1.1

Defects determined from any of the following: production components produced, production reports or tool inspections.

Assessor guide: observe that –

All relevant information with respect to defective tooling is obtained in accordance with workplace procedures. The defective tooling is examined for signs of breakage, wear, etc.

Assessor guide: confirm that –

Common tooling defects can be identified from a range of sample products/components. The probable causes of tooling failure can be identified. The reasons for selecting the probable causes of tooling failure can be explained.

Criteria 18.15A.1.2

Sequence of maintenance operations planned.

Assessor guide: observe that –

A sequential plan has been prepared for the repair/maintenance of the defective tooling and where appropriate, the plan is documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for establishing a sequential plan for the repair/ maintenance of defective tooling can be given. Where appropriate, the procedures for documented plans for the repair/ maintenance of defective tooling can be identified.

Element 18.15A.2 Disassembles and assesses tooling components**Criteria 18.15A.2.1**

Disassemble tooling and assess condition of components against prints, drawings, manufacturer's drawings etc.

Assessor guide: observe that –

The defective tooling is disassembled in accordance with acceptable tool making techniques and procedures. All relevant drawings, specifications and sample products/components obtained in accordance with work place procedures. All tooling components are checked for conformance to specifications.

Assessor guide: confirm that –

The procedures for disassembling defective tooling can be identified. The specifications of all tooling components can be identified. The precision instruments to be used to check tooling components for conformance to specification can be identified. The reasons for selecting the chosen precision instruments can be explained.

Criteria 18.15A.2.2

Worn/damaged parts replaced/reconditioned.

Assessor guide: observe that –

Worn/damaged components are marked for repair or replacement in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for identifying worn/damaged tooling components for repair or replacement can be identified. The reasons for deciding to repair or replace worn/damaged components can be given.

Element 18.15A.3 Obtains and prepares replacement materials**Criteria 18.15A.3.1**

Materials obtained to meet tooling requirements.

Assessor guide: observe that –

Where appropriate, tooling components are tested for hardness in accordance with standard operating procedures. The appropriate materials are obtained for manufacture of replacement tooling components in accordance with standard operating procedures.

Assessor guide: confirm that –

The appropriate materials for each component of the tooling to be replaced can be identified. The required physical properties of the tooling to be replaced can be identified. The reasons for selecting the chosen materials can be explained in terms of: - strength - durability - component finish - heat treatment requirements - availability. The procedures for hardness testing materials can be identified.. The procedures for obtaining tooling materials can be identified.

Element 18.15A.4 Manufacture/repair tooling components

Criteria 18.15A.4.1

Appropriate hand and hand held power tools are selected and used.

Assessor guide: observe that –

The appropriate hand and handheld power tools are used to fashion/manufacture tooling components to specification. Where appropriate, sample components or sections are utilised to test the tooling components being manufactured.

Assessor guide: confirm that –

The hand and handheld power tools to be used to fashion/manufacture the required tooling components can be identified. The reasons for selecting the chosen hand and hand-held power tools can be given.

Criteria 18.15A.4.2

Appropriate machining process chosen from a range of standard tool room machines.

Assessor guide: observe that –

The tooling components are shaped/ produced to specifications using appropriate machines and machining processes.

Assessor guide: confirm that –

The appropriate machines and machining processes to shape/produce the required tooling components can be identified. The reasons for selecting the chosen machines and machining processes can be given.

Criteria 18.15A.4.3

Machining parameters set to produce components to specification.

Assessor guide: observe that –

Assessor guide: confirm that –

The effect of machining parameters on the surface finish and tolerances achievable from machining processes can be explained. The machining parameters appropriate to given machining tasks and specifications can be identified. The reasons for selecting the chosen machining parameters can be given.

Criteria 18.15A.4.4

Where appropriate heat treatment initiated according to specification.

Assessor guide: observe that –

Assessor guide: confirm that –

Where appropriate, the tool steel is heat treated in accordance with heat treatment procedures and specifications. Where appropriate, the heat treatment of tooling components initiated in accordance with standard operating procedures can be identified. The heat treatment requirements of a range of given tool steels to achieve specified hardness can be identified. The procedures for heat treating tool steels can be identified. Where appropriate, the procedures for initiating the heat treatment of tool steels can be identified.

Element 18.15A.5 Assemble tooling components**Criteria 18.15A.5.1**

Using acceptable tool making techniques and procedures, tooling components checked and assembled correctly in conformance with specifications.

Assessor guide: observe that –

All tooling components are assembled and fitted to specification using acceptable tool making techniques and procedures.

Assessor guide: confirm that –

The procedures for fitting/ assembling the tooling components can be identified. The precautions to be taken when fitting/assembling tooling components can be given.

Element 18.15A.6 Measure production components**Criteria 18.15A.6.1**

Production components are checked with precision instruments to ensure conformance to specifications as required.

Assessor guide: observe that –

The first-off component/product is checked using appropriate precision instruments for conformance to specification.

Assessor guide: confirm that –

The appropriate precision instruments for checking the components produced can be identified. The specifications of the finished product can be identified.

Element 18.15A.7 Identify potential production/maintenance problems**Criteria 18.15A.7.1**

Conditions leading to tooling failure identified and recorded.

Assessor guide: observe that –

Where appropriate, the conditions that lead to the failure of the given set of tooling are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The common causes of tooling failure can be identified. The procedures for documenting tooling failures can be identified. The conditions leading to the failure of a given set of tooling can be identified. The reasons for selecting the chosen mode of failure can be explained.

Criteria 18.15A.7.2

Recurrent faults identified and solutions initiated.

Assessor guide: observe that –

Where appropriate, design modifications/alterations to rectify recurring faults or failure trends are initiated in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, previous faults with the given set of tooling can be identified. Where appropriate, any commonalities of causes of failures or trends/events associated with tooling failure can be identified. Appropriate solutions can be proposed for a range of recurrent faults that may occur in tooling. The reasons for selecting the chosen solutions can be explained. The procedures for initiating modifications/alterations to tooling design can be identified.

Range statement

This standard may be applied in a tool room situation which involves a great deal of autonomy based on a sound knowledge of the operation of production tooling. The tooling being maintained may include any of the following: press tools, plastic moulds, forging dies, die casting, or jigs and fixtures, gauges etc. requiring precision repair. For simple maintenance not requiring precision repair, see Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components). Normal range of tool room equipment would be used which may include lathes, mills, grinders, hand and power tools used for precision work.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance of tools and dies or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.16B A Analyse plant and equipment condition monitoring results

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.14C5 Use graphical techniques and perform simple statistical computations

12.3A Precision mechanical measurement

18.3A Use tools for precision work

18.55A Dismantle, replace and assemble engineering components

2.7C10 Perform computations - basic

9.1A Draw and interpret sketch

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

2.8C10 Perform computations

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.10A Equipment condition monitoring and recording

Element 18.16B.1 Analyse condition monitoring results

Criteria 18.16B.1.1

Records/graphs/results of condition monitoring examined, analysed and problem areas identified.

Assessor guide: observe that –

The results of condition monitoring of plant/equipment are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The operational specifications of the plant/equipment being monitored can be identified. Any trends and/or deviations from operational specifications can be identified.

Criteria 18.16B.1.2

Necessary calculations/computations undertaken.

Assessor guide: observe that –

The appropriate calculations are performed using the condition monitoring data collected.

Assessor guide: confirm that –

The calculations to be applied to condition monitoring results to enable the collected data to be analysed can be identified. The reasons for undertaking the identified calculations can be given.

Criteria 18.16B.1.3

Appropriate reports/determinations of analyses undertaken to prescribed site procedure.

Assessor guide: observe that –

Reports based on the analysis of the condition monitoring data are prepared in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting the analysis of condition monitoring data can be given.

Element 18.16B.2 Develop recommendations**Criteria 18.16B.2.1**

Recommendations developed based on previous history, results, specifications, legislative requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The previous history of the plant/equipment being monitored can be identified. Any relevant legislative requirements can be identified. The operational specifications of the plant/equipment can be identified. The recommendations with respect to action to be taken can be identified. The reasons for the recommendations made can be given. The expected effect of the recommendations on the operational performance of the plant/equipment can be given.

Criteria 18.16B.2.2

Report recommendations to appropriate authority.

Assessor guide: observe that –

The recommendations are reported to the appropriate authority.

Assessor guide: confirm that –

The procedures for reporting recommendations can be given. The authority/person to whom the recommendations are to be made can be identified.

Range statement

Analysis/recommendations undertaken autonomously. This unit is intended to apply to the analysis of data generated by a continuous plant and equipment condition monitoring program. The analysis of condition monitoring and production of recommendations is undertaken autonomously. Recommendations may be in writing or verbal. If production of formal reports is required, then appropriate communication units should be accessed.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the analysis of plant and equipment monitoring results or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.17B B Modify mechanical systems and equipment

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 8

This unit covers the competencies required to determine the requirements of the modification, undertake the modification and evaluate the modified mechanical system/equipment. Modifications covered by this unit are changes to plant and equipment which lead to desired changes in performance of the system or equipment.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.14C5 Use graphical techniques and perform simple statistical computations

12.3A Precision mechanical measurement

18.3A Use tools for precision work

18.7A Maintain and repair mechanical drives and mechanical transmission assemblies

18.11A Shut down and isolate machines/equipment

2.7C10 Perform computations - basic

9.1A Draw and interpret sketch

18.1A Use hand tools

18.5A Bearings - fault diagnosis installation and removal

18.9A Levelling and alignment of machines and engineering components

18.16B Analyse plant and equipment condition monitoring results

2.8C10 Perform computations

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.10A Equipment condition monitoring and recording

18.55A Dismantle, replace and assemble engineering components

Element 18.17B.1 Determine modification requirements

Criteria 18.17B.1.1

Maintenance reports and system output information analysed

Assessor guide: observe that –

All relevant maintenance reports, production data, drawings, circuits, condition monitoring data, specifications, instructions, etc. are obtained in accordance with work place procedures

Assessor guide: confirm that –

The desired changes in performance of the plant/equipment can be identified

Criteria 18.17B.1.2

Defective components, sub-assemblies and design faults identified

Assessor guide: observe that –

The plant/equipment is inspected for correct location, alignment, operation, performance and conformance to specifications using appropriate maintenance techniques and procedures

Assessor guide: confirm that –

The specifications of the plant/ equipment and its performance requirements can be identified The procedures for inspecting the plant/equipment against specifications can be given Where appropriate, defective components, sub-assemblies and design faults can be identified The effect of defective components, sub-assemblies and design faults on the performance of plant/equipment can be explained

Criteria 18.17B.1.3

Corrective action plan developed

Assessor guide: observe that –

The planned modifications are documented and approved in conformance to standard operating procedures

Assessor guide: confirm that –

The action to be taken to achieve the desired changes in performance can be identified The reasons for taking the action identified can be explained The procedures for documenting the proposed modifications to the plant/equipment can be identified The authority from whom approval to undertake the proposed modifications is to be obtained can be identified

Element 18.17B.2 Undertake standard modifications to mechanical systems and equipment**Criteria 18.17B.2.1**

Modification options for overcoming parts failures, design faults identified

*Assessor guide: observe that –**Assessor guide: confirm that –*

Typical part failure modes can be identified The causes of those part failures can be given The action to be taken to correct part failures and design faults can be explained For given part failures and/or design faults, the options for modifying the plant/equipment can be identified and explained

Criteria 18.17B.2.2

Failed components, sub-assembly replacements selected from manufacturer's catalogue

*Assessor guide: observe that –**Assessor guide: confirm that –*

For given components and/or sub-assemblies, appropriate standard replacements can be identified from manufacturers'/suppliers' catalogues

Criteria 18.17B.2.3

Modification designs developed in conjunction with, and approved by appropriate authority

Assessor guide: observe that –

Where appropriate, drawings of the modified components and/or sub-assemblies are prepared and authorised in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for modifying drawings of components and/or sub-assemblies can be identified The procedures for authorising changes made to drawings of plant/ equipment can be identified

Criteria 18.17B.2.4

Modification recorded to standard operating procedure

Assessor guide: observe that –

The approved modifications undertaken are recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording modifications undertaken can be identified

Element 18.17B.3 Evaluate modified mechanical system/equipment**Criteria 18.17B.3.1**

Alterations evaluated for effectiveness and efficiency

Assessor guide: observe that –

The modified plant/equipment is operated and its performance monitored to ensure conformance with the required performance specifications

Assessor guide: confirm that –

The procedures for checking the operation of the modified plant/ equipment against required performance specifications can be explained The effectiveness/efficiency of the modifications can be identified

Criteria 18.17B.3.2

Effectiveness/efficiency reported and recorded

Assessor guide: observe that –

Where appropriate, the efficiency/ effectiveness of the modifications undertaken are reported/recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for reporting/ recording the effectiveness/ efficiency of the modifications in achieving the desired performance can be identified

Criteria 18.17B.3.3

Results checked against specifications

*Assessor guide: observe that –**Assessor guide: confirm that –*

The tests to be undertaken to check the performance of the modified plant/equipment can be identified The test results have been compared with the specification of the modified plant/equipment

Criteria 18.17B.3.4

Additional modification/changes if required, recommended

Assessor guide: observe that –

Where appropriate, further modifications to the plant/equipment are recommended in accordance with standard operating procedures

Assessor guide: confirm that –

Where appropriate, the need for further modifications to the plant/ equipment can be explained in terms of the effect of the modifications undertaken on the plant/equipment and the required performance specifications

Range statement

Modifications covered by this unit are changes to plant and equipment which lead to desired changes in performance. Maintenance schedules are required for mechanical machines and systems, including stationary, stand-alone machines, and manual, semi-automatic and automatic process systems. Work is undertaken autonomously or in a team environment.

Analysis functions include interpretation and integration of data from process control instrumentation and condition monitoring systems. Modifications include approved minor design changes and/or replacement of components or sub-assemblies using equivalent parts listed in manufacturer's catalogue. This unit applies to existing equipment or the installation of new or replacement equipment. Where drafting skills to Australian Standard 1100 are required, see Unit 9.3A (Prepare basic engineering drawing).

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the modification of mechanical systems and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.18A B Maintain pneumatic system components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.18A.1 Check pneumatic system components

Criteria 18.18A.1.1

System components identified correctly.

Assessor guide: observe that –

Assessor guide: confirm that –

The full range of pneumatic system components can be identified.

Criteria 18.18A.1.2

The characteristics and operational function of each system component are understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The characteristics and operational function of each pneumatic system component can be identified.

Criteria 18.18A.1.3

The operational function of each component inspected and tested.

Assessor guide: observe that –

A range of pneumatic system components are inspected and tested in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting and testing pneumatic system components can be identified. The equipment required to test pneumatic system components can be identified.

Criteria 18.18A.1.4

Correct operation of each component assessed against specifications.

Assessor guide: observe that –

All relevant data sheets and specifications are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of each pneumatic system component can be identified. Pneumatic components not operating in accordance with specifications can be identified. The reason for pneumatic components not operating in accordance with specification can be given.

Element 18.18A.2 Identify, repair/replace faulty pneumatic system components

Criteria 18.18A.2.1

Faulty system components localised and malfunction confirmed by inspection and testing using fluid power principles, procedures and safety requirements.

Assessor guide: observe that –

All relevant pneumatic circuits, drawings, instructions, manuals and data sheets obtained in accordance with workplace procedures. The individual components within the pneumatic system are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The individual components within the pneumatic system can be identified. The safety procedures to be followed when working on pneumatic components can be identified. Where appropriate, faulty system components can be identified.

Criteria 18.18A.2.2

Faulty system components dismantled and repaired to manufacturer's/site specifications.

Assessor guide: observe that –

Faulty system components are dismantled and repaired to manufacturer's/site specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for repairing pneumatic system components can be identified.

Criteria 18.18A.2.3

Replacement parts selected from manufacturer's catalogue according to required specifications.

Assessor guide: observe that –

Where appropriate, replacement parts are selected from the manufacturers'/suppliers' catalogues in conformance with specifications.

Assessor guide: confirm that –

The parts to be replaced can be identified. The reasons for replacing the parts identified can be given.

Criteria 18.18A.2.4

System components reassembled and tested for correct operation assessed against specifications.

Assessor guide: observe that –

The pneumatic system components are reassembled in accordance with standard operating procedures. The pneumatic components are tested for correct operation and conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.18A.2.5

Correct operation of the pneumatic system confirmed to standard operating procedure.

Assessor guide: observe that –

The operation of the pneumatic system is checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation of the pneumatic system can be identified. The procedures for checking pneumatic system operation can be given.

Criteria 18.18A.2.6

Appropriate follow up procedures adopted according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, repaired/replaced pneumatic system components are checked for correct operation in accordance with standard follow up procedures.

Assessor guide: confirm that –

Where appropriate, the follow up procedures with respect to repaired/replaced pneumatic system components can be identified.

Criteria 18.18A.2.7

Where appropriate, service reports completed using standard operating procedures.

Assessor guide: observe that –

Where appropriate, service reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The reporting/recording procedures can be identified.
The reasons for completing service reports for pneumatic systems components repaired/replaced can be explained.

Range statement

Work undertaken using predetermined standards of safety, quality and work procedures. Pneumatic system components identified, inspected and assessed using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams. Repairs and replacements to site or manufacturers specifications. Pneumatic system components may include high pressure seals, linear, rotary actuators, directional control valves, proportional valves, timers, counters, sensors, pneumatic motors, pressure control valves, lines, hoses and other associated equipment. Correct operational function of equipment components confirmed and commissioned in conformance to specification, using standard operating procedures. For straightforward removal/replacement of components from a pneumatic system, see Unit 18.55A (Dismantle replace and assemble engineering components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance of pneumatic system components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.19A A Maintain and repair pneumatic systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.18A Maintain pneumatic system components

18.55A Dismantle, replace and assemble engineering components

Element 18.19A.1 Undertake preventative maintenance checks/adjustments on pneumatic systems

Criteria 18.19A.1.1

System components, assemblies or sub-assemblies are identified and prepared for inspection/preventative maintenance.

Assessor guide: observe that –

Pneumatic system components are prepared for inspection/preventative maintenance in accordance with work site procedures.

Assessor guide: confirm that –

Common pneumatic system components can be identified.

Criteria 18.19A.1.2

Visual inspection and testing with appropriate test equipment is carried out according to fluid power principles, procedures and safety requirements.

Assessor guide: observe that –

The pneumatic system and its components are inspected and tested safely in accordance with work site procedures.

Assessor guide: confirm that –

Pneumatic system/component faults that can be determined by visual inspection can be identified. The application of common pneumatic system/component test equipment can be given.

Criteria 18.19A.1.3

Scheduled preventative maintenance tasks are performed including obvious repairs and adjustments according to manufacturer's specification using fluid power techniques/practices.

Assessor guide: observe that –

Scheduled preventative maintenance tasks are performed in accordance with work site procedures. Where appropriate, obvious repairs are performed on the pneumatic system/components in accordance with work site procedures. Where appropriate, pneumatic system/components are adjusted to return the system to manufacturer's specification in accordance with work site procedures.

Assessor guide: confirm that –

Scheduled preventative maintenance tasks can be identified. The manufacturer's specifications can be identified.

Element 18.19A.2 Undertake fault finding on pneumatic systems

Criteria 18.19A.2.1

Designated pneumatic system components are identified and a visual inspection of the system is carried out for the collection of fault finding data.

Assessor guide: observe that –

The pneumatic system and its components are visually inspected for indications of correct/incorrect operation in accordance with work site procedures.

Assessor guide: confirm that –

Common pneumatic system and component faults can be identified.

Criteria 18.19A.2.2

System operator consulted where appropriate and additional data collected.

Assessor guide: observe that –

Where appropriate, the system operator is consulted with respect to the fault being investigated.

Assessor guide: confirm that –

Criteria 18.19A.2.3

Maintenance reports and preventative maintenance schedules checked and reviewed for additional fault finding data.

Assessor guide: observe that –

Maintenance reports and preventative maintenance schedules are obtained in accordance with work site procedures.

Assessor guide: confirm that –

Any previous faults in the pneumatic system/components can be identified. Any previous maintenance carried out on the pneumatic system/components can be identified.

Criteria 18.19A.2.4

Using fluid power principles checks and tests are undertaken using appropriate test equipment and techniques.

Assessor guide: observe that –

Appropriate test equipment and techniques are used to check/test pneumatic system/component operation in accordance with work site procedures.

Assessor guide: confirm that –

Typical checks/tests that can be carried out on pneumatic systems/components and their application can be identified. Pneumatic system/component tests and testing techniques can be identified.

Criteria 18.19A.2.5

Faults and malfunctions are identified and verified.

Assessor guide: observe that –

Apparent faults/malfunctions are verified/confirmed in accordance with work site procedures.

Assessor guide: confirm that –

Apparent faults/malfunctions can be identified.

Criteria 18.19A.2.6

Faults and malfunctions documented or reported by appropriate means to designated personnel and actioned.

Assessor guide: observe that –

All verified faults/malfunctions are documented or reported in accordance with work site procedures. The repair/overhaul of the pneumatic system is initiated in accordance with work site procedures.

Assessor guide: confirm that –

The documentation/reporting requirements with respect to verified faults/malfunctions can be identified. The procedures for initiating repair and/or overhaul of the pneumatic system can be identified.

Element 18.19A.3 Repair and/or overhaul pneumatic power system**Criteria 18.19A.3.1**

System or sub-assembly isolated safely and residue pressure discharged in accordance with prescribed procedures or checked for correct isolation.

Assessor guide: observe that –

The pneumatic system is isolated and depressurised safely in accordance with work site procedures. The pneumatic system is checked to ensure isolation and depressurisation in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with working on pneumatic systems/components can be identified. The procedures for isolating and depressurising pneumatic systems can be identified.

Criteria 18.19A.3.2

Isolated system or sub-assembly tagged according to designated means.

Assessor guide: observe that –

The isolated pneumatic system is tagged in accordance with work site procedures.

Assessor guide: confirm that –

The tagging requirements for isolated systems can be identified.

Criteria 18.19A.3.3

Component or sub-assembly removed from system using correct removal principles and techniques.

Assessor guide: observe that –

The pneumatic components/sub-assembly are removed from the system in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.19A.3.4

Components or sub-assemblies dismantled, examined and verified for replacement, overhaul or repair, using correct and appropriate techniques and procedures.

Assessor guide: observe that –

The pneumatic components/sub-assemblies are dismantled in accordance with work site procedures. The pneumatic components/sub-assemblies and their parts are examined for conformance to specification. Components outside specification and not repairable are marked for replacement in accordance with work site procedures. Components outside specification and able to be returned to specification are marked for repair/overhaul in accordance with work site procedures.

Assessor guide: confirm that –

The structure of typical pneumatic components can be identified. The specifications of pneumatic components and their constituent parts can be identified. The reasons for deciding to repair, replace or overhaul pneumatic components can be given.

Criteria 18.19A.3.5

Replacement items selected from manufacturers catalogues to meet specifications.

Assessor guide: observe that –

Replacement parts selected from manufacturers' catalogues in compliance with specifications.

Assessor guide: confirm that –

Criteria 18.19A.3.6

Faulty items repaired/overhauled, using correct and appropriate principles, techniques and procedures.

Assessor guide: observe that –

Faulty items repaired/overhauled in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate repair/overhaul procedures can be identified.

Criteria 18.19A.3.7

Component or sub assembly items refitted to equipment and tested for correct operation assessed against specifications.

Assessor guide: observe that –

The pneumatic component/sub-assembly is refitted into the system in accordance with work site procedures. The pneumatic component/sub-assembly is tested for correct operation and compliance to specifications in accordance with work site procedures.

Assessor guide: confirm that –

Element 18.19A.4 Recommission pneumatic system**Criteria 18.19A.4.1**

System or sub-assembly recommissioned according to prescribed procedures, to specifications.

Assessor guide: observe that –

The pneumatic system/sub-assembly is recommissioned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

System recommissioning procedures can be identified. The pneumatic system operational specifications can be identified.

Criteria 18.19A.4.2

Using fluid power principles and system application techniques correct operation of the system is verified.

Assessor guide: observe that –

The pneumatic system/sub-assembly is checked/tested for correct operation in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.19A.4.3

Appropriate follow up procedures are instigated.

Assessor guide: observe that –

Where appropriate, follow up procedures are initiated in accordance with work site procedures.

Assessor guide: confirm that –

Any appropriate follow up maintenance or operational checks can be identified.

Criteria 18.19A.4.4

Maintenance records/service reports updated and completed by appropriate designated means.

Assessor guide: observe that –

All maintenance records/reports are updated and completed in accordance with work site procedures.

Assessor guide: confirm that –

The maintenance recording/reporting requirements can be identified. The consequences of inaccurate or incomplete recording/reporting of maintenance/service activities can be given.

Range statement

Work undertaken autonomously or in a team environment. This unit relates to the use of pneumatic test equipment including leak testers, escape rate gauges, hand held pressure testers and other appropriate equipment. The use of hand tools, power tools and specialist tools is included. Work tasks include the preventative maintenance, testing diagnostic fault finding, adjustment, repair, replacement and overhauling of pneumatic systems to predetermined standards of quality, safety and work practices and procedures. Pneumatic components identified, inspected and correct operational function assessed using fluid power principles to predetermined specifications, interpreted from data sheets, manufacturer's catalogues, circuit diagrams and engineering drawings. Preventative maintenance schedules undertaken on a periodic basis and appropriate documentation maintained. Tests, checks, adjustments, repair, replacement and overhaul undertaken on pneumatic assemblies/sub-assemblies, stationary/mobile equipment, pneumatic power tools to site or manufacturer's specifications. Appropriate follow up procedures instigated, adopted and appropriate documentation maintained. Where required, work is undertaken to legislative and regulatory requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of pneumatic systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.20A B Maintain hydraulic system components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.20A.1 Check hydraulic system components

Criteria 18.20A.1.1

System components identified correctly.

Assessor guide: observe that –

Assessor guide: confirm that –

The full range of hydraulic system components can be identified.

Criteria 18.20A.1.2

The characteristics and operational function of each system component are understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The characteristics and operational function of each hydraulic system component can be identified.

Criteria 18.20A.1.3

The operational function of each component inspected and tested.

Assessor guide: observe that –

A range of hydraulic system components are inspected and tested in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting and testing hydraulic system components can be identified. The equipment required to test hydraulic system components can be identified.

Criteria 18.20A.1.4

Correct operation of each component assessed against specifications.

Assessor guide: observe that –

All relevant data sheets and specifications are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of each hydraulic system component can be identified. Hydraulic components not operating in accordance with specifications can be identified. The reasons for hydraulic components not operating in accordance with specification can be given.

Element 18.20A.2 Identify, repair/replace faulty hydraulic system components

Criteria 18.20A.2.1

Faulty system components localised and malfunction confirmed by inspection and testing using fluid power principles, procedures and safety requirements.

Assessor guide: observe that –

All relevant hydraulic circuits, drawings, instructions, manuals and data sheets obtained in accordance with workplace procedures. The individual components within the hydraulic system are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The individual components within the hydraulic system can be identified. The safety procedures to be followed when working on hydraulic components can be identified. Where appropriate, faulty system components can be identified.

Criteria 18.20A.2.2

Faulty system components dismantled and repaired to manufacturer's/site specifications.

Assessor guide: observe that –

Faulty system components are dismantled and repaired to manufacturer's/site specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for repairing hydraulic system components can be identified.

Criteria 18.20A.2.3

Replacement parts selected from manufacturer's catalogues according to required specifications.

Assessor guide: observe that –

Where appropriate, replacement parts are selected from the manufacturers'/suppliers' catalogues in conformance with specifications.

Assessor guide: confirm that –

The parts to be replaced can be identified. The reasons for replacing the parts identified can be given.

Criteria 18.20A.2.4

System components reassembled and tested for correct operation and assessment against specifications.

Assessor guide: observe that –

The hydraulic system components are reassembled in accordance with standard operating procedures. The hydraulic components are tested for correct operation and conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation of the hydraulic system can be identified. The procedures for checking hydraulic system operation can be given.

Criteria 18.20A.2.5

Correct operation of the hydraulic system confirmed to designated operating procedure.

Assessor guide: observe that –

The operation of the hydraulic system is checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation of the hydraulic system can be identified. The procedures for checking hydraulic system operation can be given.

Criteria 18.20A.2.6

Appropriate follow up procedures adopted according to standard operating procedure.

Assessor guide: observe that –

Where appropriate, repaired/replaced hydraulic system components are checked for correct operation in accordance with standard follow up procedures.

Assessor guide: confirm that –

Where appropriate, the follow up procedures with respect to repaired/replaced hydraulic system components can be identified.

Criteria 18.20A.2.7

Where appropriate, service reports completed using standard operating procedures.

Assessor guide: observe that –

Where appropriate, service reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The reporting/recording procedures can be identified. The reasons for completing service reports for hydraulic system components repaired/replaced can be explained.

Range statement

Work undertaken using predetermined standards of safety, quality and work procedures. Hydraulic system components identified, inspected and assessed using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams. Repairs and replacements to site or manufacturer's specifications. Hydraulic system components may include high pressure seals, linear, rotary actuators, directional control valves, proportional valves, timers, counters, sensors, pumps, pressure control valves, lines, hoses and other associated equipment. Correct operational function of equipment components confirmed and commissioned in conformance to specifications, using standard operating procedures. For straightforward removals/replacement of components from a Hydraulic system, see Unit 18.55A (Dismantle replace and assemble engineering components).

Evidence guide

Unit MEM 18.21A A Maintain and repair hydraulic systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.20A Maintain hydraulic system components

18.55A Dismantle, replace and assemble engineering components

Element 18.21A.1 Undertake preventative maintenance checks/adjustments on hydraulic systems

Criteria 18.21A.1.1

System components, assemblies or sub-assemblies are identified and prepared for inspection/preventative maintenance.

Assessor guide: observe that –

Hydraulic system components are prepared for inspection/preventative maintenance in accordance with work site procedures.

Assessor guide: confirm that –

Common hydraulic system components can be identified.

Criteria 18.21A.1.2

Visual inspection and testing with appropriate test equipment is carried out according to fluid power principles, procedures and safety requirements.

Assessor guide: observe that –

The hydraulic system and its components are inspected and tested safely in accordance with work site procedures.

Assessor guide: confirm that –

Hydraulic system/component faults that can be determined by visual inspection can be identified. The application of common hydraulic system/component test equipment can be given.

Criteria 18.21A.1.3

Scheduled preventive maintenance tasks are performed including obvious repairs and adjustments according to manufacturer's specification using fluid power techniques/practices.

Assessor guide: observe that –

Scheduled preventative maintenance tasks are performed in accordance with work site procedures. Where appropriate, obvious repairs are performed on the hydraulic system/components in accordance with work site procedures. Where appropriate, hydraulic system/components are adjusted to return the system to manufacturer's specification in accordance with work site procedures.

Assessor guide: confirm that –

Schedules preventative maintenance tasks can be identified. The manufacturer's specifications can be identified.

Element 18.21A.2 Undertake fault finding on hydraulic systems**Criteria 18.21A.2.1**

Designated hydraulic system components are identified and a visual inspection of the system is carried out for the collection of fault finding data.

Assessor guide: observe that –

The hydraulic system and its components are visually inspected for indications of correct/incorrect operation in accordance with work site procedures.

Assessor guide: confirm that –

Common hydraulic system and component faults can be identified.

Criteria 18.21A.2.2

System operator consulted where appropriate and additional data collected.

Assessor guide: observe that –

Where appropriate, the system operator is consulted with respect to the fault being investigated.

Assessor guide: confirm that –

Criteria 18.21A.2.3

Maintenance reports and preventative maintenance schedules checked and reviewed for additional fault finding data.

Assessor guide: observe that –

Maintenance reports and preventative maintenance schedules are obtained in accordance with work site procedures.

Assessor guide: confirm that –

Any previous faults in the hydraulic system/components can be identified. Any previous maintenance carried out on the hydraulic system/components can be identified.

Criteria 18.21A.2.4

Using fluid power principles, checks and tests are undertaken using appropriate test equipment and techniques.

Assessor guide: observe that –

Appropriate test equipment and techniques are used to check/test hydraulic system/component operation in accordance with work site procedures.

Assessor guide: confirm that –

Typical checks/tests that can be carried out on hydraulic systems/components and their application can be identified. Hydraulic system/component test and testing techniques can be identified.

Criteria 18.21A.2.5

Faults and malfunctions are identified and verified.

Assessor guide: observe that –

Apparent faults/malfunctions are verified/confirmed in accordance with work site procedures.

Assessor guide: confirm that –

Apparent faults/malfunctions can be identified.

Criteria 18.21A.2.6

Faults and malfunctions documented or reported by appropriate means to designated personnel and actioned.

Assessor guide: observe that –

All verified faults/malfunctions are documented or reported in accordance with work site procedures. The repair/overhaul of the hydraulic system is initiated in accordance with work site procedures.

Assessor guide: confirm that –

The documentation/reporting requirements with respect to verified faults/malfunctions can be identified. The procedures for initiating repair and/or overhaul of the hydraulic system can be identified.

Element 18.21A.3 Repair and/or overhaul hydraulic system

Criteria 18.21A.3.1

System or sub-assembly isolated safely and residue pressure discharged in accordance with prescribed procedure and checked for correct isolation.

Assessor guide: observe that –

The hydraulic system is isolated and depressurised safely in accordance with work site procedures. The hydraulic system is checked to ensure isolation and depressurisation in accordance with work site procedures.

Assessor guide: confirm that –

The hazards associated with working on hydraulic systems/components can be identified. The procedures for isolating and depressurising hydraulic systems can be identified.

Criteria 18.21A.3.2

Isolated system or sub-assembly tagged according to designated means.

Assessor guide: observe that –

The isolated hydraulic system is tagged in accordance with work site procedures.

Assessor guide: confirm that –

The tagging requirements for isolated systems can be identified.

Criteria 18.21A.3.3

Components or sub-assembly removed from system using correct removal principles and techniques.

Assessor guide: observe that –

The hydraulic components/sub-assembly are removed from the system in accordance with work site procedures.

Assessor guide: confirm that –

The structure of typical hydraulic components can be identified. The specifications of hydraulic components and their constituent parts can be identified.

Criteria 18.21A.3.4

Components or sub-assemblies dismantled, examined and verified for replacement, overhaul or repair, using correct and appropriate techniques and procedures.

Assessor guide: observe that –

The hydraulic components/sub-assemblies are dismantled in accordance with work site procedures. The hydraulic components/sub-assemblies and their parts are examined for conformance to specification. Components outside specification and not repairable are marked for replacement in accordance with work site procedures. Components outside specification and able to be returned to specification are marked for repair/overhaul in accordance with work site procedures.

Assessor guide: confirm that –

The structure of typical hydraulic components can be identified. The specifications of hydraulic components and their constituent parts can be identified.

Criteria 18.21A.3.5

Replacement items selected from manufacturer's catalogues to meet specifications.

Assessor guide: observe that –

Replacement parts selected from manufacturer's catalogues in compliance with specifications.

Assessor guide: confirm that –

Criteria 18.21A.3.6

Faulty items repaired/overhauled, using correct and appropriate principles, techniques and procedures.

Assessor guide: observe that –

Faulty items repaired/overhauled in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate repair/overhaul procedures can be identified.

Criteria 18.21A.3.7

Component or sub-assembly items refitted to equipment and tested for correct operation assessed against specifications.

Assessor guide: observe that –

The hydraulic component/sub-assembly is refitted into the system in accordance with work site procedures. The hydraulic component/sub-assembly is tested for correct operation and compliance with specifications in accordance with work site procedures.

Assessor guide: confirm that –

Element 18.21A.4 Recommission hydraulic system**Criteria 18.21A.4.1**

System or sub-assembly recommissioned according to prescribed procedures to specifications.

Assessor guide: observe that –

The hydraulic system/sub-assembly is recommissioned to specification in accordance with work site procedures.

Assessor guide: confirm that –

System recommissioning procedures can be identified. The hydraulic system operational specifications can be identified.

Criteria 18.21A.4.2

Using fluid power principles and system applications techniques correct operation of the system is verified.

Assessor guide: observe that –

The hydraulic system/sub-assembly is checked/tested for correct operation in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.21A.4.3

Appropriate follow up procedures are instigated.

Assessor guide: observe that –

Where appropriate, follow up procedures are initiated in accordance with work site procedures.

Assessor guide: confirm that –

Any appropriate follow up maintenance or operational checks can be identified.

Criteria 18.21A.4.4

Maintenance records/service reports updated and completed by appropriate designated means.

Assessor guide: observe that –

All maintenance records/reports are updated and completed in accordance with work site procedures.

Assessor guide: confirm that –

The maintenance recording/reporting requirements can be identified. The consequences of inaccurate or incomplete recording/reporting of maintenance/service activities can be given.

Range statement

Work undertaken autonomously or in a team environment. This unit relates to the use of hydraulic test equipment including leak testers, escape rate gauges, hand held pressure testers and other appropriate equipment. The use of hand tools, power tools and specialist tools included. Work tasks include the preventative maintenance, testing, diagnostic fault finding, adjustment, repair, replacement and overhauling of hydraulic systems to predetermined standards of quality, safety and work practices and procedures. Hydraulic components identified, inspected and correct operational function assessed using fluid power principles to predetermined specifications, interpreted from data sheets, manufacturer's catalogues, circuit diagrams and engineering drawings. Preventative maintenance schedules undertaken on a periodic basis and appropriate documentation maintained. Tests, checks, adjustments, repair, replacement and overhaul undertaken on hydraulic assemblies/sub-assemblies, stationary/mobile equipment, hydraulic power tools to site or manufacturers specifications. Appropriate follow up procedures instigated, adopted and appropriate documentation maintained. Where required, work is undertaken to legislative and regulatory requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining and repairing hydraulic systems, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.22A A Maintain/repair/replace fluid power controls

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.55A Dismantle, replace and assemble engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.18A Maintain pneumatic system components

9.2A Interpret technical drawing

18.3A Use tools for precision work

18.19A Maintain and repair pneumatic systems

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.55A Dismantle, replace and assemble engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.20A Maintain hydraulic system components

9.2A Interpret technical drawing

18.3A Use tools for precision work

18.21A Maintain and repair hydraulic systems

Element 18.22A.1 Install/replace fluid power systems and controls

Criteria 18.22A.1.1

Fluid power control principles and system/circuit diagrams interpreted and understood.

Assessor guide: observe that –

System/circuit diagrams, system operation and control data obtained in accordance with work site procedures.

Assessor guide: confirm that –

The system operational requirements and specifications can be identified. The application of common fluid power system components and controllers can be identified.

Criteria 18.22A.1.2

System/circuit components identified and inspected for compliance with specifications.

Assessor guide: observe that –

System/circuit components are checked/inspected for compliance with specifications.

Assessor guide: confirm that –

The system/circuit components can be identified.

Criteria 18.22A.1.3

Sequential installation undertaken according to manufacturer's specifications and standard operating procedure.

Assessor guide: observe that –

The installation of the fluid power system and controls is undertaken in accordance with manufacturer's specifications and work site procedures..

Assessor guide: confirm that –

Any special installation requirements can be identified.

Element 18.22A.2 Check and adjust fluid power system control sequence and operation**Criteria 18.22A.2.1**

Controls and system operation checked against operational specifications using appropriate test equipment and application principles/techniques.

Assessor guide: observe that –

Appropriate test equipment is used to check control and system operation against specification in accordance with work site procedures.

Assessor guide: confirm that –

Fluid power test equipment and application can be identified.

Criteria 18.22A.2.2

Adjustments performed to sequence system to meet/align to operational requirements and specifications.

Assessor guide: observe that –

Where appropriate, the system is adjusted to ensure that the sequence of operations conforms to operational requirements in accordance with work site procedures.

Assessor guide: confirm that –

The correct operational sequence of the system can be identified. Typical adjustments to correct sequencing variations from specification can be given.

Criteria 18.22A.2.3

Modifications/alterations recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

Any modifications/alterations to the system are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The consequences of not recording/reporting modifications to systems can be given. The procedures for recording/reporting modifications/alterations can be identified.

Criteria 18.22A.2.4

Controls and system operation checked and commissioned to specifications.

Assessor guide: observe that –

The operation of the controls and system is checked for conformance to specification. The system is commissioned in accordance with work site procedures.

Assessor guide: confirm that –

The operational and control specifications can be identified. The fluid power system commissioning procedures can be identified.

Element 18.22A.3 Fault find fluid power systems control circuit**Criteria 18.22A.3.1**

System/circuit diagrams, data sheets interpreted and understood.

Assessor guide: observe that –

All relevant system/circuit diagrams and data sheets are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The system components and their specifications can be identified.

Criteria 18.22A.3.2

System/circuit components identified and inspected.

Assessor guide: observe that –

The system/circuit components are checked/inspected for conformance to specifications.

Assessor guide: confirm that –

Criteria 18.22A.3.3

System/circuit traced and action of components diagnosed to identify and localise faults.

Assessor guide: observe that –

The system/circuit components are checked for correct operation in accordance with work site procedures. Components not conforming to operational specification identified and fault localised in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.22A.3.4

System/circuit parts tested using appropriate test equipment and application principles.

Assessor guide: observe that –

Appropriate tests are conducted on system/circuit parts in accordance with work site procedures.

Assessor guide: confirm that –

Common test equipment and its application can be identified.

Criteria 18.22A.3.5

System/circuit parts assessed against operational specifications.

Assessor guide: observe that –

System/circuit parts are checked for conformance to specifications.

Assessor guide: confirm that –

Criteria 18.22A.3.6

Fault condition localised at the component level.

Assessor guide: observe that –

Assessor guide: confirm that –

The component(s) not complying with operational specification can be identified.

Criteria 18.22A.3.7

Faulty condition evaluated, root cause analysed and corrective action planned.

Assessor guide: observe that –

An appropriate corrective action plan is documented in accordance with work site procedures.

Assessor guide: confirm that –

Typical causes of component failure can be given. The cause of the faulty condition in the component(s) can be identified. Appropriate procedures for rectifying the faulty condition can be identified.

Element 18.22A.4 Maintain, repair/replace system control components**Criteria 18.22A.4.1**

Correct maintenance procedures applied according to standard operating procedure.

Assessor guide: observe that –

Appropriate maintenance is carried out in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate maintenance schedule and procedures can be identified.

Criteria 18.22A.4.2

Repair procedures selected and applied using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

Where appropriate, control components repaired in accordance with work site procedures.

Assessor guide: confirm that –

Appropriate control component repair procedures can be identified.

Criteria 18.22A.4.3

Faulty items tested, repaired or replaced using sequential installation procedures according to manufacturer's recommendations.

Assessor guide: observe that –

Faulty items tested for conformance to specification in accordance with work site procedures. Repaired/replaced components installed in accordance with manufacturer's requirements and work site procedures.

Assessor guide: confirm that –

Any special installation requirements can be identified. Component and operational specifications can be identified. Typical test equipment and its application can be identified.

Criteria 18.22A.4.4

Replacement items selected from manufacturer's catalogues to meet specifications.

Assessor guide: observe that –

Where appropriate, replacement items are selected from manufacturer's catalogues in conformance with specifications.

Assessor guide: confirm that –

Criteria 18.22A.4.5

System control components reassembled using appropriate principles and procedures according to specifications required.

Assessor guide: observe that –

Where appropriate, control components reassembled in accordance with work site procedures.

Assessor guide: confirm that –

Element 18.22A.5 Check and adjust sequence of fluid power system controls**Criteria 18.22A.5.1**

Using circuit diagrams and fluid power system control principles identify circuit sensors and controllers.

Assessor guide: observe that –

Circuit diagrams are obtained in accordance with work site procedures.

Assessor guide: confirm that –

Circuit sensors and controllers can be identified.

Criteria 18.22A.5.2

Make necessary adjustments to sequence system control circuit to meet operational specification.

Assessor guide: observe that –

Where appropriate, the control system is adjusted to ensure conformance to operational specification in accordance with work site procedures.

Assessor guide: confirm that –

The operational requirements/specifications of the system can be identified. Common adjustments that can be made to control systems and their effect can be identified.

Criteria 18.22A.5.3

Correct operation of system control circuit checked against operational specification.

Assessor guide: observe that –

The operation of the control system is checked for conformance to operational specifications in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.22A.5.4

Correct operation confirmed.

Assessor guide: observe that –

Assessor guide: confirm that –

The correct operation of the control system has been confirmed.

Criteria 18.22A.5.5

Fluid power system controls commissioned to specifications.

Assessor guide: observe that –

The fluid power control system is commissioned to specification in accordance with work site procedures.

Assessor guide: confirm that –

The procedures for commissioning fluid power control systems can be identified.

Criteria 18.22A.5.6

Appropriate follow up procedures adopted.

Assessor guide: observe that –

Where appropriate, maintenance and/or service follow up procedures are initiated in accordance with work site procedures.

Assessor guide: confirm that –

Any maintenance/service follow up procedures can be identified.

Criteria 18.22A.5.7

Service/maintenance report completed to standard operating procedures.

Assessor guide: observe that –

Maintenance and/or service reports are completed in accordance with work site procedures.

Assessor guide: confirm that –

The maintenance/service recording/reporting requirements can be identified.

Range statement

Work undertaken using predetermined standards of quality, safety and work procedures, autonomously or in a team environment. This unit relates to the installation/repair/replacement and maintenance of fluid power systems controls. System circuit/components identified, traced, inspected and operational function assessed and verified using fluid power principles to predetermined specifications interpreted from data sheets and circuit diagrams. Installation, adjustment, repairs, replacements and overhauls undertaken to site or manufacturer's specifications using working knowledge and application of principles of fluid power systems control sequencing which may include : PLCs, relay logic control systems, unitised/modular sensors, transducers, timers, counters and associated equipment. If skills beyond the sequencing of PLC controls are required, then Units 10.4A (Enter and change programmable controller operational parameters) and/or Unit 10.5A (Commission programmable controller programs) should also be accessed. Correct operational function of the fluid power system controls verified and commissioned in conformance to specifications.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with maintaining, repairing and replacing fluid power controls, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.23B A Modify fluid power system operation

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

2.7C10 Perform computations - basic

2.8C10 Perform computations

2.14C5 Use graphical techniques and perform simple statistical computations

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

18.6A Dismantle/repair/replace/assemble and fit engineering components

18.10A Equipment condition monitoring and recording

18.16B Analyse plant and equipment condition monitoring results

18.18A Maintain pneumatic system components

18.19A Maintain and repair pneumatic systems

18.20A Maintain hydraulic system components

18.21A Maintain and repair hydraulic systems

18.22A Maintain/repair/replace fluid power controls

18.55A Dismantle, replace and assemble engineering components

Element 18.23B.1 Determine modification requirements

Criteria 18.23B.1.1

Service/maintenance reports and system output information interpreted and analysed correctly.

Assessor guide: observe that –

Service/maintenance reports and system output information is obtained in accordance with work site procedures.

Assessor guide: confirm that –

Fluid power system performance, faults history and variations from operational specification can be identified.

Criteria 18.23B.1.2

Using knowledge and principles of fluid power systems, defective components, sub-assemblies and design faults are identified.

Assessor guide: observe that –

Components/sub-assemblies are checked/tested for conformance to specification in accordance with work site procedures. Design faults are confirmed in accordance with work site procedures.

Assessor guide: confirm that –

Faults attributable to poor design can be identified. Defective components/sub-assemblies can be identified.

Criteria 18.23B.1.3

Defective components and design faults verified utilising appropriate means and techniques.

Assessor guide: observe that –

Components/sub-assemblies are checked/tested for conformance to specification in accordance with work site procedures. Design faults are confirmed in accordance with work site procedures.

Assessor guide: confirm that –

Appropriate test equipment and its application can be identified. Techniques for verifying design faults can be identified.

Criteria 18.23B.1.4

Corrective action plan researched and developed in consultation with appropriate personnel.

Assessor guide: observe that –

Relevant information with respect to the modification requirements is obtained. An appropriate action plan to overcome system problems is developed in accordance with work site procedures.

Assessor guide: confirm that –

Personnel to be consulted during the modification process can be identified. Sources of information relevant to the modification requirements identified.

Criteria 18.23B.1.5

Modification/design options investigated to overcome parts failure or design faults.

Assessor guide: observe that –

Assessor guide: confirm that –

The modification/design options available to overcome system faults can be identified. The cost associated with the available options can be determined. The benefits associated with the available options can be determined.

Criteria 18.23B.1.6

Most appropriate modifications design option developed, selected and specifications prepared.

Assessor guide: observe that –

The specifications pertaining to the selected modification/design option are determined in accordance with work site procedures.

Assessor guide: confirm that –

The most appropriate modification/design option can be identified. The procedures for undertaking the selected modification/design option can be identified.

Element 18.23B.2 Undertake modifications to fluid power systems**Criteria 18.23B.2.1**

Replacement components selected from manufacturer's catalogue to meet specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

Replacement components conforming to predetermined specifications can be identified from manufacturer's catalogues.

Criteria 18.23B.2.2

Modifications undertaken or delegated to appropriate personnel and supervised.

Assessor guide: observe that –

Where appropriate, modifications to fluid power systems undertaken in accordance with work site procedures. Where appropriate, work delegated to appropriate personnel and supervised in accordance with work site procedures.

Assessor guide: confirm that –

The modifications to be undertaken can be identified.

Criteria 18.23B.2.3

Modifications recorded and documented according to standard operating procedures.

Assessor guide: observe that –

The modifications to the fluid power system are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The requirements for recording/reporting modifications to fluid power systems can be identified.

Element 18.23B.3 Monitor and evaluate repaired or modified fluid power system**Criteria 18.23B.3.1**

Modified/repared fluid power systems monitored and operation system assessed for compliance with operational specifications.

Assessor guide: observe that –

The operation of the modified/repared fluid power system is checked for compliance with operational specifications in accordance with work site procedures.

Assessor guide: confirm that –

The revised operational specification of the fluid power system can be identified. The frequency of checks for compliance against operational specifications can be given.

Criteria 18.23B.3.2

Modifications/repairs evaluated for effectiveness, efficiency and compliance with operational specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

The effectiveness and efficiency of the modifications/repairs can be identified. Any variations from operational specifications can be identified.

Criteria 18.23B.3.3

Where applicable, further corrective action recommended to appropriate personnel, instigated and monitored until desired efficiencies/outcomes are achieved.

Assessor guide: observe that –

Where applicable, further corrective action initiated and monitored in accordance with work site procedures. Where appropriate, additional action is initiated until desired outcomes are achieved in accordance with work site procedures.

Assessor guide: confirm that –

Any further modifications/repairs that could improve the effectiveness and efficiency of the fluid power system can be identified. Personnel to whom recommendations are to be made can be identified.

Criteria 18.23B.3.4

Evaluation reports completed to standard operating procedure.

Assessor guide: observe that –

Where appropriate, evaluation reports on the modifications/repairs undertaken are completed in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate reporting requirements can be identified.

Range statement

Work undertaken autonomously or in a team environment. Analysis tasks performed utilising service/maintenance reports including interpretation and integration of data from process controls, instrumentation and condition monitoring systems in consultation with appropriate personnel. Using sound working knowledge and principles of fluid power systems, defective components, sub-assemblies, design faults are identified and appropriate redesign action commissioned. This action may include replacement of components, sub-assemblies using equivalent parts lists in manufacturer's catalogues. Preparation for redesign specifications, associated drawing changes/modifications, personally undertaken or delegated to appropriate personnel and supervised. All regulative, legislative requirements adhered to. Modifications covered by this unit are changes to fluid power systems and equipment that lead to desired changes in system performance. Where the modification requires the knowledge of PLC program installation or commissioning, then Unit 10.4A (Enter and change programmable controller operational parameters) and Unit 10.5A (Commission programmable controller programs) should also be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the modification of fluid power system operations, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.24A A Maintain and repair engine cooling systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

Element 18.24A.1 Assess cooling system operation

Criteria 18.24A.1.1

Heat transfer characteristics; water treatment; and corrosion principles and terminology understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of heat transfer as applied to cooling systems can be explained. The effect of water treatment and corrosion on the effectiveness of cooling system operation can be given.

Criteria 18.24A.1.2

Relevant information obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –

All information relevant to the cooling system is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The components of the cooling system and their function can be identified.

Criteria 18.24A.1.3

System checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –

The cooling system is checked safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The checks to be carried out on cooling systems can be identified. The procedures for carrying out cooling system checks can be given. The hazards associated with testing cooling systems can be identified.

Criteria 18.24A.1.4

Water/air flows, pressures and temperatures correctly determined and recorded.

Assessor guide: observe that –

The water/air flows, pressures and temperatures of the cooling system are accurately measured and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for measuring water/air flows, pressures and temperatures in cooling systems can be given. The necessary tools, techniques and equipment to carry out the above tests can be identified. The procedures for recording test results can be given.

Criteria 18.24A.1.5

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Any variations of test results from specifications can be identified. The likely causes of those variations can be explained. The faulty component(s) can be identified. The appropriate corrective action to be taken can be identified. The reasons for identifying the corrective action to be taken can be explained.

Criteria 18.24A.1.6

Test equipment adapted and used correctly.

Assessor guide: observe that –

Where appropriate, the test equipment is adapted for use on the cooling system being tested.

Assessor guide: confirm that –

The reasons for adapting test equipment can be given. The precautions to be taken when adapting test equipment can be identified.

Criteria 18.24A.1.7

Coolant test samples correctly obtained and tested.

Assessor guide: observe that –

Coolant test samples are obtained in accordance with standard operating procedures. The coolant samples are tested in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for taking coolant test samples can be given. The procedures for testing coolant samples can be given. The tools, techniques and equipment required to carry out tests on coolant samples can be identified. The reasons for testing coolant samples can be explained.

Criteria 18.24A.1.8

Component parts correctly assessed for re-use or replacement.

Assessor guide: observe that –

Assessor guide: confirm that –

Faulty components can be identified for repair or replacement. The reasons for identifying faulty components for repair or replacement can be given.

Element 18.24A.2 Repair/replace faulty components**Criteria 18.24A.2.1**

Component wear and clearances correctly determined using appropriate test equipment and manufacturers recommendations.

Assessor guide: observe that –

Cooling system components are checked for wear and clearances using appropriate equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing components for wear and clearances can be given. The appropriate measuring/test equipment can be identified. The reasons for selecting the chosen measuring/test equipment can be given.

Criteria 18.24A.2.2

Replacement components correctly selected for application using manufacturers data.

Assessor guide: observe that –

All relevant specifications, parts lists, catalogues etc are obtained in accordance with work place procedures. Where appropriate, replacement parts are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

Replacement parts can be identified. The procedures for obtaining replacement parts can be given.

Criteria 18.24A.2.3

Components removed and refitted to engine following prescribed procedures.

Assessor guide: observe that –

Cooling system components are removed and refitted to the engine in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing/replacing cooling system components from the engine can be given.

Criteria 18.24A.2.4

Test and repair activities are accurately recorded.

Assessor guide: observe that –

Test and repair activities undertaken on the cooling system are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test and repair activities can be given.

Criteria 18.24A.2.5

Engine free of coolant leaks and cooling system contains the correct level of additive/inhibitor after repair work is carried out.

Assessor guide: observe that –

The engine is tested for coolant leaks after repair in accordance with standard operating procedures. The coolant level is checked after repair in accordance with standard operating procedures. The coolant contains the correct amount of additive/inhibitor after the repair.

Assessor guide: confirm that –

The procedures for checking coolant levels and engine coolant leaks can be given. The correct amount of additive/ inhibitor to be added to the coolant can be identified.

Range statement

Cooling system testing would typically require the person to obtain air and/or water flows, temperatures and pressures; assessing serviceability and repair of a range of flow/pressure regulators; sensors, actuators and solenoids on shutter type systems or fan drives; or water type inter/after and oil coolers. Typical symptoms of faults would be coolant pressures/the presence of steam, gases, oil, fuel or air. This unit would typically apply to engine or vehicle cooling systems. On large stationary plant, cooling systems may include the use of cooling towers. All work undertaken to manufacturers specifications and standard operating procedures.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of engine cooling systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.25A A Service combustion engines

Pre-requisite units - Path 1

18.1A Use hand tools

Element 18.25A.1 Check and assess items for serviceability

Criteria 18.25A.1.1

Serviceable replacement items correctly assessed regarding serviceability.

Assessor guide: observe that –

Items removed from the engine are checked for serviceability. Items removed from the engine are checked for conformance to specifications.

Assessor guide: confirm that –

Items removed from the engine that are serviceable can be identified. Items removed from the engine that are unserviceable and are to be replaced can be identified. The specifications of the items removed can be identified.

Criteria 18.25A.1.2

Replacement fluids/items correctly determined for application using manufacturers data.

Assessor guide: observe that –

All relevant manufacturer's data is obtained in accordance with work place procedures.

Assessor guide: confirm that –

The replacement fluids and items can be correctly identified from manufacturer's data.

Criteria 18.25A.1.3

Abnormal appearance/condition of serviceable items/fluids identified and reported to appropriate authority.

Assessor guide: observe that –

Where appropriate, fluids and items having abnormal appearance are reported to the appropriate authority.

Assessor guide: confirm that –

Common defects that can be identified from the items' appearance can be given. The procedures for reporting items/fluids with abnormal appearance can be given. The person to whom the abnormal appearance of the items is to be reported can be identified.

Criteria 18.25A.1.4

Lubricant, cooling system additives and filtering principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of the lubrication system can be given. The principles of operation of the cooling system can be given. The function of filters can be given. The purpose of a range of additives can be given.

Element 18.25A.2 Perform servicing procedures

Criteria 18.25A.2.1

Engine fluids flushed, cleaned and replaced with correct fluid and/or additives, and to the correct level/concentration according to manufacturers recommendations.

Assessor guide: observe that –

The engine fluids are flushed from the engine in accordance with standard operating procedures. The engine is cleaned of any residual fluids. The engine fluids are replaced with the correct fluids in accordance with standard operating procedures. Where appropriate, fluid additives are added in the correct proportion in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for flushing fluids from the engine can be given. The reasons for ensuring any residual/spilt fluids are removed from the engine can be given. The appropriate grade and type of replacement fluid can be identified. The procedures for replacing engine fluids can be given. The correct proportions of additive to be used can be identified.

Criteria 18.25A.2.2

Serviceable items removed and replaced according to manufacturers recommended procedures.

Assessor guide: observe that –

Serviceable items are removed and replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing/ replacing serviceable items can be given.

Criteria 18.25A.2.3

Engine free of lubricant, water and air leaks after servicing work.

Assessor guide: observe that –

The engine is checked for lubricant, water and air leaks after servicing in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking serviced engines for leaks can be identified.

Criteria 18.25A.2.4

Hoses, wiring, ducts etc. correctly secured after servicing work.

Assessor guide: observe that –

All wires, hoses, ducts are correctly secured after servicing.

Assessor guide: confirm that –

The methods of fastening/securing wires, hoses, ducts, etc can be identified.

Criteria 18.25A.2.5

Minor running adjustments made to specification.

Assessor guide: observe that –

Minor running adjustments are made to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The minor running adjustments to be made can be identified. The procedures for undertaking minor running adjustments can be given. The specifications pertaining to those adjustments can be given.

Criteria 18.25A.2.6

Test samples correctly obtained from system as determined by standard operating procedures.

Assessor guide: observe that –

Test samples are correctly obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for taking test samples can be given. The samples to be taken can be identified.

Element 18.25A.3 Report activities**Criteria 18.25A.3.1**

Servicing activities accurately recorded on report sheet/proforma; or accurate oral report given.

Assessor guide: observe that –

Servicing activities undertaken are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting service activities undertaken can be given.

Range statement

This unit applies to the assessment and replacement of serviceable items such as filters/conditioners, coolants, lubricants and hydraulic fluids, additives, etc; and the carrying out of servicing activities to predetermined procedures or manufacturers specifications, including minor running adjustments. Servicing activities may include obtaining and despatching samples for spectrographic or laboratory analysis. Adjustments are limited to "running adjustments" typical of which are vee belt tensions, shroud clearances, linkage adjustments, etc. This unit should not be selected if Unit 18.55A (Dismantle, replace and assemble engineering components) has already been selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the servicing of combustion engines or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.26A B Test compression ignition fuel systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 18.26A.1 Assess fuel system operation

Criteria 18.26A.1.1

Fuel injection principles and component part functions/operation understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of fuel injection can be explained. The function/operation of each component in a fuel injection system can be identified.

Criteria 18.26A.1.2

Plant/equipment started, operated and shutdown to prescribed procedures.

Assessor guide: observe that –

Diesel plant/equipment is started/ operated and shut down in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for starting up, operating and shutting down diesel plant and equipment can be given.

Criteria 18.26A.1.3

Checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –

Operational checks of the diesel fuel system are safely undertaken in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational checks to be made on the diesel fuel system can be identified. The procedures for carrying out operational checks on diesel fuel systems can be given.

Criteria 18.26A.1.4

Flows, pressures, speeds correctly determined and recorded.

Assessor guide: observe that –

Fuel flows, pressures and engine speed are correctly determined and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of determining flows, pressures and speeds can be identified. The tools, techniques and equipment to be used to measure flows, pressures and speeds can be identified. The procedures for carrying out the above tests can be given. The procedures for recording test results can be given.

Criteria 18.26A.1.5 Plant operating characteristics and parameters understood.	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> The plant operating characteristics can be identified. The plant operating parameters can be identified.
Criteria 18.26A.1.6 Data is correctly interpreted regarding serviceability.	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> The serviceability of the fuel system can be determined from the test results and plant operating characteristics and parameters. The reasons for the decisions made with respect to serviceability can be explained.
Criteria 18.26A.1.7 Faults are correctly interpreted regarding serviceability.	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> For unserviceable systems the likely faults can be identified. The reasons for identifying the likely faults can be given.
Criteria 18.26A.1.8 Governing characteristics and terminology understood.	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> The principles of governing can be explained. The function of the governor on the given plant/equipment can be identified.
Criteria 18.26A.1.9 Test equipment used correctly.	<i>Assessor guide: observe that –</i> All test equipment is used correctly in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i>

Range statement

Operation of plant and equipment would be performed within the persons licensing limits or as determined by relevant regulations. Fuel system components include diesel injectors, fuel pumps, governing apparatus and replacement would require the person to time the high pressure fuel pump or injectors to engine. Final adjustment may include the setting of low/high or no load/full load speed and/or droop, sensitivity, stability, promptness etc.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance of diesel fuel systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.27A B Overhaul engine fuel system components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.27A.1 Clean and assess parts

Criteria 18.27A.1.1

Components disassembled according to manufacturers recommendation's.

Assessor guide: observe that –
Manufacturer's procedures are obtained in accordance with work place procedures. The engine fuel system components are disassembled in accordance with manufacturer's procedures.

Assessor guide: confirm that –
The sequence for disassembling engine fuel components can be identified.

Criteria 18.27A.1.2

Specialised tools used correctly.

Assessor guide: observe that –
Where appropriate, specialised tools are correctly used.

Assessor guide: confirm that –
Any specialised tools required and their application can be identified.

Criteria 18.27A.1.3

Parts are assessed visually for abnormal wear or defects.

Assessor guide: observe that –
Parts are visually checked for abnormal wear or defects.

Assessor guide: confirm that –
Common defects and examples of abnormal wear can be identified from given samples.

Criteria 18.27A.1.4

Characteristics of surface finishes and wear patterns associated with pumps/governors/injectors understood.

Assessor guide: observe that –

Assessor guide: confirm that –
The characteristics of surface finishes and wear patterns for fuel system components can be identified. Examples of wear patterns and their cause can be given.

Criteria 18.27A.1.5

Appropriate cleaning method/solution and procedure selected.

Assessor guide: observe that –

Assessor guide: confirm that –

The method of cleaning fuel system components can be identified. The appropriate solvents for cleaning fuel systems can be identified. The procedures for cleaning fuel systems can be given.

Criteria 18.27A.1.6

Parts correctly protected and stored ready for reassembly.

Assessor guide: observe that –

Fuel system parts are appropriately protected and stored in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for protecting and storing fuel system components can be given.

Criteria 18.27A.1.7

Parts made identifiable according to their original location in the pump/injector and protected and stored as required for reassembly.

Assessor guide: observe that –

Parts are identified according to their original location in the pump/injector in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for marking fuel system components in readiness for reassembly can be given.

Element 18.27A.2 Record and interpret measurements**Criteria 18.27A.2.1**

Measurements are accurately obtained and recorded.

Assessor guide: observe that –

Fuel system components are accurately measured. Measurements taken are recorded accurately in accordance with standard operating procedures.

Assessor guide: confirm that –

The measuring instruments to be used to measure fuel system components can be identified. The reason for selecting the chosen measuring instruments can be given. The procedures for recording fuel system component measurements can be given.

Criteria 18.27A.2.2

Measurements and part condition correctly interpreted when determining reuse/replacement.

Assessor guide: observe that –

The specifications, parts lists, etc. of fuel system components are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The measurements taken and the component specifications are compared and out of specification parts identified. Parts to be reused/replaced can be identified. The reasons for the decisions made with respect to reuse/replacement can be explained.

Element 18.27A.3 Recondition and set up equipment**Criteria 18.27A.3.1**

Fuel system and governing functions, characteristics, applications and terminology understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of diesel fuel systems can be explained.

Criteria 18.27A.3.2

Components identified as faulty are reconditioned and replaced.

Assessor guide: observe that –

Faulty components are replaced or reconditioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reconditioning faulty fuel system components can be given. The procedures for replacing faulty fuel system components can be given.

Criteria 18.27A.3.3

Components assembled according to manufacturer's specifications.

Assessor guide: observe that –

Fuel system components are assembled in accordance with manufacturer's specifications and procedures.

Assessor guide: confirm that –

The procedures for assembling fuel system components can be given. The specifications of the fuel system components can be identified.

Criteria 18.27A.3.4

Test equipment used correctly.

Assessor guide: observe that –

All test equipment is used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing fuel system components can be given. The tools, techniques and equipment required to carry out fuel system component tests can be identified.

Criteria 18.27A.3.5

Components tested and set to specifications.

Assessor guide: observe that –

Fuel system components are tested and set to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting fuel system components can be given.

Range statement

This unit refers to work typically undertaken on large stationary or mobile diesel engines and would entail the rebuilding/setting up of diesel fuel pumps, governors, injectors and associated equipment. Governor types include mechanical, pneumatic, hydraulic and electronic. Fuel system types typically include port and helix, sleeve metering, unit injection, distributor and pressure/time. All work undertaken to manufacturer's specifications and standard operating procedures.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the overhaul of engine fuel system components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.28A B Maintain and repair engine lubrication systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.28A.1 Assess lubrication system operation

Criteria 18.28A.1.1

Relevant information is obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –
All relevant instructions, specifications, procedures, etc. are obtained in accordance with work place procedures.

Assessor guide: confirm that –
The operation of the lubrication system can be identified.

Criteria 18.28A.1.2

Checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –
The lubrication system is checked safely in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for testing/checking lubrication systems can be given. The precautions to be taken when checking lubrication systems can be identified.

Criteria 18.28A.1.3

Flows, pressures, temperatures correctly determined and recorded.

Assessor guide: observe that –
Oil flows, pressures and temperatures are correctly determined and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –
The tests to be undertaken can be identified. The equipment and techniques to be used to determine oil flows, pressures and temperatures can be identified. The procedures for recording lubrication system test results can be given.

<p>Criteria 18.28A.1.4 Faults are correctly isolated to component level and appropriate corrective action determined.</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> The specifications of the lubrication system components can be identified. Faulty components can be identified. The appropriate corrective action can be identified. The reasons for proposing the identified corrective action can be given.</p>
<p>Criteria 18.28A.1.5 Lubricant fluid characteristics, terminology and applications understood.</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> The characteristics of lubricants can be explained. The application of a variety of lubricants can be identified.</p>
<p>Criteria 18.28A.1.6 Test equipment used correctly.</p>	<p><i>Assessor guide: observe that –</i> All test equipment is used correctly in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 18.28A.1.7 Results of spectrographic or laboratory analysis correctly evaluated and recommendations made regarding adjustments to future maintenance activities.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, the results of lubricating oil tests are obtained in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for analysing lubricating oil samples can be given. The reasons for undertaking lubricating oil analysis can be explained. The likely causes of a range of out of specification test results can be given. The appropriate corrective action to be taken can be given. The implications of out of specification test results on maintenance schedules and requirements can be explained.</p>
<p>Criteria 18.28A.1.8 Auxiliary lubrication systems assessed for correct operation.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, auxiliary lubrication systems are checked for correct operation.</p>	<p><i>Assessor guide: confirm that –</i> The reasons for installing auxiliary lubrication systems on diesel plant and equipment can be given. The operation of the auxiliary lubrication system can be identified.</p>

Element 18.28A.2 Repair/replace faulty components**Criteria 18.28A.2.1**

Replacement components correctly selected using manufacturer's data.

Assessor guide: observe that –

Replacement components are correctly selected.

Assessor guide: confirm that –

Criteria 18.28A.2.2

Components removed and refitted to engine following prescribed procedures.

Assessor guide: observe that –

Lubrication system components are removed and refitted to the engine in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing/replacing lubrication system components can be given.

Criteria 18.28A.2.3

Final adjustments made that bring system in line with specifications.

Assessor guide: observe that –

The lubrication system is adjusted in conformance to specifications and standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to the lubrication system can be identified. The procedures for adjusting lubrication systems can be given.

Criteria 18.28A.2.4

Test and repair activities accurately recorded.

Assessor guide: observe that –

All test and repair activities are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test and repair activities can be given.

Criteria 18.28A.2.5

Engine free of lubricant leaks after repair work is carried out.

Assessor guide: observe that –

The engine is free of lubricant leaks after the repair work is carried out.

Assessor guide: confirm that –

The procedures for checking lubrication systems for leaks can be given.

Criteria 18.28A.2.6

Component wear and clearances correctly determined using appropriate test equipment and manufacturer's recommendations.

Assessor guide: observe that –

Lubrication system components are checked for wear and clearance in accordance with standard operating procedures.

Assessor guide: confirm that –

The measuring equipment and techniques to be used to determine lubrication system component wear and clearances can be identified. The procedures for determining wear and clearances can be given.

Range statement

Lubrication system testing would require obtaining flow, temperature and pressure measurements. Adjustments may include setting of bypass/regulating/relief valves to specified pressures of flows and typical symptoms of faults would be lubrication pressures/temperatures that are too low/high; excessive or too little consumption/flow, etc.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of engine lubrication systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.29A A Tune diesel engine

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.26A Test compression ignition fuel systems

18.1A Use hand tools
18.55A Dismantle, replace and assemble engineering components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.26A Test compression ignition fuel systems

18.1A Use hand tools
18.55A Dismantle, replace and assemble engineering components

Element 18.29A.1 Compression test engine

Criteria 18.29A.1.1

Injectors removed and fuel system for each cylinder isolated correctly.

Assessor guide: observe that –

The injectors are removed from each cylinder and the fuel system isolated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing injectors from cylinders can be given. The reasons for isolating the fuel system can be given.

Criteria 18.29A.1.2

Appropriate adaptors selected and fitted.

Assessor guide: observe that –

Appropriate adaptors are fitted to the cylinders in accordance with standard operating procedures.

Assessor guide: confirm that –

Appropriate adaptors can be identified. The reasons for using adaptors can be given. The procedures for fitting adaptors to the cylinders can be given.

Criteria 18.29A.1.3

Readings obtained are accurately recorded and interpreted.

Assessor guide: observe that –

Compression readings are obtained and recorded accurately in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for compression testing diesel engines can be given. The procedures for recording compression readings can be given. The compression readings are compared with specifications and any deviations identified. The likely causes of any detected deviations from specification can be given.

Criteria 18.29A.1.4

Compression readings corrected for adaptor used.

Assessor guide: observe that –

The compression readings taken are corrected for the adaptor used.

Assessor guide: confirm that –

The corrections required to be made to compression readings to take account of the adaptor used can be identified. The reasons why corrections have to be made to the compression readings taken can be explained.

Element 18.29A.2 Perform tune up**Criteria 18.29A.2.0**

If applicable, firing pressures accurately determined and adjusted to specification.

Assessor guide: observe that –

Where appropriate, firing pressures are adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting firing pressures can be given. The firing pressures to be achieved can be identified.

Criteria 18.29A.2.1

Engine started, operated, loaded, and shut down safely.

Assessor guide: observe that –

The engine is started, operated, loaded and shut down safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for starting, operating, loading and shutting down diesel engines can be given. The hazards associated with starting, operating, loading and shutting down diesel engines can be given.

Criteria 18.29A.2.2

Test equipment correctly applied.

Assessor guide: observe that –

All test equipment is correctly applied in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment to be used in the tuning of diesel engines can be identified. The procedures for carrying out tests on diesel engines can be given.

Criteria 18.29A.2.3

Air restriction, boost, back pressure, flow tests performed according to manufacturer's recommendations.

Assessor guide: observe that –

The appropriate tests are carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The manufacturer's recommended tests can be identified. The reasons for conducting the tests can be given.

<p>Criteria 18.29A.2.4 Readings recorded and variances from specifications correctly determined.</p>	<p><i>Assessor guide: observe that –</i> All test readings are recorded in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for recording test results can be given. Variations from specifications of any test result can be identified.</p>
<p>Criteria 18.29A.2.5 Density of exhaust smoke correctly determined.</p>	<p><i>Assessor guide: observe that –</i> The density of exhaust smoke is correctly determined in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for determining exhaust smoke density can be given. The equipment and techniques required to measure exhaust smoke density can be identified. The reasons for determining exhaust smoke density can be given.</p>
<p>Criteria 18.29A.2.6 Valve clearance and/or timing correctly adjusted.</p>	<p><i>Assessor guide: observe that –</i> Valve clearance and/or timing is correctly adjusted in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for adjusting valve clearances and/or timing can be given. The clearances and timing to be achieved can be identified.</p>
<p>Criteria 18.29A.2.7 Injection pump or injector timing adjusted to specification.</p>	<p><i>Assessor guide: observe that –</i> Injector pump or injector timing is adjusted to specification in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for adjusting injector pump and injector timing can be given. The timing and pressures to be achieved can be identified.</p>
<p>Criteria 18.29A.2.8 Governor rack travel, torque spring load limit, overspeed trips, aneroid or fuel ratio control adjusted to specification.</p>	<p><i>Assessor guide: observe that –</i> The governor rack travel, torque spring load limit, overspeed trips, aneroid or fuel ratio control is adjusted to specification in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for adjusting the governor rack travel, torque spring load limit, overspeed trips, aneroid or fuel ratio control can be given. The governor specifications can be identified.</p>
<p>Criteria 18.29A.2.9 Injector opening pressure correctly determined and adjusted.</p>	<p><i>Assessor guide: observe that –</i> The injector opening pressure is adjusted to specification in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for adjusting injector opening pressure can be given. The injector opening pressure to be achieved can be identified.</p>

Range statement

This unit covers tune up procedures and the evaluation of engine performance on compression ignition engines. The person performing these tasks should be able to demonstrate an understanding of the theories and be able to carry out manufacturers procedures associated with servicing, adjusting and evaluating engine performance and be able to perform the following: remove injectors, install a compression gauge, carry out a compression test and interpret the test results; carry out a machine stall test or engine load test to determine engine condition by measuring air inlet restriction, boost pressure, exhaust back pressure and crankcase pressure; evaluate exhaust smoke and determine corrective action if required; adjust engine valve clearances; check and adjust injection pump timing on in-line pumps and rotary pumps using either spill, pin, mark or dial gauge methods; time and calibrate unit injectors; adjust governor settings - maximum speed/idle speed; test and adjust injectors; be able to isolate injectors on a running engine to determine cylinder misfire.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the tuning of diesel engines or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.30A A Diagnose and repair low voltage electrical systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.30A.1 Use test instruments

Criteria 18.30A.1.1

Electron theory, current, voltage and resistance principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of electron theory can be explained. The terms current, voltage and resistance can be defined in terms of electrical circuits. The relationships between current, voltage and resistance for a variety of given electrical circuits can be identified.

Criteria 18.30A.1.2

Select, correctly use and maintain test instruments appropriate for determining current, voltage and resistance.

Assessor guide: observe that –

For a variety of electrical circuits the correct test instrument is selected and appropriately used to measure the current, voltage and resistance of specified circuit components or sections of circuitry. Test equipment is maintained in accordance with standard operating procedures.

Assessor guide: confirm that –

The instruments to be used to measure current, voltage and resistance can be identified. The procedures for measuring current, voltage and resistance can be given. The units of current, voltage and resistance can be identified. The procedures for maintaining electrical test equipment can be identified.

Criteria 18.30A.1.3

Electrical drawings and manufacturers diagrams correctly interpreted.

Assessor guide: observe that –

Assessor guide: confirm that –

The function of a variety of electrical circuits can be identified from given electrical drawings/diagrams. The symbols used in electrical drawings/diagrams can be correctly identified. The components of a variety of electrical circuits can be identified from given electrical drawings/diagrams.

Criteria 18.30A.1.4

Series, parallel and series parallel circuits correctly determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The differences between series and parallel electrical circuits can be explained. A variety of electrical circuits can be correctly identified as being series, parallel, or combined series and parallel.

Criteria 18.30A.1.5

Basic electrical laws understood and correctly applied.

Assessor guide: observe that –

Assessor guide: confirm that –

Ohms law can be identified and applied to determine the required values of voltage, current and resistance for a range of electrical circuits. The laws for determining the resistance of series and parallel circuits can be identified and applied to determine the resistance of a range of electrical circuits.

Criteria 18.30A.1.6

AVR test instruments correctly connected into circuits.

Assessor guide: observe that –

Electrical test instruments are correctly connected into given circuits to determine the required values of current, voltage and resistance.

Assessor guide: confirm that –

Criteria 18.30A.1.7

Meters read to standard accuracy; and wave form and quantities determined using general purpose oscilloscope.

Assessor guide: observe that –

A general purpose oscilloscope can be correctly connected to a given electrical circuit and adjusted in accordance with standard operating procedures to measure wave forms at nominated points in the circuit.

Assessor guide: confirm that –

The function of a general purpose oscilloscope can be explained. The procedures for connecting a general purpose oscilloscope into given electrical circuits can be identified. The use of wave forms in the diagnosis of electrical circuits can be explained. The accuracy to which a range of electrical test equipment can be read can be identified.

Criteria 18.30A.1.8

Multipliers and shunts correctly used and applied.

Assessor guide: observe that –

Assessor guide: confirm that –

The use of multipliers and shunts in the measurement of electrical circuits can be identified. The procedures for using multipliers and shunts can be given.

Element 18.30A.2 Test battery**Criteria 18.30A.2.1**

Chemical battery operating principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operation of a chemical battery can be explained.

Criteria 18.30A.2.2

Electrolyte level is correctly determined and specific gravity readings temperature corrected.

Assessor guide: observe that –

For given batteries, the specific gravity of the electrolyte is correctly determined and corrected where appropriate for temperature variations in accordance with standard operating procedures. The electrolyte level for a number of given batteries is correctly determined in accordance with standard operating procedures.

Assessor guide: confirm that –

The function of the electrolyte in batteries can be identified. The procedures for measuring the specific gravity of the electrolyte can be given. The effect of temperature on the specific gravity of the electrolyte can be explained.

Criteria 18.30A.2.3

Dry charge preparation and recharging of batteries is carried out correctly.

Assessor guide: observe that –

Where appropriate, dry batteries are safely prepared for charging in accordance with standard operating procedures. Batteries are safely recharged in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing dry batteries for charging can be given. The procedures for recharging batteries can be identified. The hazards associated with charging/recharging of batteries can be identified.

Criteria 18.30A.2.4

Discharge testing performed according to prescribed procedures.

Assessor guide: observe that –

Where appropriate, batteries are safely discharge tested in accordance with standard operating procedures.

Assessor guide: confirm that –

The purpose of discharge testing of batteries can be explained. The procedures for discharge testing batteries can be identified. The hazards associated with the discharge testing of batteries can be identified.

Criteria 18.30A.2.5

Replacement batteries correctly selected for application.

Assessor guide: observe that –

Assessor guide: confirm that –

The specifications applied to batteries can be correctly identified. For given battery specifications, replacement batteries can be identified from supplier catalogues.

Element 18.30A.3 Assess and repair wiring faults**Criteria 18.30A.3.1**

Wiring faults correctly isolated.

Assessor guide: observe that –

The correct tests are carried out on given electrical circuits and where appropriate, wiring faults are correctly identified.

Assessor guide: confirm that –

Examples of common faults in electrical wiring can be given. The causes of the common faults in electrical wiring can be explained. The test procedures for isolating wiring faults can be identified.

Criteria 18.30A.3.2

Replacement cables/wires correctly sized.

Assessor guide: observe that –

All relevant drawings, circuits, specifications and instructions are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The specifications of cables and wires used in given electrical circuits can be identified. For given cable/wire specifications, replacement cables/wires can be identified from supplier catalogues.

Criteria 18.30A.3.3

Insulation quality correctly determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The specification of the insulation materials can be identified. For given insulation specifications, replacement insulation materials can be identified from supplier catalogues.

Criteria 18.30A.3.4

Wiring looms correctly made up for application and securely fixed.

Assessor guide: observe that –

Where appropriate, wiring looms are made up in accordance with specifications and securely fixed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for making up wiring looms can be given. The procedures for fixing wiring looms can be given. The appropriate fixing points and methods for wiring looms can be identified.

Criteria 18.30A.3.5

Wiring terminations stripped, fitted, prepared and made correctly.

Assessor guide: observe that –

Where appropriate, wiring is correctly terminated in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for stripping, fitting and preparing wiring terminations can be given. The procedures for soft and hard soldering/crimping of wiring terminations can be identified. The specifications of the wiring terminations to be carried out can be identified.

Criteria 18.30A.3.6

Corrosion removed, neutralised and appropriate protective coating applied.

Assessor guide: observe that –

Where appropriate, corrosion is removed and/or neutralised from terminals and connections, and appropriate protective coatings applied in accordance with standard operating procedures.

Assessor guide: confirm that –

The effect of corrosion on the performance of electrical circuits and connections can be explained. The procedures for corrosion removal and/or neutralisation can be given. A range of coatings to stop/inhibit corrosion can be identified.

Criteria 18.30A.3.7

Relays, solenoids, contacts and circuits are correctly tested and repaired/replaced.

Assessor guide: observe that –

A range of circuit components are tested for correct operation in accordance with standard operating procedures. Where appropriate, faulty circuit components are repaired in accordance with standard operating procedures. Where appropriate, the faulty circuit components are replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operational relays, solenoids and contacts can be explained. Common faults in relays, solenoids, contacts and circuits can be identified. The causes of faults in relays, solenoids, contacts and circuits can be given. The procedures for testing circuit components can be identified. The specifications of circuit components can be identified. For given circuit components, appropriate replacements can be selected from suppliers' catalogues.

Range statement

This unit applies to testing and repair activities associated with 12, 24 and 36 volt wiring systems on vehicles, plant and stationary equipment. The system extends to wiring, switching mechanisms and circuit protection devices. This unit should not be selected with any of the following Units: Unit 18.45A (Fault find/repair AC and DC electrical equipment/components which use up to 240 volts single phase supply (non-interconnected)), or Unit 18.46A (Fault find/repair AC and DC electrical equipment/components, which use up to 1000 volts AC or 1500 volts DC single phase supply (non-interconnected)). Except in exceptional circumstances this unit should not be selected with Unit 18.56A (Diagnose and repair analog equipment and components) or Unit 18.66A (Diagnose and repair microprocessor based equipment). If soldering of wires/connections is required see Unit 5.1A (Manual soldering/desoldering - electrical/electronic components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of low voltage electrical systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.31A A Diagnose and repair low voltage starting systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.30A Diagnose and repair low voltage electrical systems

18.55A Dismantle, replace and assemble engineering components

Element 18.31A.1 Assess starting motor operation

Criteria 18.31A.1.1

Magnetism, induced voltage and electromagnetism, electric motor principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The concepts of magnetism, electromagnetism and induced voltage can be explained. The construction of electric motors can be identified. The principles of operation of electric motors can be explained.

Criteria 18.31A.1.2

Starting motor component functions and multi-pole/winding/shunt wiring arrangements are understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The components of common starting motors can be identified. The function of starting motor components can be given. The effect of multi-pole/winding/shunt wiring arrangements on starting motor performance can be explained.

Criteria 18.31A.1.3

Cranking motor drive mechanism correctly performance tested.

Assessor guide: observe that –

The cranking motor drive mechanism is safely tested for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests that can be used to check the performance of the cranking motor drive mechanism can be identified. The test procedures can be given. The hazards associated with testing the performance of cranking motor drive mechanisms can be identified.

Criteria 18.31A.1.4

Starter locked armature current, voltage and torque correctly determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The concept of "locked armature" can be explained in terms of current, voltage and torque. The starter locked armature specifications can be identified. The procedures for determining locked armature current, voltage and torque can be given. The tools and equipment necessary to determine starter locked armature current, voltage and torque can be identified.

Element 18.31A.2 Test and repair starting motors**Criteria 18.31A.2.1**

Starting motors dismantled and assembled according to manufacturer's recommendations.

Assessor guide: observe that –

Given starting motors can be dismantled and assembled in accordance with manufacturer's recommendations/procedures using appropriate tools, techniques and equipment.

Assessor guide: confirm that –

The manufacturer's recommended dismantling/assembling procedures for given starting motors can be identified. The tools and equipment necessary to dismantle/assemble starting motors can be identified.

Criteria 18.31A.2.2

Testing performed to determine shorts to ground, turn shorts, winding continuity, etc.

Assessor guide: observe that –

Given starting motors are checked for electrical faults in accordance with standard operating procedures.

Assessor guide: confirm that –

The range of electrical tests that can be applied to starting motors can be identified. The purpose of each of these tests can be explained. The equipment required to carry out the tests can be identified. The electrical testing procedures can be given.

Criteria 18.31A.2.3

Solenoid, relays and over-temperature devices correctly tested.

Assessor guide: observe that –

For given starting motors, the solenoids, relays and over-temperature devices are tested for conformance to specification using appropriate techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The function of solenoids, relays and over-temperature devices can be explained. The procedures for testing solenoids, relays and over-temperature devices for correct operation can be identified. The operational specifications of the solenoids, relays and over-temperature devices can be identified.

Criteria 18.31A.2.4

Starter engagement mechanism is tested and adjusted where possible ie: pinion clearance.

Assessor guide: observe that –

For the given starting motor, the engagement mechanism is checked for correct operation and conformance with specifications in accordance with standard operating procedures. Where appropriate the starter engagement mechanism is adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing and adjusting starter engagement mechanisms can be given. The specifications of the starter engagement mechanism can be identified.

Criteria 18.31A.2.5

Starting system free of excessive voltage drops.

Assessor guide: observe that –

For given starting motors, the starting system is checked for excessive voltage drops in accordance with standard operating procedure.

Assessor guide: confirm that –

The effect of voltage drops on starting system operation/performance can be explained. The causes of voltage drops in the starting system can be given. The procedures for checking starting systems for excessive voltage drops can be given.

Criteria 18.31A.2.6

Starting and charging circuit connections are correctly made, tightened and insulated.

Assessor guide: observe that –

For given starting motors, all circuit connections are checked for conformance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The effect of loose, poorly joined and/or inappropriate insulation on starting motor performance/operation can be explained. The specifications of all circuit connections can be identified.

Criteria 18.31A.2.7

Starter locked armature current, voltage and torque correctly determined.

Assessor guide: observe that –

The repaired/overhauled starting motor is tested to ensure that the locked armature current, voltage and torque conform to specifications.

Assessor guide: confirm that –

Range statement

This unit covers engine electrical starting systems and would require extensive use of AVR test equipment. Starting motors include axial and coaxial type starters with drive arrangements such as Dyer, Positork, Sprag clutch, over running clutch and inertia drive. If soldering of wires is required see Unit 5.1A (Manual soldering/desoldering - electrical/electronic components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of low voltage starting systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.32A A Maintain and repair induction/exhaust systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.32A.1 Assess induction/exhaust system operation

Criteria 18.32A.1.1

Supercharging, filtering, inter/after cooling principles, terminology and applications are understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of supercharging, filtering, inter and after cooling can be explained using appropriate terminology. A variety of applications of supercharging, filtering inter and after cooling can be identified.

Criteria 18.32A.1.2

Relevant information is obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –

All relevant instructions, drawings, specifications, catalogues and manufacturer's documentation are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The performance and operational specifications of the induction/exhaust system can be identified.

Criteria 18.32A.1.3

Checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –

The induction/exhaust system is safely checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing induction/exhaust systems for correct operation can be identified. The safety precautions to be followed when testing induction/exhaust systems can be identified.

Criteria 18.32A.1.4

Flows, pressures, temperatures correctly determined and recorded.

Assessor guide: observe that –

The flows, pressures and temperatures of the given induction/exhaust system are accurately determined using appropriate techniques and equipment in accordance with standard operating procedures. Where appropriate, flows, pressures and temperatures are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment necessary to test flows, pressures and temperatures can be identified. The procedures for testing flows, pressures and temperatures associated with induction/exhaust systems can be identified. The procedures for recording flows, pressures and temperatures can be given.

Criteria 18.32A.1.5

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

Where appropriate, the faulty component is isolated in accordance with standard operating procedures.

Assessor guide: confirm that –

Common faults associated with induction/exhaust systems can be identified. The causes of those common faults can be given. The procedures for correcting faults in induction/exhaust systems can be identified. The appropriate corrective action for a variety of common faults can be identified.

Criteria 18.32A.1.6

Test instruments and equipment used correctly.

Assessor guide: observe that –

All test instruments and equipment are used safely and correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 18.32A.2 Repair/replace faulty components**Criteria 18.32A.2.1**

Component wear and clearances correctly determined using manufacturer's recommendations.

Assessor guide: observe that –

Component parts are checked visually and dimensionally for wear in accordance with standard operating procedures.

Assessor guide: confirm that –

The component specifications/tolerances can be identified. The actions to be taken if the components are outside of specification can be identified. The action to be taken if the components are "just" within specification can be identified. For the given component(s) the action to be taken can be explained. The measuring instruments to be used to carry out dimensional checks on components can be identified.

<p>Criteria 18.32A.2.2 Replacement components correctly selected using manufacturer's data.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, replacement components are selected from supplier catalogues in conformance to manufacturer's specifications.</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 18.32A.2.3 Components removed and refitted to engine following prescribed procedures.</p>	<p><i>Assessor guide: observe that –</i> Components are removed from and fitted to engines safely in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for removing/fitting components to engines can be identified. The safety precautions to be followed when removing/fitting components to engines can be identified.</p>
<p>Criteria 18.32A.2.4 Test and repair activities are accurately recorded.</p>	<p><i>Assessor guide: observe that –</i> All test and, where appropriate, repair activities, are recorded in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for recording test and repair activities undertaken on induction/exhaust systems can be identified.</p>
<p>Criteria 18.32A.2.5 Engine free of air/exhaust leaks after repair work is carried out.</p>	<p><i>Assessor guide: observe that –</i> The induction/exhaust system is checked for leaks in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The consequences of air/exhaust leaks on the safe operation of the induction/exhaust system can be explained. The procedures for testing for leaks in induction/exhaust systems can be identified.</p>

Range statement

Supercharging apparatus includes turbo charging equipment. Testing procedures would typically require the person to understand the operation of the apparatus installed to balance fuel injection to boost pressure; and control devices installed to prevent excessive turbocharger RPM and/or boost pressure. Typical faults would be associated with excessive air inlet restrictions, excessive exhaust back pressures, too much/little boost pressure, ineffective inter/after cooling, etc.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of induction/exhaust systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.33A A Perform engine bottom-end overhaul

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.33A.1 Dismantle, clean and assess parts

Criteria 18.33A.1.1

Characteristics of surface finishes and wear patterns associated with crankshaft and piston assemblies understood and parts correctly assessed for re-use or replacement.

Assessor guide: observe that –

All relevant parts lists, specifications, manuals and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The characteristics of surface finishes and wear patterns as applied to crankshaft and piston assemblies can be described. The specifications of crankshaft and piston assemblies can be identified. Given components can be correctly identified for re-use or replacement. The reasons for identifying the components for re-use or replacement can be given.

Criteria 18.33A.1.2

Engine removed from plant, top end components removed and block assembly dismantled according to manufacturers recommendations.

Assessor guide: observe that –

The engine is removed from plant, top end components removed and block assembly dismantled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling the block assembly can be given. The procedures for removing the engine from the plant can be given. The procedures for removing the top end from the engine can be given. The tools, techniques and equipment to be used can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The hazards associated with the removal of engines/engine components can be identified.

Criteria 18.33A.1.3

Parts assessed for abnormal wear or defects.

Assessor guide: observe that –

All parts are checked for abnormal wear or defects.

Assessor guide: confirm that –

The action to be taken when abnormal wear or defects are observed in the engine components can be given.

Criteria 18.33A.1.4

Appropriate cleaning solution and procedure selected.

Assessor guide: observe that –

Parts are cleaned using appropriate solutions and procedures.

Assessor guide: confirm that –

The procedures for cleaning engine parts can be given. The cleaning solution to be used can be identified. The reasons for selecting the chosen cleaning solution can be given.

Criteria 18.33A.1.5

Parts racked or set out according to their original location in the engine.

Assessor guide: observe that –

Engine parts are racked or set out according to their original position in readiness for reassembly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for racking and/or setting out of parts in readiness for reassembly can be given.

Criteria 18.33A.1.6

Characteristics of surface finishes and wear patterns associated with crankshaft and piston assemblies understood and parts correctly assessed for re-use or replacement.

Assessor guide: observe that –

Engine components are correctly assessed for re-use or replacement.

Assessor guide: confirm that –

Engine components not conforming to specification can be identified.

Element 18.33A.2 Record and interpret measurements**Criteria 18.33A.2.1**

Measurements are accurately obtained and recorded.

Assessor guide: observe that –

Measurements are accurately obtained and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The measuring instruments to be used to measure engine components can be identified. The reasons for selecting the chosen measuring instruments can be given. The procedures for recording engine measurements can be given.

Criteria 18.33A.2.2

Readings correctly interpreted regarding replacement or re-use and appropriate under or oversize of replacement parts determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The concept of under/over size of replacement parts can be explained. The replacement parts required can be correctly identified as being under or over size. The reasons for identifying replacement parts as under or over size can be given.

Element 18.33A.3 Recondition components**Criteria 18.33A.3.1**

Ridges, gaps, tapers, ovality, protrusions identified and necessary corrective action taken.

Assessor guide: observe that –

All ridges, gaps, tapers, protrusions and ovality are removed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing ridges, gaps, tapers, ovality and protrusions can be given. The tools, techniques and equipment required to correct the above faults can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.33A.3.2

Tools and equipment correctly utilised.

Assessor guide: observe that –

All tools and equipment are correctly used.

Assessor guide: confirm that –

Criteria 18.33A.3.3

Components assembled according to manufacturers specifications.

Assessor guide: observe that –

Engine bottom end components are assembled in accordance with specification and standard operating procedures.

Assessor guide: confirm that –

The procedures for assembling engine bottom ends can be given. The precautions to be taken when assembling engine bottom ends can be identified.

Criteria 18.33A.3.4

Bearing clearances correctly determined by calculation or direct measurement.

Assessor guide: observe that –

Bearing clearances are determined using the appropriate method in accordance with standard operating procedures.

Assessor guide: confirm that –

The methods of determining bearing clearances can be identified. The reasons for selecting the chosen method can be given. Bearing clearances can be calculated. The procedure for determining bearing clearances can be given.

Range statement

This unit refers to work typically undertaken in a bottom end engine overhaul. It includes cylinder honing using hand held power tools, replacement of bearings, piston rings and similar activities but not major machining such as crankshaft grinding, cylinder boring and tunnel boring.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the overhaul of engine bottom ends or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.34A A Perform engine top-end overhaul

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

18.6A Dismantle/repair/replace/assemble and fit engineering components

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.3A Use tools for precision work

Element 18.34A.1 Dismantle clean and assess parts

Criteria 18.34A.1.1

Characteristics of surface finishes and wear patterns associated with valve operating mechanisms and cylinder head understood.

Assessor guide: observe that –

All relevant parts lists, specifications, manuals and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The characteristics of surface finishes and wear patterns as applied to valve operating mechanisms and cylinder heads. The specifications of valve operating mechanisms and cylinder heads can be identified. Given components can be correctly identified for re-use or replacement. The reasons for identifying the components for re-use or replacement can be given.

Criteria 18.34A.1.2

Cylinder head and ancillary components disassembled according to manufacturers recommendations.

Assessor guide: observe that –

The cylinder head and ancillary components are dismantled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling cylinder heads and ancillary equipment can be given. The tools, techniques and equipment to be used can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The hazards associated with the removal of cylinder heads and ancillary equipment can be identified.

Criteria 18.34A.1.3

Parts assessed for abnormal wear or defects.

Assessor guide: observe that –

All parts are checked for abnormal wear or defects.

Assessor guide: confirm that –

The action to be taken when abnormal wear or defects are observed in the engine components can be given.

Criteria 18.34A.1.4

Appropriate cleaning solution and procedure selected.

Assessor guide: observe that –

Parts are cleaned using appropriate solutions and procedures.

Assessor guide: confirm that –

The procedures for cleaning engine parts can be given. The cleaning solution to be used can be identified. The reasons for selecting the chosen cleaning solution can be given.

Criteria 18.34A.1.5

Parts correctly cleaned and stored ready for reassembly.

Assessor guide: observe that –

Parts are correctly cleaned and stored ready for reassembly.

Assessor guide: confirm that –

The procedures for storing parts in readiness for reassembly can be given.

Criteria 18.34A.1.6

Parts racked or set out according to their original location in the engine.

Assessor guide: observe that –

Engine parts are racked or set out according to their original position in readiness for reassembly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for racking and/or setting out of parts in readiness for reassembly can be given can be given.

Element 18.34A.2 Record and interpret measurements**Criteria 18.34A.2.1**

Measurements accurately obtained and recorded using appropriate measuring equipment.

Assessor guide: observe that –

Measurements are accurately obtained and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The measuring instruments to be used to measure engine components can be identified. The reasons for selecting the chosen measuring instruments can be given. The procedures for recording engine measurements can be given.

Criteria 18.34A.2.2

Parts replaced or reused, and appropriate under/over size of replacement parts determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The concept of under/over size of replacement parts can be explained. The replacement parts required can be correctly identified as being under or over size. The reasons for identifying replacement parts as under or over size can be given.

Element 18.34A.3 Recondition cylinder head**Criteria 18.34A.3.1**

Cylinder head correctly pressure tested for serviceability.

Assessor guide: observe that –

The cylinder head is correctly pressure tested in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for pressure testing cylinder heads can be given. The tools, techniques and equipment to be used to pressure test cylinder heads can be given. The reasons for selecting the chosen tools, techniques and equipment can be given. The cylinder head specifications can be identified. The cylinder head can be identified as serviceable or requiring repair/ replacement. The reasons for identifying the cylinder head as serviceable or requiring repair/replacement can be given.

Criteria 18.34A.3.2

Spring tensions, valve and guide dimensions and surface flatness measured and recorded.

Assessor guide: observe that –

Spring tensions, valve and guide dimensions and surface flatness are measured and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for measuring spring tension, valve and guide dimensions and surface flatness can be given. The tools, techniques and equipment required to measure the above can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The procedures for recording cylinder head and valve mechanism measurements can be given.

Criteria 18.34A.3.3

Cylinder head removed according to manufacturers specification.

Assessor guide: observe that –

The cylinder head is removed from the engine in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing the cylinder head from the engine can be given. The tools, techniques and equipment to be used in removing the cylinder head from the engine can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.34A.3.4

Grinding and cleaning equipment correctly utilised.

Assessor guide: observe that –

Valves and valve seats are ground in accordance with standard operating procedures. The cylinder head and ancillary equipment are cleaned using appropriate solutions in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for grinding valves and valve seats can be given. The tools, techniques and equipment required to grind valves and valve seats can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The procedures for cleaning cylinder heads and ancillary equipment can be given. The solutions to be used to clean cylinder heads and ancillary equipment can be given. The reasons for selecting the chosen cleaning solution can be given.

Criteria 18.34A.3.5

Operational parameters of cylinder head components are understood and applied in determining whether components are reconditioned or replaced.

Assessor guide: observe that –

Cylinder head components are correctly identified for repair or replacement in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational parameters of cylinder head components can be identified. Measurements taken are compared to specifications to determine serviceability of parts. Parts outside operational specifications are identified for repair/replacement. The reasons for identifying parts for repair/replacement can be given.

Criteria 18.34A.3.6

Injectors sleeves, sealing washers, plugs, cappings etc. replaced correctly.

Assessor guide: observe that –

All cylinder head components are replaced in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for reassembling cylinder heads and their components can be given. The tools, techniques and equipment to be used to reassemble cylinder heads can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The precautions to be taken when reassembling cylinder heads can be identified.

Range statement

This unit covers top-end overhaul of all types of engines and work associated with the reconditioning of cylinder heads including determining the causes of failures, replacement of inserts, guides and injector sleeves, grinding of valves and seats, crack/twist/bend testing etc. It includes both the reconditioning of original parts, crack repairs using non-welding techniques and sizing and fitting of replacement parts.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the overhaul of engine top ends or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.35A A Diagnose and repair braking systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.35A.1 Check and assess braking system

Criteria 18.35A.1.1

Friction and heat principles, braking system types, arrangements, components including anti-lock systems, functions, and applications understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of friction and heat as applied to braking systems can be explained. A variety of braking system types and arrangements can be identified. The function of the components of the braking systems can be identified. Typical applications of different types of braking systems can be given.

Criteria 18.35A.1.2

Braking system assessed for compliance with ADR regulations of appropriate standard.

Assessor guide: observe that –

The braking system is checked for compliance with ADR regulations in accordance with standard operating procedures.

Assessor guide: confirm that –

The requirements of the relevant Australian Design Rule applying to brakes can be identified. The procedures for checking braking systems for compliance with ADR regulations can be given.

Criteria 18.35A.1.3

Serviceability of friction materials correctly assessed.

Assessor guide: observe that –

Friction materials are checked for serviceability.

Assessor guide: confirm that –

Examples of worn and defective friction materials can be correctly identified from given samples. The specifications of the braking system can be identified. The friction material can be identified as being serviceable or to be replaced. The reasons for identifying the friction material as being serviceable or to be replaced can be given.

Criteria 18.35A.1.4

Braking system control devices assessed for compliance with specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 18.35A.1.5

Minimum operating dimensions measured, recorded and corrective action determined.

Assessor guide: observe that –

The brake operating dimensions are measured and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for measuring brake operating dimensions can be given. The tools, techniques and equipment to be used can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The procedures for recording brake operating dimensions can be given. Any variation of brake operating measurement from specification can be identified. The corrective action to be taken can be identified. The reasons for identifying the chosen corrective action can be given.

Criteria 18.35A.1.6

Faults correctly diagnosed to component level and appropriate corrective action determined.

Assessor guide: observe that –

The operation of the braking system is checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Faulty braking system components can be identified. The corrective action to be taken can be identified. The reasons for identifying the chosen corrective action can be given. The procedures for checking braking system operation can be given.

Element 18.35A.2 Repair and overhaul braking system components**Criteria 18.35A.2.1**

Characteristics of surface finishes and wear patterns associated with braking components understood and measurements and part condition correctly interpreted when determining re-use/replacement.

Assessor guide: observe that –

All relevant parts lists, specifications, manuals and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The characteristics of surface finishes and wear patterns as applied to braking system components can be described. The specifications of the braking system can be identified. Given components can be correctly identified for re-use/replacement. The reasons for identifying the components for re-use or replacement can be given.

Criteria 18.35A.2.2

Braking system components removed, disassembled and handled correctly.

Assessor guide: observe that –

Braking system components are removed, dismantled and handled correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing and dismantling braking system components can be given. The precautions to be taken when handling braking systems components can be identified. The tools, techniques and equipment to be used in removing and dismantling braking system components can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.35A.2.3

Components cleaned using appropriate fluid and procedure.

Assessor guide: observe that –

Braking system components are cleaned using appropriate solutions in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for cleaning braking system components can be given. The solutions to be used when cleaning braking system components can be identified. The reasons for selecting the chosen cleaning fluid can be given.

Criteria 18.35A.2.4

Friction material to reaction member clearance adjusted to specification.

Assessor guide: observe that –

The brake clearance is adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedure for adjusting brake clearances can be given.

Criteria 18.35A.2.5 Tooling and equipment correctly applied.	<i>Assessor guide: observe that –</i> All tools and equipment are used appropriately.	<i>Assessor guide: confirm that –</i>
Criteria 18.35A.2.6 Hydraulic/air/vacuum system free of leaks/restrictions after repair work.	<i>Assessor guide: observe that –</i> The hydraulic/air/vacuum system is free of leaks/restrictions.	<i>Assessor guide: confirm that –</i> The procedures for checking for hydraulic, air and vacuum system leaks and restrictions can be given.
Criteria 18.35A.2.7 All levers, linkages and pedal clearances adjusted to specifications.	<i>Assessor guide: observe that –</i> All levers, linkages and pedal clearances are adjusted in accordance with specification and standard operating procedures.	<i>Assessor guide: confirm that –</i> The procedures for adjusting levers, linkages and pedal clearances can be given.
Criteria 18.35A.2.8 Braking system re-commissioned and tested according to manufacturers recommendations or appropriate standard/regulation.	<i>Assessor guide: observe that –</i> The braking system is tested for conformance with specifications/ regulations in accordance with standard operating procedures. The braking system is recommissioned in accordance with standard operating procedures.	<i>Assessor guide: confirm that –</i> The procedures for recommissioning the braking system can be given. The procedures for testing braking systems can be given. The tests to be carried out on the braking system can be identified. The tools, techniques and equipment required to test the braking system can be given. The reasons for selecting the chosen tools, techniques and equipment can be given.

Range statement

This unit covers braking systems associated with mobile equipment including mechanical, hydraulic, air and electrically operated types. Arrangements may include drum/disc wheel/track brakes; anti locking braking systems; transmission brakes and service; park and emergency brakes.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of braking systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.36B A Maintain and repair scientific analysis equipment

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 10

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.57A Maintain/service analog/digital electronic equipment

5.1A Manual soldering/desoldering - electrical/electronic components

12.4A Precision electrical/electronic measurement

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

9.1A Draw and interpret sketch

18.1A Use hand tools

18.55A Dismantle, replace and assemble engineering components

18.69B Maintain, repair instrumentation process control analysers

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

12.2A Electrical/electronic measurement

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.69B Maintain, repair instrumentation process control analysers

9.1A Draw and interpret sketch

18.1A Use hand tools

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.64A Maintain instrumentation system components

Element 18.36B.1 Perform preventative maintenance tasks on scientific analysis equipment

Criteria 18.36B.1.1

Determine specification requirements from manufacturers' manuals, maintenance schedules and other relevant documents.

Assessor guide: observe that –

All relevant manufacturers' manuals, maintenance schedules and documentation are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The specifications of the scientific analysis equipment can be identified.

Criteria 18.36B.1.2

Using knowledge of characteristics of scientific analysis equipment and principles of operation, specification requirements interpreted, defined and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of the scientific analysis equipment can be identified. The application(s) of the scientific analysis equipment can be identified. The effects on the results of scientific analysis undertaken with equipment outside of its operational specifications can be explained.

Criteria 18.36B.1.3

Using sound working knowledge of the characteristics and principles of operation, preventative maintenance schedules are performed on scientific analysis equipment to service and maintain at optimum operating condition.

Assessor guide: observe that –

For given scientific analysis equipment, preventative maintenance is carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The benefits of preventative maintenance strategies with respect to scientific analysis equipment can be explained. The preventative maintenance procedures for given scientific analysis equipment can be identified.

Criteria 18.36B.1.4

Using correct electrical and electronic test equipment, techniques and procedures, specified scientific analysers are diagnosed within the system or within the laboratory to determine correct operation or malfunction.

Assessor guide: observe that –

Given scientific analysis equipment is checked for correct operation using appropriate test equipment, techniques and procedures.

Assessor guide: confirm that –

The application of a range of electrical and electronic test equipment can be identified. The techniques and procedures to be used when testing scientific analysis equipment can be identified.

Criteria 18.36B.1.5

Determine specification requirements from manufacturers' manuals, maintenance schedules and other relevant documents.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 18.36B.1.6

Using appropriate electrical/electronic test equipment and procedures, correct operation of analysers is tested, and/or fault condition identified, localised and monitored.

Assessor guide: observe that –

The given scientific analysis equipment is monitored for correct operation/malfunction using appropriate test equipment, techniques and procedures. Where appropriate, the malfunction is localised in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for localising detected malfunctions can be identified. The reasons for monitoring apparent correct operation or malfunction can be explained. Common causes of scientific analysis equipment malfunction can be identified.

Criteria 18.36B.1.7

Correct operation confirmed and/or faults and malfunctions identified and confirmed.

Assessor guide: observe that –

For the given scientific analysis equipment, correct operation/ malfunction is confirmed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for confirming correct operation/malfunction of scientific analysis equipment can be identified.

Element 18.36B.2 Complete fault documentation**Criteria 18.36B.2.1**

Faults and malfunctions documented or reported to standard operating procedures.

Assessor guide: observe that –

Where appropriate, faults/malfunctions are recorded/documentated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording/documenting faults/malfunctions in scientific analysis equipment can be identified.

Element 18.36B.3 Plan corrective action**Criteria 18.36B.3.1**

Corrective action planned autonomously or in consultation with appropriate personnel and actioned.

Assessor guide: observe that –

Assessor guide: confirm that –

The role of the individual in the planning of any corrective action to be taken with respect to scientific analysis equipment can be identified. The sequential steps in carrying out any required corrective action can be identified. The reasons for selecting the chosen sequence of events can be explained.

Element 18.36B.4 Repair, replace, overhaul scientific analysis equipment**Criteria 18.36B.4.1**

Scientific analysis equipment examined and verified for repair, replacement or overhaul using correct equipment/tools and appropriate principles, techniques and procedures.

Assessor guide: observe that –

Given scientific analysis equipment is examined using appropriate tools, equipment, techniques, principles and procedures. Where appropriate, faulty/ malfunctioning components are identified for repair, replacement or overhaul using appropriate tools, equipment, techniques, principles and procedures.

Assessor guide: confirm that –

The specification of the components to be repaired, replaced or overhauled can be identified. The tools and equipment to be used in the repair, replacement or overhaul of scientific analysis equipment componentry can be identified. The principles, techniques and procedures to be followed in the repair, replacement or overhaul of scientific analysis equipment components can be given. The reasons for repairing, overhauling or replacing the faulty components can be given.

Criteria 18.36B.4.2

Replacement items selected from manufacturers' parts lists or catalogues according to specifications required.

Assessor guide: observe that –

All relevant suppliers' catalogues are obtained in accordance with work place procedures.

Assessor guide: confirm that –

Replacement components are selected from suppliers' catalogues in conformance to nominated specifications.

Criteria 18.36B.4.3

Replacement items obtained by appropriate means.

Assessor guide: observe that –

Where appropriate, replacement items are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for obtaining replacement components can be given.

Criteria 18.36B.4.4

Faulty items repaired or overhauled using correct principles, techniques, equipment/tools and procedures.

Assessor guide: observe that –

Given faulty items are repaired or overhauled using appropriate tools, equipment, techniques, principles and procedures.

Assessor guide: confirm that –

Examples of common items that can be repaired or overhauled can be identified. The tools, equipment and techniques to be used in the repair/overhaul of faulty components can be identified. The principles and procedures to be followed when repairing/overhauling faulty components can be identified.

Criteria 18.36B.4.5

Repaired, overhauled and replacement items prepared for refitting according to standard workshop procedures.

Assessor guide: observe that –

Components to be refitted/fitted into scientific analysis equipment are prepared in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The preparation requirements of items to be refitted/fitted into scientific analysis equipment can be identified.

Criteria 18.36B.4.6

Scientific analysis equipment refitted using correct principles, tools, equipment and procedures.

Assessor guide: observe that –

Components of scientific analysis equipment are refitted/fitted using appropriate tools, equipment, techniques, principles and procedures.

Assessor guide: confirm that –

The procedures for refitting/fitting components into scientific analysis equipment can be identified.

Criteria 18.36B.4.7

Refitted scientific analysers prepared for testing and calibration.

Assessor guide: observe that –

Given refitted scientific analysis equipment is prepared for testing and calibration in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing scientific analysis equipment for testing and calibration can be identified. The reasons for preparing scientific analysis equipment for testing and calibration can be explained.

Element 18.36B.5 Calibrate and test scientific analysis equipment**Criteria 18.36B.5.1**

Scientific analysis equipment calibrated against physical standards using correct calibration devices, equipment, techniques and procedures.

Assessor guide: observe that –

The given scientific analysis equipment is correctly calibrated against the physical standard using appropriate devices, equipment, techniques and procedures.

Assessor guide: confirm that –

The appropriate physical standard against which the scientific analysis equipment is to be calibrated can be identified. The procedures for calibrating scientific analysis equipment can be identified. The devices, equipment and techniques to be followed in calibrating scientific analysis equipment can be identified.

Criteria 18.36B.5.2

Calibrated scientific analysers tested using appropriate test equipment including electrical and electronic test equipment.

Assessor guide: observe that –

Calibrated scientific analysis equipment is tested for conformance with specifications using appropriate test equipment, techniques and procedures.

Assessor guide: confirm that –

The test procedures to be applied to calibrated scientific analysis equipment can be identified. The equipment to be used to test calibrated scientific analysis equipment can be identified. The reasons for testing calibrated scientific analysis equipment can be explained.

Criteria 18.36B.5.3

Calibration and analysis data collected by appropriate means.

Assessor guide: observe that –

Calibration and test data is recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording calibration and calibration test data can be identified.

Criteria 18.36B.5.4

Calibration and analysis data interpreted and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Where appropriate, trends, variations, fluctuations etc. in calibration and test data identified. The probable causes of trends, variations and fluctuations detected can be explained.

Criteria 18.36B.5.5

Calibration and analysis data assessed in accordance with manufacturers' data sheets, codes of practice and safety procedures.

Assessor guide: observe that –

The test and calibration data is compared with the scientific analysis equipment operational specifications.

Assessor guide: confirm that –

The operational specifications of the scientific analysis equipment can be identified. The procedures for dealing with test and calibration data within/outside specifications can be identified.

Element 18.36B.6 Re-install and recommission scientific analysis equipment**Criteria 18.36B.6.1**

Scientific analysis equipment put into service.

Assessor guide: observe that –

Given scientific analysis equipment is recommissioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recommissioning scientific analysis equipment can be identified. All necessary connections and precautions to be taken during recommissioning can be identified.

Criteria 18.36B.6.2

Service reports completed to standard operating procedures.

Assessor guide: observe that –

All necessary service reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting completed servicing/maintenance on scientific analysis equipment can be identified.

Element 18.36B.7 Service reports completed**Criteria 18.36B.7.1**

Service reports completed using appropriate means.

Assessor guide: observe that –

All necessary service reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

Range statement

Work undertaken autonomously or in a team environment, using predetermined standards of quality, safety and workshop procedures. Tasks performed in laboratory, workshop or on-site environments using electrical and electronic test equipment. Extends to the interpretation of electrical and electronic circuit diagrams; the use of specific calibration devices for laboratory and process analysers employing the principles of spectrometry (infra-red, visible, ultraviolet) both dispersive and non-dispersive, chromatography (gas, liquid), optical refraction, atomic radiation and x-rays. Tasks involve laboratory, workshop and site work safely utilising solid, liquid and gaseous samples for calibration, electronic test equipment, associated tools, calibration charts, laboratory data and manufacturers' data sheets. Employs the use of high pressure gas cylinders, liquid chemicals and associated equipment during calibration. The interpretation of operating sequences for program operated devices is included. Where high reliability soldering and desoldering is required Unit 5.2A (High reliability soldering and desoldering) should be selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of scientific analysis equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.37A A Diagnose and repair low voltage charging systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.30A Diagnose and repair low voltage electrical systems

18.55A Dismantle, replace and assemble engineering components

Element 18.37A.1 Assess generator/alternator operation

Criteria 18.37A.1.1

Magnetism, induced voltage and electromagnetism principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The concepts of magnetism, electromagnetism and induced voltage can be explained. The construction of generators and alternators can be identified. The principles of operation of generators and alternators can be explained.

Criteria 18.37A.1.2

Alternating and direct current generating principles; voltage/current regulation methods; and diode/condenser types and action understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The methods of generating alternating and direct current for low voltage systems can be identified. The methods of regulating voltage and current generated can be identified. The function of diode and condenser types of regulator can be explained.

Criteria 18.37A.1.3

Charging system performance checked and variances from system specifications accurately recorded.

Assessor guide: observe that –

The charging system is safely tested for correct operation in accordance with standard operating procedures. Where appropriate, variations from system specifications are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests that can be used to check the performance of the charging system can be identified. The test procedures can be given. The hazards associated with the testing of the performance of charging systems can be identified. The charging system specifications can be identified. The test equipment to be used in checking low voltage charging systems can be identified. The procedures for recording charging system performance/variations from specifications can be identified.

Element 18.37A.2 Test and repair generators/alternators**Criteria 18.37A.2.1**

Generators/alternators dismantled and assembled correctly.

Assessor guide: observe that –

Given generators/alternators are correctly and safely dismantled and reassembled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling and reassembling generators/alternators can be identified. The tools and equipment to be used in dismantling and reassembling generators/alternators can be identified. The safety precautions to be followed when working with generators/alternators can be given.

Criteria 18.37A.2.2

Charging faults determined to component level.

Assessor guide: observe that –

Charging faults in given generator/ alternator systems are safely identified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for identifying charging faults can be identified. The test equipment to be used in identifying charging faults can be identified.

Criteria 18.37A.2.3

Testing performed to determine shorts to ground, turn shorts and winding continuity etc.

Assessor guide: observe that –

Short circuit and winding continuity tests are conducted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing short circuits and winding continuity can be identified. The test equipment to be used in testing for short circuits and winding continuity can be identified.

Criteria 18.37A.2.4

Alternator/generator is tested for normal and maximum output.

Assessor guide: observe that –

The given alternator/generator output is tested for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of generator/ alternator output can be identified. The test equipment to be used to determine alternator/generator output can be identified. The procedures for testing alternator/generator output can be given.

Criteria 18.37A.2.5

Voltage and/or current regulators, cut-outs and relays are correctly tested and adjusted to specification.

Assessor guide: observe that –

Given voltage and current regulators, cut-outs and relays are tested for correct operation and conformance to specifications in accordance with standard operating procedures. Where appropriate, voltage and current regulators, cut-outs and relays are adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing voltage and current regulators, cut-outs and relays can be identified. The methods of adjusting voltage and current regulators, cut-outs and relays can be given. The operational specifications of voltage and current regulators, cut-outs and relays can be identified. The test equipment to be used to check the operation of voltage and current regulators, cut-outs and relays can be identified.

Criteria 18.37A.2.6

Condition of power/exciter diodes correctly determined.

Assessor guide: observe that –

The condition of given power/exciter diodes is safely determined in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing diodes can be identified. The test equipment to be used to test diodes can be identified. The precautions to be taken when testing diodes can be given.

Criteria 18.37A.2.7

All faulty components are replaced according to manufacturers' recommendations ie: brush gear, bearings, diodes, contacts, relays, etc.

Assessor guide: observe that –

All relevant supplier catalogues are obtained in accordance with work place procedures. Where appropriate, faulty components are replaced in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The components of generators/ alternators that can be replaced can be identified. The specifications of the faulty generator/alternator components can be identified.

Criteria 18.37A.2.8

Charging system free of excessive voltage drops and connections are correctly soldered, tightened and insulated.

Assessor guide: observe that –

The given generator/alternator charging system is checked for excessive voltage drops in accordance with standard operating procedures. The given generator/alternator charging system is checked to ensure all connections conform to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The effect of voltage drops on charging system operation/ performance can be explained. The causes of voltage drops in the charging system can be given. The procedures for checking charging systems for excessive voltage drops can be given. The effect of loose, poorly soldered and/or inappropriate insulation on charging system operation can be explained. The specifications of all circuit connections can be identified.

Range statement

This unit refers to a wide variety of generators, alternators and both electro-mechanical and specialist electronic regulating apparatus and applies to testing and repair activities associated with 12, 24 and 36 volt charging systems on vehicles, plant and stationary equipment. All work carried out to legislative and regulatory requirements. If specialist electronic skills are required, appropriate competency units should be selected. This unit should not be selected with any of the following units: 18.45A (Fault find/repair electrical equipment/components up to 240v single phase supply) or Unit 18.46A (Fault find/repair electrical equipment/components up to 1000vAC/1500vDC). If soldering of wires is required see Unit 5.1A (Manual soldering/desoldering - electrical/electronic components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of low voltage (L.V.) charging systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.38A A Maintain and repair wheels and tyres

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 18.38A.1 Assess wheel condition

Criteria 18.38A.1.1

Rim/tyre designs, constructions, codes, balancing, fastening principles and terminology understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The design and construction of a variety of rims and tyres can be described. The principles of fastening and balancing of wheels can be given. The relevant codes and standards can be identified.

Criteria 18.38A.1.2

Fastening components correctly assessed for damage and security.

Assessor guide: observe that –

The wheel fastening components are checked for damage and security.

Assessor guide: confirm that –

Damaged fastening components can be identified from given samples. The procedures for checking wheels for secure fastening can be given. The reasons for checking fastening components for damage and security can be given.

Criteria 18.38A.1.3

Abnormal tyre wear recognised and cause of fault correctly determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Abnormal tyre wear can be identified from given samples. The causes of abnormal tyre wear can be identified. The reasons for identifying the chosen cause of tyre wear can be given.

Criteria 18.38A.1.4

Unsafe tyre and/or wheel condition recognised and remedial action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Examples of unsafe tyre and wheel condition can be identified. The causes of the unsafe tyre and wheel conditions can be identified. The corrective action to be taken can be identified.

Element 18.38A.2 Repair and maintain wheel

Criteria 18.38A.2.1

Safety procedures associated with tyre/wheel removal, handling, inflation, assembly and disassembly, and fastening understood and adhered to.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for removing, handling, inflating, assembling/ disassembling and fastening of tyres and wheels can be given. The safety precautions to be taken when working with wheels and tyres can be identified. The tools, techniques and equipment required to carry out the above procedures can be identified. The reasons for identifying the chosen tools, techniques and equipment can be given.

Criteria 18.38A.2.2

Wheels/tyres safely removed and replaced using standard procedures and appropriate tools and equipment.

Assessor guide: observe that –

Wheels/tyres are safely removed and replaced using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.38A.2.3

Tools and equipment correctly applied and utilised.

Assessor guide: observe that –

All tools and equipment are correctly and appropriately used.

Assessor guide: confirm that –

Criteria 18.38A.2.4

Ballasting and/or inflation of tyres performed safely and to specification.

Assessor guide: observe that –

Ballasting and/or inflation of tyres is undertaken safely in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.38A.2.5

Static/dynamic balancing of wheels performed to specification.

Assessor guide: observe that –

Wheels are balanced to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for static and dynamic balancing of wheels can be given. The tools, techniques and equipment to be used for balancing can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.38A.2.6

Rim/tyre/tube faults repaired to specifications, regulations or codes.

Assessor guide: observe that –

Faults in rims/tyres/tubes are repaired to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Repairable rim, tyre and tube faults can be identified. The procedures for repairing these faults can be given. The tools, techniques and equipment to be used to repair the above faults can be identified. The reasons for selecting the tools, techniques and equipment chosen can be given. Examples of unrepairable rim, tyre and tube faults can be given.

Criteria 18.38A.2.7

Repair activities accurately recorded.

Assessor guide: observe that –

All repair activities are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording repairs undertaken on rims, tyres and tubes can be given.

Criteria 18.38A.2.8

Wheel bearings are correctly lubricated to specification.

Assessor guide: observe that –

Wheel bearings are lubricated in accordance with specification and standard operating procedures.

Assessor guide: confirm that –

The procedures for lubricating wheel bearings can be given. Types of wheel bearing lubricant and their application can be identified.

Range statement

This unit applies to the basic maintenance and repair of wheel rims and to the full range of wheel/tyre assemblies, plant and equipment using appropriate regulations, codes of practice, manufacturers' specifications or in-house standards as a guide for assessment repair and assembly. For complex rim repairs appropriate fitting or welding units may be required, for example, Unit 18.3A (Use tools for precision work) and Unit 18.6A (Dismantle/repair/replace/assemble and fit engineering components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of wheels and tyres or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.39A A Diagnose and repair track type undercarriage

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.39A.1 Assess track assembly

Criteria 18.39A.1.1

Track type undercarriage operating principles and terminology understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operating principles of track type undercarriage can be explained.

Criteria 18.39A.1.2

Links, pins, sprockets, idlers, rollers, pads, etc assessed for wear/damage/re-use/replacement; and corrective action determined.

Assessor guide: observe that –

All relevant specifications, parts lists, manuals, procedures, etc are obtained in accordance with work place procedures. Track type undercarriage components are checked for wear and damage using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking track type undercarriage components for wear can be given. The tools, techniques and equipment required to check track type undercarriage components for wear can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The specifications of the rack type undercarriage components can be identified. Worn or damaged components can be identified for repair or replacement. The reasons for identifying components for repair and replacement can be given. The action to be taken to overcome the wear and/or damage detected can be identified.

Criteria 18.39A.1.3

Track frame alignment checked and variances from specifications correctly determined.

Assessor guide: observe that –

The track frame is checked for alignment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for aligning track frames can be given. The tools, techniques and equipment required to align track frames can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. Variations from alignment specifications can be identified.

Element 18.39A.2 Repair and maintain track assemblies**Criteria 18.39A.2.1**

Safety procedures associated with removal and replacement of track undercarriage components followed.

Assessor guide: observe that –

Track undercarriage components are safely removed and replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing and replacing track type undercarriage components can be given. The precautions to be taken when removing and replacing track type undercarriage components can be identified.

Criteria 18.39A.2.2

Track tension correctly set to specification.

Assessor guide: observe that –

Track tension is correctly set to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for setting track tension can be given.

Criteria 18.39A.2.3

Clearances adjusted to specification.

Assessor guide: observe that –

Clearances are adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting clearances can be given.

Range statement

This unit also refers to mobile plant equipment that utilise crawler belts and/or chain link.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of track type undercarriage or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.40A A Maintain and repair suspension systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.40A.1 Assess suspension systems

Criteria 18.40A.1.1

Steering geometry, alignment, suspension systems operation and terminology understood.

Assessor guide: observe that –
All relevant specifications, parts lists, manuals and procedures are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –
The operation of suspension systems and the effects of steering geometry and alignment can be described.

Criteria 18.40A.1.2

Components assessed for security, wear and faults and corrective action determined.

Assessor guide: observe that –
The suspension components are checked for wear, faults and security in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for checking suspension system components for wear, faults, security and conformance to specification can be given. The tools, techniques and equipment to be used to check/test suspension systems can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The action to be taken to correct non-conformance to specification can be identified. The reasons for identifying the action to be taken can be explained.

Criteria 18.40A.1.3

Spring arrangements, control arms/links, dampening and control devices tested for correct operation.

Assessor guide: observe that –

Spring arrangements, control arms/ links and dampening devices are tested for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

Criteria 18.40A.1.4

Axle alignment/tracking assessed and variance from specification determined.

Assessor guide: observe that –

Axle alignment/tracking is checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

Variances of axle alignment from specification can be identified.

Criteria 18.40A.1.5

Auto/manual levelling devices performance tested.

Assessor guide: observe that –

Automatic/manual levelling devices are tested for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 18.40A.2 Maintain and repair suspension systems**Criteria 18.40A.2.1**

Axles aligned to specification.

Assessor guide: observe that –

Axles are aligned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for aligning axles can be given. The axle alignment specifications can be identified. The tools, techniques and equipment required to maintain and repair suspension systems can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.40A.2.2

Ride height adjusted to specification.

Assessor guide: observe that –

The ride height is adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting ride height can be given. The ride height specifications can be identified.

Criteria 18.40A.2.3

Suspension system re-gassed to specification.

Assessor guide: observe that –

The suspension system is re-gassed to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed in re-gassing suspension systems can be given. The precautions to be taken when re-gassing suspension systems can be identified.

Criteria 18.40A.2.4

Suspension components safely removed and replaced according to standard procedures.

Assessor guide: observe that –

Suspension components are safely removed and replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for the removal and replacement of suspension systems can be given. The precautions to be taken when removing/replacing suspension systems can be identified.

Range statement

This unit applies to maintenance and repair activities associated with suspension systems of all types of wheeled and/or tracked plant/vehicles'.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of suspension systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.41A A Maintain and repair steering systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.41A.1 Assess steering system operation

Criteria 18.41A.1.1

Relevant information is obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –
All relevant specifications, parts lists, manuals and procedures are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –
The operation of the steering system and its components can be described.

Criteria 18.41A.1.2

Performance tests undertaken on primary and/or emergency steering systems safely and to prescribed procedures.

Assessor guide: observe that –
The steering system is tested for correct performance in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for testing steering system performance can be given. The tests to be undertaken can be identified. The tools, techniques and equipment necessary to maintain and repair steering systems can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The precautions to be taken when testing steering systems can be given.

Criteria 18.41A.1.3

Flows, pressures, alignment angles correctly determined and recorded.

Assessor guide: observe that –
All test results and measurements are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –
The procedures for recording test results can be given.

Criteria 18.41A.1.4

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

The faulty components can be identified. The corrective action to be taken can be identified. The reasons for selecting the chosen corrective action can be given.

Criteria 18.41A.1.5

Power assisted steering component functions, wheel/axle alignment principles, terminology and applications understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operation of power assisted steering systems can be described. The effects of wheel/axle alignment on steering system operation can be explained.

Criteria 18.41A.1.6

Test equipment used correctly.

Assessor guide: observe that –

All test equipment is used correctly and appropriately in accordance with standard operating procedures.

Assessor guide: confirm that –

Element 18.41A.2 Repair/replace faulty components**Criteria 18.41A.2.1**

Component wear and clearances correctly determined using appropriate test equipment and manufacturers recommendations.

Assessor guide: observe that –

Steering system components are measured using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The measuring equipment to be used can be identified. The reasons for selecting the chosen measuring equipment can be given. The procedures for checking components for wear and clearance can be given.

Criteria 18.41A.2.2

Replacement components correctly selected using manufacturers data.

Assessor guide: observe that –

Assessor guide: confirm that –

Replacement components can be selected using manufacturer's data.

Criteria 18.41A.2.3

Components removed and refitted following prescribed procedures.

Assessor guide: observe that –

Steering system components are removed and refitted in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing and refitting steering system components can be given. The precautions to be taken when removing and refitting steering system components can be identified.

Criteria 18.41A.2.4

Alignment adjustments made that bring wheel/axles in line with specifications.

Assessor guide: observe that –

Wheels and axles are aligned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for aligning wheels and axles can be given.

Criteria 18.41A.2.5

Test and repair activities accurately recorded.

Assessor guide: observe that –

Test and repair activities are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test and repair activities can be given.

Criteria 18.41A.2.6

Adjustments made to primary and/or emergency steering systems that bring system in line with specifications.

Assessor guide: observe that –

The steering system is adjusted in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting primary and emergency steering systems can be given. The effect of adjustments on the steering system specifications can be given.

Range statement

This unit covers manual, hydraulically assisted, full hydraulic, articulated; and track type hydrostatic, clutch and differential type steering systems for vehicles, mobile plant and equipment.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of steering systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.42A B Diagnose and repair manual transmissions

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.42A.1 Assess clutch/transmission operation

Criteria 18.42A.1.1

Clutch and release mechanism types and principles of operation understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of a variety of clutches can be given. The functions of the components of a variety of clutches can be identified.

Criteria 18.42A.1.2

Power flows, gear types and ratios, torque multiplication, synchronising and shifting principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of manual transmissions can be explained. The concepts of gear ratios, torque multiplication and synchronisation can be explained.

Criteria 18.42A.1.3

Relevant information obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –

Assessor guide: confirm that –

All relevant specifications, parts, lists, manuals and procedures are obtained in accordance with work place procedures.

Criteria 18.42A.1.4

Preliminary checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The clutch and transmission are checked for correct operation.

The procedures for checking clutches and transmissions for correct operation can be given.

Criteria 18.42A.1.5

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Faulty clutch and/or transmission components can be correctly identified. The appropriate action to correct the faulty component(s) can be identified. The reasons for selecting the chosen corrective action can be explained.

Criteria 18.42A.1.6

Test equipment adapted and used correctly.

Assessor guide: observe that –

Test equipment is used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment to be used in checking/testing clutches and transmissions for correct operation can be identified. The reasons for selected the chosen test equipment can be given. The procedures for testing clutches and transmissions, including any necessary adaptation of test equipment, can be given.

Criteria 18.42A.1.7

Component parts correctly assessed for re-use or replacement.

Assessor guide: observe that –

Assessor guide: confirm that –

Component parts can be correctly identified for re-use or replacement. The reasons for identifying components to be re-used or replaced can be given.

Element 18.42A.2 Repair/replace faulty components**Criteria 18.42A.2.1**

Component wear and clearances correctly determined using appropriate test equipment and manufacturers recommendations.

Assessor guide: observe that –

The clutch/transmission components are tested for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking clutch and transmission components for wear and clearance can be given. The tools, techniques and equipment to be used to determine component wear and clearance can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.42A.2.2

Replacement components correctly selected using manufacturers data.

Assessor guide: observe that –

Assessor guide: confirm that –

Replacement components can be identified using manufacturer's data.

Criteria 18.42A.2.3

Components removed and refitted to clutch/transmission assembly following prescribed procedures.

Assessor guide: observe that –

Components are removed from and refitted to clutch/transmission assemblies in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing and refitting clutch and transmission components can be given.

Criteria 18.42A.2.4

Adjustments made correctly using appropriate tooling/equipment and manufacturers data.

Assessor guide: observe that –

Clutch and transmission components are correctly adjusted using appropriate tools, techniques and equipment.

Assessor guide: confirm that –

The procedures for adjusting clutch and transmission components can be given. The tools, techniques and equipment to be used to maintain and repair clutch and transmission assemblies can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The effects of the adjustments on clutch and transmission operation can be explained.

Criteria 18.42A.2.5

Test and repair activities are accurately recorded.

Assessor guide: observe that –

Test and repair activities are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test and repair activities can be given.

Criteria 18.42A.2.6

Clutch/transmission assembly free of excessive noise and operates to specification after repair work is carried out.

Assessor guide: observe that –

The clutch/transmission assembly is free of excessive noise and operates in conformance to specifications.

Assessor guide: confirm that –

The clutch/transmission assembly specifications can be identified.

Range statement

This unit covers diagnosis and repair activities associated with wheeled and/or tracked plant/vehicles, single/multi plate type clutch assemblies, counter shaft type transmissions, power take offs and transfer cases. Testing and assessment of performance would typically require operation of the plant or equipment. If hydraulic clutch assembly is used then competency Unit 18.18A (Maintain pneumatic system components) may need to be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of manual transmissions or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.43A B Diagnose and repair automatic transmissions

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.43A.1 Assess converter/transmission operation

Criteria 18.43A.1.1

Torque converter, simple and compound planetary gearing, and hydraulic control operating principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of automatic transmissions can be given. The function of torque converters, planetary gearing and hydraulic controls in automatic transmissions can be given.

Criteria 18.43A.1.2

Relevant information obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –

All relevant specifications, parts, lists, manuals and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

Criteria 18.43A.1.3

Preliminary checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –

The automatic transmission is checked for correct operation.

Assessor guide: confirm that –

The procedures for checking automatic transmissions for correct operation can be given.

Criteria 18.43A.1.4

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Faulty automatic transmission components can be correctly identified. The appropriate action to correct the faulty component(s) can be identified. The reasons for selecting the chosen corrective action can be explained.

Criteria 18.43A.1.5

Test equipment adapted and used correctly.

Assessor guide: observe that –

Test equipment is used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment to be used in checking/testing automatic transmissions for correct operation can be identified. The reasons for selected the chosen test equipment can be given. The procedures for testing automatic transmissions, including any necessary adaptation of test equipment, can be given.

Criteria 18.43A.1.6

Component parts correctly assessed for re-use or replacement.

Assessor guide: observe that –

Assessor guide: confirm that –

Component parts can be correctly identified for re-use or replacement. The reasons for identifying components to be re-used or replaced can be given.

Element 18.43A.2 Repair/replace faulty components**Criteria 18.43A.2.1**

Component wear and clearances correctly determined using appropriate test equipment and manufacturers recommendations.

Assessor guide: observe that –

The transmission components are tested for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking automatic transmission components for wear and clearance can be given. The tools, techniques and equipment to be used to determine component wear and clearance can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.43A.2.2

Replacement components correctly selected using manufacturers data.

Assessor guide: observe that –

Assessor guide: confirm that –

Replacement components can be identified using manufacturer's data.

Criteria 18.43A.2.3

Components removed and refitted to converter/transmission assembly following prescribed procedures.

Assessor guide: observe that –

Components are removed from and refitted to the automatic transmission assembly in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing and refitting automatic transmission components can be given.

Criteria 18.43A.2.4

Adjustments made correctly using appropriate tooling/equipment and manufacturers data.

Assessor guide: observe that –

Automatic transmission components are correctly adjusted using appropriate tools, techniques and equipment.

Assessor guide: confirm that –

The procedures for adjusting automatic transmission components can be given. The tools, techniques and equipment to be used to maintain and repair automatic transmission assemblies can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The effects of the adjustments on automatic transmission operation can be explained.

Criteria 18.43A.2.5

Test and repair activities are accurately recorded.

Assessor guide: observe that –

Test and repair activities are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test and repair activities can be given.

Criteria 18.43A.2.6

Converter/transmission assembly free of excessive noise and operates to specification after repair work is carried out.

Assessor guide: observe that –

The automatic transmission assembly is free of excessive noise and operates in conformance to specifications.

Assessor guide: confirm that –

The automatic transmission assembly specifications can be identified.

Range statement

This unit covers diagnostic and repair activities associated with automatic, semi automatic and hydrostatic transmissions, and fluid coupling/torque converter assemblies. Control of lockup/shifting etc. can be either fully hydraulic or electronic. Testing and assessment of performance would typically require operation of the plant or equipment.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of automatic transmissions or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.44A B Diagnose and repair drive line and final drives

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.44A.1 Assess drive line and final drive operation

Criteria 18.44A.1.1

Universal and constant velocity joints, conventional/limited slip and locking, differential action and conventional/swing axle operating principles understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of operation of drive lines and final drives can be given. The functions of universal and constant velocity joints, differentials and axles can be given.

Criteria 18.44A.1.2

Relevant information obtained and correctly interpreted prior to any testing.

Assessor guide: observe that –

All relevant specifications, parts lists, manuals and procedures are obtained in accordance with work place procedures.

Assessor guide: confirm that –

Criteria 18.44A.1.3

Preliminary checks undertaken safely and to prescribed procedures.

Assessor guide: observe that –

The drive line and final drive are checked for correct operation.

Assessor guide: confirm that –

The procedures for checking drive lines and final drives for correct operation can be given.

Criteria 18.44A.1.4

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Faulty drive line and final drive components can be correctly identified. The appropriate action to correct the faulty component(s) can be identified. The reasons for selecting the chosen corrective action can be explained.

Criteria 18.44A.1.5

Test equipment adapted and used correctly.

Assessor guide: observe that –

Test equipment is used correctly in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment to be used in checking/testing drive lines and final drives for correct operation can be identified. The reasons for selecting the chosen test equipment can be given. The procedures for testing drive lines and final drives, including any necessary adaptation of test equipment, can be given.

Criteria 18.44A.1.6

Component parts correctly assessed for reuse or replacement.

Assessor guide: observe that –

Assessor guide: confirm that –

Component parts can be correctly identified for re-use or replacement. The reasons for identifying components to be re-used or replaced can be given.

Element 18.44A.2 Repair/replace faulty components**Criteria 18.44A.2.1**

Component wear and clearances correctly determined using appropriate test equipment and manufacturers recommendations.

Assessor guide: observe that –

The drive line and final drive components are tested for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking drive line and final drive components for wear and clearance can be given. The tools, techniques and equipment to be used to determine component wear and clearance can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given.

Criteria 18.44A.2.2

Replacement components correctly selected using manufacturers data.

Assessor guide: observe that –

Assessor guide: confirm that –

Replacement components can be identified using manufacturer's data.

Criteria 18.44A.2.3

Components removed and refitted to driveline and final drive assemblies following prescribed procedures.

Assessor guide: observe that –

Components are removed from and refitted to drive line and final drive assemblies in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing and refitting drive line and final drive components can be given.

Criteria 18.44A.2.4

Adjustments made correctly using appropriate tooling/equipment and manufacturers data.

Assessor guide: observe that –

Drive line and final drive components are correctly adjusted using appropriate tools, techniques and equipment.

Assessor guide: confirm that –

The procedures for adjusting drive line and final drive components can be given. The tools, techniques and equipment to be used to maintain and repair drive line and final drive assemblies can be identified. The reasons for selecting the chosen tools, techniques and equipment can be given. The effects of the adjustments on drive line and final drive operation can be explained.

Criteria 18.44A.2.5

Test and repair activities are accurately recorded.

Assessor guide: observe that –

Test and repair activities are accurately recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test and repair activities can be given.

Criteria 18.44A.2.6

Drive line and final drive assemblies free of excessive noise and operates to specification after repair work is carried out.

Assessor guide: observe that –

The drive line and final drive assembly is free of excessive noise and operates in conformance to specifications.

Assessor guide: confirm that –

The drive line and final drive assembly specifications can be identified.

Range statement

This unit covers diagnosis and repair activities associated with wheeled and/or tracked plant/vehicles, drive line and final drive assemblies used in conventional and all wheel drive equipment. Testing and assessment of performance would typically require operation of plant and equipment.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of drive lines and final drives or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.45A A Fault find/repair electrical equipment/components up to 250v single phase supply

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

This unit covers the competencies required to locate and rectify faults in equipment and components using up to 240v single phase power, where they are disconnected

from their electrical supply. This would typically cover plug-in appliances. When work involves disconnection and reconnection of fixed-wired equipment, Unit 18.49A

(Disconnect/reconnect fixed wired equipment (which use up to 1000vAC/1500vDC)) must also be selected.

Pre-requisite units - Path 1

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 18.45A.1 Locate fault

Criteria 18.45A.1.1

Equipment/component function determined and understood by reference to circuit diagrams, schematics, manual and/or consultation with technical adviser

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics are obtained in accordance with work place procedures Where appropriate, technical advisers are consulted in accordance with work place procedures

Assessor guide: confirm that –

The function of the electrical equipment/component within the circuit can be identified The hazards associated with the electrical equipment/component can be identified The relevant regulatory requirements can be identified

Criteria 18.45A.1.2

Where required equipment is correctly isolated from power supply

Assessor guide: observe that –

Where appropriate, the electrical equipment/component is isolated from the power supply in accordance with standard operating procedures Where appropriate, the isolated electrical equipment/component is tagged in accordance with standard operating procedures Where appropriate, the electrical equipment/component is checked for isolation from the power supply in accordance with standard operating procedures

Assessor guide: confirm that –

The electrical equipment/component isolation procedures can be identified The test equipment to be used to verify isolation of the electrical equipment/circuit can be identified

Criteria 18.45A.1.3

Where appropriate built-in fault indicators, error codes examined and correctly interpreted and results recorded to standard operating procedures

Assessor guide: observe that –

Where appropriate, built-in fault indicators located and read/recorded in accordance with standard operating procedures Where appropriate, error code interpretation documents are obtained in accordance with standard operating procedures

Assessor guide: confirm that –

The errors indicated by built-in devices can be correctly identified

Criteria 18.45A.1.4

Equipment/component is checked and tested using correct and appropriate techniques, procedures, tools and test equipment

Assessor guide: observe that –

The electrical equipment/component is checked and tested for correct operation using appropriate tools, test equipment, techniques and procedures

Assessor guide: confirm that –

The procedures for testing electrical equipment/components for correct operation can be identified The tools, equipment and techniques to be used to test the operation of the electrical equipment/component can be identified The reasons for selecting the chosen tools, equipment and techniques can be explained

Criteria 18.45A.1.5

Check and test results are correctly interpreted and where required verified

Assessor guide: observe that –

Variations from specifications indicated by initial test results are verified using appropriate tools, test equipment, techniques and procedures

Assessor guide: confirm that –

The specifications of the electrical equipment/component can be identified Variations between test results and specifications can be identified

Criteria 18.45A.1.6

Equipment/component fault is identified and localised

Assessor guide: observe that –

Faults in electrical equipment/ components are identified and localised using appropriate tools, test equipment, techniques and procedures

Assessor guide: confirm that –

The procedures for localising faults in electrical equipment/components can be given

Criteria 18.45A.1.7

Equipment/component fault/s are correctly recorded to standard operating procedure

Assessor guide: observe that –

The faults in the electrical equipment/components are recorded/reported in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording/reporting faults in electrical equipment/components can be identified

Element 18.45A.2 Rectify faults**Criteria 18.45A.2.1**

Using correct and appropriate techniques, procedures, tools and equipment, equipment/component/s repaired, replaced or adjusted to specification or manufacturers requirements.

Assessor guide: observe that –

Where appropriate, the electrical equipment/components are repaired, replaced or adjusted to specification in accordance with standard operating procedures Supplier catalogues are obtained in accordance with work place procedures

Assessor guide: confirm that –

The appropriate techniques/procedures for returning the electrical equipment/components to specification can be identified The specifications of the electrical equipment/components can be identified The adjustments that can be made to electrical equipment/components can be identified Replacement components can be selected from supplier catalogues

Criteria 18.45A.2.2

Equipment/component checked and tested using correct and appropriate techniques, procedures, tools and equipment for compliance with site or manufacturers specifications

Assessor guide: observe that –

The appropriate test instruments are used to confirm that the electrical equipment/components have been returned to specification

Assessor guide: confirm that –

The procedures for confirming the electrical equipment/components have been returned to specification can be identified

Criteria 18.45A.2.3

Where appropriate, rectifications report recorded to standard operating procedures

Assessor guide: observe that –

Where appropriate, the rectification of the electrical equipment/ components is recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording electrical equipment/component rectifications can be identified

Range statement

This unit covers the competencies required to locate and rectify faults in equipment and components using up to 240v single phase power, where they are disconnected from their electrical supply. This would also typically cover plug-in appliances. This unit should not be selected if Unit 18.46A (Fault find/repair electrical equipment/components which use up to 1000vAC/1500vDC) has been selected. When work involves disconnection and reconnection of fixed-wired equipment, Unit 18.49A (Disconnect/reconnect fixed wired equipment (which use up to 1000vAC/1500vDC)) must also be selected. Work is undertaken autonomously or in a team environment using predetermined standards of quality, safety and work procedures. Work performed in situ. The following definitions are included to clarify the constituent parts of the competency, but do not by themselves define the competency. Circuits and systems cover industrial control systems for supply, switching, lighting, motor control, etc. using AC and DC power supplies incorporating a range of components, e.g.: switches, fuses, circuit breakers, relays, transformers, thyristors, regulators, motors, etc. All specifications and procedures gained from schematics, circuit diagrams/drawings, engineering data sheets and manufacturers' hand books. Fault finding techniques may include testing for voltage, current, frequency, polarity, phase, circuit continuity, insulation resistance, earth continuity etc. This unit also covers basic mechanical disconnection, dismantling and re-assembly of equipment components, enclosures, drives etc. Correct and appropriate tools and equipment may include continuity testers, ammeters, voltmeters, multimeters, tong testers, wattmeters, cathode ray oscilloscopes, etc. a range of hand and hand held power tools such as pliers, screwdrivers, spanners, etc. All work and work practices undertaken to relevant statutory authorities where required. This may include include controls or switching via contactors, relays, programmable controllers or other electronic switching devices. This unit covers electrical rescue, including electrical shock victim rescue methods and procedures, basic first aid for shock, burns and bleeding, expired air resuscitation, external cardiac compression, and cardio-pulmonary resuscitation.

Evidence**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the fault finding and repair of AC and DC electrical equipment/components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.46A A Fault find/repair electrical equipment/components up to 1000vAC/1500vDC

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

This unit covers the competencies required to locate and rectify faults in equipment and components using up to 1000vAC/1500vDC single and multi-phase power where

they are disconnected from their electrical supply. When work involves disconnection and reconnection of fixed-wired equipment, Unit 18.49A (Disconnect/reconnect fixed wired equipment (which use up to 1000vAC/1500vDC)) must also be selected.

Pre-requisite units - Path 1

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 18.46A.1 Locate fault

Criteria 18.46A.1.1

Equipment/component function determined and understood by reference to circuit diagrams, schematics, manual and/or consultation with technical adviser

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics are obtained in accordance with work place procedures Where appropriate, technical advisers are consulted in accordance with work place procedures

Assessor guide: confirm that –

The function of the electrical equipment/component within the circuit can be identified The hazards associated with the electrical equipment/component can be identified The relevant regulatory requirements can be identified

Criteria 18.46A.1.2

Where required, equipment is correctly isolated from power supply

Assessor guide: observe that –

Where appropriate, the electrical equipment/component is isolated from the power supply in accordance with standard operating procedures Where appropriate, the isolated electrical equipment/component is tagged in accordance with standard operating procedures Where appropriate, the electrical equipment/component is checked for isolation from the power supply in accordance with standard operating procedures

Assessor guide: confirm that –

The electrical equipment/component isolation procedures can be identified The test equipment to be used to verify isolation of the electrical equipment/circuit can be identified

Criteria 18.46A.1.3

Where appropriate, built-in fault indicators, error codes, examined and correctly interpreted and results recorded to standard operating procedures

Assessor guide: observe that –

Where appropriate, built-in fault indicators located and read/recorded in accordance with standard operating procedures Where appropriate, error code interpretation documents are obtained in accordance with standard operating procedures

Assessor guide: confirm that –

The errors indicated by built-in devices can be correctly identified

Criteria 18.46A.1.4

Equipment/component is checked and tested using correct and appropriate techniques, procedures, tools and test equipment

Assessor guide: observe that –

The electrical equipment/component is checked and tested for correct operation using appropriate tools, test equipment, techniques and procedures

Assessor guide: confirm that –

The procedures for testing electrical equipment/components for correct operation can be identified The tools, equipment and techniques to be used to test the operation of the electrical equipment/component can be identified The reasons for selecting the chosen tools, equipment and techniques can be explained

Criteria 18.46A.1.5

Check and test results are correctly interpreted and where required verified

Assessor guide: observe that –

Variations from specifications indicated by initial test results are verified using appropriate tools, test equipment, techniques and procedures

Assessor guide: confirm that –

The specifications of the electrical equipment/component can be identified Variations between test results and specifications can be identified

Criteria 18.46A.1.6

Equipment/component fault in identified and localised

Assessor guide: observe that –

Faults in electrical equipment/ components are identified and localised using appropriate tools, test equipment, techniques and procedures

Assessor guide: confirm that –

The procedures for localising faults in electrical equipment/components can be given

Criteria 18.46A.1.7

Equipment/component fault/s are correctly recorded to standard operating procedure

Assessor guide: observe that –

The faults in the electrical equipment/components are recorded/reported in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording/reporting faults in electrical equipment/components can be identified

Element 18.46A.2 Rectify fault/s**Criteria 18.46A.2.1**

Using correct and appropriate techniques, procedures, tools and equipment, equipment/component/s are repaired, replaced or adjusted to specifications or manufacturer's requirements

Assessor guide: observe that –

Where appropriate, the electrical equipment/components are repaired, replaced or adjusted to specification in accordance with standard operating procedures Supplier catalogues are obtained in accordance with workplace procedures

Assessor guide: confirm that –

The appropriate techniques/ procedures for returning the electrical equipment/components to specification can be identified The specifications of the electrical equipment/components can be identified The adjustments that can be made to electrical equipment/components can be identified Replacement components can be selected from supplier catalogues

Criteria 18.46A.2.2

Equipment/component is checked and tested using correct and appropriate techniques, procedures tools and equipment for compliance with site or manufacturer's specifications

Assessor guide: observe that –

The appropriate test instruments are used to confirm that the electrical equipment/components have been returned to specification

Assessor guide: confirm that –

The procedures for confirming the electrical equipment/components have been returned to specification can be identified

Criteria 18.46A.2.3

Where appropriate, rectifications report recorded to standard operating procedures

Assessor guide: observe that –

Where appropriate, the rectification of the electrical equipment/ components is recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for recording electrical equipment/component rectifications can be identified

Range statement

This unit covers locating and rectifying faults in equipment and components using up to 1000vAC/1500vDC single and multi-phase power, where they are disconnected from their electrical supply. Where work involves up to 240v single phase supply only, Unit 18.45A (Fault find/repair electrical equipment/components which use up to 240v single phase supply should be selected). When work involves disconnection and reconnection of fixed-wired equipment, Unit 18.49A (Disconnect/reconnect fixed wired equipment (which use up to 1000vAC/1500vDC)) must also be selected. Work is undertaken autonomously or in a team environment using predetermined standards of quality, safety and work procedures. Work performed in situ. The following definitions are included to clarify the constituent parts of the competency, but do not by themselves define the competency. Circuits and systems cover industrial control systems for supply, switching, lighting, motor control, etc. using AC and DC power supplies incorporating a range of components, e.g. switches, fuses, circuit breakers, relays, transformers, thyristors, regulators, motors, etc. All specifications and procedures gained from schematics, circuit diagrams/drawings, engineering data sheets and manufacturers' hand books. Fault finding techniques may include testing for voltage, current, frequency, polarity, phase, circuit continuity, insulation resistance, earth continuity etc. This unit covers basic mechanical disconnection, dismantling and re-assembly of equipment components, enclosures, drives etc. Correct and appropriate tools and equipment may include continuity testers, ammeters, voltmeters, multimeters, tong testers, wattmeters, cathode ray oscilloscopes, etc. a range of hand and hand held power tools such as pliers, screwdrivers, spanners, etc. All work and work practices undertaken to relevant statutory authorities where required. This may include controls or switching via contactors, relays, programmable controllers or other electronic switching devices. This unit covers electrical rescue, including electrical shock victim rescue methods and procedures, basic first aid for shock, burns and bleeding, expired air resuscitation, external cardiac compression, and cardio-pulmonary resuscitation.

Evidence**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the fault finding and repair of AC and DC electrical equipment/components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.47A A Diagnose and maintain electronic controlling systems on mobile plant

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.30A Diagnose and repair low voltage electrical systems

18.1A Use hand tools
18.55A Dismantle, replace and assemble engineering components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.30A Diagnose and repair low voltage electrical systems

18.1A Use hand tools
18.55A Dismantle, replace and assemble engineering components

Element 18.47A.1 Access and interpret fault codes.

Criteria 18.47A.1.1

Applicable control unit located and identified.

Assessor guide: observe that –
Correct techniques and procedures are followed to locate & identify the control unit.

Assessor guide: confirm that –
Control unit located and correctly identified using Applicable manual.

Criteria 18.47A.1.2

Fault codes accessed using vehicle indicators, meters and diagnostic tooling.

Assessor guide: observe that –
Fault codes accessed correctly with indicators, meters or diagnostic tooling using applicable manuals and procedures.

Assessor guide: confirm that –
Applicable fault codes can be described.

Criteria 18.47A.1.3

Fault codes interpreted.

Assessor guide: observe that –
Fault codes interpreted correctly from applicable manuals.

Assessor guide: confirm that –
The meaning of applicable fault codes is understood and explained.

Criteria 18.47A.1.4

Fault codes cleared from memory according to procedures.

Assessor guide: observe that –
Correct procedure used to clear fault codes from memory and verifies using applicable procedures and manuals.

Assessor guide: confirm that –
Procedure to clear fault codes and verify clearance is outlined.

Criteria 18.47A.1.5

Diagnostic and maintenance procedures performed using applicable techniques and precautions to safeguard electronic components and systems.

Assessor guide: observe that –

Correct techniques used to safeguard electronic components and systems when diagnosing and maintaining typical automotive electronic circuits.

Assessor guide: confirm that –

Correctly identifies sources of potential damage to typical automotive electronic systems when performing maintenance and diagnostic work. Uses techniques and procedures to safeguard against this damage.

Element 18.47A.2 Locate and repair faults using fault codes and manufactures fault finding and repair procedures**Criteria 18.47A.2.1**

Fault traced from fault codes using applicable trouble-shooting procedures.

Assessor guide: observe that –

Logical procedure followed to trace faults identified from fault codes.

Assessor guide: confirm that –

Correct trouble-shooting procedures identified and understood.

Criteria 18.47A.2.2

Faults repaired to required specification.

Assessor guide: observe that –

Appropriate techniques/procedures used to repair faults to manufactures specifications.

Assessor guide: confirm that –

Techniques/procedures used to repair various faults can be outlined.

Element 18.47A.3 Locate and test input components**Criteria 18.47A.3.1**

Input components located and identified.

Assessor guide: observe that –

Locates and identifies various types of input components.

Assessor guide: confirm that –

Locates and identifies various types of input components. Understands and correctly describes the operation and principles of transducers used in control systems.

Criteria 18.47A.3.2

Input components electrically tested.

Assessor guide: observe that –

Applicable procedures followed.

Assessor guide: confirm that –

Testing procedure is outlined.

Element 18.47A.4 Locate and test output components**Criteria 18.47A.4.1**

Output components located and identified.

Assessor guide: observe that –

Locates and identifies various types of output components.

Assessor guide: confirm that –

Identifies and describes component types, functions and locations. Understands and correctly describes the operation and principles of actuators used in control systems.

Criteria 18.47A.4.2

Output components electrically tested..

Assessor guide: observe that –

Output components correctly tested according to manufactures procedures.

Assessor guide: confirm that –

Testing procedure is outlined.

Element 18.47A.5 Remove/ replace and adjust sensors and actuators.**Criteria 18.47A.5.1**

Component part removed correctly.

Assessor guide: observe that –

Correct removal of identified component part.

Assessor guide: confirm that –

Component part removed using appropriate tooling and procedure to applicable instructions.

Criteria 18.47A.5.2

Correct replacement part identified.

Assessor guide: observe that –

Component part identified correctly from manufactures coding and parts listings.

Assessor guide: confirm that –

Correct component part identified and selected from manufacturer listings and codes.

Criteria 18.47A.5.3

Component part replaced correctly.

Assessor guide: observe that –

Correct replacement of component part.

Assessor guide: confirm that –

Component part replaced using appropriate tooling and procedure to manufacturer instructions.

Criteria 18.47A.5.4

Adjustments made in relation to mechanical clearances and measured electrical and resistance values.

Assessor guide: observe that –

Adjustments carried out in relation to mechanical clearances and measured electrical and resistance values.

Assessor guide: confirm that –

Correct adjustments made in relation to mechanical clearances and measured electrical and resistance values to manufacturer specifications and procedures.

Element 18.47A.6 Change operating parameters**Criteria 18.47A.6.1**

Appropriate specifications sourced from plant/equipment identification and applicable manuals and specifications.

Assessor guide: observe that –

Correctly locates and understands appropriate specifications.

Assessor guide: confirm that –

Use of plant/equipment identification and applicable manuals and specifications to source specifications is explained.

Criteria 18.47A.6.1

Appropriate tooling (software/hardware) selected.

Assessor guide: observe that –

Correct tooling (software/hardware) selected according to manufactures manual.

Assessor guide: confirm that –

Understands and describes the concepts of EPROM processors.

Criteria 18.47A.6.2

Plant/equipment identification used to obtain security codes.

Assessor guide: observe that –

Security codes obtained using correct protocol from manufacturer, using plant/equipment identification and appropriate identification.

Assessor guide: confirm that –

Procedure to obtain security codes explained.

Criteria 18.47A.6.2

Download data.

Assessor guide: observe that –

Correctly download data as per manufacturer procedures.

Assessor guide: confirm that –

Procedure to download data is understood and outlined.

Criteria 18.47A.6.3

Data entered for new specifications.

Assessor guide: observe that –

Correctly enters data for new specifications using applicable procedures.

Assessor guide: confirm that –

Procedure for entering data explained.

Criteria 18.47A.6.4

Successful data entry verified.

Assessor guide: observe that –

Verifies successful data entry according to applicable procedures.

Assessor guide: confirm that –

Procedure to verify data entry outlined/explained.

Range statement

This unit covers the skills and knowledge required to diagnose, fault find and remove/replace electronic control systems associated with mobile plant and equipment, including discrete logic, analogue and microprocessor monitoring and control systems.

Maintenance would typically cover wiring harness faults, testing and identifying faulty sensors, actuators and control components, replacement and adjustments to input and output components, accessing data from electronic control unit and applicable manufacturer software/hardware to change operating parameters. Information is sourced from manufactures/technical manuals. All work undertaken to manufacturer's specifications and standard operating procedures. This competency does not cover the skills needed to repair electronic circuitry associated with these systems. If this skill is required Units 18.56A (Diagnose and repair analog equipment and components) and 18.57A (Maintain/service analog/digital electronic equipment) should be selected as appropriate.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with electronic control systems or other competencies requiring the exercise of the skills and knowledge covered by this unit.

To undertake the elements of this competency an understanding of the concepts of electronic circuitry components their functions and operation at a basic level is required. Typically this would include resistors, capacitors, diodes, transistors, ICs, EPROMs ,ect.

To ensure safeguarding when diagnosing and maintaining these systems it is recommended the importance of the above concepts are understood in relation to voltage and current in typical automotive type electronic applications. The aim of the unit is to develop skills in the troubleshooting and repairs to electronic systems using recommended procedures and underpinning knowledge of electronic components and systems.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.48A A Fault find and repair/rectify basic electrical circuits

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 10

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

10.3A Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)

18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.49A Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC

10.2A Terminate and connect electrical wiring

18.1A Use hand tools

Element 18.48A.1 Locate fault

Criteria 18.48A.1.1

Circuit function and characteristics determined and understood by reference to circuit diagrams, specifications, schematics and/or consultation with technical adviser.

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics are obtained in accordance with work site procedures. Where appropriate, technical advisers are consulted in accordance with work site procedures.

Assessor guide: confirm that –

The circuit characteristics can be identified. The hazards associated with the electrical circuit(s) can be identified. The relevant regulatory requirements can be identified.

Criteria 18.48A.1.2

Where appropriate, built-in fault indicators, error codes examined and correctly interpreted and results recorded to standard operational procedures.

Assessor guide: observe that –

Where appropriate, built-in fault indicators located and read/recorded in accordance with work site procedures. Where appropriate, error code interpretation documents obtained in accordance with work site procedures.

Assessor guide: confirm that –

Errors indicated by built-in devices can be correctly identified.

Criteria 18.48A.1.3

Where appropriate, circuit is correctly isolated from power supply.

Assessor guide: observe that –

Where appropriate, the electrical circuit is isolated from the power supply in accordance with work site procedures. Where appropriate, the isolated circuit is tagged in accordance with work site procedures. Where appropriate, circuit isolation is verified in accordance with work site procedures.

Assessor guide: confirm that –

Circuit isolation procedures can be identified.

Criteria 18.48A.1.4

Faults are verified or localised using correct and appropriate techniques, procedures, tools and test equipment.

Assessor guide: observe that –

Circuit faults are confirmed/localised using appropriate test equipment, work techniques and tools in accordance with work site procedures.

Assessor guide: confirm that –

Common electrical test instruments and their application can be identified. Common techniques for testing electrical circuits can be identified.

Criteria 18.48A.1.5

Faults are recorded to standard operating procedures.

Assessor guide: observe that –

Faults in the electrical circuit are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The recording/reporting requirements for electrical circuit faults can be identified.

Element 18.48A.2 Repair/rectify fault(s)**Criteria 18.48A.2.1**

Using correct and appropriate techniques, procedures, tools and equipment, circuit/s is repaired, replaced or adjusted to specifications or manufacturer's requirements.

Assessor guide: observe that –

Where appropriate, the electric circuits are repaired/adjusted to specification in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate techniques/procedures for returning the circuit/s to specification can be identified.

Criteria 18.48A.2.2

Circuit/s is checked and tested using correct and appropriate techniques, procedures, tools and equipment for compliance with site or manufacturer's specifications.

Assessor guide: observe that –

The appropriate test instruments are used to confirm that the circuit/s has been returned to specification.

Assessor guide: confirm that –

The site/manufacturer's circuit specifications can be identified.

Criteria 18.48A.2.3

Where appropriate, repair/rectification report recorded to standard operating procedures.

Assessor guide: observe that –

Any rectification of the circuit(s) is recorded in accordance with work site procedures.

Assessor guide: confirm that –

The requirements for recording circuit rectifications can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and work procedures. Work performed in situ. The following definitions are included to clarify the constituent parts of the competency, but do not by themselves define the competency. Circuits and systems cover industrial control systems for supply, switching, lighting, motor control, etc. using AC and DC power supplies incorporating a range of components, e.g.: switches, fuses, circuit breakers, relays, transformers, thyristors, regulators, motors, etc. All specifications and procedures gained from schematics, circuit diagrams/drawings, engineering data sheets and manufacturers' hand books. Fault finding techniques may include testing for voltage, current, frequency, polarity, phase, circuit continuity, insulation resistance, earth continuity etc. Correct and appropriate tools and equipment may include continuity testers, ammeters, voltmeters, multimeters, tong testers, wattmeters, cathode ray oscilloscopes, etc. a range of hand and hand held power tools such as pliers, screwdrivers, spanners, etc. All work and work practices undertaken to relevant statutory authorities where required. This may include controls or switching via contractors, relays, programmable controllers or other electronic switching devices. This unit covers electrical rescue, including electrical shock victim rescue methods and procedures, basic first aid for shock, burns and bleeding, expired air resuscitation, external cardiac compression, and cardio-pulmonary resuscitation. Basic Circuits - A basic circuit is defined as a single circuit with a single output. A single circuit may be controlled by one or more devices and the output may control one or more devices.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the fault finding of basic electrical circuits, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.49A A Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 3

This unit covers the competencies required to connect and disconnect equipment. Work is performed in situ and it may include the original connection of fixed wire equipment. Disconnection of equipment may include electric motors, modular sensing devices, limit switches, etc.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

9.2A Interpret technical drawing
18.1A Use hand tools

10.2A Terminate and connect electrical wiring

12.2A Electrical/electronic measurement

Element 18.49A.1 Disconnect equipment

Criteria 18.49A.1.1

Electrical characteristics of equipment and circuit determined by reference to circuit drawings, schematics, reference manuals, equipment specifications, identification plate and/or consultation with technical adviser

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics, etc. are obtained in accordance with work site procedures
Where appropriate, technical advisers are consulted in accordance with work site procedures

Assessor guide: confirm that –

The characteristics of the circuit and the equipment can be identified The hazards associated with the circuits and the equipment can be identified The relevant regulatory requirements can be identified

Criteria 18.49A.1.2

Where appropriate, equipment characteristics determined and recorded to standard operating procedures (rotation etc.)

Assessor guide: observe that –

Where appropriate, the equipment characteristics are determined and recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for determining equipment characteristics can be given The procedures for recording equipment characteristics can be given The tools, techniques and equipment required to determine equipment characteristics can be identified

Criteria 18.49A.1.3

Point/s of isolation identified using correct and appropriate procedure

Assessor guide: observe that –

The procedures to be followed in identifying the point(s) of isolation of fixed wired equipment were followed

Assessor guide: confirm that –

The point(s) of isolation for the fixed wired equipment can be identified The reasons for selecting the chosen isolation point(s) can be explained

Criteria 18.49A.1.4

Equipment is isolated using correct and appropriate techniques and procedures

Assessor guide: observe that –

The fixed wired equipment is correctly isolated using appropriate techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The isolation procedures for the fixed wired equipment can be given The technique to be used to isolate the fixed wired equipment can be identified The reasons for selecting the chosen technique can be given

<p>Criteria 18.49A.1.5 All lock off equipment and signage requirements used correctly and appropriately</p>	<p><i>Assessor guide: observe that –</i> All lock off equipment and signs are used correctly and appropriately</p>	<p><i>Assessor guide: confirm that –</i> The lock off equipment and signs to be used can be identified The reasons for using lock off equipment and signs can be given</p>
<p>Criteria 18.49A.1.6 Electrical isolation is proven using correct and appropriate techniques, procedures and test equipment</p>	<p><i>Assessor guide: observe that –</i> Electrical isolation is proven using appropriate techniques and equipment in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for proving electrical isolation can be given The tools, techniques and equipment to be used to prove electrical isolation can be identified</p>
<p>Criteria 18.49A.1.7 Conductor layout is noted, recorded and labelled to standard operating procedure</p>	<p><i>Assessor guide: observe that –</i> Conductors are labelled and their layout recorded in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for labelling conductors and recording conductor layout can be given</p>
<p>Criteria 18.49A.1.8 Conductors disconnected using correct and appropriate techniques, procedures, tools and equipment</p>	<p><i>Assessor guide: observe that –</i> Conductors are disconnected using appropriate tools, techniques and equipment in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for disconnecting conductors can be given The tools, techniques and equipment to be used to disconnect conductors can be identified</p>
<p>Criteria 18.49A.1.9 Disconnected cables/connections are terminated and made safe to standard operating procedures</p>	<p><i>Assessor guide: observe that –</i> Disconnected cables/connections are terminated in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for terminating disconnected cables/connections can be given</p>
<p>Element 18.49A.2 Connect equipment</p>		
<p>Criteria 18.49A.2.1 Characteristics of the equipment to be connected are identified and connection requirements determined</p>	<p><i>Assessor guide: observe that –</i> All relevant circuit diagrams, specifications, schematics, etc. are obtained in accordance with work site procedures Where appropriate, technical advisers are consulted in accordance with work site procedures</p>	<p><i>Assessor guide: confirm that –</i> The characteristics of the circuit and the equipment can be identified The hazards associated with the circuits and the equipment can be identified The relevant regulatory requirements can be identified</p>
<p>Criteria 18.49A.2.2 Circuit checked for safe isolation using correct and appropriate techniques, procedures and test equipment</p>	<p><i>Assessor guide: observe that –</i> The circuit is checked for safe isolation using appropriate tools, techniques and equipment in accordance with standard operating procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for checking circuits for safe isolation can be given The tools, techniques and equipment required to check circuits for safe isolation can be identified</p>

Criteria 18.49A.2.3

Connections checked and conductors prepared for termination using correct and appropriate tools and procedures

Assessor guide: observe that –

Connections are checked and conductors prepared for termination using appropriate tools and equipment in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for terminating conductors and checking connections can be given The tools, techniques and equipment to be used to terminate conductors and check connections can be identified

Criteria 18.49A.2.4

Conductors are connected to equipment to specifications using correct and appropriate techniques, tools and equipment

Assessor guide: observe that –

The conductors are connected to the equipment using appropriate tools, techniques and equipment in conformance with specifications and standard operating procedures

Assessor guide: confirm that –

The specifications for the connections to be made can be identified The procedures for connecting conductors to equipment can be given The tools, techniques and equipment to be used to connect the conductors to the equipment can be identified

Criteria 18.49A.2.5

All cables/wires/conduit fastened/sealed to specifications using correct and appropriate techniques, tools and equipment

Assessor guide: observe that –

All cables/wires/conduits are fastened/sealed to specifications using appropriate tools, techniques and equipment in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for fastening and sealing cables, wires and conduits can be given The tools, techniques and equipment to be used to fasten and seal the cables, wires and conduits can be identified

Criteria 18.49A.2.6

All lock off equipment and signage removed using standard operating procedures

Assessor guide: observe that –

All lock off equipment and signage is removed from the equipment in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for removing lock off equipment and signage can be given

Criteria 18.49A.2.7

Equipment and circuit checked and tested for compliance with specifications using correct and appropriate techniques, procedures, tools and equipment

Assessor guide: observe that –

The equipment and circuits are checked and tested using appropriate tools, techniques and equipment for conformance to specifications in accordance with standard operating procedures

Assessor guide: confirm that –

The operational specifications of the fixed wired equipment can be identified The procedures for checking the operation of the equipment and circuits can be given The tools, techniques and equipment to be used to check and test the compliance of the equipment with specifications can be identified

Element 18.49A.3 Perform emergency first aid**Criteria 18.49A.3.1**

Situation assessed to identify points of danger to the injured person and potential rescuer

Assessor guide: observe that –

All potential points of danger are considered when planning rescue or provision of assistance

Assessor guide: confirm that –

Potential dangers are identified

Criteria 18.49A.3.2

Rescue/recovery of injured person, or assistance to injured person undertaken in accordance with recognised standards/procedures Contact made with appropriate medical and rescue authorities

Assessor guide: observe that –

Appropriate procedures are followed for the movement/treatment of injured, including:

- clearing of airways
- CPR (cardio-pulmonary resuscitation)
- care of spinal injuries
- treatment of cuts/lesions etc
- treatment of burns/scalds
- treatment of shock

Assessor guide: confirm that –

Recognised procedures for the movement and treatment of the injured person are identified
Appropriate local medical and rescue services identified

Criteria 18.49A.3.3

Details of first aid given recorded

Assessor guide: observe that –

Details of first aid are accurately recorded

Assessor guide: confirm that –

The details to be recorded of first aid given can be identified The procedures for recording first aid given can be identified The reasons for recording first aid given can be explained

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and work procedures. Work performed in situ and may include the original connection of fixed wire equipment. Disconnection of equipment may include electric motors, modular sensing devices, limit switches. Correct and appropriate tools and equipment may include ammeters, voltmeters, multimeters, tong testers, etc; a range of hand tools such as pliers, screwdrivers, sockets, spanners, conduit benders etc. If power tools are used Unit 18.2A (Use power tools/hand held operations) must also be selected. Isolation refers to the safe disconnection of all electrical power to equipment or equipment supply circuits via switching, circuit breakers or fuses etc. on circuits/equipment using up to 1000 volts AC or 1500 volts DC single or multi-phase supply. All work and work practices undertaken to regulatory and legislative requirements.

Evidence**Assessment context**

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the connection and disconnection of fixed wired equipment up to 1000 volts AC, 1500 volts DC or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. - Standards and procedures for the provision of emergency first aid. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.50A A Disconnect/reconnect fixed wired equipment over 1000vAC/1500vDC

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 3

Notes - This unit has dual status and is to be regarded as both a Specialisation Band A unit and a Specialisation Band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

9.2A Interpret technical drawing

10.2A Terminate and connect electrical wiring

12.2A Electrical/electronic measurement

18.1A Use hand tools

Element 18.50A.1 Disconnect equipment

Criteria 18.50A.1.1

Electrical characteristics of equipment and circuit are determined by reference to circuit drawings, schematics, reference manuals, equipment specifications, identification plates and/or consultation with technical adviser.

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics, etc are obtained in accordance with work site procedures. Where appropriate, technical advisers are consulted in accordance with work site procedures.

Assessor guide: confirm that –

The characteristics of the circuit and the equipment can be identified. The hazards associated with the circuits and equipment can be identified. The relevant regulatory requirements can be identified.

Criteria 18.50A.1.2

Where appropriate, equipment characteristics determined and recorded to standard operating procedures (rotation etc.).

Assessor guide: observe that –

Where appropriate, the equipment characteristics are determined and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for determining equipment characteristics can be given. The procedures for recording equipment characteristics can be given. The tools, techniques and equipment required to determine equipment characteristics can be identified.

Criteria 18.50A.1.3

Points of isolation identified using correct and appropriate procedure.

Assessor guide: observe that –

The procedures to be followed in identifying the point(s) of isolation of fixed wired equipment were followed.

Assessor guide: confirm that –

The point(s) of isolation for the fixed wired equipment can be identified. The reasons for selecting the chosen isolation point(s) can be explained.

<p>Criteria 18.50A.1.4 Equipment is isolated using correct and appropriate techniques and procedures.</p>	<p><i>Assessor guide: observe that –</i> The fixed wired equipment is correctly isolated using appropriate techniques in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The isolation procedures for the fixed wired equipment can be given. The technique to be used to isolate the fixed wired equipment can be identified. The reasons for selecting the chosen technique can be given.</p>
<p>Criteria 18.50A.1.5 All lock off equipment and signage requirements used correctly and appropriately.</p>	<p><i>Assessor guide: observe that –</i> All lock off equipment, signage and barriers are used correctly and appropriately.</p>	<p><i>Assessor guide: confirm that –</i> The lock off equipment and signs to be used can be identified. The reasons for using lock off equipment, signs and barriers can be given.</p>
<p>Criteria 18.50A.1.6 Electrical isolation is proven using correct and appropriate techniques, procedures and test equipment.</p>	<p><i>Assessor guide: observe that –</i> Electrical isolation is proven using appropriate techniques and equipment in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for proving electrical isolation can be given. The tools, techniques and equipment to be used to prove electrical isolation can be identified.</p>
<p>Criteria 18.50A.1.7 Conductor layout is noted, recorded and labelled to standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> Conductors are labelled and their layout recorded in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for labelling conductors and recording conductor layout can be given.</p>
<p>Criteria 18.50A.1.8 Conductors disconnected using correct and appropriate techniques, procedures, tools and equipment.</p>	<p><i>Assessor guide: observe that –</i> Conductors are disconnected using appropriate tools, techniques and equipment in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for disconnecting conductors can be given. The tools, techniques and equipment to be used to disconnect conductors can be identified.</p>
<p>Criteria 18.50A.1.9 Disconnected cables/connections are made safe to standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> Disconnected cables/connections are terminated in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for terminating disconnected cables/connections can be given.</p>

Element 18.50A.2 Connect equipment

Criteria 18.50A.2.1

Characteristics of the equipment to be connected are identified and connection requirements determined.

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics, etc are obtained in accordance with work site procedures. Where appropriate, technical advisers are consulted in accordance with work site procedures.

Assessor guide: confirm that –

The characteristics of the circuit and the equipment can be identified. The hazards associated with the circuits and equipment can be identified. The relevant regulatory requirements can be identified.

Criteria 18.50A.2.2

Circuit checked for safe isolation using correct and appropriate techniques, procedures and test equipment.

Assessor guide: observe that –

The circuit is checked for safe isolation using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking circuits for safe isolation can be given. The tools, techniques and equipment required to check circuits for safe isolation can be identified.

Criteria 18.50A.2.3

Connections are checked and prepared for termination using correct and appropriate tools and procedures.

Assessor guide: observe that –

Connections are checked and conductors prepared for termination using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for terminating conductors and checking connections can be given. The tools, techniques and equipment to be used to terminate conductors and check connections can be identified.

Criteria 18.50A.2.4

Conductors are connected to equipment to specifications using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

The conductors are connected to the equipment using appropriate tools, techniques and equipment in conformance with specifications, regulatory requirements and standard operating procedures.

Assessor guide: confirm that –

The specifications and regulatory requirements for the connections to be made can be identified. The procedures for connecting conductors to equipment can be given. The tools, techniques and equipment to be used to connect the conductors to the equipment can be identified.

Criteria 18.50A.2.5

All cables/wires/conduit fastened/sealed to specifications, using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

All cables/wires/conduits are fastened/sealed to specifications using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fastening and sealing cables, wires and conduits can be given. The tools, techniques and equipment to be used to fasten and seal the cables, wires and conduits can be identified.

Criteria 18.50A.2.6

All lock off equipment and signage removed using standard operating procedures.

Assessor guide: observe that –

All lock-off equipment, barriers and signage are removed from the equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing lock-off equipment, barriers and signage can be given.

Criteria 18.50A.2.7

Equipment and circuit checked and tested for compliance to specifications using correct and appropriate techniques, procedures, tools and equipment.

Assessor guide: observe that –

The equipment and circuits are checked and tested using appropriate tools, techniques and equipment for performance to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the fixed wired equipment can be identified. The procedures for checking the operation of the equipment and circuits can be given. The tools, techniques and equipment to be used to check and test the compliance of the equipment with specifications can be identified.

Element 18.50A.3 Perform emergency first aid**Criteria 18.50A.3.1**

Situation assessed to identify points of danger to the injured person and potential rescuer.

Assessor guide: observe that –

All potential points of danger are considered when planning rescue or provision of assistance.

Assessor guide: confirm that –

Potential dangers are identified.

Criteria 18.50A.3.2

Rescue/recovery of injured person, or assistance to injured person undertaken in accordance with recognised standards/procedures. Contact made with appropriate medical and rescue authorities.

Assessor guide: observe that –

Appropriate procedures are followed for the movement/treatment of injured, including:

- clearing of airways
- CPR (cardio-pulmonary resuscitation)
- care of spinal injuries
- treatment of cuts/lesions etc
- treatment of burns/scalds
- treatment of shock

Assessor guide: confirm that –

Recognised procedures for the movement and treatment of the injured person are identified. Appropriate local medical and rescue services identified.

Criteria 18.50A.3.3

Details of first aid given recorded.

Assessor guide: observe that –

Details of first aid are accurately recorded.

Assessor guide: confirm that –

The details to be recorded of first aid given can be identified. The procedures for recording first aid given can be identified. The reasons for recording first aid given can be explained.

Range statement

Work undertaken autonomously or part of a team environment using predetermined standards of quality, safe work procedures. Work performed in situ. Correct and appropriate tools and equipment may include ammeters, tong testers, continuity testers, voltmeters, multimeters etc., a range of hand held tools such as pliers, screwdrivers, sockets, spanners, keys etc. If power tools are used Unit 18.2A (Use powertools/hand held operations) must also be selected. Isolation refers to the safe disconnection of electrical power to equipment or equipment supply circuit with switch breaker or fuses etc. Circuit applies to voltage levels above 1000 volts AC and 1500 volts DC. All work and work practices undertaken to regulatory and legislative requirements. Persons undertaking this work would be appropriately recognised and endorsed by relevant statutory authorities where required.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. - Standards and procedures for the provision of emergency first aid. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the connection and disconnection of fixed wired equipment over 1000 volts AC or 1500 volts DC or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.51A A Fault find repair/rectify complex electrical circuits

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

10.2A Terminate and connect electrical wiring

10.3A Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)

12.2A Electrical/electronic measurement

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.2A Use power tools/hand held operations

18.48A Fault find and repair/rectify basic electrical circuits

18.49A Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC

Element 18.51A.1 Locate fault

Criteria 18.51A.1.1

Circuit/system function and characteristics determined and understood by reference to circuit diagrams, specifications, schematics and/or consultation with technical adviser.

Assessor guide: observe that –

All relevant circuit diagrams, specifications, schematics are obtained in accordance with work site procedures. Where appropriate, technical advisers are consulted in accordance with work site procedures.

Assessor guide: confirm that –

The circuit function and characteristics can be identified. The hazards associated with the electrical circuit(s) can be identified. The relevant regulatory requirements can be identified.

Criteria 18.51A.1.2

Where appropriate, built-in fault indicators, error codes examined and correctly interpreted and results recorded to standard operational procedures.

Assessor guide: observe that –

Where appropriate, built-in fault indicators located and read/recorded in accordance with work site procedures. Where appropriate, error code interpretation documents obtained in accordance with work site procedures.

Assessor guide: confirm that –

Errors indicated by built-in devices can be correctly identified.

Criteria 18.51A.1.3

Where appropriate, circuit(s) correctly isolated from power supply.

Assessor guide: observe that –

Where appropriate, the electrical circuit is isolated from the power supply in accordance with work site procedures. Where appropriate, the isolated circuit is tagged in accordance with work site procedures. Where appropriate, circuit isolation is verified in accordance with work site procedures.

Assessor guide: confirm that –

Circuit isolation procedures can be identified.

Criteria 18.51A.1.4

Faults are verified or localised using correct and appropriate techniques, procedures, tools and test equipment.

Assessor guide: observe that –

Circuit faults are confirmed/localised using appropriate test equipment, techniques and tools in accordance with work site procedures.

Assessor guide: confirm that –

Common electrical test instruments and their application can be identified. Common techniques for testing electrical circuits can be identified.

Criteria 18.51A.1.5

Faults are recorded to standard operating procedures.

Assessor guide: observe that –

Faults in electrical circuits are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The recording/reporting requirements for electrical circuit faults can be identified.

Element 18.51A.2 Repair/rectify fault(s)**Criteria 18.51A.2.1**

Using correct and appropriate techniques, procedures, tools and equipment, circuit/system is repaired, replaced or adjusted to specifications or manufacturer's requirements.

Assessor guide: observe that –

Where appropriate the electric circuit/system is repaired/adjusted to specification in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate techniques/procedures for returning the circuit/system to specification can be identified.

Criteria 18.51A.2.2

Circuit/system is checked and tested using correct and appropriate techniques, procedures, tools and equipment for compliance with site or manufacturer's specifications.

Assessor guide: observe that –

The appropriate test instruments are used to confirm that the circuit(s) has been returned to specification.

Assessor guide: confirm that –

The site/manufacturer's circuit specifications can be identified.

Criteria 18.51A.2.3

Where appropriate, repair/rectification report recorded to standard operating procedures.

Assessor guide: observe that –

Any rectification of the circuit(s) is recorded in accordance with work site procedures.

Assessor guide: confirm that –

The requirements for recording circuit rectification can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and work procedures. Work performed in situ. The following definitions are to clarify the constituent parts of the competency, but do not by themselves define the competency. Circuits and systems cover industrial control systems for supply, switching, lighting, motor control, etc. using AC and DC power supplies incorporating a range of components, e.g.: switches, fuses, circuit breakers, relays, transformers, thyristors, regulators, motors, etc. This may include controls or switching via contactors, relays, programmable controllers or other electronic switching devices. Fault finding techniques may include testing for voltage, current, frequency, polarity, phase, circuitry continuity, insulation resistance, earth continuity etc. Correct and appropriate tools and equipment may include continuity testers, ammeters, voltmeters, multimeters, tong testers, wattmeters, cathode ray oscilloscopes, etc. a range of hand and hand held power tools such as pliers, screwdrivers, spanners, etc. All specifications and procedures gained from schematics, circuit diagrams/drawings, engineering data sheets and manufacturers' hand books. All work and work practices undertaken to relevant statutory authorities where required. Complex Circuits - A complex circuit is defined as one made up of more than one interdependent circuit. A complex circuit is made up of more than one circuit, controlling and processing inputs or outputs. This unit covers electrical rescue, including electrical shock victim rescue methods and procedures, basic first aid for shock, burns and bleeding, expired air resuscitation, external cardiac compression, and cardio-pulmonary resuscitation.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the fault finding of interconnected electrical circuits, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.52A A Maintain and repair fluid power systems for mobile plant

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 18.52A.1 Secure system from potentially hazardous situations

Criteria 18.52A.1.1

Sources of stored energy are identified.

Assessor guide: observe that –
Sources of stored energy are identified on mobile plant.

Assessor guide: confirm that –
Different sources of stored energy and their applications can be described and identified from circuit diagrams and manufacturer manuals.

Criteria 18.52A.1.2

Mobile plant is assessed for potentially hazardous situations and conditions.

Assessor guide: observe that –
Hazardous situations/conditions are identified and appropriate safety measures applied.

Assessor guide: confirm that –
Hazardous situations/conditions relating to maintenance and repair of fluid power systems can be outlined and safety precautions described.

Criteria 18.52A.1.3

Accumulators and position actuators are bled down to remove stored energy as per manufacturers instructions.

Assessor guide: observe that –
Accumulators bled down and actuators positioned correctly.

Assessor guide: confirm that –
The reasons for bleeding accumulators and actuators can be outlined and the hazards associated with working on pressurised systems explained.

Element 18.52A.2 Check hydraulic system components

Criteria 18.52A.2.1

System components identified correctly, using appropriate circuit diagrams or manufacturers instruction.

Assessor guide: observe that –

Appropriate circuit diagram or manufacturer instructions selected, system components identified and other relevant information interpreted. All applicable components are identified on mobile plant.

Assessor guide: confirm that –

The full range of hydraulic system components can be identified in a mobile plant application. Information on circuit diagram or manufacturer instructions can be explained. The characteristics and operational function of each system component can be described.

Criteria 18.52A.2.2

Faults are traced and localised with reference to manufacturer trouble shooting procedures and flow charts.

Assessor guide: observe that –

Faulty components are traced and localised using fluid power principles, procedures and safety requirements.

Assessor guide: confirm that –

Methods and techniques for tracing and localising faults can be outlined and explained.

Criteria 18.52A.2.3

The operational function of components is inspected and tested in accordance with standard operating procedures.

Assessor guide: observe that –

Equipment for testing hydraulic system components is used correctly. Components including hoses, pipes, actuators, pumps, valves, cylinders and rams are inspected/tested according to procedure and using fluid power principles. All relevant hydraulic circuits, drawings, instructions, manuals and data sheets and specifications are obtained in accordance with standard operating procedures. Hydraulic components not operating in accordance with specifications are identified

Assessor guide: confirm that –

The procedures and equipment for inspecting and testing hydraulic system components can be identified. Problems relating to faulty hydraulic system components/operation can be described. The specifications of each hydraulic system component can be identified. The reasons for hydraulic components not operating in accordance with specifications can be given. All safety procedures and precautions can be identified. Common faults in hydraulic components can be described.

Element 18.52A.3 Replace faulty system components

Criteria 18.52A.3.1

Faulty components are correctly removed from system using appropriate tools, techniques and procedures.

Assessor guide: observe that –

Components are correctly removed from system.

Assessor guide: confirm that –

Removal methods for various components can be described.

Criteria 18.52A.3.2

Replacement components are sourced where appropriate from manufacturer/supplier.

Assessor guide: observe that –

Replacement pipes and hoses identified using catalogues or electronic media. Replacement parts are obtained using appropriate procedures

Assessor guide: confirm that –

Information in catalogues or electronic media can be correctly interpreted. Procedures to obtain replacement parts can be outlined.

Criteria 18.52A.3.3

Hoses, tubes and pipework are prepared and assembled using appropriate tools, techniques and procedures.

Assessor guide: observe that –

Appropriate conductors and fittings are selected from manufacturer catalogues and charts. Conductors are cut to length using appropriate tooling/machine. Conductors are assembled using correct techniques and orientation

Assessor guide: confirm that –

Typical conductor types and fittings can be identified and their applications explained. Methods for cutting and assembling hoses, tubes and pipework can be explained.

Criteria 18.52A.3.4

Replacement components and conductors correctly assembled and refitted to system.

Assessor guide: observe that –

Component parts correctly replaced in system using appropriate tools and techniques.

Assessor guide: confirm that –

Tools and techniques for fitting replacement components and conductors can be outlined.

Criteria 18.52A.3.5

System tested and adjusted for correct operation according to standard operating procedures.

Assessor guide: observe that –

Replacement components are tested and adjusted for correct operation and conformance to specifications in accordance with standard operating procedures. Conductor assemblies are conducted using machine circuits and/or test rigs and correct assembly verified.

Assessor guide: confirm that –

The correct operation of hydraulic components and conductors can be identified. The procedures for checking and adjusting the system can be given.

Element 18.52A.4 Dismantle, inspect and repair linear actuators**Criteria 18.52A.4.1**

Hydraulic cylinders and rams are dismantled using appropriate tools, techniques and procedures.

Assessor guide: observe that –

Linear actuators are dismantled without damage, using correct tools, techniques, procedures and safety measures.

Assessor guide: confirm that –

The tools, techniques and procedures used for dismantling can be identified. Safety measures for dismantling linear actuators can be described.

<p>Criteria 18.52A.4.2 Component parts evaluated for condition.</p>	<p><i>Assessor guide: observe that –</i> Specifications are located and used to identify performance/ condition of cylinders and rams. Wear and damage to cylinders and rams is identified.</p>	<p><i>Assessor guide: confirm that –</i> The methods of inspection and measurement can be described. Guides and specifications for reusable parts are used.</p>
<p>Criteria 18.52A.4.3 Seals and bearings fitted as per manufacturer specifications.</p>	<p><i>Assessor guide: observe that –</i> Seals and bearings are fitted correctly.</p>	<p><i>Assessor guide: confirm that –</i> The correct procedures for fitting bearings and seals can be given. Manufacturer installation instructions can be accessed and described.</p>
<p>Criteria 18.52A.4.4 Cylinders/rams reassembled and fitted as per manufacturer instructions.</p>	<p><i>Assessor guide: observe that –</i> Cylinder/ram reassembled in correct sequence as per manufacturer instruction. Assembly is correctly refitted to machine</p>	<p><i>Assessor guide: confirm that –</i> The sequence and procedure for reassembly of cylinder/ram can be given. Assembly and fitting instructions can be accessed and described. The procedures for refitting rams can be given.</p>
<p>Criteria 18.52A.4.5 Assembly is tested by use of machine circuit or equivalent.</p>	<p><i>Assessor guide: observe that –</i> Refitted assemblies are tested and repairs are verified on machine circuit and/or test rig.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for testing and verifying repairs using machine circuits and/or test rigs are given. Necessary remedial action can be described.</p>
<p>Element 18.52A.5 Service hydraulic systems</p>		
<p>Criteria 18.52A.5.1 Hydraulic systems are serviced according to manufacturers schedules and instructions.</p>	<p><i>Assessor guide: observe that –</i> General service procedures carried out correctly.</p>	<p><i>Assessor guide: confirm that –</i> Manufacturer scheduled service timeframes and service items can be identified. Service procedures can be described.</p>

Range statement

This unit covers the skills and knowledge required to diagnose, fault-find and repair basic fluid power systems used in the earthmoving, mining, agricultural, marine and transport industries. This competency does not cover skills required in the design or modification of systems, component re-manufacture or the diagnosis, maintenance and repair of control systems (solenoid and electro proportional systems). If these skills are required, then Units 18.23B (Modify fluid power system operation), 18.47A (Diagnose and maintain electronic controlling systems on mobile plant) and 18.53B (Modify fluid power control systems) should be selected as appropriate. Repairs would typically include the assembly and fitting of hydraulic hoses, tubing and pipework. Resealing and repairs to cylinders and rams. Change out of hydraulic components such as pumps, valves and actuators and the associated remedial actions required such as system flushing and purging and setting of component parameters. Fault finding of systems according to manufacturers guidelines and procedures would typically include techniques such as pressure and flow testing, cycle times, basic interrogation of diagnostic system and may include basic electronic servicing. The general servicing of systems is also covered by this unit and includes fluid replacement, filtration requirements and oil sampling. Where Unit 18.20 (Maintain hydraulic system components) and/or 18.21A (Maintain and repair hydraulic systems) are selected, this unit should not be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fluid power for mobile plant or other competencies requiring the exercise of the skills and knowledge covered by this unit.

accepted engineering techniques, practices, processes and workplace procedures. Tasks

To undertake the elements of this competency an understanding of the concepts of fluid power and fluid power components and their application to mobile plant is required. This is considered important in the development of effective trouble shooting skills, and in the ability to work safely on systems containing stored energy devices (accumulators) and systems under pressure due to external forces.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.53B A Modify fluid power control systems

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
2.8C10 Perform computations

2.6C10 Plan a complete activity
2.10C5 Write reports

2.7C10 Perform computations - basic
2.14C5 Use graphical techniques and perform simple statistical computations

9.1A Draw and interpret sketch
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.3A Use tools for precision work

18.1A Use hand tools
18.6A Dismantle/repair/replace/assemble and fit engineering components

18.10A Equipment condition monitoring and recording

18.16B Analyse plant and equipment condition monitoring results

18.18A Maintain pneumatic system components

18.19A Maintain and repair pneumatic systems
18.22A Maintain/repair/replace fluid power controls

18.20A Maintain hydraulic system components
18.23B Modify fluid power system operation

18.21A Maintain and repair hydraulic systems
18.55A Dismantle, replace and assemble engineering components

Element 18.53B.1 Check/test control software program

Criteria 18.53B.1.1

Program steps checked against manufacturers' and site specifications using schematics, circuit and ladder diagrams.

Assessor guide: observe that –

All relevant manufacturers' and site specifications, schematics, circuit and ladder diagrams obtained in accordance with standard operating procedures. The program steps are checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the control system can be identified. The program steps and their function can be identified.

Criteria 18.53B.1.2

Deviations determined and recorded.

Assessor guide: observe that –

Where appropriate, deviations of control software program from specification are recorded in accordance with standard operating procedure.

Assessor guide: confirm that –

The procedures for recording deviations of the control software program from specification can be identified.

Element 18.53B.2 Control system software/program corrected or modified**Criteria 18.53B.2.1**

Program deviations corrected and aligned to specification requirements using standard operating procedures.

Assessor guide: observe that –

Program deviations are corrected and aligned to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for correcting deviations of the control system software from specification can be identified.

Criteria 18.53B.2.2

Modifications to program undertaken to specification requirements using standard operating procedures.

Assessor guide: observe that –

The control system software/program is modified to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The modifications to be made to the control system software can be identified. The reasons for modifying the control system software can be given.

Criteria 18.53B.2.3

Modification recorded to standard operating procedures.

Assessor guide: observe that –

The modifications made to the control system software are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording control system software modifications can be identified.

Criteria 18.53B.2.4

Modified program backed up to standard operating procedures.

Assessor guide: observe that –

The modified control system program is backed up in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for backing up modifications to control system programs can be identified.

Element 18.53B.3 Check/test control system inputs/outputs**Criteria 18.53B.3.1**

Input/output signals checked and assessed against operational specifications using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

The input and output signals are checked for conformance to specification using appropriate tools, equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The tools, equipment and techniques to be used to check input and output signals for conformance to specification can be identified. The correct form of the input and output signals can be identified.

Criteria 18.53B.3.2

Faulty signals identified, repaired and recorded/reported to appropriate personnel.

Assessor guide: observe that –

Where appropriate, faulty signals identified are recorded/reported in accordance with standard operating procedure.

Assessor guide: confirm that –

The procedures for recording/ reporting faulty input/output signals can be identified.

Element 18.53B.4 Repair faulty control system input/output**Criteria 18.53B.4.1**

Faulty signal source repaired and/or replaced.

Assessor guide: observe that –

The source of the faulty signal is marked for repair or replacement in accordance with standard operating procedures. All relevant supplier catalogues are obtained in accordance with workplace procedures. Where appropriate, the faulty signal source is repaired and/or replaced in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for marking items for repair or replacement can be identified. The tools, equipment and techniques necessary to repair the signal source can be identified. The disassembly/assembly procedures to be followed when repairing signal sources can be identified. Where appropriate, replacement parts/items are selected from supplier catalogues. The specifications of the signal source can be identified.

Criteria 18.53B.4.2

Repaired/replaced signal source tested for correct operation in system and commissioned in conformance to operational specifications.

Assessor guide: observe that –

The repaired/replaced signal source is tested for correct operation in accordance with specifications and standard operating procedures. The repaired/replaced signal source is commissioned into operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing signal sources can be identified. The procedures for commissioning signal sources into operation can be identified.

Element 18.53B.5 Prepare service report**Criteria 18.53B.5.1**

Service report is prepared and completed following standard operating procedure Recommendations for improvement and repeat downtime avoidance analysis are included.

Assessor guide: observe that –

All necessary service reports are completed in accordance with standard operating procedures. All relevant historical data, reports and documents with respect to the control system's operation are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for reporting service undertaken on control systems can be identified. Any trends evident in the data collected and collated can be identified. The probable causes of any detected trends can be given. Where appropriate, improvements to the control system are recommended. Where appropriate, the reasons that the recommended improvements should be implemented can be given.

Range statement

This unit covers the skills required to alter the control parameters of fluid power control systems by system modification; this includes the ability to assess system performance based on sound working knowledge of established principles, methods and procedures. System specifications interpreted and understood from data sheets, circuit diagrams and flow diagrams. Corrections, modifications/alterations are undertaken to specifications to parts of the control system including software timers, gates, associated equipment, flow, ladder and logic diagrams. Fault finding of hardware associated with system input/outputs includes input/output circuitry, cards, external sensors, limits, mnemonic coding and associated equipment. Control systems include PCs, programmable controllers, DCS, relay logic (electric-hydraulic-pneumatic) etc. Service reports are prepared according to standard operating procedure. Modifications covered by this unit are changes to fluid power control systems that lead to desired changes in system performance. Programmable controllers include PLC and DCS or similar.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the modification of fluid power control systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.54A A Fault find, test, calibrate instrumentation systems, equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

18.64A Maintain instrumentation system components

Element 18.54A.1 Test instrumentation systems, equipment

Criteria 18.54A.1.1

Work/test requirements identified and defined to standard operating procedures.

Assessor guide: observe that –

All relevant data with respect to the operation of the instrumentation systems/equipment is obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The operational requirements/ specifications of the instrumentation system/equipment can be identified. The correct operation of the instrumentation system/equipment can be explained.

Criteria 18.54A.1.2

Correct test application principles selected after inspection of instrumentation systems, equipment/components.

Assessor guide: observe that –

The instrumentation system/equipment and its components are inspected for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for inspecting instrumentation systems/equipment and their components can be identified. The procedures and principles to be applied in testing the instrumentation system/equipment can be identified. The reasons for selecting the chosen procedures and principles can be explained.

Criteria 18.54A.1.3

Appropriate test equipment selected in accordance with defined requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

The appropriate test equipment can be identified.

Criteria 18.54A.1.4

Device isolation methods/requirements observed and utilised.

Assessor guide: observe that –

The instrumentation system/equipment is isolated in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for isolating instrumentation systems/equipment can be identified. The hazards associated with fault-finding, testing and calibrating instrumentation systems/equipment can be identified.

Criteria 18.54A.1.5

Appropriate test procedures and application principles applied in assessing operation of instrumentation systems, equipment/components.

Assessor guide: observe that –

The operation of the instrumentation system/equipment and its components is tested using appropriate equipment, techniques and procedures.

Assessor guide: confirm that –

Criteria 18.54A.1.6

Normal operating characteristics of instrumentation systems, equipment/components understood to the level necessary to identify and localise faults.

Assessor guide: observe that –

Assessor guide: confirm that –

The operational specifications of the instrumentation system/equipment can be identified. Where appropriate, variations between test results and operational specifications can be identified. Where appropriate, faults in instrumentation system/equipment components can be identified.

Criteria 18.54A.1.7

Characteristics/operational function assessment procedures applied according to safety and regulatory/site specifications.

Assessor guide: observe that –

Procedures followed and safety requirements observed and met.

Assessor guide: confirm that –

The operational function of the instrumentation system/equipment can be explained. Any regulatory/safety requirements associated with the operation of the instrumentation system/equipment can be identified. The operation of the instrumentation system/equipment with respect to safety, regulatory and site requirements can be identified.

Criteria 18.54A.1.8

Characteristics and operational function checked and verified.

Assessor guide: observe that –

The operational function of the instrumentation system/equipment is checked in accordance with standard operating procedures. The operational function/malfunction of the instrumentation system/equipment is verified in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking and verifying the operational function of the instrumentation system/equipment can be given. The equipment and techniques necessary to test the operational function of the instrumentation system/equipment can be identified.

Element 18.54A.2 Apply data collection techniques and localise fault conditions**Criteria 18.54A.2.1**

Drawings/diagrams and operational specifications utilised in identifying and localising fault conditions.

Assessor guide: observe that –

All relevant drawings/diagrams and operational specifications are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The correct function of the instrumentation system/equipment can be identified. The operational specifications of the instrumentation system/equipment can be identified.

Criteria 18.54A.2.2

Where appropriate, built-in fault indicators, error codes examined and correctly interpreted and results recorded to standard operating procedures.

Assessor guide: observe that –

Where appropriate, built-in indicators located and read/recorded in accordance with standard operating procedures. Where appropriate, error code interpretation documents obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Errors indicated by built-in devices can be correctly identified.

Criteria 18.54A.2.3

Fault condition localised to major component level using appropriate test equipment principles and procedures.

Assessor guide: observe that –

Logical, safe and efficient procedures followed, using appropriate test equipment.

Assessor guide: confirm that –

Methods of determining procedures can be described.

Element 18.54A.3 Analyse and report test results**Criteria 18.54A.3.1**

Test results analysed/verified against operational specifications and localised faults confirmed.

Assessor guide: observe that –

Assessor guide: confirm that –

The test results obtained are compared to the operational specifications and the faulty component(s) confirmed.

Criteria 18.54A.3.2

Potential and real faults reported using standard operating procedures.

Assessor guide: observe that –

Real and potential faults are reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting faults can be identified. The difference between real and potential faults can be explained.

Criteria 18.54A.3.3

Faulty conditions evaluated and corrective action planned.

Assessor guide: observe that –

Corrective action plan developed.

Assessor guide: confirm that –

The probable causes of faults in instrumentation system/equipment components can be given. The action to be taken to rectify the causes of faults in instrumentation systems/equipment can be identified. The sequence of events to be undertaken to correct faults in the instrumentation system/equipment components can be identified.

Criteria 18.54A.3.4

Action plan recorded and documented according to standard operating procedures.

Assessor guide: observe that –

The planned maintenance activities are recorded/documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording/documenting planned maintenance activities can be identified.

Element 18.54A.4 Calibrate instrumentation equipment/components**Criteria 18.54A.4.1**

Zero, span and range checks undertaken on indicators/controllers using correct and appropriate configuration.

Assessor guide: observe that –

Zero, span and range checks are undertaken on instrumentation systems/equipment, in accordance with standard operating procedures.

Assessor guide: confirm that –

The function of zero, span and range checks on instrumentation systems/equipment can be explained. The procedures for checking zero, span and range of instrumentation systems/equipment can be identified.

Criteria 18.54A.4.2

Where applicable, methods of adjustment using calibration devices are performed and documented to prescribed procedures and operational specifications.

Assessor guide: observe that –

Where appropriate, the instrumentation system/equipment is calibrated using appropriate techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for calibrating and adjusting instrumentation systems/ equipment can be given. The operational specifications of the instrumentation system/equipment can be identified. The procedures for recording the calibration of instrumentation systems/equipment can be identified. The equipment required to carry out the calibration of instrumentation systems/equipment can be identified.

Range statement

Work undertaken autonomously or in a team environment. Undertake test procedures to determine correct operational function of electrical, electronic, mechanical, fluid power systems, equipment, components and associated items. Extends to the use of mechanical, pneumatic/electro-pneumatic, electronic (analog/digital) and associated instruments, measuring variables such as temp, level, pressure, flow rate, current, resistance, voltage, levels, light, density or any other process variable. Tasks undertaken in workshop/site, laboratory environments utilising system calibrators, manometers, dead weight testers, wheatstone bridge, potentiometers, frequency/signal generators, logic probes, multimeters, (analog/digital), test gauges, cathode ray oscilloscopes and other associated equipment. Operational function of instrumentation equipment/components tested and assessed against operational specifications, interpreted from data sheets and circuit diagrams in consultation with appropriate personnel where applicable. Service reports completed by appropriate means. All regulatory/legislative requirements adhered to. In this unit, major components can include transducers, power supplies, removable circuit boards, sensor units and other like components. Soldering/desoldering of electrical/electronic components requires the selection of Unit 5.1A (Manual soldering/desoldering - electrical/electronic components) or Unit 5.2A (High reliability soldering and desoldering) as appropriate. High reliability covers soldering/desoldering for the installation and fabrication of electrical/electronic components to advanced or military specifications, or where the reliability of electrical connections is critical. It also covers the soldering of electronic components where prevention of damage through electrostatic discharge or other means is required.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the fault-finding, testing, calibrating of instrumentation systems and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.55A A Dismantle, replace and assemble engineering components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 3

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

18.1A Use hand tools

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 18.55A.1 Dismantle engineering components

Criteria 18.55A.1.1

Engineering components are inspected and task requirements analysed.

Assessor guide: observe that –

All relevant instructions, drawings and specifications are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The tasks to be performed can be identified.

Criteria 18.55A.1.2

Appropriate tools and equipment selected and component/s prepared for dismantling.

Assessor guide: observe that –

The component is prepared for dismantling in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for dismantling the component can be identified. The tools and equipment to be used to dismantle the components can be identified. The reasons for selecting the tools and equipment can be given.

Criteria 18.55A.1.3

Component dismantled using standard operating procedures, tools and equipment.

Assessor guide: observe that –

The components are dismantled using appropriate techniques, tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for utilising the selected technique to dismantle the components can be given. Two examples of situations where other dismantling techniques may be selected can be given.

Criteria 18.55A.1.4

Engineering components are clearly marked to aid reassembly.

Assessor guide: observe that –

The component parts are appropriately marked for identification purposes in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for identifying parts can be explained. The procedures for marking component parts can be identified.

Element 18.55A.2 Identify faulty components**Criteria 18.55A.2.1**

Specifications for components obtained from appropriate source and interpreted and understood.

Assessor guide: observe that –

All relevant specifications and data are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of the component can be identified. Alternative sources of component specifications can be given.

Criteria 18.55A.2.2

Damaged or faulty components assessed against specifications.

Assessor guide: observe that –

The components are visually and dimensionally checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking components for conformance to specification can be given. The equipment necessary to check components for conformance to specification can be identified. The consequences of having components that do not comply with specifications can be explained.

Criteria 18.55A.2.3

Faulty components are identified for repair, replacement or adjustment.

Assessor guide: observe that –

Where appropriate, faulty parts are marked for repair, replacement or adjustment in accordance with standard operating procedures.

Assessor guide: confirm that –

The reason(s) for identifying parts for repair, replacement or adjustment can be given. Two examples of situations where parts would be identified for repair can be given. Two examples of situations where parts would be identified for replacement can be given.

Element 18.55A.3 Select replacement components

Criteria 18.55A.3.1

Where applicable, replacement and/or repaired parts are selected for reassembly.

Assessor guide: observe that –

Replacement parts selected confirm to specifications All relevant supplier catalogues are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications of the components to be replaced can be identified. The features and/or dimensions upon which replacement parts are to be selected can be identified. The process of identifying replacement parts from "third party" suppliers' catalogues can be described.

Element 18.55A.4 Assemble engineering components into assemblies or sub-assemblies

Criteria 18.55A.4.1

Appropriate techniques are applied in the preparation, assembly and adjustment of components using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety of the completed assembly.

Assessor guide: observe that –

The components are prepared and assembled using appropriate fitting techniques and principles in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for assembling components can be identified The requirements of the assembly in terms of specifications, operational performance, quality and safety can be identified. Two examples of situations where other assembly techniques may be used can be given.

Criteria 18.55A.4.2

Correct lubrication, packing, sealing materials selected and applied correctly in conformance to job specifications.

Assessor guide: observe that –

Where appropriate, lubricants are correctly applied to the assembly in accordance with specifications and standard operating procedures. Where appropriate, packing and/or sealing materials are applied in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for lubricating the assembly can be identified. The application of different types of lubricants can be identified The consequences of using inappropriate or no lubricant can be explained. The function of packing and sealing materials can be explained. The applications of different types of packing and sealing materials can be identified. The reasons for selecting chosen packing and/or sealing materials can be explained. The procedures for installing packing and sealing materials can be given.

Criteria 18.55A.4.3

Final component assembly inspected, tested and adjusted as necessary for compliance with operational specifications and returned to use according to standard operating procedure.

Assessor guide: observe that –

The final assembly is inspected and checked for conformance to specification. Where appropriate the final assembly is returned into use in accordance with standard operating procedures.

Assessor guide: confirm that –

The checks to be undertaken during inspection of the final assembly can be identified. The procedures for returning components/assemblies into use can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. This unit involves the dismantling, inspection, replacement, assembling of engineering components. All specifications interpreted from manufacturers' manuals, engineering drawings, detailed/technical sketches and associated data sheets. Tasks are undertaken utilising engineering principles, designated procedures, appropriate tools, equipment and safe workshop practices. Replacement parts are selected from manufacturers' catalogues, etc. Appropriate techniques utilised in the assembly of component parts using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety; this may include the straightforward removal and replacement of pre-manufactured bearings and seals. Appropriate lubrication, packing, sealing materials are selected and applied in conformance to standard operating procedure. Where precision mechanical measurement is required, then Unit 12.3A (Precision mechanical measurement) must also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the dismantling, replacement and assembly of engineering components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.56A A Diagnose and repair analog equipment and components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 10

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.57A Maintain/service analog/digital electronic equipment

Element 18.56A.1 Locate fault in electronic system/sub-assembly

Criteria 18.56A.1.1

System/sub-assembly functions and principles determined and understood eg: reference to equipment manuals, circuit diagrams etc..

Assessor guide: observe that –

All relevant circuit diagrams, manuals, specifications, schematics, maintenance records, etc. obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The function(s) of the electronic system/sub-assembly can be identified. The electronic principles utilised in the operation of the system/sub-assembly can be explained.

Criteria 18.56A.1.2

Built-in test functions run and fault indicator error codes and appropriate maintenance records checked and reviewed.

Assessor guide: observe that –

Where appropriate, built-in test functions are run in accordance with standard operating procedures. Where appropriate, built-in fault indicators are located and read/recorded in accordance with standard operating procedures. Where appropriate, error code interpretation documents are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for running built-in test functions can be identified. Errors indicated by built-in devices can be correctly identified.

Criteria 18.56A.1.3

Fault symptoms reproduced, where appropriate, and verified using appropriate technique.

Assessor guide: observe that –

Where appropriate, the fault symptoms are reproduced in the system and the fault verified using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The symptoms of the fault in the electronic system/sub-assembly can be identified. The purpose of reproducing system/sub-assembly fault symptoms can be explained. The test equipment and techniques necessary to confirm electronic system/sub-assembly faults can be identified. The procedures for verifying faults in electronic systems/sub-assemblies can be given.

Criteria 18.56A.1.4

Where appropriate, faulty sub-assembly isolated and removed from electronic system using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, the electronic system/sub-assembly is isolated from the power supply in accordance with standard operating procedures. Where appropriate the faulty sub-assembly is removed from the electronic system using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for isolating electronic systems/sub-assemblies can be identified. The hazards associated with electronic systems/sub-assemblies can be identified. The procedures for removing sub-assemblies from electronic systems can be given. The tools and techniques to be used to remove the sub-assemblies from the electronic system can be identified.

Criteria 18.56A.1.5

Sub-assembly checked and tested using correct and appropriate test equipment and techniques.

Assessor guide: observe that –

The electronic sub-assembly is checked for conformance to specification using appropriate equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing faulty sub-assemblies can be given. The operational specifications of the sub-assembly can be identified. The equipment and techniques to be used to test the faulty sub-assemblies can be identified. The test results obtained are compared with the operational specifications and the faulty components identified. The probable causes of component failure can be given.

Criteria 18.56A.1.6

Faulty component/s identified and/or fault cause isolated.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 18.56A.2 Repair/replace faulty components

Criteria 18.56A.2.1

Faulty component removed, where required, using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, faulty components are removed from the electronic system using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing faulty components from electronic systems can be identified. The tools and techniques to be used to remove components from electronic systems can be identified.

Criteria 18.56A.2.2

Faulty component repaired/replaced in accordance with manufacturers' recommended procedures or to standard operating procedures.

Assessor guide: observe that –

All relevant suppliers' catalogues are obtained in accordance with work place procedures. Faulty components are repaired/replaced using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for repairing faulty components can be identified. Replacement parts can be selected from suppliers' catalogues in conformance to specification. All tools and equipment necessary to repair faulty components can be identified.

Criteria 18.56A.2.3

Repaired/replacement components fitted in accordance with manufacturers' recommended procedure or to standard operating procedure using correct and appropriate tools and techniques.

Assessor guide: observe that –

The repaired/replaced components are refitted into the sub-assembly using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting repaired/ replaced components into sub-assemblies can be identified. The tools and techniques required to refit the repaired/replaced components into sub-assemblies can be identified.

Criteria 18.56A.2.4

Where appropriate, repaired sub-assembly refitted to electronic system using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, the repaired sub-assembly is refitted into the electronic system using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting repaired sub-assemblies into electronic systems can be identified.

Criteria 18.56A.2.5

Systems/sub-assembly checked and tested for correct operational compliance with specifications utilising correct and appropriate test procedures and equipment.

Assessor guide: observe that –

The electronic system/sub-assembly is tested for compliance with specifications using appropriate test equipment and techniques, in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing electronic system/sub-assembly performance can be identified. The operational specifications of the electronic system/sub-assembly can be identified. The test equipment and techniques necessary to check electronic system/sub-assembly performance can be identified.

Range statement

Work undertaken autonomously or in team environment using predetermined standards of quality, safety and work procedures. Diagnose includes working from first principles to identify non-routine and undefined faults. Work performed in laboratory, workshops or on-site environments. Correct and appropriate tools and equipment include continuity testers, ammeters, voltmeters, cathode ray oscilloscopes, frequency counters, signal generators, digital probes etc. Fault finding techniques include signal injection, substitution, monitoring, heating/cooling etc. Electronic sub-assemblies can form part of electronic systems or equipment including computer, control, safeguarding, monitoring, telecommunications, interface or security equipment etc. Components may include discrete component assemblies or individual components such as resistors, switching devices, capacitors, transformers, solenoids, tubes, semi-conductors etc. All specifications and procedures gained from schematics, circuit drawings, engineering data sheets or manufacturers' hand books. Unit 5.2A (High reliability soldering and desoldering) must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered. Where termination of cables is involved, Unit 10.2A (Terminate and connect electrical wiring) and/or Unit 18.63A (Terminate signal and data cables) must also be selected. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of electronic systems/sub-assemblies (analog) or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.57A A Maintain/service analog/digital electronic equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

Element 18.57A.1 Undertake maintenance checks and routine tests

Criteria 18.57A.1.1

Electronic equipment, functions determined and understood by reference to circuit diagrams, equipment manuals and/or consultation with equipment operator where appropriate.

Assessor guide: observe that –

All relevant circuit diagrams, manuals, specifications, schematics, maintenance records, etc. obtained in accordance with workplace procedures. Where appropriate, equipment operator consulted with respect to equipment operation.

Assessor guide: confirm that –

The function(s) of the electronic equipment can be identified.

Criteria 18.57A.1.2

Equipment built-in test functions run and results recorded to standard operating procedures where appropriate.

Assessor guide: observe that –

Where appropriate, built-in test functions are run in accordance with standard operating procedures. Where appropriate, built-in fault indicators are located and read/recorded in accordance with standard operating procedures. Where appropriate, error code interpretation documents are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The procedures for running built-in test functions can be identified. Errors indicated by built-in devices can be correctly identified.

Criteria 18.57A.1.3

Built-in faults/status display noted and recorded to standard operating procedure.

Assessor guide: observe that –

Where appropriate, the faults and/or equipment status indicated by built-in test functions/displays are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording faults and/or equipment status identified by built-in test functions/displays can be identified.

Criteria 18.57A.1.4

Equipment/sub-assemblies, components, connections, terminations etc. checked visually and with correct and appropriate test equipment and techniques.

Assessor guide: observe that –

The electronic equipment/sub-assemblies, components, connections and terminations are checked for conformance to specifications using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the following for compliance with specifications can be identified: - electronic - equipment/sub-assemblies - components - connections - terminations.

Criteria 18.57A.1.5

Faulty components removed and replaced where appropriate.

Assessor guide: observe that –

Where appropriate, faulty components are removed from the electronic equipment using appropriate tools and techniques in accordance with standard operating procedures. Where appropriate, the replacement component is refitted into the electronic equipment using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing faulty components from electronic equipment can be identified. The tools and techniques to be used to remove/replace components from/into electronic equipment can be identified. The procedures for fitting replacement components into electronic equipment can be identified.

Criteria 18.57A.1.6

All results checked for compliance with manufacturers' requirements or specification, results recorded to standard operating procedures.

Assessor guide: observe that –

The electronic equipment is checked for conformance to specification using appropriate equipment and techniques in accordance with standard operating procedures. The results of the tests undertaken on the electronic equipment are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing electronic equipment can be given. The operational specifications of the electronic equipment can be identified. The equipment and techniques to be used to test the electronic equipment can be identified. The test results obtained are compared with the operational specifications and where appropriate, the faulty components identified. The procedures for recording electronic equipment test results can be identified.

Element 18.57A.2 Maintain and/or service electronic equipment**Criteria 18.57A.2.1**

Where appropriate, isolate sub-assemblies to standard operating procedures.

Assessor guide: observe that –

Where appropriate, the electronic sub-assembly is isolated from the power supply in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for isolating electronic equipment/sub-assemblies can be identified. The hazards associated with electronic sub-assemblies can be identified.

Criteria 18.57A.2.2

Electronic equipment/sub-assemblies adjusted to specifications, manufacturers' requirements and/or standard operating procedures using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

The electronic equipment/sub-assemblies are adjusted/tuned in accordance with specifications, using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting the electronic equipment/sub-assembly can be identified. The tools, equipment and techniques to be used to adjust the electronic equipment/sub-assembly can be identified. The operational specifications of the electronic equipment/sub-assembly can be identified.

Element 18.57A.3 Return electronic equipment to service**Criteria 18.57A.3.1**

Equipment/sub assemblies returned into service utilising correct and appropriate techniques and procedures.

Assessor guide: observe that –

The electronic equipment/sub-assembly is returned into service in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for returning to service the electronic equipment/sub-assembly can be identified. The equipment and techniques to be used to return the electronic equipment/sub-assembly back into service can be identified.

Criteria 18.57A.3.2

Equipment/sub assemblies checked for operational compliance to specifications and/or manufacturers requirements and documentation requirements are carried out to standard operating procedure.

Assessor guide: observe that –

The electronic equipment/sub-assembly is checked for conformance to specification, using appropriate test equipment and techniques in accordance with standard operating procedures. The test results are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the electronic equipment/sub-assembly can be identified. The procedures for recording/ documenting the maintenance servicing of the electronic equipment/sub-assembly can be given. The test equipment and techniques to be used to check the electronic equipment/sub-assembly for conformance to specification can be identified. The procedures for testing the electronic equipment/sub-assembly for compliance with specification can be identified.

Range statement

This unit covers the testing and maintenance of electronic equipment and systems, it covers situations in which a series of checks and pre-determined tests is applied in accordance with work shop manuals, testing procedures etc. This unit also covers the replacement of faulty components identified during these tests. Work ordinarily undertaken with minimal assistance but could include working as part of team. Work undertaken in field (in situ) or workshop/laboratory environment. Check, tests, adjustments and services undertaken on a wide range of equipment utilised in engineering environments including telecommunication, process control, computer systems, security monitoring and alarm systems etc. Correct and appropriate tools and equipment includes the use of voltmeters, ammeters, cathode ray oscilloscopes, frequency counters, continuity testers etc, hand tools and soldering and de-soldering devices etc. Components may include discrete component, circuit boards, connectors, plug-in items, power supplies and the like. Where termination of cables is involved Unit 10.2A (Terminate and connect electrical wiring) and/or Unit 18.63A (Terminate signal and data cables) must also be selected. If diagnosis and repair of electronic equipment is undertaken to component level Unit 18.56A (Diagnose and repair analog equipment and components) and/or Unit 18.65A (Diagnose and repair digital equipment and components) should also be selected. For higher level diagnostic skills see Unit 18.56A (Diagnose and repair analog equipment and components) or Unit 18.65A (Diagnose and repair digital equipment and components) is used. All specifications and procedures obtained from circuit drawings, engineering data sheets or manufacturers hand books. All work and work practices undertaken to regulatory and legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and calibration of electronic systems and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.58A B Modify electronic equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

This unit covers the competencies required to modify and recommission equipment. Modifications can vary from minor calibrations and alteration requirement to experimental and development modifications of a complex nature and can include replacement and /or alterations of system equipment, sub assemblies, PCBs and components on analog and digital electronic systems

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

12.4A Precision electrical/electronic measurement
18.56A Diagnose and repair analog equipment and components

18.1A Use hand tools
18.65A Diagnose and repair digital equipment and components

18.2A Use power tools/hand held operations

Element 18.58A.1 Modify equipment

Criteria 18.58A.1.1

Modification requirements determined and understood by reference to circuit diagrams, schematics, equipment manuals and /or consultation with technical authority where appropriate

Assessor guide: observe that –

Relevant circuit diagrams, schematics, manuals, etc. obtained in accordance with work site procedures Where appropriate, technical authority consulted in accordance with work site procedures

Assessor guide: confirm that –

Modification requirements can be identified Sources of technical advice can be identified

Criteria 18.58A.1.2

Equipment isolated to standard operational procedures

Assessor guide: observe that –

Equipment is isolated in accordance with work site procedures Isolated equipment is tagged in accordance with work site procedures Isolation of equipment is verified in accordance with work site procedures

Assessor guide: confirm that –

Equipment isolation procedures can be identified

Criteria 18.58A.1.3

Equipment removed from system, if required, using correct and appropriate techniques and equipment

Assessor guide: observe that –

Where appropriate, equipment is removed from system in accordance with work site procedures

Assessor guide: confirm that –

The procedures for removing equipment from the system can be identified

Criteria 18.58A.1.4

Modification carried out to equipment/sub-assembly/component in accordance with specifications or application requirements using correct and appropriate techniques and equipment

Assessor guide: observe that –

The modification is carried out to specification in accordance with work site procedures

Assessor guide: confirm that –

The modification to be carried out can be identified The specifications applicable to the modification can be identified Any permits/approvals required can be identified The tools and equipment necessary to carry out the modification can be identified

<p>Criteria 18.58A.1.5 Sub-assembly refitted to equipment, if required, using correct and appropriate technique and equipment</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, sub-assembly/equipment refitted to system in accordance with work site procedures</p>	<p><i>Assessor guide: confirm that –</i> Any specialised fitting requirements can be identified</p>
<p>Element 18.58A.2 Return equipment to service</p>		
<p>Criteria 18.58A.2.1 Where required, circuit diagrams, schematics, equipment manuals etc. amended to reflect modifications undertaken</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, circuit diagrams, schematics, equipment manuals, specifications, etc. affected by the modifications are amended to reflect the modifications, in accordance with work site procedures</p>	<p><i>Assessor guide: confirm that –</i> The modifications undertaken can be identified</p>
<p>Criteria 18.58A.2.2 Checks and tests undertaken to specifications using correct and appropriate techniques, test equipment and tools</p>	<p><i>Assessor guide: observe that –</i> The modified electronic equipment is tested to ensure conformance to specifications in accordance with work site procedures</p>	<p><i>Assessor guide: confirm that –</i> The electronic equipment specifications can be identified Appropriate test equipment and its application can be identified Appropriate testing procedures can be identified</p>
<p>Criteria 18.58A.2.3 Equipment/system recommissioned using correct and appropriate techniques and procedures</p>	<p><i>Assessor guide: observe that –</i> The electronic equipment is recommissioned in accordance with work site procedures</p>	<p><i>Assessor guide: confirm that –</i> The procedures for recommissioning electronic equipment can be identified</p>
<p>Criteria 18.58A.2.4 Equipment/system checked for operational compliance with specifications</p>	<p><i>Assessor guide: observe that –</i> The equipment/system is checked for conformance to operational specifications in accordance with work site procedures</p>	<p><i>Assessor guide: confirm that –</i> The operational specification of the equipment/system can be identified</p>

Range statement

Work undertaken autonomously and/or as a member of team. Professional or higher level technical assistance may be utilised for determining modification. Work undertaken in field or workshop/laboratory. Modifications include minor adjustments and alterations requirements through to experimental and development modifications of a complex nature and can include replacement and/or alterations of system equipment, sub-assemblies, PCBs and components etc. on analog and digital electronic equipment and systems. All work and work practices undertaken to regulatory or legislative requirements. Where drafting skills are required, then Unit 9.3A (Prepare basic engineering drawing) or Unit 9.4B (Electrical/electronic detail drafting) should be considered. Unit 5.2A (High reliability soldering and desoldering) must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the modification of electronic equipment, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.59B A Modify electronic systems

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.56A Diagnose and repair analog equipment and components

18.57A Maintain/service analog/digital electronic equipment

18.58A Modify electronic equipment

18.65A Diagnose and repair digital equipment and components

Element 18.59B.1 Modification determined

Criteria 18.59B.1.1

Modification requirements determined and understood by reference to schematics, circuit diagrams, documentation and/or consultation with appropriate authority.

Assessor guide: observe that –

All relevant instructions, schematics, circuit diagrams are obtained in accordance with work place procedures.

Where appropriate, technical advisers are consulted in accordance with work place procedures.

Assessor guide: confirm that –

The modifications to be made to the electronic system can be identified. The reasons for undertaking the modification to the electronic system can be given. The appropriate personnel to consult for technical advice can be identified. The hazards associated with the electronic system can be identified.

Criteria 18.59B.1.2

Where appropriate, maintenance reports and system output information analysed to confirm the need and nature of modification.

Assessor guide: observe that –

All relevant maintenance reports and system output information is obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The data obtained is collated and any trends and/or deviations from specification are identified. The probable causes for any detected trends and/or deviations from specification can be given. The likely effect of the proposed modifications on system performance can be explained.

Criteria 18.59B.1.3

Scope and nature of modifications determined, recorded to standard operating procedures and confirmed with appropriate authority.

Assessor guide: observe that –

The proposed modifications are recorded in accordance with standard operating procedures. Approval to carry out the proposed modifications is obtained from the appropriate authority.

Assessor guide: confirm that –

The procedures for recording modifications to be made to electronic systems can be identified. The appropriate authority to authorise modifications to electronic systems can be identified.

Element 18.59B.2 Undertake modification(s)**Criteria 18.59B.2.1**

Modification/s undertaken using correct and appropriate techniques, tools and procedures.

Assessor guide: observe that –

The electronic system is modified using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures to be followed when undertaking modifications to electronic systems can be identified. The tools and techniques to be used to modify the electronic system can be identified.

Criteria 18.59B.2.2

Correct and appropriate amendments undertaken to documentations, circuit drawing etc. using standard operating procedures.

Assessor guide: observe that –

All relevant documents, circuit drawings, schematics etc. are amended in accordance with the modifications made to the electronic system and standard operating procedures.

Assessor guide: confirm that –

The procedures for amending documents, circuit drawings, schematics etc. can be identified. The appropriate authority to authorise changes to documentation, circuit drawings, schematics etc. can be identified.

Element 18.59B.3 Test and evaluate modified electronic systems**Criteria 18.59B.3.1**

Modifications checked/tested and evaluated for compliance with desired outcome or specification using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

The modified electronic system is checked for conformance to specification using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking the performance of the modified electronic system can be identified. The test equipment and techniques to be used to evaluate the modified electronic system can be identified. The operational specifications to be achieved by the modified electronic system can be identified.

Criteria 18.59B.3.2

Additional modification changes, if required, recommended using standard operating procedures.

Assessor guide: observe that –

Where appropriate, additional modifications are recommended in accordance with standard operating procedures.

Assessor guide: confirm that –

Any deviations/variations of test results from operational specifications can be identified. The probable causes of any deviations/variations from specification can be given. The likely effect of further modifications on electronic system performance can be explained.

Range statement

Work is undertaken autonomously or in a team environment. Professional or higher level technical assistance may be utilised in determining modifications. Work undertaken in field, workshop/laboratory. Modification proposals are approved by appropriate authority. Modifications include approved design changes and/or replacement of components or sub-assemblies on electronic analog and digital systems. All work undertaken to regulatory or legislative requirements. Where drafting skills are required, then Unit 9.3A (Prepare basic engineering drawing) or Unit 9.4B (Electrical/electronic detail drafting) should be considered. Unit 5.2A (High reliability soldering and desoldering must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered.

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.60A A Maintain, repair control instrumentation - single and multiple loop control systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

This unit covers the competencies required to determine control loop characteristics, monitor and record operation of panel mounted, split architecture single/multiple loop control instruments. It covers the ability to localise the fault condition, replace or repair faulty conditions, calibrate and adjust control instrumentation, recommission

and complete service reports. The tasks undertaken use pneumatic calibrators, electronic calibrators and test equipment (current, voltage and digital).

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

18.64A Maintain instrumentation system components

Element 18.60A.1 Determine control loop operating characteristics

Criteria 18.60A.1.1

Engineering specifications, technical information and historical trends examined for relevant data

Assessor guide: observe that –

All relevant engineering specifications, technical information, historical records and documents are obtained in accordance with workplace procedures

Assessor guide: confirm that –

Relevant data on the control loop characteristics can be identified Where appropriate, trends are identified from the data

Criteria 18.60A.1.2

System specifications, operational data and other relevant data sources examined, read, interpreted and relevant conclusions noted

Assessor guide: observe that –

The specifications of system components and operational data are obtained in accordance with workplace procedures

Assessor guide: confirm that –

The specifications of each system component can be identified Where appropriate, trends are identified from operational data

Criteria 18.60A.1.3

Consultation with system operators and other relevant plant personnel is carried out, relevant data extracted and documented by appropriate means

Assessor guide: observe that –

System operators and other relevant plant personnel are consulted with respect to the control loop characteristics
The information obtained from system operators and other relevant personnel is documented in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for documenting information gained by consultation with personnel can be given Where appropriate, relevant data and/or trends are identified

Criteria 18.60A.1.4

Using knowledge of all control loop device characteristics, controller mode principles and adjustment methods, operation of the system is

Assessor guide: observe that –

The operation of the system is observed to confirm function/malfunction of the system and/or its

Assessor guide: confirm that –

The reasons for observing the system in operation can be explained The following can be identified for the given control system: - the characteristics of the external control device - the controller modes - the means of signal transmission - the principles of operation of the final control element - the procedures for calibrating the control system - the procedures for adjusting the control system

Criteria 18.60A.1.5

Appropriate test equipment and testing procedures used

Assessor guide: observe that –

The control system is tested using appropriate equipment and techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The equipment necessary to test the control system can be identified The reasons for selecting the chosen test equipment can be given The test procedures to be followed can be identified

Criteria 18.60A.1.6

Fault finding and diagnostic techniques utilised

Assessor guide: observe that –

The operational characteristics of control devices, signal conversion instruments and final control elements are checked for conformance to specification, using appropriate test equipment and techniques in accordance with standard operating procedures Where appropriate, faults/defects in control system components are correctly identified

Assessor guide: confirm that –

Fault finding and diagnostic tests to be applied to control devices, signal conversion instruments and final control elements can be identified The necessary test equipment and techniques can be identified The procedures for testing control system components can be identified

Criteria 18.60A.1.7

Relevant data collected by appropriate means, from all sources including maintenance records, fault indicators, charts, error codes operational symptoms, observation monitoring and consultation with appropriate personnel

Assessor guide: observe that –

In-built fault indicators and error codes are located/read in accordance with standard operating procedures

Assessor guide: confirm that –

The errors indicated by in-built devices can be correctly identified All relevant data from all sources is collected and collated for analysis

Element 18.60A.2 Monitor and record operation of a control loop**Criteria 18.60A.2.1**

Pneumatic, electrical and electronic circuit diagrams interpreted and understood

Assessor guide: observe that –

All relevant pneumatic, electrical and electronic circuit diagrams obtained in accordance with work place procedures

Assessor guide: confirm that –

The correct function of the circuits can be identified
The components of the control loop can be identified

Criteria 18.60A.2.2

Using knowledge of all control loop device characteristics, controller mode principles and calibration/adjustment methods, check/test and monitor loop operation from the controller response to set point and manual output changes using correct test equipment, principles and procedures

Assessor guide: observe that –

The control loop operation is tested and monitored for correct operation using appropriate test equipment and techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The characteristics of the control loop devices can be given The calibration and adjustment methods for the control loop devices can be explained The principles and modes of operation of the system controller can be explained The test equipment and techniques necessary to monitor and record the operation of the control system can be identified The reasons for selecting the chosen test equipment and techniques can be explained The test procedures to be applied to the control system can be identified

Criteria 18.60A.2.3

Interpret software configuration data for digital control systems

Assessor guide: observe that –

All relevant software data is obtained in accordance with work place procedures

Assessor guide: confirm that –

The configuration of the digital control system software can be identified

Criteria 18.60A.2.4

Operational responses monitored and recorded by appropriate means

Assessor guide: observe that –

The operational responses of the control system are monitored and recorded in accordance with standard operating procedures

Assessor guide: confirm that –

The operational responses to be monitored can be identified The procedures for recording test and operational data can be identified

Criteria 18.60A.2.5

Fault finding and diagnostic techniques utilised throughout checking and testing procedures including simple and multi-controller type control schemes

Assessor guide: observe that –

Appropriate fault-finding and diagnostic techniques and procedures are used throughout the monitoring and testing process

Assessor guide: confirm that –

The need to employ appropriate fault-finding and diagnostic techniques throughout the monitoring and testing process can be explained

Criteria 18.60A.2.6

Diagnostic results and conclusions analysed against predetermined operational specifications

Assessor guide: observe that –

The collated data is compared with the operational specifications of the control system The results of the analysis of collated data and any conclusions reached are documented in accordance with standard operating procedures

Assessor guide: confirm that –

Where appropriate, deviations/ variations from specification can be identified The probable reasons for any deviations/variations from specification can be given The procedures for documenting control system tests and analysis can be identified

Element 18.60A.3 Localise fault condition**Criteria 18.60A.3.1**

Circuits tested to the level necessary to identify and localise faults

Assessor guide: observe that –

The circuits are tested for continuity/fault in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for testing circuits can be identified
The hazards associated with testing circuits can be identified
Where appropriate, the procedures for isolating the control system and its components can be identified

Criteria 18.60A.3.2

Drawings/diagrams, operational testing data utilised in identifying and localising fault conditions

Assessor guide: observe that –

All relevant drawings, diagrams and operational test data are collected and collated to assist in localising fault conditions

Assessor guide: confirm that –

The relevant drawings, diagrams and operational test data can be identified

Criteria 18.60A.3.3

Fault condition localised and verified to major component level using appropriate test equipment, principles and procedures

Assessor guide: observe that –

Apparent faults are verified using appropriate test equipment and techniques in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for verifying apparent faults in circuits and/or control system components can be given
The test equipment and techniques required to verify an apparent fault can be identified

Element 18.60A.4 Replace or repair faulty condition**Criteria 18.60A.4.1**

Components dismantled for repair or replacement using appropriate tools, equipment and procedures

Assessor guide: observe that –

Components marked for repair or replacement in accordance with standard operating procedures
Serviceable items are dismantled/ disassembled in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for marking components for repair or replacement can be identified
The procedures for dismantling/ disassembling components for repair or replacement can be identified

Criteria 18.60A.4.2

Replaceable items are selected from manufacturers' catalogues, spare parts lists, or data sheets

Assessor guide: observe that –

All relevant manufacturers'/ suppliers' catalogues, spare parts lists or data sheets obtained in accordance with workplace procedures

Assessor guide: confirm that –

Appropriate replacement parts can be identified

Criteria 18.60A.4.3

Serviceable items repaired using correct principles, tools, equipment and procedures

Assessor guide: observe that –

The serviceable item(s) are repaired using appropriate tools and equipment in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The correct maintenance procedures for serviceable item(s) can be identified
The tools and equipment required to undertake maintenance on the serviceable item(s) can be identified
The specifications of the serviceable item(s) can be identified

Criteria 18.60A.4.4

Repaired and replaceable items reassembled using appropriate tools, equipment, techniques and procedures

Assessor guide: observe that –

Repaired and/or replacement items are assembled in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for assembling repaired and/or replacement items can be identified

Element 18.60A.5 Calibrate and adjust control instrumentation**Criteria 18.60A.5.1**

Calibrate and adjust panel mounted, split architecture single loop/multiple loop control instruments using correct calibration principles, equipment and methods for all devices according to manufacturers' instructions

Assessor guide: observe that –

The appropriate test and calibration equipment is set up in accordance with standard operating procedures
Control system components are calibrated and adjusted in accordance with standard operating procedures

Assessor guide: confirm that –

The calibration procedures for the control system components can be identified The equipment necessary to calibrate the control system components can be identified The specifications of the equipment to be calibrated can be identified The reasons for selecting the chosen test and calibration equipment can be explained The adjustments that can be made to control system components can be identified The effects of those adjustments on the calibration of the control system component can be explained

Criteria 18.60A.5.2

Adjust controller modes and actions according to specifications

Assessor guide: observe that –

The controller modes and actions are set and adjusted to specification in accordance with standard operating procedures

Assessor guide: confirm that –

The controller modes and actions specified can be identified

Criteria 18.60A.5.3

Zero span and range checks undertaken using correct and appropriate configuration

Assessor guide: observe that –

The control instrumentation is checked for correct zero, span and range in accordance with specifications and standard operating procedures

Assessor guide: confirm that –

The control instrumentation specifications can be identified The procedures for checking control instruments for zero, span and range can be given

Criteria 18.60A.5.4

Correct and appropriate procedures, techniques, tools and equipment used to make final adjustments to control instrumentation to specifications

Assessor guide: observe that –

The control system is adjusted as required to ensure that all components conform to specification in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for making final adjustments to ensure all control system components conform to specification can be given

Element 18.60A.6 Complete service reports and recommission**Criteria 18.60A.6.1**

Service reports completed to standard operating procedures

Assessor guide: observe that –

All necessary reports are completed in accordance with standard operating procedures

Assessor guide: confirm that –

The reporting/recording requirements associated with the commissioning of the control system can be identified

Criteria 18.60A.6.2

Appropriate follow up procedures adopted

Assessor guide: observe that –

The appropriate follow up procedures are followed

Assessor guide: confirm that –

The follow up actions to be undertaken can be identified The procedures to be followed after maintaining/repairing control system instrumentation can be identified

Criteria 18.60A.6.3

Control instrumentation recommissioned to standard operating procedures

Assessor guide: observe that –

The control system is commissioned in accordance with standard operating procedures

Assessor guide: confirm that –

The procedures for commissioning the control system can be identified

Range statement

Work undertaken autonomously or in a team environment, using predetermined standards of quality, safety and workshop procedures. Tasks undertaken in workshop or on-site environments utilising pneumatic calibrators, electronic calibrators and test equipment (current, voltage and digital). Extends to the use of pneumatic analog and digital test equipment for the testing and calibration of panel mounted, split architecture single loop/multi-loop control instrumentation including PLCs, distributed control systems, computer based systems, both PC based and (mini) process computer based. The tasks involve the use of operating and calibration principles for all devices according to manufacturers' instructions; interpretation of pneumatic electrical and electronic circuit diagrams, interpretation of software configuration data for digital control systems. Included is the basic adjustment of controller modes, checking of loop operation from the controller response to set point and manual output changes; identification and fault finding of simple and multiple controller type control schemes, adjusting controller modes and actions according to specifications. In this unit, major components can include transducers, power supplies, removable circuit boards, sensor units and other like components. Where fault finding is required to electronic component level Unit 18.56A (Diagnose and repair analog equipment and components) and/or Unit 18.65A (Diagnose and repair digital equipment and components) should also be selected.

Evidence**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of control system instrumentation or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.61B A Maintain/calibrate complex control systems

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 8

Notes - Where diagnosis and repair of electronic equipment is undertaken to component level Unit 18.56A (Diagnose and repair analog equipment and components) and/or Unit 18.65A (Diagnose and repair digital equipment and components) should be selected.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.36B Maintain and repair scientific analysis equipment

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

18.69B Maintain, repair instrumentation process control analysers

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.36B Maintain and repair scientific analysis equipment

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.64A Maintain instrumentation system components

18.69B Maintain, repair instrumentation process control analysers

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment

18.60A Maintain, repair control instrumentation - single & multiple loop control systems

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

18.67A Tune control loops - multi controller or multi element systems

Pre-requisite units - Path 4

2.5C11 Measure with graduated devices

12.2A Electrical/electronic measurement

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

9.1A Draw and interpret sketch

18.1A Use hand tools

18.55A Dismantle, replace and assemble engineering components

18.64A Maintain instrumentation system components

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.60A Maintain, repair control instrumentation - single & multiple loop control systems

18.67A Tune control loops - multi controller or multi element systems

Element 18.61B.1 Determine system specifications and control loop characteristics**Criteria 18.61B.1.1**

Engineering specifications, technical information and historical records and trends examined and relevant data documented.

Assessor guide: observe that –

All relevant engineering specifications, technical information, historical records and documents are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Relevant data on the control loop characteristics can be identified. Where appropriate, trends are identified from the data.

Criteria 18.61B.1.2

System specifications and operational data including those for multiple loop control systems and devices obtained, read and interpreted.

Assessor guide: observe that –

The specifications of system components and operational data are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specification of each system component can be identified. Where appropriate, trends are identified from operational data.

Criteria 18.61B.1.3

Circuit and logic diagrams and configuration data obtained, read and interpreted.

Assessor guide: observe that –

All relevant circuit and logic diagrams and configuration data are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The system components and their function can be identified.

Criteria 18.61B.1.4

Consultation with system operators and other relevant plant personnel is carried out, relevant data extracted and documented by appropriate means.

Assessor guide: observe that –

System operators and other relevant plant personnel are consulted with respect to the control loop characteristics. The information obtained from system operators and other relevant personnel is documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for documenting information gained by consultation with personnel can be given. Where appropriate, relevant data and/or trends are identified.

Criteria 18.61B.1.5

Appropriate work clearances obtained for monitoring and testing the system.

Assessor guide: observe that –

All necessary work clearances for the monitoring and testing of the system are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The work clearances to be obtained can be identified. The procedures for obtaining work clearances can be given.

Element 18.61B.2 Test, monitor and record system operation**Criteria 18.61B.2.0**

Relevant data collected by appropriate means from all sources including maintenance records, chart recorders, data loggers, fault indicators, error codes, operational symptoms, tests and observation monitoring.

Assessor guide: observe that –

In-built fault indicators and error codes are located/read in accordance with standard operating procedures.

Assessor guide: confirm that –

The errors indicated by in-built devices can be correctly identified. All relevant data from all sources is collected and collated for analysis.

Criteria 18.61B.2.1

System operation observed using knowledge of all individual/multiple element loop device characteristics, controller mode principles, testing, calibration and adjustment methods.

Assessor guide: observe that –

The operation of the system is observed to confirm function/ malfunction of the system and/or its components.

Assessor guide: confirm that –

The reasons for observing the system in operation can be explained. The following can be identified for the given system: - all individual/multiple element loop device characteristics - controller mode principles - testing methods - calibration methods - adjustment methods.

Criteria 18.61B.2.1

Fault detection and diagnostic data analysed against predetermined operational specifications, and conclusions documented.

Assessor guide: observe that –

The collated data is compared with the operational specifications of the control system. The results of the analysis of collated data and any conclusions reached are documented in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, deviations/ variations from specification can be identified. The probable reasons for any deviations/variations from specification can be given. The procedures for documenting control system tests and analysis can be identified.

Criteria 18.61B.2.2

Appropriate test equipment set up and used correctly.

Assessor guide: observe that –

The appropriate test equipment is set up and used in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment to be utilised can be identified. The reasons for selecting the chosen test equipment can be explained. The procedures for using the chosen test equipment can be given.

Criteria 18.61B.2.3

Appropriate tests undertaken using standard operating procedures.

Assessor guide: observe that –

All tests are carried out in accordance with standard operating procedures.

Assessor guide: confirm that –

The test procedures to be followed can be given.

Criteria 18.61B.2.4

Signal transmission test equipment set up and used where applicable.

Assessor guide: observe that –

Where appropriate, the transmission signal is tested using suitable equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment necessary to test signal transmissions can be identified. The reasons for selecting the chosen test equipment can be given. The test procedures to be followed can be identified.

Criteria 18.61B.2.5

Adjustment/maintenance needs determined through interpretation and analysis of pneumatic, electrical, electronic, logic diagrams and configuration data for all control system devices.

Assessor guide: observe that –

Assessor guide: confirm that –

The adjustments/maintenance to be carried out can be identified. The reasons for identifying the adjustments/maintenance to be carried out can be explained in terms of test results and control system device logic diagrams and configuration data.

Criteria 18.61B.2.6

Connect appropriate field instrumentation to test system configuration.

Assessor guide: observe that –

Appropriate field instruments are connected to the system in accordance with standard operating procedures.

Assessor guide: confirm that –

Field instrumentation to be used to test system configuration can be identified. The procedures for testing system configuration can be given.

Criteria 18.61B.2.7

Connect field instrumentation for selected control operation, test and monitor performance against specifications.

Assessor guide: observe that –

The operation of selected controls is tested and monitored using field instrumentation in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing and monitoring the operation of selected controls can be given.

Criteria 18.61B.2.8

Carry out diagnostics checks to ensure correct operation.

Assessor guide: observe that –

Diagnostic checks are carried out on the system in accordance with standard operating procedures.

Assessor guide: confirm that –

Diagnostic checks to be applied to the system to ensure correct operation of the system can be identified. The reasons for selecting the chosen diagnostic checks can be explained. The procedures for carrying out the diagnostic checks can be given.

Criteria 18.61B.2.9

Fault finding and diagnostic tests undertaken using correct equipment, techniques and procedures to detect faulty control system components or elements.

Assessor guide: observe that –

The operational characteristics of control devices, signal conversion instruments and final control elements are checked for conformance to specification, using appropriate test equipment and techniques in accordance with standard operating procedures. Faults/defects in control system components/elements are correctly identified.

Assessor guide: confirm that –

Fault finding and diagnostic tests to be applied to control devices, signal conversion instruments and final control elements can be identified. The necessary test equipment and techniques can be identified. The procedures for testing control system components/elements can be identified.

Element 18.61B.3 Localise fault condition**Criteria 18.61B.3.1**

System tested to the level necessary to detect and localise fault condition.

Assessor guide: observe that –

The system is tested for continuity/fault in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing circuits and control lines can be identified. The hazards associated with testing circuits and control lines can be identified. Where appropriate, the procedures for isolating the control system and its components can be identified.

Criteria 18.61B.3.2

Fault condition localised and verified using appropriate test equipment, principles and processes.

Assessor guide: observe that –

Apparent faults are verified using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for verifying apparent faults in circuits, control lines and/or control system components can be given. The test equipment and techniques required to verify an apparent fault can be identified.

Criteria 18.61B.3.3

Fault condition analysed, evaluated and corrective action planned.

Assessor guide: observe that –

Where appropriate, the corrective action to be taken is documented showing the sequence of activities to be performed.

Assessor guide: confirm that –

The causes of verified faults can be identified. The action to be taken to return the control system/component to specification can be identified.

Element 18.61B.4 Replace or repair faulty condition**Criteria 18.61B.4.1**

Serviceable items dismantled for repair or replacement using appropriate tools, equipment and procedures according to manufacturers' recommendations.

Assessor guide: observe that –

Serviceable items are marked for repair or replacement in accordance with standard operating procedures. Serviceable items are dismantled/disassembled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for marking serviceable items for repair or replacement can be identified. The procedures for dismantling/ disassembling items for repair or replacement can be identified.

Criteria 18.61B.4.2

Replaceable items selected from manufacturers' catalogues, spare parts lists, or data sheets.

Assessor guide: observe that –

All relevant manufacturers'/suppliers' catalogues, spare parts lists or data sheets are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

Appropriate replacement parts can be identified.

Criteria 18.61B.4.3

Using manufacturers' handbooks, correct maintenance procedures for serviceable items established.

Assessor guide: observe that –

Assessor guide: confirm that –

The correct maintenance procedures for serviceable item(s) can be identified.

Criteria 18.61B.4.4

Serviceable items repaired using correct maintenance procedures and equipment.

Assessor guide: observe that –

The serviceable item(s) are repaired using appropriate tools and equipment in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The tools and equipment required to undertake maintenance on the serviceable item(s) can be identified. The specifications of the serviceable item(s) can be identified.

Criteria 18.61B.4.5

Repaired and replaceable items reassembled using appropriate principles, tools, equipment, techniques and procedures.

Assessor guide: observe that –

Repaired and/or replacement items are assembled in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for assembling repaired and/or replacement items can be identified.

Element 18.61B.5 Calibrate, configure, adjust complex control systems

Criteria 18.61B.5.0

Carry out diagnostic checks to ensure correct operation of system taking appropriate corrective action as necessary.

Assessor guide: observe that –

Diagnostic checks of the system are carried out in accordance with standard operating procedures. Where appropriate, corrective action is taken to bring system operation into line with specifications.

Assessor guide: confirm that –

The diagnostic checks to be carried out can be identified. The procedures for carrying out diagnostic checks can be given. The procedures for adjusting the system to conform to operational specifications can be given.

Criteria 18.61B.5.1

Correct calibration and test equipment selected/set up to enable calibration to manufacturers' specifications.

Assessor guide: observe that –

The appropriate test and calibration equipment is set up in accordance with standard operating procedures.

Assessor guide: confirm that –

The calibration procedures for the control system components can be identified. The equipment necessary to calibrate the control system components can be identified. The specifications of the equipment to be calibrated can be identified. The reasons for selecting the chosen test and calibration equipment can be explained.

Criteria 18.61B.5.2

Mechanical alignment of control devices undertaken where applicable.

Assessor guide: observe that –

Where appropriate, control devices are aligned to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for aligning control devices can be identified. The alignment specifications can be identified. The tools and equipment necessary to carry out the alignment of the control devices can be identified.

Criteria 18.61B.5.3

Configure system using appropriate programming tools and techniques.

Assessor guide: observe that –

The system is configured using appropriate programming tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for configuring the system can be given. The programming tools and techniques to be used can be identified.

Criteria 18.61B.5.4

Tune controllers for optimum control and in accordance with specifications.

Assessor guide: observe that –

Controllers are tuned for optimum performance in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for tuning controllers can be given. The specifications of the controllers can be identified.

Criteria 18.61B.5.5

Correct sequence of tuning is used on multiple control loops and multi-element systems.

Assessor guide: observe that –

Multiple control loops are tuned in the correct sequence in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for tuning multiple control loops and multi-element systems can be given. The correct sequence of tuning can be identified.

Criteria 18.61B.5.6

Correct recording equipment set up for adjustment and monitoring during tuning.

Assessor guide: observe that –

The appropriate recording equipment is set up and monitored during the tuning process to identify the effects of adjustment made to the system.

Assessor guide: confirm that –

The procedures for recording signals and data during system tuning operations can be given. The recording equipment to be used can be identified.

Criteria 18.61B.5.7

Calibration and adjustment function performed on multi-loop devices, multi-element control loops, controller modes and actions according to operational specifications using correct principles and methods applicable to the type of control loop being serviced.

Assessor guide: observe that –

Control system components are calibrated and adjusted in accordance with standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to control system components can be identified. The effects of those adjustments on the calibration of the control system components can be explained.

Criteria 18.61B.5.8

Make on-line changes to parameters in the system to meet specified requirements.

Assessor guide: observe that –

Where appropriate, system parameters are changed on-line to meet specified requirements.

Assessor guide: confirm that –

The requirements to be achieved by changing system parameters on-line can be identified. The procedures for changing parameters can be given.

Criteria 18.61B.5.9

Connect field instrumentation for selected control operation and operate system to a satisfactory level of control.

Assessor guide: observe that –

Field instrumentation is connected to a selected control system. The system is operated to a satisfactory level of control.

Assessor guide: confirm that –

The level of control to be achieved can be identified. The procedures for operating and monitoring a control system can be given.

Element 18.61B.6 Return system to service**Criteria 18.61B.6.1**

Final adjustments to align system operation to operational specifications including process and optimum control efficiencies undertaken.

Assessor guide: observe that –

The control system is adjusted as required to ensure that all components conform to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for making final adjustments to ensure all control system components conform to specifications can be given.

Criteria 18.61B.6.2

Correct procedures are applied in return to service including configuring, calibrating, adjusting, tuning and final validation of system performance in accordance with specifications.

Assessor guide: observe that –

All instrumentation is correctly configured, calibrated, adjusted and tuned in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for returning to service all instrumentation in the control system can be identified.

Criteria 18.61B.6.3

System returned to service in accordance with standard operating procedures.

Assessor guide: observe that –

The system performance in conformance to specifications is validated using appropriate equipment and techniques in accordance with standard operating procedures. The control system is returned to service in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment and techniques to be used to adjust, tune and validate system performance can be identified. The procedures for returning to service can be identified.

Criteria 18.61B.6.4

Service reports completed to standard operating procedures.

Assessor guide: observe that –

All necessary reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The reporting/recording requirements associated with return to service of control systems can be identified.

Range statement

Work undertaken autonomously or in a team environment in consultation with appropriate personnel, using predetermined standards of quality, safety and workshop procedures. Tasks undertaken in workshop or on-site environments. Equipment used may include pneumatic and/or electronic, analog and/or digital test and recording equipment. Control systems include pneumatic control, analog and/or digital electronics, distributed PLC, DCS, SCADA, and computer based control systems. Computer based control systems may include supervisory mode. Control strategies include; ratio, cascade, selector, duplex, feed forward, adaptive, dynamic compensations, computations, energy management and environmental control/systems. Tasks include testing, configuration and calibration of multiple loop control systems. Tasks involve the interpretation of manuals, specifications and diagrams, including pneumatic, electrical, electronic and logic diagrams, as well as program listings and configuration data for control system devices. Unit 5.2A (High reliability soldering and desoldering) must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of complex control systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.62A A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 8

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.64A Maintain instrumentation system components

Element 18.62A.1 Select for installation appropriate sensors, transmitters and final control elements

Criteria 18.62A.1.1

Determine specification requirements from data sheets, circuit diagrams, engineering drawings.

Assessor guide: observe that –

All relevant data sheets, circuit diagrams, engineering drawings, instructions etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications for the sensors, transmitters and final control elements to be installed can be identified.

Criteria 18.62A.1.2

Using knowledge of device characteristics and principles of operation, specification requirements interpreted, defined and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The characteristics and principles of operation of the sensors, transmitters and final control elements to be installed can be correctly described.

Criteria 18.62A.1.3

Having regard for measurement range, processes and environment, sensors, transmitters and final control elements are selected according to their device characteristics, principles of operation and measurement capabilities, in conformance to specifications.

Assessor guide: observe that –

Appropriate sensors, transmitters and final control elements are selected in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for selecting appropriate sensors, transmitters and final control elements can be given. The following details with respect to the sensors, transmitters and final control elements to be selected can be identified: - the range of measurements to be made - the processes to be measured - the environment in which measurements are to be taken - the capabilities of the selected sensor, transmitter and final control elements. The reasons for selecting the chosen sensors, transmitters and final control elements can be explained.

Element 18.62A.2 Install instrumentation sensors, transmitters and final control elements**Criteria 18.62A.2.1**

Sensors, transmitters and final control elements installed using sound working knowledge of installation principles, procedures, techniques, tools and equipment, according to appropriate codes of practice, standards, safety and legislative requirements.

Assessor guide: observe that –

Sensors, transmitters and final control elements are correctly installed to specification using appropriate tools, equipment and techniques in accordance with all relevant codes, standards, legislative and safety requirements and procedures.

Assessor guide: confirm that –

The procedures for installing sensors, transmitters and final control elements can be given. The tools, equipment and techniques required to install sensors and transmitters can be identified. The relevant codes, standards, safety and legislative requirements can be identified.

Criteria 18.62A.2.2

During installation access for maintenance and mounting connections for power, signal, and process are planned and catered for.

Assessor guide: observe that –

Appropriate access is provided to the installed sensors, transmitters and final control elements to enable future maintenance and connections to be undertaken.

Assessor guide: confirm that –

The need to provide access to installed sensors, transmitters and final control elements for future maintenance and connections can be explained. The maintenance, removal/ replacement procedures applicable to sensors, transmitters and final control elements can be identified. The connections to be made to sensors, transmitters and final control elements can be identified.

Criteria 18.62A.2.3

Installed sensors, transmitters and final control elements diagnosed for correct operation using appropriate equipment and procedures. Results assessed against specifications or manufacturers technical data sheets.

Assessor guide: observe that –

The installed sensors, transmitters and final control elements are tested for correct operation using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing installed sensors, transmitters and final control elements can be given. The test equipment and techniques to be used to check installed sensors, transmitters and final control elements for correct operation can be identified. The specifications of the installed sensors, transmitters and final control elements can be identified. Where appropriate, variations of test results from specifications can be identified.

Element 18.62A.3 Maintain, diagnose sensors , transmitters and final control elements**Criteria 18.62A.3.1**

Using knowledge of device characteristics and principles of operation, preventative maintenance schedules and procedures are applied to maintain sensors, transmitters and final control elements in optimum condition.

Assessor guide: observe that –

Relevant preventative maintenance schedules for sensors, transmitters and final control elements are obtained in accordance with work place procedures. Scheduled/preventative maintenance is carried out on sensors, transmitters and final control elements in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for maintaining sensors, transmitters and final control elements can be identified. The maintenance to be undertaken and the frequency at which sensors, transmitters and final control elements are to be maintained can be identified.

Criteria 18.62A.3.2

Using knowledge of device characteristics and principles of operation, sensing elements cleaned and serviced to maintain optimum operating condition particularly at the process interface, using correct principles, tools, equipment, techniques and procedures.

Assessor guide: observe that –

Sensors are cleaned and serviced using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The housekeeping requirements with respect to sensors can be identified. The reasons for cleaning and servicing sensors can be explained. The tools, equipment and techniques required to clean and service sensors can be identified. The procedures for cleaning and servicing sensors can be identified.

Criteria 18.62A.3.3

Using appropriate test equipment and procedures, sensors, transmitters and final control elements are diagnosed, within the system or as individual devices, to determine correct operation or malfunction.

Assessor guide: observe that –

The correct function/malfunction of sensors, transmitters and final control elements is determined using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for determining correct function/malfunction of sensors, transmitters and final control elements can be given. The test equipment and techniques required to determine correct function or malfunction of sensors, transmitters and final control elements can be identified.

Criteria 18.62A.3.4

Operation of sensors, transmitters and final control elements monitored and assessed against predetermined specification or manufacturers technical data.

Assessor guide: observe that –

The test results are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational specifications of the sensors, transmitters and final control elements can be identified. Where appropriate, variations of sensors, transmitters and final control elements from specification can be identified. The procedures for recording test results can be identified.

Criteria 18.62A.3.5

Using appropriate test equipment/procedures correct operation of sensors, transmitters and final control elements is checked or fault condition identified, localised and monitored.

Assessor guide: observe that –

Where appropriate, the apparent fault is monitored in accordance with standard operating procedures. Where appropriate, faults in sensors, transmitters and final control elements are identified and localised in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for monitoring apparent faults detected from test results can be given. The test results have been compared to the sensors, transmitters and final control elements specification. Any variations between test results and specifications can be identified. The probable causes of variations between test results and specifications can be explained.

Element 18.62A.4 Complete fault documentation and plan corrective action**Criteria 18.62A.4.1**

Faults and malfunctions documented or reported according to standard operating procedures.

Assessor guide: observe that –

Faults and malfunctions in sensors, transmitters and final control elements are reported/ recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting/ recording faults and/or malfunctions in sensors, transmitters and final control elements can be identified.

Criteria 18.62A.4.2

Corrective action planned autonomously or in consultation with appropriate personnel and actioned.

Assessor guide: observe that –

An appropriate, sequential action plan to correct faults in sensors, transmitters and final control elements is prepared.

Assessor guide: confirm that –

The action to be taken to return the sensors, transmitters and final control elements to specification can be given. The reasons for undertaking the proposed actions can be explained. Where appropriate, the persons to be consulted in planning the corrective action can be identified. The sequence of actions to be taken can be given.

Element 18.62A.5 Analyse control loop and localise faults**Criteria 18.62A.5.1**

Engineering specifications and technical information, control device, signal transmission and final element specifications obtained and interpreted. System specifications, including operational data, and historical records and trends read and interpreted.

Assessor guide: observe that –

All relevant and appropriate specifications and information obtained and/or accessed.

Assessor guide: confirm that –

There is a clear understanding and interpretation of all specifications and information.

Criteria 18.62A.5.2

Consultation with system operators and other relevant plant personnel is carried out, relevant data extracted and documented to standard operating procedures.

Assessor guide: observe that –

Appropriate communication occurs and relevant details recorded.

Assessor guide: confirm that –

The reasons and importance for consultation can be explained.

Criteria 18.62A.5.3

Operation of the system is observed using sound knowledge of all external control device characteristics, controller modes, signal transmission, final control devices.

Assessor guide: observe that –

Systematic observation occurs.

Assessor guide: confirm that –

<p>Criteria 18.62A.5.4 Correct and appropriate signal transmission test equipment set up and applied using appropriate technique.</p>	<p><i>Assessor guide: observe that –</i> Correct equipment for the job is selected and properly set up and applied.</p>	<p><i>Assessor guide: confirm that –</i> The factors that determine the type of test equipment required can be given.</p>
<p>Criteria 18.62A.5.5 Circuits and control lines tested to the level necessary to detect and localise fault.</p>	<p><i>Assessor guide: observe that –</i> Appropriate and thorough sequential and loop testing procedures are used.</p>	<p><i>Assessor guide: confirm that –</i> The need for systematic and sequential testing can be explained.</p>
<p>Element 18.62A.6 Repair/replace, overhaul sensors, transmitters and final control elements</p>		
<p>Criteria 18.62A.6.1 Sensors, transmitters and final control elements examined and verified for replacement, repair or overhaul using correct tools/equipment and appropriate principles, techniques and procedures.</p>	<p><i>Assessor guide: observe that –</i> Sensors, transmitters and final control elements are checked using appropriate tools, techniques and equipment and marked for replacement, repair or overhaul in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for marking components for repair, replacement or overhaul can be identified. The tools, equipment and techniques required to test components can be identified. The reasons for marking components for repair, replacement and/or overhaul can be explained.</p>
<p>Criteria 18.62A.6.2 Replacement items selected from manufacturers parts lists or catalogues to meet specifications.</p>	<p><i>Assessor guide: observe that –</i> All relevant supplier catalogues are obtained in accordance with work place procedures.</p>	<p><i>Assessor guide: confirm that –</i> The specifications of the component(s) to be replaced can be identified. Appropriate replacement components can be identified from supplier catalogues.</p>
<p>Criteria 18.62A.6.3 Replacement items obtained.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, replacement components are obtained in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for obtaining replacement parts can be identified.</p>

Criteria 18.62A.6.4

Faulty items repaired or overhauled using correct principles, techniques, tools, equipment and procedures.

Assessor guide: observe that –

Faulty items are repaired or overhauled using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for repairing/over-hauling faulty items can be identified. The tools, techniques and equipment required to repair/over-haul the faulty items can be identified.

Criteria 18.62A.6.5

Repaired, overhauled and replacement items prepared for refitting according to standard workshop procedures.

Assessor guide: observe that –

The repaired, overhauled and replacement items are prepared for fitting/refitting in accordance with standard operating procedures.

Assessor guide: confirm that –

The preparation requirements of items to be fitted/refitted can be identified. The procedures for preparing items for fitting/refitting can be given.

Criteria 18.62A.6.6

Sensors, transmitters and final control elements refitted using correct principles, tools, equipment and procedures.

Assessor guide: observe that –

Sensors, transmitters and final control elements are fitted/refitted using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting/refitting sensors, transmitters and final control elements can be given. The tools, techniques and equipment required to fit/refit sensors, transmitters and final control elements can be identified.

Criteria 18.62A.6.7

Refitted sensors, transmitters and final control elements prepared for testing and calibration.

Assessor guide: observe that –

The fitted/refitted sensors, transmitters and final control elements are prepared for testing and calibration in accordance with standard operating procedures.

Assessor guide: confirm that –

The preparation requirements of sensors, transmitters and final control elements prior to testing and calibration can be identified.

Element 18.62A.7 Calibrate and test instrumentation sensors, transmitters and final control elements**Criteria 18.62A.7.1**

Sensors, transmitters and final control elements calibrated against appropriate physical standards using correct calibration devices, equipment, techniques and procedures.

Assessor guide: observe that –

Sensors, transmitters and final control elements are calibrated against appropriate physical standards using appropriate calibration devices, equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for calibrating sensors, transmitters and final control elements can be identified. The physical standards against which sensors, transmitters and final control elements are to be calibrated can be identified. The devices, equipment and techniques required to calibrate sensors, transmitters and final control elements can be identified.

Criteria 18.62A.7.2

Zero, span and range tests performed using correct calibration devices, equipment, principles, techniques and procedures.

Assessor guide: observe that –

The sensors, transmitters and final control elements are tested with respect to zero, span and range using appropriate equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The zero, span and range tests to be applied to the sensors, transmitters and final control elements can be identified.

Criteria 18.62A.7.3

Zero span and range results assessed against manufacturers instructions sheets.

Assessor guide: observe that –

Relevant instruction/information sheets are accessed and used.

Assessor guide: confirm that –

Specification range for the sensors, transmitters and final control elements can be identified. The test results have been compared to the specifications and any deviations/variations from specification can be identified. The probable causes of any deviations/variations from specification detected can be explained.

Criteria 18.62A.7.4

Zero, span adjustments applied to align sensors, transmitters and final control elements to manufacturers instruction sheets using correct calibration equipment, principles, techniques and procedures.

Assessor guide: observe that –

Sensors, transmitters and final control elements are adjusted to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The adjustments that can be made to sensors, transmitters and final control elements with respect to zero, span and range can be identified. The procedures for adjusting sensors, transmitters and final control elements can be identified.

Element 18.62A.8 Return sensors, transmitters and final control elements and control loops to service**Criteria 18.62A.8.1**

Sensors, transmitters and final control elements put into service on conformance to specifications with due regard to process requirements, safety, installation/commissioning procedures and sequence of operation.

Assessor guide: observe that –

Sensors, transmitters and final control elements are returned to service in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recommissioning sensors, transmitters and final control elements can be given. The safety procedures to be taken when recommissioning sensors, transmitters and final control elements can be explained.

Criteria 18.62A.8.2 Controller modes and actions adjusted according to specifications.	<i>Assessor guide: observe that –</i> Device performance requirements are considered during adjustment.	<i>Assessor guide: confirm that –</i> The performance requirements can be given.
Criteria 18.62A.8.3 Electrical and pneumatic transmission lines tested and appropriate action taken including the use of signal conditioning devices.	<i>Assessor guide: observe that –</i> Accepted test procedures are used and that any necessary action is undertaken where required.	<i>Assessor guide: confirm that –</i> Variation to test procedures to suit different operating conditions and parameters can be described.
Criteria 18.62A.8.4 Correct procedures are applied in returning instrumentation to service, including configuring, calibrating, adjusting, tuning and validating system performance.	<i>Assessor guide: observe that –</i> All actions are carried out systematically and to identified procedures.	<i>Assessor guide: confirm that –</i> Variation from given specifications can be analysed and correct action sequence determined.
Criteria 18.62A.8.5 System returned to service in accordance with standard operating procedures.	<i>Assessor guide: observe that –</i> Procedures are followed to ensure correct operation once returned to service.	<i>Assessor guide: confirm that –</i>

Range statement

Work undertaken autonomously or in a team environment, using predetermined standards of quality, safety and workshop procedures. Tasks relate to the use of mechanical, pneumatic, electrical, electronic (analog and digital) and associated sensing, indication and signal transmitting instrumentation, representing measurement of pressure, temperature, level, flowrate, weight, density and other process variables. Equipment includes manometers, dead weight testers, vacuum system, power supplies, control valve test beds. Pneumatic, analogue, digital, test and calibration equipment, utilised for maintenance, calibration and testing of process signal converters and final control elements. Tasks involve the maintenance, calibration and testing of process signal converters, associated devices, calibration of transmitters to manufacturers' specifications and application requirements (including flow, level, temperature, pressure), installation and zero checking of transmitters, testing of electrical and pneumatic signal lines. Additional tasks include the maintenance of control valves (including changing and reseating valve plugs), adjustment of valve actuators (pneumatic, electrical and hydraulic) maintenance and adjustment of pneumatic, electro-pneumatic and electronic valve positioners and signal converters. Tasks undertaken in workshop, laboratory or on-site environments utilising mechanical and electrical tools and test equipment such as: spanners (all forms), screwdriver, pliers, multimeters (analog, digital) calibration devices/charts, manufacturers parts lists, catalogues and instructions sheets. Extends to the installation, maintenance, testing, calibration and commissioning of sensors and transmitters in accordance to specifications with due regard to process requirements, safety, installation/commissioning principles, techniques and procedures. All codes of practice and legislative requirements adhered to where applicable. Unit 5.2A (High reliability soldering and desoldering) must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered. If diagnosis and repair of electronic equipment is undertaken to component level Unit 18.56A (Diagnose and repair analog equipment and components) and/or Unit 18.65A (Diagnose and repair digital equipment and components) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation, repair and overhaul of instrumentation sensors, transmitters and final control elements or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures.

Unit MEM 18.63A A Terminate signal and data cables

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

Element 18.63A.1 Identify and mark conductors/cables

Criteria 18.63A.1.1

Cables and conductors are identified using appropriate test equipment and techniques.

Assessor guide: observe that –

Cables and conductors are identified using appropriate test techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The test equipment and techniques to be used to identify cables and conductors can be given. The procedures to be followed when identifying cables and conductors can be given.

Criteria 18.63A.1.2

Cables and conductors are labelled in accordance with standard operating procedures to specifications.

Assessor guide: observe that –

All cables and conductors are labelled in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The labelling requirements of cables and conductors can be identified. The procedures for labelling cables and conductors can be given.

Element 18.63A.2 Prepare cable

Criteria 18.63A.2.1

Termination requirements and specifications obtained and understood.

Assessor guide: observe that –

All relevant instructions, specifications and data sheets are obtained in accordance with standard operating procedures.

Assessor guide: confirm that –

The termination requirements and specifications can be identified.

Criteria 18.63A.2.2

Cable ends prepared to specifications utilising appropriate tools and techniques.

Assessor guide: observe that –

Cable ends are prepared for termination in accordance with specifications and standard operating procedures.

Assessor guide: confirm that –

The procedures for preparing cable ends for termination can be given. The tools and techniques to be used to prepare cable ends for termination can be given.

Element 18.63A.3 Terminate cables**Criteria 18.63A.3.1**

Cables are terminated to specifications utilising appropriate tools and techniques.

Assessor guide: observe that –

All terminations are made to specifications in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for terminating cables can be given. The tools and techniques to be used to terminate cables can be identified.

Criteria 18.63A.3.2

Terminations are tested/examined for compliance with specifications utilising appropriate test equipment and techniques.

Assessor guide: observe that –

Completed terminations are tested for compliance to specifications safely in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing completed terminations can be given. The tests to be undertaken can be identified.

Element 18.63A.4 Fix/secure cables**Criteria 18.63A.4.1**

Cables are fixed/secured in accordance with standard operating procedures and specifications, utilising appropriate fixing/securing techniques.

Assessor guide: observe that –

All cables are fixed/secured in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fixing and securing cables can be given. A variety of fixing/securing techniques can be identified. The reasons for selecting the chosen fixing/securing technique can be given.

Range statement

Work undertaken autonomously or as part of team environment. Work undertaken in field or workshop environment. Termination techniques may include solder, crimp, wire wrap, (non-insulated and pre-insulated), connectors, multi-terminal plugs and sockets, fibre optics, co-axial, terminal blocks etc. Fixing and securing include the use of clamps, cable ties, bolting, screwing etc. All specifications and procedures are obtained from circuit drawings, data sheets and instructions. All work and work practices undertaken to regulatory and legislative requirements. If termination of cables is undertaken to pre-determined specifications and procedures the competency is covered by Unit 3.4A (Electronic/electrical assembly (production)). Where hand held power tools are used, Unit 18.2A (Use power tool/hand held operations). Where higher levels of electrical/electronic measures are required, Unit 12.4A (Precision electrical/electronic measurement) should be selected. This unit covers all types of signal and data cables, excluding specialist cables.

Types of cables covered include:

Signal cables;

- thermocouple/compensator cables
- transmission cables
- thermoplastic/elastomer insulated/sheathed
- compensating cables

Communication cables;

- telephone
- category 5
- coaxial
- optical fibre

Extra low voltage power and control cables;

- telephone
- category 5
- optical fibre
- thermoplastic/elastomer insulated/sheathed

For termination and connection of specialist cables, see Unit 10.11A (Terminate and connect specialist cables).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the termination of signal and data cables or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.64A A Maintain instrumentation system components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

Element 18.64A.1 Check instrumentation system components

Criteria 18.64A.1.1

System components identified correctly.

Assessor guide: observe that –

Appropriate system components are located.

Assessor guide: confirm that –

Various system components can be identified.

Criteria 18.64A.1.2

The characteristics and operational function of each system component are understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The characteristics and operational function of each system component can be explained.

Criteria 18.64A.1.3

The operational function of each component is inspected and tested in accordance with standard operating procedures.

Assessor guide: observe that –

A range of instrumentation system components is inspected and tested. Standard operating procedures are followed.

Assessor guide: confirm that –

Procedures for inspecting & testing instrumentation system components can be explained.
The equipment required to test instrumentation system components can be identified.

Criteria 18.64A.1.4

Operation of each component is assessed against specifications.

Assessor guide: observe that –

All relevant data sheets and specifications are obtained and used to interpret operation of component in accordance with standard operating procedures. Instrumentation components not operating in accordance with specifications are identified.

Assessor guide: confirm that –

The specifications of each instrumentation system component can be identified. Deviations from specifications can be explained.

Element 18.64A.2 Identify, repair/replace faulty instrumentation system components**Criteria 18.64A.2.1**

Faulty system components are localised/isolated and the malfunction confirmed by inspection & testing using instrumentation principles, procedures and safety requirements.

Assessor guide: observe that –

All relevant instrumentation circuits, drawings, instructions, manuals and data sheets are obtained and used in accordance with workplace procedures. The individual components within the instrumentation system are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The individual components within the instrumentation system can be identified. The safety procedures to be followed when working on instrumentation components can be identified. Where appropriate, faulty system components can be identified.

Criteria 18.64A.2.2

Faulty system components are dismantled and repaired according to manufacturer's/site specifications and in accordance with standard operating procedures.

Assessor guide: observe that –

Components are dismantled and repaired correctly.

Assessor guide: confirm that –

The procedures for repairing instrumentation system components can be explained.

Criteria 18.64A.2.3

Replacement parts are selected from manufacturer catalogues and listings according to required specifications.

Assessor guide: observe that –

Correct replacement parts are selected from the manufacturer/supplier catalogues.

Assessor guide: confirm that –

Parts to be replaced can be identified. The reasons for replacing parts can be given.

Criteria 18.64A.2.4

System components are reassembled and tested for correct operation and assessment against specifications and in accordance with standard operating procedures.

Assessor guide: observe that –

Instrumentation system components are reassembled correctly. Operation and conformance to specifications is confirmed.

Assessor guide: confirm that –

Reassembly and testing techniques are understood.

Criteria 18.64A.2.5

Correct operation of the instrumentation system is confirmed to according to standard operating procedure.

Assessor guide: observe that –

The operation of the instrumentation system is checked for conformance to specification in accordance with standard operating procedures.

Assessor guide: confirm that –

The correct operation of the instrumentation system can be explained. Procedures for checking instrumentation can be given.

Criteria 18.64A.2.6

Appropriate follow up procedures are adopted according to standard operating procedures.

Assessor guide: observe that –

Where appropriate, repaired/replaced instrumentation system components are checked for correct operation in accordance with standard follow up procedures.

Assessor guide: confirm that –

Follow up procedures can be explained.

Criteria 18.64A.2.7

Where appropriate, service reports are completed according to standard operating procedures.

Assessor guide: observe that –

Service reports are completed with all relevant detail.

Assessor guide: confirm that –

Reporting/recording procedures can be explained. Reasons for completing service reports can be explained.

Range statement

Work undertaken using predetermined standards of safety, quality and work procedures. Instrumentation system components identified, inspected and assessed using instrumentation principles to predetermined specifications interpreted from data sheets and circuit diagrams. Repairs and replacements to site or manufacturer's specifications. Instrumentation system components may include sensors, transmitters, converters, indicators, analysers and controllers associated with determining/controlling density, level, flow, temperature, composition etc, of a range of materials. Application may include, but are not limited to, fixed and mobile plant and equipment, marine installations and machine and process operations. Correct operational function of equipment components confirmed and commissioned in conformance to specifications, using standard operating procedures. For straightforward removals/replacement of components from an instrumentation system, see Unit 18.55A (Dismantle, replace and assemble engineering components).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance of instrumentation system components or other units requiring the exercise of skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.65A A Diagnose and repair digital equipment and components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 10

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV)

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.57A Maintain/service analog/digital electronic equipment

Element 18.65A.1 Locate fault

Criteria 18.65A.1.1

System/equipment functions and principles determined and understood by reference to equipment manuals, circuit diagrams etc.

Assessor guide: observe that –

All relevant circuit diagrams, manuals, specifications, schematics, maintenance records, etc obtained in accordance with work place procedures.

Assessor guide: confirm that –

The function(s) of the electronic system/equipment can be identified. The electronic principles utilised in the operation of the system/equipment can be explained.

Criteria 18.65A.1.2

Built in test functions run and fault indicators error codes and appropriate maintenance records checked and reviewed.

Assessor guide: observe that –

Where appropriate, built-in test functions are run in accordance with standard operating procedures. Where appropriate, built-in fault indicators are located and read/recorded in accordance with standard operating procedures. Where appropriate, error code interpretation documents are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for running built-in test functions can be identified. Errors indicated by built-in devices can be correctly identified.

Criteria 18.65A.1.3

Fault symptoms reproduced where appropriate and verified, using appropriate technique.

Assessor guide: observe that –

Where appropriate, the fault symptoms are reproduced in the system and the fault verified using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The symptoms of the fault in the electronic system/equipment can be identified. The purpose of reproducing system/equipment fault symptoms can be explained. The test equipment and techniques necessary to confirm electronic system/equipment faults can be identified. The procedures for verifying faults in electronic system/equipment can be given.

Criteria 18.65A.1.4

Where appropriate, faulty equipment isolated and removed from system using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, the electronic system/equipment is isolated from the power supply in accordance with standard operating procedures. Where appropriate the faulty equipment is removed from the electronic system using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for isolating electronic systems/equipment can be identified. The hazards associated with electronic systems/equipment can be identified. The procedures for removing equipment from electronic systems can be given. The tools and techniques to be used to remove the equipment from the electronic system can be identified.

Criteria 18.65A.1.5

Equipment checked and tested using correct and appropriate test equipment and techniques.

Assessor guide: observe that –

The electronic equipment is checked for conformance to specification using appropriate equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing faulty equipment can be given. The operational specifications of the equipment can be identified. The equipment and techniques to be used to test the faulty equipment can be identified. The test results obtained are compared with the operational specifications and the faulty components identified. The probable causes of component failure can be given.

Criteria 18.65A.1.6

Faulty component/s identified and/or fault cause isolated.

Assessor guide: observe that –

Assessor guide: confirm that –

The test results obtained are compared with the operational specifications and the faulty components identified. The probable causes of component failure can be given.

Element 18.65A.2 Repair/replace faulty components**Criteria 18.65A.2.1**

Faulty component removed where required using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, faulty components are removed from the electronic system using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing faulty components from electronic systems can be identified. The tools and techniques to be used to remove components from electronic systems can be identified.

Criteria 18.65A.2.2

Faulty component repaired/replaced in accordance with manufacturers recommended procedures or to standard operating procedures.

Assessor guide: observe that –

All relevant suppliers' catalogues are obtained in accordance with work place procedures. Faulty components are repaired/ replaced using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for repairing faulty components can be identified. Replacement parts can be selected from suppliers' catalogues in conformance to specification. All tools and equipment necessary to repair faulty components can be identified.

Criteria 18.65A.2.3

Repaired/replacement components fitted in accordance with manufacturers recommended procedure or to standard operating procedure using correct and appropriate tools and techniques.

Assessor guide: observe that –

The repaired/replaced components are refitted into the equipment using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting repaired/ replaced components into the equipment can be identified. The tools and techniques required to refit the repaired/replaced components into the equipment can be identified.

Criteria 18.65A.2.4

Where appropriate, repaired equipment refitted to system using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, the repaired equipment is refitted into the electronic system using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting repaired equipment into electronic systems can be identified.

Criteria 18.65A.2.5

Systems/equipment checked and tested for correct operational compliance to specifications utilising correct and appropriate test procedures and equipment.

Assessor guide: observe that –

The electronic system/equipment is tested for compliance with specifications using appropriate test equipment and techniques, in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing electronic system/equipment performance can be identified. The operational specifications of the electronic system/equipment can be identified. The test equipment and techniques necessary to check electronic system/equipment performance can be identified.

Range statement

Work undertaken autonomously or in team environment using predetermined standards of quality, safety and work procedures. Diagnose includes working from first principles to identify non-routine and undefined faults. Work performed in laboratory, workshops or on site environments. Correct and appropriate tool and equipment includes continuity testers, ammeters, voltmeters, cathode ray oscilloscopes, frequency counters, signal generators, digital probes, pulse generators, hand tools and soldering and desoldering devices etc. Fault finding techniques include signal injection, substitution, monitoring, heating/cooling etc. Electronic sub assemblies can form part of electronic systems or equipment including computer, control, safeguarding, monitoring, telecommunications, interface or security equipment etc. Components may include discrete component assemblies or individual components such as resistors, digital/electronic switching devices, capacitors, etc. All specifications and procedures gained from circuit drawings, engineering data sheets or manufacturers hand books. All schematics, flow charts, work and work practices undertaken to regulatory and legislative requirements. Unit 5.2A (High reliability soldering and desoldering) must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered. Where termination of cables is involved Unit 10.2A (Terminate and connect electrical wiring) and/or Unit 18.63A (Terminate signal and data cables) must also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of digital systems and equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.66A A Diagnose and repair microprocessor based equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.57A Maintain/service analog/digital electronic equipment

18.65A Diagnose and repair digital equipment and components

Element 18.66A.1 Locate faults

Criteria 18.66A.1.1

Equipment function and principles determined and understood by reference to schematics, circuit diagrams, flow charts, equipment manuals etc.

Assessor guide: observe that –

All relevant circuit diagrams, manuals, specifications, flow charts, schematics, maintenance records, etc obtained in accordance with work place procedures.

Assessor guide: confirm that –

The function(s) of the microprocessor-based equipment can be identified. The electronic principles utilised in the operation of the equipment can be explained.

Criteria 18.66A.1.2

Built in test functions run and results interpreted correctly.

Assessor guide: observe that –

Where appropriate, built-in test functions are run in accordance with standard operating procedures. Where appropriate, built-in fault indicators are located and read/recorded in accordance with standard operating procedures. Where appropriate, error code interpretation documents are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The procedures for running built-in test functions can be identified. Errors indicated by built-in devices can be correctly identified.

Criteria 18.66A.1.3

Fault symptoms reproduced where appropriate and verified using appropriate techniques.

Assessor guide: observe that –

Where appropriate, the fault symptoms are reproduced in the system and the fault verified using appropriate test equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The symptoms of the fault in the microprocessor-based equipment can be identified. The purpose of reproducing fault symptoms can be explained. The test equipment and techniques necessary to confirm microprocessor-based equipment faults can be identified. The procedures for verifying faults in microprocessor-based equipment can be given.

Criteria 18.66A.1.4

Faulty or defect component/s identified and/or fault cause isolated.

Assessor guide: observe that –

The microprocessor-based equipment is checked for conformance to specification using appropriate equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing faulty microprocessor-based equipment can be given. The operational specifications of the equipment can be identified. The equipment and techniques to be used to test the faulty microprocessor-based equipment can be identified. The test results obtained are compared with the operational specifications and the faulty components identified. The probable causes of component failure can be given.

Element 18.66A.2 Replace/repair faulty components**Criteria 18.66A.2.1**

Faulty component renewed using correct and appropriate tools and techniques.

Assessor guide: observe that –

Where appropriate, faulty components are removed from the microprocessor-based equipment using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for removing faulty components from microprocessor-based equipment can be identified. The tools and techniques to be used to remove components from microprocessor-based equipment can be identified.

Criteria 18.66A.2.2

Faulty component/s repaired/replaced in accordance with manufacturers recommended procedure or standard operating procedure.

Assessor guide: observe that –

All relevant suppliers' catalogues are obtained in accordance with work place procedures. Faulty components are repaired/ replaced using appropriate tools and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The reasons for identifying the faulty component for repair or replacement can be given. The procedures for repairing faulty components can be identified. Replacement parts can be selected from suppliers' catalogues in conformance to specification. All tools and equipment necessary to repair faulty components can be identified.

Criteria 18.66A.2.3

Repaired/replaced component/s fitted using correct and appropriate tools and techniques.

Assessor guide: observe that –

The repaired/replaced components are refitted into the microprocessor-based equipment using appropriate tools and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting repaired/ replaced components into the microprocessor-based equipment can be identified. The tools and techniques required to refit the repaired/replaced components into the microprocessor-based equipment can be identified.

Criteria 18.66A.2.4

Equipment checked and tested for operational compliance to specifications utilising correct and appropriate test procedures and equipment.

Assessor guide: observe that –

The microprocessor-based equipment is tested for compliance with specifications using appropriate test equipment and techniques, in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for testing microprocessor-based equipment performance can be identified. The operational specifications of the microprocessor-based equipment can be identified. The test equipment and techniques necessary to check the microprocessor-based equipment performance can be identified.

Range statement

This unit refers to situations in which the individual has sufficient information and access to microprocessor components to diagnose the functioning of elements within the microprocessor. For routine fault finding within microprocessor systems refer to Unit 18.57A (Maintain/service analog/digital electronic equipment). For diagnosis of analog components Unit 18.56A (Diagnose and repair analog equipment and components) should also be selected. Work undertaken autonomously or in a team environment. Work performed in workshop/laboratory or on site environments. Correct and appropriate tools and equipment includes voltmeters, cathode ray oscilloscope, frequency counters, pulse generators, digital probes etc. Fault finding techniques include signal injection, substitution, monitoring, heating/cooling and the use of inbuilt software and hardware diagnostics. Equipment includes sub assemblies of systems or discrete equipment used in computer, control, safeguarding, monitoring, telecommunication, connection, security etc equipment and systems. Components may include component assemblies (PCB), etc. or individual components including resistors, capacitors and full range of plug in and solder fixed chips associated with microprocessor equipment. This unit requires understanding of machine and assembly language and address and bus systems. All specifications and procedures gained from schematics, circuit drawings, instruction sets, flow charts and data sheets. All work and work practices to regulatory or legislative requirements.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and repair of microprocessor-based equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.67A A Tune control loops - multi controller or multi element systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

5.1A Manual soldering/desoldering - electrical/electronic components

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.4A Precision electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.57A Maintain/service analog/digital electronic equipment

18.60A Maintain, repair control instrumentation - single & multiple loop control systems

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

9.1A Draw and interpret sketch

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.55A Dismantle, replace and assemble engineering components

18.60A Maintain, repair control instrumentation - single & multiple loop control systems

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

18.64A Maintain instrumentation system components

Element 18.67A.1 Determine control loop characteristics

Criteria 18.67A.1.1

Engineering specifications, technical information and historical process, records and trends examined for relevant data.

Assessor guide: observe that –

All relevant engineering specifications, technical information, historical records and documents are obtained in accordance with work place procedures. The specifications of system components and operational data is obtained in accordance with work place procedures.

Assessor guide: confirm that –

Relevant data on the control loop characteristics can be identified. Where appropriate, trends are identified from the data. The specifications of each system component can be identified.

Criteria 18.67A.1.2

Consultation with system operators and other relevant plant personnel is carried out, relevant data extracted and documented to standard operating procedures.

Assessor guide: observe that –

System operators and other relevant plant personnel are consulted with respect to the control loop characteristics. The information obtained from system operators and other relevant personnel is documented in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for documenting information gained by consultation with personnel can be given. Where appropriate, relevant data and/or trends are identified.

Criteria 18.67A.1.3

Programmed maintenance/service reports read and relevant data noted.

Assessor guide: observe that –

Relevant maintenance and service reports are obtained in accordance with work place procedures.

Assessor guide: confirm that –

Where appropriate, relevant data and/or trends are identified.

Criteria 18.67A.1.4

Data is analysed and control loop characteristics ascertained.

Assessor guide: observe that –

Assessor guide: confirm that –

The data collected and collated is compared to the operational specifications of the control loop. The control loop characteristics can be identified.

Element 18.67A.2 Record control loop responses**Criteria 18.67A.2.1**

Using chart recorders and data loggers, control loop responses are recorded in open and closed loop mode.

Assessor guide: observe that –

The operational responses of the control loop are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The operational responses to be monitored can be identified. The procedures for recording test and operational data can be identified.

Criteria 18.67A.2.2

Unit tested for tuning using appropriate diagnostic techniques.

Assessor guide: observe that –

Appropriate diagnostic techniques and procedures are used throughout the monitoring and testing process.

Assessor guide: confirm that –

The need to employ appropriate fault-finding and diagnostic techniques throughout the monitoring and testing process can be explained. The test equipment and techniques required to diagnose control loop responses can be identified. The procedures for diagnosing and fault-finding control loops can be given.

Criteria 18.67A.2.3

Diagnostic results analysed against specifications.

Assessor guide: observe that –

The collated data is compared with the operational specifications of the control system. The results of the analysis of collated data and any conclusions reached are documented in accordance with standard operating procedures.

Assessor guide: confirm that –

Where appropriate, deviations/ variations from specification can be identified. The probable reasons for any deviations/variations from specification can be given. The procedures for documenting control system tests and analysis can be identified.

Element 18.67A.3 Tune control loops**Criteria 18.67A.3.1**

Using knowledge of control loop device characteristics, controller mode principles and adjustment methods, tuning operations performed using correct and appropriate techniques, procedures and equipment.

Assessor guide: observe that –

The control loop is tuned using appropriate equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The modes of controller operation can be identified. The methods of adjusting the controller can be given. The procedures for tuning the control loop can be identified. The equipment and techniques required to tune the control loop can be identified.

Criteria 18.67A.3.2

Correct and appropriate test and recording equipment used for monitoring and adjustment of control loop components during controller tuning operations.

Assessor guide: observe that –

The results of tests and adjustments carried out on control loop components during the tuning of the controller are recorded using appropriate equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recording test results can be given. The recording equipment to be used to monitor adjustments made to control loop components can be identified.

Criteria 18.67A.3.3

Step response - open loop tuning calculations are applied to achieve specified loop characteristics.

Assessor guide: observe that –

Specified loop characteristics are correctly calculated.

Assessor guide: confirm that –

The loop characteristics that may be calculated can be identified. The procedures for calculating loop characteristics can be explained. The data necessary to enable loop characteristics to be calculated can be identified. The procedures for obtaining the data necessary for calculating loop characteristics can be given.

Criteria 18.67A.3.4

Closed loop tuning methods using ultimate sensitivity and systematic trials, used to achieve specified loop characteristics.

Assessor guide: observe that –

Specified loop characteristics are achieved through the correct use of closed loop tuning methods.

Assessor guide: confirm that –

The closed loop tuning methods can be identified. The loop characteristics to be obtained from closed loop tuning methods can be identified. The procedures for obtaining loop characteristics from closed loop tuning methods can be given.

Criteria 18.67A.3.5

Correct sequence of tuning is used on multi controllers and/or multi element systems to achieve specified characteristics.

Assessor guide: observe that –

The specified loop characteristics of multi controller and/or multi element systems are achieved by the application of correctly sequenced tuning procedures.

Assessor guide: confirm that –

The specified sequence of events within the control loop can be identified. The procedures for tuning multi controller and/or multi element systems can be given.

Criteria 18.67A.3.6

Tune control loops to optimum mode settings utilising correct and appropriate techniques, tools, equipment and procedures.

Assessor guide: observe that –

The control loop is tuned to specification in each operational mode using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The optimum mode settings for the control loop can be identified. The tools, equipment and techniques required to tune the control loop can be identified. The procedures for tuning control loops can be given.

Element 18.67A.4 Complete service reports**Criteria 18.67A.4.1**

Service reports completed to standard operating procedures.

Assessor guide: observe that –

All necessary reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The reporting/recording requirements associated with the commissioning of the process control loop can be identified.

Criteria 18.67A.4.2

Appropriate follow up procedures adopted.

Assessor guide: observe that –

The appropriate follow-up procedures are followed.

Assessor guide: confirm that –

The follow-up actions to be undertaken can be identified. The procedures to be followed after tuning the process control loop can be identified.

Criteria 18.67A.4.3

Process control loop recommissioned to specifications.

Assessor guide: observe that –

The process control loop is commissioned in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for commissioning the process control loop can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. Tasks undertaken in situ, utilising appropriate knowledge of control loop characteristics, controller mode principles and methods of adjustment and tuning. Involves the use of pneumatic, analog and digital electronic test and recording equipment for the monitoring and adjustment of control loop tuning - the recording of control loop responses in open and closed loop modes. Included is the application of step response - open loop tuning calculations and closed loop, ultimate, sensitivity trials to achieve specified loop characteristics in conformance to operational specifications. Consultation with process operation personnel for data collection and to ensure plant safety during tuning operations. Extends to the interpretation of process system configuration data, including process schematics and instrument schematics. Correct sequencing of tuning of multi control loops and multi element systems is included. The application of fault finding, diagnostic and analytical techniques is included. All work and work practices undertaken to regulatory and legislative requirements. Where fault finding is required to electronic component level Unit 18.56A (Diagnose and repair analog equipment and components) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the tuning of control loops or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.69B A Maintain, repair instrumentation process control analysers

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.57A Maintain/service analog/digital electronic equipment

5.1A Manual soldering/desoldering - electrical/electronic components

12.4A Precision electrical/electronic measurement

18.54A Fault find, test, calibrate instrumentation systems, equipment

18.62A Install, maintain and calibrate instrumentation sensors, transmitters and final control elements

9.1A Draw and interpret sketch

18.1A Use hand tools

18.55A Dismantle, replace and assemble engineering components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

12.2A Electrical/electronic measurement

18.54A Fault find, test, calibrate instrumentation systems, equipment

9.1A Draw and interpret sketch

18.1A Use hand tools

18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

18.64A Maintain instrumentation system components

Element 18.69B.1 Perform preventative maintenance on process control analysers

Criteria 18.69B.1.1

Determine specification requirements from manufacturers' manuals, maintenance schedules and other relevant documents.

Assessor guide: observe that –

All relevant data sheets, circuit diagrams, engineering drawings, instructions etc. are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The specifications for the process control analyser to be installed can be identified.

Criteria 18.69B.1.2

Using knowledge of process control analyser characteristics and principles of operation, specification requirements interpreted, defined and understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 18.69B.1.3

Preventative maintenance schedules performed on process control analysers to service and maintain analysers at optimum operating condition.

Assessor guide: observe that –

Relevant preventative maintenance schedules for process control analysers are obtained in accordance with workplace procedures. Scheduled/preventative maintenance is carried out on process control analysers in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for maintaining process control analysers can be identified. The maintenance to be undertaken and the frequency at which process control analysers are to be maintained can be identified.

Criteria 18.69B.1.4

Using appropriate electrical and electronic test equipment, techniques and procedures, specified process control analysers are diagnosed within the system or within the laboratory to determine correct operation or malfunction.

Assessor guide: observe that –

The correct function or the malfunction of process control analysers is determined using appropriate test equipment and techniques in accordance with standard operating procedures. The test results are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for determining correct function or the malfunction of process control analysers can be given. The test equipment and techniques required to determine correct function or malfunction of process control analysers can be identified. The operational specifications for the process control analysers can be identified. The procedures for recording test results can be identified.

Criteria 18.69B.1.5

Operation of process control analysers monitored and assessed against predetermined laboratory data and/or fault condition identified, localised and monitored.

Assessor guide: observe that –

Where appropriate, the apparent fault is monitored in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for monitoring apparent faults detected from test results can be given.

Criteria 18.69B.1.6

Using appropriate test equipment and procedures, correct operation of analysers is tested, and/or fault condition identified, localised and monitored.

Assessor guide: observe that –

Where appropriate, faults in process control analysers are identified and localised in accordance with standard operating procedures.

Assessor guide: confirm that –

The test results have been compared with the process control analyser's specification. Any variations between test results and specifications can be identified. The probable causes of variations between test results and specifications can be explained.

Criteria 18.69B.1.7

Correct operation confirmed.

Assessor guide: observe that –

Where appropriate, correct action of the process control analysers is confirmed.

Assessor guide: confirm that –

Criteria 18.69B.1.8

Faults and malfunctions identified and confirmed.

Assessor guide: observe that –

Where appropriate, faults and malfunctions are identified and confirmed.

Assessor guide: confirm that –

Element 18.69B.2 Complete fault documentation**Criteria 18.69B.2.1**

Faults and malfunctions documented or reported according to standard operating procedures.

Assessor guide: observe that –

Faults and malfunctions in process control analysers are reported/ recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting/ recording faults and/or malfunctions in process control analysers can be identified.

Element 18.69B.3 Plan corrective action**Criteria 18.69B.3.1**

Corrective action planned autonomously or in consultation with appropriate personnel and actioned.

Assessor guide: observe that –

An appropriate, sequential action plan to correct faults in process control analysers is prepared.

Assessor guide: confirm that –

The action to be taken to return the process control analysers to specification can be given. The reasons for undertaking the proposed actions can be explained. Where appropriate, the persons to be consulted in planning the corrective action can be identified. The sequence of actions to be taken can be given.

Element 18.69B.4 Repair, replace, overhaul process control analysers**Criteria 18.69B.4.1**

Process control analysers examined or verified for repair, replacement or overhaul using correct tools/equipment and appropriate principles, techniques and procedures.

Assessor guide: observe that –

Process control analysers are checked using appropriate tools, techniques and equipment and marked for replacement, repair or overhaul in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for marking components for repair, replacement or overhaul can be identified. The tools, equipment and techniques required to test components can be identified. The reasons for marking components for repair, replacement and/or overhaul can be explained.

Criteria 18.69B.4.2

Replacement items selected from manufacturers' parts lists or catalogues according to specifications required.

Assessor guide: observe that –

All relevant supplier catalogues are obtained in accordance with work place procedures.

Assessor guide: confirm that –

The specifications for the component(s) to be replaced can be identified. Appropriate replacement components can be identified from supplier catalogues.

Criteria 18.69B.4.3

Faulty items repaired or overhauled using correct principles, techniques, tools, equipment and procedures.

Assessor guide: observe that –

Faulty items are repaired or overhauled using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for repairing/overhauling faulty items can be identified. The tools, techniques and equipment required to repair/overhaul the faulty items can be identified.

Criteria 18.69B.4.4

Repaired, overhauled and replacement items prepared for refitting according to standard operating procedures.

Assessor guide: observe that –

The repaired, overhauled and replacement items are prepared for fitting/refitting in accordance with standard operating procedures.

Assessor guide: confirm that –

The preparation requirements of items to be fitted/refitted can be identified. The procedures for preparing items for fitting/refitting can be given.

Criteria 18.69B.4.5

Process control analysers refitted using correct principles, tools, equipment and procedures.

Assessor guide: observe that –

Process control analysers are fitted/ refitted using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for fitting/refitting process control analysers can be given. The tools, techniques and equipment required to fit/refit process control analysers can be identified.

Criteria 18.69B.4.6

Refitted process control analysers prepared for testing and calibration.

Assessor guide: observe that –

The fitted/refitted process control analysers are prepared for testing and calibration in accordance with standard operating procedures.

Assessor guide: confirm that –

The preparation requirements of process control analysers prior to testing and calibration can be identified.

Element 18.69B.5 Calibrate and test process control analysers

Criteria 18.69B.5.1

Process control analysers calibrated against appropriate physical standards using correct calibration devices, equipment, techniques and procedures.

Assessor guide: observe that –

Process control analysers are calibrated against appropriate physical standards using appropriate calibration devices, equipment and techniques in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for calibrating process control analysers can be identified. The physical standards against which process control analysers are to be calibrated can be identified. The devices, equipment and techniques required to calibrate process control analysers can be identified.

Criteria 18.69B.5.2

Calibrated process control analysers tested using appropriate test equipment.

Assessor guide: observe that –

Calibrated process control analysers are tested using appropriate equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The equipment necessary to test calibrated process control analysers can be identified. The procedures for testing calibrated process control analysers can be given.

Criteria 18.69B.5.3

Calibration and analysis data collected.

Assessor guide: observe that –

All relevant calibration and analysis data with respect to the given process controller is obtained in accordance with work place procedures.

Assessor guide: confirm that –

Assessor guide: confirm that –

The collected and collated data has been compared with the operational specifications of the process control analyser and any deviations/ variations from specification identified.

Criteria 18.69B.5.4

Calibration and analysis data interpreted and understood.

Assessor guide: observe that –

Criteria 18.69B.5.5

Calibration and analysis data assessed in accordance with manufacturers' data sheets, codes of practice and safety procedures.

Assessor guide: observe that –

Assessor guide: confirm that –

The probable causes of any variations/deviations detected can be explained. Where appropriate, action to be taken to return the process control analyser to specification can be identified. The reasons for undertaking the proposed action(s) can be explained.

Element 18.69B.6 Re-install and recommission process control analysers**Criteria 18.69B.6.1**

Process control analysers put into service to specifications with due regard to process requirements, codes of practice, safety, commissioning procedures and techniques.

Assessor guide: observe that –

Process control analysers are recommissioned into service in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for recommissioning process control analysers can be given. The safety precautions to be taken when recommissioning process control analysers can be explained.

Criteria 18.69B.6.2

Service reports completed to standard operating procedure.

Assessor guide: observe that –

All necessary service reports are completed in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for reporting/recording service undertaken on process control analysers can be given. The reasons for recording service undertaken on process control analysers can be given.

Range statement

Work undertaken autonomously or in a team environment, using predetermined standards of quality, safety and workshop procedures. Tasks performed in laboratory, workshop or on-site environments using electrical and electronic test equipment for transmission and signal measurement. Extends to the use of liquid analysis devices for the measurement of pH, selective and specific ions, oxygen and electrolytic conductivity. Included is the use of gas analysis devices operating on the principles of thermal conductivity, thermal reaction, combustion, paramagnetism, chemical absorption, ionisation, infra-red, ultraviolet, emission or absorption and solid electrolytic conductivity. Tasks involve the use of hygrometers, wet and dry bulb and calibration of gas cylinders and gas supply equipment, the use of chemical calibration solutions and the use of special calibration devices specific to chemical detectors. Central to the task is the interpretation of electrical and electronic circuit diagrams and the interpretation of calibration and analysis data and procedures in accordance with manufacturers' data sheets. Safety codes of practice including the identification, handling and appropriate use of high pressure gas cylinders, equipment and chemical solutions are included. Unit 5.2A (High reliability soldering and desoldering) must also be selected if soldering of components is required to advanced or military specifications, where the reliability of electrical connections is critical, or where surface mounted devices are being soldered/de-soldered. If diagnosis and repair of electronic equipment is undertaken to component level Unit 18.56A (Diagnose and repair analog equipment and components) and/or Unit 18.65A (Diagnose and repair digital equipment and components) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the maintenance and repair of instrumentation process control analysers or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.70B B Modify complex electrical circuits and systems

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 6

This unit covers the competencies required to check circuits and systems and diagnose faults, modify systems as required and test the modified system. Diagnostic techniques may include testing for voltage, current, frequency, polarity, phase circuit continuity, insulation resistance, earth continuity etc.

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

10.3A Install and test electrical wiring and circuits (up to 1000vAC/1500vDC)

18.1A Use hand tools

18.49A Disconnect/reconnect fixed wired equipment which use up to 1000vAC/1500vDC

9.2A Interpret technical drawing

12.2A Electrical/electronic measurement

18.2A Use power tools/hand held operations

18.51A Fault find repair/rectify complex electrical circuits

10.2A Terminate and connect electrical wiring

12.4A Precision electrical/electronic measurement

18.48A Fault find and repair/rectify basic electrical circuits

Element 18.70B.1 Determine system specifications and characteristics

Criteria 18.70B.1.1

Complex circuit/system function and characteristics determined and understood with reference to circuit diagrams, specifications, schematics and/or consultation with technical adviser

Assessor guide: observe that –

Relevant circuit diagrams, specifications, schematics, engineering data sheets, etc. are obtained in accordance with work site procedures

Assessor guide: confirm that –

The circuit function and characteristics can be identified
The appropriate personnel to consult for technical advice can be identified

Criteria 18.70B.1.2

System specifications and operational data obtained, read and interpreted

Assessor guide: observe that –

Information and data obtained

Assessor guide: confirm that –

Information and data can be described and interpretation synthesised

Criteria 18.70B.1.3

Findings are verified using correct and appropriate techniques, procedures, tools and test equipment

Assessor guide: observe that –

Circuit/system faults are confirmed/localised using appropriate test equipment, techniques and tools in accordance with work site procedures

Assessor guide: confirm that –

Common electrical test instruments and their application can be identified
Common techniques for testing electrical circuits/systems can be identified

Criteria 18.70B.1.4

Results are recorded and analysed to determine appropriate modification

Assessor guide: observe that –

Faults in the operation of the electrical circuit/system are recorded/reported in accordance with work site procedures

Assessor guide: confirm that –

The recording/reporting requirements for electrical circuit/system faults can be identified
Appropriate circuit/system modification can be identified

Element 18.70B.2 Modify circuits and systems as required**Criteria 18.70B.2.1**

Modifications undertaken as determined to standard operating procedures

Assessor guide: observe that –

Circuit/system modifications undertaken safely in accordance with work site procedures All relevant documentation is amended to reflect the modifications undertaken in accordance with work site procedures

Assessor guide: confirm that –

The hazards associated with the modification to the circuit/system to be undertaken can be identified The relevant regulatory requirements can be identified

Element 18.70B.3 Test modification**Criteria 18.70B.3.1**

Modification tested and monitored to assess suitability

Assessor guide: observe that –

The modified electrical circuit/system is tested and monitored for conformance to specifications in accordance with work site procedures Where appropriate, reports on the suitability of the modifications undertaken are completed in accordance with work site procedures

Assessor guide: confirm that –

The operational specifications of the circuit/system can be identified That appropriate test equipment and its application to the testing of the modified circuit/system can be identified The testing and monitoring procedures for modified circuits and systems can be identified

Criteria 18.70B.3.2

Modifications documented in accordance with standard operating procedures
be identified

Assessor guide: observe that –

Reports completed

Assessor guide: confirm that –

The reporting/recording requirements associated with the modification of complex electrical circuits and systems can

Range statement

A systems' circuit is defined as one that interconnects between a number of interdependent apparatus. A systems' circuit is made up of more than one interconnecting circuit controlling and processing apparatus inputs and outputs. This unit involves demonstration of an understanding of system inter-relationship and dynamics, the implications of modifications to system and the ability to determine appropriate system modifications. Complex electrical circuits and systems cover industrial control systems, automatic process machines, material transfer systems, distribution systems, complex control panels etc. incorporating a range of circuit protective devices, relays, timers, transformers, sensors etc. Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and work procedures. Work performed in situ. Correct and appropriate tools and equipment may include continuity testers, ammeters, voltmeters, multimeters, tong testers, wattmeters, cathode ray oscilloscope, etc. Diagnostic techniques may include testing for voltage, current, frequency, polarity, phase circuit continuity, insulation resistance, earth continuity etc. All specifications and procedures gained from schematics, circuit diagrams/drawings, engineering data sheets or manufacturers' hand books. Modifications are on existing circuits and systems and are limited to replacement of components, changes to supply and circuitry. All modifications recorded or incorporated into drawings, schematics, etc. All work and work practices undertaken to regulatory and legislative requirements where required.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units applicable to the safety, quality, communication, materials handling, recording and reporting associated with the diagnosis and modification of complex electrical circuits and systems, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or by methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.71A A Connect/disconnect fluid conveying system components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 2

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials 18.1A Use hand tools

Element 18.71A.1 Disconnect fluid conveying components and assemblies

Criteria 18.71A.1.1

Safety/risk assessment is carried out, potentially hazardous situations/conditions identified and safety devices positioned as required.

Assessor guide: observe that –

Plant operator or other appropriate personnel consulted to ensure isolation has been correctly carried out. Potentially hazardous situations are identified and remedial action taken. Tagging, safety/security lock off devices and signage installed using appropriate techniques and procedures.

Assessor guide: confirm that –

Different sources of stored energy and their applications can be described and identified from circuit diagrams and manufacturer manuals. Hazardous situations/conditions can be explained. OHS responsibilities of customer and self can be explained. Safety/security lock off devices and signage can be identified. The reasons for installing lock off devices and signage can be explained. The procedures for installing lock off devices and signage can be given.

Criteria 18.71A.1.2

Fluid conveying conductor lay out is noted, recorded and labelled to standard operating procedures.

Assessor guide: observe that –

Appropriate note is taken of the layout, if necessary for future reference.

Assessor guide: confirm that –

Procedures to record and label components are understood.

Criteria 18.71A.1.3

Faulty component/assembly identified using specific trouble-shooting procedures and reference documents to identify the fault location.

Assessor guide: observe that –

Faulty component is located.

Assessor guide: confirm that –

Trouble shooting techniques understood.

Criteria 18.71A.1.4

Fluid conveying components and assemblies disconnected and removed using appropriate techniques, procedures, tools and equipment.

Assessor guide: observe that –

Pressures neutralised safely. Component/assembly removed correctly. Safety practices adhered to.

Assessor guide: confirm that –

Techniques, procedures and safety practices understood, including neutralisation of pressures.

Criteria 18.71A.1.5

Open system adequately sealed with standard or special purpose sealing materials.

Assessor guide: observe that –

System is sealed correctly.

Assessor guide: confirm that –

Standard & specific sealing materials and techniques are understood.

Element 18.71A.2 Obtain replacement parts**Criteria 18.71A.2.1**

Replacement parts selected from manufacturer catalogues and other relevant reference sources according to international standards and specifications.

Assessor guide: observe that –

Reference materials are used to identify required part(s)

Assessor guide: confirm that –

Different fluid conveying parts and their function can be explained.

Element 18.71A.3 Test and store components**Criteria 18.71A.3.1**

Fluid conveying assemblies and individual components pressure tested according to industry and manufacturer standards.

Assessor guide: observe that –

Correct pressure testing method is followed and safety practices adhered to at all times.

Assessor guide: confirm that –

Techniques and safety practices for pressure testing are understood.

Basic functions of fluid power systems understood, including:

- effects of heat/contamination
- pressures, flow rates and temperatures
- hose strength and size
- effect of media on hoses
- test, operational and burst pressures

Criteria 18.71A.3.2

Condition assessed and noted according to standard operating procedure.

Assessor guide: observe that –

Correct assessment of condition and serviceability is made.

Assessor guide: confirm that –

Criteria for assessment are understood. Storage methods and requirements can be explained.

Criteria 18.71A.3.3

Components/assemblies cleaned, sealed and stored according to industry and manufacturer standards.

Assessor guide: observe that –

Components cleaned, sealed and stored correctly.

Assessor guide: confirm that –

Methods of cleaning, sealing and storing are

Element 18.71A.4 Connect fluid conveying components and assemblies**Criteria 18.71A.4.1**

Connections are checked and prepared for reconnection.

Assessor guide: observe that –

Suitability of connection is established.

Assessor guide: confirm that –

Criteria for checking connection is understood.

Criteria 18.71A.4.2

Components and assemblies are connected to equipment to specifications using appropriate techniques.

Assessor guide: observe that –

Connections are established correctly.

Assessor guide: confirm that –

Techniques for connection are understood.

Criteria 18.71A.4.3

Tagged out equipment, signage and safety blocking devices removed according to standard operating procedures.

Assessor guide: observe that –

All signage & security devices are removed.

Assessor guide: confirm that –

Procedure for removal is understood.

Criteria 18.71A.4.4

Equipment and fluid conveying systems checked and tested for correct operation according to manufacturer and industry standards.

Assessor guide: observe that –

Test is carried out correctly.

Assessor guide: confirm that –

Testing procedures are understood. Safety requirements can be explained.

Element 18.71A.5 Report results**Criteria 18.71A.5.1**

Reporting and certification procedures followed.

Assessor guide: observe that –

Reports completed correctly.

Assessor guide: confirm that –

Reporting procedures and media for reporting are understood.

Criteria 18.71A.5.2

All relevant information is completed and correct.

Assessor guide: observe that –

All relevant information is included and checked.

Assessor guide: confirm that –

Required information is understood.

Range statement

Work undertaken using pre-determined standards of safety, quality and work procedures. Fluid conveying components and assemblies identified, inspected and assessed using fluid power principles or pre-determined specific interpretations from data and circuit diagrams. Repairs and replacement to pressure and suction systems on fixed and mobile plant/equipment, including marine, heavy plant, manufacturing plant applications. Work undertaken to industry standards and manufacturer specifications. Fluid conveying components may include high pressure seals, seats, hoses, tubes, pipes, fittings, connectors, adaptors and anchors, and other associated attachments. System applications may include, but are not limited to hydraulic, pneumatic, water, gas, acids/corrosives/alkalines, abrasives, petroleum and other dry/wet media. System pressures would typically range from 10.5MPa to 35 MPa, ranging up to 70 MPa. Functional testing of fluid conveying components and assemblies may include in-situ and high pressure test rigs. Reference material for identification of parts may include manufacturer product catalogues, tables and charts. This unit is not to be selected when Unit 18.55A (Dismantle, replace and assemble engineering components) or Unit 18.52A (Maintain and repair fluid power systems for mobile plant) has already been selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fluid conveying systems or other competencies requiring the exercise of the skills and knowledge covered by this unit.

accepted engineering techniques, practices, processes and workplace procedures. Tasks

To undertake the elements of this competency an understanding of basic concepts of fluid power and fluid power components and their application to fluid conveying systems is required. This is considered important for the ability to work safely on systems containing stored energy devices (accumulators) and systems under pressure due to external forces.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.72A A Manufacture fluid conveying conductor assemblies

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

Element 18.72A.1 Manufacture fluid conveying system conductors

Criteria 18.72A.1.1

Conductor requirements identified and appropriate materials/fittings selected to suit application.

Assessor guide: observe that –

Correct materials/fittings are obtained with reference to circuit drawings, schematics, reference manuals and equipment specifications.

Assessor guide: confirm that –

Conductor materials and fittings for a range of applications and media (fluid types) are understood.

Criteria 18.72A.1.2

Conductor materials prepared for assembly.

Assessor guide: observe that –

Existing conductor prepared and fittings removed, if necessary. Conductor is cut to required length using appropriate equipment. Pipes bent to basic shapes to drawing or by copying supplied shapes. Correct fittings are detected to suit conductors or machined to size, if necessary.

Assessor guide: confirm that –

Methods for preparation of different conductors can be explained, including hose and pipe assemblies.

Criteria 18.72A.1.3

Conductors are assembled to specification.

Assessor guide: observe that –

Conductors assembled using appropriate equipment and techniques. Assembly is checked to ensure specifications met

Assessor guide: confirm that –

Specifications are understood. Different methods for assembling hose and pipe assemblies can be explained, including swaging, crimping, brazing/soldering.

Element 18.72A.2 Repair faulty conductors and assemblies

Criteria 18.72A.2.1

Faulty fluid conveying system conductors dismantled and repaired to manufacturer/industry standards and specifications.

Assessor guide: observe that –

Safety practices are followed at all times.

Assessor guide: confirm that –

Dismantle and repair procedures are understood.

Element 18.72A.3 Check/test conductor assemblies**Criteria 18.72A.3.1**

Operation of fluid conveying components and assemblies assessed against current industry standards and manufacturer specifications.

Assessor guide: observe that –
Procedures are followed correctly.

Assessor guide: confirm that –
Operational function and characteristics of fluid conveying installation and application category types is understood. Industry standards and manufacturer specifications are understood. Procedure to assess operation is understood.

Criteria 18.72A.3.2

Faulty fluid conveying components and assemblies identified and failure/potential to fail confirmed by inspection and testing using fluid power conveying principles, procedures and safety requirements.

Assessor guide: observe that –
Components identified correctly from circuit drawings, schematics, reference manuals and equipment specifications
All faults/ potential faults are identified.

Assessor guide: confirm that –
Fluid power conveying principles, procedures and safety requirements are understood.

Criteria 18.72A.3.3

Manufactured/repared components assembled, cleaned, tested and correct operation verified to ensure compliance with required specifications and standards.

Assessor guide: observe that –
Compliance/non-compliance with specifications is established.

Assessor guide: confirm that –
Procedures to assemble, clean, test are understood.

Range statement

Work undertaken using pre-determined standards of safety, quality and work procedures. Fluid conveying components and assemblies identified, inspected and assessed using fluid power principles or pre-determined specific interpretations from data and circuit diagrams. Conductor assemblies may apply to positive and negative pressure systems on fixed and mobile plant/equipment, including marine, heavy plant, manufacturing plant applications. Work undertaken to industry standards and manufacturer specifications. Fluid conveying components may include high pressure seals, seats, hoses, tubes, pipes, fittings, connectors, adaptors and anchors, and other associated attachments. System applications may include, but are not limited to hydraulic, pneumatic, water, gas, acids/corrosives/alkalines, abrasives, petroleum and other dry/wet media. Correct assembly and functional testing of fluid conveying components and assemblies may include: hose - skive and measurement tools, crimping and cleaning machines, lathes. Testing may be in-situ or using high pressure test rigs. System pressures would typically range from 10.5MPa to 35 MPa, ranging up to 70 MPa. Reference material for identification of parts may include manufacturer product catalogues, tables and charts. Where brazing/soldering is required, Unit 5.6A (Perform brazing and/or silver soldering) should also be selected. This unit is not to be selected when Unit 18.55A (Dismantle, replace and assemble engineering components) or Unit (18.52A Maintain and repair fluid power systems for mobile plant) has already been selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fluid conveying systems or other competencies requiring the exercise of the skills and knowledge covered by this unit.

To undertake the elements of this competency an understanding of basic concepts of fluid power and fluid power components and their application to fluid conveying systems is required. This is considered important for the ability to work safely on systems containing stored energy devices (accumulators) and systems under pressure due to external forces.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.86A A Test, evacuate and charge refrigeration systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

Element 18.86A.1 Assess refrigeration system operation

Criteria 18.86A.1.1

Refrigeration system operating principles and terminology understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operating principles of refrigeration systems can be explained. The range of refrigerants available for use in refrigeration systems can be identified. The characteristics and properties of each type of refrigerant can be given. The safety precautions to be taken when handling or working with refrigerants can be given. The methods of identifying stored refrigerants can be given. The methods of identifying the type of refrigerant used in refrigeration systems can be described.

Criteria 18.86A.1.2

All relevant information is obtained and correctly interpreted prior to the commencement of work on the refrigeration system.

Assessor guide: observe that –

All relevant drawings, instructions, specifications, procedures, codes and regulations are obtained in accordance with workplace procedures.

Assessor guide: confirm that –

The correct refrigerant for the given system can be identified. The precautions to be taken when handling or working with the refrigerant can be given. The relevant codes and regulations applying to the given refrigeration system can be identified. The operating specifications of the refrigeration system can be identified.

Criteria 18.86A.1.3

Refrigeration system checks are undertaken safely in accordance with standard operating procedures, relevant codes and regulations.

Assessor guide: observe that –

Refrigeration system is checked safely in accordance with standard operating procedures, relevant codes and regulations.

Assessor guide: confirm that –

The procedures for testing/checking refrigeration systems can be given. The precautions to be taken when checking refrigeration systems can be identified.

Criteria 18.86A.1.4

Pressures and temperatures correctly determined and recorded.

Assessor guide: observe that –

Pressures and temperatures are correctly determined and recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The tests to be undertaken can be identified. The equipment and techniques to be used to determine pressures and temperatures can be identified. The procedures for recording refrigeration system test results can be given.

Criteria 18.86A.1.5

Faults are correctly isolated to component level and appropriate corrective action determined.

Assessor guide: observe that –

The refrigeration system components are checked for correct operation in accordance with standard operating procedures.

Assessor guide: confirm that –

The specifications of the refrigeration system components can be identified. Faulty components can be identified. The appropriate corrective action can be identified. The reasons for proposing the identified corrective action can be given.

Criteria 18.86A.1.6

The refrigeration system is checked for leaks.

Assessor guide: observe that –

The refrigeration system is checked for leaks safely using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking refrigeration systems for leaks can be given. The types of leak detection equipment/techniques and their applications can be given. The method(s) of leak detection to be used for a given refrigeration system can be identified. The reasons for selecting the chosen method(s) can be explained. The safety precautions to be taken when leak testing refrigeration systems can be identified.

Criteria 18.86A.1.7

The refrigeration system is checked for contamination.

Assessor guide: observe that –

The refrigeration system is checked for contamination in accordance with standard operating procedures.

Assessor guide: confirm that –

The causes of contamination in refrigeration systems can be identified. The procedures, tools and equipment to be used to clean up contaminated systems can be identified. The effects of contaminants on refrigeration system performance can be explained.

Element 18.86A.2 Reclaim refrigerant and system evacuation**Criteria 18.86A.2.1**

The refrigeration system is evacuated in accordance with standard operating procedures, codes and regulations.

Assessor guide: observe that –

The appropriate tools, techniques and equipment are used to evacuate the refrigeration system in accordance with standard operating procedures, codes and regulations.

Assessor guide: confirm that –

The procedures for evacuating refrigeration systems can be identified. The tools, techniques and equipment required to carry out evacuation procedures can be identified. The appropriate evacuation procedure for a given refrigeration system can be identified. The reasons for selecting the chosen evacuation procedure can be explained.

Criteria 18.86A.2.2

The refrigerant evacuated from the refrigeration system is contained/disposed of in accordance with the relevant codes and regulations.

Assessor guide: observe that –

The evacuated refrigerant is contained/disposed of in accordance with standard operating procedures and the relevant codes and regulations. The quantities of refrigerant reclaimed from refrigeration systems are recorded/reported in accordance with standard operating procedures, codes and regulations. Where appropriate, the quantities of any refrigerant released into the atmosphere are recorded/reported in accordance with standard operating procedures, codes and regulations.

Assessor guide: confirm that –

The reasons for containing reclaimed refrigerant can be explained. The procedures for storing/disposing of reclaimed refrigerant can be given. The procedures for recording/reporting quantities of refrigerant reclaimed from refrigeration systems can be given. The procedures for recording/reporting quantities of refrigerant released into the atmosphere can be given. The consequences of releasing quantities of refrigerant into the atmosphere can be given.

Element 18.86A.3 Charge the refrigeration system**Criteria 18.86A.3.1**

The refrigeration system is charged with the correct refrigerant in accordance with standard operating procedures.

Assessor guide: observe that –

The refrigeration system is safely charged with the correct refrigerant in accordance with standard operating procedures and all relevant legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures for charging refrigeration systems can be given. The correct refrigerant for a range of given applications can be identified. The tools, techniques and equipment required to charge a refrigeration system with refrigerant can be given. The precautions to be taken when charging refrigeration systems with refrigerant can be given.

Criteria 18.86A.3.2

The appropriate lubricating oil is added to the refrigeration system in accordance with standard operating procedures.

Assessor guide: observe that –

The correct lubricating oil for the given application is added to the refrigeration system in accordance with standard operating procedures and all relevant legislation and regulations.

Assessor guide: confirm that –

The procedures for adding lubricating oil to refrigeration systems can be given. The properties of refrigeration oil can be identified. The appropriate refrigeration oil for a range of given applications can be identified. The reasons for selecting the chosen refrigeration oil can be explained. The function of the refrigeration oil in the refrigeration system can be explained.

Criteria 18.86A.3.3

The refrigeration system is checked for leaks.

Assessor guide: observe that –

The refrigeration system is checked for leaks safely, using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking refrigeration systems for leaks can be given.

Range statement

Work is undertaken autonomously or in a team environment using predetermined standards of safety, quality and workshop procedures. Refrigeration systems may be associated with refrigeration and air conditioning applications including commercial, industrial and transport. All work is to be undertaken in accordance with all relevant state or territory legislation and regulatory requirements. Refrigerants include CFCs, HFCs, ammonia, etc.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the testing, evacuating and charging of refrigeration systems or other competencies requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant data sheets, catalogues, circuit diagrams and engineering drawings. The candidate will be required to: - Orally, or by methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment, the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 18.87A A Service and repair domestic and light commercial refrigeration and air conditioning equipment

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

Element 18.87A.1 Undertake preventive maintenance checks/adjustment on domestic air conditioning/refrigeration equipment

Criteria 18.87A.1.1

Visual inspection and testing with appropriate test equipment is carried out according to refrigeration/air conditioning principles, procedures and safety requirements.

Assessor guide: observe that –

Testing is carried out to accepted standards in a safe manner.

Assessor guide: confirm that –

Correct test procedures can be identified and described.

Criteria 18.87A.1.2

Preventative maintenance tasks are performed according to manufacturers specifications using refrigeration/air conditioning techniques/practices.

Assessor guide: observe that –

All work is carried out to accepted standards and to specifications where applicable.

Assessor guide: confirm that –

Frequency and reason for preventative maintenance is understood.

Element 18.87A.2 Undertake fault finding on domestic refrigeration/air conditioning equipment

Criteria 18.87A.2.1

Equipment components identified correctly.

Assessor guide: observe that –

Components on a range of equipment can be accurately identified.

Assessor guide: confirm that –

Variations in component identities can be explained.

<p>Criteria 18.87A.2.2 The characteristics and operation of each component is understood.</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> Operation and characteristics of range if components can be described.</p>
<p>Criteria 18.87A.2.3 The operational function of each component is inspected and tested.</p>	<p><i>Assessor guide: observe that –</i> All refrigeration/air conditioning system components are checked for correct operation using appropriate tools, techniques and equipment in accordance with standard operating procedures.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for checking refrigeration/air conditioning components for correct operation can be given. The tools, techniques and equipment necessary to check refrigeration/air conditioning system components for correct operation can be identified.</p>
<p>Criteria 18.87A.2.4 Correct operation of each component assessed against specification.</p>	<p><i>Assessor guide: observe that –</i> Component performance/operation is compared against specification.</p>	<p><i>Assessor guide: confirm that –</i> Specifications are obtained, interpreted and understood.</p>

Element 18.87A.3 Repair/replace faulty domestic refrigeration/air conditioning components

<p>Criteria 18.87A.3.1 Faulty components are localised and malfunction confirmed by inspection and testing using refrigeration and air conditioning principles, procedures and safety requirements.</p>	<p><i>Assessor guide: observe that –</i> Where appropriate, faulty components are identified for repair or replacement.</p>	<p><i>Assessor guide: confirm that –</i> The procedures for identifying components for repair or replacement can be given.</p>
<p>Criteria 18.87A.3.2 The refrigerant is removed safely from the system and contained in accordance with standard operating procedures and regulatory requirements where appropriate.</p>	<p><i>Assessor guide: observe that –</i> The refrigerant is evacuated and contained in a safe and appropriate manner, meeting all necessary requirements.</p>	<p><i>Assessor guide: confirm that –</i> Evacuation, containment and storage procedures can be identified and explained.</p>
<p>Criteria 18.87A.3.3 Faulty components are dismantled and repaired to manufacturer's specifications as required.</p>	<p><i>Assessor guide: observe that –</i> Repairs are undertaken in a safe and reliable manner using correct techniques and accepted practices.</p>	<p><i>Assessor guide: confirm that –</i> The effect of poor repair practices can be described.</p>

Criteria 18.87A.3.4

Replacement parts selected from manufacturer's catalogues according to required specifications.

Assessor guide: observe that –

Relevant catalogues/lists are used.

Assessor guide: confirm that –

Process to select replacement parts can be described, particularly when catalogues etc are not available.

Element 18.87A.4 Return to service domestic refrigeration/air conditioning equipment**Criteria 18.87A.4.1**

Components are reassembled and tested for correct operation and assessed against specification.

Assessor guide: observe that –

Assembly and testing procedures are followed correctly and thoroughly.

Assessor guide: confirm that –

Assembly and testing procedures can be identified and explained.

Criteria 18.87A.4.2

Using domestic refrigeration/air conditioning principles and system application techniques, correct operation of the equipment is verified.

Assessor guide: observe that –

The temperatures, flows, pressures, air properties and noise/vibration levels achieved as a result of the adjustments made are recorded/reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting refrigeration/air conditioning systems for correct operation in accordance with specifications can be given.

Criteria 18.87A.4.3

Maintenance records/service reports completed by appropriate designated means.

Assessor guide: observe that –

Where appropriate, authorised out-of specification adjustments are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for obtaining authorisation of adjustments outside of operational specifications can be given. The person(s) responsible for authorising adjustments outside of specifications can be identified. The reasons adjustments outside of specification may be made can be given. The tools, techniques and equipment required to adjust the refrigeration/air conditioning system to specification can be identified.

Range statement

This unit applies servicing of domestic and light commercial refrigeration and air conditioning equipment and components. Work is carried out autonomously or in a team environment. Interpret drawings and diagrams of refrigeration and air conditioning equipment, and utilise basic fault finding procedures, service manifolds, and test equipment to identify and diagnose faults in equipment; and isolate faulty components including control components and rectify common faults. They are able to retro fit existing domestic and light commercial refrigeration and air conditioning equipment with alternative refrigerants, recondition components, return to service and test equipment, and complete service reports for administrative action. Where any rectification, modification involves electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should also be considered. When there is a requirement to remove and replace components by brazing and or silver soldering Unit 5.6A (Perform brazing and/or silver soldering) should also be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with refrigeration and air conditioning or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.88A A Maintain and repair commercial air conditioning systems and components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

Element 18.88A.1 Undertake preventive maintenance checks/adjustment on commercial air conditioning systems and components

Criteria 18.88A.1.1

The temperature, quality, properties and flow of air delivered by the air conditioning system is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring equipment selected and used to check that the temperature, flow and quality of the conditioned air conforms to specification. Appropriate measuring instruments/equipment selected and used to check that the air properties conform to specification. All non conforming measurements are correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment for checking air temperatures, air flows, air quality and air properties can be identified. The appropriate specifications required for checking air temperatures, air flows, air quality and air properties can be identified. The procedures for reporting non conformances can be given. The air properties controlled by the air conditioning system can be identified.

Criteria 18.88A.1.2

The noise/vibration levels of the air conditioning system components are checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring instruments/equipment selected and used to check noise and vibration levels of the system components are within specifications. Abnormal noise/vibration is correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment required for checking component noise and vibration levels can be identified. The appropriate specifications for checking component noise and vibration levels can be identified. The procedures for reporting abnormal noise/vibration can be given.

Criteria 18.88A.1.3

Preventative maintenance tasks are performed according to manufacturer's specifications using refrigeration and air conditioning principles, techniques.

Assessor guide: observe that –

The preventative maintenance procedures are performed in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The appropriate procedures and sequence for performing preventative maintenance on an air conditioning system can be identified.

Element 18.88A.2 Undertake fault finding on commercial air conditioning systems and components**Criteria 18.88A.2.1**

System components identified correctly.

Assessor guide: observe that –

The system components correctly identified from specifications.

Assessor guide: confirm that –

The specifications and process for identifying system components can be given.

Criteria 18.88A.2.2

The characteristics and operation of each component is understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operational characteristics of the system components can be given.

Criteria 18.88A.2.3

The operational function of each component is inspected and tested.

Assessor guide: observe that –

The system components are inspected and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for inspecting and testing system components can be identified.

Criteria 18.88A.2.4

Correct operation of each component assessed against system specification.

Assessor guide: observe that –

The operation of each system component is assessed against system specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet system specification can be identified.

Element 18.88A.3 Repair/replace faulty commercial air conditioning components**Criteria 18.88A.3.1**

Faulty components are localised and malfunction confirmed by inspection and testing using air conditioning principles, procedures and safety requirements.

Assessor guide: observe that –

The faulty components are localised and malfunction confirmed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate process for localising and confirming faulty components can be given.

Criteria 18.88A.3.2

The refrigerant is removed safely from the system and contained in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The refrigerant is safely removed in accordance with standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and all legislative and regulatory requirements for safely removing the refrigerant from the system can be identified.

Criteria 18.88A.3.3

Faulty components are dismantled and repaired to manufacturer's specifications as required.

Assessor guide: observe that –

The faulty components dismantled and repaired in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for dismantling and repairing faulty components can be identified.

Criteria 18.88A.3.4

Replacement parts selected from manufacturer's catalogues according to required specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for selecting replacement parts can be given.

Element 18.88A.4 Return to service commercial air conditioning system and components**Criteria 18.88A.4.1**

Components are reassembled and tested for correct operation and assessed against specification.

Assessor guide: observe that –

The components reassembled and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for reassembling and testing components can be identified.

Criteria 18.88A.4.2

The system is charged with correct refrigerant safely in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The system is correctly and safely charged with refrigerant in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and all legislative and regulatory requirements for safely charging the system be identified.

Criteria 18.88A.4.3

Using air conditioning principles, correct operation of the equipment is verified.

Assessor guide: observe that –

The operation of each system component is assessed against system specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet system specification can be identified.

Criteria 18.88A.4.4

Maintenance records/service reports completed by appropriate designated means.

Assessor guide: observe that –

Maintenance records/service reports completed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for completing maintenance records/service reports can be identified.

Range statement

This unit applies maintenance and repair of commercial air conditioning systems and components, which may include heating systems, direct expansion refrigeration systems, simple air distribution systems, typically used for comfort air conditioning. Work is carried out autonomously or in a team environment and includes interpreting drawings and diagrams of commercial air conditioning systems. Utilising fault-finding procedures, service manifolds, and test equipment to identify and diagnose faults in systems to isolate faulty components and rectify common faults return to service, test systems, and complete service reports. Work may also include retrofitting existing commercial air conditioning systems with alternative refrigerants and reconditioning components. Where the refitting or repair/replacement of components involves the fabrication and installation of pipework and assemblies Unit 10.10A (Install pipework and pipework assemblies) should be accessed. Where any rectification, modification involves electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should also be considered. When there is a requirement to remove and replace of components by brazing and/or silver soldering Unit 5.6A (Perform brazing and/or silver soldering) should also be accessed.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with air conditioning service work or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.89A A Maintain and repair large central air handling systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

Element 18.89A.1 Undertake preventive maintenance checks/adjustment on large central air handling systems

Criteria 18.89A.1.1

The temperature, humidity, quality, pressure and flow of air delivered to zones by the air handling system is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring equipment selected and used to check that the temperature, humidity, quality, pressure and flow of the air delivered to the zones conforms to specification. All non conforming measurements are correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment for checking humidity, air temperatures, air flows, air quality and air pressure can be identified. The appropriate specifications required for checking humidity, air temperatures, air flows, air quality and air pressure can be identified. The procedures for reporting non conformances can be given. The air properties controlled by the air handling system can be identified.

Criteria 18.89A.1.2

The noise/vibration levels of the air handling sub systems are checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring instruments/equipment selected and used to check noise and vibration levels of the sub systems are within specifications. Abnormal noise/vibration is correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment required for checking sub system noise and vibration levels can be identified. The appropriate specifications for checking sub system noise and vibration levels can be identified. The procedures for reporting abnormal noise/vibration can be given.

Criteria 18.89A.1.3

Preventative maintenance tasks are performed according to manufacturer's specifications using appropriate refrigeration and air conditioning techniques/practices.

Assessor guide: observe that –

The preventative maintenance procedures are performed in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The appropriate procedures and sequence for performing preventative maintenance on an air conditioning system can be identified.

Element 18.89A.2 Undertake fault finding on large central air handling system

Criteria 18.89A.2.1

Components of sub systems correctly identified.

Assessor guide: observe that –
Primary and secondary refrigerant, or air distribution/reticulation systems correctly identified from specifications.

Assessor guide: confirm that –
The specifications of and process for identifying primary and secondary refrigerant, or air distribution/reticulation systems can be given.

Criteria 18.89A.2.2

The characteristics and operation of each sub system component understood.

Assessor guide: observe that –

Assessor guide: confirm that –
The operational characteristics of each sub system component can be given.

Criteria 18.89A.2.3

The operational function of each sub system component inspected and tested.

Assessor guide: observe that –
The sub system components are inspected and tested in accordance standard operating procedures.

Assessor guide: confirm that –
The appropriate procedures for inspecting and testing each sub system component can be identified.

Criteria 18.89A.2.4

Correct operation of each component assessed against specification.

Assessor guide: observe that –
The operation of each component is assessed against system specification in accordance standard operating procedures.

Assessor guide: confirm that –
The appropriate procedures for assessing that the operation of the components meet system specification can be identified.

Element 18.89A.3 Repair/replace faulty air handling components

Criteria 18.89A.3.1

Faulty components are localised and malfunction confirmed by inspection and testing using air conditioning principles, procedures and safety requirements.

Assessor guide: observe that –
The faulty components are localised and malfunction confirmed in accordance standard operating procedures.

Assessor guide: confirm that –
The appropriate process for localising and confirming faulty components can be given.

Criteria 18.89A.3.2

Faulty components are dismantled and repaired to manufacturers specifications as required.

Assessor guide: observe that –
The faulty components dismantled and repaired in accordance standard operating procedures.

Assessor guide: confirm that –
The appropriate procedures for dismantling and repairing faulty components can be identified.

Criteria 18.89A.3.3

Replacement parts selected from manufacturer's catalogues according to required specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for selecting replacement parts can be given.

Element 18.89A.4 Return to service large central air handling system**Criteria 18.89A.4.1**

Components are reassembled and tested for correct operation and assessed against specification.

Assessor guide: observe that –

The components reassembled and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for reassembling and testing components can be identified.

Criteria 18.89A.4.2

Using air handling principles and techniques correct operation of the equipment is verified.

Assessor guide: observe that –

The operation of each system component is assessed against system specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet system specification can be identified.

Criteria 18.89A.4.3

Maintenance records/service reports completed by appropriate designated means.

Assessor guide: observe that –

Maintenance records/service reports completed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for completing maintenance records/service reports can be identified.

Range statement

This unit applies maintenance and repair of large central air handling systems, which may include boilers, chillers, secondary refrigeration pumps, dehumidifiers, odour control, complex filtering systems, multi zone air distribution systems etc. typically used for comfort air conditioning. Work is carried out autonomously or in a team environment, and includes interpreting drawings and diagrams of large central air handling systems. Utilising fault finding procedures, and test equipment to identify and diagnose faults in systems to isolate faulty components, rectify faults, return to service test the systems and complete service reports. Where the refitting or repair/replacement of components involves the fabrication and installation of pipework and assemblies Unit 10.10A (Install pipework and pipework assemblies) should be accessed. Where any rectification, modification involves electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should also be considered. Where there is a requirement to remove and replace components by brazing and/or silver soldering Unit 5.6 (Perform brazing and/or silver soldering) should also be accessed. Where there is a requirement for maintaining/dosing water cooling towers and treatment systems in accordance legislative and regulatory requirements Unit 13.7A (Maintain water cooling towers and treatment systems) should be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.90A A Maintain and repair industrial refrigeration systems and components

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

Element 18.90A.1 Undertake preventive maintenance checks/adjustment on industrial refrigeration systems and components

Criteria 18.90A.1.1

The temperature and properties of the controlled medium/s is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring equipment selected and used to check that the temperature of the controlled medium(s) conforms to specification. Appropriate measuring instruments/equipment selected and used to check that the properties of the controlled medium/s conform to specification. All non conforming measurements are correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment for checking the temperature(s) and properties of the controlled medium(s) can be identified. The appropriate specifications required for checking temperature(s) and properties of the controlled medium(s) can be identified. The procedures for reporting non conformances can be given. The air properties controlled by the controlled medium(s) can be identified.

Criteria 18.90A.1.2

The noise/vibration levels of the industrial refrigeration system components are checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring instruments/equipment selected and used to check noise and vibration levels of the system components are within specifications. Abnormal noise/vibration is correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment required for checking components noise and vibration levels can be identified. The procedures for reporting abnormal noise/vibration can be given.

Criteria 18.90A.1.3

Preventative maintenance tasks and plant room safety equipment checks are performed according to manufacturers specifications using refrigeration principles techniques/practices.

Assessor guide: observe that –

The preventative maintenance procedures and plant room safety equipment checks are performed in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and sequence for performing preventative maintenance on an air conditioning system can be identified. The procedures and sequence for performing plant room safety equipment checks can be identified.

Element 18.90A.2 Undertake fault finding on industrial refrigeration systems and components**Criteria 18.90A.2.1**

System components identified correctly.

Assessor guide: observe that –

The system components correctly identified from specifications.

Assessor guide: confirm that –

The specifications and process for identifying system components can be given.

Criteria 18.90A.2.2

The characteristics and operation of each component is understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operational characteristics of the system components can be given.

Criteria 18.90A.2.3

The operational function of each component is inspected and tested.

Assessor guide: observe that –

The system components are inspected and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for inspecting and testing system components can be identified.

Criteria 18.90A.2.4

Correct operation of each component assessed against specification.

Assessor guide: observe that –

The operation of each system component is assessed against system specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet system specification can be identified.

Element 18.90A.3 Repair/replace faulty industrial refrigeration components

Criteria 18.90A.3.1

Faulty components are localised and malfunction confirmed by inspection and testing using industrial refrigeration principles, procedures and safety requirements.

Assessor guide: observe that –

The faulty components are localised and malfunction confirmed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate process for localising and confirming faulty components can be given.

Criteria 18.90A.3.2

The refrigerant is removed safely from the system and contained in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The refrigerant is safely removed in accordance with standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and all legislative and regulatory requirements for safely removing the refrigerant from the system can be identified.

Criteria 18.90A.3.3

Faulty components are dismantled and repaired to manufacturers specifications as required.

Assessor guide: observe that –

The faulty components dismantled and repaired in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for dismantling and repairing faulty components can be identified.

Criteria 18.90A.3.4

Replacements parts selected from manufacturers catalogues according to required specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for selecting replacement parts can be given.

Element 18.90A.4 Return to service industrial refrigeration system and components

Criteria 18.90A.4.1

Components are reassembled and tested for correct operation and assessed against specification.

Assessor guide: observe that –

The components reassembled and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for reassembling and testing components can be identified.

Criteria 18.90A.4.2

The system is charged with correct refrigerant safely in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The system is correctly and safely charged with refrigerant in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and all legislative and regulatory requirements for safely charging the system be identified.

Criteria 18.90A.4.3

Using industrial refrigeration principles and system application techniques correct operation of the equipment is verified.

Assessor guide: observe that –

The operation of each system component is assessed against equipment specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet equipment specification can be identified.

Criteria 18.90A.4.4

Maintenance records/service reports completed by appropriate designated means.

Assessor guide: observe that –

Maintenance records/service reports completed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for completing maintenance records/service reports can be identified.

Range statement

The unit applies maintenance and repair of industrial refrigeration systems that may include large capacity (ammonia) plant typically used for product/process temperature/environment control. Work is carried out autonomously or in a team environment, and includes interpreting drawings and diagrams of industrial refrigeration systems. Utilising fault finding procedures, service manifolds, and test equipment to identify and diagnose faults in systems to isolate faulty components, rectify faults, return to service, test the systems and complete service reports. The work may also include retrofitting existing industrial refrigeration systems and reconditioning components. Where the refitting or repair/replacement of components involves the fabrication and installation of pipework and assemblies Unit 10.10A (Install pipework and pipework assemblies) should be accessed. Where any rectification, modification involves electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should also be considered. Where there is a requirement to remove and replace of components by brazing and/or silver soldering Unit 5.6A (Perform brazing and/or silver soldering) should also be accessed.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.91A A Maintain and repair multi stage, cascade and/or ultra-cold industrial refrigeration systems

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.87A Service and repair domestic and light commercial refrigeration and air conditioning equipment

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.90A Maintain and repair industrial refrigeration systems and components

Pre-requisite units - Path 3

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.88A Maintain and repair commercial air conditioning systems and components

Element 18.91A.1 Undertake preventive maintenance checks/adjustment on multi stage, cascade and/or ultra cold industrial refrigeration systems

Criteria 18.91A.1.1

The temperature, pressure and properties of the multi stage, cascade and/or ultra cold refrigeration system is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring equipment selected and used to check that the temperature of the controlled medium/s conforms to specification. Appropriate measuring instruments/equipment selected and used to check that the properties of the controlled medium/s conform to specification. All non conforming measurements are correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment for checking the temperature/s and properties of the controlled medium/s can be identified. The appropriate specifications required for checking temperature(s) and properties of the controlled medium(s) can be identified. The procedures for reporting non conformances can be given. The air properties controlled by the controlled medium(s) can be identified.

Criteria 18.91A.1.2

The noise/vibration levels of the multi stage, cascade and/or ultra cold refrigeration system is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring instruments/equipment selected and used to check noise and vibration levels of the system components are within specifications. Abnormal noise/vibration is correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment required for checking components noise and vibration levels can be identified. The procedures for reporting abnormal noise/vibration can be given.

Criteria 18.91A.1.3

Preventative maintenance tasks are performed according to manufacturer's specifications using refrigeration techniques/practices.

Assessor guide: observe that –

The preventative maintenance procedures and safety equipment checks are performed in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and sequence for performing preventative maintenance on an air conditioning system can be identified. The procedures and sequence for performing safety equipment checks can be identified.

Element 18.91A.2 Undertake fault finding on multi stage, cascade and/or ultra cold industrial refrigeration system**Criteria 18.91A.2.1**

System components identified correctly.

Assessor guide: observe that –

The system components correctly identified from specifications.

Assessor guide: confirm that –

The specifications and process for identifying system components can be given.

Criteria 18.91A.2.2

The characteristics and operation of each component is understood.

Assessor guide: observe that –

Assessor guide: confirm that –

The operational characteristics of the system components can be given.

Criteria 18.91A.2.3

The operational function of each component is inspected and tested.

Assessor guide: observe that –

The system components are inspected and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for inspecting and testing system components can be identified.

Criteria 18.91A.2.4

Correct operation of each component assessed against specification.

Assessor guide: observe that –

The operation of each system component is assessed against system specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet system specification can be identified.

Element 18.91A.3 Repair/replace faulty components**Criteria 18.91A.3.1**

Faulty components are localised and malfunction confirmed by inspection and testing using industrial refrigeration principles, procedures and safety requirements.

Assessor guide: observe that –

The faulty components are localised and malfunction confirmed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate process for localising and confirming faulty components can be given.

Criteria 18.91A.3.2

The refrigerant is removed safely from the system and contained in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The refrigerant is safely removed in accordance with standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and all legislative and regulatory requirements for safely removing the refrigerant from the system can be identified.

Criteria 18.91A.3.3

Faulty components are dismantled and repaired to manufacturer's specifications as required.

Assessor guide: observe that –

The faulty components dismantled and repaired in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for dismantling and repairing faulty components can be identified.

Criteria 18.91A.3.4

Replacement parts selected from manufacturer's catalogues according to required specifications.

Assessor guide: observe that –

Assessor guide: confirm that –

The procedures for selecting replacement parts can be given.

Element 18.91A.4 Return to service multi stage, cascade and/or ultra cold refrigeration system**Criteria 18.91A.4.1**

Components are reassembled and tested for correct operation and assessed against specification.

Assessor guide: observe that –

The components reassembled and tested in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for reassembling and testing components can be identified.

Criteria 18.91A.4.2

The system is charged with correct refrigerant safely in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The system is correctly and safely charged with refrigerant in accordance standard operating procedures and all legislative and regulatory requirements.

Assessor guide: confirm that –

The procedures and all legislative and regulatory requirements for safely charging the system be identified.

Criteria 18.91A.4.3

Using industrial refrigeration principles and system application techniques correct operation of the equipment is verified.

Assessor guide: observe that –

The operation of each system component is assessed against equipment specification in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for assessing that the operation of system components meet equipment specification can be identified.

Criteria 18.91A.4.4

Maintenance records/service reports completed by appropriate designated means.

Assessor guide: observe that –

Maintenance records/service reports completed in accordance standard operating procedures.

Assessor guide: confirm that –

The appropriate procedures for completing maintenance records/service reports can be identified.

Range statement

This unit applies to the maintenance and repair of multi stage, cascade cryogenic and ultra cold industrial refrigeration systems. Work is carried out autonomously or in a team environment. Interpret drawings and diagrams of complex industrial refrigeration systems and utilising fault finding procedures and test equipment to identify and diagnose faults in systems; and isolate faulty components and rectify common faults. They are able to retrofit existing industrial refrigeration systems, recondition components, return to service and test systems, and complete service reports for administrative action. Where the refitting or repair/replacement of components involves the fabrication and installation of pipework and assemblies, Unit 10.10A (Install pipework and pipework assemblies) should be accessed. Where any rectification, modification involves electrical disconnection and reconnection, the Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should also be considered. Where there is a requirement and replace of components by brazing and/or silver soldering, Unit 5.6A (Perform brazing and/or silver soldering) should also be accessed.

Unit MEM 18.92A A Maintain and repair commercial and/or industrial refrigeration and/or air conditioning controls

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C7 (AQF IV)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.88A Maintain and repair commercial air conditioning systems and components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices

18.1A Use hand tools

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement

18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.90A Maintain and repair industrial refrigeration systems and components

Element 18.92A.1 Install/replace refrigeration/air conditioning controls

Criteria 18.92A.1.1

Refrigeration/air conditioning control principles and system diagrams interpreted and understood.

Assessor guide: observe that –

System/circuit diagrams, system operation and control data obtained in accordance with work site procedures.

Assessor guide: confirm that –

The system operational requirements and specifications can be identified. The application of common refrigeration/air conditioning system components and controllers can be identified.

Criteria 18.92A.1.2

Control circuit components identified and inspected for compliance to specifications.

Assessor guide: observe that –

System/circuit components are checked/inspected for compliance to specifications.

Assessor guide: confirm that –

The system/circuit components can be identified.

Criteria 18.92A.1.3

Sequential installation undertaken according to manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Specifications addressed and procedures followed during any installation work.

Assessor guide: confirm that –

The importance of following installation procedures can be explained in terms of control operation, safety and reliability.

Element 18.92A.2 Check and adjust refrigeration/air conditioning control sequence and operation**Criteria 18.92A.2.1**

The temperature, quality, pressure and properties of the air delivered by the air conditioning system is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring equipment selected and used to check that the temperature, flow and quality of the conditioned air conforms to specification. Appropriate measuring instruments/equipment selected and used to check that the air properties conform to specification. All non conforming measurements are correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment for checking air temperatures, air flows, air quality and air properties can be identified. The appropriate specifications required for checking air temperatures, air flows, air quality and air properties can be identified. The procedures for reporting non conformances can be given. The air properties controlled by the air conditioning system can be identified.

Criteria 18.92A.2.2

Controls operation checked against operational specifications using appropriate test equipment and application principles/techniques.

Assessor guide: observe that –

Appropriate test equipment is used to check control and system operation against specifications in accordance with work site procedures.

Assessor guide: confirm that –

Refrigeration/air conditioning test equipment and application can be identified.

Criteria 18.92A.2.3

Adjustments performed to control sequence to meet/align to operational requirements and specifications.

Assessor guide: observe that –

Where appropriate, the system is adjusted to ensure that the sequence of operations conforms to operational requirements in accordance with work site procedures.

Assessor guide: confirm that –

The correct operational sequence of the system can be identified. Typical adjustments to correct sequencing variations from specification can be given.

Criteria 18.92A.2.4

Modifications/alterations recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

Any modifications/alterations to the system are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The consequences of not recording/reporting modifications to systems can be given. The procedures for recording/reporting modifications/alterations can be identified.

Criteria 18.92A.2.5

Controls operation checked and returned to service to specifications.

Assessor guide: observe that –

The operation of the controls is checked for conformance to specification. The system is returned to service in accordance with work site procedures.

Assessor guide: confirm that –

The operational and control specifications can be identified. The refrigeration/air conditioning system return to service procedures can be identified.

Element 18.92A.3 Fault-find refrigeration/air conditioning control circuits**Criteria 18.92A.3.1**

Control circuit diagrams, data sheets interpreted and understood.

Assessor guide: observe that –

All relevant system/circuit diagrams and data sheets are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The system components and their specifications can be identified.

Criteria 18.92A.3.2

Control circuit components identified and inspected.

Assessor guide: observe that –

The control circuit components are checked/inspected for conformance to specifications.

Assessor guide: confirm that –

Criteria 18.92A.3.3

Control circuit traced and action of components diagnosed to identify and localise faults.

Assessor guide: observe that –

The control circuit components are checked for correct operation in accordance with work site procedures. Components not conforming to operational specification identified and fault localised in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.92A.3.4

Control circuit parts tested using appropriate test equipment and application principles.

Assessor guide: observe that –

Appropriate tests are conducted on control circuit parts in accordance with work site procedures.

Assessor guide: confirm that –

Common test equipment and its application can be identified.

Criteria 18.92A.3.5

Control circuit parts assessed against operational specifications.

Assessor guide: observe that –

Control circuit parts are checked for conformance to specifications.

Assessor guide: confirm that –

Criteria 18.92A.3.6 Fault condition localised at the component level.	<i>Assessor guide: observe that –</i> An appropriate corrective action plan is documented in accordance with work site procedures.	<i>Assessor guide: confirm that –</i> The component(s) not complying with operational specification can be identified.
Criteria 18.92A.3.7 Faulty condition evaluated, root cause analysed and corrective action planned.	<i>Assessor guide: observe that –</i> An appropriate corrective action plan is documented in accordance with work site procedures.	<i>Assessor guide: confirm that –</i> Typical causes of component failure can be given. The causes of the faulty condition in the component(s) can be identified. Appropriate procedures for rectifying the faulty condition can be identified.
Element 18.92A.4 Maintain, repair/replace control components		
Criteria 18.92A.4.1 Correct maintenance procedures applied according to standard operating procedures.	<i>Assessor guide: observe that –</i> Appropriate maintenance is carried out in accordance with work site procedures.	<i>Assessor guide: confirm that –</i> The appropriate maintenance schedule and procedures can be identified.
Criteria 18.92A.4.2 Repair procedures selected and applied using correct and appropriate techniques, tools and equipment.	<i>Assessor guide: observe that –</i> Where appropriate, control components repaired in accordance with work site procedures.	<i>Assessor guide: confirm that –</i> Appropriate control component repair procedures can be identified.
Criteria 18.92A.4.3 Faulty items tested, repaired or replaced using sequential installation procedures according to manufacturers' specifications.	<i>Assessor guide: observe that –</i> Faulty items tested for conformance to specification in accordance with work site procedures. Repaired/replaced components installed in accordance with manufacturers' requirements and work site procedures.	<i>Assessor guide: confirm that –</i> Any special installation requirements can be identified. Component and operational specifications can be identified. Typical test equipment and its application can be identified.
Criteria 18.92A.4.4 Replacement items selected from manufacturers' catalogues to meet specification.	<i>Assessor guide: observe that –</i> Where appropriate, replacement items are selected from manufacturers' catalogues in conformance with specifications.	<i>Assessor guide: confirm that –</i>

Criteria 18.92A.4.5

Control components reassembled using appropriate principles and procedures according to specification.

Assessor guide: observe that –

Where appropriate, control components reassembled in accordance with work site procedures.

Assessor guide: confirm that –

Element 18.92A.5 Check and adjust sequence of refrigeration/air conditioning controls**Criteria 18.92A.5.1**

Using circuit diagram and refrigeration/air conditioning system control principles, identify sensors and controllers.

Assessor guide: observe that –

Circuit diagrams are obtained in accordance with work site procedures.

Assessor guide: confirm that –

Circuit sensors and controllers can be identified.

Criteria 18.92A.5.2

Make necessary adjustments to sequence control circuit to meet operational specification.

Assessor guide: observe that –

Where appropriate, the control system is adjusted to ensure conformance to operational specification in accordance with work site procedures.

Assessor guide: confirm that –

The operational requirements/specifications of the system can be identified. Common adjustments that can be made to control systems and their effect can be identified.

Criteria 18.92A.5.3

Correct operation of control circuit checked and confirmed against operational specification.

Assessor guide: observe that –

The operation of the control system is checked for conformance to operational specifications in accordance with work site procedures.

Assessor guide: confirm that –

The correct operation of the control system can be confirmed.

Criteria 18.92A.5.4

Refrigeration/air conditioning controls return to service to specification.

Assessor guide: observe that –

The refrigeration/air conditioning control system is returned to service to specification in accordance with work site procedures.

Assessor guide: confirm that –

The procedures for returning to service commissioning refrigeration/air conditioning control systems can be identified.

Criteria 18.92A.5.5

Appropriate follow-up procedures adopted.

Assessor guide: observe that –

Where appropriate, maintenance and/or service follow-up procedures are initiated in accordance with work site procedures.

Assessor guide: confirm that –

Any maintenance/service follow-up procedures can be identified.

Criteria 18.92A.5.6

Service/maintenance report completed to standard operating procedures.

Assessor guide: observe that –

Maintenance and/or service reports are completed in accordance with work site procedures.

Assessor guide: confirm that –

The maintenance/service recording/reporting requirements can be identified.

Range statement

This unit applies to the repair/replacement of commercial industrial refrigeration and commercial air conditioning controls. Work is carried out autonomously or in a team environment, utilising predetermined standards of safety, quality and workshop procedures. System circuit components identified, traced, inspected and operational function assessed and verified using refrigeration/air conditioning principles to predetermined specifications interpreted from data sheets and circuit diagrams. Installation, adjustment, repairs, replacements and overhauls undertaken to site or manufacturers' specifications, using working and application of principles of domestic refrigeration and/or commercial air conditioning control sequencing which may include: PLC's, relay logic control systems, unitised/modular sensors, transducers, timers, counters and associated equipment. If the skills beyond the sequencing of PLC controls are required, then Unit 10.4A(Enter and change programmable controller operational parameters) and/or Unit 10.5A (Commission programmable controller programs) should also be assessed. Correct operational function of the industrial refrigeration/air handling system controls verified and return to service in conformance to specifications. Where any rectification, modification involves electrical disconnection then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should be considered. This unit should not be selected if Unit 18.93B (Maintain and repair integrated refrigeration and/or large handling system controls) has already been selected.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with refrigeration and air conditioning, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.93B A Maintain and repair integrated industrial refrigeration and/or large air handling system controls

Band – Specialisation band B

Field – Maintenance & diagnostics

Unit Weight 8

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.90A Maintain and repair industrial refrigeration systems and components

Pre-requisite units - Path 2

2.5C11 Measure with graduated devices
18.1A Use hand tools

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations

12.2A Electrical/electronic measurement
18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

18.89A Maintain and repair large central air handling systems

Element 18.93B.1 Install/replace refrigeration/air handling system controls

Criteria 18.93B.1.1

Refrigeration/air handling control principles and system diagrams interpreted and understood.

Assessor guide: observe that –

System/circuit diagrams, system operation and control data obtained in accordance with work site procedures.

Assessor guide: confirm that –

The system operational requirements and specifications can be identified. The application of common refrigeration/air handling system components and controllers can be identified.

Criteria 18.93B.1.2

Control system/circuit components identified and inspected for compliance to specifications.

Assessor guide: observe that –

System/circuit components are checked/inspected for compliance to specifications.

Assessor guide: confirm that –

The system/circuit components can be identified.

Criteria 18.93B.1.3

Sequential installation undertaken according to manufacturer's specifications and standard operating procedures.

Assessor guide: observe that –

Specifications addressed and procedures followed during any installation work.

Assessor guide: confirm that –

The importance of following installation procedures can be explained in terms of control operation, safety and reliability.

Element 18.93B.2 Check and adjust refrigeration/air handling system control sequence and operation**Criteria 18.93B.2.1**

The temperature, quality, pressure and properties of the air delivered by the air handling system is checked for conformance to specification.

Assessor guide: observe that –

Appropriate measuring equipment selected and used to check that the temperature, flow and quality of the conditioned air conforms to specification. Appropriate measuring instruments/equipment selected and used to check that the air properties conform to specification. All non conforming measurements are correctly identified.

Assessor guide: confirm that –

The appropriate measuring instruments/equipment for checking air temperatures, air flows, air quality and air properties can be identified. The appropriate specifications required for checking air temperatures, air flows, air quality and air properties can be identified. The procedures for reporting non conformances can be given. The air properties controlled by the air conditioning system can be identified.

Criteria 18.93B.2.2

Controls and system operation checked against operational specifications using appropriate test equipment and application principles/techniques.

Assessor guide: observe that –

Appropriate test equipment is used to check control and system operation against specifications in accordance with work site procedures.

Assessor guide: confirm that –

Refrigeration/air conditioning test equipment and application can be identified.

Criteria 18.93B.2.3

Adjustments performed to sequence system to meet/align to operational requirements and specifications.

Assessor guide: observe that –

Where appropriate, the system is adjusted to ensure that the sequence of operations conforms to operational requirements in accordance with work site procedures.

Assessor guide: confirm that –

The correct operational sequence of the system can be identified. Typical adjustments to correct sequencing variations from specification can be given.

Criteria 18.93B.2.4

Modifications/alterations recorded and reported in accordance with standard operating procedures.

Assessor guide: observe that –

Any modifications/alterations to the system are recorded/reported in accordance with work site procedures.

Assessor guide: confirm that –

The consequences of not recording/reporting modifications to systems can be given. The procedures for recording/reporting modifications/alterations can be identified.

Criteria 18.93B.2.5

Controls and system operation checked and commissioned to specifications.

Assessor guide: observe that –

The operation of the controls is checked for conformance to specification. The system is returned to service in accordance with work site procedures.

Assessor guide: confirm that –

The operational and control specifications can be identified. The refrigeration/air handling system return to service procedures can be identified.

Element 18.93B.3 Fault-find refrigeration/air handling system control circuits**Criteria 18.93B.3.1**

Control system/circuit diagrams, data sheets interpreted and understood.

Assessor guide: observe that –

All relevant system/circuit diagrams and data sheets are obtained in accordance with work site procedures.

Assessor guide: confirm that –

The system components and their specifications can be identified.

Criteria 18.93B.3.2

Control system/circuit components identified and inspected.

Assessor guide: observe that –

The control circuit components are checked/inspected for conformance to specifications.

Assessor guide: confirm that –

Criteria 18.93B.3.3

Control system/circuit traced and action of components diagnosed to identify and localise faults.

Assessor guide: observe that –

The control circuit components are checked for correct operation in accordance with work site procedures. Components not conforming to operational specification identified and fault localised in accordance with work site procedures.

Assessor guide: confirm that –

Criteria 18.93B.3.4

Control system/circuit parts tested using appropriate test equipment and application principles.

Assessor guide: observe that –

Appropriate tests are conducted on control circuit parts in accordance with work site procedures.

Assessor guide: confirm that –

Common test equipment and its application can be identified.

Criteria 18.93B.3.5

Control system/circuit parts assessed against operational specification.

Assessor guide: observe that –

Control circuit parts are checked for conformance to specifications.

Assessor guide: confirm that –

Criteria 18.93B.3.6

Fault condition localised at the component level.

Assessor guide: observe that –

Assessor guide: confirm that –

The component(s) not complying with operational specification can be identified.

Criteria 18.93B.3.7

Faulty condition evaluated, root cause analysed and corrective action planned.

Assessor guide: observe that –

An appropriate corrective action plan is documented in accordance with work site procedures.

Assessor guide: confirm that –

Typical causes of component failure can be given. The causes of the faulty condition in the component(s) can be identified. Appropriate procedures for rectifying the faulty condition can be identified.

Element 18.93B.4 Maintain, repair/replace system control components**Criteria 18.93B.4.1**

Correct maintenance procedures applied according to standard operating procedures.

Assessor guide: observe that –

Appropriate maintenance is carried out in accordance with work site procedures.

Assessor guide: confirm that –

The appropriate maintenance schedule and procedures can be identified.

Criteria 18.93B.4.2

Repair procedures selected and applied using correct and appropriate techniques, tools and equipment.

Assessor guide: observe that –

Where appropriate, control components repaired in accordance with work site procedures.

Assessor guide: confirm that –

Appropriate control component repair procedures can be identified.

Criteria 18.93B.4.3

Faulty items tested, repaired or replaced using sequential installation procedures according to manufacturer's specifications.

Assessor guide: observe that –

Faulty items tested for conformance to specification in accordance with work site procedures. Repaired/replaced components installed in accordance with manufacturers' requirements and work site procedures.

Assessor guide: confirm that –

Any special installation requirements can be identified. Component and operational specifications can be identified. Typical test equipment and its application can be identified.

Criteria 18.93B.4.4

Replacement items selected from manufacturer's catalogues to meet specifications.

Assessor guide: observe that –

Where appropriate, replacement items are selected from manufacturers' catalogues in conformance with specifications.

Assessor guide: confirm that –

Criteria 18.93B.4.5

System control components reassembled using appropriate principles and procedures according to specification.

Assessor guide: observe that –

Where appropriate, control components reassembled in accordance with work site procedures.

Assessor guide: confirm that –

Element 18.93B.5 Check and adjust sequence of refrigeration/air handling system controls**Criteria 18.93B.5.1**

Using circuit diagram and refrigeration/air handling system control principles, identify circuit sensors and controllers.

Assessor guide: observe that –

Circuit diagrams are obtained in accordance with work site procedures.

Assessor guide: confirm that –

Circuit sensors and controllers can be identified.

Criteria 18.93B.5.2

Make necessary adjustments to sequence system control circuit to meet operational specification.

Assessor guide: observe that –

Where appropriate, the control system is adjusted to ensure conformance to operational specification in accordance with work site procedures.

Assessor guide: confirm that –

The operational requirements/specifications of the system can be identified. Common adjustments that can be made to control systems and their effect can be identified.

Criteria 18.93B.5.3

Correct operation of system control circuit checked and confirmed against operational specification.

Assessor guide: observe that –

The operation of the control system is checked for conformance to operational specifications in accordance with work site procedures.

Assessor guide: confirm that –

The correct operation of the control system can be confirmed.

Criteria 18.93B.5.4

Refrigeration/air handling system controls commissioned to specification.

Assessor guide: observe that –

The refrigeration/air handling control system is returned to service to specification in accordance with work site procedures.

Assessor guide: confirm that –

The procedures for returning to service commissioning refrigeration/air handling control systems can be identified.

Criteria 18.93B.5.5

Appropriate follow-up procedures adopted.

Assessor guide: observe that –

Where appropriate, maintenance and/or service follow-up procedures are initiated in accordance with work site procedures.

Assessor guide: confirm that –

Any maintenance/service follow-up procedures can be identified.

Criteria 18.93B.5.6

Service/maintenance report completed to standard operating procedures.

Assessor guide: observe that –

Maintenance and/or service reports are completed in accordance with work site procedures.

Assessor guide: confirm that –

The maintenance/service recording/reporting requirements can be identified.

Range statement

This unit applies to the repair/replacement of integrated industrial refrigeration and air handling systems controls. Work is carried out autonomously or in a team environment. Utilising predetermined standards of safety, quality and workshop procedures. System circuit components identified, traced, inspected and operational function assessed and verified using refrigeration/air conditioning principles to predetermined specifications interpreted for data sheets and circuit diagrams. Installation, adjustment, repairs, replacements and overhauls undertaken to site or manufacturers specification, using working and application of principles of industrial refrigeration and/or air handling systems control sequencing which may include: PLC's relay logic control systems, unitised/modular sensors, transducers, timers, counters and associated equipment. If the skills beyond the sequencing of PLC controls are required. Then Unit 10.4A (Enter and change programmable controller operational parameters) and/or Unit 10.5A (Commission programmable controller programs) should also be assessed. Correct operational function of the industrial refrigeration/air handling system controls verified and commissioned in conformance to specifications. Where any rectification, modification involves electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000vAC/1500vDC) should also be considered.

Evidence guide

Assessment context

This unit should be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurements or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 18.94A A Service and repair of commercial refrigeration

Band – Specialisation band A

Field – Maintenance & diagnostics

Unit Weight 6

Pre-requisite units - Path 1

12.2A Electrical/electronic measurement

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.55A Dismantle, replace and assemble engineering components

18.86A Test, evacuate and charge refrigeration systems

Element 18.94A.1 Undertake preventive maintenance checks/adjustment on commercial refrigeration equipment

Criteria 18.94A.1.1

Visual inspection and testing with appropriate test equipment is carried out according to refrigeration principles, procedures and safety requirements.

Assessor guide: observe that –

Testing is carried out to accepted standards in a safe manner.

Assessor guide: confirm that –

Correct test procedures can be identified and described.

Criteria 18.94A.1.2

Preventative maintenance tasks as performed according to manufacturer's specifications using refrigeration techniques and practices.

Assessor guide: observe that –

All work is carried out to accepted standards and to specifications where applicable.

Assessor guide: confirm that –

Frequency and reason for preventative maintenance is explained.

Element 18.94A.2 Undertake fault finding on commercial refrigeration equipment

Criteria 18.94A.2.1

Equipment components identified correctly.

Assessor guide: observe that –

Components on a range of equipment can be accurately identified.

Assessor guide: confirm that –

Variations in component identities can be explained

Criteria 18.94A.2.2

The characteristics and operation of each component is understood.

Assessor guide: observe that –

Assessor guide: confirm that –

Operation and characteristics of range if components can be described

Criteria 18.94A.2.3

The operational function of each component is inspected and tested.

Assessor guide: observe that –

All refrigeration system components are checked for correct operation using appropriate tools, techniques and equipment in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for checking refrigeration components for correct operation can be given. The tools, techniques and equipment necessary to check refrigeration system components for correct operation can be identified.

Criteria 18.94A.2.4

Correct operation of each component assessed against specification.

Assessor guide: observe that –

Component performance/operation is compared against specification.

Assessor guide: confirm that –

Specifications are obtained, interpreted and understood.

Element 18.94A.3 Repair/replace commercial refrigeration components**Criteria 18.94A.3.1**

Faulty components are localised and malfunction confirmed by inspection and testing using refrigeration principles, procedures and safety requirements.

Assessor guide: observe that –

Where appropriate, faulty components are identified for repair or replacement.

Assessor guide: confirm that –

The procedures for identifying components for repair or replacement can be given.

Criteria 18.94A.3.2

The refrigerant is removed safely from the system and contained in accordance with standard operating procedures and regulatory requirements where appropriate.

Assessor guide: observe that –

The refrigerant is evacuated and contained in a safe and appropriate manner, meeting all necessary requirements.

Assessor guide: confirm that –

Evacuation, containment and storage procedures can be identified and explained.

Criteria 18.94A.3.3

Faulty components are dismantled and repaired to manufacturer's specifications as required.

Assessor guide: observe that –

Repairs are undertaken in a safe and reliable manner using correct techniques and accepted practices.

Assessor guide: confirm that –

The effect of poor repair practices can be described.

Criteria 18.94A.3.4

Replacement parts selected from manufacturer's catalogues according to required specifications.

Assessor guide: observe that –

Relevant catalogues/lists are used particularly when catalogues, etc., are not available.

Assessor guide: confirm that –

Process to select replacement parts can be described.

Element 18.94A.4 Return to service commercial refrigeration equipment**Criteria 18.94A.4.1**

Components are reassembled and tested for correct operation and assessed against specification.

Assessor guide: observe that –

Assembly and testing procedures are followed correctly and thoroughly.

Assessor guide: confirm that –

Assembly and testing procedures can be identified and explained.

Criteria 18.94A.4.2

Using domestic refrigeration principles and system application techniques, correct operation of the equipment is verified.

Assessor guide: observe that –

The temperatures, flows, pressures, air properties and noise/vibration levels achieved as a result of the adjustments made are recorded/reported in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for adjusting refrigeration systems for correct operation in accordance with specifications can be given.

Criteria 18.94A.4.3

Maintenance records/service reports completed by appropriate designated means.

Assessor guide: observe that –

Where appropriate, authorised out-of-specification adjustments are recorded in accordance with standard operating procedures.

Assessor guide: confirm that –

The procedures for obtaining authorisation of adjustments outside of operational specifications can be given. The person(s) responsible for authorising adjustments outside of specifications can be identified. The reasons adjustments outside of specification may be made can be given. The tools, techniques and equipment required to adjust the refrigeration system to specification can be identified.

Range statement

This unit applies to servicing and repairing commercial and supermarket refrigeration equipment and components. Work is carried out autonomously or in a team environment. Interpret drawings and diagrams of refrigeration equipment, and utilise basic fault finding procedures, service manifolds, and test equipment to identify and diagnose faults in equipment; and isolate faulty components including control components and rectify common faults. They are able to retro fit existing commercial refrigeration equipment with alternative refrigerants, recondition components, return to service and test equipment, and complete service reports for administrative action. Where any rectification, modification involves electrical disconnection and reconnection, then Unit 18.49A (Disconnect/reconnect fixed wired equipment up to 1000v AC and 1500v DC) should also be considered. When there is a requirement to remove and replace components by brazing and or silver soldering Unit 5.6A (Perform brazing and/or silver soldering) should also be accessed. Where detailed maintenance is carried out on control systems, Unit 18.57A (Maintain/service analog/digital electronic equipment) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with refrigeration units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference manuals. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 19.1A A Jewellery metal casting

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

Pre-requisite units - Path 1

13.4A Work safely with molten metals/glass

Element 19.1A.1 Prepare metals for casting

Criteria 19.1A.1.1

Metals and alloys selected in appropriate proportions.

Assessor guide: observe that –

Jewellery metals and alloys are identified for given job
Correct proportions/quantity of metals selected for appropriate alloys.

Assessor guide: confirm that –

Procedures for identifying jewellery metals and alloys can be given. Procedures for calculating proportions/quantities of alloys can be given for jewellery metals. Properties of jewellery metals in relation to casting are understood.

Criteria 19.1A.1.2

Metals/alloys are weighed out correctly.

Assessor guide: observe that –

Metals/alloys are weighed out in correct proportions/sequence according to standard procedures.

Assessor guide: confirm that –

Procedures for weighing out metals/alloys in correct proportions/sequence can be given.

Criteria 19.1A.1.3

Relevant data is recorded.

Assessor guide: observe that –

All applicable data is recorded according to standard operating procedure.

Assessor guide: confirm that –

Procedures for recording all data can be given and accessed as reference material.

Element 19.1A.2 Conduct pre-casting operations

Criteria 19.1A.2.1

Equipment is prepared according to standard operation procedure.

Assessor guide: observe that –

Equipment is balanced/set according to standard operating procedures.

Assessor guide: confirm that –

Procedures for preparing equipment at all process stages can be identified. Results of poor work practices can be given.

Criteria 19.1A.2.2

Inert gas supply/delivery and vacuum systems checked, if applicable.

Assessor guide: observe that –

Inert gas supply/delivery, vacuum systems, and graphite/silicone seals checked, checked according to standard operating procedure and manufacturers specifications.

Assessor guide: confirm that –

The procedures for checking and maintaining inert gas supply/delivery seals and vacuum systems can be given.

Criteria 19.1A.2.3

Preheating/glazing carried out if applicable.

Assessor guide: observe that –

Crucible pre-heated/glazed and thermocouple/heat register/control device tested, if applicable. All systems/devices checked according to standard operating procedure and manufacturer specifications.

Assessor guide: confirm that –

Procedures for pre-heating/glazing of melting crucible and testing of heat register/control device can be given.

Criteria 19.1A.2.4

Temperature of invested flask is maintained.

Assessor guide: observe that –

Invested flask maintained at appropriate temperature after burn out.

Assessor guide: confirm that –

Procedures for maintaining flask temp can be identified for various situations and flask combinations.

Element 19.1A.3 Melt jewellery metal**Criteria 19.1A.3.1**

Protective coating applied to jewellery metal as appropriate.

Assessor guide: observe that –

Appropriate coating is applied in accordance with standard operating procedures.

Assessor guide: confirm that –

Procedures for applying protective coating to jewellery metal can be identified, and reasons for its use can be given.

Criteria 19.1A.3.2

Jewellery metal is heated.

Assessor guide: observe that –

Metal is heated by appropriate means, following standard operating procedures/equipment manuals.

Assessor guide: confirm that –

Procedures for heating jewellery metals of various qualities and quantities can be identified.

Criteria 19.1A.3.3

Jewellery metal casting temperature is achieved.

Assessor guide: observe that –

Metal is raised to casting temperature in accordance standard operating procedures, and Occupational Health and Safety requirements.

Assessor guide: confirm that –

Procedures for achieving casting temperatures can be identified for a range of metals.

Element 19.1A.4 Cast metals**Criteria 19.1A.4.1**

Burn-out flask is positioned correctly.

Assessor guide: observe that –

Burn-out flask is placed safely in casting position in accordance with standard operating procedure.

Assessor guide: confirm that –

Procedures for safe and secure placement of burn-out flasks in the casting position can be given for different size flasks.

Criteria 19.1A.4.2

Molten metal tapped following.

Assessor guide: observe that –

Metal is poured/dropped/released in accordance with standard operating procedures. Safe and accurate flow of molten metal is ensured.

Assessor guide: confirm that –

Molten jewellery metal status and properties can be given Relevant Occupational Health and Safety issues can be explained.

Criteria 19.1A.4.3

Allowance made for adequate solidification time.

Assessor guide: observe that –

Appropriate time frame observed for solidification in accordance with standard operating procedure.

Assessor guide: confirm that –

The processes for confirming stabilisation and solidification of jewellery metals can be given for various flask sizes and applications.

Criteria 19.1A.4.4

Furnace is operated in accordance with work site procedures.

Assessor guide: observe that –

Furnace is started, monitored and shut down in accordance with work site procedures and occupational health and safety requirements and regulations.

Assessor guide: confirm that –

Furnace start up and shut down procedures can be given. Optimum operating temperatures can be given. Safety clothing/apparatus and their applications can be identified. Hazards associated with feeding and removing materials can be identified. Hazard prevention and emergency procedures can be given.

Element 19.1A.5 Perform post-casting operations**Criteria 19.1A.5.1**

Casting flask removed and stored in a safe manner.

Assessor guide: observe that –

Flask is safely removed and stored in accordance with standard operating procedure.

Assessor guide: confirm that –

The procedures for safe handling and storage of casting flask can be identified. The results of inappropriate action at this stage can be given.

Criteria 19.1A.5.2

Casting materials/consumables cleaned/stored/disposed as appropriate.

Assessor guide: observe that –

Investment materials removed, trees cleaned, and cleaning agents are stored and/or disposed of following safety precautions/Occupational Health and Safety requirements and in standard operating procedure.

Assessor guide: confirm that –

Procedures for the safe handling and storage of all materials can be demonstrated, and the hazards/precautions can be explained in each case.

Criteria 19.1A.5.3

Work area and equipment maintained.

Assessor guide: observe that –

Work area and equipment cleaned of investment, chemicals and cleaning agent residue.

Assessor guide: confirm that –

Procedures for appropriate cleaning work areas and equipment can be given and the consequences of poor standards can be explained.

Range statement

This unit covers jewellery metal casting, primarily by the 'lost wax' method of investment casting, but may include cuttlebone and sand processes as extensions. All work undertaken autonomously or within a team environment using predetermined specifications and standards of quality, safety. Casting metals may include gold, platinum, palladium, silver, copper, and their alloys. Processes include centrifugal and vacuum assist. Heating methods may include resistance/induction coils, and hand held torches fuelled by a variety of combinations of gas/propane/acetylene/air/oxygen. Protective coatings may include fluxes and inert gases.

Evidence guide

Assessment context

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. Evidence for assessment should be accompanied by appropriate evidence that supports the gaining of underpinning knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the "lost wax" casting process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.2A A Prepare jewellery illustrations

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

Element 19.2A.1 Identify illustration requirements

Criteria 19.2A.1.1

Requirements and purpose of illustration determined from customer and/or work instructions and associated documents.

Assessor guide: observe that –

Customer and/or work instructions and associated documents interpreted and illustration requirements determined. Sufficient information is obtained to determine customer requirements.

Assessor guide: confirm that –

Common work specifications and documents relating to work instruction can be identified. Various sources of information can be identified.

Criteria 19.2A.1.2

Required data identified and collected.

Assessor guide: observe that –

All data necessary to produce the drawing is identified and collected. Data is collected for emphasis and priority according to illustration requirements and is identified, collected and collated to match required outcomes.

Assessor guide: confirm that –

Data for producing illustrations can be given.

Criteria 19.2A.1.3

Appropriate equipment is selected.

Assessor guide: observe that –

Equipment is appropriate to the illustrating method chosen and requirements. Equipment is checked, maintained and stored according to standards operating procedure.

Assessor guide: confirm that –

Equipment can be identified and uses given. Storage and maintenance requirements of equipment can be given. The working parameters of the selected equipment can be given.

Element 19.2A.2 Prepare or modify drawing

Criteria 19.2A.2.1

Illustrations are consistent with enterprise standard operating procedures.

Assessor guide: observe that –

Illustrations are produced/modified/supplied according to standards operating procedures. Illustrations comply with stated requirements and are appropriate for practical application.

Assessor guide: confirm that –

Jewellery metal/fabrication for preparation of the illustration is understood. The key aspects of the illustration can be identified. Working properties of jewellery metals used in practical manufacturing applications can be identified. Communication of construction, polishing and stone setting as through illustration is understood.

Criteria 19.2A.2.2

Illustration is rendered if applicable.

Assessor guide: observe that –

Rendering requirements are identified. Illustration is rendered to specification. Colour, contour, shadow/highlight techniques are used for emphasis to display jewellery design concept.

Assessor guide: confirm that –

Rendering process is understood. Techniques and tools for the creation of illustration effects can be given.

Criteria 19.2A.2.3

Illustration and accompanying documentation approved in accordance with standard operating procedures.

Assessor guide: observe that –

Completed drawing and all accompanying specifications are checked/approved in accordance with standard operating procedures. Modifications/corrections undertaken to ensure conformance to specifications.

Assessor guide: confirm that –

Procedure for approving illustrations can be given. Appropriate authority for confirming data/specifications/illustration can be identified.

Element 19.2A.3 Filing/storage of illustration

Criteria 19.2A.3.1

Working and reference drawings/illustrations are used/stored/filed/copied/issued in accordance with standard operating procedures.

Assessor guide: observe that –

Recording/storage and retrieval systems are used in accordance with standard operating procedures.

Assessor guide: confirm that –

Appropriate methods for storage and retrieval can be identified. Systems usage procedures can be given.

Range statement

This unit applies to manual and electronic procedures and equipment. Where a CAD system is used, the appropriate units should also be selected. Where interpersonal and customer/client service skills are required, the appropriate units should be considered. Where computerised storage and retrieval systems are used Unit 2.9C10 (Perform computer operations) should also be selected. Specifications may be obtained from design information, customer ideas/concepts/expectations/requirements, sketches, preliminary layouts.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

Competency in this unit requires the production of a jewellery illustration that will ensure practical application of the elements of construction and metal properties resulting in an item faithful to the original design concept/specifications. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing jewellery illustrations or other units requiring the exercise of the skills and knowledge covered by this unit.

Knowledge and experience in construction and polishing techniques are considered essential in order to achieve competency in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.3A A Handle gem materials (basic)

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 2

Element 19.3A.1 Handle gem materials

Criteria 19.3A.1.1

Working area set out in accordance with standard operating procedure.

Assessor guide: observe that –

Gemstone observation area is prepared according to standard operating procedure.

Assessor guide: confirm that –

Requirements for setting up appropriate gem observation area can be identified.

Criteria 19.3A.1.2

Appropriate tools selected to observe material.

Assessor guide: observe that –

Appropriate observation tools/equipment selected according to standard operating procedure.

Assessor guide: confirm that –

Tools and equipment for observing the properties/condition of materials can be identified and their uses given. Function and limitations of selected equipment can be given.

Criteria 19.3A.1.3

Observation carried out according to standard operating procedure.

Assessor guide: observe that –

Tools/equipment and materials are used according to standard operating procedure, occupational health and safety and manufacturers specifications.

Assessor guide: confirm that –

Techniques/observations that may be used/made with selected tools can be given.

Criteria 19.3A.1.4

Correct handling procedure is identified.

Assessor guide: observe that –

Gem materials are handled in accordance with the condition and properties identified.

Assessor guide: confirm that –

Specific handling procedures and measures for different gem materials can be given.

Element 19.3A.2 Record and compare general observations**Criteria 19.3A.2.1**

Techniques and results are recorded.

Assessor guide: observe that –

Standard recording processes are followed All appropriate information is recorded.

Assessor guide: confirm that –

Recording processes can be identified. The type of information to be recorded can be identified. The reasons why information is relevant can be given.

Criteria 19.3A.2.2

Results are interpreted.

Assessor guide: observe that –

Results are collated and compared with reference documentation charts/lists/graphs/diagrams, and all other control material. Reference materials are used according to workshop practice. Results are collated according to standard operating procedures.

Assessor guide: confirm that –

Location of reference materials can be identified. Application of knowledge gained from resource/observations can be applied to reach a conclusion.

Range statement

This unit covers the skills and knowledge for basic handling and observation of gem materials, where the application of skills and knowledge may not be part of a designated gemmological work environment. Observations are primarily aimed at recognition of the properties of gem materials that may affect the way in which they are to be handled in the workplace. Included in this unit is a basic understanding of gemology and gemstone types (including diamonds), nomenclature relative to gemstones and diamonds and the use of the basic equipment required to observe the condition and features of gemstones. The basic equipment includes, but is not limited to, tweezers and 10x loupe. The range of gemstones includes selections of all the major gemstone materials as well as composite, synthetic and imitation gemstones. All work undertaken autonomously or within a team environment using predetermined specifications and standards of quality, safety.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

The underpinning knowledge required to complete this competency will cover common workplace handling and storage of gemstone materials. All knowledge must be applied to practical applications such as parcel wear, reaction to heat, liquids, applied abrasive actions and ultra-sonic cleaning effects. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with basic gemstone handling or other units requiring the exercise of the skills and knowledge covered by this unit. Knowledge and experience in construction and polishing techniques are considered essential in order to achieve competency in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.4A A Handle and examine gemstone materials

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

Pre-requisite units - Path 1

19.3A Handle gem materials (basic)

Element 19.4A.1 Prepare equipment for gemstone examination

Criteria 19.4A.1.1

Appropriate examination methods and equipment selected.

Assessor guide: observe that –

Appropriate procedures and equipment are selected for examination of gem materials.

Assessor guide: confirm that –

Different methods for examination of gem materials in relation to the properties and features that may affect specific materials during jewellery manufacture, repair or alteration can be given. Equipment required for examination and the function of each can be given.

Criteria 19.4A.1.2

Equipment and specimen/s prepared.

Assessor guide: observe that –

Equipment is prepared, pre-set, balanced, calibrated, levelled according to supplier/manufacturer specifications. Specimen is cleaned according to workplace procedures.

Assessor guide: confirm that –

Limitations of the selected equipment/methods can be given. Standard operating procedures and supplier/manufacturer specifications are understood.

Element 19.4A.2 Perform gemstone examinations

Criteria 19.4A.2.1

Physical and optical properties of gem materials are observed.

Assessor guide: observe that –

Equipment is used according to manuals and standard operating procedures. All work is performed in accordance with standard operating procedures and OH&S. All relevant physical and optical properties of gemstone are identified.

Assessor guide: confirm that –

The procedures for correct use of the selected equipment can be given. Definitions of processes and features can be given. Physical and optical properties of relevant gemstones can be given. The requirements for occupational health and safety can be identified. The effects of inadequate housekeeping and workplace procedures can be given.

Criteria 19.4A.2.2

Results recorded and verified.

Assessor guide: observe that –

Results are recorded and compared with known control items/charts/lists/graphs/diagrams and resource materials
Outcomes are verified.

Assessor guide: confirm that –

The process for verifying results can be given. Resource materials can be identified and accessed.

Element 19.4A.3 Handle gem materials**Criteria 19.4A.3.1**

Appropriate handling measures are identified.

Assessor guide: observe that –

Appropriate handling measures and precautions are selected in relation to given gem materials, work processes and tools/equipment.

Assessor guide: confirm that –

Handling measures and precautions for specific gem materials during jewellery manufacture, repair or alteration can be given.

Criteria 19.4A.3.2

Gem materials are handled to minimise risk of damage.

Assessor guide: observe that –

Selected handling measures and precautions are applied correctly during given jobs.

Assessor guide: confirm that –

Specific handling measures and precautions used during given jobs can be explained.

Element 19.4A.4 Investigate and report examination results**Criteria 19.4A.4.1**

Examination results prepared and recorded.

Assessor guide: observe that –

Format/documentation of results is prepared according to standard operating procedures. Results are interpreted and findings verified by independent source, where required. Sufficient evidence to support conclusions is presented.

Assessor guide: confirm that –

Evidence used in support of conclusions can be explained Terminology definitions can be given. Limitations/errors in process/methods can be identified. Sources of independent verification can be given.

Range statement

This unit covers the knowledge and skills required to handle specific gem materials during jewellery manufacture, repair or alteration, through defining the properties and condition of gem materials (including diamonds) that may affect handling in the workplace. The unit primarily aims at minimising the risk of damage to gem materials during jewellery manufacturing, alteration, and repair processes, through gaining a familiarity and understanding of the physical and chemical properties of natural, composite, synthetic, imitation and treated gem materials. It applies to an individual working autonomously and guided by strict rules of procedure. Emphasis to be placed on knowledge of the principles of gemology, gemstone and diamond nomenclature, gemstone processing enhancement and repair, and appreciation of gemstone qualities. Equipment would include 10x loupe, tweezers and thermal probes. The range of gem materials would include all natural, synthetic, treated, composite and imitation gem materials that may reasonably be expected to be encountered in the workplace. Note: the competencies covered by this unit do not include the requirement to perform accurate and positive gemstone identifications.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gemstone handling and examination or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.5A A Produce three-dimensional precision items

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 8

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

13.4A Work safely with molten metals/glass

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

Element 19.5A.1 Determine item requirements

Criteria 19.5A.1.1

Item production information identified.

Assessor guide: observe that –

Specifications and drawings interpreted and data collected and assessed for practical applications according to standard operating procedures.

Assessor guide: confirm that –

Location of information/specifications can be identified. Clarification/approval processes can be given. Drawings/illustrations/specifications are understood.

Criteria 19.5A.1.2

Process/technique selected for production of item.

Assessor guide: observe that –

Appropriate methods are selected for format requirements according to standard operating procedure.

Assessor guide: confirm that –

Wrought, forge, machine and cast techniques are understood. The appropriate application for each can be identified.

Criteria 19.5A.1.3

Item material/s selected.

Assessor guide: observe that –

Materials are selected according to standard operating procedures and item specifications.

Assessor guide: confirm that –

The appropriate properties/function of materials can be identified. All pre-requisite working specifications/abilities/limitations of selected materials are understood. Stored data on specifications and processes can be accessed.

Criteria 19.5A.1.4

Appropriate tools, equipment and processes selected.

Assessor guide: observe that –

Tools/equipment/processes are selected according to the format requirements, and standard operating procedures.

Assessor guide: confirm that –

Knowledge of tools and equipment is matched correctly to processes, and fundamental variations are understood.

Element 19.5A.2 Produce one-off design/item**Criteria 19.5A.2.1**

Construction plan developed to meet specifications/stages of process.

Assessor guide: observe that –

Working knowledge of metals and materials is applied in the construction of the plan.

Assessor guide: confirm that –

Planning/process stages can be identified. Integrated working knowledge of different mediums can be given.

Criteria 19.5A.2.2

Item components are prepared using appropriate techniques/procedures.

Assessor guide: observe that –

Materials are marked out and/or using acceptable techniques, procedures. Item/components pre-formed/produced to size and shape. Appropriate tools and equipment are utilised. Work is checked for compliance to known specifications.

Assessor guide: confirm that –

Fine detail work processes can be given OH&S issues are understood. Various components of jewellery items can be identified.

Criteria 19.5A.2.3

Design/item produced/assembled.

Assessor guide: observe that –

All work is undertaken according to standard operating procedures and OH&S procedures. Product is produced/assembled to specification.

Assessor guide: confirm that –

Levels of acceptable performance and productivity outcomes can be identified.

Element 19.5A.3 Finish and inspect work**Criteria 19.5A.3.1**

Item checked for compliance with specifications.

Assessor guide: observe that –

Product is matched to original design concept/drawings/specifications. Surface condition inspected for conformance to specification and appropriateness for post-production processing, if applicable.

Assessor guide: confirm that –

Inspection and compliance checks can be identified. Surface/parts can be assessed as appropriate for post-production processes if required, e.g. setting, electroplating, etc.

Criteria 19.5A.3.2

Product data is recorded.

Assessor guide: observe that –

Specifications, including weights and measurements are recorded according to standard operating procedures.

Assessor guide: confirm that –

Reasons for the recording of specifications can be given. Appropriate measuring devices and recording methods can be identified.

Criteria 19.5A.3.3

Final finish and storage procedures applied.

Assessor guide: observe that –

Final treatments are undertaken according to standard operating procedures and occupational health and safety procedures. Handling and storage of item conducted according to workplace requirements. Items polished using appropriate techniques.

Assessor guide: confirm that –

Knowledge of the finishing process can be given. Procedures for final treatment/safe handling and storage of items are understood. Reasons why tools, equipment, resources and reference material are stored in accordance with operating procedures and occupational health and safety procedures can be given.

Range statement

This unit covers the production of one-off three-dimensional precision jewellery items including rings, pendants, brooches, earrings, bracelets and other decorative pieces from metals common to industry practice. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. Documentation and manuals may include drawings/illustrations, customer verbal/written specifications. Work is mainly by the hand-held application of processes and techniques. Tools & equipment include hand-held power tools, saws, files, drills, punch plates, pliers. Where lathes are used, Unit 7.5 (Perform general machining) should also be selected. Where soldering is required Unit 5.6A (Perform brazing/soldering) should also be selected. Production of three-dimensional precision jewellery masters is covered by Unit 19.13A (Prepare jewellery metal masters).

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with producing three dimensional precision jewellery items or other units requiring the exercise of the skills and knowledge covered by this unit. Knowledge and experience in construction and polishing techniques are considered essential in order to achieve competency in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.6A A Watch battery replacement

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 1

Pre-requisite units - Path 1

18.1A Use hand tools

Element 19.6A.1 Identify watch case construction

Criteria 19.6A.1.1

Case material and construction identified.

Assessor guide: observe that –

Case and adjustment parts are handled safely Watch status is clarified.

Assessor guide: confirm that –

Horological terminology for common case parts can be given. Case requirement for battery can be identified. Design of case types and their functions can be grouped appropriately.

Criteria 19.6A.1.2

Case types and their functions are identified.

Assessor guide: observe that –

Design of case types and their functions can be grouped appropriately.

Assessor guide: confirm that –

Different case types and their functions can be given.

Criteria 19.6A.1.3

Associated parts and consumables identified.

Assessor guide: observe that –

Preliminary inspection confirms power cell requirement. Glass, crown and pushers are inspected for obvious damage/wear and/or moisture intrusion.

Assessor guide: confirm that –

Relevant case/watch parts can be identified. Water resistant, dustproof and diver's cases can be identified. Analog, digital, multi-function and mechanicals can be identified. Watch functions can be explained. Wear and the possible effects on glass and adjusters can be given. Procedures to confirm power cell status can be given.

Element 19.6A.2 Open and close watches**Criteria 19.6A.2.1**

Workshop tools and equipment selected and used appropriately.

Assessor guide: observe that –

The workplace set-up for battery replacement is in accordance with industry requirements and standard operating procedures. Tools for watch case open/close procedures are selected according to standard operating procedures.

Assessor guide: confirm that –

The watch-specific tools and equipment can be identified for a range of functions related to watch battery fitting and checking.

Criteria 19.6A.2.2

Watch cases are opened and closed correctly.

Assessor guide: observe that –

Opening and closing procedures are undertaken in accordance with standard operating procedures and OH&S.

Assessor guide: confirm that –

Seals, gaskets, threads and seating areas can be identified and condition recognised. Opening and closing procedures for various case types can be given.

Criteria 19.6A.2.4

Parts inspected and results reported and/or recorded.

Assessor guide: observe that –

Inspection of case parts conducted according to standard operating procedures. Information recorded as appropriate.

Assessor guide: confirm that –

Reporting authority can be identified. Location of recording facility can be identified and readily accessed.

Element 19.6A.3 Select power cells**Criteria 19.6A.3.1**

Appropriate batteries/power cells selected.

Assessor guide: observe that –

Manufacturer's recommendations/specifications are identified from charts and information sheets, and where appropriate is included as part of standard operating procedures. Appropriate type of replacement battery selected.

Assessor guide: confirm that –

Various types of batteries/power cells and their functions can be identified. Knowledge of cell construction can be given. The location of manufacturer's information/specifications can be identified and the contents are understood.

Element 19.6A.4 Replace power cells**Criteria 19.6A.4.1**

General inspection of surface/contact areas performed.

Assessor guide: observe that –

Inspection of the opened case surfaces and contact areas conducted in accordance with standard operating procedures. Moisture, corrosion, contaminants and damage identified.

Assessor guide: confirm that –

Knowledge of parts associated with power cell function can be given. Location and cause of moisture and corrosion effects can be identified.

Criteria 19.6A.4.2

Appropriate batteries/power cells selected and installed.

Assessor guide: observe that –

Manufacturer's recommendations/specifications are identified from charts and information sheets and in accordance with standard operating procedures. Contacts are cleaned, residue removed, and seals checked. Battery/power cell installed correctly.

Assessor guide: confirm that –

The correct handling/cleaning/adjustment procedures can be identified and understood. The functions of identified parts can be given.

Criteria 19.6A.4.3

Voltage, consumption and resistance measured.

Assessor guide: observe that –

Where applicable, voltage/ resistance/consumption measured according to standard operating procedures.

Assessor guide: confirm that –

Tools for measuring battery charge, current density, and watch resistance can be identified. Knowledge of the application and use of the testing equipment can be given.

Criteria 19.6A.4.4

Power cells handled and stored correctly.

Assessor guide: observe that –

Handling and storage conducted according to standard operating procedures and OH&S. Storage for old batteries is labelled appropriately. Disposal is in accordance with OH&S. Used mercury, silver oxide and lithium batteries are stored separately.

Assessor guide: confirm that –

The correct tools/equipment/procedures for safe handling and storage can be identified. OH&S issues for mercury and lithium batteries are understood.

Element 19.6A.5 Arrange water resistance and pressure testing**Criteria 19.6A.5.1**

Watches requiring water resistance and/or pressure testing are identified.

Assessor guide: observe that –

Water resistant watch cases are identified using relevant Australian and International Standards information.

Assessor guide: confirm that –

The location of relevant standards information can be given. Appropriate symbols and other identifying information can be given.

Criteria 19.6A.5.2

Water resistance and pressure testing is arranged.

Assessor guide: observe that –

Resistance/pressure testing is arranged with appropriate internal/external personnel. Watches are despatched and received in accordance with workplace procedures. Appropriate security, packaging and handling procedures are applied.

Assessor guide: confirm that –

Relevant internal and/or external water resistance and pressure testing bodies/personnel can be identified. Arrangements/procedures for despatch and receipt of watches can be given.

Range statement

This unit applies to the selection and replacement of digital/analogue watch power cells whilst operating in a jewellery/watch workshop environment with access to the appropriate equipment. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. Some knowledge of watch glasses and seals is required, however specific replacement functions for these are not covered by this unit. Testing functions relate only to the measurement of voltage, consumption, and resistance. This competency does not apply to diver and other water-resistant watch types. Water resistance and pressure testing is not covered by this unit, however identification of watches requiring testing as well as procedures for arranging testing are a requirement of this unit. Where power cell replacements in these two categories are of common practice with associated testing, and/or identification/cleaning/supply/fitting/of waterproofing/water resistance components, the appropriate horological units should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with watch battery replacement or other units requiring the exercise of the skills and knowledge covered by this unit. Knowledge and experience in construction and polishing techniques are considered essential in order to achieve competency in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.7A A Perform gemstone setting

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

19.3A Handle gem materials (basic)

Element 19.7A.1 Identify setting requirements

Criteria 19.7A.1.1

Setting requirements are identified.

Assessor guide: observe that –
Instructions are interpreted from job packets/
verbal/written instructions/diagrams.

Assessor guide: confirm that –
Setting processes can be identified. Terminology and
processes are understood.

Criteria 19.7A.1.2

Gemstone status is assessed.

Assessor guide: observe that –
Gemstone features are identified for setting Gemstones
handled appropriately.

Assessor guide: confirm that –
Gemstone handling procedures can identified for a range
of gems.

Criteria 19.7A.1.3

Setting metal is identified.

Assessor guide: observe that –
Metal is identified as appropriate for the desired setting
result.

Assessor guide: confirm that –
The process for determining the suitability of metal for
carving and setting requirements can be identified.

Element 19.7A.2 Prepare materials and equipment for setting

Criteria 19.7A.2.1

Tools are selected for use in achieving the desired
outcome.

Assessor guide: observe that –
Tools are selected according to work requirements.

Assessor guide: confirm that –
Knowledge of tool functions can be identified and
related to specific setting methods/techniques.

Criteria 19.7A.2.2

Tools are prepared and maintained to produce required
specifications.

Assessor guide: observe that –
Tools are prepared/adjusted/sharpened and maintained
Profiles, shapes, points and angles clamps, etc. are
maintained to workplace standards.

Assessor guide: confirm that –
Procedures for maintaining a variety of tools for optimum
performance can be given.

Criteria 19.7A.2.3

Metal is prepared for setting.

Assessor guide: observe that –

Metal is prepared according to job requirements.

Assessor guide: confirm that –

Process for achieving setting requirements is understood.

Element 19.7A.3 Perform gemstone setting**Criteria 19.7A.3.1**

Gemstones are secured correctly.

Assessor guide: observe that –

Stone(s) secured according to workplace procedures and using appropriate tools/methods.

Assessor guide: confirm that –

Appropriate setting techniques and procedures can be given.

Criteria 19.7A.3.2

Setting metal is finished/burnished to specification.

Assessor guide: observe that –

Knowledge of gemstone/metal properties applied according to standard operating procedures and OH&S issues. Appropriate hand tools and/or flexi-drive attachments used.

Assessor guide: confirm that –

Working properties of materials can be identified and understood for a variety of scenarios.

Range statement

This unit applies to most diamond and gem setting styles by manual methods, with the aid of basic electrical/mechanical equipment. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. Metals may include noble jewellery metals and their alloys. Do not select this unit for the setting of stones into wax, rubber, resin, etc. For production setting Unit 7.24 (Operate and monitor machine/process) should be considered. Where annealing and tempering are required, Unit 19.5 (Produce three-dimensional precision item) should also be selected. Techniques cover the basic forms of claw, grain and rub-over styles by manual methods, over a range of design styles.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gemstone setting or other units requiring the exercise of the skills and knowledge covered by this unit. Knowledge and experience in construction and polishing techniques are considered essential in order to achieve competency in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied. The basic setting styles of grain, claw, and cabochon rub-over, are the relevant styles in this basic setting context. General carving/engraving ability must be demonstrated with the use of pointed/flat scrapers/gravers of appropriate design. Setting work should be clean and neat, to appropriate trade standards for security and accuracy. Finished work would be set straight, level and in symmetry with the overall design of the article. Set stones to be free from internal and surface damage caused in the setting process. Surfaces of the jewellery item(s) should be free from all evidence of cuts/scratches and abrasions caused by the setting and/or resultant trimming/cleaning process.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.8A A Prepare jewellery designs

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

9.1A Draw and interpret sketch

18.1A Use hand tools

19.2A Prepare jewellery illustrations

13.3A Work safely with industrial chemicals and materials

18.2A Use power tools/hand held operations

13.4A Work safely with molten metals/glass

18.3A Use tools for precision work

Pre-requisite units - Path 2

8.10A Manually finish/polish materials

18.1A Use hand tools

19.2A Prepare jewellery illustrations

9.1A Draw and interpret sketch

18.2A Use power tools/hand held operations

13.4A Work safely with molten metals/glass

19.1A Jewellery metal casting

Pre-requisite units - Path 3

9.1A Draw and interpret sketch

18.3A Use tools for precision work

19.14A Perform hand engraving

18.1A Use hand tools

19.3A Handle gem materials (basic)

18.2A Use power tools/hand held operations

19.7A Perform gemstone setting

Element 19.8A.1 Identify design requirements

Criteria 19.8A.1.1

Design requirements, purpose and needs determined from appropriate sources.

Assessor guide: observe that –

Purpose and needs identified, including design restraints, budget considerations, item end-use, proportions and desired features, available materials.

Assessor guide: confirm that –

Knowledge of design resources and where to locate them.

Criteria 19.8A.1.2

Where necessary, further research/idea development undertaken.

Assessor guide: observe that –

Research/idea development undertaken to sufficient level as to determine customer expectations and/or design outcomes. Ethical and environmental contexts taken into consideration.

Assessor guide: confirm that –

Research techniques and available resources can be given. Awareness of social trends, cultural/environmental/social context Awareness of relevant industry literature. Awareness of existing designs, ethical & competitive consideration. Awareness of any applicable industry standards or regulations. Brainstorming techniques for research/idea development can be given.

Criteria 19.8A.1.3

Information is consolidated and analysed.

Assessor guide: observe that –

Data is collected and collated to match desired outcomes.

Assessor guide: confirm that –

Abstract and applied concepts/data can be recognised and evaluated for use in a commercial environment.

Criteria 19.8A.1.4

Where applicable, customer is advised on design considerations and limitations and further clarification made as necessary.

Assessor guide: observe that –

Concepts are communicated in terms suitable to relevant customer or other contacts e.g. engineer, master pattern maker.

Assessor guide: confirm that –

Design concepts/drafts are interpreted as appropriate for client/industry technician. Valid options can be given.

Element 19.8A.2 Develop design concept**Criteria 19.8A.2.1**

Concept developed employing design principles.

Assessor guide: observe that –

Logical conceptual development displayed Desired features are documented.

Assessor guide: confirm that –

Design principles including form, function, harmony, line definition (interpretive/actual) are understood.

Criteria 19.8A.2.2

Design process is documented.

Assessor guide: observe that –

Design process, features documented and design development notes maintained.

Assessor guide: confirm that –

Criteria 19.8A.2.3

Basic forms and proportions are established.

Assessor guide: observe that –

Basic form drawings produced. Drawing accurately reflects design concept.

Assessor guide: confirm that –

Drawing media and their functions/applications can be given including paper, watercolour, pastel ink pencil. Drawing tools and their functions/applications can be given including stencils, rubbers etc. Knowledge of geometric forms e.g. cones, cylinders, cube, rectangle, sphere etc. 3D concept understood - axis lines, conversion of 2D to 3D concepts, depth, perspective and scale (1,2,3 point).

Criteria 19.8A.2.4

Where applicable, decorative aesthetics applied.

Assessor guide: observe that –

Balance, proportion, highlights, shadowing, texturing effects are used appropriately.

Assessor guide: confirm that –

Enhancement techniques can be given.

Criteria 19.8A.2.5

Design concept confirmed as necessary.

Assessor guide: observe that –

Concept is confirmed with customer and redesign/modifications made as necessary.

Assessor guide: confirm that –

Element 19.8A.3 Produce drawings for item manufacture**Criteria 19.8A.3.1**

Appropriate manufacturing technologies selected.

Assessor guide: observe that –

Selected technologies are suitable for manufacture of item(s).

Assessor guide: confirm that –

Awareness of available manufacturing technologies and their suitability for jewellery manufacture.

Criteria 19.8A.3.2

Working, technical and finished drawings are developed.

Assessor guide: observe that –

Prepared drawings/designs comply with industry parameters.

Assessor guide: confirm that –

Types of working drawings and their uses can be given. The inter-relation between technical and design drawings is understood.

Criteria 19.8A.3.3

Production requirements/instructions specified and communicated to appropriate persons.

Assessor guide: observe that –

Appropriate actions undertaken to assess level of industry requirements.

Assessor guide: confirm that –

Industry requirements and availability of industry expertise can be identified.

Range statement

Work undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. Jewellery designs are developed with view to producing the designed item/s using current commercial procedures, including traditional hand-fabrication techniques and/or in combination with a range of manufacturing technologies. Procedures may include CNC and mass finishing activities. Preparation of designs may include 2D and 3D CAD applications. Where CAD is used, the appropriate units should also be selected. Where jewellery illustrations only are prepared, Unit 19.2A (Prepare jewellery illustrations) should be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing jewellery designs or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.9A A Perform investment procedures for lost wax casting process

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 1

This unit covers the competencies required for the preparation of investment flasks for jewellery casting.

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials 18.1A Use hand tools

Pre-requisite units - Path 2

2.7C10 Perform computations - basic 7.24A Operate and monitor machine/process 18.1A Use hand tools

Element 19.9A.1 Prepare investment materials

Criteria 19.9A.1.1

Assembled tree/materials checked, if appropriate

Assessor guide: observe that –
Pre-assembled wax is checked for security, size, and weight

Assessor guide: confirm that –
The procedures for checking built wax are identified and understood

Criteria 19.9A.1.2

Appropriate casting method and equipment selected

Assessor guide: observe that –
Standard operating procedures are used to guide the selection process

Assessor guide: confirm that –
Casting methods and equipment can be identified, and processes are understood

Criteria 19.9A.1.3

Associated tools and equipment prepared

Assessor guide: observe that –
Sprue and investment materials selected/ checked/ cleaned according to standard operating procedures

Assessor guide: confirm that –
The correct sprue/investment tools/ equipment/ materials can be identified, their purposes given

Criteria 19.9A.1.4

Sprue/tree materials prepared/built if appropriate

Assessor guide: observe that –
If appropriate, wax item/s assembled according to standard operating procedures Appropriate components selected Weights are recorded according to standard operating procedure

Assessor guide: confirm that –
The techniques for sprue/tree styles can be identified Knowledge of the selection/application of the processes can be given Recording procedures can be identified

Element 19.9A.2 Invest flask

Criteria 19.9A.2.1

Flask is assembled for casting

Assessor guide: observe that –
Appropriate flask size is selected and assembled with components as per standard operating procedures

Assessor guide: confirm that –
The selection of flask and components can be identified for the specific casting process The reasons for selections can be given

Criteria 19.9A.2.2

Investment is mixed appropriately

Assessor guide: observe that –
Calculations are made for the correct proportions of investment material and water, and weighed out accurately Mix, vibrate and vacuum procedures are undertaken according to specifications, standard operating procedures and occupational health and safety requirements

Assessor guide: confirm that –
Procedures and computations for mixing proportions, time calculations, volume and weights etc. can be performed occupational health and safety requirements/issues can be identified Knowledge of processes and the result of inappropriate methods/actions can be given

Criteria 19.9A.2.3

Curing stage prepared

Assessor guide: observe that –
Invested flask is completed according to standard operating procedures Appropriate gloss off/set time is allowed prior to base removal

Assessor guide: confirm that –
Requirements for curing/set stage can be identified and understood

Element 19.9A.3 Operate “lost wax” sequence**Criteria 19.9A.3.1**

“Low melt” wax evacuated by steam process if appropriate

Assessor guide: observe that –
Steamer and process are operated according to standard operating procedures and occupational health and safety requirements Flasks inspected for residue prior to “burn-out”

Assessor guide: confirm that –
Steamer process can be identified and understood Suitability of flask/investment for burn-out can be given

Criteria 19.9A.3.2

“Burn-out” procedure selected and applied

Assessor guide: observe that –
Appropriate burn-out procedure/equipment selected Sequence and values for time, temperature, and/or cam settings are in accordance with standard operating procedures

Assessor guide: confirm that –
Sequence, procedures, adjustments for variables can be identified Knowledge of procedures and results can be given for a variety of situations

Criteria 19.9A.3.3

Investment flask positioned/stored

Assessor guide: observe that –
Flask is positioned/stored safely in accordance with standard operating procedures Oven/kiln cavity is inspected and adjusted if appropriate

Assessor guide: confirm that –
Procedures for storage and positioning can be identified

Element 19.9A.4 De-contaminate/clean site**Criteria 19.9A.4.1**

Tools, equipment and site area cleaned as appropriate

Assessor guide: observe that –
The working area, and all tools and investing equipment are cleaned of investment residue in accordance with standard operating procedures and occupational health and safety requirements Residue and materials are disposed of/stored according to occupational health and safety requirements

Assessor guide: confirm that –
The procedures for cleaning, storage and/or removal of materials can be given The reasons for appropriate/approved housekeeping functions can recognised and understood

Range statement

This unit applies to the preparation of investment flasks using manual and/or automatic equipment for jewellery casting procedures. Work undertaken autonomously or within a team environment using pre-determined standards of quality, safety, workplace procedures and accepted workplace techniques/methods.

Evidence**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with investment procedures for “lost wax” casting process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.10A A Produce rubber moulds for lost wax casting process

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 2

This unit covers the competencies required for the preparation of flexible moulds for the purpose of replicating an original model.

Element 19.10A.1 Prepare and pack mould frame/systems

Criteria 19.10A.1.1

Appropriate mould frame/moulding system selected for given job

Assessor guide: observe that –

Appropriate frame/system selected to suit master requirements in accordance with standard operating procedures

Assessor guide: confirm that –

Procedures for assessing frame/system can be given
The specific master requirements can be explained

Criteria 19.10A.1.2

Appropriate rubber selected for style of master

Assessor guide: observe that –

Type/needs of master identified and rubber selected in accordance with standard operating procedures

Assessor guide: confirm that –

Procedures for assessing rubber/ master suitability/compatibility can be given Knowledge of working limitations of rubber can be demonstrated

Criteria 19.10A.1.3

Rubber prepared and packed correctly

Assessor guide: observe that –

Master, frame/system prepared/packed in accordance with standard operating procedures, OH&S and manufacturer specifications

Assessor guide: confirm that –

Procedures for correct packing technique can be demonstrated Knowledge of packing variations for a range of situations can be given

Element 19.10A.2 Vulcanise/cure rubber

Criteria 19.10A.2.1

Appropriate curing system selected

Assessor guide: observe that –

The appropriate variables of time, temperature, and pressure are selected in accordance with standard operating procedures, and manufacturers specifications

Assessor guide: confirm that –

The methods for establishing the appropriate time, temperature and pressure settings for the selected process can be identified The significance of these variables can be given

Criteria 19.10A.2.2

Assembled mould cured, cooled, removed

Assessor guide: observe that –

Preparations prior to mould release are performed in correct sequence according to standard operating procedures and manufacturers specifications

Assessor guide: confirm that –

The stages in the process for mould curing, removal and cooling can be explained Occupational health and safety issues can be identified and described

Element 19.10A.3 Release mould**Criteria 19.10A.3.1**

Appropriate tools and procedure for the release of master pattern selected

Assessor guide: observe that –

Tools/methods for safe and accurate release of master are selected according to release procedure

Assessor guide: confirm that –

The process for correct selection of tools/ procedures can be identified

Criteria 19.10A.3.2

Master pattern is released correctly

Assessor guide: observe that –

The master is released safely and without damage using tools and procedures according to standard operating procedures and occupational health and safety requirements

Assessor guide: confirm that –

The appropriate sequence of procedures for release of master can be identified The placement of mould/vent lines can explained

Range statement

This unit applies to the preparation of flexible moulds to replicate an original model. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. Types of rubber material used may include natural and silicon varieties of differing working specifications such as shrinkage and transparency. Vulcanisation may include RTV as well as standard heat and pressure combinations.

Evidence**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with producing rubber moulds for “lost wax” process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.11A A Perform wax injection of moulds for lost wax casting process

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 2

This unit covers the competencies required injecting materials under pressure for investment and burn-out aspects within "lost wax" casting procedures.

Element 19.11A.1 Perform wax injection of moulds

Criteria 19.11A.1.1

Appropriate wax material selected

Assessor guide: observe that –
Wax type is selected according to wax/ model/ cavity specifications

Assessor guide: confirm that –
The variables associated with the selection process can be identified and explained

Criteria 19.11A.1.2

Injection equipment/tools prepared

Assessor guide: observe that –
Selections and adjustments equipment/tools made according to wax/model/cavity specifications and standard operating procedures

Assessor guide: confirm that –
The standard operating procedures for wax injection equipment/processes can be identified and understood for the given values of time, temperature, pressure

Criteria 19.11A.1.3

Moulds prepared correctly

Assessor guide: observe that –
Mould prepared according to workplace standards for automatic/manual procedures

Assessor guide: confirm that –
Mould conditions can be identified and inappropriate features rectified

Criteria 19.11A.1.4

Wax injection procedures carried out correctly

Assessor guide: observe that –
Injection is completed according to specifications and standard operating procedures

Assessor guide: confirm that –
Injection procedures can be identified Minor variations and adjustments to processes/ equipment situations can be given

Element 19.11A.2 Remove and inspect patterns

Criteria 19.11A.2.1

Wax pattern is removed without damage

Assessor guide: observe that –
Duplicated wax pattern is removed using one/two/three piece techniques as appropriate, without distortion or breakage

Assessor guide: confirm that –
Undamaged wax duplicate removal techniques for a range of scenarios can be given

Criteria 19.11A.2.2

Duplicate wax pattern inspected and stored

Assessor guide: observe that –

Duplicate is checked for compliance with master/specifications, and inspected for irregularities
 Item is stored according to standard operating procedures
 Irregularities are reported/recorded as appropriate

Assessor guide: confirm that –

Procedures for wax duplicate inspection can be given
 Types of common irregularities can be identified
 Causes of imperfections can be given Remedies for imperfections can be identified Safe storage procedures can be identified Reporting authority can be identified

Criteria 19.11A.2.3

Work area secured and cleaned

Assessor guide: observe that –

All excess materials are removed/stored, and equipment/tools cleaned and stored according to workplace procedures Disposal of waste complies with occupational health and safety and legislative requirements The immediate work area is maintained safe and clean according to standard operating

Assessor guide: confirm that –

Procedures for safe cleaning, disposal, and storage can be given The reasons for standard operating procedures and occupational health and safety measures can be given

Range statement

This unit applies primarily to organic/synthetic wax injection, but may include resin and plastic materials injected under pressure for investment and burn-out aspects within "lost wax" casting procedures. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods.

Evidence**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with wax injection of moulds for "lost wax" casting process or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.12A A Produce jewellery wax model

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

Element 19.12A.1 Determine master requirements

Criteria 19.12A.1.1

Customer specifications are identified.

Assessor guide: observe that –

Customer specifications are identified from verbal instruction/supplied item/illustration. Method of construction of wax model is suitable for the supplied specifications.

Assessor guide: confirm that –

Factors affecting construction of wax model can be given, including type of wax, hand tools, method of construction, final finish, weight of finished product.

Element 19.12A.2 Prepare materials for production of wax model

Criteria 19.12A.2.1

Appropriate waxes are selected.

Assessor guide: observe that –

Wax selection allows for variation in end product. Wax properties are selected to suit construction method and required finish.

Assessor guide: confirm that –

Variations in end product and the relationship with wax types can be given.

Criteria 19.12A.2.2

Stock materials are cut to appropriate length.

Assessor guide: observe that –

Stock materials are cut by most appropriate method for design, allowing for variation and/or error in process and finish.

Assessor guide: confirm that –

Methods based upon the outcome requirements/specifications and waste minimisation can be given.

Criteria 19.12A.2.4

Appropriate tools are selected and used.

Assessor guide: observe that –

Tools are selected to suit wax work.

Assessor guide: confirm that –

Tools for preparing and producing wax can be given for specific wax types and constructions.

Element 19.12A.3 Produce wax models**Criteria 19.12A.3.1**

Material use and production time is optimised.

Assessor guide: observe that –

Shapes are roughed out, with material removed to minimise wastage. Material removed to minimise effort/time in final finishing, taking into account minimal wastage.

Assessor guide: confirm that –

Importance of minimising material wastage and time taken during roughing/finishing can be explained.

Criteria 19.12A.3.2

Wax is sculpted to specifications.

Assessor guide: observe that –

A close match of model features to original specifications is achieved. Wax joints are fused to achieve optimum strength and quality. Sections are added/backfilled as required.

Assessor guide: confirm that –

Appropriate key features/datum points are identified.

Element 19.12A.4 Finish wax models**Criteria 19.12A.4.1**

Imperfections in final wax model are minimised.

Assessor guide: observe that –

Best surface is produced to suit final product requirements.

Assessor guide: confirm that –

Purpose/requirements for selected surface finish can be identified.

Criteria 19.12A.4.2

Surface finishes are applied.

Assessor guide: observe that –

Texture finishing, high polishes, etc are applied as required. Appropriate protective safety equipment is worn, including dust mask and safety goggles.

Assessor guide: confirm that –

Melting wax, effects of toxic fumes understood.

Element 19.12A.5 Assess suitability of final wax product**Criteria 19.12A.5.1**

Product is inspected for compliance with specifications.

Assessor guide: observe that –

Product is inspected for correct tolerances, allowance for casting shrinkage and finishing processes.

Assessor guide: confirm that –

Effects of casting shrinkage and finishing processes can be given.

Criteria 19.12A.5.2

Final product is modified as necessary.

Assessor guide: observe that –

Final product is modified as necessary to meet required tolerances and finishes.

Assessor guide: confirm that –

Evaluation of product by weight formulation can be given.

Range statement

This unit covers the production of wax models for a range of jewellery products, simple to moderate carved forms, simple to moderate structural forms. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. Tools may include electric and handheld tools, e.g., heat irons, wax guns, saws, carving tools, wax files, flaming torch. Materials may include those of different colours/hardness/properties. Processes may include free-form carving moderate detail with some fine detail. This unit is not intended to include fine wire filigree work. Appropriate awareness of occupational health and safety issues and measures, including the use of protective equipment is applied, including control of melting wax, knowledge of effects of toxic fumes. For modelling with the use of computer aided equipment, Units 9.9B Create 2D drawings using computer aided design system and Units 9.10B Create 3D models using computer aided design system should be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with jewellery wax production or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.13A A Produce jewellery metal masters

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

8.10A Manually finish/polish materials

9.1A Draw and interpret sketch

13.4A Work safely with molten metals/glass

19.1A Jewellery metal casting

Element 19.13A.1 Determine master pattern requirements

Criteria 19.13A.1.1

Interpret specifications and drawings.

Assessor guide: observe that –

All data is collected and assessed for practical applications according to standard operating procedures.

Assessor guide: confirm that –

Location of information/specifications can be identified. Clarification approval processes can be given. Collective information/drawings/specification/product development plans are understood.

Criteria 19.13A.1.2

Technique/process to achieve suitable quality finish for masters selected.

Assessor guide: observe that –

Appropriate methods are selected for format requirements according to standard operating procedure.

Assessor guide: confirm that –

Wrought, forge, machine and cast techniques are understood. The valid application for each case can be identified.

Criteria 19.13A.1.3

Select item material(s).

Assessor guide: observe that –

Materials are selected according to standard operating procedures and object/production specifications.

Assessor guide: confirm that –

The appropriate properties/function of materials can be identified. All pre-requisite working specifications/abilities/limitations of selected materials are understood. Stored data on specifications and processes can be readily accessed.

Criteria 19.13A.1.4

Select appropriate tools, equipment and processes.

Assessor guide: observe that –

Tools/equipment/processes are selected according to the format requirements, and standard operating procedures.

Assessor guide: confirm that –

Knowledge of tools and equipment is matched correctly to the processes, and fundamental variations are understood.

Element 19.13A.2 Produce master**Criteria 19.13A.2.1**

Materials are marked out and/or construction plan developed to meet specifications/stages of process.

Assessor guide: observe that –

Apply a working knowledge of metals and materials.

Assessor guide: confirm that –

The ability to recognise and understand planning/process stage is evident. Difference between master and finished item specifications are understood prior to assembly/construction/solder/drill operations.

Criteria 19.13A.2.2

Prepare pattern material(s).

Assessor guide: observe that –

Using acceptable techniques/procedures, and utilising appropriate tools and equipment, the item/components is/are pre-formed/produced to size and shape. Work is checked for compliance to known specifications, particularly in relation to the calculated requirements of the retail finished product.

Assessor guide: confirm that –

Knowledge of fine detail work processes can be given OH&S issues are understood.

Criteria 19.13A.2.3

Produce master.

Assessor guide: observe that –

All work is undertaken according to standard operating procedures and OHS&W. Product is checked for compliance to specifications and design outcomes.

Assessor guide: confirm that –

Levels of acceptable performance and productivity outcomes can be identified. Knowledge of the finishing process can be given. Understands the sequential processes required for design outcomes.

Element 19.13A.3 Finish and inspect work

Criteria 19.13A.3.1

Check item for compliance with specifications.

Assessor guide: observe that –
Product is matched to original design concept/drawings/specifications. Surface condition inspected for pre-treatment/plating process (if appropriate). Allowance made for sequential processes.

Assessor guide: confirm that –
Inspection and compliance checks can be identified. Surface/parts/areas can be assessed as appropriate for post production processes if required for setting/electroplating/enamelling, and for the subsequent processes of moulding and waxing.

Criteria 19.13A.3.2

Record all weights and measurements.

Assessor guide: observe that –
Statistical evidence is recorded according to standard operating procedures.

Assessor guide: confirm that –
Reasons for the recording of specifications can be given. Appropriate measuring devices and recording methods can be identified.

Criteria 19.13A.3.3

Fit correct sprue material if appropriate.

Assessor guide: observe that –
If required, sprue section is positioned/secured in the approved manner.

Assessor guide: confirm that –
Handling and design needs associated with sprue placement can be identified. Appropriate knowledge of wax injection, moulding, casting, molten metal flow/solidification can be given.

Criteria 19.13A.3.4

Apply final finish, where appropriate, and store item.

Assessor guide: observe that –
Final treatments are undertaken according to standard operating procedures and OH&S. Handling and storage of item conducted according to workplace requirements.

Assessor guide: confirm that –
Procedures for final treatment/safe handling/storage of item can be identified and understood. Reasons why all tools, equipment, resources and reference material are stored in accordance with OH&S and standard operating procedures can be given.

Criteria 19.13A.3.5

Evaluate and compare master to production sample where appropriate.

Assessor guide: observe that –
Appropriate design specifications are compared/calculated.

Assessor guide: confirm that –
Relevancy of calculations/specifications are understood.

Range statement

This unit requires the application of precision measurement and hand-making/machine skills to a greater level than that required in Unit 19.5 A (Produce three-dimensional precision items) Competency in this unit cannot be fully met without appropriate comparison to the finished production item. The unit covers the manufacture of jewellery master pattern(s) for jewellery reproduction, mainly by the hand held application of processes whilst working autonomously. Materials include jewellery alloys and/or their base metals. Understanding of the principles of casting, moulding, shrinkage, and wax injection are required. The requirements for quality results through general production processes used to finish the reproductions are understood. Work may be carried out as part of a team to predetermined standards of quality and safety. Where machining is required as a major component of this manufacturing concept, then unit 7.5 (Perform general machining) should be selected. The equipment used may include hand and power tools, lathes and non-CNC machines. Where component(s) require preparation or manufacture by NC/CNC/CAD/CAM as an integral part of this process by the person working autonomously, the relevant competencies should be accessed. If the electro-deposition and/or electro-forming of metal is required, 7.24A (Operate and monitor machine/process) or Unit 8.3A (Perform electroplating operations) should also be selected. This unit should not be selected when Unit 18.14 (Tool, gauge and die manufacture) has already been selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with gemstone handling or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities. Evidence text: The successful completion of a production item (within production parameters) from this master pattern is evidence of the scope of understanding and performance of the practical applications.

This should be valid over a given range of open and closed designs.

Underpinning knowledge of shrinkage and sprue design for item is understood. Able to compare, evaluate and calculate shrinkage/proportion measurements over a range of variables that are affected by sequential steps in the moulding and waxing processes.

Unit MEM 19.14A A Perform hand engraving

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

Pre-requisite units - Path 1

18.1A Use hand tools

Element 19.14A.1 Identify engraving requirements

Criteria 19.14A.1.1

Engraving requirements are identified from applicable documents.

Assessor guide: observe that –

Instructions, worksheets, drawings and other sources of information to perform the work accessed and engraving requirements identified.

Assessor guide: confirm that –

Engraving terminology, instructions on relevant documents and can be explained. Appropriate methods for the collection of task information can be given.

Criteria 19.14A.1.2

Sequence of procedures correctly identified.

Assessor guide: observe that –

A prepared job plan identifies the task sequence.

Assessor guide: confirm that –

The function/purpose of each task in the sequence can be identified. The appropriate method for securing/holding the work can be identified.

Element 19.14A.2 Select and maintain engraving equipment and accessories

Criteria 19.14A.2.1

Appropriate equipment is selected for use.

Assessor guide: observe that –

Selected gravers, burins, scorpers and other tools are appropriate to specified outcomes.

Assessor guide: confirm that –

Different gravers, burins, scorpers and other tools and tools can be identified and their applications given.

Criteria 19.14A.2.2

Gravers are prepared to industry standards.

Assessor guide: observe that –

Graver shape and cutting angles machined and sharpened using appropriate techniques and equipment.

Assessor guide: confirm that –

Techniques for producing and maintaining cutting edges can be given. Equipment used for maintaining gravers can be identified and function/operation explained. Required industry standards can be given.

Element 19.14A.3 Perform hand engraving**Criteria 19.14A.3.1**

Item measured and marked out for engraving as required.

Assessor guide: observe that –

Datum lines/points are used as required.

Assessor guide: confirm that –

The appropriate reference data/materials/tools can be identified.

Criteria 19.14A.3.2

Workpiece is positioned and held/clamped effectively and without damage to the workpiece.

Assessor guide: observe that –

Appropriate safe handling of the workpiece and securing method used.

Assessor guide: confirm that –

The reasons for the selection of securing method and its limitations can be identified.

Criteria 19.14A.3.3

Work is undertaken according to standard operating procedure and workplace/industry standards.

Assessor guide: observe that –

All work is carried out safely and relative to the individual specifics of the work plan. Points/cutting edges/polished faces are maintained throughout the work process. Quality of results meets with workplace/industry standards.

Assessor guide: confirm that –

Appropriate safety knowledge and tool maintenance procedures can be identified. Specific techniques for producing desired outcomes can be given.

Range statement

This unit covers basic hand tool applications with burins/scrapers/gravers as the predominant selection of hand tools, and does not include the use of any power/air driven apparatus. Work includes basic block/script lettering and carving techniques on mostly flat surfaces to achieve patterns in relief or intaglio. Where the work being performed requires the item to have shaping/drilling/contour modification using power tools then Unit 18.2A (Use power tools/hand held operations) should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with hand engraving or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.15A A Perform jewellery enamelling

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials 18.1A Use hand tools

Element 19.15A.1 Identify enamelling requirements

Criteria 19.15A.1.1

Item materials & construction assessed for suitability for enamelling.

Assessor guide: observe that –

Item features/properties/construction analysed for suitability for enamelling. Colour selection is appropriate to job specification/ design. Appropriate technique is selected.

Assessor guide: confirm that –

Factors for determining suitability for enamelling can be identified, including available enamelling compositions, firing temperatures, metal type and properties, item construction. Different enamelling techniques & terms can be given.

Criteria 19.15A.1.2

Appropriate enamelling technique/ materials selected.

Assessor guide: observe that –

Enamelling technique/ materials selected to suit job specification/design, item properties and construction.

Assessor guide: confirm that –

Enamelling compositions and techniques can be given and related to specific item properties and factors such as metal type/properties, item construction, firing temperatures. Enamels & forms of availability for purchase can be given including leaded/unleaded, opaque/transparent. Terms applied to various enamelling techniques can be described. Use of enamel colour chart to determine suitable colours can be demonstrated.

Criteria 19.15A.1.3

Enamelling requirements identified.

Assessor guide: observe that –

Instructions and job requirements are interpreted from job packets, verbal, written instructions/diagrams.

Assessor guide: confirm that –

Process can be identified, terminology and processes are understood.

Element 19.15A.2 Prepare items & materials for enamelling

Criteria 19.15A.2.1

Enamels are prepared for enamelling operation.

Assessor guide: observe that –
Enamels washed and/or ground as appropriate.
Occupational health and safety practices followed and personal protective equipment used/worn.

Assessor guide: confirm that –
Correct working procedures during the preparation of enamel powder can be given. Techniques for washing & grinding enamels, when required and reasons for doing so can be given.

Criteria 19.15A.2.2

Metal surface prepared for enamelling.

Assessor guide: observe that –
Metals are cleaned, polished/burnished & pre-treated by hand or pickling as appropriate. Appropriate methods are selected according to standard operating procedure.

Assessor guide: confirm that –
Preparation of metal surfaces by hand cleaning, polishing/burnishing, chemical pre-treatment by acid, surface depletion methods & application to different metals can be given. Hazards & safety measures relating to pre-treatment of metals and preparation of enamels/metals can be given.

Criteria 19.15A.2.3

Additional processing of item prior to enamelling carried out.

Assessor guide: observe that –
Additional processing requirements are identified. Impact on enamelling process, if any, identified and actions taken at appropriate stage. Processing carried out using appropriate tools and techniques. Processing conforms to specification.

Assessor guide: confirm that –
Additional processing can be given, including stamping, engraving, saw piercing, chasing, oxidising, roller pressing. Tools and equipment for processing can be identified and their uses explained.

Element 19.15A.3 Enamel jewellery items

Criteria 19.15A.3.1

Equipment and items are set up for firing.

Assessor guide: observe that –
Enamel is applied correctly to achieve desired outcome. Equipment is set to correct temperature. Items are positioned correctly for firing using appropriate work holding devices.

Assessor guide: confirm that –
Methods of applying enamels including wet packing, dry dusting can be given. Melting temperatures of metals and enamels can be given. Work holding devices can be identified and related to items being enamelled.

Criteria 19.15A.3.2

Items fired correctly.

Assessor guide: observe that –

Stages are monitored and gauged. Items removed from heat source at appropriate time to avoid over/under firing. Items fired appropriate number of times using kiln and torch. Different firing techniques are applied as appropriate including counter enamelling, annealing, cleaning & lapping processes between firing.

Assessor guide: confirm that –

Visual appearance of enamel at diff stages of firing process can be given. Counter enamelling techniques & reasons for doing so can be given. Cleaning & lapping processes between firing are understood.

Element 19.15A.4 Finish and inspect work**Criteria 19.15A.4.1**

Final finishes are applied.

Assessor guide: observe that –

Final treatments/finishes are applied according to standard operating procedure and occupational health and safety requirements. Items are masked out as required and final firing polishing undertaken to specification.

Assessor guide: confirm that –

Different finishes & methods for achieving specific effects can be given. Masking out methods can be given. Final firing and polishing methods can be given.

Criteria 19.15A.4.2

Product checked for compliance.

Assessor guide: observe that –

Compliance to design outcomes is verified against specifications and/or job requirements. Non conformances and their causes are identified.

Assessor guide: confirm that –

Features and factors for compliance can be given from original specifications and/or job requirements. Common enamelling faults/incorrect outcomes and their causes can be given including oxidation, staining, under/over firing.

Criteria 19.15A.4.3

Faults are rectified.

Assessor guide: observe that –

Faults are rectified using standard techniques/ methods and standard operating procedures.

Assessor guide: confirm that –

Actions to rectify faults using standard techniques/methods can be given.

Criteria 19.15A.4.4

Relevant job data is recorded.

Assessor guide: observe that –

Job data is recorded in accordance with standard operating procedure.

Assessor guide: confirm that –

Job data to be recorded can be identified. Procedure to record data can be given.

Range statement

This unit applies to most jewellery-scale methods of application and some larger scale methods to precious and base metals. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. Enamelling of items may include manufacture of jewellery items such as rings, brooches, earrings, pendants and other small scale objects. Enamelling techniques may apply to torch and kiln firing and would include dusting, cloisonne, basse taille and champleve. Excludes complex three-dimensional forms and plique a jour techniques. Occupational health and safety extends to safe work practices and use of personal protective equipment. Knowledge and skills covered by this unit include enamels, base metals and properties relating to enamelling, enamelling techniques, firing techniques and work holding devices, faults and common rectification methods.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with jewellery enamelling or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.16A A Construct jewellery components

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

This unit covers the skills and knowledge required to construct jewellery components or single-piece items of basic design.

Pre-requisite units - Path 1

5.6A Perform brazing and/or silver soldering

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 19.16A.1 Identify pattern and component/item requirements

Criteria 19.16A.1.1

Component/item specifications are identified from work instruction.

Assessor guide: observe that –

Component type, design, material type and specifications are identified from verbal/written instructions, jewellery illustrations and samples.

Assessor guide: confirm that –

Common jewellery items and components of items can be identified. Common metal types, applications and properties can be given.

Criteria 19.16A.1.2

Design transfer requirements are identified from work instruction.

Assessor guide: observe that –

Transfer method is correctly identified from work instruction. Transfer materials, tools and equipment correctly selected.

Assessor guide: confirm that –

Different methods of transfer, including to template or direct to workpiece can be given.

Criteria 19.16A.1.3

Forming, joining and finishing requirements are identified from work instruction.

Assessor guide: observe that –

Required techniques/methods and steps are correctly identified. Tools and equipment for forming, joining and finishing are correctly selected.

Assessor guide: confirm that –

Techniques, tools and equipment for bending, folding, curving shaping, surface impressing and joining can be given. Techniques, tools and equipment for finishing/polishing can be given.

Element 19.16A.2 Transfer designs to templates and workpieces

Criteria 19.16A.2.1

Workpieces are prepared as required for drawing transfer.

Assessor guide: observe that –

Workpiece is cut, rolled or shaped to correct size/thickness if required.

Assessor guide: confirm that –

Criteria 19.16A.2.2

Accurate representations component specifications are produced onto templates or workpieces.

Assessor guide: observe that –

Markings are transcribed clearly and accurately onto workpiece or template, as required. Templates are securely adhered to workpieces, as required.

Assessor guide: confirm that –

Criteria 19.16A.2.3

Metal wastage is minimised

Assessor guide: observe that –

Design is transferred to optimise use of material.

Assessor guide: confirm that –

Importance of minimising wastage can be given.

Element 19.16A.3 Produce 2D patterns/blanks**Criteria 19.16A.3.1**

Patterns/blanks are produced to specification.

Assessor guide: observe that –

Workpiece is sawpierced and drilled as appropriate and filing and finishing requirements minimised. Design markings are accurately followed. Pattern/blank is filed, emery finished, polished as required to achieve specified pattern.

Assessor guide: confirm that –

Correct blades, drills files and materials for application can be given.

Element 19.16A.4 Form and finish components/items**Criteria 19.16A.4.1**

The formed item conforms to design requirements.

Assessor guide: observe that –

Components are folded, bent, curved, dapped etc. as required. Correct symmetry, angle, shape is achieved to specification.

Assessor guide: confirm that –

Methods for /techniques for forming components/single piece items can be given.

Criteria 19.16A.4.2

Appropriate tools and equipment are selected for forming, joining and finishing

Assessor guide: observe that –

Correct tool is selected for forming, joining and finishing.

Assessor guide: confirm that –

Tools and equipment for forming and finishing can be given.

Criteria 19.16A.4.3

Components/formed items are joined as required. removed by filing, emery etc. as appropriate. Re-forming

Assessor guide: observe that –

Joins are flush and correctly aligned. Excess materials are adjustments are undertaken if necessary to achieve specifications.

Assessor guide: confirm that –

Methods and materials for joining can be given.

Criteria 19.16A.4.4

Components/items are finished to specification.

Assessor guide: observe that –

Scratches, scribe marks and other markings are removed by file, emery etc. to a fine emery finish. Item is polished according to standard operating procedure.

Assessor guide: confirm that –

Methods, tools and materials for removing markings can be given. Polishing equipment is operated safely and correct polishing technique is used.

Range statement

This unit covers the skills and knowledge required to construct jewellery components or single-piece items of basic design. It requires the ability to use common jewellery tools and equipment and safe and efficient work practices to transfer designs to templates and workpieces, produce two-dimensional patterns/blanks and form and finish components/items.

This work would be carried out autonomously or in a team environment, under supervision and within organisational guidelines.

Range Name**Description**

Items may include:	Components or single-piece items of basic design
Forming methods may include:	Cutting, folding, bending, curving, dapping
Joining methods may include:	Primarily by brazing/silver soldering but may include other methods such as riveting
Finishing processes may include:	Filing, emery finishing, basic polishing
Transfer of design may include:	Transfer direct to workpiece using permanent pen, scribe, freehand and/or by compass, dividers, chinagraph pencil, carbon paper tracing or drawn/copied to template and adhered to workpiece
Level of supervision:	Under direct supervision.
Tools and equipment may include:	Compass, dividers, rules, squares, spring gauges, vernier calipers, piercing saw, files, drill press/pedestal drill, polishing equipment and compounds, ultrasonic cleaner.
Metals and consumables may include:	Silver, gold, brass, copper, solders and fluxes, drills and blades, polishing compounds, cleaning and finishing materials, adhesives.
Instructions may include:	Instructions from supervisor/management, job packet.
Appropriate persons may include:	Supervisors/managers, colleagues.
Client may include:	Owner, supervisor/manager.
Social and cultural differences may be expressed in:	Language, traditional practices and observations, beliefs, values, practices, symbols, design artefacts, food, diet, dress, religious and spiritual observances, social conventions and customs, cultural stereotypes, conventions of gender/sexuality.
Organisational requirements may relate to:	Standard operating procedures and work methods, quality systems and processes, security and confidentiality procedures, induction and training, employer and employee rights and responsibilities, own role and responsibility, OHS procedures and programs, emergency and evacuation procedures, code of conduct, access and equity principles and practices, basic record keeping, communication and reporting procedures.
OHS policies and procedures may relate to:	Hazard identification, following safety regulations, safety training, safety systems incorporating: <ul style="list-style-type: none"> - work clearance procedures - chemical handling - use of protective equipment and clothing
Personal protective clothing and equipment may include:	Masks, safety glasses, head and hand protection, ear protection, safety boots, gloves, apron, first aid kit.
Safe operating practices may include:	Working safely around chemicals and industrial materials, working safely around tools and equipment, hazard recognition, emergency and first aid procedures.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: -

Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with constructing jewellery components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.17A A Fabricate jewellery items

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

This unit covers the skills and knowledge required to construct jewellery components, single and multiple-piece items involving a range of fabrication processes and techniques.

Pre-requisite units - Path 1

5.6A Perform brazing and/or silver soldering

6.7A Perform basic incidental heat/quenching, tempering and annealing

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 19.17A.1 Identify fabrication requirements

Criteria 19.17A.1.1

Item design characteristics, dimensions, construction, composition and finish are established from appropriate sources in accordance with organisational and client requirements.

Assessor guide: observe that –

Relevant information and specifications are gathered by appropriate means, including visual inspection and measurement, job documentation, discussions with client and other appropriate personnel. Specifications for fabrication could relate to metal composition, component parts, dimensions and features.

Assessor guide: confirm that –

Metals and materials for fabricating a range of jewellery items/designs can be given. Common jewellery design features, constructions and finishes can be given.

Criteria 19.17A.1.2

Fabrication and finish specifications and required outcomes are confirmed and clarified as necessary with appropriate person(s) and in accordance with organisational requirements.

Assessor guide: observe that –

Item design, material composition, dimensions and specifications is checked against verbal/written instructions, jewellery illustrations and samples as necessary.

Assessor guide: confirm that –

Appropriate person(s) can be identified.

Criteria 19.17A.1.3

Appropriate preparation and fabrication techniques are established in accordance with item construction, verbal and written specifications, organisational requirements and personal abilities.

Assessor guide: observe that –

Fabrication alternatives are identified, where available, and the most efficient/effective approach clarified and confirm with appropriate person (s).

Assessor guide: confirm that –

Metal preparation and fabrication techniques to suit different design requirements can be given. Personal limitations in relation to preparation and fabrication techniques can be given. Factors affecting the selection of preparation and fabrication methods can be given.

Criteria 19.17A.1.4

Fabrication and finishing activities are prioritised in accordance with designated timeframes, organisational and specific fabrication requirements.

Assessor guide: observe that –

Individual steps, stages and activities for producing the given item are identified and prioritised for effective and timely completion.

Assessor guide: confirm that –

Organisational requirements for fabrication activities can be given.

Element 19.17A.2 Prepare materials for fabrication**Criteria 19.17A.2.1**

Components, materials and consumables are selected/obtained in accordance with organisational requirements and in consultation with appropriate person(s).

Assessor guide: observe that –

Materials and consumables are checked for appropriate condition and quality. Organisational procedures for obtaining materials and resources are followed.

Assessor guide: confirm that –

Metals, materials and consumables for given jewellery fabrication jobs can be identified.

Criteria 19.17A.2.2

Metals are alloyed to specified quality, as required.

Assessor guide: observe that –

Materials are weighed and measured correctly. Correct ratios are used to produce required properties/metal composition. Applicable ingot moulds are selected and used as required. Metals are produced to correct ratios and qualities.

Assessor guide: confirm that –

Properties and characteristics of applicable metals can be given. Ratios to create required grade/quality/composition of metals can be given. Melting temperatures and preparation methods for melting applicable metals can be given. Types of ingot moulds and their characteristics/applications can be given.

Criteria 19.17A.2.3

Metals are rolled/drawn down/cut to required dimensions. Metals are annealed as appropriate. Final shape conforms to required dimensions.

Assessor guide: observe that –

Metals are annealed as appropriate. Final shape conforms to required dimensions.

Assessor guide: confirm that –

Methods, applications, equipment types and operational requirements for rolling and drawing metals can be given. Process for annealing metals to prevent work hardening can be given.

Criteria 19.17A.2.4

Tools and equipment are selected and used appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures.

Assessor guide: observe that –

Appropriate tools and equipment are selected for required outcomes. Tools are checked and used safely and effectively.

Assessor guide: confirm that –

Procedures for checking serviceability of applicable tools and equipment can be given. Safe operating procedure for applicable tools and equipment can be given.

Criteria 19.17A.2.5

Material preparation is conducted using safe operating practices and protective equipment, in accordance with OHS and organisational requirements.

Assessor guide: observe that –

Appropriate personal protective equipment is selected, used and maintained correctly. Safe work practices are followed.

Assessor guide: confirm that –

Applicable safe work practices and protective equipment can be given.

Element 19.17A.3 Fabricate jewellery item**Criteria 19.17A.3.1**

Tools and equipment for fabrication are selected and used appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures.

Assessor guide: observe that –

Tools and equipment are selected appropriate to required outcomes. Tools are checked and used safely and effectively.

Assessor guide: confirm that –

Procedures for checking serviceability of applicable tools and equipment can be given. Safe operating procedure for applicable tools and equipment can be given.

Criteria 19.17A.3.2

Applicable fabrication activities are performed using safe operating practices and protective equipment, and in accordance with OHS, organisational and industry accepted methods.

Assessor guide: observe that –

Appropriate personal protective equipment is selected, used and maintained correctly. Safe work practices are followed. Organisational and industry accepted fabrication procedures, practices and methods are followed.

Assessor guide: confirm that –

Safe work practices and protective equipment can be given. Applicable fabrication techniques and processes can be given.

Criteria 19.17A.3.3

Item construction conforms with required specifications, quality, organisational and applicable industry standards.

Assessor guide: observe that –

Item is checked and adjusted as necessary for conformance with required dimensions, construction, composition and adjustments, in keeping with organisation customer service, quality and work standards.

Assessor guide: confirm that –

Organisation customer service, quality and work standards can be given. Accepted industry standards of quality can be given.

Element 19.17A.4 Finish jewellery items**Criteria 19.17A.4.1**

The appropriate surface finish is produced to required specifications in accordance with organisational requirements.

Assessor guide: observe that –

Items are embellished and/or polished at appropriate stages during fabrication and final finish process. Scratches and other imperfections are removed to specifications. Adjustments and rectifications identified during finishing are carried out as necessary.

Assessor guide: confirm that –

Tools, techniques and materials for embellishing and polishing can be given.

Criteria 19.17A.4.2

Tools and equipment for embellishing and polishing are selected and used appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures.

Assessor guide: observe that –

Tools and equipment are selected appropriate to required outcomes. Tools are checked and used safely and effectively.

Assessor guide: confirm that –

Procedures for checking serviceability of applicable tools and equipment can be given. Safe operating procedure for applicable tools and equipment can be given.

Element 19.17A.5 Complete fabrication**Criteria 19.17A.5.1**

Finished item is packaged/presented and stored safely in accordance with organisational requirements.

Assessor guide: observe that –

Organisational packaging/presentation and storage procedures are applied.

Assessor guide: confirm that –

Organisation procedures for storage and packaging/presentation of finished items can be given. Security measures for protection of jewellery items can be given.

Criteria 19.17A.5.2

Documentation is accurately completed and processed in accordance with organisational requirements and standards.

Assessor guide: observe that –

Procedures for completing and processing documentation are followed. Information is checked for accuracy.

Assessor guide: confirm that –

Work performed, material use, future actions required and other relevant information can be given.

Criteria 19.17A.5.3

Notification of work completion is made to appropriate person(s) in accordance with organisational procedures.

Assessor guide: observe that –

Required person(s) are notified and supporting information relevant to work is given as appropriate.

Assessor guide: confirm that –

Appropriate person(s) for notification can be identified.

Criteria 19.17A.5.4

Work area, tools and equipment are cleaned and stored in accordance with OHS and organisational requirements.

Assessor guide: observe that –

Work area is cleaned to the required standard. Tools and equipment are cleaned and stored safely.

Assessor guide: confirm that –

Organisational requirements for cleaning and storage can be given.

Criteria 19.17A.5.5

Unused/excess materials are collected and stored/reclaimed in accordance with organisational and requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

Organisation procedures for reclamation and storage of materials can be given.

Range statement

This unit covers the skills and knowledge required to construct jewellery components, single and multiple-piece items involving a range of fabrication processes and techniques. It requires the ability to use jewellery tools and equipment and safe and efficient work practices to identify fabrication requirements, prepare materials/manufacture components for fabrication and fabricate and finish items. This work would be carried out autonomously or in a team environment, under occasional supervision, within organisational guidelines and to accepted industry standards.

If electroplating skills are required, Unit 8.3A (Perform electroplating operations) should also be selected.

Range Name**Description**

Items may include:	Components, single and multiple-piece items involving a range of fabrication processes and techniques.
Indicative forming methods are:	Cutting, folding, bending, curving, dapping, drawing, rolling, doming, annealing, melting, granulation.
Indicative joining methods are:	Primarily by brazing/silver soldering but may include other methods such as riveting
Indicative finishing processes are:	Filing, emery finishing, high and satin polish, various embellishment finishes (sandblasting, brushed, burring, reticulation, burnishing etc.)
Tools and equipment may include:	Compass, dividers, rules, vernier calipers, spring gauges, squares, piercing saw, files, drill press/pedestal drill, heating, melting and annealing equipment, polishing equipment and compounds, ultrasonic cleaner.
Metals and consumables may include:	Silver, gold, brass, copper, solders and fluxes, drills and blades, polishing compounds, cleaning and finishing materials, adhesives.
Level of supervision may include:	Autonomously or in a team environment, occasional supervision
Instructions may include:	Instructions from supervisor/management, colleagues, client, job packet.
Appropriate persons may include:	Supervisors/managers, colleagues, client, supplier, technical expert.
Client may include:	Owner, supervisor/manager, external customer, supplier.
Social and cultural differences maybe expressed in:	Language, traditional practices and observations, beliefs, values, practices, symbols, design artefacts, food, diet, dress, religious and spiritual observances, social differences may be conventions and customs, cultural stereotypes, conventions of gender/sexuality.
Organisational requirements may relate to:	Organisational operational policies, standard operating procedures and work methods, organisational goals, objectives, plans, systems and processes, security measures, induction and training materials, client and organisational confidentiality requirements, employer and employee rights and responsibilities , own role, responsibility and delegation, quality and continuous improvement processes and standards, client service standards, defined resource parameters, OHS policies, procedures and programs, emergency and evacuation procedures, duty of care, code of conduct, code of ethics , access and equity policy, principles and practice, record keeping, communication and reporting procedures.
OHS policies and procedures may relate to:	Hazard identification, administering safety regulations, safety training, safety systems incorporating: work clearance procedures, chemical handling, use of protective equipment and clothing, codes of practice.
Personal protective clothing and equipment may include:	Masks, safety glasses, head and hand protection, ear protection, safety boots, gloves, apron, clothing, first aid kit.
Safe operating practices may relate to:	Working safely around chemicals and industrial materials, working safely around tools and equipment, hazard recognition, emergency and first aid procedures.
Documentation may include:	Job packet, work instructions and procedures, parts and components reference material, materials and consumables used, time and record sheets.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fabricating jewellery items or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.18A A Repair jewellery items

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

This unit covers the skills and knowledge required to carry out repairs to a range of jewellery items. It requires the ability to use safe and efficient work practices to identify the condition of the item, establish repair requirements and complete and finalise the repair work. This work would be carried out autonomously or in a team environment, under minimal supervision and within organisational guidelines.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

5.6A Perform brazing and/or silver soldering
18.2A Use power tools/hand held operations
19.16A Construct jewellery components

13.3A Work safely with industrial chemicals and materials
19.1A Jewellery metal casting
19.17A Fabricate jewellery items

18.1A Use hand tools
19.3A Handle gem materials (basic)

Element 19.18A.1 Assess item condition

Criteria 19.18A.1.1

Item characteristics, construction and composition are identified from appropriate sources in accordance with organisational requirements.

Assessor guide: observe that –

Relevant information is gathered by appropriate means, including visual inspection and measurement, job documentation, discussions with client and other appropriate personnel.

Assessor guide: confirm that –

Construction methods and types can be given. Components and materials in given items can be identified. Tools and techniques for establishing condition of items can be given.

Criteria 19.18A.1.2

Personal limitations in assessing item condition are identified and assistance is sought from appropriate sources in accordance with organisational procedures.

Assessor guide: observe that –

Unusual or unfamiliar aspects in design, construction or materials are identified and assistance sought from appropriate sources.

Assessor guide: confirm that –

Appropriate sources of assistance can be given.

Criteria 19.18A.1.3

Condition of item and nature/extent of damage is verified in accordance with organisational procedures, established inspection techniques and original specifications.

Assessor guide: observe that –

Wear, scratching, breakage, missing components and other damage is identified.

Assessor guide: confirm that –

Appropriate inspection and measurement techniques can be given.

Element 19.18A.2 Establish repair requirements and materials

Criteria 19.18A.2.1

Repair requirements, options and recommended actions are established in accordance with organisational requirements and factors impacting on feasibility of repair.

Assessor guide: observe that –

Alternative options are identified, where available. Assistance/verification is sought from other appropriate person(s) as necessary.

Assessor guide: confirm that –

Factors impacting on feasibility of repairs can be given, including item condition, available materials, complexity of repair, time.

Criteria 19.18A.2.2

Recommended repairs and options are conveyed to client and required repair work confirmed, in accordance with organisational requirements.

Assessor guide: observe that –

Options, factors impacting on feasibility of repairs and recommended actions are conveyed clearly to client. Agreed repair and replacement requirements are confirmed and clarified.

Assessor guide: confirm that –

Criteria 19.18A.2.3

Appropriate repair techniques are selected in accordance with item construction/condition and identified repair requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 19.18A.2.4

Replacement components are obtained and/or manufactured in accordance with organisational requirements and in consultation with appropriate person(s).

Assessor guide: observe that –

Appropriate type/quantity of metals, stones and other are calculated/estimated. Requirement for replacement or repair of specific components is determined in consultation with appropriate person(s), as necessary.

Assessor guide: confirm that –

Quantities of metal can be calculated/estimated. Features and dimensions of required components can be given. Factors affecting the decision to replace or repair components can be given (e.g. wear, cost, availability of parts, complexity of repair, functionality etc.)

Criteria 19.18A.2.5

Unavoidable damage caused by repair technique is identified and measures to remove or protect existing components/subassemblies are established.

Assessor guide: observe that –

Assemblies are dismantled and components removed as appropriate.

Assessor guide: confirm that –

Methods for protecting components/subassemblies during repair can be given. Situations where unavoidable damage may occur can be given.

Element 19.18A.3 Carry out repairs**Criteria 19.18A.3.1**

Unforeseen conditions/effects of the repair work are identified and appropriate actions taken in accordance with organisational requirements.

Assessor guide: observe that –

Unforeseen conditions are identified and conveyed to appropriate person/s, if necessary. Corrective actions are clarified and agreed with appropriate person/s.

Assessor guide: confirm that –

Effects of various repair techniques on items can be given.

Criteria 19.18A.3.2

Tools, equipment, materials and consumables are selected and used appropriate to job requirements and checked for operational effectiveness in accordance with manufacturer's specifications and organisational procedures.

Assessor guide: observe that –

Materials and consumables are checked for conformity/compatibility to workpiece. Tools are checked and used safely and effectively.

Assessor guide: confirm that –

Tools, equipment, materials and consumables for jewellery repair can be identified and their uses given. Checks for condition and safety can be given.

Criteria 19.18A.3.3

All work is conducted using safe operating practices and protective equipment, in accordance with OHS and organisational requirements.

Assessor guide: observe that –

Appropriate personal protective equipment is selected, used and maintained correctly. Safe work practices are followed.

Assessor guide: confirm that –

Safe work practices and protective equipment can be given.

Criteria 19.18A.3.4

Evidence of the repair/repair area is minimised.

Assessor guide: observe that –

Visible solder is minimised, joints and other moving parts work smoothly, replacement components are matched to original dimensions and finish.

Assessor guide: confirm that –

Importance of minimising evidence of repair can be given.

Criteria 19.18A.3.5

Repaired item conforms with original specifications and/or identified customer requirements.

Assessor guide: observe that –

Item is checked for conformance with required dimensions, function, construction, composition and finish. Adjustments are made to ensure conformance to required specifications in keeping with organisation customer service, quality and workmanship standards.

Assessor guide: confirm that –

Organisation customer service, quality and workmanship standards can be given.

Element 19.18A.4 Finalise repair**Criteria 19.18A.4.1**

Finished item is packaged/presented and stored safely in accordance with organisational requirements.

Assessor guide: observe that –

Organisational packaging/presentation and storage procedures are applied.

Assessor guide: confirm that –

Organisation procedures for storage and packaging/presentation of finished repairs can be given. Security measures for protection of jewellery items can be given.

Criteria 19.18A.4.2

Repair work is documented and confirmed with appropriate person(s) in accordance with organisational procedures.

Assessor guide: observe that –

Information relevant to the repair is accurately documented. The repair is confirmed with appropriate person(s).

Assessor guide: confirm that –

Repairs performed, material use, future actions required and other relevant information can be given. Documentation procedures can be given.

Criteria 19.18A.4.3

Work area, tools and equipment are cleaned and stored in accordance with OHS and organisational requirements.

Assessor guide: observe that –

Work area is cleaned to the required standard. Tools and equipment are cleaned and stored safely.

Assessor guide: confirm that –

Organisational requirements for cleaning and storage can be given.

Criteria 19.18A.4.5

Unused/excess materials are collected and stored/reclaimed in accordance with organisational and requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

Organisation procedures for reclamation and storage of materials can be given.

Range statement

This unit covers the skills and knowledge required to carry out repairs to a range of jewellery items. It requires the ability to use safe and efficient work practices to identify the condition of the item, establish repair requirements and complete and finalise the repair work. This work would be carried out autonomously or in a team environment, under minimal supervision and within organisational guidelines.

If an estimate or quotation for repair is produced, then Unit PRSTS317A (Provide estimate and quote) should also be selected. If jewellery setting is required then Unit 19.7A (Perform gemstone setting) should also be selected. If replacement components need to be manufactured for the repair, then the appropriate units should also be selected.

Range Name**Description**

Instructions may include:	Instructions from supervisor/management, job packet, specific client requirements, reporting and documentation requirements, budget allocations
Appropriate persons may include:	Clients, supervisors/managers/suppliers, technical experts, colleagues.
Organisational requirements may relate to:	Organisational operational policies, procedures and work methods, organisational goals, objectives, plans, systems and processes, security systems and measures, operations manuals, induction and training materials, client and organisational confidentiality requirements, employer and employee rights and responsibilities, own role, responsibility and delegation, quality and continuous improvement processes and standards, client service standards, defined resource parameters, OHS policies, procedures and programs, emergency and evacuation procedures, duty of care, code of conduct, code of ethics, access and equity policy, principles and practice, records and information systems and processes, communication channels and reporting procedures.
Client may include:	Owner, other supplier/jeweller, supervisor/manager.
Interpersonal techniques may include:	Verbal or non-verbal language, two-way interaction, constructive feedback, active listening, questioning to clarify and confirm understanding, interpreting non-verbal and verbal messages, observation techniques, use of positive, confident and co-operative language, control of tone of voice and body language, use of language and concepts appropriate to cultural differences, use of clear presentations of options and consequences, demonstrating flexibility and willingness to compromise.
Social and cultural differences may be expressed in:	Language, traditional practices and observations, beliefs, values, practices, symbols, design artefacts, food, diet, dress, religious and spiritual observances, social conventions and customs, cultural stereotypes, conventions of gender/sexuality
Assessment of repair may involve:	Client, supervisor, colleagues, suppliers.
Indicative of repairs are:	Repairs involving re-sizing, re-shanking, re-tipping, re-shaping, soldering, rivetting and re-fixing. Repair or replacement of components could include gemstones and settings hinges/joints, catches etc.
Materials may include:	Yellow and white gold (au), silver (ag), platinum (pt) and palladium (pd), ferrous and non-ferrous metals.
Consumables may include:	Solders and fluxes, drills and blades, polishing, cleaning and finishing materials.
Tools and equipment may include:	All hand and power tools appropriate to jewellery construction and repair, personal protective equipment
Documentation may include:	Job packet, recommendation for repairs, parts and components replaced, materials and consumables used, timekeeping records.
Items may include:	Chains, bracelets, rings, pendants, broaches, earrings.
OHS policies and procedures may relate to:	Hazardous assessment mechanisms, implementation of safety regulations, safety training, safety systems incorporating: <ul style="list-style-type: none"> - work clearance procedures - chemical handling - use of protective equipment and clothing use of codes of practice
Personal protective clothing and equipment may include:	Masks, safety glasses, head and hand protection, ear protection, safety boots, gloves, first aid kit.

Safe operating practices may include: Working safely around chemicals and industrial materials, working safely around tools and equipment, hazard recognition, emergency and first aid procedures.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with jewellery repair or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.20A A Fault-find and maintain micro-mechanisms

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 4

This unit covers the competencies required to fault-find and maintain micro-mechanisms

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
18.2A Use power tools/hand held operations

9.2A Interpret technical drawing
18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

Element 19.20A.1 Dismantle components

Criteria 19.20A.1.1

Components are dismantled for inspection

Assessor guide: observe that –

Components are dismantled/removed using appropriate hand towels and techniques Power is removed from the spring. Movement is removed and dismantled Balance assembly is removed and dismantled Bridges, mainspring, barrel, winding mechanism removed/dismantled Procedures to avoid damage to components during disassembly are applied Position/ assembly of components is noted as necessary for re-assembly

Assessor guide: confirm that –

Component parts can be identified, including mainspring, barrel, winding mechanism, electronic circuit, bridges, bearing surfaces, balance assembly, calendar, power source Techniques and procedures for dismantling/removing components can be given

Element 19.20A.2 Verify condition and operation of components

Criteria 19.20A.2.1

Overall condition is assessed

Assessor guide: observe that –

Timepiece is checked for overall condition, damage to case etc.

Assessor guide: confirm that –

Common/typical faults and maintenance requirements can be given for common timepieces

Criteria 19.20A.2.2

Physical condition and operational functioning of components inspected and verified

Assessor guide: observe that –

Components, including movement, are cleaned and prepared for inspection Components are checked for evidence of toxic contamination, pollution, chemical waste and other contaminants identified Operation/function of each component is checked using appropriate tools and techniques and faults identified Defective, damaged or non-serviceable components identified

Assessor guide: confirm that –

Condition/function verified for components of movement including balance assembly, escapement, endshakes, sideshakes, bridges, bearing surfaces, mainspring, barrel, winding mechanism, electronic circuit, freedom of wheel train

Criteria 19.20A.2.3

Faults are identified using appropriate tools and techniques

Assessor guide: observe that –

Standard/routine procedures are followed to locate/identify common faults and maintenance requirements

Assessor guide: confirm that –

Fault-finding procedures can be given Typical faults caused by wear, blockages and other damage and their effects can be given Typical contaminants and their effects on operation/functioning of components can be given, including contaminants and foreign objects

Element 19.20A.3 Carry out maintenance**Criteria 19.20A.3.0**

Components are lubricated to specification

Assessor guide: observe that –

Correct lubricants are used according to manufacturer/design specification Lubricants are applied using appropriate techniques

Assessor guide: confirm that –

Lubricants and lubrication techniques can be given

Criteria 19.20A.3.1

Components are cleaned/replaced and installed as required

Assessor guide: observe that –

Components are cleaned/replaced in correct sequence, using appropriate tools and techniques OHS procedures are applied Components are handled to ensure cleanliness of assembled mechanism

Assessor guide: confirm that –

Cleaning requirements for ensuring correct operation can be given OHS procedures for cleaning and maintenance can be given Techniques/tools for handling and installing components can be given

Element 19.20A.4 Assemble components**Criteria 19.20A.4.1**

Components are assembled to specification

Assessor guide: observe that –

Appropriate tools and techniques are used Components assembled to specification, including, barrel and mainspring, mechanism (movement), canon pinion, drive train, balance assembly, shock resist system, calendar, winding system and other mechanisms

Assessor guide: confirm that –

Tools and techniques for assembling components can be given Safe work practices and safety measures can be given

Element 19.20A.5 Check and adjust components**Criteria 19.20A.5.1**

Components are checked for correct operation

Assessor guide: observe that –

Appropriate tools are used to verify operation of components and assemblies, including barrel, mainspring, cannon pinion, endshake, sideshake, power reserve, drive train, calendar, winding system, power source

Assessor guide: confirm that –

Required checks and procedures for verifying correct operation/function of components can be given

Criteria 19.20A.5.2

Components are adjusted to specification

Assessor guide: observe that –

Components, assemblies/mechanisms adjusted to ensure operation/function to manufacturer specification using appropriate electronic timing and other diagnostic equipment and tools Operational adjustments and verification include regulation, beat error, balance amplitude, rate, power supply,

Assessor guide: confirm that –

Procedures/techniques for adjusting components can be given Operational specification for components and assemblies can be given Tools and equipment (mechanical and electronic) can be given and their use/application given

Range statement

This unit covers the competencies required to fault-find and maintain micro-mechanisms. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods.

Range Name	Description
Range of micro-mechanisms	Mechanical and electric watches and clocks of recent manufacture or restoration pieces. May include day/date, automatic winding or generating systems. Clock mechanisms may include alarm, striking and chiming mechanisms.
Range of components	Power source, wheel trains, mechanical oscillating systems, motion work and calendar systems.
Range of checks	Observations of clearances, fits and adjustments, functioning. Operation of systems and performance analysis.
Specific exclusions	Does not extend to ability to adjust indexing system for acoustic resonator watches, chronometer escapements and chronograph mechanisms
Tools and equipment	Includes standard range of mechanical hand tools and electronic equipment to measure amplitude, rate etc.
Safe operating practices may relate to:	Safe use of tools/equipment, chemical cleaning solutions, polishing equipment, application of correct ergonomics.
Specifications may relate to:	Work performed to manufacturer specifications. Recognition of components of product and how quality of component will affect performance
Level of supervision:	Under direct supervision.
Instructions may include:	Instructions from supervisor/management, job packet, specific client requirements, reporting and documentation requirements, budget allocations
Appropriate persons may include:	Clients, supervisors/managers/suppliers, technical experts, colleagues.
Organisational requirements may relate to:	Organisational operational policies, procedures and work methods, organisational goals, objectives, plans, systems and processes, security systems and measures, operations manuals, induction and training materials, client and organisational confidentiality requirements, employer and employee rights and responsibilities, own role, responsibility and delegation, quality and continuous improvement processes and standards, client service standards, defined resource parameters, OHS policies, procedures and programs, emergency and evacuation procedures, duty of care, code of conduct, code of ethics, access and equity policy, principles and practice, records and information systems and processes, communication channels and reporting procedures.
Client may include:	Owner, other supplier/jeweller, supervisor/manager.
Interpersonal techniques may include:	Verbal or non-verbal language, two-way interaction, constructive feedback, active listening, questioning to clarify and confirm understanding, interpreting non-verbal and verbal messages, observation techniques, use of positive, confident and co-operative language, control of tone of voice and body language, use of language and concepts appropriate to cultural differences, use of clear presentations of options and consequences, demonstrating flexibility and willingness to compromise.
Social and cultural differences may be expressed in:	Language, traditional practices and observations, beliefs, values, practices, symbols, design artefacts, food, diet, dress, religious and spiritual observances, social conventions and customs, cultural stereotypes, conventions of gender/sexuality
Documentation may include:	Job packet, recommendation for repairs, parts and components replaced, materials and consumables used, timekeeping records.
OHS policies and procedures may relate to:	Hazardous assessment mechanisms, implementation of safety regulations, safety training, safety systems incorporating: <ul style="list-style-type: none"> - work clearance procedures - chemical handling - use of protective equipment and clothing use of codes of practice
Personal protective clothing and equipment may include:	Masks, safety glasses, head and hand protection, ear protection, safety boots, gloves, first aid kit.

Safe operating practices may include: Working safely around chemicals and industrial materials, working safely around tools and equipment, hazard recognition, emergency and first aid procedures.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fault-finding and maintenance of micro-mechanisms or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.21A A Diagnose and service micro-mechanisms

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

This unit covers the competencies required to diagnose and service micro-mechanisms, including clocks and watches

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

18.2A Use power tools/hand held operations

9.2A Interpret technical drawing

18.55A Dismantle, replace and assemble engineering components

18.1A Use hand tools

19.20A Fault-find and maintain micro-mechanisms

Element 19.21A.1 Identify performance requirements for servicing

Criteria 19.21A.1.1

Features and performance characteristics of timepiece are identified

Assessor guide: observe that –

Features and performance characteristics are identified by critical observation of materials/design/finish. Movement type identified correctly

Assessor guide: confirm that –

Methods/media for identifying performance characteristics can be given

Criteria 19.21A.1.2

Performance problems are identified

Assessor guide: observe that –

Typical performance problems and special servicing requirements for given mechanism are identified

Assessor guide: confirm that –

Reasons for specific performance problems/faults can be given e.g. wear, broken parts, fatigue, knocking. Faults in design or materials and special servicing requirements can be identified

Element 19.21A.2 Diagnose faults and servicing requirements

Criteria 19.21A.2.1

Overall condition of timepiece is assessed

Assessor guide: observe that –

Missing/damaged components are identified. Remedial action is determined. Casing components assessed for wear/damage or missing parts

Assessor guide: confirm that –

Timepiece is assessed for general condition such as obvious damage, contaminants, rust etc.

Criteria 19.21A.2.2

Replacement parts are sourced

Assessor guide: observe that –

Parts and movement catalogues interpreted and replacement parts identified. Originality of components is ensured where possible

Assessor guide: confirm that –

Interchangeability of parts for specific timepiece can be given

Criteria 19.21A.2.3

Servicing requirements are established

Assessor guide: observe that –

Sequence required for servicing is determined with reference to available parts, design of product, nature of servicing requirement All aspects of repair costing including provision for replacement parts Most appropriate procedure/s to replace, rectify, repair faults is identified with respect to cost, availability of parts, performance outcomes, integrity/originality of mechanisms, time, customer requirements etc.

Assessor guide: confirm that –

Factors affecting sequence/process for servicing can be given

Criteria 19.21A.2.4

Performance problems are diagnosed

Assessor guide: observe that –

Standard checks are applied to assemblies and subassemblies, balance assembly, escapement, wheel train, motion work, power source (mainspring), calendar, winding and setting mechanisms Checks are made for correct tensioning, functioning, cleanliness, clearances/tolerances, wear and damage Functioning of additional mechanisms verified e.g. auto-winding, generating systems, calendar mechanisms Faults affecting performance are identified

Assessor guide: confirm that –

Techniques, tools and diagnostic equipment for diagnosing and identifying performance problems can be given

Element 19.21A.3 Service micro-mechanisms**Criteria 19.21A.3.1**

Components are dismantled and cleaned to specification can

Assessor guide: observe that –

Special cleaning advice, documentation and diagrams from manufacturer is followed

Assessor guide: confirm that –

Techniques for dismantling assemblies and subassemblies be given

Criteria 19.21A.3.2

Requirements for new components are identified

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 19.21A.3.3

Components are refinished/replaced as required

Assessor guide: observe that –

Tarnished, corroded components are refinished e.g. pivots

Assessor guide: confirm that –

Operation of equipment for refinishing pivots/ bearing replacement can be given

Criteria 19.21A.3.4

Components are assembled and lubricated to specification

Assessor guide: observe that –

Correct lubricant is selected and applied based on materials used and torque requirements Assemblies and subassemblies correctly assembled to specification and standard procedure

Assessor guide: confirm that –

Techniques and procedures for assembling components, assemblies and subassemblies can be given Application and use of different lubricants can be given

Criteria 19.21A.3.5

Components finished and adjusted to specification

Assessor guide: observe that –

Appearance parts fitted correctly Water resistance of completed watch is evaluated. Appropriate method of testing water resistance is selected Timekeeping is adjusted to tolerance Workshop evaluation of running performance of timepiece is verified using correct tools and equipment

Assessor guide: confirm that –

Correct alignment of hands relating to date change mechanism and dial graduations can be given Timekeeping requirements can be given

Range statement

This unit covers the competencies required to diagnose and service micro-mechanisms. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. This unit includes procurement and fitting of replacement parts. It also includes adjustment and checking to achieve timekeeping and water resistance of completed timepieces to specification/tolerance. If manufacturing of parts is required, the appropriate machining units should also be selected.

Range Name**Description**

Range of micro-mechanisms may include:	Mechanical and electric watches and clocks of recent manufacture or restoration pieces. May include day/date, automatic winding or generating systems. Clock mechanisms may include alarm, striking and chiming mechanisms.
Range of components may include:	Power source, wheel trains, mechanical oscillating systems, motion work and calendar systems.
Range of checks may include:	Observations of clearances, fits and adjustments, functioning. Operation of systems and performance analysis.
Specific exclusions relate to:	Chronometers, precision adjusting and complex mechanisms. Excludes servicing of timekeeping elements.
Tools and equipment may include:	Includes range of mechanical hand tools and electronic equipment for diagnosis and servicing.
OH & S policies and procedures may relate to:	Safe use of tools/equipment, chemical cleaning solutions, polishing equipment, application of correct ergonomics.
Personal protective clothing and equipment may include:	Masks, safety glasses, head and hand protection, ear protection, safety boots, gloves, first aid kit.
Safe operating practices may relate to:	Working safely around chemicals and industrial materials, working safely around tools and equipment, hazard recognition, emergency and first aid procedures.
Specifications may relate to:	Manufacturer specifications. Recognition of components of product and how quality of component and materials will affect performance
Documentation may include:	Job packet, recommendation for repairs, parts and components replaced, materials and consumables used, timekeeping records.
Instructions may include:	Written or verbal instructions from supervisor/management, job packet, customer/client.
Level of supervision may include:	Autonomously or in a team environment, regular supervision.
Appropriate persons may include:	Supervisors/managers, colleagues, client, supplier, technical expert.
Client may include:	Owner, supervisor/manager.
Social and cultural differences may be expressed in:	Language, traditional practices and observations, beliefs, values, practices, symbols, design artefacts, food, diet, dress, religious and spiritual observances, social conventions and customs, cultural stereotypes, conventions of gender/sexuality.
Organisational requirements may relate to:	Organisational operational policies, procedures and work methods, organisational goals, objectives, plans, systems and processes, security systems and measures, operations manuals, induction and training materials, client and organisational confidentiality requirements, employer and employee rights and responsibilities, own role, responsibility and delegation, quality and continuous improvement processes and standards, client service standards, defined resource parameters, OHS policies, procedures and programs, emergency and evacuation procedures, duty of care, code of conduct, code of ethics, access and equity policy, principles and practice, records and information systems and processes, communication channels and reporting procedures.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fault-finding and maintenance of micro-mechanisms or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 19.22A A Perform precision micro-mechanism diagnosis and servicing

Band – Specialisation band A

Field – Jewellery & horological

Unit Weight 6

This unit covers the competencies required to diagnose and service precision micro-mechanisms including chronometer watch and clock components to achieve performance to original specifications.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices
12.3A Precision mechanical measurement
18.3A Use tools for precision work

7.5A Perform general machining
18.1A Use hand tools
18.55A Dismantle, replace and assemble engineering components

9.2A Interpret technical drawing
18.2A Use power tools/hand held operations
19.20A Fault-find and maintain micro-mechanisms

19.21A Diagnose and service micro-mechanisms

Element 19.22A.1 Adjust timing of precision micro-mechanisms

Criteria 19.22A.1.1

Data for precision timing is analysed and interpreted

Assessor guide: observe that –

Physical limitations and condition of system and control factors influencing isochronism are identified and taken into account when timing

Assessor guide: confirm that –

Inherent influences in design, internal and external influences on rating variation can be given

Criteria 19.22A.1.2

Compensation/adjustment is made to achieve a constant rate

Assessor guide: observe that –

Effects of internal external/external influences are eliminated/minimised Judgement is applied as to adequacy of accuracy Timing adjustments include balance spring, dynamic poising, static poising, truing balance (flat and round)

Assessor guide: confirm that –

Adjustment procedures/techniques can be given

Element 19.22A.2 Diagnose precision micro-mechanisms

Criteria 19.22A.2.1

Detailed inspection techniques are applied to diagnose and identifying performance faults, condition and servicing requirements

Assessor guide: observe that –

Detailed observations are carried out using high-magnification optics Functioning of components is tested to high tolerances including the functioning of escapement and oscillating system

Assessor guide: confirm that –

Detailed inspection and analysis techniques for diagnosing precision micro-mechanisms can be given Acceptable tolerances, clearances and limits for precision components can be given

Criteria 19.22A.2.2

High tolerance equipment is handled and used correctly

Assessor guide: observe that –

Assessor guide: confirm that –

Element 19.22A.3 Carry out precision micro-mechanism servicing**Criteria 19.22A.3.1**

Precision components replaced as appropriate

Assessor guide: observe that –

Assembly and subassembly components removed and replaced including balance staff, pallet staff, pallet jewels and other precision components

Assessor guide: confirm that –

Components suitable for precision outcomes can be identified

Criteria 19.22A.3.2

Components adjusted to precision tolerances

Assessor guide: observe that –

Pallet jewels, safety action of escapement, poise of balance, manipulation of balance spring adjusted to minimise error in performance

Assessor guide: confirm that –

Effects of adjustment on performance and operation can be given Criteria for correct adjustment of balance spring and regulating system can be given

Element 19.22A.4 Repair and adjust chronograph mechanisms**Criteria 19.22A.4.1**

Functional elements adjusted

*Assessor guide: observe that –*Chronograph wheel and minute wheel correctly tensioned
Depth of engagement and operating sequence of functioning elements observed and adjusted Lubrication applied as appropriate Correct alignment of hands with dial graduations is ensured*Assessor guide: confirm that –*

Types of chronograph mechanisms and their functioning can be identified Correct adjustment procedures for chronograph operation, including minute and hour recording systems can be given

Criteria 19.22A.4.2

Chronograph components are examined and re-finished as required

Assessor guide: observe that –

Components are re-finished and matched to existing components to ensure correct functioning New and repaired components fitted and adjusted to function within existing system

Assessor guide: confirm that –

Range statement

This unit covers the competencies required to diagnose and service precision micro-mechanisms including chronometer watch and clock components to achieve performance to original specifications. Work undertaken autonomously or within a team environment using predetermined standards of quality, safety, workplace procedures and accepted workplace techniques/methods. The unit includes precision adjustment and testing to achieve timekeeping and water resistance of completed timepieces to minimise error in performance within specification/tolerance. If manufacturing of parts is required, the appropriate machining units should also be selected.

Range Name	Description
Range of micro-mechanisms	Mechanical and electric precision watches and clocks of recent manufacture or restoration pieces. Includes chronometer timepieces. May include day/date, automatic winding or generating systems. Clock mechanisms may include alarm, striking and chiming mechanisms.
Range of components	Timekeeping elements, including balance staff, pallet staff, pallet jewels, wheel trains and other precision components. Power source, mechanical oscillating systems, motion work, calendar systems.
Range of checks and tests	Observations of high-tolerance clearances, fits and adjustments and functioning. Operation of systems and performance analysis.
Range of repairs and adjustments	Repairs and timing adjustments include balance spring, dynamic poising, static poising, truing balance (flat and round) Repair and adjustment of chronograph mechanisms to ensure correct operation of seconds, minute and hour recording systems
Specific exclusions	
Tools and equipment	Range of precision mechanical/electronic tools and high-tolerance testing equipment for detailed observation diagnosis and servicing. Includes specialist service tools for adjusting oscillating systems and chronograph mechanisms
Safe operating practices may relate to:	Safe use, handling and care of high-tolerance precision tools/equipment.
Specifications may relate to:	Precision adjustment performed to detailed manufacturer specifications and tolerances. Account made of inherent influences in design, internal and external influences on rating variation
Instructions may include:	Instructions from supervisor/management, job packet, specific client requirements, reporting and documentation requirements, budget allocations
Appropriate persons may include:	Clients, supervisors/managers/suppliers, technical experts, colleagues.
Organisational requirements may relate to:	Organisational operational policies, procedures and work methods, organisational goals, objectives, plans, systems and processes, security systems and measures, operations manuals, induction and training materials, client and organisational confidentiality requirements, employer and employee rights and responsibilities, own role, responsibility and delegation, quality and continuous improvement processes and standards, client service standards, defined resource parameters, OHS policies, procedures and programs, emergency and evacuation procedures, duty of care, code of conduct, code of ethics, access and equity policy, principles and practice, records and information systems and processes, communication channels and reporting procedures.
Client may include:	Owner, other supplier/jeweller, supervisor/manager.
Interpersonal techniques may include:	Verbal or non-verbal language, two-way interaction, constructive feedback, active listening, questioning to clarify and confirm understanding, interpreting non-verbal and verbal messages, observation techniques, use of positive, confident and co-operative language, control of tone of voice and body language, use of language and concepts appropriate to cultural differences, use of clear presentations of options and consequences, demonstrating flexibility and willingness to compromise.
Social and cultural differences may be expressed in:	Language, traditional practices and observations, beliefs, values, practices, symbols, design artefacts, food, diet, dress, religious and spiritual observances, social conventions and customs, cultural stereotypes, conventions of gender/sexuality
Assessment of repair may involve:	Client, supervisor, colleagues, suppliers.
Documentation may include:	Job packet, recommendation for repairs, parts and components replaced, materials and consumables used, timekeeping records.

OHS policies and procedures may relate to: Hazardous assessment mechanisms, implementation of safety regulations, safety training, safety systems incorporating:

- work clearance procedures
- chemical handling
- use of protective equipment and clothing
- use of codes of practice

Personal protective clothing and equipment may include: Masks, safety glasses, head and hand protection, ear protection, safety boots, gloves, first aid kit.

Safe operating practices may include: Working safely around chemicals and industrial materials, working safely around tools and equipment, hazard recognition, emergency and first aid procedures.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Assessment should be conducted in an environment that the individual is familiar with.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with diagnosis and servicing of precision micro-mechanisms or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 24.1A A Perform basic penetrant testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 24.1A.1 Prepare inspection areas for basic penetrant testing

Criteria 24.1A.1.1

Inspection areas are cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques. Inspection areas are correctly prepared using the appropriate cleaning materials.

Assessor guide: confirm that –

Cleaning and preparation processes are explained.

Criteria 24.1A.1.2

Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements.

Assessor guide: observe that –

Preparation procedures are carried out correctly OH&S requirements are followed at all times.

Assessor guide: confirm that –

Procedures and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.1A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

All obvious discontinuities have been identified from a visual inspection.

Assessor guide: confirm that –

Established inspection procedures and techniques are explained. Types of discontinuities are explained and their consequences outlined.

Element 24.1A.2 Perform basic penetrant testing

Criteria 24.1A.2.1

Nominated test is identified from standard operating procedures.

Assessor guide: observe that –

Procedures are interpreted correctly and all relevant information identified.

Assessor guide: confirm that –

The procedure for carrying out penetrant testing can be explained.

Criteria 24.1A.2.2

Test equipment is prepared in accordance with standard operating procedures.

Assessor guide: observe that –

Test equipment is prepared correctly. The procedures for setting up test equipment are demonstrated.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the penetrant test are explained.

Criteria 24.1A.2.3

Test media is selected and applied in accordance with workplace practices and specifications.

Assessor guide: observe that –

Test media is applied correctly.

Assessor guide: confirm that –

Test media is suitable for type of test and material.

Criteria 24.1A.2.4

Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements.

Assessor guide: observe that –

Basic principles of penetrant testing techniques are applied
The penetrant test is performed correctly and in logical sequence. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Basic principles of penetrant testing can be explained. Limitations and advantages of penetrant testing can be explained. Hazards associated with penetrant testing are identified and safety requirements outlined.

Criteria 24.1A.2.5

Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH &S requirements.

Assessor guide: observe that –

Basic maintenance is carried out on test equipment and equipment is stored correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Basic maintenance and storage procedures for testing equipment are explained. OH &S requirements can be explained.

Element 24.1A.3 Report the results of penetrant test(s)**Criteria 24.1A.3.1**

Basic indications are checked and defects identified in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Procedure for identifying basic defects is followed.

Assessor guide: confirm that –

Common basic defects are explained.

Criteria 24.1A.3.2

Basic indications are confirmed in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Test results are confirmed by other penetrant testing methods or by visual inspections.

Assessor guide: confirm that –

Confirmation of test results is explained in accordance with enterprise standards and/or procedures.

Criteria 24.1A.3.3

Test results are reported in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Test results are reported according to standard

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained.

Range statement

This unit describes the underpinning knowledge and skills required to apply basic penetrant testing techniques on fabrications, structures and components across a wide range of industries and restricted to basic visible dye and/or process penetrant line methods. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects to be considered, together with ongoing abnormalities in fabrications, components and structures. Penetrant testing is performed on critical component or structural zones. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

This unit should not be selected when Unit 24.2A Perform penetrant testing or Unit 15.4A Perform inspection basic has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;

- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.2A A Perform penetrant testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

18.1A Use hand tools

24.12A Apply metallurgy principles

Element 24.2A.1 Prepare inspection areas for penetrant testing

Criteria 24.2A.1.1

Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques.

Assessor guide: confirm that –

Cleaning and preparation processes can be explained for a range of test surfaces.

Appropriate cleaning materials are selected & applied.

Criteria 24.2A.1.2

Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements.

Assessor guide: observe that –

Procedures are carried out correctly. Statutory and OH&S requirements are followed.

Assessor guide: confirm that –

Procedure, statutory and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.2A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

Discontinuities are identified and classified from a visual inspection.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained. Types of discontinuities are explained and their consequences/effect on the material are described.

Element 24.2A.2 Perform penetrant testing

Criteria 24.2A.2.1

The most appropriate penetrant test for the material/application is selected.

Assessor guide: observe that –

Nominated testing method is appropriate regarding:

- * defect type
- * material type and form

Assessor guide: confirm that –

The penetrant testing technique is appropriate for the given situation. Selection of testing method can be justified/explained.

The procedure for carrying out penetrant testing can be explained.

Criteria 24.2A.2.2

Test equipment is selected and prepared in accordance with standards and/or procedures.

Assessor guide: observe that –

Test equipment is set up correctly OH & S precautions are adhered to.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the penetrant test can be identified.

Criteria 24.2A.2.3

Appropriate test media is selected and applied in accordance with workplace/industry practices.

Assessor guide: observe that –

Correct test media is selected. Test media is applied correctly.

Assessor guide: confirm that –

Test media is suitable for type of test and material.

Criteria 24.2A.2.4

Penetrant test is carried out in accordance with relevant standards, specifications and OH&S requirements.

Assessor guide: observe that –

Principles of penetrant testing techniques are applied. The penetrant test is performed correctly and in logical sequence
OH&S requirements are followed at all times.

Assessor guide: confirm that –

Principles and applications of penetrant testing techniques are explained. Relevant standards are explained. The hazards associated with penetrant testing are identified and appropriate safety requirements outlined.

Criteria 24.2A.2.5

Penetrant test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.

Assessor guide: observe that –

Appropriate maintenance is carried out on test equipment and equipment is stored correctly. Faulty/unserviceable test equipment is identified.

Assessor guide: confirm that –

Maintenance and storage procedures for test equipment are explained. Common faults and damage can be outlined.

Element 24.2A.3 Interpret and report the results of penetrant test(s)**Criteria 24.2A.3.1**

Indications are assessed and defects detected and classified in accordance with national and international codes and standards.

Assessor guide: observe that –

All relevant defects are detected. Defects are interpreted and classified in terms of national and international codes and standards.

Assessor guide: confirm that –

A range of defects are explained. The meaning and application of national and international codes and standards is explained.

Criteria 24.2A.3.2

Defects are confirmed in accordance with enterprise procedures and industry practices.

Assessor guide: observe that –

Defect indications are confirmed. Test results are confirmed by other penetrant testing methods and/or other NDT methods.

Assessor guide: confirm that –

Confirmation of test results is explained.

Criteria 24.2A.3.3

Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Assessor guide: observe that –

Report is completed correctly and according to procedures.
Test results, implications of results and related information

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained. Implications of test results for the particular material/application are explained. are conveyed to end user.

Range statement

This unit describes the underpinning knowledge and skills required to apply penetrant testing techniques on fabrications, structures and components across a wide range of industries to Level 2 (AS3669 and AS3998) or equivalent by portable penetrant testing, processing on a dedicated penetrant line, visible dye and fluorescent methods. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Penetrant tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian Standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations.. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

This unit should not be selected when Unit 15.4A Perform inspection (basic) or Unit 15.5A Perform inspection (advanced) has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.3A A Perform basic magnetic particle testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 24.3A.1 Prepare inspection areas for basic magnetic particle testing

Criteria 24.3A.1.1

Inspection areas are cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques.

Assessor guide: confirm that –

Cleaning and preparation processes are explained.

Inspection areas are correctly prepared using the appropriate cleaning materials.

Criteria 24.3A.1.2

Preparation processes are carried out in accordance with the relevant specifications and OH&S requirements.

Assessor guide: observe that –

Preparation procedures are carried out correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Procedures and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.3A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

Obvious discontinuities have been identified from a visual inspection.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained.
Types of discontinuities are explained and their consequences outlined.

Element 24.3A.2 Perform basic magnetic particle testing**Criteria 24.3A.2.1**

Nominated 'yoke' or 'bench' magnetic particle testing procedure is identified from standard operating procedures.

Assessor guide: observe that –

Procedures are interpreted correctly and all relevant information identified.

Assessor guide: confirm that –

Basic principles of magnetism are explained.

Appropriateness of testing method for the given situation can be justified/explained.

The procedure for carrying out magnetic particle test using either the 'yoke' or 'bench' can be explained.

Knowledge of basic metallurgy associated with the application is demonstrated.

Criteria 24.3A.2.2

Test equipment is prepared in accordance with relevant standards and/or procedures.

Assessor guide: observe that –

Test equipment is prepared correctly. The procedures for setting up test equipment are demonstrated.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the magnetic particle test are outlined & explained.

Criteria 24.3A.2.3

Magnetic particle test is carried out in accordance with relevant work instructions and OHS requirements.

Assessor guide: observe that –

Basic principles of magnetism are applied to magnetic particle testing techniques. Relevant procedures and OH&S requirements are observed. The magnetic particle test and demagnetisation has been performed correctly and in logical sequence. OH&S requirements are followed at all times.

Assessor guide: confirm that –

The limitations of magnetic particle testing are explained. The hazards associated with magnetic particle testing are identified and safety precautions outlined.

Criteria 24.3A.2.4

Magnetic particle testing equipment is maintained and stored in accordance with Standard Operating Procedures and OH &S requirements.

Assessor guide: observe that –

Basic maintenance is carried out on test equipment and equipment is stored correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Basic maintenance and storage procedures for testing equipment are explained. OH &S requirements can be explained.

Element 24.3A.3 Report the results of magnetic particle test(s)**Criteria 24.3A.3.1**

Basic indications are checked and defects identified in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –
Procedure for identifying basic defects is followed.

Assessor guide: confirm that –
Common basic defects are explained.

Criteria 24.3A.3.2

Basic indications are confirmed in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –
Test results are confirmed by other magnetic particle test methods.

Assessor guide: confirm that –
Confirmation of test results is explained in accordance with enterprise standards and/or procedures.

Criteria 24.3A.3.3

Test results are reported in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –
Test results are reported according to standard

Assessor guide: confirm that –
Methods/procedures for reporting test results are explained.

Range statement

This unit describes the underpinning knowledge and skills required to apply portable and fixed ('yoke' or 'bench') basic magnetic particle testing techniques on fabrications, structures and components across a wide range of industries. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific magnetic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components and structures. Magnetic particle testing is performed on critical component or structural zones. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

This unit should not be selected when Unit 24.4A Perform magnetic particle testing or Unit 15.4A Perform inspection basic has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.4A A Perform magnetic particle testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

18.1A Use hand tools

24.12A Apply metallurgy principles

Element 24.4A.1 Prepare inspection areas for magnetic particle testing.

Criteria 24.4A.1.1

Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques. Appropriate cleaning materials are selected & applied.

Assessor guide: confirm that –

Cleaning and preparation processes are explained for a range of test surfaces.

Criteria 24.4A.1.2

Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements.

Assessor guide: observe that –

Procedures are carried out correctly. Statutory and OH&S requirements are followed.

Assessor guide: confirm that –

Procedure, statutory and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.4A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

Obvious discontinuities are identified, classified and confirmed from a visual inspection. A primary metallurgical assessment of inspection areas is used to describe primary or manufacturing or service defects.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained. Types of discontinuities are explained and their consequences/effect on the material are described.

Element 24.4A.2 Perform magnetic particle testing

Criteria 24.4A.2.1

The most appropriate magnetic particle test for the material/application is selected.

Assessor guide: observe that –

Nominated testing method is appropriate regarding:

- * Defect type and orientation
- * Part geometry and configuration
- * Magnetism method
- * Particle application

Assessor guide: confirm that –

The magnetic particle testing technique is appropriate for the given situation. Selection of testing method can be justified/explained. The procedure for carrying out magnetic particle test can be explained.

Criteria 24.4A.2.2

Testing equipment is selected and prepared in accordance with standards and/or procedures.

Assessor guide: observe that –

Test equipment is set up correctly. OH & S precautions are adhered to.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the magnetic particle test can be identified.

The procedures for setting up test equipment can be explained.

Criteria 24.4A.2.3

Magnetic particle test is carried out in accordance with relevant standards, specifications and OH&S requirements.

Assessor guide: observe that –

Principles of magnetic particle testing are applied. The magnetic particle test and demagnetisation is performed correctly and in logical sequence. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Principles and applications of magnetic particle testing are understood and explained. Relevant standards are explained.

The hazards associated with magnetic particle testing are identified and appropriate safety requirements outlined.

Criteria 24.4A.2.4

Magnetic particle testing equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.

Assessor guide: observe that –

Appropriate maintenance is carried out on test equipment and equipment is stored correctly. Faulty/unserviceable testing equipment is identified.

Assessor guide: confirm that –

Maintenance and storage procedures for test equipment are explained. Common faults and damage can be outlined.

Element 24.4A.3 Interpret and report the results of magnetic particle tests**Criteria 24.4A.3.1**

Indications are assessed and defects detected and classified in accordance with national and international codes and standards.

Assessor guide: observe that –

All relevant defects are detected. Defects are interpreted and classified in terms of national and international codes and standards.

Assessor guide: confirm that –

A range of defects are explained. The meaning and application of national and international codes and standards is explained.

Criteria 24.4A.3.2

Defects are confirmed in accordance with enterprise procedures and industry practices.

Assessor guide: observe that –

Defect indications are confirmed. Test results are confirmed by other magnetic particle testing methods and/or other NDT methods.

Assessor guide: confirm that –

Confirmation of test results is explained.

Criteria 24.4A.3.3

Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Assessor guide: observe that –

Report is completed correctly and according to procedures. Test results, implications of results and related information are conveyed to end user.

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained.

Implications of test results for the particular

material/application are explained.

Range statement

This unit describes the underpinning knowledge and skills required to apply magnetic particle testing techniques on fabrications, structures and components across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Magnetic particle testing is performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian Standards and/or other relevant standards. All testing must be completed with particular attention to personal and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

This unit should not be selected when Unit 15.4A Perform inspection (basic) or Unit 15.5A Perform inspection (advanced) has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.5A A Perform basic eddy current testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 24.5A.1 Prepare inspection areas for basic eddy current testing.

Criteria 24.5A.1.1

Inspection areas are cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques.

Assessor guide: confirm that –

Cleaning and preparation processes are explained.

Inspection areas are correctly prepared using the appropriate cleaning materials.

Criteria 24.5A.1.2

Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements.

Assessor guide: observe that –

Preparation procedures are carried out correctly OH&S requirements are followed at all times.

Assessor guide: confirm that –

Procedures and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.5A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

All obvious discontinuities have been identified from a visual inspection.

Assessor guide: confirm that –

Established inspection procedures and techniques are explained.
Types of discontinuities are explained and their consequences outlined.

Element 24.5A.2 Perform basic eddy current testing

Criteria 24.5A.2.1

Nominated test is identified from standard operating procedures.

Assessor guide: observe that –

Procedures are interpreted correctly and all relevant information identified.

Assessor guide: confirm that –

The procedure for carrying out eddy current testing can be explained.

Criteria 24.5A.2.2

Test equipment is prepared in accordance with standards and/or procedures.

Assessor guide: observe that –

Test equipment is prepared correctly. The procedures for setting up test equipment are demonstrated.

Assessor guide: confirm that –

The tools, equipment and techniques and system verification checks necessary to carry out eddy current testing can be identified. The procedures for setting up test equipment can be outlined.

Criteria 24.5A.2.3

Eddy Current test procedure is carried out in accordance with relevant work instructions and OH&S requirements.

Assessor guide: observe that –

Basic principles of electricity, magnetism and electromagnetism in relation to eddy current testing are applied. The test is performed correctly and in logical sequence. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Basic principles of electricity, magnetism, electromagnetism and eddy current testing can be explained. Limitations and advantages of eddy current testing can be explained. Hazards associated with eddy current testing are identified and safety requirements outlined.

Criteria 24.5A.2.4

Eddy current test equipment is maintained and stored in accordance with standard operating procedures and OH &S requirements.

Assessor guide: observe that –

Basic maintenance is carried out on test equipment and equipment is stored correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Basic maintenance and storage procedures for testing equipment are explained. OH &S requirements can be explained.

Element 24.5A.3 Report the results of eddy current test(s)**Criteria 24.5A.3.1**

Basic indications are checked and defects identified in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Procedure for identifying basic defects is followed.

Assessor guide: confirm that –

Common basic defects are explained.

Criteria 24.5A.3.2

Basic indications are confirmed in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Test results are confirmed by other testing methods or by visual inspections.

Assessor guide: confirm that –

Confirmation of test results is explained in accordance with enterprise standards and/or procedures.

Criteria 24.5A.3.3

Test results are reported in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Test results are reported according to standard

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained.

Range statement

This unit describes the underpinning knowledge and skills required for the preparation of, and eddy current testing on, fabrications, structures and components across a wide range of industries. It includes wheel bead seat, production line, tube production line and conductivity measurement methods. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific eddy current testing equipment as specified in maintenance documentation, testing procedures or operators instructions. Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components and structures. Eddy current testing is performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices. This unit should not be selected when Unit 24.6A Perform eddy current testing or Unit 15.4A Perform inspection basic has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;

- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.6A A Perform eddy current testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

18.1A Use hand tools

24.12A Apply metallurgy principles

Element 24.6A.1 Prepare inspection areas for eddy current testing

Criteria 24.6A.1.1

Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques.

Assessor guide: confirm that –

Cleaning and preparation processes are explained for a range of test surfaces.

Appropriate cleaning materials are selected & applied.

Criteria 24.6A.1.2

Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements.

Assessor guide: observe that –

Procedures are carried out correctly. Statutory and OH&S requirements are followed.

Assessor guide: confirm that –

Statutory and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.6A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

Discontinuities are identified and classified from a visual inspection. A primary metallurgical assessment of inspection areas is used to describe primary or manufacturing or service defects.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained. Types of discontinuities are explained and their consequences/effect on the material are described.

Element 24.6A.2 Perform eddy current testing

Criteria 24.6A.2.1

The most appropriate eddy current test for the material/application is selected.

Assessor guide: observe that –

Nominated testing method is appropriate regarding:

Defect type and orientation

- * part geometry and configuration
- * test frequency
- * probe configuration

Assessor guide: confirm that –

The eddy current testing technique is appropriate for the given situation. The procedure for carrying out each eddy current test can be explained.

Criteria 24.6A.2.2

Test equipment is selected and prepared in accordance with standards and/or procedures.

Assessor guide: observe that –

Test equipment is set up correctly. OH & S precautions are adhered to.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the eddy current test can be identified.

Criteria 24.6A.2.3

Eddy current test is carried out in accordance with relevant standards, specifications and OH&S requirements.

Assessor guide: observe that –

Principles of electricity, magnetism and electromagnetism in relation to eddy current testing are applied. The test is performed correctly and in logical sequence OH&S requirements are followed at all times.

Assessor guide: confirm that –

Principles of electricity, magnetism, electromagnetism in relation to eddy current testing can be explained. Principles and applications of eddy current testing can be explained. Hazards associated with eddy current testing are identified and appropriate safety requirements outlined.

Criteria 24.6A.2.4

Eddy current test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.

Assessor guide: observe that –

Appropriate maintenance is carried out on test equipment and equipment is stored correctly. Faulty/unserviceable test equipment is identified.

Assessor guide: confirm that –

Maintenance and storage procedures for test equipment are explained. Common faults and damage can be outlined.

Element 24.6A.3 Interpret and report the results of eddy current tests**Criteria 24.6A.3.1**

Indications are assessed and defects detected and classified in accordance with national and international codes and standards.

Assessor guide: observe that –

Resultant signals and data is analysed and all relevant defects are detected. Defects are interpreted and classified in terms of national and international codes and standards.

Assessor guide: confirm that –

A range of indications/defects can be outlined. The meaning and application of national and international codes and standards is explained.

Criteria 24.6A.3.2

Defects are confirmed in accordance with enterprise procedures and industry practices.

Assessor guide: observe that –

Defect indications are confirmed. Test results are confirmed by other eddy current testing methods and/or other NDT methods.

Assessor guide: confirm that –

Confirmation of test results is explained.

Criteria 24.6A.3.3

Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Assessor guide: observe that –

Report is completed correctly and according to procedures. Test results, implications and related information are conveyed to end user.

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained. Implications of test results for the particular material/application are explained.

Range statement

This unit describes the underpinning knowledge and skills required to inspect, interpret, classify and report results of eddy current testing on fabrications, structures and components across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent. This unit also includes identifying abnormalities such as corrosion, metal fatigue, deformation in non ferrous/ ferrous alloys, steels, fatigue cracks, stress corrosion cracking, heat damage, metal properties sorting, manufacturing defects, coating thickness measurement etc. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific testing eddy current testing tools and equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects are considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Eddy current tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian Standards and/or other relevant standards. nature of this work.

Unit MEM 24.7A A Perform ultrasonic thickness testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 2

Pre-requisite units - Path 1

18.1A Use hand tools

Element 24.7A.1 Prepare inspection areas for ultrasonic thickness testing

Criteria 24.7A.1.1

Inspection areas are cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques.

Assessor guide: confirm that –

Cleaning and preparation processes can be explained for a variety of test surfaces.

Inspection areas are correctly prepared using the appropriate cleaning materials.

Criteria 24.7A.1.2

Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements.

Assessor guide: observe that –

Preparation procedures are carried out correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Procedures and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.7A.1.3

Inspection areas are visually assessed for obvious discontinuities.

Assessor guide: observe that –

All obvious discontinuities have been identified from a visual inspection.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained.
Types of discontinuities are explained and their consequences outlined.

Element 24.7A.2 Perform ultrasonic thickness testing

Criteria 24.7A.2.1

Nominated ultrasonic thickness test is identified from standard operating procedures.

Assessor guide: observe that –

Procedures are interpreted correctly and all relevant information identified.

Assessor guide: confirm that –

The procedures for carrying out ultrasonic thickness test can be explained.

Criteria 24.7A.2.2

Test equipment is prepared in accordance with standard operating procedures.

Assessor guide: observe that –

Test equipment is prepared correctly. The procedures for setting up test equipment are demonstrated.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic thickness test are explained.

Criteria 24.7A.2.3

Ultrasonic tests are carried out in accordance with relevant standards and OH&S requirements.

Assessor guide: observe that –

Basic principles of ultrasonic thickness testing are applied.

The test is performed correctly and in logical sequence. OH&S requirements are followed at all times.

Assessor guide: confirm that –

The advantages and limitations of ultrasonic thickness testing are explained. The hazards associated with ultrasonic thickness testing are identified and safety requirements outlined.

Criteria 24.7A.2.4

Ultrasonic test equipment is maintained and stored in accordance with standard operating procedures and OH &S requirements.

Assessor guide: observe that –

Basic maintenance is carried out on test equipment and equipment is stored correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Basic maintenance and storage procedures for testing equipment are explained. OH &S requirements can be explained.

Element 24.7A.3 Report the results of ultrasonic thickness tests**Criteria 24.7A.3.1**

Basic thicknesses are identified and explained in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Procedure for identifying basic defects is followed.

Assessor guide: confirm that –

Common basic defects are explained. All indications can be explained and thickness confirmed.

Criteria 24.7A.3.2

Basic thicknesses are confirmed in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Thickness indications are confirmed by other ultrasonic testing or NDT methods (if applicable).

Assessor guide: confirm that –

Confirmation of test results is explained in accordance with enterprise standards and/or procedures.

Criteria 24.7A.3.3

Test results are reported in accordance with enterprise standards and/or procedures.

Assessor guide: observe that –

Test results are reported according to standard

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained.

Range statement

This unit describes the underpinning knowledge and skills required in applying, inspecting, interpreting and reporting on ultrasonic testing techniques of fabrications, structures and components. Testing across a wide range of industries which includes identifying abnormalities such as thickness measurement of corrosion, laminations of non-ferrous/ferrous alloys steels, composite materials.

The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific ultrasonic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Ultrasonic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian Standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations.. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

This unit should not be selected when Unit 24.8A Perform ultrasonic testing or Unit 15.4A Perform inspection basic has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.8A A Perform ultrasonic testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

18.1A Use hand tools

24.12A Apply metallurgy principles

Element 24.8A.1 Prepare inspection areas for ultrasonic testing

Criteria 24.8A.1.1

Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques.

Assessor guide: confirm that –

Cleaning and preparation processes can be explained for a variety of test surfaces.

Appropriate cleaning materials are selected & applied.

Criteria 24.8A.1.2

Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements.

Assessor guide: observe that –

Procedures are carried out correctly. Statutory and OH&S requirements are followed.

Assessor guide: confirm that –

Procedure, statutory and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.8A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

Discontinuities are identified, classified and confirmed from a visual inspection. A primary metallurgical assessment of inspection areas is used to describe primary or manufacturing or service defects.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained. Types of discontinuities are explained and their consequences/effect on the material are described.

Element 24.8A.2 Perform ultrasonic testing

Criteria 24.8A.2.1

The most appropriate ultrasonic test for the material/application is selected.

Assessor guide: observe that –

Nominated testing method is appropriate regarding:

- material type and form
- defect type
- standards and/or procedures

Assessor guide: confirm that –

The ultrasonic testing technique is appropriate for the given situation. Selection of testing method can be justified/explained. The procedure for carrying out ultrasonic test can be explained.

Criteria 24.8A.2.2

Testing equipment is selected and prepared in accordance with standards and/or procedures.

Assessor guide: observe that –

Test equipment is set up correctly OH & S precautions are adhered to.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic tests can be identified.

Criteria 24.8A.2.3

Ultrasonic test is carried out in accordance with relevant standards, specifications and OH&S requirements.

Assessor guide: observe that –

Principles of ultrasonic testing are applied. The ultrasonic test is performed correctly and in logical sequence OH&S requirements are followed at all times.

Assessor guide: confirm that –

Principles of ultrasonic testing are explained. Relevant standards are explained. The hazards associated with ultrasonic testing are identified and appropriate safety requirements outlined.

Criteria 24.8A.2.4

Ultrasonic testing equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.

Assessor guide: observe that –

Appropriate maintenance is carried out on test equipment and equipment is stored correctly. Faulty/unserviceable test equipment is identified.

Assessor guide: confirm that –

Maintenance and storage procedures for testing equipment are explained. Common faults and damage can be outlined.

Element 24.8A.3 Interpret and report the results of ultrasonic tests**Criteria 24.8A.3.1**

Indications are assessed and defects detected and classified in accordance with national and international codes and standards.

Assessor guide: observe that –

Resultant signals and data are analysed. All relevant defects are detected. Defects are interpreted and classified in terms of national and international codes and standards.

Assessor guide: confirm that –

A range of defects are explained. The meaning and application of national and international codes and standards is explained.

Criteria 24.8A.3.2

Defects are confirmed in accordance with enterprise procedures and industry practices.

Assessor guide: observe that –

Defect indications are confirmed. Test results are confirmed by other ultrasonic testing methods and/or other NDT methods.

Assessor guide: confirm that –

Confirmation of test results is explained.

Criteria 24.8A.3.3

Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Assessor guide: observe that –

Report is completed correctly and according to procedures. Test results, implications of results and related information are conveyed to end user.

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained. Implications of test results for the particular material/application are explained.

Range statement

This unit describes the underpinning knowledge and skills required in applying, inspecting, interpreting, classifying and reporting on ultrasonic testing techniques of fabrications, structures and components. Testing across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent and includes identifying abnormalities such as corrosion, metal fatigue, deformation in non ferrous/ferrous alloys steels, composite materials, fatigue cracks, stress corrosion cracking, manufacturing defects, thickness measurement and fit, mechanical and bonded repairs, laminar tearing, welding defects and casting defects and/or aircraft components.

The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific ultrasonic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Ultrasonic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian Standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices.

This unit should not be selected when Unit 15.4A Perform inspection (basic) or Unit 15.5A Perform inspection (advanced) has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required

knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.9A A Perform basic radiographic testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 2

Pre-requisite units - Path 1

13.13A Work safely with ionizing radiation

18.1A Use hand tools

Element 24.9A.1 Prepare inspection areas ready for basic radiographic testing

Criteria 24.9A.1.1

Radiographic specimens are cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques. Inspection areas are correctly prepared using the appropriate cleaning materials. Specimens are set up according to the nominated techniques and methods.

Assessor guide: confirm that –

Cleaning and preparation processes are explained.

Criteria 24.9A.1.2

Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements.

Assessor guide: observe that –

Preparation procedures are carried out correctly. OH&S requirements are followed at all times.

Assessor guide: confirm that –

Procedures and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.9A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

All obvious discontinuities have been identified from a visual inspection.

Assessor guide: confirm that –

Established inspection procedures and techniques are explained. Types of discontinuities are explained and their consequences outlined.

Element 24.9A.2 Set up radiographic test equipment

Criteria 24.9A.2.1

Nominated test is identified from standard operating procedures.

Assessor guide: observe that –

Procedures are interpreted correctly and all relevant information identified.

Assessor guide: confirm that –

The procedure for carrying out radiographic test can be explained.

Criteria 24.9A.2.2

Radiation testing and processing equipment is set up in accordance with standard operating procedures.

Assessor guide: observe that –

Test equipment is prepared correctly. The procedures for setting up test equipment are demonstrated.

Assessor guide: confirm that –

Principal components of x-ray and gamma ray equipment can be identified. The tools, equipment, techniques and system verification checks necessary to carry out the radiographic tests can be identified.

Element 24.9A.3 Carry out basic radiographic tests**Criteria 24.9A.3.1**

Basic properties of x-rays and gamma rays are identified.

Assessor guide: observe that –

Intensities of ionising radiation are calculated in imperial and metric systems.

Assessor guide: confirm that –

Characteristics and sources of ionising radiation are explained. Different units of radiation are explained.

Criteria 24.9A.3.2

Safety practices and controls for minimising radiation exposure are applied.

Assessor guide: observe that –

Minimum exposure rates/distances are calculated. Relevant codes and regulations are observed. Emergency procedures are followed.

Assessor guide: confirm that –

Interaction of ionising radiation and matter is explained. Processes by which ionising radiation is detected can be outlined. Hazards associated with ionising radiation are explained and regulatory exposure limits outlined. Exposure reduction factors are explained: time, distance, shielding.

Criteria 24.9A.3.3

Radiographic testing and safety equipment is operated in accordance with relevant work instructions and OH&S requirements.

Assessor guide: observe that –

Basic principles of radiographic testing are applied. Radiographic tests are performed correctly and in logical sequence. OH&S requirements are followed at all times.

Assessor guide: confirm that –

The tools, equipment, techniques and system verification checks necessary to carry out the test are explained.

Criteria 24.9A.3.4

Films are processed to achieve optimum results.

Assessor guide: observe that –

safe work practices are applied in handling of radiographic films and chemicals.

Assessor guide: confirm that –

Film processing techniques, materials and development conditions are outlined.

Range statement

This unit describes the underpinning knowledge and skills required to work with ionizing radiation in open or closed sites; on fabrications, structures and components across a wide range of industries. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

All testing must be completed with particular attention to personal and OH&S regulations. Ionizing radiation equipment materials and chemicals, which are subject to codes and regulations, are stored, used, and transported must be stored and used in accordance with safe work practices. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.

This unit should not be selected when Unit 24.10A Perform radiographic testing or Unit 15.4A Perform inspection basic has already been selected/has been also selected Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.10A A Perform radiographic testing

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 6

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

13.13A Work safely with ionizing radiation

18.1A Use hand tools

24.12A Apply metallurgy principles

Element 24.10A.1 Prepare inspection areas for radiographic testing

Criteria 24.10A.1.1

Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials.

Assessor guide: observe that –

Inspection areas are identified by established techniques. Appropriate cleaning materials are selected & applied.

Assessor guide: confirm that –

Cleaning and preparation processes are explained for a range of test surfaces.

Criteria 24.10A.1.2

Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements.

Assessor guide: observe that –

Procedures are carried out correctly. Statutory and OH&S requirements are followed.

Assessor guide: confirm that –

Procedure, statutory and OH&S requirements can be explained in relation to the preparation process.

Criteria 24.10A.1.3

Inspection areas are visually assessed and obvious discontinuities identified.

Assessor guide: observe that –

Discontinuities are identified, classified and confirmed from a visual inspection. A primary metallurgical assessment of inspection areas is used to describe primary or manufacturing or service defects.

Assessor guide: confirm that –

Established assessment procedures and techniques are explained. Types of discontinuities are explained and their consequences/effect on the material are described.

Element 24.10A.2 Select and prepare radiographic test**Criteria 24.10A.2.1**

The most appropriate radiographic test for the material/application is selected.

Assessor guide: observe that –
Nominated testing method is appropriate regarding radiography sensitivity:
- contrast
- definition

Assessor guide: confirm that –
Appropriateness of testing method can be justified/explained. The procedure for carrying out each radiographic test can be explained.
Principal types of x-ray generators and radioisotopes can be identified and their effect on radiographic sensitivity outlined.

Criteria 24.10A.2.2

Appropriate testing and processing equipment is selected and set up for various geometries in accordance with standards and/or procedures.

Assessor guide: observe that –
Test equipment is set up correctly OH & S precautions are adhered to. Equipment settings are checked and verified.

Assessor guide: confirm that –
Tools, equipment, techniques and system verification checks necessary to carry out the radiographic tests can be identified and explained.

Criteria 24.10A.2.3

Quality of radiographic test is optimised.

Assessor guide: observe that –
The most suitable film/screen combinations and number of exposures are selected/calculated for the conditions. Principles for calculating and producing optimum quality radiographs are applied.

Assessor guide: confirm that –
Photographic features and aspects of radiographic film exposure & development are described.

Element 24.10A.3 Perform radiographic testing**Criteria 24.10A.3.1**

Radiographic tests are carried out in accordance with relevant standards, codes, specifications and OH&S requirements.

Assessor guide: observe that –
Relevant standards and OH&S requirements are applied at all times.

Assessor guide: confirm that –
Relevant standards, regulations and codes are explained. The hazards associated with radiographic testing are identified.

Criteria 24.10A.3.2

Radiographs are set up and carried out for specialised applications.

Assessor guide: observe that –
Specialised radiographic applications are identified and correct set up procedures are applied.

Assessor guide: confirm that –
Procedures for specialised radiographic applications are described.

Criteria 24.10A.3.3

Films are processed to maximise quality of image.

Assessor guide: observe that –

Processes for maximising image quality are applied.

Assessor guide: confirm that –

Principles of image formation, film and chemical properties and processing techniques are outlined.

Criteria 24.10A.3.4

Films are processed to achieve optimum results.

Assessor guide: observe that –

Safe work practices are applied in handling of radiographic films and chemicals.

Assessor guide: confirm that –

Various types of films and screens, their properties and effects on image quality can be identified and explained. Principles of image formation are explained. Film processing techniques, materials and development conditions. are outlined.

Element 24.10A.4 Maintain radiographic testing equipment**Criteria 24.10A.4.1**

Radiographic testing equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.

Assessor guide: observe that –

Appropriate maintenance is carried out on test equipment and equipment is stored correctly including:

- ionizing apparatus
- processing equipment
- viewers

Assessor guide: confirm that –

Maintenance and storage procedures for test equipment are explained. Common faults and damage can be outlined.

Faulty / unserviceable test equipment is identified Testing equipment is properly maintained and returned to usual storage areas

Element 24.10A.5 Monitor and ensure radiation safety**Criteria 24.10A.5.1**

Safety controls are set up and maintained.

Assessor guide: observe that –

Safety requirements are applied at all times. Criteria for the effective design of exposure & storage areas are determined.

Assessor guide: confirm that –

Applicable regulations and codes of practice are outlined. Safety features of radioisotope cameras and x-ray equipment are explained.

Criteria 24.10A.5.2

Exposure to radiation employees and general public is minimised.

Assessor guide: observe that –

Equipment is selected & used to detect & measure ionising radiation. Shielding thicknesses are calculated using first principles, tables and charts.

Assessor guide: confirm that –

Production of x-rays and gamma rays is described. Factors that can be controlled to minimise exposure are outlined. Absorption of ionising radiation by matter and the biological effects on living matter are explained.

Criteria 24.10A.5.3

Radiation monitoring equipment is selected & used.

Assessor guide: observe that –

Equipment is set up and used in accordance with relevant codes & practices.

Assessor guide: confirm that –

Types of equipment & their applications and limitations are outlined.

Element 24.10A.6 Interpret and report the results of radiographic tests**Criteria 24.10A.6.1**

Conditions necessary to view and interpret radiographs are established.

Assessor guide: observe that –

Appropriate radiographic viewing facilities are set up.

Assessor guide: confirm that –

Conditions necessary to view & interpret radiographs are explained.

Criteria 24.10A.6.2

Radiographs are interpreted/evaluated in accordance with applicable codes, standards and specifications.

Assessor guide: observe that –

Defects are interpreted and classified in terms of national and international codes and standards.

Assessor guide: confirm that –

Different indications/anomalies can be interpreted and classified in terms of international codes and standards.

Criteria 24.10A.6.3

Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Assessor guide: observe that –

Report is completed correctly and according to procedures. Test results, implications and related information are conveyed to end user.

Assessor guide: confirm that –

Methods/procedures for reporting test results are explained. Implications of test results for the particular material/application are explained.

Range statement

This unit describes the underpinning knowledge and skills required in applying, inspecting, interpreting, classifying and reporting on radiographic testing techniques of fabrications, structures and components. Testing across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent and includes identifying abnormalities such as corrosion, metal fatigue, deformation in non ferrous/ferrous alloys steels, composite materials, fatigue cracks, stress corrosion cracking, manufacturing defects, thickness measurement and fit, mechanical and bonded repairs, welding defects and casting defects and/or aircraft components.

The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.

Actual and potential defects be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Radiographic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian Standards and/or other relevant standards. All testing must be completed with particular attention to personal and OH&S regulations. Ionizing radiation equipment materials and chemicals, which are subject to codes and regulations, are stored, used, and transported must be stored and used in accordance with safe work practices. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.

This unit should not be selected when Unit 15.4A Perform inspection (basic) or Unit 15.5A Perform inspection (advanced) has already been selected. Where power tools are required, Unit 18.2A Use power tools/hand held operations should also be selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

critical

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge. Activities should closely simulate a workplace environment and conditions due to the nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.11B A Establish non-destructive tests

Band – Specialisation band B

Field – Non-destructive testing

Unit Weight 12

Pre-requisite units - Path 1

2.10C5 Write reports

24.2A Perform penetrant testing

24.8A Perform ultrasonic testing

13.13A Work safely with ionizing radiation

24.4A Perform magnetic particle testing

24.10A Perform radiographic testing

18.1A Use hand tools

24.6A Perform eddy current testing

24.12A Apply metallurgy principles

Element 24.11B.1 Assess requirements for non destructive test

Criteria 24.11B.1.1

Inspection area is assessed for testing and all possible failure sites identified utilising metallurgical analysis.

Assessor guide: observe that –

All possible failure sites have been identified. A metallurgical assessment of inspection areas is carried out to describe all manufacturing or service defects.

Assessor guide: confirm that –

Application of metallurgical analysis to assess inspection areas is explained.

Criteria 24.11B.1.2

Relevant information for test development is collected from available sources using accepted techniques.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 24.11B.1.3

Information is analysed and interpreted.

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 24.11B.1.4

Test requirements are determined.

Assessor guide: observe that –

Assessor guide: confirm that –

Element 24.11B.2 Establish non destructive test techniques and procedures

Criteria 24.11B.2.1

Test methods, techniques and procedures to be used for specific NDT work are designated.

Assessor guide: observe that –

Most appropriate method, technique or procedure is designated.

Assessor guide: confirm that –

Particular methods, techniques and procedures can be outlined in relation to a range of NDT work.

Criteria 24.11B.2.2

Codes, standards, specifications and procedures are interpreted.

Assessor guide: observe that –

All relevant information is referenced.

Assessor guide: confirm that –

The meaning of all relevant codes, standards, specifications and procedures can be explained.

Criteria 24.11B.2.3

Test procedures are developed in accordance with established techniques and metallurgical principles.

Assessor guide: observe that –

Applicable test procedures are developed with regard to testing techniques and specimen.

Assessor guide: confirm that –

Test procedure can be explained with regard to testing techniques and specimen.

Element 24.11B.3 Validate/confirm non destructive tests**Criteria 24.11B.3.1**

General and specific test procedures are validated in accordance with established techniques.

Assessor guide: observe that –

Test procedures are validated and suitability of test determined.

Assessor guide: confirm that –

Validation processes are outlined.

Criteria 24.11B.3.2

Inspection results are interpreted and evaluated in terms of existing codes, standards and specifications.

Assessor guide: observe that –

Applicable specifications, codes and standards are utilised.

Assessor guide: confirm that –

The validity of the selection of specifications, codes and standards can be explained.

Element 24.11B.4 Approve non destructive test procedures**Criteria 24.11B.4.1**

Procedures are approved in accordance with workplace procedures and relevant codes and standards.

Assessor guide: observe that –

Approval procedure is followed.

Assessor guide: confirm that –

Process for approval of procedures is explained.

Criteria 24.11B.4.2

Procedures are documented and distributed in accordance with workplace requirements and relevant codes and standards.

Assessor guide: observe that –

Procedure format follows documentation protocols. Enterprise approval process is followed. Procedures are documented as per organisation's quality system requirements.

Assessor guide: confirm that –

Process for documentation and distribution of procedures is explained.

Element 24.11B.5 Evaluate non destructive test procedures**Criteria 24.11B.5.1**

Procedures are evaluated for effectiveness.

Assessor guide: observe that –

Assessor guide: confirm that –

Evaluation procedures can be explained.

Criteria 24.11B.5.2

Evaluation results are documented and reported according to workplace requirements.

Assessor guide: observe that –

Assessor guide: confirm that –

Process for documentation is explained.

Criteria 24.11B.5.3

Changes/amendments to non destructive test procedures are made and distributed as necessary.

Assessor guide: observe that –

Assessor guide: confirm that –

Process for amending test and distributing amendments is explained.

Range statement

Work undertaken autonomously using predetermined standards of quality, safety and workshop procedures. This unit applies to research, development, approval and evaluation of applicable non-destructive tests on fabrications, structures and components across a wide range of industries to Level 3 (AS 3669 and AS 3998) or equivalent. The work can relate to scheduled and un-scheduled maintenance activities, using general tools, specific testing equipment, test development procedures or guidelines. Activities should replicate 'in-service' - tasks due to the high level of self-supervision and critical nature of the work.

Actual and potential defects are considered, together with ongoing abnormalities in fabrications, components, structures from a wide range of applications by the selection of relevant testing method. Tests are validated/evaluated on critical component or structural zones. All testing must be developed and completed with particular attention to personal safety and OH&S regulations.. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals, which are subject to codes and regulations, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products safe work habits must be stored and used in accordance with safe work practices. This unit should not be selected when Unit 5.25B Perform welding fabrication inspection has already been selected.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit.

Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 24.12A A Apply metallurgy principles

Band – Specialisation band A

Field – Non-destructive testing

Unit Weight 4

Notes - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Element 24.12A.1 Interpret and apply the principles of solidification and crystal structures in metals

Criteria 24.12A.1.1

Principles of solidification and crystal structures in metals are interpreted and applied in relation to NDT techniques.

Assessor guide: observe that –

The principles of solidification and crystal structures is applied in various NDT testing situations.

Assessor guide: confirm that –

The principles of solidification and crystal structures in metal can be explained.

Element 24.12A.2 Interpret equilibrium diagrams for metals

Criteria 24.12A.2.1

Equilibrium diagrams are correctly interpreted.

Assessor guide: observe that –

Assessor guide: confirm that –

The meaning of equilibrium diagrams, representative of a range of metals including aluminium and steel, can be explained.

Element 24.12A.3 Interpret and apply the principles of fusion welding of steel

Criteria 24.12A.3.1

Principles and methods for fusion welding of steel are applied to NDT testing.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of fusion welding are understood and can be explained in relation to NDT testing. In particular, MMAW, SAW, GMAW, GTAW & FCAW.

Criteria 24.12A.3.2

Defects in weldments are identified and classified.

Assessor guide: observe that –

Assessor guide: confirm that –

Defects in fusion welding can be classified, including:

- cracks, lack of fusion
- cavities, imperfect shape
- solid inclusions, miscellaneous

Element 24.12A.4 Interpret and apply the principles of the formation of castings**Criteria 24.12A.4.1**

Principle methods used to produce metal castings are applied to NDT testing.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of the formation of castings are can be explained.

Criteria 24.12A.4.2

Defects in metal castings are identified and classified.

Assessor guide: observe that –

Assessor guide: confirm that –

Defects in castings can be classified including:

- shrinkage cavities
- hot tears
- cold cracks
- gas holes

Element 24.12A.5 Interpret and apply the principles of steel forging**Criteria 24.12A.5.1**

Principles methods used to produce steel forgings are applied to NDT testing.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of steel forging are can be explained. In particular:

- deformations
- strengthening mechanisms
- annealing

Criteria 24.12A.5.2

Defects in steel castings are identified and classified.

Assessor guide: observe that –

Assessor guide: confirm that –

Defects in steel forging can be identified and classified.

Element 24.12A.6 Interpret and apply the principles of mechanical testing**Criteria 24.12A.6.1**

Principles of mechanical testing are applied to NDT testing.

Assessor guide: observe that –

Assessor guide: confirm that –

The principles of mechanical testing can be explained. In particular, impact, tensile and hardness testing.

Range statement

This unit describes the underpinning knowledge of metallurgy. The relationship between the various non destructive testing methods and their capabilities and limitations, when applied for the detection of specific discontinuities in metals. Such variable as type of discontinuity, manufacturing process and limitations will assist in determining the sequence of testing and the ultimate selection of one non destructive test method in preference to another.

Any testing that may be carried out, must be completed with particular attention to personal and OH&S regulations. Where materials and chemicals, which are subject to codes and regulations, are stored and used, for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products, safe work habits must be considered.

Evidence guide

Assessment context

This unit may be assessed on the job, off the job or through a combination of both on and off the job. An individual working alone or as part of a team would demonstrate the competencies covered in this unit. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:-

- all tools, equipment, materials and documentation required.

The candidate will be permitted access to the following documents: -

- any relevant workplace procedures;
- any relevant product and manufacturing specifications;
- any relevant codes, standards, manuals and reference materials.

The candidate will be required to:

- orally, or by other methods of communication, answer questions put by the assessor about processes, events or tasks being undertaken;
- identify colleagues who can be approached for the collection of competency evidence, where appropriate;
- present evidence of any off-job training related to this unit
- perform the tasks within the time frames established between the candidates supervisor/instructor and the assessor, prior to the assessment;

Assessors must be satisfied that the candidate can competently and consistently perform all elements of this unit as specified by the criteria, including required knowledge.

Activities should closely simulate a workplace environment and conditions due to the critical nature of this work.

Critical aspects

The candidate should demonstrate sufficient underpinning knowledge of:

- OH&S requirements
- metallurgy associated with the level of application in this unit
- take responsibility for the quality of their own work;

This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with non-destructive testing in accordance with relevant standards and procedures, or other units requiring the exercise of skills and knowledge covered in this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will:

- demonstrate safe working practices at all times;
- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment;
- plan tasks in all situations and review task requirements as appropriate;
- perform all tasks to specifications and use accepted NDT techniques, practices, processes and workplace procedures;
- tasks will be completed within reasonable time frames relating to typical workplace activities.

Unit MEM 25.1A A Apply fibre-reinforced materials

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 2

This unit covers the competencies required for applying and forming/shaping fibre-reinforced materials. It covers the use of manual and mechanical methods using a variety of glass reinforcements and other fibres. Typical applications include marine vessel and aircraft construction.

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 25.1A.1 Prepare for application/forming operations

Criteria 25.1A.1.1

Appropriate tools and equipment selected according to organisational requirements and instructions.

Assessor guide: observe that –

Appropriate equipment is selected for the application/forming job. Equipment is checked for

Assessor guide: confirm that –

Use of tools and equipment for application/forming operations can be given.

Criteria 25.1A.1.2

Equipment is set up and adjusted ready for operation, in accordance with standard operating procedures.

Assessor guide: observe that –

Equipment is set up in a safe manner and settings are adjusted to suit the application requirements.

Assessor guide: confirm that –

Procedures for setting up and adjusting equipment can be given.

Criteria 25.1A.1.3

Required specifications are identified.

Assessor guide: observe that –

Work instructions are interpreted and where necessary, clarified before commencing operations.

Assessor guide: confirm that –

Terminology and information relevant to standard work instructions can be given. Applicable codes and regulations can be given.

Criteria 25.1A.1.4

Materials are selected according to job specifications.

Assessor guide: observe that –

Appropriate materials are selected to suit different operations.

Assessor guide: confirm that –

Different materials and their properties can be given.

Criteria 25.1A.1.5

Allowances for thickness to specifications are made.

Assessor guide: observe that –

Correct allowance is made to suit the conditions and specifications.

Assessor guide: confirm that –

The importance and relevance of thickness allowances can be given.

Element 25.1A.2 Apply reinforced materials

Criteria 25.1A.2.1

Components are positioned ready for reinforcement operation.

Assessor guide: observe that –

All components are placed in correct position using accepted methods.

Assessor guide: confirm that –

Techniques for positioning components can be given.

<p>Criteria 25.1A.2.2 Equipment is started up, shut down and operated according to standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> Operating procedures are correctly followed.</p>	<p><i>Assessor guide: confirm that –</i> Safety requirements and start up/shut down/operating procedures can be given.</p>
<p>Criteria 25.1A.2.3 Safe working practices are followed, including the use of personal protective equipment.</p>	<p><i>Assessor guide: observe that –</i> Material and safety guards correctly positioned, safe working practices applied and appropriate personal protective equipment is worn.</p>	<p><i>Assessor guide: confirm that –</i> Safe working practices and safe use of personal protective equipment can be given.</p>
<p>Element 25.1A.3 Form and shape reinforcement materials</p>		
<p>Criteria 25.1A.3.1 Materials are rolled/shaped to specified thicknesses and/or finishes.</p>	<p><i>Assessor guide: observe that –</i> Material is correctly rolled/shaped using accepted techniques and timeframes. Irregularities are smoothed out.</p>	<p><i>Assessor guide: confirm that –</i> Methods for rolling and shaping can be given. Problems associated with rolling and shaping and methods for rectifying can be given.</p>
<p>Criteria 25.1A.3.2 Materials are laminated according to specifications.</p>	<p><i>Assessor guide: observe that –</i> Correct lamination sequence is followed.</p>	<p><i>Assessor guide: confirm that –</i> The lamination sequence is explained and its importance can be given.</p>
<p>Criteria 25.1A.3.3 Final application and shape is checked for compliance to specifications and adjusted as necessary.</p>	<p><i>Assessor guide: observe that –</i> Compliance to specification is established. Required adjustments are identified and carried out.</p>	<p><i>Assessor guide: confirm that –</i> Methods of checking final application and form can be given.</p>

Range statement

Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operational procedures. Application and forming operations conducted within a mould or over a former assembly. Tasks may include hand and mechanical lay-up practices, sheathing applications using resins, adhesives, sealants and fillers, core material for stiffening applications. Typical applications may include hull, deck, superstructures, bulkhead and partitions, transverse and longitudinal frame members, engine beds and tanks. Materials may include a variety of glass reinforcements and other fibres, types of laminating resins, stiffening materials such as foams, core mat etc. Tools and equipment may include appropriate brushes and rollers, metal rollers, gelcoat and resin depositors. All work and work practices are undertaken to regulatory and legislative requirements. Forming and integration work and vacuum bagging techniques are covered by Unit 25.2 A (Form and integrate fibre-reinforced structures). This unit should not be selected if Unit 25.2A (Form and integrate fibre-reinforced structures) has already been selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the application and forming of fibre reinforced materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.2A A Form and integrate fibre-reinforced structures

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 4

This unit covers the competencies required for applying, forming and integrating fibre-reinforced components. It covers the use of manual and mechanical methods using a

variety of glass reinforcements and other fibres. Typical applications include marine vessel and aircraft construction.

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 25.2A.1 Form components

Criteria 25.2A.1.1

Relevant materials for component construction are selected.

Assessor guide: observe that –

Required fibre-reinforced materials and components are selected from drawings and job instructions. Appropriate laminated resins, associated hardeners, release agents, pigment additives are selected.

Assessor guide: confirm that –

Typical components, materials, resins and hardeners, release agents, pigment additives can be identified and their uses given. Fibre-reinforced materials and common high-performance materials can be identified.

Criteria 25.2A.1.2

Relevant drawings and templates are selected.

Assessor guide: observe that –

Associated drawings/templates for construction process are selected.

Assessor guide: confirm that –

Drawings and templates can be identified and their construction role explained. Applicable codes and regulations can be given.

Criteria 25.2A.1.3

Components formed to specifications

Assessor guide: observe that –

Hand tools, power tools, workshop equipment and machinery are selected and used safely and in accordance with job requirements. Appropriate personal protective equipment is worn and safety practices followed. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Appropriate hand tools, power tools, workshop equipment and machinery are identified and their use explained. Personal protective equipment and safety practices can be given. Waste disposal obligations and regulations can be given.

Criteria 25.2A.1.4

Component sizing matches the appropriate template.

Assessor guide: observe that –

Dimension size of component is checked against template.

Assessor guide: confirm that –

Method used to check component size against relevant template can be given.

Element 25.2A.2 Integrate components

Criteria 25.2A.2.1

Integration requirements, materials fixing/bonding methods and mixing practices are determined from job specifications and manufacturer specifications.

Assessor guide: observe that –

Appropriate fixing/bondage materials are selected and mixing procedure applied correctly.

Assessor guide: confirm that –

Procedures used to install component, fixing/bondage and mixing application can be given. Method of component integration can be identified.

<p>Criteria 25.2A.2.2 Equipment is set up and adjusted according to standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> Equipment such as resin/roving depositor gun, vacuum bagging equipment set up and operational adjustments made in accordance with workshop procedures.</p>	<p><i>Assessor guide: confirm that –</i> Procedures required in setting up and adjusting equipment can be given.</p>
<p>Criteria 25.2A.2.3 Components are fixed/bonded in accordance with job requirements and specifications.</p>	<p><i>Assessor guide: observe that –</i> Adhesive/filler materials are selected and fixing/bondage methods applied for component integration. Appropriate personal protective equipment is worn and safety practices followed.</p>	<p><i>Assessor guide: confirm that –</i> Relevant adhesive/filler and fixing/bondage methods can be given. Personal protective equipment and safety practices can be given.</p>
<p>Criteria 25.2A.2.4 Reinforcement materials are formed/shaped to specifications.</p>	<p><i>Assessor guide: observe that –</i> Foams, timber/plywood reinforcements are cut and shaped/bevelled to specification. Tools/machinery selected to suit job requirements. Appropriate personal protective equipment is worn and safety practices followed.</p>	<p><i>Assessor guide: confirm that –</i> Reinforcement materials can be identified. Procedures for forming/ shaping and tools/machinery used can be given. Personal protective equipment and safety practices can be given.</p>
<p>Criteria 25.2A.2.5 Component is prepared for encapsulation process.</p>	<p><i>Assessor guide: observe that –</i> Excess fixing/bondage material is cleaned off. Appropriate personal protective equipment is worn and safety practices followed. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.</p>	<p><i>Assessor guide: confirm that –</i> Importance of cleaning excess fixing/bondage material is explained. Personal protective equipment and safety practices can be given. Waste disposal obligations and regulations can be given.</p>
<p>Element 25.2A.3 Undertake post-curing of materials</p>		
<p>Criteria 25.2A.3.1 Post-curing method is selected to suit job application.</p>	<p><i>Assessor guide: observe that –</i> Appropriate method of post-curing is selected according to the job application and/or job instructions/verbal instructions.</p>	<p><i>Assessor guide: confirm that –</i> Post-curing methods, procedures and applications can be given.</p>
<p>Criteria 25.2A.3.2 Equipment/accessories for post-curing set-up.</p>	<p><i>Assessor guide: observe that –</i> Operational procedures and safety requirements are followed.</p>	<p><i>Assessor guide: confirm that –</i> Equipment/accessories and safe operating procedures can be given.</p>
<p>Criteria 25.2A.3.3 Equipment/accessories are stored according to standard procedure.</p>	<p><i>Assessor guide: observe that –</i> Equipment/accessories are disassembled, cleaned and stored in an appropriate place.</p>	<p><i>Assessor guide: confirm that –</i> Storage procedure can be given.</p>

Range statement

Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following operating procedures. Component construction carried out for mould installation and application and forming operations conducted within a mould or over a former assembly. Typical applications may include hand and mechanical lay-up practices, post curing practices, core materials for stiffening application, sheathing applications using resins, adhesives, sealants and fillers and vacuum bagging techniques where applicable. Product/components constructed may include hull, deck, superstructures, bulkhead and partitions, transverse and longitudinal framing, engine beds and tanks etc. Materials may include a variety of glass reinforcements and other fibres, types of laminating resins, other types of stiffening materials such as foams, core mat etc. Tools and equipment used for laminating work may include brushes and rollers, metal roller, gelcoat and resin depositors and vacuum bagging equipment. A variety of hand and power tools and workshop machinery can be used for component construction and installation practices. Where mark off/out skills are required then Unit 12.7A (Mark off/out structural fabrications and shapes) should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the construction, application, forming and integration of fibre reinforced materials or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.3A A Set up marine vessel structures

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 4

This unit covers the competencies required for setting up marine vessel structures. It includes straightforward levelling and alignment. Erection of metal structures is covered by Unit 10.1A (Erect structures).

Pre-requisite units - Path 1

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.7A Mark off/out structural fabrications and shapes

18.1A Use hand tools

Element 25.3A.1 Inspect and prepare site

Criteria 25.3A.1.1

The site is checked for location, dimensions and levels in accordance with industry standards.

Assessor guide: observe that –

Practices for checking construction site location dimension and levelling procedures are correctly applied.

Assessor guide: confirm that –

Practices used for checking construction site location, dimensions and levelling procedures can be given.

Criteria 25.3A.1.2

Minor alterations, corrections or adjustments are undertaken with approval of appropriate authority.

Assessor guide: observe that –

Procedures used in minor alterations, correction or adjustments are applied.

Assessor guide: confirm that –

Procedures for authorised minor alterations, correction or adjustment can be given.

Criteria 25.3A.1.3

Surfaces and materials/components are prepared for use.

Assessor guide: observe that –

Assessor guide: confirm that –

Practices used to prepare surfaces, materials/component structures can be given.

Criteria 25.3A.1.4

Structural components and materials are identified

Assessor guide: observe that –

Relative structural components and material species are identified and confirmed against job specification.

Assessor guide: confirm that –

Structural components and material species/types can be given in accordance with job specifications.

Element 25.3A.2 Undertake levelling and measurement readings

Criteria 25.3A.2.1

Principles of levelling and measurement reading are applied.

Assessor guide: observe that –

Assessor guide: confirm that –

Process for obtaining levelling and measurement reading can be given.

Criteria 25.3A.2.2

Task requirements are determined

Assessor guide: observe that –

Appropriate levelling and measurement tools/method selected from inspection of equipment/component assembly to be levelled.

Assessor guide: confirm that –

Levelling and measurement tools/methods can be given.

Criteria 25.3A.2.3 Levelling procedures are identified.	<i>Assessor guide: observe that –</i> Method used for levelling application can be identified.	<i>Assessor guide: confirm that –</i> Levelling method used to level equipment /component assembly structure can be given.
Criteria 25.3A.2.4 Levelling equipment is selected and set up to operating procedures.	<i>Assessor guide: observe that –</i> Appropriate levelling equipment selected and set up in accordance with job requirements.	<i>Assessor guide: confirm that –</i> Levelling equipment can be identified and set-up procedure given.
Criteria 25.3A.2.5 Levelling measurements are taken accurately.	<i>Assessor guide: observe that –</i> Accurate measurements are made and levelling requirements identified. Appropriate engineering principles, techniques, tools and measuring equipment are used.	<i>Assessor guide: confirm that –</i> Appropriate engineering principles, techniques, tools and equipment for levelling and measurement can be given.
Criteria 25.3A.2.6 Levelling tasks are completed to specifications.	<i>Assessor guide: observe that –</i> Specifications are correctly interpreted and correct levelling achieved.	<i>Assessor guide: confirm that –</i>
Element 25.3A.3 Erect marine vessel structures		
Criteria 25.3A.3.1 All work is carried out safely and in accordance with defined procedures.	<i>Assessor guide: observe that –</i> Safety aspects of work requirements, such as correct assembly and fixing procedures are identified and applied.	<i>Assessor guide: confirm that –</i> Personal protective equipment and safe working practices can be given. Safety principles for erecting structures can be given.
Criteria 25.3A.3.2 Components of structure are prepared correctly for sequential erection.	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i> Sequence of assembly of component structure can be given.
Criteria 25.3A.3.3 Components are erected and fixed according to specifications.	<i>Assessor guide: observe that –</i> Relevant component erection and fixing practices comply with requirements of job specifications.	<i>Assessor guide: confirm that –</i> Erection and fixing methods can be given.
Criteria 25.3A.3.4 Structure alignment meets required specifications. adjustments are made to achieve correct specifications.	<i>Assessor guide: observe that –</i> Alignment requirements are established. Appropriate	<i>Assessor guide: confirm that –</i>

Range statement

Work undertaken individually or as part of team environment. Structures include composite, metal and timber requiring a location/erection process. Structures would typically be of those where fairness and load bearing is critical and/or where building/marine regulations may apply. Specifications for the structure supplied via engineering drawings or similar and include site location information. Structures include framework such as hull framing, deck framing, superstructures, jig construction, stairways, walkways, tanks, platforms, cradles etc., completed prior to commencement of installation work. Levelling and alignment undertaken is of a straightforward nature, which may include plumb bob/lines, spirit levels, water and dumpy levels etc. This unit does not include fixed structures, such as jetties, wharves, moorings etc. Materials include timber and other non-metallic materials. Where erection of metal structures is required to Unit 10.1A (Erect structures) should be selected. Where construction and assembly of marine timber components is undertaken, Unit 25.5A (Construct and assemble marine timber components) should be selected. Where lifting or rigging skills are required, appropriate materials handling units should be

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting up marine timber structures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.4A A Fair and shape surfaces

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 2

This unit covers the competencies required for filling, sanding, fairing and grinding practices to achieve uniform or correct contours and surfaces. Typical applications include marine vessel construction and the manufacture of transport vehicles.

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 25.4A.1 Determine requirements for operation

Criteria 25.4A.1.1

Job requirements are identified.

Assessor guide: observe that –

Job requirements are determined from specification, verbal instructions or visual inspection. Materials to be prepared are identified.

Assessor guide: confirm that –

From specifications, verbal instructions or visual inspection procedures for operation can be explained. Species of material to be prepared can be identified and features/specific preparation requirements and techniques given.

Criteria 25.4A.1.2

Sequence of operations is determined.

Assessor guide: observe that –

Steps used for filling/sanding/grinding, fairing and shaping are identified in accordance with job requirements.

Assessor guide: confirm that –

Steps for fairing and shaping operations can be given.

Element 25.4A.2 Prepare for filling/sanding/grinding operations

Criteria 25.4A.2.1

Safety equipment is set up in accordance with standard procedure.

Assessor guide: observe that –

Where applicable, safety equipment such as fans, extraction unit are set up in accordance with work place procedures.

Assessor guide: confirm that –

Relevant safety equipment can be identified and uses/application given.

Criteria 25.4A.2.2

Appropriate fillers and abrasive materials selected and prepared to suit job requirements and required surface finish.

Assessor guide: observe that –

Fillers and abrasive materials are prepared correctly.

Assessor guide: confirm that –

Fillers and their properties can be given. Surface finish, abrasive discs, belts and other material and coarse grinding can be identified and related to job requirements.

Criteria 25.4A.2.3

Appropriate equipment and accessories selected and set up ready for operation.

Assessor guide: observe that –

Relevant sanding/grinding, power tools such as disc sander, angle grinder and associated safety accessories such as dust extraction assemblies and guard protection are set up correctly.

Assessor guide: confirm that –

Equipment and accessories can be identified and applications given. Safe operating practices and personal protective equipment use can be given.

Element 25.4A.3 Perform filling, sanding, fairing and grinding operations**Criteria 25.4A.3.1**

Work is carried out to specified finishes.

Assessor guide: observe that –

Operator demonstrates surface filling, sanding, internal and external sanding and flat, concave and convex surfaces.

Assessor guide: confirm that –

Filling, sanding, fairing and grinding practices to achieve specified finishes can be given.

Criteria 25.4A.3.2

Power tools are used to optimise equipment and material use.

Assessor guide: observe that –

Operator utilises power tools in correct manner to maximise efficiency and effectiveness of abrasive materials equipment.

Assessor guide: confirm that –

The importance of optimising life of abrasive materials can be given.

Criteria 25.4A.3.3

Safety procedures are observed, safety glasses/shield worn and, where applicable, protective clothing worn.

Assessor guide: observe that –

Personal safety protection is worn to suit specific job requirements and conditions.

Assessor guide: confirm that –

Personal safety procedures and protective equipment relevant to sanding/grinding practices can be identified. Safety hazards relating to faired materials, fillers and abrasives can be given.

Criteria 25.4A.3.4

Surfaces checked to ensure compliance to specifications.

Assessor guide: observe that –

Surface and finish checked visually and by use of fairing battens, straightedges, stringlines, french curves, templates etc. and verified in accordance with job specification.

Assessor guide: confirm that –

In accordance with surface and finish requirements, practices and equipment used to check correct finish can be given.

Range statement

This unit covers filling, sanding, fairing and grinding practices to achieve uniform or correct contours and surfaces, typically on marine vessels and other transport vehicles. Work undertaken autonomously and to predetermined standards of quality and safety. Work is carried out following standard operational procedures. Typical construction materials may include timber, fibre-reinforced materials and metal materials of new and pre-coated surface area. A selection of hand and power tools may include electric or pneumatic disc, orbital and belt sanders, straight and angle grinders. Die grinders may be used for certain applications but should not be used as the sole tool for assessment purposes. A variety of fillers and abrasive materials of different grades are used to suit job application. Where slipping is required, or when working on a slipped craft, Unit 25.14A (Perform marine slipping operations) should also be selected. Relevant units related to specific applications and materials should also be selected as required.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with fairing and shaping surfaces or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.5A A Construct and assemble marine vessel timber components

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 8

This unit covers the competencies required for constructing and assembling marine timber components, including laminating by cold processes.

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

4.18A General woodworking machine operations

12.7A Mark off/out structural fabrications and shapes

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 25.5A.1 Determine job requirements

Criteria 25.5A.1.1

Required information is determined from drawings, instructions and specifications.

Assessor guide: observe that –

All relevant specifications, drawings, instructions and procedures are obtained in accordance with work place procedures. Job structure, templates, material types are identified.

Assessor guide: confirm that –

The specifications to be achieved can be identified. A variety of component types, materials and templates can be identified. Specifications of species, durability, strength and appearance can be explained. Applicable codes and regulations can be given.

Criteria 25.5A.1.2

Construction process is selected to suit job application.

Assessor guide: observe that –

Construction detail and assembly practices are identified in accordance with specific job.

Assessor guide: confirm that –

Methods used to construct and assemble components can be given. Affect on access, rigidity, strength, buoyancy, resistance to stresses encountered at sea can be described, where appropriate.

Element 25.5A.2 Construct marine vessel timber components

Criteria 25.5A.2.1

Appropriate tools/equipment are selected to suit job application.

Assessor guide: observe that –

Tools and equipment requirements of application. Materials chosen meet specifications in terms of species, grade and quality.

Assessor guide: confirm that –

Hand tools, power tools and workshop machinery to suit construction applications can be given. Appropriateness of species and quality specifications and be explained.

Criteria 25.5A.2.2

Template/measurement is selected to suit component construction.

Assessor guide: observe that –

Appropriate templates, measurements for construction of component are selected.

Assessor guide: confirm that –

Relevant templates/measurements, associated with component construction can be given.

Criteria 25.5A.2.3

Material is dressed, sized and shaped to suit job requirements and specifications.

Assessor guide: observe that –

Appropriate hand and power tools, workshop machinery are selected to suit dressing, sizing and shaping process. Materials are formed to suit job specifications.

Assessor guide: confirm that –

Practices used in dressing, sizing and shaping of material can be given. The candidate identifies strength, durability and appearance characteristics of selected materials.

Criteria 25.5A.2.4

Final form/shape of component is checked against template/measurement specification and modified if necessary.

Assessor guide: observe that –

Methods used to check final form/shape of component against template/measurements and modify where necessary are identified.

Assessor guide: confirm that –

Procedures used in checking final form/shape and where necessary modify component can be given.

Criteria 25.5A.2.5

Component identification and set-up markings are applied.

Assessor guide: observe that –

Relevant markings associated with identification and setting up of component, off template/plan are obtained.

Assessor guide: confirm that –

Relevancy of component identification and setting up markings can be given.

Element 25.5A.3 Assemble components**Criteria 25.5A.3.1**

Jig support assembly is set up to suit job requirements.

Assessor guide: observe that –

Where applicable, from given plans or component structure procedures used to assemble a support jig are identified.

Assessor guide: confirm that –

Where applicable, methods used in assembling a support jig to suit job requirement can be given.

Criteria 25.5A.3.2

Assembly and fastening sequence is determined.

Assessor guide: observe that –

Appropriate fasteners, fastening method and material species are selected.

Assessor guide: confirm that –

Procedures, codes and regulations used in applying relevant fastenings to suit assembly can be given. Fasteners and material species can be given.

Criteria 25.5A.3.3

Material preservation requirements are carried out, if required.

Assessor guide: observe that –

Preservation materials applied to component in accordance with job requirement.

Assessor guide: confirm that –

Preservation materials can be identified, their uses given and safety precautions to be observed explained.

Criteria 25.5A.3.4

Components are assembled to specified line markings and positions.

Assessor guide: observe that –

Assembly line markings are identified and components positioned in accordance with specific markings.

Assessor guide: confirm that –

Purpose of component assembly markings can be given.

Criteria 25.5A.3.5

Assembled component meets specifications.

Assessor guide: observe that –

Components are assembled in accordance with job requirements and checked against template or specifications.

Assessor guide: confirm that –

Size specification of assembled component can be given.

Criteria 25.5A.3.6

Component assembly is cleaned/prepared to suit job requirements.

Assessor guide: observe that –

Excess material wastage is cleaned off and component prepared in accordance with workplace practices. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Practices used in cleaning and finish preparation of component can be explained. Waste disposal obligations and regulations can be given.

Range statement

Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following operating procedures. Component materials may be hardwood, softwood or plywood sheeting, or combinations of two or more of the three. Components constructed and assembled may include marine vessel backbone components such as keel, deadwoods, stem etc., transverse and longitudinal framing, knees, deck framing, hull construction, laid deck construction and superstructures. Where hull is to be planked, planking may include, but not be limited to, carvel, strip, clinker, double diagonal systems, etc. Fastenings, joining methods and sealing systems may vary according to application. Materials for fastening, joining and sealing may include marine-grade adhesives, sealant and caulking materials, metal fasteners including copper, silicon bronze, monel and stainless steel etc. Timber joinery must be appropriate for application and fixed to industry standards. This unit includes laminating by cold processes. Where permanent timber bending practices are required, such as boiling/steam bending, Unit 25.9 A (Form timber shapes using hot processes) should also be selected. A variety of hand and hand-held power tools and workshop equipment such as bandsaw, surfacer and thicknesser etc. may be used for the construction and assembly

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with constructing and assembling timber components used in marine vessel manufacture or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.6A A Undertake marine sheathing operations

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 2

This unit covers the competencies required for the application of sheathing to marine structures (sheathing operations). Basic composite sheathing operations are covered by Unit 25.1A (Apply fibre-reinforced materials)

Pre-requisite units - Path 1

13.3A Work safely with industrial chemicals and materials
25.4A Fair and shape surfaces

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 25.6A.1 Identify job requirements

Criteria 25.6A.1.1

Job specifications are identified from written and verbal instructions as appropriate.

Assessor guide: observe that –
Sheathing application, material and other relevant specifications are identified.

Assessor guide: confirm that –
Specifications and instructions for sheathing operation can be given.

Criteria 25.6A.1.2

Surface materials are identified from specification or verbal instructions.

Assessor guide: observe that –
Surface materials are correctly identified.

Assessor guide: confirm that –

Criteria 25.6A.1.3

Application schedules are identified.

Assessor guide: observe that –
Material application procedure, in accordance with job requirements are identified.

Assessor guide: confirm that –
Procedures of applying materials can be given.

Element 25.6A.2 Observe safety practices

Criteria 25.6A.2.1

Application material is prepared in accordance with manufacturer specifications.

Assessor guide: observe that –
Sheathing material lengths measured to produce minimal wastage. Resin mix ratios are clarified in accordance with manufacturer specifications.

Assessor guide: confirm that –
Preparation of materials for sheathing process can be given.

Criteria 25.6A.2.2

Work area is made safe in accordance with organisational and legislative requirements.

Assessor guide: observe that –
Work site is prepared for obstruction-free work environment.

Assessor guide: confirm that –
Practices used for establishing and maintaining a safe work site can be given.

Criteria 25.6A.2.3

Safety practices are observed and appropriate protective clothing is worn.

Assessor guide: observe that –
Appropriate protective clothing/equipment is used, such as safety glasses, rubber gloves and other clothing.

Assessor guide: confirm that –
Relevant safety practices can be given. Relevant protective clothing/equipment can be given. Safety issues relevant to sheathing application can be given.

Element 25.6A.3 Prepare surface areas and application materials**Criteria 25.6A.3.1**

Surface area is prepared to suit job application.

Assessor guide: observe that –

Surface area prepared in accordance with job requirements.
Appropriate sanding tools/equipment selected.

Assessor guide: confirm that –

Procedures used in surface preparation can be given.

Criteria 25.6A.3.2

Surface contaminants are removed using appropriate method.

Assessor guide: observe that –

Appropriate equipment and materials are selected and used correctly. Contaminants are removed to specification.

Assessor guide: confirm that –

Procedures used in removal of surface contaminants can be given.

Criteria 25.6A.3.3

Where applicable, non-contact surface areas are protected.

Assessor guide: observe that –

Surface areas not being sheathed are protected against spillage, excess resin run-off by appropriate means.

Assessor guide: confirm that –

Procedures used to protect non-contact surface can be given.

Criteria 25.6A.3.4

Measures to prevent external contamination are applied in accordance with organisational procedures.

Assessor guide: observe that –

Surface areas are suitably covered/shielded during material application using appropriate materials/equipment.

Assessor guide: confirm that –

Practices, materials and equipment used for prevention of contamination can be given.

Criteria 25.6A.3.5

Appropriate equipment is used to calibrate mixing quantities.

Assessor guide: observe that –

Mixing quantities are correctly calculated using appropriate equipment.

Assessor guide: confirm that –

Correct use of mixing utensils can be given. Equipment for calculating mixing quantities such as scales, measurement stick, calibrated pumps, can be identified.

Element 25.6A.4 Prepare application materials**Criteria 25.6A.4.1**

Materials are prepared/mixed in accordance with manufacturer specification.

Assessor guide: observe that –

Sheathing matting, cloths etc; resin preparation/mixing procedures can be identified in accordance with job requirements.

Assessor guide: confirm that –

Procedures used in preparing/mixing of sheathing materials can be given.

Criteria 25.6A.4.2

Material quantities are calculated and cut to produce minimum wastage.

Assessor guide: observe that –

Appropriate cutting tools are selected for specified sheathing material. Wastage is minimised.

Assessor guide: confirm that –

Sheathing cutting tools can be identified for different materials and applications. Techniques for minimising wastage can be given.

Element 25.6A.5 Apply materials**Criteria 25.6A.5.1**

Application tools are selected and used correctly. roller, rubber squeegee are demonstrated.

Assessor guide: observe that –

Correct selection/usage of paint brush/paint roller, metal identified and their uses given.

Assessor guide: confirm that –

Appropriate hand tools for resin application can be

Criteria 25.6A.5.2

Application procedures are carried out in accordance with manufacturer specification.

Assessor guide: observe that –

Appropriate techniques in applying materials can be demonstrated.

Assessor guide: confirm that –

Procedures used in applying materials, as per manufacturer specifications, can be given.

Criteria 25.6A.5.3

Where applicable, job materials are held securely in place until curing process is achieved.

Assessor guide: observe that –

If applicable, matting/cloth and waste overhang is secured by appropriate fixing method and fastener e.g. staples, masking tape

Assessor guide: confirm that –

Where applicable, practices used to secure materials and waste overhang can be given.

Criteria 25.6A.5.5

Excess material is removed.

Assessor guide: observe that –

Excess materials are removed to produce minimum sanding/finishing requirements. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Practices used in removal of excess resin, to minimise sanding requirements, can be given. Waste disposal obligations and regulations can be given.

Criteria 25.6A.5.6

Application tools are cleaned up and stored.

Assessor guide: observe that –

Tools are cleaned and stored using appropriate cleaners/solvent. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Practices used for cleaning and storage of tools can be given. Waste disposal obligations and regulations can be given.

Criteria 25.6A.5.7

Job area is cleaned up to maximise safe working conditions.

Assessor guide: observe that –

Area is cleaned and potential hazards removed. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Practice used for clean up of excess wastage materials in work site can be given. Waste disposal obligations and regulations can be given.

Element 25.6A.6 Seal fabricated components**Criteria 25.6A.6.1**

Surface preparation is completed as per manufacturer's specification.

Assessor guide: observe that –

Appropriate method used to sand/re-coat sheathed surface area. Appropriate sanding machine and abrasive materials are selected. Manufacturer's specifications are followed.

Assessor guide: confirm that –

In accordance with manufacturer specification, practice used for sanding/re-coating can be given.

Criteria 25.6A.6.2

Sealant is applied to components and secured as per specifications and/or drawings.

Assessor guide: observe that –

Correct sealant is selected for sealing fittings. Components/fittings are secured correctly.

Assessor guide: confirm that –

Application of sealant and fastening procedure can be given.

Criteria 25.6A.6.3

Excess sealant is cleaned off and tested/checked to ensure water tightness.

Assessor guide: observe that –

Fitting is cleaned and structurally tested in accordance with workshop quality practices.

Assessor guide: confirm that –

Practices used for clean up and testing for water tightness can be given.

Range statement

This unit covers the application of sheathing to marine structures. Work is undertaken autonomously, in a team environment or a combination of both. Predetermined standards of quality and safety are observed and work is carried out to standard operational procedures. Construction materials may include copper, gal sheet and other metals, fabric, sheathing resins, a range of adhesives, sealants and fillers and where applicable may be applied to timber, fibre-reinforced plastics and metal surface areas. Tasks may be carried out on prepared new and old surface areas. Sealing may involve various materials to ensure a water-tight seal on a variety of components. Hand tools for mixing and application practices may include mixing sticks, putty/broad knives, scales, tins of equal size, trowels, squeegee, brushes and rollers. All work and work practices are undertaken to regulatory and legislative requirements. Where application of marine coatings is undertaken Unit 8.17A Undertake pre-treatment and coating applications should be selected. Basic sheathing operations are covered by Unit 25.1A (Apply fibre-reinforced materials). Where materials and chemicals subject to codes and regulations are stored, Unit 13.3A (Work safely with industrial chemicals and materials) should also be considered.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the application of marine construction materials (sheathing operations) to surface areas of a boat or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.7A A Maintain marine vessel surfaces

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 4

This unit covers the competencies required to perform cosmetic maintenance/repair of surfaces, including fibre reinforced plastics, timber and metal surfaces.

Pre-requisite units - Path 1

12.7A Mark off/out structural fabrications and shapes

18.2A Use power tools/hand held operations

13.3A Work safely with industrial chemicals and materials

18.1A Use hand tools

Element 25.7A.1 Inspect vessel and identify maintenance/repair requirements

Criteria 25.7A.1.1

Sectors, surfaces and fittings requiring inspection are identified.

Assessor guide: observe that –

Inspection procedures are located and inspection requirements identified. General sectors/fittings are located for inspection. Surface coating and toxicity status of different sectors are identified.

Assessor guide: confirm that –

Different hull and superstructure sectors and associated fittings common to maintenance activities can be given. Surface coatings and toxicity status for specific applications can be given. Standard fittings requiring inspection can be given, including anodes, bearings, shafts, propellers, rudder, skin fittings.

Criteria 25.7A.1.2

Condition of sectors/surfaces and fittings is established.

Assessor guide: observe that –

Breakdowns in surface integrity are identified, such as scuffs, build-ups, cosmetic collision damage, wet points, corrosion and leaks. Common environmental problems associated with specific materials are identified from visual inspection. Fittings are removed if necessary and checked, including anodes, bearings, shafts, propellers, rudder, skin fittings.

Assessor guide: confirm that –

Common environmental problems, and causes of irregularities/breakdowns in surface integrity and fittings can be given.

Criteria 25.7A.1.3

Appropriate maintenance/repair requirements and methods are established.

Assessor guide: observe that –

Degree of breakdowns in surface integrity and implications are assessed. Cosmetic maintenance/repair requirements and are established, including replacement of fittings as appropriate. Appropriate methods and materials for maintenance/repair are selected. Damage extending beyond cosmetic repair/replacement (e.g. star cracking, rot and other impediments to structural and watertight integrity) is reported to appropriate person/s. Relevant surface coating materials and associated health/environmental risks are identified.

Assessor guide: confirm that –

Implications of different surface breakdowns and irregularities can be given. Methods and materials for cosmetic maintenance/repair of surfaces and fittings can be given. Health/environmental preventative measures associated with specific materials can be given.

Element 25.7A.2 Clean and prepare vessel sectors and surfaces**Criteria 25.7A.2.1**

Correct cleaning equipment and materials are selected and used safely.

Assessor guide: observe that –

Appropriate cleaning tools, equipment and materials are selected. Equipment and accessories are used in a safe manner.

Assessor guide: confirm that –

Different cleaning tools, equipment and materials and their applications can be given, including:

- hand tools, such as hand scrapers and scouring pads
- handheld power tools
- abrasive materials and equipment and associated dust extraction accessories
- high-pressure blast cleaning equipment
- chemicals, such as acid wash, solvent, detergent

Safety measures and safe working procedures can be given.

Criteria 25.7A.2.2

Fittings are cleaned and prepared for maintenance.

Assessor guide: observe that –

Hull and topside fittings are removed, if necessary, and cleaned using appropriate methods and materials.

Assessor guide: confirm that –

Procedures and materials for cleaning fittings can be given. Hull and topside fittings include bearings, shafts, propellers, rudder, skin fittings, docking strip, fairleads, gunwhales etc.

Criteria 25.7A.2.3

Surfaces and sectors are cleaned free of contaminants.

Assessor guide: observe that –

Methods for removal of contaminated material from hull and superstructure are applied correctly. Contaminants, including build-up, flaking etc. are removed. Safety measures and safe work procedures are applied. Top side surfaces are cleaned using suitable products.

Assessor guide: confirm that –

Methods for cleaning/washing and removing contaminated materials can be given, including use of acid wash (fibreglass surfaces), solvents, detergents, abrasive and high-pressure water blasting, hand scraping and scouring.

Criteria 25.7A.2.4

Safety practices are applied in accordance with organisational and legislative requirements.

Assessor guide: observe that –

Appropriate personal protective equipment is worn and safety practices followed. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Safe work practices and personal protective equipment can be identified. Waste disposal obligations and regulations can be given.

Element 25.7A.3 Perform cosmetic maintenance/repair**Criteria 25.7A.3.1**

Surfaces are correctly prepared, filled and faired ready for finishing.

Assessor guide: observe that –

Timber hulls and decking are stripped and recaulked as required. Fibreglass chips are touched up using gelcoat. Metal and timber surfaces are filled as appropriate. Preservative/primers are applied correctly to bare surface areas and fittings.

Assessor guide: confirm that –

Bare surface areas requiring pre-treatment can be identified. Preservative/primers/fillers can be identified and their applications given. Methods, materials and tools for preparing, filling and fairing different hull and topside surfaces, including timber, metal and fibreglass can be given.

Criteria 25.7A.3.2

Compatibility of re-coating materials is confirmed.

Assessor guide: observe that –

Compatibility of re-coating materials with specified surface material is determined using manufacturer specification.

Assessor guide: confirm that –

Manufacturer specifications can be interpreted for compatibility information.

Criteria 25.7A.3.3

Material coatings are selected and applied correctly.

Assessor guide: observe that –

Material coatings, such as anti-fouling, gelcoat, varnish and touch-up paint are applied correctly to hull and topside sectors.

Assessor guide: confirm that –

Coatings and relevant application methods can be given for different surface materials.

Criteria 25.7A.3.4

Fittings are maintained/replaced as appropriate.

Assessor guide: observe that –

Minor/cosmetic maintenance/repair carried out to existing fittings if required. Existing and new fittings are correctly installed, including, bearings, shafts, propellers, rudder, skin fittings. Fittings requiring periodic replacement, such as anodes and docking strips, are replaced where necessary.

Assessor guide: confirm that –

Correct fitting types and installation methods/procedures can be established for given vessel. Lubrication, sealants, protective coatings and other materials required for installation and maintenance of fittings can be given.

Criteria 25.7A.3.5

Tools and equipment are cleaned and stored correctly.

Assessor guide: observe that –

Coating application tools are cleaned using appropriate methods and solvents. Tools are stored using appropriate practices.

Assessor guide: confirm that –

Cleaning techniques can be given. Solvents and other cleaning materials can be identified and safety practices given. Storage procedures can be given.

Element 25.7A.4 Finish surfaces**Criteria 25.7A.4.1**

Where applicable, surfaces are re-coated.

Assessor guide: observe that –

Surfaces are re-coated to match/blend with surface finish.

Assessor guide: confirm that –

Tools and equipment for re-coating surfaces can be identified and their function given. Paints, varnishes and other finishes can be identified.

Criteria 25.7A.4.2

Where applicable, surfaces are sanded and buffed/polished to specification.

Assessor guide: observe that –

Finish specifications are established. Correct sanding and buffing/polishing techniques are applied finish hull and topside surfaces.

Assessor guide: confirm that –

Wet/dry sanding, polishing and buffing techniques can be given for different surfaces and materials. Cutting and polishing compounds and their application can be given. Tools and equipment for surfaces can be identified and their function given.

Range statement

This unit covers cosmetic maintenance and repair practices used in the marine industry. Work undertaken autonomously, in a team environment or a combination. Cosmetic maintenance and repair practices apply across a range of timber, fibre reinforced plastics and metal materials. Routine maintenance-related inspection of hull and superstructure sectors, surfaces and fittings. Covers identification of cosmetic environmental and other damage including chips in fibre reinforced plastics, minor corrosion in metal, caulking in timber surfaces, wear and corrosion of fittings etc. A range of hand-held tools, equipment and materials are used to suit specific maintenance/repair requirements. Typical cleaning tools and equipment may include hand scrapers and scouring pads, handheld power tools, abrasive materials and equipment and associated dust extraction accessories, high-pressure blast cleaning equipment and chemical cleaners such as acid wash, solvent, detergent. All work is carried out observing all safety aspects. All work and work practices are undertaken to regulatory and legislative requirements. Where repair of marine surfaces and structures is carried out, Unit 25.8A (Repair marine vessel surfaces and structures) should be selected. Where slipping is required, or when working on a slipped craft, Unit 25.14A (Perform marine slipping operations) should also be selected. Relevant units related to specific applications and materials should also be selected as required.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with cosmetic maintenance and repair of marine vessel surfaces and fittings or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required for demonstrating competency in this unit. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.8A A Repair marine vessel surfaces and structures

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 4

This unit covers the competencies required to repair marine structures and surfaces, including fibre reinforced plastics, timber and metal surfaces. Cosmetic maintenance/repair of surfaces is covered by Unit 25.7A (Maintain marine vessel surfaces).

Pre-requisite units - Path 1

12.7A Mark off/out structural fabrications and shapes
18.2A Use power tools/hand held operations

13.3A Work safely with industrial chemicals and materials
25.4A Fair and shape surfaces

18.1A Use hand tools
25.7A Maintain marine vessel surfaces

Element 25.8A.1 Determine nature and extent of damage and subsequent repair requirements

Criteria 25.8A.1.1

Damaged structural areas/sectors are identified and extent of damage determined.

Assessor guide: observe that –

From visual inspection, extent of structural damage area/sector is identified.

Assessor guide: confirm that –

Extent of damaged area/sector can be identified. Affect of damage in relation to the capacity of the vessel to withstand stresses encountered at sea can be described.

Criteria 25.8A.1.2

Repair requirements are determined.

Assessor guide: observe that –

Suitable repair method and materials are selected.

Assessor guide: confirm that –

Repair methods and materials for timber, fibre reinforced plastics and metal surfaces and structures can be given. Characteristics of chosen materials can be described. Affect on structural and or watertight integrity can be explained.

Element 25.8A.2 Remove damaged sectors

Criteria 25.8A.2.1

Where applicable damaged sector is reinforced/supported.

Assessor guide: observe that –

Appropriate techniques are used to ensure maintenance of structural and watertight integrity.

Assessor guide: confirm that –

Correct tools/equipment are identified and their usage given. Techniques for reinforcement/shoring/support can be given.

Criteria 25.8A.2.2

Damaged sector is removed.

Assessor guide: observe that –

Tools/equipment used correctly to remove damaged sector
Damaged sector is removed safely.

Assessor guide: confirm that –

Correct tools/equipment are identified and their usage applied.

Element 25.8A.3 Repair damaged sectors

Criteria 25.8A.3.1

Method of component replacement is determined.

Assessor guide: observe that –

Appropriate re-construction method of replacement component selected.

Assessor guide: confirm that –

Method of re-constructing damaged components can be given.

Criteria 25.8A.3.2

Damaged components are repaired/constructed to specification.

Assessor guide: observe that –

Selection and usage of appropriate tools and equipment in repairing/constructing damage components is demonstrated.

Assessor guide: confirm that –

Specification requirements for repair construction can be given.

Criteria 25.8A.3.3

Components are fastened using appropriate fastening practices.

Assessor guide: observe that –

Correct fastening methods are selected and applied. Through hull fittings are reconnected/refitted where necessary and packed /sealed.

Assessor guide: confirm that –

Correct fastening method can be identified and application procedure can be given.

Criteria 25.8A.3.4

Repaired surface area is prepared and re-coated to specifications.

Assessor guide: observe that –

Practices used in preparing and re-coating repaired surface area are applied.

Assessor guide: confirm that –

Procedures used in preparing and re-coating can be given. Purpose of coatings can be stated. Ventilation requirements can be explained.

Criteria 25.8A.3.5

Repairs are cleaned in accordance with delivery requirements.

Assessor guide: observe that –

In accordance with job requirements, procedures used in pre-delivery clean up of damaged sector can be applied. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Procedures used in pre-delivery clean up of damaged sector can be explained. Waste disposal obligations and regulations can be given.

Range statement

This unit covers the competencies required to repair marine structures and surfaces. Work undertaken autonomously, in a team environment or a combination. All practices may be applied to timber, fibre reinforced plastics, polycarbonates, acrylics, glass and metal materials. Repairs may relate to hull, superstructure and decks. Structural repair includes impediments to structural and watertight integrity, for example, holed hull, star-cracking in fibre reinforced plastics, replacement of hull and deck planking, replacement of cracked hatch tops and portlight 'windows', hull penetration causing ingress of water. Repairs may be related to foreign contact damage such as reef, jetty collision and environmental problems such as fungi, marine and insect effects on timber, variants of severe corrosion in metals, such as electrolysis and galvanic corrosion and with fibre reinforced plastics construction, such as osmosis. A range of tools/equipment and materials are used to suit specified job requirements. All work is carried out observing all safety aspects of structural integrity. Chosen repair methods must take account of stresses encountered by vessels at sea including, but not limited to hogging, sagging, wracking, sheering, panting. All work and work practices are undertaken to regulatory and legislative requirements. Where sheathing applications are required Unit 25.6A (Undertake sheathing operations) should also be selected. Where interpretation of technical drawings is required, Unit 9.2A (Interpret technical drawing) should also be selected. Where location/erection of structures is required, Unit 25.3A (Set up marine vessel structures) should also be selected. Where mechanical systems/components/fittings are to be replaced, Unit 18.55A should be selected. Where slipping is required, or when working on a slipped craft, Unit 25.14A (Perform marine slipping operations) should also be selected. Relevant units related to specific applications and materials should also be selected as required.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the repair of marine surfaces and structures or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required for demonstrating competency in this unit. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.9A A Form timber shapes using hot processes

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 2

This unit covers the competencies required for forming solid timber shapes using hot processes. Laminating by cold processes is covered by Unit 25.5A (Construct and assemble marine timber components)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

4.18A General woodworking machine operations

12.7A Mark off/out structural fabrications and shapes

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 25.9A.1 Determine job requirements

Criteria 25.9A.1.1

Specifications are identified from drawings and instructions.

Assessor guide: observe that –

Relevant drawings, instructions and specifications are identified.

Assessor guide: confirm that –

Relevant job specifications can be given.

Criteria 25.9A.1.2

Appropriate bending process is selected and components identified.

Assessor guide: observe that –

Component structure and associated bending practice is identified.

Assessor guide: confirm that –

Forming and component assembly practices can be given. Heating times, temperatures and humidity requirements, where appropriate, can be stated. Suitability characteristics of materials used can be described. Faults in material, such as twist, shakes, sloping grain, can be identified.

Criteria 25.9A.1.3

Construction sequence is determined.

Assessor guide: observe that –

Steps for construction of components are identified.

Assessor guide: confirm that –

Forming and component assembly practice can be given.

Element 25.9A.2 Prepare jigs and templates

Criteria 25.9A.2.1

Standard jigs/templates are selected to suit job application.

Assessor guide: observe that –

Associated jig/template relevant to form application are selected. Safety measures are applied and personal protective equipment used as appropriate.

Assessor guide: confirm that –

Jig/templates are identified and their uses explained.

Criteria 25.9A.2.2

Jigs/templates are constructed to suit required shape.

Assessor guide: observe that –

Jig/templates conform to required shape. Appropriate tools/equipment are used.

Assessor guide: confirm that –

Jig/template construction process, to suit specified shape, can be explained.

Element 25.9A.3 Form timber shapes**Criteria 25.9A.3.1**

Components are constructed to specifications using hot processes.

Assessor guide: observe that –

In accordance with the selected heating and bending processes, components are constructed to specifications.

Assessor guide: confirm that –

Bending and forming processes used for constructing components can be given.

Criteria 25.9A.3.2

Where applicable, laminating/heating equipment is set up according to standard operating procedures observing safety practices.

Assessor guide: observe that –

Observing safety practices laminating/heating equipment, such as cramps, steambox/pot are set up in accordance with standard operating procedures.

Assessor guide: confirm that –

Relevant laminating/heating equipment can be identified, their use and safety procedures can be given.

Criteria 25.9A.3.3

Components are constructed and shaped to specifications.

Assessor guide: observe that –

Using heating processes, applying safety practices, components are constructed in accordance with job requirements and specifications.

Assessor guide: confirm that –

Procedures used in heating, construction and shaping of components can be given.

Criteria 25.9A.3.4

Final components conform to specifications.

Assessor guide: observe that –

Component size is checked in accordance with job specifications. Component is adjusted if necessary to achieve specifications.

Assessor guide: confirm that –

Procedures for checking specified component size can be given.

Range statement

This unit covers the competencies required for forming solid timber shapes using hot processes. Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operational procedures. Application and forming operations conducted within a mould, existing structure or over a former assembly. Typical applications in construction of marine vessels include forming and shaping of structural and decorative components. Tools and equipment may include jigs, templates, steamboxes, cramps, fasteners etc. All work and work practices are undertaken to regulatory and legislative requirements. Where straightforward construction and assembly of marine timber components is undertaken, including laminating by cold processes, Unit 25.5A (Construct and assemble marine vessel timber components should be selected). Where complex forming is required, Unit 9.21A (Interpret and produce curved 3-dimensional shapes) should also be considered.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the construction of solid timber shapes using hot processes or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.10A A Perform fitout procedures

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 4

This unit covers the competencies required for structural fit-out of marine vessels. It includes set-out, construction, assembly and installation of a variety of components.

Straightforward installation of fittings/accessories is covered by Unit 18.2A (Use power tools/hand held operations).

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

4.18A General woodworking machine operations

12.7A Mark off/out structural fabrications and shapes

25.5A Construct and assemble marine vessel timber components

9.1A Draw and interpret sketch

18.1A Use hand tools

Element 25.10A.1 Determine job requirements

Criteria 25.10A.1.1

Drawings are identified and checked for accuracy.
Accuracy and scale of drawings is checked.

Assessor guide: observe that –
Correct drawings are selected.
be given.

Assessor guide: confirm that –
Procedures used for drawing identification and accuracy can

Criteria 25.10A.1.2

Specified job requirements are identified from fit-out plans and procedures.

Assessor guide: observe that –
Job fixing methods, fit-out components, scantling sizes, patterns and materials are identified from fit-out plans and procedures. Work order identified in consultation with others, where appropriate.

Assessor guide: confirm that –
Common structures used in boat fit-out can be given. Job fixing methods, fit-out components, materials and use of patterns can be given.

Criteria 25.10A.1.3

Specified job requirements are identified.

Assessor guide: observe that –
Component structure, materials and assembly procedure are identified.

Assessor guide: confirm that –
Procedures used for constructing and assembling component can be given.

Element 25.10A.2 Construct fit-out components

Criteria 25.10A.2.1

Take-off quantities are checked and cutting list produced, if applicable.

Assessor guide: observe that –
Quantities are accurately determined and cutting list produced to requirements.

Assessor guide: confirm that –
Typical sizing, common species, strength and appearance requirements can be described.

Criteria 25.10A.2.2

Material is machined to suit job scantling sizes, strength and appearance requirements, where applicable.

Assessor guide: observe that –
Appropriate tools/equipment are selected and used.

Assessor guide: confirm that –
Practice used for machining of material can be given. Material characteristics in terms of species, strength, appearance grade can be described.

Criteria 25.10A.2.3

Materials are marked/cut out to specification

Assessor guide: observe that –

Appropriate tools/equipment are selected and used. Materials are marked out/cut to specifications, optimising appearance characteristics and minimising waste.

Assessor guide: confirm that –

Marking and cutting procedures can be given.

Criteria 25.10A.2.4

Components requiring assembly are clearly identified and the sequence of assembly determined.

Assessor guide: observe that –

Sequence of component assembly is correctly identified. Structure marked clearly for assembly.

Assessor guide: confirm that –

Practices used in identification and assembly sequence, of structure, can be given.

Element 25.10A.3 Assemble fit-out components**Criteria 25.10A.3.1**

Method of assembling and fastening components is identified.

Assessor guide: observe that –

Component assembly procedure and fastening application can be identified. Relevant fastening type/species are selected.

Assessor guide: confirm that –

Steps of assembly and method of fastening can be given. Appropriate tools are identified for fastening procedure.

Criteria 25.10A.3.2

Components are assembled to specifications.

Assessor guide: observe that –

Component assembly is checked against specifications for correct sizing and construction standard.

Assessor guide: confirm that –

Procedure used to check assembly specification can be given.

Criteria 25.10A.3.3

Waste materials are removed in accordance with workpractices and relevant legislation.

Assessor guide: observe that –

Clean up of excess waste material is applied using appropriate tools and solvent materials. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Tools and solvent required for clean up practice can be identified. Safe work practices and personal protective equipment can be identified. Waste disposal obligations and regulations can be given.

Criteria 25.10A.3.4

Surface area of assembled components is sanded for installation, where applicable.

Assessor guide: observe that –

If applicable, selected component parts can be identified for sanding. Abrasive material selected to suit job requirements.

Assessor guide: confirm that –

Where applicable, identification of component parts requiring sanding and type of abrasive materials used can be given.

Criteria 25.10A.3.5

Component surface is pre-coated for preservation, where applicable, according to standard specification and procedure.

Assessor guide: observe that –

If applicable surface area is selected for preservation treatment. Appropriate coating material and application process selected.

Assessor guide: confirm that –

Surface preservation pre-coating and application method can be given.

Element 25.10A.4 Install components**Criteria 25.10A.4.1**

Surface area is marked for lay-out installation, where applicable.

Assessor guide: observe that –

Marking of installation lay out is performed correctly from given plans. Appropriate marking tools are selected and used.

Assessor guide: confirm that –

Where applicable, installation plan markings can be identified and transferred accordingly.

Criteria 25.10A.4.2 Fitting and levelling practices are applied.	<i>Assessor guide: observe that –</i> Component sections requiring alterations and levelling for installation are identified. Appropriate tools are selected for fitting/levelling practice.	<i>Assessor guide: confirm that –</i> Practices used for fitting and levelling can be given.
Criteria 25.10A.4.3 Fastenings are selected to suit job requirements.	<i>Assessor guide: observe that –</i> Correct fastening species and fastening type are selected.	<i>Assessor guide: confirm that –</i> Type of fastenings and material species can be given.
Criteria 25.10A.4.4 Components are fixed to meet specified job requirements.	<i>Assessor guide: observe that –</i> All structures are fixed in accordance with job specifications.	<i>Assessor guide: confirm that –</i> Method of fixing/fastening applications can be given.
Criteria 25.10A.4.5 Clean work practices are applied for coating and adhesive applications.	<i>Assessor guide: observe that –</i> All fit-out structures are prepared ready for coating and adhesive applications.	<i>Assessor guide: confirm that –</i> Materials can be identified for preparation (sanding).

Range statement

This unit covers the competencies required for structural fit-out of marine vessels. Set-out, construction, assembly and installation of flooring/decking, partitions, door frames, portlights, hatches, windows, windscreens, non-structural bulkheads, deckheads, bunks, cupboards and other furniture, lining, engine room, galley etc. Includes installation of thermal, noise, vibration and fire control insulation materials. Work may be undertaken autonomously or as part of a team. All work carried out safely and to specified industry standards for timber joinery, surface finish, appearance characteristics, dressing or plugging of fastenings, etc. All work and work practices are undertaken to regulatory and legislative requirements. Tasks should address both "on-the-job" and "pre-fabricated structure fit-outs". An arrangement of hand and hand held power tools and machinery may be used for construction and installation requirements. Materials used for fit-out may include, but not limited to, timber, composites, fibre-reinforced plastics, acrylics, polycarbonates, glass and metal. Where construction of fibre reinforced plastics components is undertaken, Unit 25.2 A (Form and integrate fibre-reinforced structures) should also be selected. Where construction of solid timber shapes using hot processes is undertaken, Unit 25.9A (Form timber shapes using hot processes) should also be selected. For straightforward installation of fittings/accessories, Unit 18.2A (Use power tools/hand held operations) should be selected. Where lines plan drawings and loftings are interpreted, Unit 9.21A (Interpret and produce curved 3-dimensional shapes) should also be considered.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the construction, assembly and installation of fit-out components or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.11A A Install marine systems

Band – Specialisation band A

This unit covers the competencies required for the installation and testing of engine/plant and ancillary equipment relevant to propulsion, stability, steering and fuel systems for mechanically powered marine vessels. Where installation only is required, Unit 10.13A (Assemble and install equipment and accessories/ancillaries) should be selected.

Field – Marine vessel construction

Unit Weight 8

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

Element 25.11A.1 Prepare installation site

Criteria 25.11A.1.1

Site features are checked using appropriate measuring equipment.

Assessor guide: observe that –

Relevant drawings, specifications and instructions are obtained in accordance with workplace procedures. The site is checked for correct location, dimensions and, where appropriate, levels in accordance with standard operating procedure.

Assessor guide: confirm that –

The different features to check can be identified. Equipment used to check various site features can be identified and their use given.

Criteria 25.11A.1.2

Non-compliance with specification is reported to appropriate authority.

Assessor guide: observe that –

Appropriate authority is identified and non-compliance reported in accordance with standard procedure.

Assessor guide: confirm that –

The procedure to be followed if the site features do not comply with specifications can be given. Appropriate authorities to which non-compliance need to be reported can be given. Procedures for checking machine/plant can be given.

Criteria 25.11A.1.3

Modifications are undertaken with approval of appropriate authority

Assessor guide: observe that –

Where appropriate, authorised alterations, corrections and/or adjustments are made to the site and/or machine/plant in accordance with standard procedures. Checks made to ensure approval has been received.

Assessor guide: confirm that –

Alterations, corrections and/or adjustments to be made to the site and/or machine/plant can be identified. Appropriate authorities to approve alterations, corrections and/or adjustments can be identified. Approval process can be given.

Criteria 25.11A.1.4

Installation site and components prepared.

Assessor guide: observe that –

Surfaces, materials and components are prepared for installation in accordance with specifications and standard procedures.

Assessor guide: confirm that –

The materials and components to be used in the installation of machine/plant can be given. Preparation requirements prior to commencing installation can be given.

Element 25.11A.2 Install marine engines/plant**Criteria 25.11A.2.1**

All work is carried out safely, in accordance with site procedures and relevant Australian Standards.

Assessor guide: observe that –

Work is carried out to applicable codes, standards, procedures. Safety measures are followed.

Assessor guide: confirm that –

Safety procedures and measures can be given. Applicable safety equipment and personal protective equipment can be identified and their use given. Relevant codes, standards can be given.

Criteria 25.11A.2.2

Engine/plant components are prepared for correct sequential installation.

Assessor guide: observe that –

Components are arranged to assist sequential installation procedures.

Assessor guide: confirm that –

The sequence in which components are to be installed can be given.

Criteria 25.11A.2.3

Engine/plant is installed in accordance with manufacturer's site specifications.

Assessor guide: observe that –

Components are installed and fixed correctly. Through hull and associated fittings are packed/sealed to maintain watertight integrity.

Assessor guide: confirm that –

Methods of fixing/fastening components can be given. Methods of lifting/moving, locating/holding components for fixing/fastening and the reasons for selecting specific methods can be given.

Criteria 25.11A.2.4

Engine/plant is checked for conformance to specifications and modifications/adjustments undertaken to standard operating procedure.

Assessor guide: observe that –

The machine/plant is checked for conformance to specifications. Where appropriate, approved obtained and adjustments are made in accordance with standard procedures and specifications.

Assessor guide: confirm that –

Procedures for checking machine/plant for conformance can be given. Non-conformance and reporting procedures can be given, including appropriate authority. Required adjustments can be given.

Criteria 25.11A.2.5

Engine/plant is installed in accordance with specifications.

Assessor guide: observe that –

Engine/plant is levelled, aligned, coupled and connected (excluding electrical connections) to specification. Where appropriate, electrical connections scheduled with appropriate persons.

Assessor guide: confirm that –

Levelling, alignment, coupling and connection requirements can be given. Person(s) for making electrical connections can be identified.

Criteria 25.11A.2.6

Site conditions finalised in accordance with OH & S requirements and standard procedures.

Assessor guide: observe that –

Installation site is cleared of all debris, waste, cleaned and left in a safe state. Waste is disposed of in an environmentally sustainable manner in accordance with legislative requirements.

Assessor guide: confirm that –

Cleaning and clearing requirements can be identified. Equipment for cleaning/clearing can be identified. Waste disposal obligations and regulations can be given.

Criteria 25.11A.2.7

Documentation completed to required specifications.

Assessor guide: observe that –

All reports and other documents are completed correctly and according to standard procedure.

Assessor guide: confirm that –

Reports and other documentation to be completed before, during and after installation can be given and required information outlined.

Element 25.11A.3 Test engine/plant systems and ancillary equipment**Criteria 25.11A.3.1**

Work/test requirements for engine/plant and ancillary equipment are identified.

Assessor guide: observe that –

Relevant data with respect to the operation of engine/plant and ancillary equipment is obtained. Appropriate test equipment is selected.

Assessor guide: confirm that –

Operational requirements/specifications of the engine/plant and ancillary equipment can be given. Test equipment is identified and the uses given.

Criteria 25.11A.3.2

Engine/plant and ancillary equipment is tested for correct operation.

Assessor guide: observe that –

Equipment is isolated in accordance with standard procedures. Engine/plant and ancillary equipment tested and correct operation verified. Non-conformances identified.

Assessor guide: confirm that –

Testing procedures and principles can be given. Reasons for selecting specific procedures and principles can be given.

Criteria 25.11A.3.3

Operational function is assessed and verified.

Assessor guide: observe that –

Variations between test results and operational specifications are identified. Assessment procedures are applied in accordance with safety and regulatory/site specifications. Operational function is verified in accordance with standard operating procedures. Equipment and techniques used/applied correctly.

Assessor guide: confirm that –

Normal operating characteristics of engine/plant and ancillary equipment can be given. Faults and malfunctions can be identified and reasons given.

Element 25.11A.4 Collect data and localise fault conditions**Criteria 25.11A.4.1**

Drawings/diagrams and operational specifications are used to identify and localise fault conditions.

Assessor guide: observe that –

Relevant drawings/diagrams and operational specifications are obtained and referred to.

Assessor guide: confirm that –

Fault conditions can be identified from drawings/diagrams and operational specifications.

Criteria 25.11A.4.2

Built-in fault indicators, error codes are examined and interpreted and results recorded to standard procedures.

Assessor guide: observe that –

Correct faults identified from built-in fault indicators, error codes.

Assessor guide: confirm that –

Error indications in built-in devices can be given.

Criteria 25.11A.4.3

Fault condition is localised to major component level.

Assessor guide: observe that –

Faults condition/s are identified using appropriate equipment.

Assessor guide: confirm that –

Methods of determining fault condition can be given.

Element 25.11A.5 Analyse and report test results**Criteria 25.11A.5.1**

Test results are analysed/verified against operational specifications and localised faults confirmed.

Assessor guide: observe that –

Test results are analysed against specifications for faults. Potential and actual faults are confirmed from comparison of test results to operational specifications.

Assessor guide: confirm that –

Criteria 25.11A.5.2

Potential and actual faults are reported according to standard procedures.

Assessor guide: observe that –

All relevant information is reported.

Assessor guide: confirm that –

Procedures for reporting faults can be identified. The difference between potential and actual faults can be given.

Criteria 25.11A.5.3

Corrective action is planned.

Assessor guide: observe that –

A plan to rectify the fault is developed.

Assessor guide: confirm that –

Probable causes/faults in engine/plant and ancillary equipment can be given. The appropriate action to rectify faults can be given.

Criteria 25.11A.5.4

Action plan is recorded/documented.

Assessor guide: observe that –

Planned corrective maintenance is recorded/documented according to standard procedures.

Assessor guide: confirm that –

Procedures for recording/documenting corrective maintenance activity are given.

Range statement

This unit applies to installation and testing practices of engine/plant and ancillary equipment relevant to propulsion, stability, steering and fuel systems for mechanically powered marine vessels. Work undertaken may include drive systems such as inboard/outboard, water jet and side thrusting units (excluding outboard motor installation). Stabilisers may include electric, hydraulic or mechanically operated fin and/or tab types. Steering systems may include hydraulic, cable and wire-operated units. Fuel systems may include petrol and diesel supply operations. Site locations may include new or existing external and internal locations for foundations, footings, beds and frameworks etc. completed prior to installation and commissioning. All specifications applied using engineering drawings, written and verbal instructions. Straightforward modifications are of a minor nature not requiring specification changes or technical recording. Testing should be undertaken in accordance with manufacturer specifications, guidelines, requirements and limitations. Testing procedures may include engineering practices for determining correct operational function of mechanical, fluid power systems, equipment, components and associated items. Extends to the use of mechanical, pneumatic/electro-pneumatic, electronic (analog/digital) and associated instruments, measuring variables such as temperature, pressure, flow rate, levels, lights, density or any other operational variable. Tasks may be undertaken in a workshop/site, moored or in a sea-trial situation. Work may be undertaken autonomously or as part of a team. All work and work practices undertaken to regulatory, legislative and manufacturer requirements. Where installation only is required, Unit 10.13A (Assemble and install equipment and accessories/ancillaries) should be selected. Where technical drawings are interpreted, Unit 9.2A (Interpret technical drawing) should also be considered. Where load shifting equipment such as ride on fork lifts/pallet trucks is used, Unit 11.10A (Operate mobile load shifting equipment) should also be considered. Where movable and fixed load shifting equipment, such as pendant cranes, travelling overhead cranes, monorail hoists and chain blocks etc. is used, Unit 11.22A (Operate fixed/moveable load shifting equipment) should also be considered.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the installation and testing of engine/plant and ancillary equipment or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.12A A Install and test operations of marine auxiliary systems

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 6

This unit covers the competencies required for the installation and testing of marine auxiliary systems. Where installation only is required, Unit 10.13A (Assemble and install equipment and accessories/ancillaries) should be selected.

Pre-requisite units - Path 1

18.1A Use hand tools

18.2A Use power tools/hand held operations

18.3A Use tools for precision work

Element 25.12A.1 Determine job requirements

Criteria 25.12A.1.1

Job requirements established from plans, specifications, verbal instructions or visual inspections.

Assessor guide: observe that –

Structural assembly, lifting equipment, where applicable, installation plans/component are identified.

Assessor guide: confirm that –

Role of plans/specification used for installation of identified components can be given.

Criteria 25.12A.1.2

Installation materials are identified.

Assessor guide: observe that –

Material species such as metals, timber, resin and glass reinforcements are identified from plans/drawing.

Assessor guide: confirm that –

Species of materials and their uses can be given.

Criteria 25.12A.1.3

Compatibility of surface and fitting materials are identified.

Assessor guide: observe that –

Compatibility of component material and structural surface is established.

Assessor guide: confirm that –

Compatibility of between species/types of construction materials of component and surface can be given.

Criteria 25.12A.1.4

Installation site of system is identified.

Assessor guide: observe that –

Installation site is correctly identified from plans.

Assessor guide: confirm that –

Element 25.12A.2 Select Auxiliary System

Criteria 25.12A.2.1

Auxiliary system selected in accordance with job requirements.

Assessor guide: observe that –

Systems such as bilge, freshwater, plumbing are identified.

Assessor guide: confirm that –

Systems relevant to job task can be given. Sequence of installation can be given.

Criteria 25.12A.2.2

Material structure and installation procedures are identified.

Assessor guide: observe that –

Framework, footings, beds and system materials are identified. Sequence of installation is identified.

Assessor guide: confirm that –

Material species of structure/system and installation process can be given.

<p>Criteria 25.12A.2.3 Associated installation/assembly, plans/instruction are identified and verified.</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> Plans/instruction relevant to installation and assembly of selected system can be given.</p>
<p>Element 25.12A.3 Install Auxiliary System</p>		
<p>Criteria 25.12A.3.1 Appropriate tools for specified installation are selected</p>	<p><i>Assessor guide: observe that –</i> Specific tools are selected.</p>	<p><i>Assessor guide: confirm that –</i> Tools, associated with system installation, can be identified and their uses given.</p>
<p>Criteria 25.12A.3.2 Where applicable, structural area cut to suit installation requirements.</p>	<p><i>Assessor guide: observe that –</i> In accordance with system to be installed, sections such as unit support/bracing etc requiring structural modification are identified. Appropriate tools are selected and used.</p>	<p><i>Assessor guide: confirm that –</i> Practices used in modifying structural components, to suit system applications can be given.</p>
<p>Criteria 25.12A.3.3 Where applicable, structural reinforcement fitted to suit job requirement.</p>	<p><i>Assessor guide: observe that –</i> Sections requiring structural reinforcement and materials used, such as foams, timber, fibre reinforced plastics, metal etc are identified.</p>	<p><i>Assessor guide: confirm that –</i> Procedures used in applying the reinforcement to structural sections can be given.</p>
<p>Criteria 25.12A.3.4 Structural area prepared for surface preparation.</p>	<p><i>Assessor guide: observe that –</i> Reinforced section requiring sanding, in accordance with job requirements, are identified. Abrasive material/sanding tools are selected.</p>	<p><i>Assessor guide: confirm that –</i> Method of sanding for surface preparation can be given.</p>
<p>Criteria 25.12A.3.5 Coating sealants and/or isolation materials are applied to suit job requirements.</p>	<p><i>Assessor guide: observe that –</i> Appropriate sealants, coatings/isolation materials, such as sika, paints, flowcoat, nylon etc are selected and applied in accordance with job requirements.</p>	<p><i>Assessor guide: confirm that –</i> Sealant coatings and/or isolation materials can be identified Application procedures can be given.</p>
<p>Criteria 25.12A.3.6 Fastening methods are applied to suit job application.</p>	<p><i>Assessor guide: observe that –</i> Appropriate fastening method and type/materials species can be selected. Appropriate tools are selected and used in accordance with job task.</p>	<p><i>Assessor guide: confirm that –</i> Practice used in fastening application can be given.</p>
<p>Criteria 25.12A.3.7 Installation procedures applied in accordance with job specification.</p>	<p><i>Assessor guide: observe that –</i> System is correctly installed in accordance with plans/verbal instruction. Where through hull and associated fittings are required, watertight integrity is maintained.</p>	<p><i>Assessor guide: confirm that –</i> System requirements and installation procedures are understood and can be explained.</p>

<p>Criteria 25.12A.3.8 Clean work practices are applied.</p>	<p><i>Assessor guide: observe that –</i> Waste materials such as resin, sealants etc. are removed in accordance with workplace quality procedure and disposed of in an environmentally sustainable manner in accordance with legislative requirements.</p>	<p><i>Assessor guide: confirm that –</i> Waste materials can be identified and removal practices given. Waste disposal obligations and regulations can be given.</p>
<p>Element 25.12A.4 Test Operation of Auxiliary System</p>		
<p>Criteria 25.12A.4.1 Pre-test checks are applied and verified before standard testing procedures.</p>	<p><i>Assessor guide: observe that –</i> Pre-test check list selected and verification made in accordance with job requirements.</p>	<p><i>Assessor guide: confirm that –</i> Standard pre-testing checks can be given.</p>
<p>Criteria 25.12A.4.2 Test operation procedures are identified and verified.</p>	<p><i>Assessor guide: observe that –</i> Testing procedures are identified from standard operational manual. Operation manual is verified against system identity.</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 25.12A.4.3 Where required, test equipment is correctly set-up and used in accordance with testing practice.</p>	<p><i>Assessor guide: observe that –</i> Appropriate test equipment is selected and set up correctly.</p>	<p><i>Assessor guide: confirm that –</i> Role, function and set-up procedure of test equipment can be given.</p>
<p>Criteria 25.12A.4.4 Systems tested in accordance with specified operational procedures.</p>	<p><i>Assessor guide: observe that –</i> Correct operation of system is verified.</p>	<p><i>Assessor guide: confirm that –</i> Practice used in testing operation of installed system can be given.</p>
<p>Criteria 25.12A.4.5 All faults are recorded and reported to appropriate authorities.</p>	<p><i>Assessor guide: observe that –</i> Where applicable, fault diagnosis is recorded and identified to appropriate personnel.</p>	<p><i>Assessor guide: confirm that –</i> Recording procedures for fault diagnosis and identification can be given.</p>
<p>Criteria 25.12A.4.6 Faults are rectified and re-tested for correct operation.</p>	<p><i>Assessor guide: observe that –</i> Diagnosed faults are rectified and re-testing procedures applied.</p>	<p><i>Assessor guide: confirm that –</i> Methods used for rectifying faults and re-testing of system operations can be given.</p>
<p>Criteria 25.12A.4.7 Final test operation recorded and documented according to standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> In accordance with system operation check list, final test approval is documented.</p>	<p><i>Assessor guide: confirm that –</i> Test operation check list can be identified and recording procedure for final test clearance given.</p>

Range statement

This unit applies to installation and testing practices of auxiliary systems for marine vessels. Work may be undertaken autonomously or as part of a team. Work may include the installation and testing operations of systems such as bilge, freshwater, fire (water) and sanitary plumbing systems. Lifting systems include davits, crane and winch units. Locations may include external and internal locations for foundations, footings, beds and frameworks etc completed prior to installation and commissioning. All specifications applied via engineering drawings, written or verbal instructions. Routine modifications and alterations are of a minor nature not requiring specification changes or technical recording. Testing should be undertaken in accordance with manufacturer specifications, guidelines, requirements and limitations. Testing procedures may include engineering practices for determining correct operational function of mechanical, fluid power systems, equipment, components and associated items. Extends to the use of mechanical, pneumatic/electro-pneumatic, electronic (analog/digital) and associated instruments, measuring variables such as temp, pressure, flow rate, levels, light, density or any other process variable. Tasks may be undertaken in a workshop/site, moored or in a sea trial situation. All work and work practices undertaken to regulatory and legislative requirements. Where installation only is required, Unit 10.13A (Assemble and install equipment and accessories/ancillaries) should be selected.

Evidence guide**Assessment context**

This unit should be assessed on the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will have access to: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with installing and testing operations of marine auxiliary systems or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 25.13A A Produce three-dimensional plugs/moulds

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 12

This unit covers the competencies required for the manufacturing of three dimensional plugs and where applicable, solid and/or split moulds constructions used in marine vessel construction.

Note - This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V)

Pre-requisite units - Path 1

2.5C11 Measure with graduated devices

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

4.18A General woodworking machine operations

12.7A Mark off/out structural fabrications and shapes

25.2A Form and integrate fibre-reinforced structures

9.1A Draw and interpret sketch

18.1A Use hand tools

25.3A Set up marine vessel structures

Element 25.13A.1 Determine plug requirements

Criteria 25.13A.1.1

Plug specifications are established from drawings, relevant documentation and client discussion as appropriate.

Assessor guide: observe that –

Material dimensions and specified plug drawing are identified. Relevant drawing and material specifications can be given.

Assessor guide: confirm that –

Criteria 25.13A.1.2

Plug construction materials are selected in accordance with job requirements and specifications.

Assessor guide: observe that –

Materials, such as timber, plywood, fastenings, fillers etc are identified from specifications/drawings. In accordance with construction details, correct plug materials are selected.

Assessor guide: confirm that –

Plug construction materials can be given.

Criteria 25.13A.1.3

Plug coating materials are selected to meet specifications in accordance with organisational

Assessor guide: observe that –

Plug finishing coating materials such as single/two packs paints and their application procedures are identified. Dimensions relevant to plug components are marked out accurately.

Assessor guide: confirm that –

Plug coating materials can be given.

Criteria 25.13A.1.4

Appropriate tooling and machinery selected.

Assessor guide: observe that –

Hand tools, hand held power tools and workshop machinery are selected to suit plug construction.

Assessor guide: confirm that –

Hand tools, hand held power tools and workshop machinery can be identified and their uses given.

Element 25.13A.2 Construct plug

Criteria 25.13A.2.1

Plug material/s are accurately marked out in accordance with plug construction requirements.

Assessor guide: observe that –

Dimensions relevant to plug components are marked out accurately according to construction plan.

Assessor guide: confirm that –

Correct dimensions and application procedures for marking out can be given.

<p>Criteria 25.13A.2.2 Where applicable, plug release angles/taper, flanges and rounding/concaving of corners carried out.</p>	<p><i>Assessor guide: observe that –</i> Sections requiring release angles/tapers, flanges and rounding/concaving are identified and produced.</p>	<p><i>Assessor guide: confirm that –</i> Purpose of release angles/tapers, flanges, rounding/concaving of corner sections can be given.</p>
<p>Criteria 25.13A.2.3 Appropriate tools, machine/s and construction practices used to construct plug.</p>	<p><i>Assessor guide: observe that –</i> Hand tools/hand held power tools and workshop machinery are used correctly and safely in accordance with plug construction requirements.</p>	<p><i>Assessor guide: confirm that –</i> Appropriate hand tools/hand held power tools and workshop machinery can be identified and their uses given.</p>
<p>Element 25.13A.3 Finish plug</p>		
<p>Criteria 25.13A.3.1 Plug is checked for compliance with specifications/drawing.</p>	<p><i>Assessor guide: observe that –</i> Practices used to check external/internal dimensions against specification/drawings are applied. External/internal dimensions of plug aligns with plug specification /drawing.</p>	<p><i>Assessor guide: confirm that –</i></p>
<p>Criteria 25.13A.3.2 Where applicable, final finish coating/s applied to plug where required to comply with specifications.</p>	<p><i>Assessor guide: observe that –</i> If applicable, final finish coating/s and application sequence applied in accordance with job specifications.</p>	<p><i>Assessor guide: confirm that –</i> Method of application and sequence of final finish coating can be given.</p>
<p>Criteria 25.13A.3.3 Where applicable, plug prepared for mould manufacturing in accordance with specifications or standard operating procedures.</p>	<p><i>Assessor guide: observe that –</i> If applicable, sanding, buffing/polishing practices in preparing plug, for mould lay-up is carried out in accordance with workshop procedures.</p>	<p><i>Assessor guide: confirm that –</i> Procedures used for sanding/buffing/polishing of plug can be given.</p>
<p>Element 25.13A.4 Determine mould requirements</p>		
<p>Criteria 25.13A.4.1 Mould construction specifications and drawings interpreted.</p>	<p><i>Assessor guide: observe that –</i> Mould construction materials and lay-up sequence relevant to associated specification/drawing are identified.</p>	<p><i>Assessor guide: confirm that –</i> Mould materials and associated construction practices can be given.</p>
<p>Criteria 25.13A.4.2 Mould construction materials selected in accordance with specifications.</p>	<p><i>Assessor guide: observe that –</i> Mould construction/reinforcement materials such as matting, stiffening products are selected to suit job requirements.</p>	<p><i>Assessor guide: confirm that –</i> Mould construction materials can be given.</p>
<p>Criteria 25.13A.4.3 Appropriate tools and machinery/equipment selected for job application.</p>	<p><i>Assessor guide: observe that –</i> Correct hand tools, hand held power tools and workshop machinery/equipment are selected in accordance with job requirements.</p>	<p><i>Assessor guide: confirm that –</i> Tools, machinery/equipment required to construct mould can be identified and their uses explained.</p>

Element 25.13A.5 Produce mould**Criteria 25.13A.5.1**

Tooling coat is applied to plug in accordance with standard application procedures.

Assessor guide: observe that –

Tooling gelcoat is applied correctly, in accordance with workshop procedures and manufacturer's specification.

Assessor guide: confirm that –

Method of applying tooling gelcoat can be identified and use of equipment can be given.

Criteria 25.13A.5.2

Construction materials are applied to plug in accordance with appropriate lay-up sequence and procedure.

Assessor guide: observe that –

Lay-up sequence and procedure is followed correctly.

Assessor guide: confirm that –

For mould construction, method of material lay-up sequence and application procedure can be given.

Criteria 25.13A.5.3

Where applicable, apply stiffening/bracing materials in accordance with job requirements.

Assessor guide: observe that –

If applicable, sections requiring stiffening/bracing are identified and appropriate materials applied correctly.

Assessor guide: confirm that –

If applicable, methods used to apply stiffening/bracing materials can be given.

Criteria 25.13A.5.4

Where applicable, prepare mould for production run/s.

Assessor guide: observe that –

If applicable, practices used in preparing a new mould, for production runs are applied.

Assessor guide: confirm that –

Procedures used to prepare a new mould can be given.

Range statement

This unit covers the manufacture of three-dimensional plugs and, where applicable, solid and/or split mould constructions. Work may be undertaken autonomously or as part of a team. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures relevant to industry standards. Tasks may include the use of hand and mechanical lay-up practices for plug/mould construction. Materials used may include a variety of timber, metal, plastic, fibreglass composites, fillers etc. Hand tools/ power tools and workshop machinery/equipment can also be used in conjunction with construction practices. Where mark off/out skills are required then Unit 12.7A (Mark off/out structural fabrications and shapes) should also be selected.

Evidence guide**Assessment context**

Assessment may occur on the job or in a simulated workplace. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.

The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with:

- All tools, equipment, materials and documentation required.

The candidate will be permitted to refer to the following documents:

- Any relevant workplace procedures.

- Any relevant product and manufacturing specifications.

The candidate will be required to:

- Orally, or by other methods of communication, answer questions put by the assessor.

- Identify colleagues who can be approached for the collection of competency evidence where appropriate.

- Present evidence of credit for any off-job training related to this unit.

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit is to be assessed in conjunction with a production machine or equipment. The unit could also be assessed in conjunction with units assessing the safety, quality, communication, materials handling, recording and reporting associated with producing three-dimensional plugs and moulds or other competencies requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment, the individual will:

- demonstrate safe working practises at all times,

- communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment:

- take responsibility for the quality of their own work:

- plan tasks in all situations and review task requirements as appropriate:

- perform all tasks in accordance with standard operating procedures:

- perform all tasks to specification;

- use accepted engineering techniques, practices, processes and workplace procedures.

Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 25.14A A Perform marine slipping operations

Band – Specialisation band A

Field – Marine vessel construction

Unit Weight 2

This unit covers the competencies required for slipping a range of marine vessels such as work/pleasure craft, yachts etc. to suit capacity of slipping facility. It covers the

set up of slipping facilities, hauling out and launching of vessels using a range of methods to suit the slipping facility.

Pre-requisite units - Path 1

9.2A Interpret technical drawing

18.2A Use power tools/hand held operations

12.7A Mark off/out structural fabrications and shapes

18.1A Use hand tools

Element 25.14A.1 Set up slipping facilities

Criteria 25.14A.1.1

Set up of slipping facility is determined to suit vessel in accordance with organisational and legislative requirements.

Assessor guide: observe that –

Slipping set up takes into account mooring facility, slipping facility hull design, other applicable slipping requirements and required access.

Assessor guide: confirm that –

Common mooring facilities identified and slipping facilities and methods are explained. Hull designs can be related to slipping requirements. Safety and legislative requirements for slipping can be given.

Criteria 25.14A.1.2

Where applicable, measurements to suit hull structure are taken.

Assessor guide: observe that –

Measurements relevant to positioning of hull structure on slipping facilities are identified from plans/verbal instruction.

Assessor guide: confirm that –

Different types of hull structures can be given. Set up of slipping facility to suit hull/backbone structures can be given.

Criteria 25.14A.1.3

Where applicable, hull support bearers are safely positioned to suit hull structure.

Assessor guide: observe that –

Relevant support bearers requiring positioning, to suit backbone structure, and securing methods are identified.

Assessor guide: confirm that –

Techniques for positioning hull support bearers are outlined

Safety requirements in relation to setting up hull support

Element 25.14A.2 Perform hauling out procedures

Criteria 25.14A.2.1

Slipping facilities are positioned to suit slipping application.

Assessor guide: observe that –

Slipping facility is correctly positioned.

Assessor guide: confirm that –

The correct positioning of slipping facility to suit specified hull can be given.

Criteria 25.14A.2.2

Vessel is positioned to suit slipping set up.

Assessor guide: observe that –

Vessel is positioned correctly in accordance with set up of slipping facility.

Assessor guide: confirm that –

Correct vessel positioning can be given in relation to backbone/bearer support.

<p>Criteria 25.14A.2.3 Vessel retaining ropes are selected and secured correctly, in accordance with slipping facility and vessel retaining requirements.</p>	<p><i>Assessor guide: observe that –</i> Vessel retaining requirements and slipping facility arrangements are established. Appropriate vessel retaining ropes are selected. Ropes are handled and cleated/secured correctly.</p>	<p><i>Assessor guide: confirm that –</i> Appropriate vessel retaining ropes are identified and method of securing can be given. Types of knots are identified and purpose explained.</p>
<p>Criteria 25.14A.2.4 Vessel is grounded/levelled for positioning of hull support</p>	<p><i>Assessor guide: observe that –</i> Vessel is grounded/trimmed correctly to aid levelling of vessel for positioning of relevant hull supports.</p>	<p><i>Assessor guide: confirm that –</i> Procedures for grounding/levelling of vessel can be given.</p>
<p>Criteria 25.14A.2.5 Hull support mechanics are correctly positioned. can be identified and their uses can be given.</p>	<p><i>Assessor guide: observe that –</i> Arms, straps slings, etc. are positioned correctly.</p>	<p><i>Assessor guide: confirm that –</i> Different hull support mechanics such as arms, straps slings</p>
<p>Criteria 25.14A.2.6 Safety checks of vessel stability are carried out.</p>	<p><i>Assessor guide: observe that –</i> Appropriate safety checks to ensure vessel stability are applied.</p>	<p><i>Assessor guide: confirm that –</i> Safety checks relevant to stability of vessel, before extraction from water, can be given.</p>
<p>Element 25.14A.3 Perform launching procedures</p>		
<p>Criteria 25.14A.3.1 Vessel support and slip devices checked for safety.</p>	<p><i>Assessor guide: observe that –</i> Before launching, safety checks on vessel stability supports such as props, bearers, wedge, slings etc are carried out.</p>	<p><i>Assessor guide: confirm that –</i> Correct procedures used to check vessel stability before launching can be given.</p>
<p>Criteria 25.14A.3.2 Pre-launch safety checks for vessel seaworthiness are applied.</p>	<p><i>Assessor guide: observe that –</i> Safety checks on fittings relevant to water ingress are carried out.</p>	<p><i>Assessor guide: confirm that –</i> Pre-launch safety checks, such as bilge plug, water inlet valves, etc. can be given.</p>
<p>Criteria 25.14A.3.3 Launch practices are carried out according to standard procedure and organisational requirements.</p>	<p><i>Assessor guide: observe that –</i> Cradle retaining devices, such as chocks are released.</p>	<p><i>Assessor guide: confirm that –</i> Procedures used in the release of slipping facility can be given.</p>
<p>Criteria 25.14A.3.4 Hull support devices are re-positioned to prevent obstruction during vessel removal.</p>	<p><i>Assessor guide: observe that –</i> Hull supports such as arms, slings are positioned to allow clear passage for removal of vessel.</p>	<p><i>Assessor guide: confirm that –</i> Practice used in re-positioning of hull supports can be given.</p>

Criteria 25.14A.3.5

Where applicable, vessel is moored using appropriate restraints.

Assessor guide: observe that –

Vessel is moored in accordance with requirements of mooring facility Retaining ropes are belayed/secured correctly, and where necessary, appropriate knots are used.

Assessor guide: confirm that –

In accordance with mooring facility used, procedures applied to retaining of vessel can be given. Advantages of various securing methods can be explained.

Range statement

This unit covers the competencies required for slipping a range of marine vessels such as work/pleasure craft, yachts etc. to suit capacity of slipping facility. It covers the preparation of slipping facilities, hauling out and launching of vessels using a range of methods appropriate to the slipping facility. Hull support devices may include slings, shoring, cables, stays, blocks, chocks etc. Work is undertaken in a team environment. Predetermined standards of quality and safety are observed and work is carried out following standard operational procedures. All work and work practices are undertaken to regulatory and legislative requirements. Where boat is to be moored using the vessel's engine or with the assistance of a work boat, Unit 50.9A (Safely operate a mechanically powered recreational boat) should be selected. Where travel lifts, forklifts and/or cranes are used, Unit 11.10A (Operate mobile load shifting equipment) or other appropriate units should also be selected.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job, or a combination of on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. - Any relevant codes, standards, manuals and reference materials. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with slipping operations or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted engineering techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities

Unit MEM 50.1E A Classify recreational boating technologies and features

Band – Boating Services

Field – Boating services

This unit covers the competencies required to recognise vessel features, fittings and fixtures, to correctly identify power and transmission systems, describe system operating purpose and use appropriate terminology

Element 50.1E.1 Identify vessel configurations used in boating applications

Criteria 50.1E.1.0

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.1E.1.1

Hull forms and superstructure features are identified

Assessor guide: observe that –

Hull and superstructure designs are identified on vessels and in catalogues, diagrams and plans

Assessor guide: confirm that –

The candidate identifies the likely applications of hull and superstructure design configurations

Criteria 50.1E.1.2

Hull designs are matched to normal vessel application

Assessor guide: observe that –

Hulls are classified as planing or displacement type

Assessor guide: confirm that –

Criteria 50.1E.1.3

Construction materials are identified

Assessor guide: observe that –

Assessor guide: confirm that –

The candidate identifies construction materials and their characteristics

Appropriate marine terminology is used in describing vessels, including: starboard, port, fore, aft, stern, bow, quarter, transom, skeg, keel, tiller, chine, stem, bow rail, hull, freeboard, gunwale, deck

Element 50.1E.2 Identify and describe the functions of the major systems of a recreational vessel and trailer.

Criteria 50.1E.2.1

Systems used for vessel propulsion, steering, navigation, communication, services and appliances are identified and functions are explained

Assessor guide: observe that –

Solar, wind, hydraulic, mechanical, electrical and fuelled systems are located and identified on vessels and in diagrams and plans

Assessor guide: confirm that –

Function of the system described matches the system operating principles and application

The candidate identifies the propulsion system's key components

<p>Criteria 50.1E.2.2 Trailer components including winching, coupling, load securing, braking, suspension and electrical systems are identified and functions are explained</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> Corrosion/electrolysis and cavitation control methods are identified</p>
Element 50.1E.3 Identify fasteners and fittings used in recreational boating applications		
<p>Criteria 50.1E.3.1 Fasteners used for attaching components and systems to the vessel are identified, explaining the reasons for the materials selection and maintenance requirements</p>	<p><i>Assessor guide: observe that –</i> Fasteners and fittings are located and identified on components, vessels and in catalogues, diagrams and plans</p>	<p><i>Assessor guide: confirm that –</i> Function of the fasteners and fittings described matches the application</p>
<p>Criteria 50.1E.3.2 Fittings are identified and categorised for function and application</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> The candidate identifies the likely application of fasteners and fittings</p>
<p>Criteria 50.1E.3.3 Replacement and/or repair fasteners are identified and matched to applications</p>	<p><i>Assessor guide: observe that –</i></p>	<p><i>Assessor guide: confirm that –</i> The candidate identifies the likely application of fasteners and fittings</p>
Element 50.1E.4 Use identification information to confirm vessel origins		
<p>Criteria 50.1E.4.1 Vessel identification plates and registration tags are located</p>	<p><i>Assessor guide: observe that –</i> Identification tags and labels are located and used with relevant technical information</p>	<p><i>Assessor guide: confirm that –</i> Information is interpreted and recorded accurately</p>
<p>Criteria 50.1E.4.2 Engine number, model designation and other details are located and recorded</p>	<p><i>Assessor guide: observe that –</i> Identification tags and labels are located and used with relevant technical information</p>	<p><i>Assessor guide: confirm that –</i> Information is interpreted and recorded accurately</p>
<p>Criteria 50.1E.4.3 Identification data is used to confirm vessel year of manufacture, refurbishment (and/or registration)</p>	<p><i>Assessor guide: observe that –</i> Identification tags and labels are located and used with relevant technical information</p>	<p><i>Assessor guide: confirm that –</i> Information is interpreted and recorded accurately</p>

Element 50.1E.5 Identify configuration of motorised propulsion systems**Criteria 50.1E.5.1**

Vessel power plant(s) are located and categorised for fuel system, number and configuration of cylinders

Assessor guide: observe that –

Power plants, propulsion systems and fittings are located and identified on vessels and in catalogues and diagrams

Assessor guide: confirm that –

Power plants, propulsion systems and fittings are categorised and identified to match the examples shown
Terminology for the operational descriptions include appropriate use of the terms and measurements for area, volume, pressure, ratio, power ratings, bore, stroke, capacity

Criteria 50.1E.5.2

Engine cooling and control systems are identified and categorised

Assessor guide: observe that –

Power plants, propulsion systems and fittings are located and identified on vessels and in catalogues and diagrams

Assessor guide: confirm that –

Power plants, propulsion systems and fittings are categorised and identified to match the examples shown
Terminology for the operational descriptions include appropriate use of the terms and measurements for area, volume, pressure, ratio, power ratings, bore, stroke, capacity

Criteria 50.1E.5.3

Engine lubricating systems are identified and categorised

Assessor guide: observe that –

Power plants, propulsion systems and fittings are located and identified on vessels and in catalogues and diagrams

Assessor guide: confirm that –

Power plants, propulsion systems and fittings are categorised and identified to match the examples shown
Terminology for the operational descriptions include appropriate use of the terms and measurements for area, volume, pressure, ratio, power ratings, bore, stroke, capacity

Criteria 50.1E.5.4

Vessel propulsion (transmission) system is categorised for type and operation

Assessor guide: observe that –

Power plants, propulsion systems and fittings are located and identified on vessels and in catalogues and diagrams

Assessor guide: confirm that –

Power plants, propulsion systems and fittings are categorised and identified to match the examples shown
Terminology for the operational descriptions include appropriate use of the terms and measurements for area, volume, pressure, ratio, power ratings, bore, stroke, capacity

Criteria 50.1E.5.5

Operating cycles and cylinder configuration for 2 stroke, 4 stroke, diesel and petrol powered engines are described

Assessor guide: observe that –

Power plants, propulsion systems and fittings are located and identified on vessels and in catalogues and diagrams

Assessor guide: confirm that –

Power plants, propulsion systems and fittings are categorised and identified to match the examples shown
Terminology for the operational descriptions include appropriate use of the terms and measurements for area, volume, pressure, ratio, power ratings, bore, stroke, capacity

Range statement

This unit may be applied in a workplace in which vessels are repaired in or out of water.

Descriptions of engine operation should include:

- Identification of valve and port types, fuel delivery method (diesel, fuel injection and carburetted), ignition method, cooling and lubrication system type,
- Description of cycle sequence and operational timing
- Propulsion systems include sail, outboard and inboard/outboard drives, jet drives

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, industrial chemicals, communication, materials handling and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.2A A Work safely on marine craft

Band – Specialisation band A

Field – Boating services

Unit Weight 1

This Unit covers the competencies required to identify risks and to safely work on and move around vessels for sales, service or repair, on and out of the water. The unit

may be applied to recreational vessels in both land and water environments.

Element 50.2A.1 Identify safe access methods and working platforms

Criteria 50.2A.1.1

Appropriate access methods are used to gain access to the work location

Assessor guide: observe that –

Workplace required procedures are followed including any required fall protection.

Assessor guide: confirm that –

Workplace procedures are able to be interpreted and the reasons for the requirements explained.

Criteria 50.2A.1.2

Work platforms are inspected to confirm that they are appropriate for the purpose, are correctly located and comply with any regulatory controls

Assessor guide: observe that –

Correct platforms, scaffolding and related access equipment are selected and located according to workplace procedures and regulatory provisions

Assessor guide: confirm that –

Workplace procedures are able to be interpreted and the reasons for the requirements explained.

Element 50.2A.2 Move around vessels safely

Criteria 50.2A.2.1

Risks and hazards are identified from observation and workplace approved risk controls are identified

Assessor guide: observe that –

Appropriate risk control measures are used

Assessor guide: confirm that –

The hazards when working on vessels in the water and on land can be identified, including: moorings, cables and winches, slings and pulleys, anchors, trailerable vessels, cranes, gantries, jacks, dollies and props, forklifts, fuel storage, flammable gas storage and ventilation systems

Criteria 50.2A.2.2

2.2 Appropriate engineering controls and personal protection equipment for work with recreational vessels are used

Assessor guide: observe that –

Appropriate risk control measures are used

Assessor guide: confirm that –

Appropriate workplace procedures and precautions can be matched to the hazards.

Criteria 50.2A.2.3

Appropriate warning signs and signals are used

Assessor guide: observe that –

Appropriate risk control measures are used

Assessor guide: confirm that –

Appropriate workplace procedures and precautions can be matched to the hazards

Element 50.2A.3 Work safely on recreational vessels**Criteria 50.2A.3.1**

Work methods and tools are selected appropriate for the task

Assessor guide: observe that –

The work methods and controls are appropriate for the task and work environment and follow workplace procedures

Assessor guide: confirm that –

The hazards when working on vessels in the water and on land can be identified, including:

Noise

Confined spaces

Working at heights/falls

Manual handling

Hazardous Substances, liquids/dust/fumes

Dangerous goods including fuels

Electrical installations and equipment

Gas and liquid fuelled appliances

Criteria 50.2A.3.2

Appropriate engineering controls and personal protection equipment are identified from workplace procedures, selected and used

Assessor guide: observe that –

Equipment is checked by candidates for working condition (and for current dates, labels or tags if required by regulation/codes)

Assessor guide: confirm that –

Appropriate workplace procedures and precautions can be matched to the hazards.

Criteria 50.2A.3.3

Work residues are minimised, controlled and disposed of following approved procedures

Assessor guide: observe that –

The work methods and controls are appropriate for the task and work environment and follow workplace procedures

Assessor guide: confirm that –

Appropriate workplace procedures and precautions can be matched to the hazards

Criteria 50.2A.3.4

3.4 Work site is maintained in a clean and tidy state, following approved workplace housekeeping methods

Assessor guide: observe that –

The work methods and controls are appropriate for the task and work environment and follow workplace procedures

Assessor guide: confirm that –

Appropriate workplace procedures and precautions can be matched to the hazards.

Element 50.2A.4 Follow emergency procedures for incidents in the marine environment**Criteria 50.2A.4.1**

Appropriate responses are used in reaction to incidents and accidents

Assessor guide: observe that –

Procedures are followed promptly and accurately and in accordance with workplace policy and regulatory requirements

Assessor guide: confirm that –

Organisations and/or personnel who may offer emergency assistance are able to be identified, including contact protocols

Criteria 50.2A.4.2

Communication systems and methods are used to convey emergency messages

Assessor guide: observe that –

Procedures are followed promptly and accurately and in accordance with workplace policy and regulatory requirements

Assessor guide: confirm that –

Effective communication of the nature and location of the emergency is made

Criteria 50.2A.4.3

Drills for fire, explosion, toxic/dangerous spills and leakage, personal illness or injury, man overboard, collision or vessel damage are followed

Assessor guide: observe that –

Procedures are followed promptly and accurately and in accordance with workplace policy and regulatory requirements

Assessor guide: confirm that –

Range statement

This unit may be applied in a workplace in which vessels are repaired in or out of water involving the use of dangerous goods and hazardous materials, noxious waste products etc. Personal protection can include goggles, masks, air helmets, head/hearing protection, fall arrest devices, U.V. protection, safety boots and appropriate work wear.

This unit describes the competencies that are particular to the marine environment.

This unit describes the competencies which are beyond those safety requirements normally applied in the workplace as described in Unit MEM 1.2F (Apply principles of Occupational Health & Safety (OH&S) in work environment) or specifically described in individual units such as Welding. The unit MEM 13.3A “Work Safely with industrial chemicals and materials” may be assessed with this unit

Work platforms include purpose built, mobile and pre-fabricated scaffold and elevated work platforms.

Access to work areas may include gang planks, access ladders, bosun’s chairs, rigging

Emergency communication systems include voice, flares, radio, hand signals, telephone, flags, computer, EPERB

Engineering controls include ventilation and extraction systems, dust control devices, screens

Housekeeping procedures include returning materials and equipment to appropriate storage, sweeping, containment and mopping of spills and appropriate disposal of waste products

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, industrial chemicals, communication, materials handling and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.3A A Follow work procedures to maintain the marine environment

Band – Specialisation band A

Field – Boating services

Unit Weight 1

This unit covers the competencies required to conduct work on vessels without adversely affecting the quality of the marine environment

Element 50.3A.1 Identify from work procedures and personal observation activities that may impact on the

Criteria 50.3A.1.1

Workplace environment and health and safety procedures are located and used to identify approved work procedures

Assessor guide: observe that –

Procedures to deal with hazardous substances, spills, waste management, noise, air and water quality are identified, including: drains, spill containment equipment and clean up materials

Assessor guide: confirm that –

The candidate can relate the requirements of approved work procedures to environmental regulations
Work activities which may cause air, water, land, noise or visual pollution are identified

Criteria 50.3A.1.2

Workplace is observed noting:
- location of drains and interceptors, bunded work and storage areas, recyclable, solid and hazardous waste storage, emergency equipment and spill kits
- areas where work may impact on the environment
- equipment and practices used to minimise environmental damage and legally dispose of waste

Assessor guide: observe that –

Procedures to deal with hazardous substances, spills, waste management, noise, air and water quality are identified, including: drains, spill containment equipment and clean up materials

Assessor guide: confirm that –

The candidate can relate the requirements of approved work procedures to environmental regulations
Work activities which may cause air, water, land, noise or visual pollution are identified

Element 50.3A.2 Complete assigned housekeeping duties

Criteria 50.3A.2.1

Assigned housekeeping duties are completed following workplace procedures ensuring that:
- waste is correctly removed to appropriate location
- any damaged equipment is tagged for maintenance and notified to appropriate personnel
- schedules and records for housekeeping duties are maintained

Assessor guide: observe that –

The candidate self checks that work areas meet required standards

Assessor guide: confirm that –

The candidate can identify why waste must be classified, collected and disposed of in appropriate storage areas

Criteria 50.3A.2.2

Housekeeping duties are carried out following workplace approved safe work practices and procedures

Assessor guide: observe that –

Equipment and consumables are selected in accordance with the housekeeping task and workplace procedures

Assessor guide: confirm that –

Candidate can identify the benefits to the business and the environment of waste reduction, reuse of materials, recycling and legal disposal of other waste generated

Element 50.3A.3 Follow spill clean up procedures**Criteria 50.3A.3.1**

Source of spill is identified and stopped if possible and notification made to appropriate personnel

Assessor guide: observe that –

Work procedures are followed
 Work activities are prioritised to prevent spread of spills into the environment
 Waste is classified, collected and disposed of in appropriate storage areas

Assessor guide: confirm that –

The candidate matches appropriate spill containment and clean up method and materials to the type of spill

Criteria 50.3A.3.2

2 Appropriate materials are identified to contain spills including: booms, portable bunding, absorbent materials and drain blocks

Assessor guide: observe that –

Work procedures are followed
 Work activities are prioritised to prevent spread of spills into the environment
 Waste is classified, collected and disposed of in appropriate storage areas

Assessor guide: confirm that –

The candidate matches appropriate spill containment and clean up method and materials to the type of spill

Criteria 50.3A.3.3

Spills are cleaned up following workplace procedures

Assessor guide: observe that –

Work procedures are followed
 Work activities are prioritised to prevent spread of spills into the environment
 Waste is classified, collected and disposed of in appropriate storage areas

Assessor guide: confirm that –

The candidate matches appropriate spill containment and clean up method and materials to the type of spill

Criteria 50.3A.3.4

Waste is disposed of in appropriate locations and containers

Assessor guide: observe that –

Work procedures are followed
 Work activities are prioritised to prevent spread of spills into the environment
 Waste is classified, collected and disposed of in appropriate storage areas

Assessor guide: confirm that –

The candidate matches appropriate spill containment and clean up method and materials to the type of spill

Element 50.3A.4 Assist the business to maintain the quality of the environment**Criteria 50.3A.4.1**

Business environment policy is followed

Assessor guide: observe that –

Noise suppression devices are used on equipment such as compressors
 Environment policy is followed
 Dust control and waste containment systems are used for sanding, grinding, shaping, chipping operations

Assessor guide: confirm that –

The candidate can relate the requirements of approved work procedures to environmental regulations
 Approved procedures for work activities which may cause air, water, land, noise or visual pollution are identified

Criteria 50.3A.4.2

Excessive idling and revving of engines is avoided compressors

Assessor guide: observe that –

Noise suppression devices are used on equipment such as work procedures to environmental regulations
Environment policy is followed
Dust control and waste containment systems are used for sanding, grinding, shaping, chipping operations

Assessor guide: confirm that –

The candidate can relate the requirements of approved

Approved procedures for work activities which may cause air, water, land, noise or visual pollution are identified

Criteria 50.3A.4.3

Noisy activities are located away from neighbours where possible

Assessor guide: observe that –

Noise suppression devices are used on equipment such as compressors
Environment policy is followed
Dust control and waste containment systems are used for sanding, grinding, shaping, chipping operations

Assessor guide: confirm that –

The candidate can relate the requirements of approved

work procedures to environmental regulations
Approved procedures for work activities which may cause air, water, land, noise or visual pollution are identified

Criteria 50.3A.4.4

Noise suppression procedures are used where available

Assessor guide: observe that –

Noise suppression devices are used on equipment such as compressors
Environment policy is followed
Dust control and waste containment systems are used for sanding, grinding, shaping, chipping operations

Assessor guide: confirm that –

The candidate can relate the requirements of approved

work procedures to environmental regulations
Approved procedures for work activities which may cause air, water, land, noise or visual pollution are identified

Criteria 50.3A.4.5

Dust control and waste containment measures are used

Assessor guide: observe that –

Noise suppression devices are used on equipment such as compressors
Environment policy is followed
Dust control and waste containment systems are used for sanding, grinding, shaping, chipping operations

Assessor guide: confirm that –

The candidate can relate the requirements of approved

work procedures to environmental regulations
Approved procedures for work activities which may cause air, water, land, noise or visual pollution are identified

Criteria 50.3A.4.6

Waste is appropriately collected and disposed of compressors

Assessor guide: observe that –

Noise suppression devices are used on equipment such as work procedures to environmental regulations
Environment policy is followed
Dust control and waste containment systems are used for sanding, grinding, shaping, chipping operations

Assessor guide: confirm that –

The candidate can relate the requirements of approved

Approved procedures for work activities which may cause air, water, land, noise or visual pollution are identified

Range statement

This unit may be applied in a workplace in which vessels are constructed, repaired or maintained in the marine environment, or in close proximity to the marine environment, involving the use of dangerous goods and hazardous materials, noxious waste products etc. Personal protection includes goggles, masks, air helmets, head/hearing protection, fall arrest devices, U.V. protection, safety boots and appropriate work wear. The level of 'classification' of waste and pollutants required in this unit is limited to grouping by known material (for example fuels and oils, dust, paint products, fouled water, solvents etc). The range of this unit does not extend to specific identification or chemical analysis of waste products and pollutants.

This unit describes the competencies that are particular to the marine environment.

Engineering controls include ventilation and extraction systems, dust control devices, screens

Housekeeping procedures include returning materials and equipment to appropriate storage, sweeping, containment and mopping of spills and appropriate disposal of waste

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, industrial chemicals, communication, materials handling and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.4A A Maintain quality of environment by following marina codes

Band – Specialisation band A

Field – Boating services

Unit Weight 1

The purpose of this unit is to assist workers in the industry in the control of pollution through the limitation, capture and disposal of pollutants in the marine environment.

Pre-requisite units - Path 1

50.3A Follow work procedures to maintain the marine environment

Element 50.4A.1 Assess the environmental implications of the tasks to be conducted

Criteria 50.4A.1.1

Tasks to be conducted are listed or work instructions consulted to establish work requirements

Assessor guide: observe that –

Work requirements and vessel are assessed for potential pollutants

Assessor guide: confirm that –

The candidate can identify surface coatings, fittings and finishes, work methods, equipment and materials used and the by-products of the work.

Criteria 50.4A.1.2

Vessel to be maintained is visually inspected to establish any particular potential pollutants

Assessor guide: observe that –

Work requirements and vessel are assessed for potential pollutants

Assessor guide: confirm that –

The candidate can identify surface coatings, fittings and finishes, work methods, equipment and materials used and the by-products of the work.

Criteria 50.4A.1.3

Potential pollutants that may be produced as a result of the work are identified

Assessor guide: observe that –

Work requirements and vessel are assessed for potential pollutants

Assessor guide: confirm that –

The candidate can identify surface coatings, fittings and finishes, work methods, equipment and materials used and the by-products of the work.

Element 50.4A.2 Select work area and method

Criteria 50.4A.2.1

Possible work areas are identified for the work and selected to:

-conform with marina/slipway codes and local environmental regulations

- minimise risk of pollution

Assessor guide: observe that –

Work space selected provides the most effective pollution control available in the marina/slipway

Assessor guide: confirm that –

The candidate matches regulatory requirements with the work area

Implications for the environment of the work are able to be explained

Impact on the business of non-compliance are explained

Criteria 50.4A.2.2

Work method, equipment and materials are selected to minimise impact on the environment

Assessor guide: observe that –

Work space selected provides the most effective pollution control available in the marina/slipway

Assessor guide: confirm that –

The candidate matches regulatory requirements with the work area
Implications for the environment of the work are able to be explained
Impact on the business of non-compliance are explained

Criteria 50.4A.2.3

Pollution control measures are identified and implemented

Assessor guide: observe that –

Work space selected provides the most effective pollution control available in the marina/slipway

Assessor guide: confirm that –

The candidate matches regulatory requirements with the work area
Implications for the environment of the work are able to be explained
Impact on the business of non-compliance are explained

Element 50.4A.3 Dispose of potential pollutants**Criteria 50.4A.3.1**

Potential pollutants are classified, separated and collected appropriate for the recycling, treatment or storage system adopted by the business

Assessor guide: observe that –

Potential pollutants are disposed of according to regulatory requirements

Assessor guide: confirm that –

Regulatory requirements for waste are applied consistently

Criteria 50.4A.3.2

Collected pollutants are disposed of in accordance with regulatory requirements and workplace procedures

Assessor guide: observe that –

Potential pollutants are disposed of according to regulatory requirements

Assessor guide: confirm that –

Regulatory requirements for waste are applied consistently

Element 50.4A.4 Support implementation of marina and slipway environment management plans**Criteria 50.4A.4.1**

Workplace designated procedures for marina and slipway management are followed

Assessor guide: observe that –

Management plan requirements are followed

Assessor guide: confirm that –

The candidate can relate the implications of the marina code to the operation of the business and personal job role

Links between Marina codes/best management practice documentation and workplace procedures can be made. Business marina and slipway environment management plan requirements can be explained.

Criteria 50.4A.4.2

Observations of management plan effects and possible implementation improvements are identified and communicated to appropriate personnel

Assessor guide: observe that –

Management plan requirements are followed

Assessor guide: confirm that –

The candidate can relate the implications of the marina code to the operation of the business and personal job role

Links between Marina codes/best management practice documentation and workplace procedures can be made. Business marina and slipway environment management plan requirements can be explained.

Criteria 50.4A.4.3

Active, positive involvement in implementation of the environment management plan is consistently applied

Assessor guide: observe that –

Management plan requirements are followed

Assessor guide: confirm that –

The candidate can relate the implications of the marina code to the operation of the business and personal job role

Links between Marina codes/best management practice documentation and workplace procedures can be made. Business marina and slipway environment management plan requirements can be explained.

Range statement

This unit may be applied to operations in marinas and slipways, inland and coastal, public and private.

Marinas are defined as the buildings, wharves and surroundings in which vessels are stored and maintained. Slipways are defined as the areas where vessels are removed from the water for repair or maintenance.

Waste water includes all process water, cleaning water, contaminated storm water, bilge water, black/grey water and other waste to be accepted in pump-out stations.

Sources of pollution of waters and contamination of sediment from marina and slipway activities include paint, anti-fouling, (flakes or soluble), sand or grit from blasting operations, fuel or oil spills, discharges of emulsified oil, fumes and overspray from painting operations, domestic waste.

Some of these pollutants are contaminants such as heavy metals, solvents, hydrocarbons, and other toxicants.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, industrial chemicals and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all pre-requisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.5E A Refuel vessels

Band – Boating Services

Field – Boating services

Unit Weight 0

This unit covers the competencies required to refuel vessels and appliances

Pre-requisite units - Path 1

50.2A Work safely on marine craft

50.3A Follow work procedures to maintain the marine environment

Element 50.5E.1 Match fuels and additives to marine applications

Criteria 50.5E.1.1

Fuels are selected to match the engine or appliance

Assessor guide: observe that –

Correct fuel types and grades are selected for the engine type, operating cycle, year of manufacture, appliance brand/type

Assessor guide: confirm that –

Specifications are consulted to confirm fuel requirement for the engine/appliance
The candidate identifies correct fuel type (diesel, leaded/unleaded petrol), lubricant and additives to match the application

Criteria 50.5E.1.2

Alternative fuel applications are considered

Assessor guide: observe that –

Correct fuel types and grades are selected for the engine type, operating cycle, year of manufacture, appliance brand/type

Assessor guide: confirm that –

Specifications are consulted to confirm fuel requirement for the engine/appliance
The candidate identifies correct fuel type (diesel, leaded/unleaded petrol), lubricant and additives to match the application

Criteria 50.5E.1.3

Fuel additives and lubricants are selected based on vessel/appliance use and manufacturer's requirements

Assessor guide: observe that –

Correct fuel types and grades are selected for the engine type, operating cycle, year of manufacture, appliance brand/type

Assessor guide: confirm that –

Specifications are consulted to confirm fuel requirement for the engine/appliance
The candidate identifies correct fuel type (diesel, leaded/unleaded petrol), lubricant and additives to match the application

Element 50.5E.2

Criteria 50.5E.2.1

Personal protection for contact with fuels is identified

Assessor guide: observe that –

The candidate identifies the risks and control measures applicable to each fuel type from workplace information

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety

Criteria 50.5E.2.2

Dangers of volatile fuel liquids and vapours are identified

Assessor guide: observe that –

The candidate identifies the risks and control measures applicable to each fuel type from workplace information

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety

Criteria 50.5E.2.3 Precautions for minimising risks associated with volatile liquids are identified in workplace procedures	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures applicable to each fuel type from workplace information	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
Criteria 50.5E.2.4 Procedures to prevent build up of volatile vapours and gases are identified	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures applicable to each fuel type from workplace information	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
Criteria 50.5E.2.5 Regulatory requirements for refilling portable fuel containers are identified	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures applicable to each fuel type from workplace information	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
Element 50.5E.3 Identify safety and environmental requirements for fuel refill areas		
Criteria 50.5E.3.1 Correct locations for refuelling activities are used	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures in the workplace	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of environmental regulations and public and personal safety
Criteria 50.5E.3.2 The workplace strategies/procedures to limit danger from static electricity and other sources of ignition are applied	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures in the workplace	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of environmental regulations and public and personal safety
Criteria 50.5E.3.3 Identify protection systems in the workplace: - used to prevent spills entering drains or the water environment - that provide physical barriers to minimise accidental collision with fuelling facilities	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures in the workplace	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of environmental regulations and public and personal safety
Criteria 50.5E.3.4 Interpret signage for public safety needs and Hazchem requirements	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures in the workplace	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of environmental regulations and public and personal safety
Criteria 50.5E.3.5 Emergency stops and shut off devices are identified and activation methods described	<i>Assessor guide: observe that –</i> The candidate identifies the risks and control measures in the workplace	<i>Assessor guide: confirm that –</i> The candidate can relate the requirements of environmental regulations and public and personal safety

Element 50.5E.4 Refill fuel containers**Criteria 50.5E.4.1**

Refill portable liquid fuel tanks and appliances

Assessor guide: observe that –

Workplace approved procedures and areas are used
 Appropriate static control is applied
 Containers for volatile liquid fuels are checked for approved type, condition and suitability
 Sources of ignition are eliminated
 Condition of and dates on gas cylinders are checked for currency
 Adequate ventilation is ensured
 Over fill limiting devices are used
 Appropriate signage, ventilated work area and PPE are used

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
 Regulatory requirements are identified and explained

Appropriate extinguishing devices and emergency procedures are identified

Criteria 50.5E.4.2

Refill gas cylinders

Assessor guide: observe that –

Workplace approved procedures and areas are used
 Appropriate static control is applied
 Containers for volatile liquid fuels are checked for approved type, condition and suitability
 Sources of ignition are eliminated
 Condition of and dates on gas cylinders are checked for currency
 Adequate ventilation is ensured
 Over fill limiting devices are used
 Appropriate signage, ventilated work area and PPE are used

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
 Regulatory requirements are identified and explained

Appropriate extinguishing devices and emergency procedures are identified

Criteria 50.5E.4.3

Refill on board fuel tanks

Assessor guide: observe that –

Workplace approved procedures and areas are used
 Appropriate static control is applied
 Containers for volatile liquid fuels are checked for approved type, condition and suitability
 Sources of ignition are eliminated
 Condition of and dates on gas cylinders are checked for currency
 Adequate ventilation is ensured
 Over fill limiting devices are used
 Appropriate signage, ventilated work area and PPE are used

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
 Regulatory requirements are identified and explained

Appropriate extinguishing devices and emergency procedures are identified

Criteria 50.5E.4.4

Identify emergency procedures for leaks, spills and fire

Assessor guide: observe that –

Workplace approved procedures and areas are used
 Appropriate static control is applied
 Containers for volatile liquid fuels are checked for approved type, condition and suitability
 Sources of ignition are eliminated
 Condition of and dates on gas cylinders are checked for currency
 Adequate ventilation is ensured
 Over fill limiting devices are used
 Appropriate signage, ventilated work area and PPE are used

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
 Regulatory requirements are identified and explained

Appropriate extinguishing devices and emergency procedures are identified

Element 50.5E.5**Replace gas cylinders****Criteria 50.5E.5.1**

Appliances and pilot lights are turned off

Assessor guide: observe that –

Appropriate ventilation system, signage and PPE are used
 Sources of ignition are eliminated
 Safe work procedures are used
 Appropriate extinguishing devices and emergency procedures are identified

Assessor guide: confirm that –

The candidate explains the reasons for:
 ventilation of the work area and need for personal protection due to contact with gas and leak testing fittings

Criteria 50.5E.5.2

Gas lines are safely vented after closing gas valves

Assessor guide: observe that –

Appropriate ventilation system, signage and PPE are used
 Sources of ignition are eliminated
 Safe work procedures are used
 Appropriate extinguishing devices and emergency procedures are identified

Assessor guide: confirm that –

The candidate explains the reasons for:
 ventilation of the work area and need for personal protection due to contact with gas and leak testing fittings

Criteria 50.5E.5.3

Fittings are leak tested after fitting cylinders

Assessor guide: observe that –

Appropriate ventilation system, signage and PPE are used
 Sources of ignition are eliminated
 Safe work procedures are used
 Appropriate extinguishing devices and emergency procedures are identified

Assessor guide: confirm that –

The candidate explains the reasons for:
 ventilation of the work area and need for personal protection due to contact with gas and leak testing fittings

Criteria 50.5E.5.4

Bottle restraining devices are fitted and adjusted

Assessor guide: observe that –

Appropriate ventilation system, signage and PPE are used
 Sources of ignition are eliminated
 Safe work procedures are used
 Appropriate extinguishing devices and emergency procedures are identified

Assessor guide: confirm that –

The candidate explains the reasons for:
 ventilation of the work area and need for personal protection due to contact with gas and leak testing fittings

Criteria 50.5E.5.5

Identify emergency procedures for leaks and fire
 Sources of ignition are eliminated

Assessor guide: observe that –

Appropriate ventilation system, signage and PPE are used
 ventilation of the work area and need for personal protection due to contact with gas and leak testing fittings
 Safe work procedures are used
 Appropriate extinguishing devices and emergency procedures are identified

Assessor guide: confirm that –

The candidate explains the reasons for:
 protection due to contact with gas and leak testing fittings

Element 50.5E.6 Contain and clean up spills**Criteria 50.5E.6.1**

Potential for spills are identified

Assessor guide: observe that –

The candidate can follow workplace procedures and use equipment correctly
 Clean up equipment is correctly used
 Appropriate cleaning and disposal products are selected and disposed of within workplace procedures and environmental regulations

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe work procedures to environmental regulation and public and personal safety
 Regulatory requirements are identified and explained

Criteria 50.5E.6.2

Procedures for notification of spills are followed
equipment correctly

Assessor guide: observe that –

The candidate can follow workplace procedures and use
work procedures to environmental regulation and public and
Clean up equipment is correctly used
Appropriate cleaning and disposal products are selected and
disposed of within workplace procedures and environmental
regulations

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe
personal safety
Regulatory requirements are identified and explained

Criteria 50.5E.6.3

Workplace procedures are followed to contain spill and
minimise any environment or safety dangers

Assessor guide: observe that –

The candidate can follow workplace procedures and use
equipment correctly
Clean up equipment is correctly used
Appropriate cleaning and disposal products are selected and
disposed of within workplace procedures and environmental
regulations

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe
work procedures to environmental regulation and public and
personal safety
Regulatory requirements are identified and explained

Criteria 50.5E.6.4

Clean up equipment is identified and used

Assessor guide: observe that –

The candidate can follow workplace procedures and use
equipment correctly
Clean up equipment is correctly used
Appropriate cleaning and disposal products are selected and
disposed of within workplace procedures and environmental
regulations

Assessor guide: confirm that –

The candidate can relate the requirements of approved safe
work procedures to environmental regulation and public and
personal safety
Regulatory requirements are identified and explained

Range statement

This unit may be applied in a workplace in which vessels are refuelled involving the use of dangerous goods and hazardous materials, volatile liquids and gasses. Personal protection includes goggles, masks, air helmets, head/hearing protection, fall arrest devices, U.V. protection, safety boots and appropriate work wear. Other equipment includes spill control, containment and clean up.

This unit describes the competencies that are particular to the marine environment.

This unit describes the competencies which are beyond those safety requirements normally applied in the workplace as described in Unit 1.2F (Apply principles of Occupational Health & Safety (OH&S) in work environment)

Refuelling operations include fuel replenishment for vessel propulsion system(s), cooking, refrigeration, water heating systems and power generation systems.

Refuelling includes diesel fuel and petrol in portable and on-board tanks, gas cylinders, liquid fuels such as kerosene, methylated spirits, lighter fluid/white spirits

Spill containment and clean up materials include bunding and drain covers, chemical dispersal agents, absorptive materials, containment booms and portable bunding

Emergency devices include fire extinguishers and hoses, emergency shut off devices

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, industrial chemicals, communication, materials handling and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit.

Competency in this unit cannot be claimed until all pre-requisites have been

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.6E A Perform basic operational checks on marine craft

Band – Boating Services

Field – Boating services

Unit Weight 0

This unit covers the competencies required to conduct basic checks on the operational condition of vessels in or out of the water

Pre-requisite units - Path 1

50.2A Work safely on marine craft

Element 50.6E.1 Inspect hull and fittings

Criteria 50.6E.1.1

Hull bungs and sea cocks are inspected for security and integrity

Assessor guide: observe that –

Hulls are inspected as far as the location of the vessel allows

Reports on condition of hull and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches hull, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.1.2

Hull condition is checked for holes, cracks and deterioration

Assessor guide: observe that –

Hulls are inspected as far as the location of the vessel allows

Reports on condition of hull and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches hull, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.1.3

Fittings and mountings are checked for security and excessive corrosion

Assessor guide: observe that –

Hulls are inspected as far as the location of the vessel allows

Reports on condition of hull and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches hull, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.1.4

Reports of hull and fitting condition are completed on (any) approved workplace documentation and/or reported verbally

Assessor guide: observe that –

Hulls are inspected as far as the location of the vessel allows

Reports on condition of hull and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches hull, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Element 50.6E.2 Inspect safety equipment for suitability and operation**Criteria 50.6E.2.1**

Requirements for safety equipment for the class of vessel and purpose of use are identified from regulations

Assessor guide: observe that –

Vessel type and class is matched to safety requirements in regulations
 Reports of inadequate safety equipment are made promptly following workplace procedures
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches safety equipment condition and suitability
 Candidate is aware of requirements to courteously provide

Criteria 50.6E.2.2

Vessel safety equipment is checked against identified requirements

Assessor guide: observe that –

Vessel type and class is matched to safety requirements in regulations
 Reports of inadequate safety equipment are made promptly following workplace procedures
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches safety equipment condition and suitability
 Candidate is aware of requirements to courteously provide

Criteria 50.6E.2.3

Condition of safety equipment is determined and reported if required

Assessor guide: observe that –

Vessel type and class is matched to safety requirements in regulations
 Reports of inadequate safety equipment are made promptly following workplace procedures
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches safety equipment condition and suitability
 Candidate is aware of requirements to courteously provide

Element 50.6E.3 Check operating systems**Criteria 50.6E.3.1**

Propulsion, electrical power, steering, cable and line handling and domestic systems are checked for correct fluid levels, fuel state, lubrication and visually for mechanical condition

Assessor guide: observe that –

Fluid levels, belts and fittings are inspected
 Condition of systems is reported as required by workplace procedures
 Engines are started and run (if appropriate)
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches equipment condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.3.2

Communication equipment is checked for operational status

Assessor guide: observe that –

Condition of systems is reported as required by workplace procedures
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches equipment condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Element 50.6E.4 Inspect cabin and domestic systems**Criteria 50.6E.4.1**

Cabin fittings are inspected for security and integrity

Assessor guide: observe that –

Cabin and domestic systems are inspected as far as the location of the vessel allows
Reports on condition of cabin and domestic systems are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches cabin and domestic system condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.4.2

Cabin and fittings are checked for holes, cracks and deterioration

Assessor guide: observe that –

Cabin and domestic systems are inspected as far as the location of the vessel allows
Reports on condition of cabin and domestic systems are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches cabin and domestic system condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.4.3

Fittings and mountings are checked for security and condition

Assessor guide: observe that –

Cabin and domestic systems are inspected as far as the location of the vessel allows
Reports on condition of cabin and domestic systems are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches cabin and domestic system condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.4.4

Domestic systems are operated to ensure serviceability

Assessor guide: observe that –

Cabin and domestic systems are inspected as far as the location of the vessel allows
Reports on condition of cabin and domestic systems are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches cabin and domestic system condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.6E.4.5

Reports of cabin and fittings condition are completed on (any) approved workplace documentation and/or reported verbally

Assessor guide: observe that –

Cabin and domestic systems are inspected as far as the location of the vessel allows
Reports on condition of cabin and domestic systems are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches cabin and domestic system condition
Candidate is aware of requirements to courteously provide customers with accurate information

Range statement

This unit may be applied in a workplace in which vessels are checked in or out of water. Basic operational checks relate to inspections of a routine and/or defined nature similar to pre-operational checks undertaken by machinery or vehicle operators.

The level of 'reporting' required in this unit would follow a simple verbal or checklist process and does not require the application of diagnostic, marine survey or complex report writing skills.

Personal protection includes goggles, masks, air helmets, head/hearing protection, fall arrest devices, U.V. protection, safety boots and appropriate work wear.

This unit describes the competencies that are particular to the marine environment.

Operational checks of sail systems are covered in the unit MEM50.7EA "Perform basic operational checks on sails and sail operating equipment.

Where battery 'check' extends beyond a visual inspection and simple operational check, Unit AUR18676A – 'Test, service and replace battery' should be selected

Vessels may be primarily engine or sail powered

This unit applies to engine and mechanical systems, 12 or 24 volt DC electrical switches and connections, hull and steering system checks.

Safety equipment includes flotation devices, communication systems, flares, pumps and bailers, anchor, halyards and chains, EPIRBs, fire extinguishers, torches, life lines

Operating systems include mechanical propulsion systems, steering system, pumping system, low voltage DC electrical system, winches and cable handling equipment, navigational aids and lights

Domestic systems may include water supply and heating, air conditioning and heating, lighting, cooking, refrigeration, sewage and sullage, pumps

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, communication, and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all pre-requisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.7E A Perform basic operational checks on sails and sail operating equipment

Band – Boating Services

Field – Boating services

Unit Weight 0

This unit covers the competencies required to conduct basic checks on vessel sail systems

Pre-requisite units - Path 1

50.2A Work safely on marine craft

Element 50.7E.1 Inspect mast(s), boom(s), spars and fittings

Criteria 50.7E.1.1

Masts, booms and spars are inspected for security and integrity

Assessor guide: observe that –

All mast(s) and rigging are inspected
Reports on condition of masts, booms, spars and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches mast(s), booms and spars, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.1.2

Fixed rigging is inspected for security and excessive corrosion

Assessor guide: observe that –

All mast(s) and rigging are inspected
Reports on condition of masts, booms, spars and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches mast(s), booms and spars, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.1.3

Fittings and mountings are checked for security and excessive corrosion

Assessor guide: observe that –

All mast(s) and rigging are inspected
Reports on condition of masts, booms, spars and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches mast(s), booms and spars, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.1.4

Reports of masts, booms, spars, rigging and fittings condition are completed on (any) approved workplace documentation and/or reported verbally

Assessor guide: observe that –

All mast(s) and rigging are inspected
Reports on condition of masts, booms, spars and fittings are made promptly following workplace procedures
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches mast(s), booms and spars, fittings and mounting condition
Candidate is aware of requirements to courteously provide customers with accurate information

Element 50.7E.2 Inspect sail condition**Criteria 50.7E.2.1**

Sails are inspected for tears, rot and deterioration

Assessor guide: observe that –

All sails are inspected including rigged sails and stored sails
 Reports of inadequate sail condition are made promptly following workplace procedures
 Sails are stowed in the correct manner, order and location after inspection completed
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.2.2

Sail runners, cleats and reinforcing points are inspected

Assessor guide: observe that –

All sails are inspected including rigged sails and stored sails
 Reports of inadequate sail condition are made promptly following workplace procedures
 Sails are stowed in the correct manner, order and location after inspection completed
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.2.3

Reports of sails and fittings condition are completed on (any) approved workplace documentation and/or reported verbally

Assessor guide: observe that –

All sails are inspected including rigged sails and stored sails
 Reports of inadequate sail condition are made promptly following workplace procedures
 Sails are stowed in the correct manner, order and location after inspection completed
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.2.4

Sails are correctly stowed after inspection

Assessor guide: observe that –

All sails are inspected including rigged sails and stored sails
 Reports of inadequate sail condition are made promptly following workplace procedures
 Sails are stowed in the correct manner, order and location after inspection completed
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Element 50.7E.3 Check sail control cables, ropes and winches**Criteria 50.7E.3.1**

Sail control ropes and cables are inspected for security and integrity

Assessor guide: observe that –

All sail operating systems are inspected
 Reports on condition of sail control systems are made promptly following workplace procedures
 All ropes and cables are re-coiled/returned to correct position
 Lubrication requirements are determined by visual inspection and/or ratchet operation of sealed units
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail control system condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.3.2

Sail control ropes and cables are re-coiled/returned to correct position

Assessor guide: observe that –

All sail operating systems are inspected
 Reports on condition of sail control systems are made promptly following workplace procedures
 All ropes and cables are re-coiled/returned to correct position
 Lubrication requirements are determined by visual inspection and/or ratchet operation of sealed units
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail control system condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.3.3

Winches and capstans are checked for operation, lubrication and condition

Assessor guide: observe that –

All sail operating systems are inspected
 Reports on condition of sail control systems are made promptly following workplace procedures
 All ropes and cables are re-coiled/returned to correct position
 Lubrication requirements are determined by visual inspection and/or ratchet operation of sealed units
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail control system condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.3.4

Fittings and mountings are checked for security and condition

Assessor guide: observe that –

All sail operating systems are inspected
 Reports on condition of sail control systems are made promptly following workplace procedures
 All ropes and cables are re-coiled/returned to correct position
 Lubrication requirements are determined by visual inspection and/or ratchet operation of sealed units
 Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail control system condition
 Candidate is aware of requirements to courteously provide customers with accurate information

Criteria 50.7E.3.5

Reports of sail control system condition are completed on (any) approved workplace documentation and/or reported verbally

Assessor guide: observe that –

All sail operating systems are inspected
Reports on condition of sail control systems are made promptly following workplace procedures
All ropes and cables are re-coiled/returned to correct position
Lubrication requirements are determined by visual inspection and/or ratchet operation of sealed units
Any interaction with customers/owners is courteous and informative

Assessor guide: confirm that –

Report matches sail control system condition
Candidate is aware of requirements to courteously provide customers with accurate information

Range statement

This unit may be applied in a workplace in which vessels are checked in or out of water. Basic operational checks relate to inspections of a routine and/or defined nature similar to pre-operational checks undertaken by machinery or vehicle operators.

The level of 'reporting' required in this unit would follow a simple verbal or checklist process and does not require the application of diagnostic, marine survey or complex report writing skills

Personal protection includes goggles, masks, air helmets, head/hearing protection, fall arrest devices, U.V. protection, safety boots and appropriate work wear.

This unit describes the competencies that are particular to the marine environment.

Operational checks of hull and mechanical systems are covered in the unit MEM50.6EA Perform basic operational checks on marine craft

Vessels may be primarily engine or sail powered

This unit applies to sails and sail hoisting and trimming equipment including sail material, sheets, halyards, ropes, wires, cables, shackles, turning blocks, electric and hand powered winches, coffee grinders, self steer systems and self furling sail systems, etc.

Evidence guide**Assessment context**

This unit may be assessed on the job, off the job or a combination of both on and off the job. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

Assessment conditions

The candidate will be provided with: - All tools, equipment, materials and documentation required. - All safety clothing and personal safety equipment. The candidate will be permitted to refer to the following documents: - Any relevant workplace procedures. - Any relevant product and manufacturing specifications. The candidate will be required to: - Orally, or by other methods of communication, answer questions put by the assessor. - Identify colleagues who can be approached for the collection of competency evidence where appropriate. - Present evidence of credit for any off-job training related to this unit. Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge.

Critical aspects

This unit could be assessed in conjunction with any other units addressing safety, communication, materials handling and units associated with working within the recreational boating environment, or other units requiring the exercise of the skills and knowledge covered by this unit. Competency in this unit cannot be claimed until all pre-requisites have been satisfied.

Special notes

During assessment the individual will: - demonstrate safe working practices at all times; - communicate information about processes, events or tasks being undertaken to ensure a safe and efficient working environment; - take responsibility for the quality of their own work; - plan tasks in all situations and review task requirements as appropriate; - perform all tasks in accordance with standard operating procedures; - perform all tasks to specification; - use accepted industry techniques, practices, processes and workplace procedures. Tasks involved will be completed within reasonable timeframes relating to typical workplace activities.

Unit MEM 50.8E A Carry out trip preparation and planning

Band – Boating Services

Field – Boating services

Unit Weight 0

This unit covers the competencies to undertake the required steps to plan and prepare for a safe boating trip. This unit was developed by the National Marine Safety Committee (NMSC).

Element 50.8E.1 Maintain the boat and safety equipment

Criteria 50.8E.1.1

Boat is maintained/serviced on a regular basis

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.8E.1.2

Safety equipment complies with relevant legislation

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.8E.1.3

Safety equipment is serviceable, accessible, its location identified and securely and appropriately stowed

Assessor guide: observe that –

Assessor guide: confirm that –

Element 50.8E.2 Maintain mooring and berthing apparatus

Criteria 50.8E.2.1

Mooring and berthing apparatus is maintained/serviced on a regular basis

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.8E.2.2

Mooring apparatus is appropriate to the vessel and location

Assessor guide: observe that –

Assessor guide: confirm that –

Element 50.8E.3 Plan trip

Criteria 50.8E.3.1

Weather conditions, vessel and personnel are checked for suitability for planned trip

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.8E.3.2 Trip activity plan takes into account area and type of operation and emergency contact	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.8E.3.3 Adequate provisions, including fuel, for trip are carried	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.8E.3.4 Trip details are communicated to an appropriate person	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.8E.3.5 Check is made to ensure the number of passengers does not exceed boat design limitations and/or legislative requirements	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.8E.3.6 Check is made to ensure equipment, stores and personal items are securely stowed and do not adversely affect the boat's stability	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.8E.3.7 Appropriate person is informed of safe return from the activity	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>

Range statement

Maintenance/service of the motor may include but is not limited to:

Oil levels and mix, belts, spark plugs, regular running and flushing of motor including manual starting, raw water intake filters, fuel lines, fillers and tanks, hoses, compliance with program maintenance, electrical wiring, Dead Man's switch, steerage, propeller and shaft condition

Safety equipment may include:

Life-jackets, bailers, dinghy/life-raft, paddles/oars, bilge pump, bucket and line, First Aid kit, fire extinguisher, distress signalling equipment, marine radio, waterproof torch, charts, anchor/sea anchor, lifebuoy, compass, sound signal, drinking water, towing harness, isolating switches, tow rope, local emergency procedures book, sounding equipment, EPIRB, GPS, divers flag, suitable clothing, emergency steering, alternative means of propulsion

Weather and conditions:

Current forecast, wind, latest weather and conditions information, sources of weather information, tides (flood and ebb tides), rips and bars, wave height, visibility, day/night

Area of operation may include:

Hazards, local knowledge, rules and protocols, events, emergency response, access and exit points, safe havens, launching ramps, destination port

Trip activity may include:

Adequate fuel for distance to be travelled, way points, suitability of boat for the activity, radio use and frequency, call signs, trip intention forms, description of boat, registration number, trip departure and return time, area and nature of operation

Persons to advise may include:

Family member, neighbour(s), Water Police, recognised marine rescue services, local police, relative, organisation, club, Harbour Master, note in car, if appropriate, coastal radio stations

Provisions may include:

Water, food, ice, sun protection, wet weather gear, First Aid kit, personal medication for all passengers, batteries, gas, adequate emergency fuel (reserve) and a method of fuel transfer

Mooring and berth maintenance may include:

Appropriateness of mooring/berthing, regularity of checks, services by recognised contractor, serviceable mooring and berthing lines, fenders, anchors and other ground tackle

Activity details to be communicated may include:

Vessel description and photo, number of people in boat, departure/arrival times, types of radios, must advise trip conclusion, shore contact details, trailer registration number, fuel capacity and usage

Pre-start check may include:

Fuel is connected, battery is charged and connected, kill switch, fumes, petrol, fuel and water leaks, open hatches/windows/doors, ventilation, sea-cock opening, secure loose gear, turn on marine radio, checking bilge water levels, navigation lights, raising radio aerials

Evidence guide

Assessment context

Competence in this unit may be assessed in an actual or simulated boating

Critical aspects

Boat is regularly maintained and serviced and pre-departure check completed to ensure readiness for the planned activity. The activity is planned and trip details communicated to an appropriate person.

Assessment conditions

Special notes

Competence in this unit may be assessed over time in a range of boating contexts

Unit MEM 50.9A A Safely operate a mechanically powered recreational boat

Band – Specialisation band A

Field – Boating services

Unit Weight 2

This unit covers the competencies to safely handle/operate a powered recreational boat on coastal and inland waters. This unit was developed by the National Marine Safety Committee (NMSC).

Element 50.9A.1 Manoeuvre and handle boat

Criteria 50.9A.1.1

A pre-start check is undertaken

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.9A.1.2

Motor is prepared and started

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.9A.1.3

Boat is manoeuvred safely according to conditions and in accordance with water traffic regulations

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.9A.1.4

Performance of the boat and personnel is monitored at all times

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.9A.1.5

Impact of boat use on others and the environment is considered

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.9A.1.6

Safety equipment is used, stowed and if required, worn in accordance with legislation and recognised regulations and rules

Assessor guide: observe that –

Assessor guide: confirm that –

Element	50.9A.2	Navigate safely		
Criteria	50.9A.2.1		<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
	9.2.1 Aids to small craft navigation are identified			
	9.2.2 Collision avoidance techniques are applied when required in accordance with relevant legislation, recognised regulations and rules			
	9.2.3 Operation of the boat is carried out at all times in accordance with relevant legislation, recognised regulations and rules			
	9.2.4 Navigational aids and landmarks are used to determine and monitor boat position			
	9.2.5 Hazards and conditions are taken into account in navigating the boat			
Criteria	50.9A.2.2		<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
	Collision avoidance techniques are applied when required in accordance with relevant legislation, recognised regulations and rules			
Criteria	50.9A.2.3		<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
	Operation of the boat is carried out at all times in accordance with relevant legislation, recognised regulations and rules			
Criteria	50.9A.2.4		<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
	Navigational aids and landmarks are used to determine and monitor boat position			
Criteria	50.9A.2.5		<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
	Hazards and conditions are taken into account in navigating the boat			
Element	50.9A.3	Anchor the boat		
Criteria	50.9A.3.1		<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
	Anchorage site is selected in accordance with prevailing and forecast conditions and in accordance with legislation			

Criteria 50.9A.3.2 Type of anchor used is suitable for location	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.9A.3.3 Anchor is lowered, set and monitored according to prevailing conditions	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.9A.3.4 Anchor is retrieved and securely stowed	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>

Range statement

Manoeuvring conditions may include:

From or to a ramp, pontoon, wharf, mooring, anchor, confined areas (narrow channels, marinas, moorings, obstructions), sea-states: bars, waves, rips, high seas, tidal surges, choppy conditions, low speed/high speed, wakes, poor visibility, effect of wind, large vessels

Safe manoeuvring may include:

Steer straight line, astern, figure-eight, right of way, port-starboard, throttle control, emergency stop, trim and stability of vessel, towing or being towed, berthing, standing-on/stemming the tide, retrieval of person overboard

Monitoring may include:

Cooling system, bilge, portholes and hatches, location and welfare of persons on board, oil, fuel and water, radio, position of boat, other water users, battery and electrical systems, ventilation

Hazards and conditions may include:

Weather, set and drift, effect of wind, tides and currents, submerged objects, other boats/wash, restricted waters, crossing bars

Types of anchors may include:

Danforth, Grapnel/Reef, Bruce, Plough, Admiralty, sea anchor, Sarca

Anchoring systems may include:

Multiple anchors, bow and stern anchors, mooring buoy

Aids to small craft navigation may include:

IALA Buoyage System "A", charts, compasses, GPS, sounder, tide tables, passage plan, marine references, notices to mariners, radio navigational warnings

Impact of boat use on others and the environment may include:

Noise, wake, safety of others, disturbance or injury to wildlife, disposal of waste, effects of detergent, anti-foul, disposal of bilge water, fuelling arrangements

Legislation, procedures and rules may relate to: Collision regulations such as:

Navigating in narrow channels, giving way to other vessels, overtaking, proper lookout, sound signals, lights and shapes, responsibilities and duty of care, use of buoyage system, speed, recognition of lights and markers, rules of road, recognition of operation areas, specific activity rules eg PWCs, water skis, equipment requirements, accident/Incident reporting

Marine regulations such as:

Safety regulations, licensing and registration, speed limit restrictions, distance off requirements, port limits/rules, marine incident reporting, carrying capacity, alcohol limits, age of operators

Environmental and wildlife regulations:

Relevant and applicable State/Territory rules as they apply to the operations of boats

Evidence guide

Assessment context

Competence in this unit may be assessed in an actual or simulated boating

Critical aspects

Operations and anchoring of the boat is conducted safely at all times and in accordance with relevant legislation, regulations and rules.

Assessment conditions

Special notes

Competence in this unit may be assessed over time in a range of boating contexts

Unit MEM 50.10E A Respond to boating emergencies and incidents

Band – Boating Services

Field – Boating services

Unit Weight 0

This unit covers the competencies to deal with boating emergencies and incidents including the use of safety equipment and the provision of assistance to others in distress. This unit was developed by the National Marine Safety Committee (NMSC).

Element 50.10E.1 Use safety equipment

Criteria 50.10E.1.1

Nature, type, location, accessibility and serviceability of safety equipment is known and understood by all personnel on board

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.10E.1.2

Briefing of personnel is conducted before departure

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.10E.1.3

Safety equipment is used in a manner appropriate to the emergency or incident

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.10E.1.4

Safety equipment is used for the purpose for which it was designed

Assessor guide: observe that –

Assessor guide: confirm that –

Element 50.10E.2 Raise alarms

Criteria 50.10E.2.1

Nature of emergency is identified

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.10E.2.2

Alarm is communicated to on-board personnel

Assessor guide: observe that –

Assessor guide: confirm that –

Criteria 50.10E.2.3	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Recognised distress signals are used to indicate need of assistance		
Element 50.10E.3 Deal with on-board emergency		
Criteria 50.10E.3.1	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
On board personnel are informed of actions required to deal with the emergency		
Criteria 50.10E.3.2	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Procedures are implemented to combat emergency and protect persons on board		
Criteria 50.10E.3.3	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Position is identified, recorded and communicated		
Criteria 50.10E.3.4	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Injured persons are provided with assistance		
Criteria 50.10E.3.5	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Communication with rescuers is maintained		
Criteria 50.10E.3.6	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Preparation for abandoning the boat is undertaken, if required		
Criteria 50.10E.3.7	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Cessation of emergency is communicated to appropriate personnel		
Element 50.10E.4 Assist others in distress		
Criteria 50.10E.4.1	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Distress signals from others are recognised		

Criteria 50.10E.4.2 Nature of assistance required is identified	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.10E.4.3 Capability to safely assist or relay emergency is determined taking into account own safety and physical proximity to the emergency incident	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.10E.4.4 Appropriate response to the emergency is prepared for and implemented	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>
Criteria 50.10E.4.5 Cessation of emergency incident is communicated to appropriate personnel	<i>Assessor guide: observe that –</i>	<i>Assessor guide: confirm that –</i>

Range statement

Emergencies may include:

Fire (smoke or heat), collision, grounding, man overboard, person retrieval from water, capsize, swamping, sinking, motor breakdown or malfunction (electrical/mechanical), fouled propeller, anchoring, flooding, lost, injuries/illnesses, hypothermia, lack of fuel, contaminated fuel

Distress signals may include:

Pyrotechnic distress flares, flags, radio, hand signals, dye marker, International Code Signal of Distress, sound signals (including voice), EPIRB, V-sheet, reflective mirror, light signals, mobile phone

Preparing for abandoning includes:

Brief on-board personnel, drinking water, donning of life jackets, identifying location of vessel, communicating to rescuers of actions taken or to be taken, readiness of life raft/rings, activate EPIRB, identification and collection of emergency equipment, provisions and clothing, deployment of anchor and sea anchor

Briefing information may include:

Vessel operation, personnel assessment such as swimming skills, boating knowledge, medication and dietary requirements, location and use of safety equipment, emergency procedures, abandoning procedures

Evidence guide**Assessment context**

Competence in this unit may be assessed in an actual or simulated boating

Critical aspects

Nature of emergency is communicated accurately to on-board personnel, potential rescuers and/or marine authorities. Safety equipment is deployed to suit the nature of the emergency.

Assessment conditions**Special notes**

Competence in this unit may be assessed over time in a range of boating contexts

AUR18676B Test, Service and Replace Batteries

Unit Descriptor

This unit identifies the competence required to service, remove, replace, test and charge automotive batteries. The competency is applicable to batteries fitted to vehicles, plant and equipment and marine applications. It may also be applied to the service, replacement and charging of batteries in electric vehicles such as golf buggies and electric forklifts.

Element	Performance Criteria
1. Test, remove and replace batteries	<ul style="list-style-type: none">1.1 Information required for the work is accessed from appropriate manufacturer's specifications and correctly interpreted.1.2 Relevant occupational health and safety policies and procedures are observed throughout the work processes.1.3 Components, tools and equipment required to complete all work are identified, selected and prepared in accordance with site procedures.1.4 Battery tests are performed and results analysed in accordance with site procedures and manufacturer's specifications.1.5 Battery, testing and replacement procedures are carried out in accordance with relevant legislation, industry and enterprise policies/procedures guidelines.
2. Service and charge batteries	<ul style="list-style-type: none">2.1 Information required for servicing and charging is accessed from appropriate manufacturer's specifications and correctly interpreted.2.2 Components, tools and equipment required to complete all work are identified, selected and prepared in accordance with site procedures.2.3 Electrolyte levels are checked and topped up in accordance with site procedures.2.4 Battery/terminals are cleaned and battery charged in accordance with site procedures.
3. Jump start vehicle	<ul style="list-style-type: none">3.1 Information required for jump start vehicle is accessed from appropriate manufacturer's specifications and correctly interpreted.3.2 Leads are connected/disconnected in correct sequence and polarity.3.3 All work is carried out without causing damage to any component or system.3.4 Workplace records are completed in accordance with enterprises procedures.

Metal and Engineering Training Package

AUR18676B Test service and replace batteries

Range of Variables

Sources of Information/Documents

May include site documentation for battery testing, servicing and replacement, general duty of care, emergency procedures, safe working practices, enterprise operating procedures, customer requirements, industry/workplace codes of practice.

Relevant Site Policies and Procedures

May include hazard policies and procedures, emergency, fire and accident procedures, personal safety procedures, procedures for the use of personal protective clothing and equipment, issue resolution procedures, job procedures, work instructions, quality and environmental procedures.

Legislative Requirements

May include state and territory occupational health and safety legislation and national/state codes of practice.

Occupational Health and Safety Procedures

May include safe manual handling and lifting, customers, staff, equipment/tools, premises and stock.

Components and Tools

May include hand tools, special tools for removal adjustment.

Resources

May include testing equipment including load tester, hydrometer, multimeter or voltmeter and battery charger.

Emergency Procedures

May include sickness, accidents, fire or store evacuation involving staff or customers.

Communications

Communications may be verbal, written, by telephone or by other means.

Installation Action

May include light vehicles and/or plant and equipment and/or plant and equipment and/or heavy commercial vehicles and/or marine applications.

Evidence Guide

Critical Aspects

It is essential that competence in this unit signifies the ability to transfer the competency to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- communicating effectively with others in associated areas
- identifying and assessing hazardous situations and rectifying, where appropriate, or reporting to the relevant personnel
- applying safe manual handling practices
- removing/replacing batteries
- servicing and charging batteries
- testing and jump starting batteries
- safety handling and storing dangerous and/or hazardous goods and substances

Metal and Engineering Training Package

AUR18676B Test service and replace batteries

- completing essential post activity housekeeping
- applying relevant OH&S procedures.

Interdependent Assessment of Units

This unit may be assessed in conjunction with all common and technical units which form part of the normal job role.

Underpinning Knowledge

- General knowledge of common automotive terminology.
- Working knowledge of relevant OH&S regulations/requirements, equipment, material and personal safety requirements.
- Working knowledge of safe manual handling theory and practice.
- Working knowledge of the types and applications batteries.
- Detailed knowledge of testing, servicing and replacing batteries procedures.
- Working knowledge of site reporting procedures.
- Working knowledge of disposal of batteries and acids.
- Working knowledge of servicing, jump starting and battery charging procedures.

Underpinning Skills

- Plain English literacy and communication skills in relation to dealing with others involved in the work.
- Technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications related to battery testing, servicing and replacement.
- Questioning and active listening skills, for example when obtaining information of battery testing, servicing and replacement procedures.
- Research and interpretative skills to locate, interpret and apply relevant operational and safety information for battery testing, servicing and replacement procedures.
- Manipulative and dexterity skills to perform battery testing, servicing and replacement procedures.
- Problem solving skills for a range of differing procedural issues.

Consistency in Performance

It is preferable that assessment reflects a process rather than an event and that it occurs over a period of time to cover the varying circumstances. Evidence of performance may be provided by clients, team leaders/members or other appropriate persons subject to agreed authentication arrangements.

Context for Assessment

Assessment of this unit must be completed on-the-job or in a realistically simulated work environment which reflects a range of battery testing, servicing and replacement.

Resource Implications

The following are required:

- a workplace or simulated workplace
- realistic situations requiring battery testing, servicing and replacement.
- site or equivalent instructions for battery testing, servicing and replacement.
- hazardous chemicals information (and/or dangerous goods if applicable).
- appropriate materials, tools and equipment.

Metal and Engineering Training Package

AUR18676B Test service and replace batteries

- site or equivalent instructions for disposal of batteries and acids.

Key Competencies & Application to Standards

AUR37119A DRIVE AND MANOEUVRE TRAILER(S)

UNIT DESCRIPTOR: This unit identifies the competence required to drive and manoeuvre trailers in a work environment applicable to light/heavy vehicle, plant and marine.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR37119A.1 Perform a preliminary safety check.</p>	<p>AUR37119A.1.1 Safety checks are completed without causing damage to any component or system.</p> <p>AUR37119A.1.2 Appropriate vehicle and coupling setup is chosen.</p> <p>AUR37119A.1.3 Safe condition of trailer is determined.</p> <p>AUR37119A.1.4 Safe condition of towing vehicle is determined.</p> <p>AUR37119A.1.5 If trailer contains a “load”, security of load is determined.</p>
<p>AUR37119A.2 Connect trailer to vehicle.</p>	<p>AUR37119A.2.1 Vehicle to trailer alignment is achieved.</p> <p>AUR37119A.2.2 Appropriate manual handling devices are selected and used.</p> <p>AUR37119A.2.3 Trailer is hitched to vehicle and ancillaries connected.</p> <p>AUR37119A.2.4 Connections are tested and checked.</p>
<p>AUR37119A.3 Drive and manoeuvre trailer(s).</p>	<p>AUR37119A.3.1 Brake lockout devices are appropriately set.</p> <p>AUR37119A.3.2 Techniques are used to safely manoeuvre trailer and vehicle in forward and reverse directions, and perform parking functions.</p>
<p>AUR37119A.4 Disconnect trailer from vehicle.</p>	<p>AUR37119A.4.1 Parking devices are applied.</p> <p>AUR37119A.4.2 Appropriate manual handling devices are selected and used.</p> <p>AUR37119A.4.3 Ancillary devices are disconnected and trailer unhitched.</p>

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
-----------------------	----------------------

AUR37119A.4 (continued) Disconnect trailer from vehicle.	AUR37119A.4.4 All servicing/maintenance activities are carried out according to industry regulations/guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.
---	---

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- light/heavy vehicle, plant and marine

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- trailer with non-pivoting axle
- vehicle with towing hitch
- suitable area(s) for manoeuvre to take place
- trailer with pivoting front axle

Methods include:

- sealed and non-sealed surfaces, laden and unladen trailers
- manoeuvres in unrestricted and restricted areas

Methods should be applied under normal operating conditions.

Specific requirements:

- Current drivers licence

Other variables may include:

- tilt and non-tilt trailers, single and multi-axle, day and night manoeuvres

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- manoeuvring of trailer in restricted and non-restricted environments without damage to vehicle, trailer or surroundings

Underpinning knowledge:

- Personal safety requirements

Metal and Engineering Training Package

AUR37119A Drive and Manoeuvre Trailer(s)

- Vehicle/trailer safety requirements
- Driving and manoeuvring techniques
- Different trailer types
- Trailer hitching systems
- Loading of trailers and travelling with a loaded trailer
- State and Territory regulations for towing trailers

Practical assessments:

- Manoeuvre trailer in restricted and non-restricted areas
- Access, interpret and apply State and Territory regulations
- Connect a trailer to a vehicle
- Determine if a vehicle/trailer and load is safe for towing

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	2

AUR37271A SERVICE AND REPAIR TRAILERS

UNIT DESCRIPTOR: This unit identifies the competence required to interpret transport regulations, adjust and maintain trailers for the RS&R mechanical and recreational boating streams.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR37271A.1 Interpret Transport Regulations.</p>	<p>AUR37271A.1.1 Information is accessed from relevant State/Territories Transport Regulations.</p> <p>AUR37271A.1.2 Information is accurately interpreted.</p> <p>AUR37271A.1.3 All activities are carried out according to industry regulations/guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>
<p>AUR37271A.2 Adjust trailers to suit individual applications.</p>	<p>AUR37271A.2.1 Trailers are adjusted without causing damage to any vehicle sections, system or components.</p> <p>AUR37271A.2.2 Information is accessed from appropriate sources to enable this competency element to be carried out using approved methods and equipment in accordance with manufacturer specifications.</p> <p>AUR37271A.2.3 Trailer application is determined and measurements taken in preparation for adjustment.</p> <p>AUR37271A.2.4 Adjustments are carried out in accordance with manufacturer specifications for methods, equipment used and tolerances relative to the vehicle/system.</p> <p>AUR37271A.2.5 All activities are carried out according to industry regulations/guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>
<p>AUR37271A.3 Maintain and repair trailers as required.</p>	<p>AUR37271A.3.1 Maintenance and repair of trailers is completed without causing damage to any vehicle sections, systems or components.</p> <p>AUR37271A.3.2 Correct information is accessed and interpreted from appropriate manufacturer specifications.</p> <p>AUR37271A.3.3 Trailer is inspected for maintenance repair requirements.</p>

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR37271A.3 (continued) Maintain and repair trailers as required.	AUR37271A.3.4 All maintenance and repairs are carried out in accordance with manufacturer specifications for methods, equipment used and tolerances relative to the vehicle/system. AUR37271A.3.5 All maintenance and repairs are carried out according to industry regulations/guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- RS&R Mechanical and Recreational Boating streams

Sources of information/documents may include:

- manufacturer specifications
- state/territory transport regulations
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- hand tools, power tools
- measuring equipment, lifting equipment
- surface coating applicators
- cleaning equipment
- winterising equipment
- Welding equipment

Methods include:

- Visual, audio - Application of relevant transport regulations
- ADRs

Methods should be applied under normal operating conditions.

Specific requirements:

- Clamps, brackets, blocks, chains, ropes

Other variables may include:

- lubricants, paints, safety glasses, masks etc.
- winterise (trailer preservation/protection during non use)
- recommission (trailer prepared for use after storage/repair)
- galvanised, painted and powder coated surfaces
- rollers and guides
- winches (electrical and manual)
- single and multi axle
- fixed and moveable dolly wheels
- tilting and non tilting mechanisms

Metal and Engineering Training Package

AUR37271A Service and Repair Trailers

- mechanical, air and rubber suspension

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- interpretation of legislative and manufacturer requirements
- adjusting and maintaining trailers

Underpinning knowledge:

- Recording and reporting requirements and procedures
- Trailer repair and adjustment procedures
- Personal safety requirements
- Vehicle/trailer safety requirements
- Relevant technical information
- Types of materials and their application
- Relevant transport regulations
- Manufacturer specifications
- Trailer service procedures

Practical assessments:

- Access, interpret and apply technical/legal information.
- Prepare customer reports
- Convey information both orally and in writing
- Maintain records
- Use tools and equipment
- Carry out routine trailer maintenance

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	2
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	2

Metal and Engineering Training Package

AUR46108A Carry Out Minor Hull Repairs

AUR46108A CARRY OUT MINOR HULL REPAIRS

UNIT DESCRIPTOR: This unit identifies the competence required to inspect hull for deterioration/damage and repair using approved methods and equipment.

PRE-REQUISITES: AUR23608A Carry out welding, soldering, thermal cutting and thermal heating procedures

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46108A.1 Inspect and repair hull deterioration and damage.	AUR46108A.1.1 Inspection and repair of hull deterioration and damage is completed without causing damage to any system or components. AUR46108A.1.2 Correct information is accessed and interpreted from appropriate manufacturer specifications. AUR46108A.1.3 Hull is inspected and deterioration/damage identified. AUR46108A.1.4 Repairs are carried out in accordance with manufacturer specifications for and tolerances relative to the vessel type. AUR46108A.1.5 All activities are carried out according to industry regulations/ guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- RS&R Marine body stream

Sources of information/documents may include:

- vehicle/vessel manufacturer specifications
- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice
- statutory legislation for marine and harbours board requirements

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- hand tools, power tools, special tools including: hand tool required for aluminium and fibreglass repair
- fibreglass materials and hardeners
- aluminum filler
- gas metal arc welder

Metal and Engineering Training Package

AUR46108A Carry Out Minor Hull Repairs

- gas tungsten arc welder

Methods include:

- aural, visual and functional assessments
- fibreglass repair techniques
- aluminium repair techniques

Methods should be applied under normal operating conditions.

Specific requirements:

- Petrol and/or light diesel engines

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- aluminum hull repairs carried out without causing damage or injury to tools, equipment or personnel.
- fibreglass hull repairs carried out without causing damage or injury to tools, equipment or personnel.

Underpinning knowledge:

- Repair methods
- Measuring and testing procedures
- Relevant technical information
- Relevant marine and harbours board regulations
- Equipment safety requirements
- Vessel safety requirements
- Manufacturer/company policies

Practical assessments:

- Access, interpret and apply technical information
- Apply aluminium and fibreglass repair methods
- Use relevant tools and equipment
- Test systems/components for both technical and legal requirements
- Carry out minor hull repairs

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46335A LAUNCH AND RECOVER VESSELS FROM TRAILER

UNIT DESCRIPTOR: This unit identifies the competence required to launch and recover vessels from a trailer.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46335A.1 Launching the vessel.</p>	<p>AUR46335A.1.1 Safe launching conditions are to be determined by checking:</p> <ul style="list-style-type: none"> • weather • tidal conditions • launch site <p>AUR46335A.1.2 Pre-launch check is to include:</p> <ul style="list-style-type: none"> • Safety equipment • Hull condition • Propulsion unit • Fuel status • Equipment secured • Removal of detachable trailer fittings <p>AUR46335A.1.3 Vessel is launched ensuring:</p> <ul style="list-style-type: none"> • Vehicle is manoeuvred to position trailer in suitable depth of water on launch way • Safe operation of tilting and winch mechanisms • Damage to all vessels and environment is avoided. • Vessel is moved from launch way to safe area • Vehicle/trailer is parked in suitable area
<p>AUR46335A.2 Recovering the vessel.</p>	<p>AUR46335A.2.1 Trailer is positioned ensuring:</p> <ul style="list-style-type: none"> • Vehicle is manoeuvred to position trailer in suitable depth of water on launch way • Detachable trailer fixtures have been removed <p>AUR46335A.2.2 Vessel is recovered onto trailer, ensuring:</p> <ul style="list-style-type: none"> • Vessel is manoeuvred into recovery area and is aligned with trailer guides and rollers • Safe operation of tilting and winch mechanisms • Damage to all vessels and environment is avoided <p>AUR46335A.2.3 Vessel/trailer is secured by:</p> <ul style="list-style-type: none"> • Moving vehicle/trailer and vessel from the recovery area to a safe position • Securing devices from vessel to trailer are attached and adjusted. • Trailer fixtures are replaced and tested

Metal and Engineering Training Package

AUR46335A Launch and Recover Vessels From Trailer

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R streams – Recreational Boating.

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- vehicle, trailer and vessel
- suitable launch site
- gloves
- hand tools (if required)

Methods include:

- obtaining climate information, site inspection
- driving, inspection, fixture removal
- launching, boat manoeuvres, winch operation, recovery

Methods should be applied under normal operating conditions.

Specific requirements:

- Launch and recover a vessel complying with all safety and regulatory requirements.

Other variables may include:

- vessels (single/multi-hulled, flat bottomed, 'V' and displacement designed)
- tow vehicles (car, truck, tractor, wheel or track driven)
- trailers (tilt/non-tilt, single/multi-axle, fitted with fixed/removable lighting systems, rollers/slides, manual/electric winches)
- launch site surface (sand, gravel, bitumen, concrete, grass)
- launch site location (coastal, estuary, ramp, slip way, marina, harbour)
- salt/fresh water, climatic conditions

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- launching and recovering a vessel from a trailer

Underpinning knowledge:

- Licence requirements for vehicle/vessel operation
- Manoeuvring a vehicle and trailer

Metal and Engineering Training Package

AUR46335A Launch and Recover Vessels From Trailer

- Safety and regulatory requirements for launch site
- Pre-launch inspection procedures, equipment requirements and standards.
- Water depth required for vessel floatation
- Trailer winch and tilt mechanism operation and safety requirements

Practical assessments:

- Detect vessels/equipment that fail to meet standard for launching
- Manoeuvre a vehicle/trailer/vessel on the launch way into a suitable launching position
- Launch a vessel with the aid of tilting mechanisms and a winch.
- Recover a vessel with the aid of tilting mechanisms and a winch
- Refit detachable fittings to a trailer and test operation of the lighting system

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46435A LAUNCH AND RECOVER VESSELS FROM CRANES, GANTRIES AND FORKLIFTS

UNIT DESCRIPTOR: This unit identifies the competence required to launch and recover vessels from a crane, gantry or forklift.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46435A.1 Launch the vessel.</p>	<p>AUR46435A.1.1 Safe launching conditions are to be determined by checking:</p> <ul style="list-style-type: none"> • Weather • Tidal conditions • Launch site <p>AUR46435A.1.2 Pre-launch check is to include:</p> <ul style="list-style-type: none"> • Safety equipment • Hull condition • Propulsion unit • Fuel status • Equipment secured <p>AUR46435A.1.3 Vessel is launched ensuring:</p> <ul style="list-style-type: none"> • Slings and lifting equipment attached to hull are positioned to prevent hull damage and will observe safe lifting practices • Crane, gantry or forklift is manoeuvred to place vessel in suitable depth of water at launch site • Safe operation of crane, gantry or fork lift • Damage to all vessels and environment is avoided • Slings/lifting equipment are removed and vessel is moved from launch site to safe area • Crane, gantry or forklift is moved from launch site
<p>AUR46435A.2 Recover the vessel.</p>	<p>AUR46435A.2.1 Crane, gantry or fork lift is positioned ensuring suitable depth of water is present under lift point.</p> <p>AUR46435A.2.2 Vessel is recovered ensuring:</p> <ul style="list-style-type: none"> • Vessel is manoeuvred into recovery area and is aligned with lifting equipment • Slings and lifting equipment attached to hull are positioned to prevent hull damage and will observe safe lifting practices • Safe operation of the lifting equipment as boat is raised from water • Damage to all vessels and environment is avoided

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46435A.2 (continued) Recover the vessel.	AUR46435A.2.3 Vessel is secured by: <ul style="list-style-type: none"> • Transporting vessel from the recovery area to a safe position (storage or trailer) • Lowering vessel onto storage location or trailer • Removing slings/lifting equipment after vessel is moved from launch site to safe area • Vessel to storage rack (or trailer) securing devices are attached and adjusted • If applicable - trailer fixtures are replaced and tested

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- personal safety equipment
- crane, gantry or fork lift
- suitable lifting slings or equipment
- suitable launch site
- gloves
- hand tools (if required)

Methods include:

- obtaining climate information, site inspection
 - driving, lifting (powered), inspection
 - launching, boat manoeuvres, winch operation, recovery
- Methods should be applied under normal operating conditions.

Specific requirements:

- Launch and recover a vessel using powered lifting equipment and complying with all safety and regulatory requirements

Other variables may include:

- vessels (single/multi-hulled, flat bottomed, ‘V’ and displacement designed)
- lifting equipment (crane, gantry, forklift, slings, specialised lift equipment)
- boat location (storage or trailer)
- launch site surface (sand, gravel, bitumen, concrete)
- launch site location (ramp, slip way, marina, harbour)
- salt/fresh water, climatic conditions

Metal and Engineering Training Package

AUR46435A Launch and Recover Vessels from Cranes, Gantries and Forklifts

EVIDENCE GUIDE:

Context.:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- launching and recovering a vessel using powered lifting equipment

Underpinning knowledge:

- Licence requirements for lifting equipment/vessel operation
- Maneuvring a crane, forklift and attached vessel
- Safety and regulatory requirements for launch site
- Pre-launch inspection procedures, equipment requirements and standards
- Water depth required for vessel floatation
- Lifting sling/equipment vessel attaching points and safety precautions

Practical assessments:

- Detect vessels/equipment that fail to meet standard for launching
- Attach/remove slings or lifting equipment to a vessel
- Maneuvre a crane/forklift/vessel into suitable launching position
- Launch a vessel with the aid of powered lifting equipment
- Recover a vessel with the aid of powered lifting equipment
- Position a vessel into storage (or onto a trailer)

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46519A DRIVE AND MANOEUVRE MOTOR DRIVEN VESSELS

UNIT DESCRIPTOR: This unit identifies the competence required to assess the seaworthiness of, and drive a motor driven vessel.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46519A.1 Assess seaworthiness.	AUR46519A.1.1 Seaworthiness of a vessel is assessed by checking: <ul style="list-style-type: none">• All safety equipment for fitment, currency and accessibility• Vessel hull and fittings• Suitability for journey of vessel resources and fuel.
AUR46519A.2 Drive the vessel.	AUR46519A.2.1 Vessel is driven: <ul style="list-style-type: none">• Using appropriate driving techniques for the weather conditions• Giving consideration to other craft and persons• Using vessel equipment according to manufacturer guidelines.

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating.

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- suitable vessel
- authorisation/licence (if required) for vessel operation
- equipment checklist

Methods include:

- inspecting
- driving

Methods should be applied under normal operating conditions.

Specific requirements:

- Drive a suitably equipped motor driven vessel within all regulatory and safety requirements

Other variables may include:

- vessels (single/multi-hulled, flat bottomed, planning and displacement hulls)
- engines (single/multi-cylinder, inboard/outboard)

Metal and Engineering Training Package

AUR46519A Drive and Manoeuvre Motor Driven Vessels

- drive system (propeller, jet drive)
- conditions (coastal, estuary, day, night)
- water depth, salt/fresh water, climatic conditions

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- driving and manoeuvring motor driven vessels

Underpinning knowledge:

- Inspection requirements and standards for safety equipment, hull and fittings
- Regulations related to vessel operation and navigation
- Etiquette and techniques for movement of a vessel
- Manual and powered manoeuvring techniques
- Daily maintenance requirement for vessel
- Operation of the vessel controls and ancillary systems

Practical assessments:

- Detect safety equipment, hull or fitting defects which do not meet specified standards
- Perform daily operating maintenance (as required) on vessel
- Operate all controls and ancillary systems fitted to the vessel
- Drive and manoeuvre the vessel both in channel and open water conditions
- Observe all regulatory requirements while the vessel is under way

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46542A MOOR VESSELS

UNIT DESCRIPTOR: This unit identifies the competence required to enable safe mooring of a vessel.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46542A.1 Moor vessels.	AUR46542A.1.1 Mooring site selected is appropriate for vessel and: <ul style="list-style-type: none">• Vessel is manoeuvred to mooring without damage to vessel or surrounding environment• Appropriate attachment equipment is selected• Suitable attachment points are located on the mooring and vessel• The vessel is linked to the mooring by secure attachment equipment Buffering equipment is used, if required.

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating.

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- suitable securing equipment
- buffering equipment
- suitable vessel and mooring
- gloves

Methods include:

- boat driving
- mooring/securing equipment selection, attaching securing equipment

Methods should be applied under normal operating conditions.

Specific requirements:

- Moor a vessel, safely, in water, complying with all local regulations

Other variables may include:

- mooring (recognised mooring system, anchor system, pier or jetty, fixed or floating)
- securing devices (ropes, chains, wires, cables, buoys, tenders, buffers)
- conditions (salt/fresh water, coastal, estuary, marine, day/night, varying water depth)
- climatic (range of weather and water conditions)
- vessel type and size

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- safe mooring of a vessel

Underpinning knowledge:

- Regulatory requirements in mooring a vessel.
- Types of mooring methods
- Identification, types and classification of mooring components

Practical assessments:

- Manoeuvre a vessel safely to a mooring site
- Secure a vessel safely to a selection of moorings, requiring the deployment of differing securing method and equipment
- Moor a vessel at a location requiring the deployment of buffering equipment

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46649A PREPARE (WINTERISE) VESSEL SYSTEMS

UNIT DESCRIPTOR: This unit identifies the competence required to prepare a vessel for seasonal shutdown and storage.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46649A.1 Winterise vessel systems.</p>	<p>AUR46649A.1.1 Work undertaken must match work clearance approved by customer.</p> <p>AUR46649A.1.2 Vessel systems are tested and compared to system specifications prior to winterising.</p> <p>AUR46649A.1.3 Vessel systems which fail testing must be advised to the customer and rectification approval obtained.</p> <p>AUR46649A.1.4 Winterising service procedures are performed:</p> <ul style="list-style-type: none">• For vessel systems nominated and approved on the work order• As prescribed by manufacturer specification• As required for specific customer usage of vessel. <p>AUR46649A.1.5 Report for the customer is prepared detailing:</p> <ul style="list-style-type: none">• Work undertaken• Technical or regulatory requirements.
<p>AUR46649A.2 Maintain work site.</p>	<p>AUR46649A.2.1 Tools and equipment are checked for serviceability and conformity with manufacturer specification.</p> <p>AUR46649A.2.2 Work site is maintained in accordance with local and OH&S guidelines.</p>

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- tools and equipment suitable for task
- multimeter, test light
- lubrication and cleaning equipment
- anti-corrosion and surface treatments
- specialist service tools
- jacks, floor stands, pit
- fork lift, crane

Methods include:

- reading service data, compiling reports
- manual and powered tool use
- testing, inspecting, adjusting, cleaning, weather proofing components and systems
- manual and powered lifting

Methods should be applied under normal operating conditions.

Specific requirements:

- Perform the service work required to winterise a vessel system in accordance with vessel specifications and customer requirements

Other variables may include:

- vessel may be single or multi-hull, powered/non-powered propulsion system
- open, half or full cabin
- metal and non-metal construction
- remote or direct motion control
- safety equipment
- work may be performed in workshop or on-site (indoor or outdoor), on or off trailer

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- testing and winterising vessel systems

Underpinning knowledge:

- Propulsion system requirements and its relationship to vessel systems and associated components.
- Application of mechanical, hydraulic, electrical and electronic principles.
- Safety precautions, properties and use of servicing fluids/lubricants/anti-corrosion products used in winterising procedures
- Servicing requirements as specified by the manufacturer
- Company requirements for entries to job sheets and reports
- Use and application of testing, measuring and specialised servicing equipment
- Vessel classification, system type and component identification
- Tool and equipment use and maintenance requirements

Metal and Engineering Training Package

AUR46649A Prepare (Winterise) Vessel Systems

Practical assessments:

- Identify and evaluate the required winterising procedure
- Explain/report the procedure required to a customer
- Select and use the correct tools/equipment for each task
- Access technical information to determine the service procedure required
- Perform required system services in accordance with the manufacturer specifications and quality standards
- Maintain customer records
- Maintain the equipment/work site in accordance with company and OH&S standards

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46660A RECOMMISSION VESSEL SYSTEMS

UNIT DESCRIPTOR: This unit identifies the competence required to prepare a vessel for use after seasonal shutdown and storage.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46660A.1 Recommission vessel systems.</p>	<p>AUR46660A.1.1 Work undertaken matches work clearance approved by customer.</p> <p>AUR46660A.1.2 Recommissioning service procedures are performed:</p> <ul style="list-style-type: none"> • For vessel systems nominated and approved on the work order • As prescribed by manufacturer specification • As required for specific customer usage of vessel. <p>AUR46660A.1.3 Vessel systems are tested and compared to system specifications.</p> <p>AUR46660A.1.4 Vessel systems which fail testing are advised to the customer and rectification approval obtained.</p> <p>AUR46660A.1.5 Failed systems are repaired and tested after customer approval is entered on work order.</p> <p>AUR46660A.1.6 Report for the customer is prepared detailing:</p> <ul style="list-style-type: none"> • Work undertaken • Technical or regulatory requirements.
<p>AUR46660A.2 Maintain work site.</p>	<p>AUR46660A.2.1 Tools and equipment are checked for serviceability and conformity with manufacturer specification.</p> <p>AUR46660A.2.2 Work site is maintained in accordance with local and OH&S guidelines.</p>

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

Metal and Engineering Training Package

AUR46660A Recommission Vessel Systems

- State/industry OH&S legislation
- Award provisions

Resources may include:

- tools and equipment suitable for task
- multimeter, test light
- lubrication and cleaning equipment
- specialist service tools
- jacks, floor stands, pit
- fork lift, crane

Methods include:

- reading service data, compiling reports
- manual and powered tool use
- testing, inspecting, adjusting, cleaning and repairing systems
- manual and powered lifting

Methods should be applied under normal operating conditions.

Specific requirements:

- Perform the service work required to recommission vessel systems in accordance with vessel specifications and customer requirements

Other variables may include:

- vessel may be single or multi-hull, powered/non-powered propulsion system
- open, half or full cabin
- metal and non-metal construction
- remote or direct motion control
- safety equipment
- work may be performed in workshop or on-site (indoor or outdoor), on or off trailer

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- recommissioning and testing vessel systems.

Underpinning knowledge:

- Propulsion system requirements and its relationship to vessel systems and associated components.
- Application of mechanical, hydraulic, electrical and electronic principles
- Safety precautions, properties and use of servicing fluids/lubricants products used in recommissioning procedures
- Servicing requirements as specified by the manufacturer
- Company requirements for entries to job sheets and reports
- Use and application of testing, measuring and specialised servicing equipment
- Vessel classification, system type and component identification
- Tool and equipment use and maintenance requirements

Practical assessments:

- Identify and evaluate the required recommissioning procedure

Metal and Engineering Training Package

AUR46660A Recommision Vessel Systems

- Explain/report the procedure required to a customer
- Select and use the correct tools/equipment for each task
- Access technical information to determine the service procedure required
- Perform required system services in accordance with the manufacturer specifications and quality standards
- Maintain customer records
- Maintain the equipment/work site in accordance with company and OH&S standards

AUR46749A PREPARE (WINTERISE) ENGINE SYSTEMS

UNIT DESCRIPTOR: This unit identifies the competence required to prepare an engine for seasonal shutdown and storage.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46749A.1 Winterise engine systems.	AUR46749A.1.1 Work undertaken matches work clearance approved by customer. AUR46749A.1.2 Engine systems are tested and compared to system specifications prior to winterising. AUR46749A.1.3 Engine systems which fail testing are advised to the customer and rectification approval obtained. AUR46749A.1.4 Winterising service procedures are performed: <ul style="list-style-type: none">• For engine systems nominated and approved on the work order• As prescribed by manufacturer specification• As required for specific customer usage of engine AUR46749A.1.5 Report for the customer is prepared detailing: <ul style="list-style-type: none">• Work undertaken• Technical or regulatory requirements
AUR46749A.2 Maintain work site.	AUR46749A.2.1 Tools and equipment are checked for serviceability and conformity with manufacturer specification. AUR46749A.2.2 Work site is maintained in accordance with local and OH&S guidelines.

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- tools and equipment suitable for task
- multimeter, test light
- lubrication and cleaning equipment
- anti-corrosion surface treatments
- engine, water tank and safe test area
- specialist service tools
- lifting equipment
- engine test facility

Methods include:

- reading service data, compiling reports
- manual and powered tool use
- testing, inspecting, adjusting, cleaning, weather proofing components and systems
- manual and powered lifting

Methods should be applied under normal operating conditions.

Specific requirements:

- Perform the service work required to winterise a engine system in accordance with engine specifications and customer requirements

Other variables may include:

- engine systems may be inboard/outboard, 2 or 4 stroke, single or multi-cylinder
- water or air cooled, electrical/electronic/remote/local control
- carburation or fuel injection, manual or electric start
- petrol, diesel, LPG or electric fuelled
- propeller or jet drive propulsion systems, tilt, trim and manual adjustment
- remote or direct motion control
- work may be performed in workshop or on-site (indoor or outdoor), on or off vessel

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- testing and winterising engine systems

Underpinning knowledge:

- Engine system requirements and its relationship to vessel systems and associated components.
- Application of mechanical, hydraulic, electrical and electronic principles
- Safety precautions, properties and use of servicing fluids/lubricants/anti-corrosion products used in winterising procedures
- Servicing requirements as specified by the manufacturer
- Company requirements for entries to job sheets and reports
- Use and application of testing, measuring and specialised servicing equipment
- Engine classification, system type and component identification
- Tool and equipment use and maintenance requirements

Metal and Engineering Training Package

AUR46749A Prepare (Winterise) Engine Systems

Practical assessments:

- Identify and evaluate the required winterising procedure
- Explain/report the procedure required to a customer
- Select and use the correct tools/equipment for each task
- Access technical information to determine the service procedure required
- Perform required system services in accordance with the manufacturer specifications and quality standards
- Maintain customer records
- Maintain the equipment/work site in accordance with company and OH&S standards

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

AUR46760A RECOMMISSION ENGINE SYSTEMS

UNIT DESCRIPTOR: This unit identifies the competence required to prepare an engine for use after seasonal shutdown and storage.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46760A.1 Recommission engine systems.</p>	<p>AUR46760A.1.1 Work undertaken matches work clearance approved by customer.</p> <p>AUR46760A.1.2 Recommissioning service procedures are performed:</p> <ul style="list-style-type: none"> • For engine systems nominated and approved on the work order • As prescribed by manufacturer specification • As required for specific customer usage of engine. <p>AUR46760A.1.3 Engine systems are tested and compared to system specifications.</p> <p>AUR46760A.1.4 Engine systems which fail testing are advised to the customer and rectification approval obtained.</p> <p>AUR46760A.1.5 Failed systems are repaired and tested after customer approval is entered on work order.</p> <p>AUR46760A.1.6 Report for the customer is prepared detailing:</p> <ul style="list-style-type: none"> • Work undertaken • Technical or regulatory requirements.
<p>AUR46760A.2 Work site maintenance.</p>	<p>AUR46760A.2.1 Tools and equipment are checked for serviceability and conformity with manufacturer specification.</p> <p>AUR46760A.2.2 Work site is maintained in accordance with local and OH&S guidelines.</p>

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

Metal and Engineering Training Package

AUR46760A Recommission Engine Systems

- State/industry OH&S legislation
- Award provisions

Resources may include:

- tools and equipment suitable for task
- multimeter, test light
- lubrication and cleaning equipment
- engine, water tank and safe test area
- specialist service tools
- lifting equipment
- engine test facility

Methods include:

- reading service data, compiling reports
- manual and powered tool use
- testing, inspecting, adjusting, cleaning repairing components and systems
- manual and powered lifting

Methods should be applied under normal operating conditions.

Specific requirements:

- Perform the service work required to recommission an engine system in accordance with engine specifications and customer requirements

Other variables may include:

- engine systems may be inboard/outboard, 2 or 4 stroke, single or multi-cylinder
- water or air cooled, electrical/electronic/remote/local control
- carburation or fuel injection, manual or electric start
- petrol, diesel, LPG or electric fuelled
- propeller or jet drive propulsion systems, tilt, trim and manual adjustment
- remote or direct motion control
- work may be performed in workshop or on-site (indoor or outdoor), on or off vessel

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- recommissioning and testing engine systems

Underpinning knowledge:

- Engine system requirements and its relationship to vessel systems and associated components.
- Application of mechanical, hydraulic, electrical and electronic principles.
- Safety precautions, properties and use of servicing fluids/lubricant products used in recommissioning procedures
- Servicing requirements as specified by the manufacturer
- Company requirements for entries to job sheets and reports
- Use and application of testing, measuring and specialised servicing equipment
- Engine classification, system type and component identification
- Tool and equipment use and maintenance requirements

Metal and Engineering Training Package

AUR46760A Recommission Engine Systems

Practical assessments:

- Identify and evaluate the required recommissioning procedure
- Explain/report the procedure required to a customer
- Select and use the correct tools/equipment for each task
- Access technical information to determine the service procedure required
- Perform required system services in accordance with the manufacturer specifications and quality standards
- Maintain customer records
- Maintain the equipment/work site in accordance with company and OH&S standards

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	1
Use technology	1

Metal and Engineering Training Package

AUR46866A Repair Deck, Hull, Cabin Equipment and Fittings

AUR46866A REPAIR DECK, HULL, CABIN EQUIPMENT AND FITTINGS

UNIT DESCRIPTOR: This unit identifies the competence required to identify customer requirements, interpret specifications and regulations to perform repairs on deck, hull, cabin equipment and fittings.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46866A Repair deck, hull, cabin equipment and fittings.	<p>AUR46866A.1.1 Vessel deck, hull, cabin equipment and fittings are tested as prescribed by the manufacturer and the test results compared to specifications.</p> <p>AUR46866A.1.2 Deck, hull, cabin equipment and fittings which fail testing are advised to the customer and rectification approval obtained.</p> <p>AUR46866A.1.3 Work undertaken matches work clearance approved by customer.</p> <p>AUR46866A.1.4 Repair procedures are performed:</p> <ul style="list-style-type: none">• For deck, hull, cabin equipment and fittings nominated and approved on the work order• To manufacturer specification and quality standards• As required for specific customer usage of vessel. <p>AUR46866A.1.5 Report for the customer is prepared detailing:</p> <ul style="list-style-type: none">• Work undertaken• Technical or regulatory requirements.
AUR46866A.2 Maintain work site.	<p>AUR46866A.2.1 Tools and equipment are checked for serviceability and conformity with manufacturer specification.</p> <p>AUR46866A.2.2 Work site is maintained in accordance with local and OH&S guidelines.</p>

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

Metal and Engineering Training Package

AUR46866A Repair Deck, Hull, Cabin Equipment and Fittings

- State/industry OH&S legislation
- Award provisions

Resources may include:

- hand tools and equipment suitable for task
- material repair equipment
- wiring repair equipment
- multimeter, test light
- cleaning and defouling equipment
- pneumatic air tools and equipment

Methods include:

- use of hand tools, powered tools, cleaning equipment
- electrical wiring repair, testing by light and meter
- repair applications using wide range of materials
- removal and refitting of deck, hull, cabin equipment and fittings
- recording and reporting (repair details)

Methods should be applied under normal operating conditions.

Specific requirements:

- Repair, to serviceable condition, a wide range of deck, hull, cabin equipment and fittings

Other variables may include:

- size and type of vessel
- material repair (fibreglass, wood, aluminium, steel, plastic, ferro-cement)
- fittings (bollards, ferrules, runners, clamps, cleats, turnbuckles, press studs, brewsters)
- winches (12V, 24V, 240V), capstans
- bow and stern rails, rudder and steering bushes and bearings
- fishing rod, bail boxes and cabin fixtures
- repair may be performed in workshop or on-site, indoor or outdoor

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- removal, repair and refitting of deck, hull, cabin equipment and fittings

Underpinning knowledge:

- Repair techniques related to deck, hull, cabin equipment, fittings and the relationship of these parts/fittings to the integrity of the vessel
- Types of materials used in deck, hull, cabin equipment and fittings
- Application of mechanical, hydraulic, electrical and electronic principles
- Safety precautions, properties and use of repair materials and products used in repair procedures
- Repair requirements/standards as specified by the manufacturer
- Company requirements for entries to job sheets and reports
- Use and application of testing, measuring and specialised servicing equipment
- Vessel classification, component type and identification
- Tool and equipment use and maintenance requirements

Metal and Engineering Training Package

AUR46866A Repair Deck, Hull, Cabin Equipment and Fittings

Practical assessments:

- Identify and evaluate the required repair procedure
- Explain/report the repair procedure required to a customer
- Select and use the correct tools/equipment for each task
- Access technical information to determine the repair procedure required
- Perform required repair in accordance with the manufacturer specifications and quality standards
- Maintain customer records
- Maintain the equipment/work site in accordance with company and OH&S standards

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1
Solve problems	2
Use technology	1

Metal and Engineering Training Package

AUR46870A Service Deck, Hull, Cabin Equipment and Fittings

AUR46870A SERVICE DECK, HULL, CABIN EQUIPMENT AND FITTINGS

UNIT DESCRIPTOR: This unit identifies the competence required to identify customer requirements, interpret specifications and regulations to perform servicing procedures on deck, hull, cabin equipment and fittings.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46870A Service deck, hull, cabin equipment and fittings.	<p>AUR46870A.1.1 Vessel deck, hull, cabin equipment and fittings are tested as prescribed by the manufacturer and the test results compared to specifications.</p> <p>AUR46870A.1.2 Deck, hull, cabin equipment and fittings which fail testing are advised to the customer and rectification approval is obtained.</p> <p>AUR46870A.1.3 Work undertaken matches work clearance approved by customer.</p> <p>AUR46870A.1.4 Service procedures are performed:</p> <ul style="list-style-type: none">• For deck, hull, cabin equipment and fittings nominated and approved on the work order• As prescribed by manufacturer specification• As required for specific customer usage of vessel. <p>AUR46870A.1.5 Report for the customer is prepared detailing:</p> <ul style="list-style-type: none">• Work undertaken• Technical or regulatory requirements.
AUR46870A.2 Maintain work site.	<p>AUR46870A.2.1 Tools and equipment are checked for serviceability and conformity with manufacturer specification.</p> <p>AUR46870A.2.2 Work site is maintained in accordance with local and OH&S guidelines.</p>

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- hand tools and equipment suitable for task
- material repair equipment
- wiring repair equipment
- multimeter, test light
- cleaning and defouling equipment
- pneumatic air tools and equipment
- oxygen, acetylene and LPG equipment

Methods include:

- use of hand tools, powered tools, cleaning equipment
- electrical wiring repair, testing by light and meter
- repair applications using wide range of materials
- welding, heating
- recording and reporting (repair details)

Methods should be applied under normal operating conditions.

Specific requirements:

- Return to serviceable condition a wide range of deck, hull, cabin equipment and fittings

Other variables may include:

- size and type of vessel
- material repair (fibreglass, wood, aluminium, steel, plastic, ferro-cement)
- fittings (bollards, ferrules, runners, clamps, cleats, turnbuckles, press studs, brewsters)
- winches (12V, 24V, 240V), capstans
- bow and stern rails, rudder and steering bushes and bearings
- fishing rod, bail boxes and cabin fixtures
- service may be performed in workshop or on-site, indoor or outdoor

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Solve problems	2
Use technology	1

AUR46927A IDENTIFY THE NEED FOR WATER TESTING VESSELS

UNIT DESCRIPTOR: This unit identifies the competence required to inspect vessel, compare test results with specifications and determine if water testing of the vessel is required.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
AUR46927A.1 Inspect vessel.	AUR46927A.1.1 Vessel condition is determined by: <ul style="list-style-type: none">• Collating data from service history – job cards, customer comments, any relevant source.• Performing a visual inspection of vessel noting obvious or potential problems.• Compare inspection results/collated data with manufacturer specification. AUR46927A.1.2 Report for the customer is prepared detailing: <ul style="list-style-type: none">• Condition of vessel.• Further testing which will be required to validate component or system condition.• Costing estimates of recommended repairs and further testing requirements.• Potential service life of components which are still serviceable but have detectable deterioration.

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- Automotive RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- general workshop equipment
- specialised testing equipment suitable for required test

Methods include:

- reading, collating and comparing data, cost estimating, report preparation
- visual inspection, assessment of component condition

Methods should be applied under normal operating conditions.

Specific requirements:

- Inspection standards applied must ensure vessel conforms to relevant specification

Metal and Engineering Training Package

AUR46927A Identify the Need for Water testing Vessels

Other variables may include:

- vessel (type, size, new, modified, developmental, addition to existing vessel)
- local regulations
- testing of some components may be required during inspection procedure
- inspection may be performed in workshop or on-site (indoor or outdoor)

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must only take place after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- vessel inspection procedures and test requirements

Underpinning knowledge:

- Regulatory requirements in relation to navigation and safety equipment
- Component/system assessment based on manufacturer specification
- Vessel operating systems, components and fittings
- Company business documentation – job cards, service history, releases, performance data systems, estimating, quoting
- Inspection report compilation and presentation

Practical assessments:

- Collate the data required to provide a service history of the vessel
- Inspect the vessel at a standard which will detect vessel component/systems/equipment that do not conform to manufacturer, local or state regulatory authority requirements
- Prepare a condition report that accurately indicates vessel conformity with specifications and regulations
- Prepare an estimate of further testing requirements, recommended repairs and cost implications of repairs

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	2
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	2
Solve problems	2
Use technology	1

AUR46930A WATER TEST VESSELS

UNIT DESCRIPTOR: This unit identifies the competence required to water test a vessel to check conformity of the vessel to statutory requirements and configuration.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46930A.1 Conduct pre-water test safety inspection.</p>	<p>AUR46930A.1.1 Safety of vessel is checked before water testing by:</p> <ul style="list-style-type: none"> • Auditing vessel safety equipment • Visually inspecting systems/ components for conformity to manufacturer specification and/or regulations • Connecting appropriate test equipment • Requiring repair of any system/component that fails the safety inspection to be effected prior to vessel leaving mooring
<p>AUR46930A.2 Water test vessel.</p>	<p>AUR46930A.2.1 Performance data from the relevant unit(s) is recorded during each of the test sequences.</p> <p>AUR46930A.2.2 Engine performance is tested by:</p> <ul style="list-style-type: none"> • Operating the engine through the full operating range • Performing manufacturer test procedures <p>AUR46930A.2.3 Propulsion unit is tested by:</p> <ul style="list-style-type: none"> • Operating the propulsion unit through the full range of speeds and directions • Performing manufacturer test procedure <p>AUR46930A.2.4 Hull and hull fittings are tested by:</p> <ul style="list-style-type: none"> • Operating the hull/hull fittings through the full range of performance conditions • Performing manufacturer test procedures <p>AUR46930A.2.5 Performance data from the water test is compared with manufacturer specifications and a test report prepared containing:</p> <ul style="list-style-type: none"> • Vessel conformity to manufacturer specifications and local/state regulations • Components/systems which “failed” to comply with requirements • Recommended repairs/modifications required for the vessel to conform to water test requirements

Metal and Engineering Training Package

AUR46930A Water Test Vessels

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- access to performance data and relevant regulations
- safe water way allowing performance testing
- test equipment appropriate to a specified test

Methods include:

- auditing, reading, collating and comparing data, report preparation
- visual inspection, assessment of component condition
- inspection (visual and by equipment)
- boat driving, testing

Methods should be applied under normal operating conditions.

Specific requirements:

- Testing and inspection standards applied must ensure vessel conforms to relevant specification and regulations

Other variables may include:

- vessel (type, size, new, modified, developmental, addition to existing vessel)
- engine (type/size, single/multi), propulsion unit (propeller, jet drive)
- hull type (planing, displacement, single, multi-hull), hull fittings
- varying performance data and specification
- state, territory, local regulations and laws
- testing, by use of test equipment, of some components may be required during inspection procedure
- climatic (day/night, salt/fresh water, coastal, estuary or marine, water depth, weather)

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- performing a comprehensive water test of a vessel

Underpinning knowledge:

Metal and Engineering Training Package

AUR46930A Water Test Vessels

- Regulatory requirements in relation to navigation and safety equipment
- Boat driving, manoeuvring, etiquette and techniques, navigation
- Distress routines
- Vessel/component/system performance assessment standards based on manufacturer specification and regulatory requirements
- Vessel operating systems, components and fittings
- Company business documentation – job cards, service history, performance data systems.
- Inspection report compilation and presentation

Practical assessments:

- Perform a pre-water test audit and inspection of a vessel
- Conduct a series of engine, propulsion unit, hull and hull fitting tests in accordance with manufacturer specifications and quality standards
- Record the results of performance testing of components/units/systems
- Assess the test data against specifications at a standard which will detect vessel component/systems/equipment that do not conform to manufacturer, local or state regulatory authority requirements
- Prepare a condition report that accurately indicates vessel conformity with specifications and regulations
- Prepare a non-conformity report which indicates further testing requirements and recommended repairs for compliance with specifications and regulations

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	2
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	2
Solve problems	2
Use technology	1

AUR46975A WATER TEST ENGINES IN TANKS

UNIT DESCRIPTOR: This unit identifies the competence required to performance test an engine in a water tank.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR46975A.1 Set-up test equipment.</p>	<p>AUR46975A.1.1 Engine is prepared for testing by:</p> <ul style="list-style-type: none"> • Using lifting equipment to locate engine in tank • Checking security of water tank • Ensuring exhaust emissions are removed in conformity with State and Territory law • Test equipment is linked to engine • Fuel and battery are safely located and connected to engine • Safety precautions, warning signs, and work site comply with local and OH&S guidelines
<p>AUR46975A.2 Performance test engine.</p>	<p>AUR46975A.2.1 Performance data is recorded during engine test sequence.</p> <p>AUR46975A.2.2 Test is conducted by:</p> <ul style="list-style-type: none"> • Starting and operating engine through speed ranges specified in test procedure • Ensuring engine, test equipment and surrounding environment are not damaged by incorrect test procedures <p>AUR46975A.2.3 Engine performance is evaluated by comparing recorded data to manufacturer specification.</p> <p>AUR46975A.2.4 Test is concluded by:</p> <ul style="list-style-type: none"> • Disconnecting battery, fuel and test equipment links from engine • Using lifting equipment to lift engine from tank and move engine to safe location • Cleaning work site <p>AUR46975A.2.5 Engine performance report is prepared indicating:</p> <ul style="list-style-type: none"> • Conformity, or non-conformity, with manufacturer specification • Components, if applicable, requiring repair for engine performance to be restored

RANGE OF VARIABLES:

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- RS&R sector – Recreational Boating

Sources of information/documents may include:

- manufacturer specifications

Metal and Engineering Training Package

AUR46975A Water Test Engines in Tanks

- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- access to performance data
- suitable test tank
- engine performance monitoring equipment
- lifting equipment
- hand tools
- test equipment appropriate to a specified test

Methods include:

- reading, recording and comparing data, report preparation
- operating engines, performance monitoring equipment
- use of manual tools
- Assessment and problem identification

Methods should be applied under normal operating conditions.

Specific requirements:

- Performance test an engine

Other variables may include:

- engine (type/size), 2/4 stroke, inboard/outboard, fitted or not fitted to a vessel
- test facility, dynamometer, monitoring equipment
- varying performance data and specification
- State, Territory, local regulations and laws

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- performance testing an engine in a water tank

Underpinning knowledge:

- Engine operating systems eg., starting, ignition, charging, hydraulic trim
- Electronic, electrical and hydraulic controls
- Marine engine classification, types and identification of system components
- Engine performance report compilation and presentation
- Company business documentation – job cards, performance and test data

Practical assessments:

- Mount (and remove) an engine into the water tank for performance testing
- Conduct a series of engine performance tests in accordance with manufacturer specifications and quality standards
- Record the results of engine performance tests

Metal and Engineering Training Package

AUR46975A Water Test Engines in Tanks

- Assess the test data against specifications at a standard which will detect engine outputs that do not conform to manufacturer, local or state regulatory authority requirements
- Prepare a condition report that accurately indicates the engine performance and whether repair(s) are required to enable conformity with specifications and regulations
- Maintain the work site in accordance with local and OH&S guidelines

Key Competencies:

	Level
Collect, analyse and organise information	2
Communicate ideas and information	2
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	2
Solve problems	2
Use technology	2

AUR50318A DISPOSE OF WASTE AND MAINTAIN A TIDY WORK AREA

UNIT DESCRIPTOR: This unit identifies the competence required to remove and dispose of waste matter keeping the work area and surrounds in a tidy and safe condition.

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR50318A.1 Access appropriate rubbish pick up equipment.</p>	<p>AUR50318A.1.1 Rubbish pick up equipment relevant to the task is obtained and checked to be in good working order in accordance with manufacturer specifications.</p> <p>AUR50318A.1.2 Protective apparel appropriate to the type of rubbish and litter to be collected is selected.</p> <p>AUR50318A.1.3 All activities are carried out according to industry regulations/ guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>
<p>AUR50318A.2 Transfer rubbish to portable carrier.</p>	<p>AUR50318A.2.1 Transfer rubbish to portable carrier is completed without causing damage to any machinery or equipment.</p> <p>AUR50318A.2.2 Rubbish is accessed for health, safety, and environmental risks and handled in accordance with relevant enterprise, client and OH&S and statutory requirements.</p> <p>AUR50318A.2.3 Rubbish bin liners are cleaned and/or replaced as necessary to comply with industry/ enterprise standards.</p> <p>AUR50318A.2.4 All activities are carried out according to industry regulations/ guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>

Metal and Engineering Training Package

AUR50318A Dispose of Waste and Maintain a Tidy Work Area

<p>AUR50318A.3 Deliver rubbish to disposal point.</p>	<p>AUR50318A.3.1 Rubbish is delivered without causing damage to any machinery or equipment.</p> <p>AUR50318A.3.2 Rubbish is transported to disposal point by a practical route and without spillage.</p> <p>AUR50318A.3.3 Mechanical lifting devices where necessary are fitted correctly to trolley/carrier and operated in accordance with manufacturer specifications.</p> <p>AUR50318A.3.4 Reports are made to supervisor when disposal unit is full or hazardous rubbish identified.</p>
---	---

ELEMENT OF COMPETENCY	PERFORMANCE CRITERIA
<p>AUR50318A.3 (continued) Deliver rubbish to disposal point.</p>	<p>AUR50318A.3.5 All activities are carried out according to industry regulations/guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>
<p>AUR50318A.4 Identify and sort rubbish where required.</p>	<p>AUR50318A.4.1 Sorting is achieved without causing damage to any machinery or equipment.</p> <p>AUR50318A.4.2 Recyclable materials are identified and separated as appropriate.</p> <p>AUR50318A.4.3 All activities are carried out according to industry regulations/guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>
<p>AUR50318A.5 Clean and store equipment.</p>	<p>AUR50318A.5.1 Equipment is cleaned and stored without causing damage to any machinery or equipment.</p> <p>AUR50318A.5.2 All equipment is washed and dried as appropriate to minimise development of odours and bacteria.</p> <p>AUR50318A.5.3 Equipment is checked to be in good working order before storage in an accessible location.</p> <p>AUR50318A.5.4 All activities are carried out according to industry regulations/ guidelines, OH&S legislation, statutory legislation and enterprise procedures/policies.</p>

RANGE OF VARIABLES:

Metal and Engineering Training Package

AUR50318A Dispose of Waste and Maintain a Tidy Work Area

Range of contexts:

This competency standard applies to the following and should be contextualised to the qualification to which it is being applied:

- RS&R streams

Sources of information/documents may include:

- manufacturer specifications
- enterprise operating procedures
- product manufacturer specifications
- customer requirements
- industry/workplace codes of practice

OH&S practices must abide by:

- State/industry OH&S legislation
- Award provisions

Resources may include:

- compactors, dump master, large waste bins, open trucks, pick up trolley, 240 litre bins with wheels, cleaning cloths, fragrant neutral detergent, bin liners, rubbish bins, protective apparel and equipment (masks etc.)

Methods include:

- hand and machine pick-up and disposal

Methods should be applied under normal operating conditions.

Specific requirements:

- Specialist removal contractors usually deal with toxic and other dangerous wastes or high security waste

Other variables may include:

- wet rubbish types include waste oil, cleaning fluids, coffee, tea, food stuffs, other liquids, dry; old parts, paper, cartons, containers etc.

EVIDENCE GUIDE:

Context:

- The underpinning knowledge and skills may be assessed on or off-the-job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.

Critical aspects:

It is essential that competence is fully observed and there is the ability to transfer the competency to changing circumstances and to respond to unusual situations in the critical aspects of:

- interpreting and communicating relevant information
- safe working practices
- methods of pick-up and disposal of waste and litter
- complying with statutory and environmental equipment

Underpinning knowledge:

- The necessary cleaning agents and their uses
- Relevant information
- Equipment safety requirements
- Relevant methods for picking up various types of waste/litter
- Relevant methods for disposal of various types of waste/litter
- Procedures relevant to legislation regarding disposal of toxic and other waste substances
- Manual handling procedures

Metal and Engineering Training Package

AUR50318A Dispose of Waste and Maintain a Tidy Work Area

- Personal safety requirements

Practical assessments:

- Access, interpret and apply relevant information
- Use relevant equipment
- Apply relevant methods for collecting and disposal of various waste/litter
- Apply relevant legislation regarding disposal of toxic and other waste substances
- Apply correct manual handling procedures
- Apply relevant personal safety requirements

Key Competencies:

	Level
Collect, analyse and organise information	1
Communicate ideas and information	1
Plan and organise activities	1
Work with others and in teams	1
Use mathematical ideas and techniques	1

BSBCMN205A Use business technology

Unit Descriptor This unit covers the skills and knowledge required to select, use, and maintain business technology. This technology includes the effective use of computer software to organise information and data.

This unit is related to BSBCMN307A Maintain business resources.

Competency Field Common

Element

Performance Criteria

- | | |
|------------------------------|--|
| 1. Select and use technology | 1.1 Appropriate <i>technology</i> and <i>software</i> applications are selected to achieve the requirements of the task |
| | 1.2 Workspace, furniture and equipment are adjusted to suit the ergonomic requirements of the user |
| | 1.3 Technology is used according to <i>organisational requirements</i> and in a way which promotes a safe work environment |
| 2. Process and organise data | 2.1 Files and records are identified, opened, generated or amended according to task and organisational requirements |
| | 2.2 <i>Input devices</i> are operated according to organisational requirements |
| | 2.3 <i>Data</i> is <i>stored</i> appropriately and applications are exited without damage to or loss of data |
| | 2.4 Manuals, training booklets and/or on-line help or help-desks are used to overcome basic difficulties with applications |
| 3. Maintain technology | 3.1 Used <i>technology consumables</i> are identified and replaced in accordance with manufacturer's instructions and organisational requirements |
| | 3.2 <i>Routine maintenance</i> is carried out and/or arranged in order to ensure that equipment is maintained in accordance with manufacturer's instructions and organisational requirements |
| | 3.3 <i>Equipment faults</i> are accurately identified and action taken in accordance with manufacturer's instructions or by reporting fault to designated person |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- Legislation, codes and national standards relevant to the workplace which may include:**
- award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice

- Technology may include:**
- computer technology, such as laptops and PCs
 - digital cameras
 - zip drives
 - modems
 - scanners
 - printers

- Software applications may include:**
- email, internet
 - word processing, spreadsheet, database, accounting, or presentation packages

- Organisational requirements may relate to procedures including:**
- log-on procedures
 - correctly identifying and opening files
 - locating data
 - saving and closing files
 - Occupational Health and Safety policies, procedures and programs
 - storing data
 - manufacturer's guidelines
 - legal and organisation policy/guidelines and requirements

- Input devices may include:**
- keyboard
 - numerical key pad
 - mouse
 - scanner

Range Statement

- Storage of data may include:**
- storage in directories and sub-directories
 - storage on CD-ROMs, hard and floppy disk drives or back up systems
 - appropriate storage/filing of hard copies of computer generated documents

- Technology consumables may include:**
- printer ribbons and cartridges
 - CD-ROM
 - zip disks
 - print heads
 - floppy disks
 - toner cartridges
 - backup tapes

- Routine maintenance may include:**
- regular checking of equipment
 - replacing consumables
 - “in-house” cleaning and servicing of equipment according to manufacturer’s guidelines
 - periodic servicing by qualified or manufacturer approved technician

- Equipment faults or problems may be identified or anticipated by:**
- routine checking of equipment
 - preparation of a maintenance program
 - encouraging feedback from work colleagues
 - regular back-ups of data
 - keeping a log book of detected faults
 - regular Occupational Health and Safety inspections
 - checking that repairs have been carried out

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Selection and application of functional software applications to produce workplace documents
- Application of Occupational Health and Safety procedures for set up of workstation, operation of computer, changing toner cartridges and other work with plant and substances
- Access, retrieval and storage of required data

Underpinning Knowledge*

* At this level the learner must demonstrate basic operational knowledge in a moderate range of areas.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- The organisation's policies, plans and procedures, especially in regard to file-naming and storage conventions
- The correct log-on and shut-down procedures for computer equipment
- Organisational IT procedures including back-up and virus protection procedures
- Basic technical terminology in relation to reading help-files and manuals
- Methods of detecting faults in and solving problems with business technology

Underpinning Skills

- Literacy skills to identify work requirements and understand and process basic, relevant workplace information; follow written instructions;
- Communication skills to request advice, receive feedback and work with a team
- Problem solving skills to solve routine problems
- Keyboarding skills to produce basic workplace documents
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 1	Level 1	Level 1	Level 1	Level 1	Level 1	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to identify application needs
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for self
- **Working with teams and others** – in communicating equipment faults
- **Using mathematical ideas and techniques** – when preparing routine maintenance
- **Solving problems** – to identify application problems
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN206A Process and maintain workplace information

Unit Descriptor

This unit covers the skills and knowledge required to collect, process, store and maintain workplace information and its systems. It includes the maintenance of filing and record systems.

This unit is related to BSBCMN305A Organise workplace information.

Competency Field

Common

Element

Performance Criteria

- | | |
|----------------------------------|---|
| 1. Collect information | 1.1 Collection of <i>information</i> is timely and relevant to organisational needs |
| | 1.2 <i>Business equipment/technology</i> available in the work area is used to obtain information effectively |
| | 1.3 <i>Organisational requirements</i> relating to security and confidentiality are applied to information handling |
| 2. Process workplace information | 2.1 Business equipment/technology is used to process information in accordance with <i>organisational requirements</i> |
| | 2.2 Information is processed in accordance with defined timeframes, guidelines and procedures |
| | 2.3 <i>Information</i> is updated, modified and filed in accordance with organisational requirements |
| | 2.4 Information is collated and despatched in accordance with specified timeframes and organisational requirements |
| 3. Maintain information systems | 3.1 Information and filing systems are maintained in accordance with organisational requirements |
| | 3.2 <i>Inactive or dead files</i> are identified, <i>removed</i> and/or <i>relocated</i> in accordance with organisational requirements |
| | 3.3 New files are established and assembled in accordance with organisational requirements |
| | 3.4 Reference and index systems are updated in accordance with organisational requirements |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- Legislation, codes and national standards relevant to the workplace which may include:**
- award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice

- Information may include:**
- correspondence (faxes, memos, letters, email)
 - computer databases (library catalogue, customer records)
 - computer files (letters, memos and other documents)
 - sales records (monthly forecasts, targets achieved)
 - forms (insurance forms, membership forms)
 - invoices (from suppliers, to debtors)
 - personnel records (personal details, salary rates)
 - minutes of meetings

- Business equipment/technology may include:**
- photocopier
 - computer
 - printer
 - binder
 - filing systems (manual/computerised/electronic)
 - answering machine
 - fax machine
 - telephone

Range Statement

Organisational requirements may include:

- procedures for deciding which records should be captured and filed
- security procedures
- legal and organisation policy/guidelines and requirements
- despatching and collecting procedures
- procedures for updating records
- Occupational Health and Safety policies, procedures and programs

Removing inactive or dead files may include:

- transferring records from the active filing system to secondary storage
- transferring files at regular intervals or routinely checking for dead or inactive files
- periodically archive or delete files
- compressing computer files prior to archiving

Relocation of information may include:

- electronic (email, internet access, diskette, tape, CD-ROM)
- microfilm
- printed material
- photographic material

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Application of organisational policies and procedures for collecting and processing workplace information
- Maintains accuracy in recording and documenting information
- Correct storage and classification of documents
- Maintenance of information records

Evidence Guide

Underpinning Knowledge*

* At this level the learner must demonstrate basic operational knowledge in a moderate range of areas.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding of organisation's business and structure
- Knowledge of the organisation's record keeping/filing systems and security procedures
- Understanding organisational policies and procedures relating to collecting and processing workplace information

Underpinning Skills

- Literacy skills to read and understand organisation's recordkeeping and information (including classification) systems; follow sequenced written instructions; to comprehend/interpret nature of record content
- Interpreting and applying relevant access and security rules and conditions
- Planning skills to organise work priorities and arrangements
- Problem solving skills to solve routine problems
- Technology skills including the ability to select and use technology appropriate to a task
- Communication skills including reporting of information
- Numeracy skills in relation to sequencing and indexing files
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Evidence Guide

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 1	Level 1	Level 1	Level 1	Level 1	Level 1

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to store and despatch information
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for collating and filing information
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – in filing information
- **Solving problems** – to store and despatch information
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN207A Prepare and process financial/business documents

Unit Descriptor This unit covers the processing of financial transactions including petty cash, invoicing and banking in a business environment.

This unit is related to BSBCMN308A Maintain financial records.

Competency Field Common

Element	Performance Criteria
1. Process petty cash transactions	<p>1.1 Petty cash claims and vouchers are <i>checked</i> for approval, accuracy and authenticity prior to processing</p> <p>1.2 <i>Petty cash transactions</i> are processed and recorded within designated time limits</p> <p>1.3 Irregularities are noted and referred to <i>nominated person</i> for resolution</p> <p>1.4 Transactions are checked and petty cash book balanced according to <i>organisational requirements</i></p>
2. Prepare and process banking documents	<p>2.1 Deposits and withdrawals are accurately entered and balanced according to organisational requirements</p> <p>2.2 Cheques and credit card vouchers are checked for validity (signatures, dates, amounts) before processing</p> <p>2.3 Cash, cheques and credit cards are listed on banking forms in accordance with the <i>banking institution's guidelines</i></p> <p>2.4 Pay-in documentation is reconciled with all money calculations</p>
3. Reconcile invoices for payment to creditors	<p>3.1 Discrepancies between invoices and <i>source documents</i> are identified and reported to nominated person for resolution</p> <p>3.2 Adjustments and errors are identified, reported and rectified in accordance with organisational requirements</p> <p>3.3 Creditor enquiries are answered and/or referred to nominated person for resolution</p>
4. Prepare invoices for debtors	<p>4.1 Invoices are prepared accurately in accordance with organisational requirements</p> <p>4.2 Invoices are distributed to nominated person for verification prior to despatch</p> <p>4.3 Adjustments are made as required in accordance with organisational requirements</p>

Element

Performance Criteria

- 4.4 Invoices and other related documents are copied and filed for auditing purposes

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Checking claims for accuracy and authenticity may include:

- requiring a receipt
- ensuring items purchased are business related
- accepting claims from authorised personnel only

Recording petty cash transactions may include:

- paper based
- electronic
- organisational accounting system

Nominated persons include:

- petty cash officer
- supervisor
- accounts department

Range Statement

Organisational requirements may include:

- totalling and balancing petty cash book procedures
- legal and organisation policy/guidelines and requirements
- all cash being accounted for at all times
- procedures for entering and balancing deposits
- procedures for checking validity of cheques and credit card vouchers
- security procedures
- Occupational Health and Safety policies, procedures and programs
- format of documents for reimbursement
- guidelines for updating receipts
- Australian Accounting and Auditing standards
- designated timelines for petty cash period/pay period

Banking institution's guidelines may include:

- deposit slips filled out accurately
- cash bundled
- banking summary provided
- banking electronically

Source documents may include:

- purchase orders
- invoices
- receipts
- delivery dockets/receipts
- credit notes
- statements
- remittance advices
- deposit books

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Application of organisations policy and procedures for financial transactions in regard to petty cash, invoicing and bank processes
- Accurate processing of petty cash claims and vouchers including identification of irregularities or errors
- Accurate preparing and processing of banking documents including identification of irregularities or errors
- Accurate reconciliation and payment of invoices for creditors and debtors including identification of irregularities or errors
- The recording and reporting of transactions

Underpinning Knowledge*

* At this level the learner must demonstrate basic operational knowledge in a moderate range of areas.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding procedures for cash and non-cash handling
- Knowledge of organisational policies and procedures relating to petty cash, banking, security, invoicing procedures relating to debtors and creditors
- Understanding banking institution's guidelines
- Knowledge of methods and techniques for simple calculations
- Methods of presenting financial data

Evidence Guide

Underpinning Skills

- Literacy skills to read and interpret financial information; maintain records and banking documents
- Numeracy skills for checking accuracy of calculations and reconciliations of accounts
- Proofreading skills for maintaining accuracy of information
- Communication skills including reporting of irregularities and errors
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 1	Level 1	Level 1	Level 2	Level 1	Level 1

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to process financial documentation
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for payment of invoices etc
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – in processing business transactions
- **Solving problems** – to identify irregularities and errors
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN212A Handle mail

Unit Descriptor

The unit is based on and equivalent to BSAINF101A and BSAINF201A (together) from BSA97 Administration Training Package (enhanced).

The unit covers receiving and distributing incoming mail, collecting and despatching outgoing mail, and organising and sending electronic mail.

This unit is related to BSBCMN305A Organise workplace information.

Competency Field

Common

Element

Performance Criteria

- | | |
|--|---|
| 1. Receive and distribute incoming mail | 1.1 <i>Incoming mail is checked</i> and registered in accordance with organisational policy and procedures |
| | 1.2 Titles and locations of company personnel and departments are identified |
| | 1.3 Urgent and confidential mail is identified and <i>distributed</i> in accordance with organisational requirements |
| | 1.4 Mail is <i>sorted</i> and despatched to the <i>nominated person/location</i> in accordance with organisational requirements |
| | 1.5 <i>Damaged, suspicious or missing items</i> are recorded and/or reported in accordance with organisational policy and procedures |
| 2. Receive and despatch outgoing mail | 2.1 Outgoing mail is collected, checked and sorted to ensure all items are <i>correctly prepared for despatch</i> in accordance with organisational policy and procedures |
| | 2.2 Outgoing mail is <i>recorded</i> and <i>processed</i> for <i>despatch</i> in accordance with organisational requirements |
| | 2.3 Mail is <i>despatched</i> to meet designated timelines |
| 3. Organise urgent and same day deliveries | 3.1 Items are prepared for urgent delivery in accordance with organisational requirements and the carrier's specifications |
| | 3.2 <i>Delivery options</i> are evaluated and the <i>best option</i> for delivery is selected |
| | 3.3 Lodgement or pick up of emergency deliveries is organised and followed up if necessary |

Element

Performance Criteria

- | | |
|--------------------------------------|---|
| 4. Organise and send electronic mail | 4.1 <i>Distribution lists</i> are prepared/maintained in accordance with organisational requirements |
| | 4.2 Mail message/s are <i>checked for accuracy</i> and any attachments are identified and <i>prepared</i> in accordance with organisational and service provider requirements |
| | 4.3 Outgoing mail is recorded/stored in accordance with organisational requirements |
| | 4.4 Mail is <i>despatched</i> to meet designated timelines |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Incoming mail may include:

- paper based
- electronic (eg faxes, emails to central address)
- internal
- external
- urgent
- confidential/personal
- letters
- journals/magazines
- other correspondence

Checking mail may include:

- mail marked 'confidential', 'urgent' or 'personal'
- mail sent "express post" or registered
- mail that has been damaged
- mail that looks suspicious
- enclosures

Range Statement

Registering of mail may include:

- the date received
- the sender
- the addressee
- the subject
- the contents eg cheque
- assigning a file number
- the condition of mail item (damaged, no return address)

Delivery of urgent and confidential mail may include:

- separating and prioritising urgent mail
- immediate, hand delivery, express post, registered

Sorting mail may include:

- separating urgent mail to be distributed first
- sorting by departments
- sorting by location
- sorting by seniority of personnel
- separating internal (organisational) mail and external mail
- separating by order of importance for each individual
- separating junk mail
- sorting invoices, cheques and accounts
- adding a circulation slip

Nominated person/location may include:

- department
- individual addressee
- administrative support person

Damaged, suspicious or missing items may include:

- mail exposed to the weather (water damage from rain)
- mail roughly handled (broken contents, torn address labels)
- pilfered mail (contents may be missing, parcels slit opened)
- mail that looks unusual
- mail that makes noises
- mail that smells strange
- mail that looks like it has been interfered with (re-sealed mail)

Range Statement

Action in relation to damaged, missing or suspicious items may include:

- contacting the sender to ensure everything sent was received
- negotiating the replacement of missing or damaged items with the sender
- filling out forms for the sender's insurance company
- not touching or moving suspicious mail
- calling the supervisor or security staff immediately

Correctly preparing mail items for despatch may include:

- checking the address details and layout are correct
- checking letter and envelope are addressed to same person
- checking that the letter has been signed
- checking enclosures
- checking that the address is not obscured
- checking that the return address is included
- determining the most appropriate carrier
- ensuring the correct requirements for the chosen carrier are being followed
- preparing bulk mailouts

Mail records may include:

- electronic (specialist software, database, spreadsheet systems)
- paper based (mail book, form, file)

Processing mail for despatch may include:

- calculating and paying for postage
- registering mail
- DX mail

Records of outgoing mail may include:

- date of despatch
- sender
- sender's department
- addressee/organisation
- appropriate carrier (courier, normal mail, express post)
- reference number
- receipts attached where appropriate

Delivery options may include:

- express mail
- overnight bag
- courier

Range Statement

Best option may be determined by:

- cost
- time constraints
- delivery location
- nature of contents (bulky, fragile, confidential)
- quantity of delivery items

Distribution lists may include:

- electronic address books
- database or spreadsheet records
- wordprocessing tables or data files

Maintenance of distribution lists may include:

- deleting records
- adding new records
- updating records or deleting returned mail addressees

Checking electronic mail for accuracy may include:

- spelling
- grammar
- punctuation
- intended meaning

Preparing attachments may include:

- checking that the file size will negotiate the Internet Service Provider gateway
- separating large documents into a number of files
- compressing files
- preparing self-executable files

Evidence Guide

The Evidence Guide identifies the critical aspects, knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Integrated demonstration of all elements of competency and their performance criteria
- Knowledge of the organisation's policies and procedures relating to mail and electronic mail
- Justification for choice of carrier for urgent and same day deliveries
- Knowledge of carriers' requirements (eg postal and courier)

Underpinning Knowledge*

* At this level the learner must demonstrate basic operational knowledge in a moderate range of areas.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Organisational structure
- Titles, roles and locations of the organisation's personnel
- Range of mail services available
- Procedural requirements for receiving/despatching and prioritising correspondence
- Organisational policies and procedures that are specific to handling electronic mail

Underpinning Skills

- Literacy skills to keep records, check accuracy of written material and follow policies and procedures
- Numeracy skills for checking weights and addresses, sorting and collating and estimating time for mail despatches and bulk mailouts
- Communication skills to receive instructions of several steps to complete task, give information to others and consult with or question supervisor and peers to clarify information
- Computer/technology skills related to using electronic mail
- Problem solving eg choosing appropriate delivery method for urgent documents
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 1	Level 1	Level 1	Level 1	Level 1	Level 1	Level 1

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to deal with incoming and outgoing mail
- **Communicating ideas and information** – when organising couriers or other carriers
- **Planning and organising activities** – to organise bulk mail despatch either electronically or paper-based
- **Working with teams and others** – to collect and distribute mail
- **Using mathematical ideas and techniques** – to estimate time and resources needed for bulk mailing
- **Solving problems** – to identify the most appropriate and cost efficient option for urgent delivery
- **Using technology** – to record incoming and outgoing mail if required

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN213A Produce simple wordprocessed documents

Unit Descriptor

This unit covers preparation and production of short routine letters, notes, memos and records using word processing software.

This unit is related to BSBCMN107A Operate a personal computer, BSBCMN108A Develop keyboard skills and BSBCMN306A Produce business documents.

Competency Field

Common

Element

Performance Criteria

- | | |
|----------------------------------|--|
| 1. Use safe work practices | 1.1 Workspace, furniture and equipment are adjusted to suit the <i>ergonomic requirements</i> of the user |
| | 1.2 <i>Work organisation</i> meets organisational and Occupational Health and Safety requirements for computer operation |
| | 1.3 Energy and resource <i>conservation techniques</i> are used to minimise wastage in accordance with organisational and statutory requirements |
| 2. Confirm document requirements | 2.1 Document purpose, audience and presentation requirements are clarified with relevant personnel in accordance with organisational policy and procedures |
| | 2.2 Organisational requirements in relation to <i>document</i> style, storage and security requirements are identified |
| 3. Produce documents | 3.1 Text is entered, checked and amended in accordance with organisational and task requirements |
| | 3.2 <i>Software functions</i> are utilised for consistency of design and layout and document is <i>formatted</i> in accordance with organisational style and presentation requirements |
| | 3.3 Manuals, user documentation and on-line help are used to overcome problems with document presentation and production |
| | 3.4 Mailable document is previewed, adjusted and printed in accordance with organisational and task requirements |
| | 3.5 Documents are prepared within designated timelines, organisational requirements and Australian standards for speed and accuracy |
| | 3.6 Document is named and stored, in accordance with organisational requirements and the application exited without information loss/damage |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Organisational policy and procedures may include:

- log-on procedures
- password protection
- storage / location of data
- standard formats
- author's instructions
- use of templates

Ergonomic requirements may include:

- workstation height and layout
- chair height, seat and back adjustment
- footrest
- screen position
- keyboard and mouse position
- document holder
- posture
- avoiding radiation from computer screens
- lighting
- noise minimisation

Work organisation may include:

- mix of repetitive and other activities
- rest periods
- exercise breaks

Range Statement

Conservation techniques may include:

- double-sided paper use
- re-used paper for rough drafts (observing confidentiality requirements)
- disposing of non-confidential waste paper in recycling bins
- utilising power-save options for equipment

Documents may include:

- memos
- faxes
- letters
- standard form letters
- labels
- envelopes
- agendas
- minutes
- briefing papers
- short reports
- simple one-page flyers

Software functions may include:

- default settings
- page setup
- paragraph formatting
- text formatting
- tabs
- line spacing
- page numbers
- headers/footers
- spell check
- grammar check
- indent
- document protection

Range Statement

Formatting may include:

- page orientation
- margins
- company logo / letterhead
- columns
- enhancements to text – colour, size, orientation
- enhancements to format – borders, patterns and colours
- alignment on page
- headers/footers

Designated timelines may include:

- timeline agreed with supervisor/person requiring document/s
- timeline agreed with internal/external client
- organisation timeline eg deadline requirements

Printing may include:

- printer setup whole document
- specified pages
- odd or even pages
- multiple copies

Naming and storage of documents may include:

- file names which are easily identifiable in relation to the content
- file/directory names which identify the operator, author, section, date etc
- file names according to organisational procedure eg numbers rather than names
- storage in folders / sub-folders
- storage on hard/floppy disk drives, CD ROM, tape backup
- organisation policy for backing up files
- organisation policy for filing hard copies of documents
- filing locations
- security
- authorised access

Metal and Engineering Training Package

BSBCMN213A Produce Simple Wordprocessed Documents

Range Statement

Checking may include:

- proofreading
- accuracy of information
- spelling, electronically and manually
- grammar
- consistency of layout
- ensuring instructions with regard to content and format have been followed

Evidence Guide

The Evidence Guide identifies the critical aspects, knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Integrated demonstration of all elements of competency and their performance criteria
- Knowledge of simple word processing functions
- Knowledge of standard document layout
- Knowledge of simple document design principles
- Knowledge of organisational requirements for simple wordprocessed documents

Underpinning Knowledge*

* At this level the learner must demonstrate basic operational knowledge in a moderate range of areas.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Knowledge of the purposes of and the uses and function of wordprocessing software.
- Organisational requirements for ergonomics, work periods and breaks, and conservation techniques.
- Formatting styles and rules of the organisation's style guide
- Effect of formatting on readability and appearance of documents

Underpinning Skills

- Keyboarding and technology skills
- Literacy skills for reading and understanding the organisation's procedures; using basic models to produce a range of correspondence; using page layout to support text structure
- Proofreading and editing skills for checking own work and re-reading for accuracy against original
- Communication including questioning and clarifying
- Problem solving skills to solve routine problems
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

Consistency of Performance In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Resource Implications The learner and trainer should have access to appropriate documentation and resources normally used in the workplace. These may include:

- workplace reference materials such as style guides
- computer equipment with wordprocessing software
- English dictionary

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 2	Level 2	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to meet organisational requirements
- **Communicating ideas and information** – through well-designed business documents
- **Planning and organising activities** – to meet designated timelines
- **Working with teams and others** – to determine document purpose and audience
- **Using mathematical ideas and techniques** – to determine spatial design requirements
- **Solving problems** – using manuals and on-line help
- **Using technology** – to produce wordprocessing documents

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN302A Organise personal work priorities and development

Unit Descriptor

This unit covers the skills and knowledge required to organise own work schedules, monitor and obtain feedback on work performance, and maintain required levels of competence.

This unit is related to BSBCMN202A Organise and complete daily work tasks and BSBCMN402A Develop work priorities.

Competency Field

Common

Element

Performance Criteria

- | | |
|--|---|
| 1. Organise and complete own work schedule | 1.1 <i>Work goals and objectives</i> are understood, negotiated and agreed in accordance with <i>organisational requirements</i> |
| | 1.2 Workload is assessed and prioritised to ensure completion within identified timeframes |
| | 1.3 <i>Factors</i> affecting the achievement of work objectives are identified and incorporated into work plans |
| | 1.4 <i>Business technology</i> is used efficiently and effectively to manage and monitor scheduling and completion of tasks |
| 2. Monitor own work performance | 2.1 Personal work performance is accurately monitored and adjusted to ensure maintenance of job quality and customer service |
| | 2.2 <i>Feedback on performance</i> is actively sought from colleagues and clients and evaluated in the context of individual and group requirements |
| | 2.3 Variations in the quality of service and products are routinely identified and reported in accordance with organisational requirements |
| 3. Develop and maintain own competence level | 3.1 Personal knowledge and skills are assessed against <i>competency standards</i> performance descriptions to determine development needs and priorities |
| | 3.2 <i>Opportunities for improvement</i> are identified and planned in liaison with colleagues |
| | 3.3 Feedback is used to identify and develop ways to improve competence within available opportunities |
| | 3.4 New skills and opportunities to develop them are identified to achieve and maintain continuous learning |

Element

Performance Criteria

- 3.5 Records and documents relating to achievements and assessments are stored and maintained in accordance with own requirements

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

They may use legislation, codes and national standards relevant to the workplace including:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Work goals and objectives may include:

- sales targets
- reporting deadlines
- production targets
- budgetary targets
- team participation
- team and individual learning goals

Organisational requirements may be included in:

- quality assurance and/or procedures manuals
- goals, objectives, plans, systems and processes
- legal and organisational policy/guidelines and requirements
- business and performance plans
- access and equity principles and practice
- ethical standards
- Occupational Health and Safety policies, procedures and programs
- quality and continuous improvement processes and standards
- defined resource parameters

Range Statement

Factors affecting the achievement of work objectives may include:

- competing work demands
- technology/equipment breakdowns
- unforeseen incidents
- workplace hazards, risks and controls
- environmental factors such as time, weather, etc
- resource and materials availability
- budget constraints

Business technology may include:

- computers
- computer applications
- modems
- personal schedulers
- email
- internet/extranet/intranet
- photocopiers
- scanners
- facsimile machines
- printers

Feedback on performance may include:

- formal/informal performance appraisals
- obtaining feedback from supervisors and colleagues
- obtaining feedback from clients
- personal, reflective behaviour strategies
- routine organisational methods for monitoring service delivery

Competency standards are standards which measure:

- all those personal and technical knowledge, skills and attitudinal aspects (competencies) required to effectively and efficiently undertake the day to day tasks and duties of the practitioner's work function

Range Statement

Opportunities for improvement may include:

- coaching, mentoring and/or supervision
- formal/informal learning programs
- internal/external training provision
- work experience/exchange/opportunities
- personal study
- career planning/development
- performance appraisals
- workplace skills assessment
- quality assurance assessments and recommendations
- Recognition of Prior Learning

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Preparing work plans
- Prioritising and scheduling work objectives and tasks
- Seeking and acting on feedback from clients and colleagues
- Reviewing own work performance against achievements through self-assessment
- Accessing learning opportunities to extend own personal work competencies

Underpinning Knowledge*

* At this level the learner must demonstrate some relevant theoretical knowledge.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding the organisation's policies, plans and procedures
- Knowledge of methods to elicit, analyse and interpret feedback
- Understanding techniques to prepare personal plans and establish priorities
- Knowledge of the principles and techniques of goal setting, measuring performance, time management and personal assessment
- Understanding processes to interpret competency standards and apply them to self
- Understanding methods to identify and prioritise

Evidence Guide

personal learning needs

Underpinning Skills

- Literacy skills for reading and understanding the organisation's procedures, own work goals and objectives
- Proofreading and editing skills for checking own work
- Planning skills to organise work priorities and arrangements
- Problem solving skills to solve routine problems
- Communication skills including giving and receiving constructive feedback on development needs
- Technology skills including the ability to select and use technology appropriate to a task
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 1	Level 2	Level 2	Level 1	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to measure self-performance
- Communicating ideas and information – with members of the work team
- **Planning and organising activities** – for self
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – as an aid to measure and schedule tasks
- **Solving problems** – as an aid to self-development
- **Using technology** – to manage scheduling and completion of tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN306A Produce business documents

Unit Descriptor This unit covers the skills and knowledge required to produce various business documents. It includes the skills and knowledge required to select and use a range of functions on a computer application.

This unit relates to BSBCMN213A Produce simple wordprocessed documents and BSBCMN405A Analyse and present research information. Consider co-assessment with BSBCMN305A Organise workplace information.

Competency Field Common

Element

Performance Criteria

- | | |
|---------------------------------|---|
| 1. Select and prepare resources | 1.1 Appropriate <i>technology</i> and <i>software</i> applications are selected and utilised to produce required <i>business documents</i> |
| | 1.2 <i>Organisational requirements</i> for information entry, storage, output and quality of presentation are identified prior to design of documentation |
| | 1.3 Workspace, furniture and equipment are adjusted to suit the ergonomic requirements of the user |
| 2. Design document | 2.1 Document design is appropriate for the efficient entry of information and maximises the presentation and appearance of information |
| | 2.2 Files and records are identified, opened, generated and amended according to task and organisational requirements |
| | 2.3 A range of <i>functions</i> are used to ensure consistency of design and layout |
| | 2.4 <i>Input devices</i> are operated within designated speed and accuracy requirements |
| 3. Produce document | 3.1 Document production is completed within designated timelines according to organisational requirements |
| | 3.2 Documents produced are checked to ensure they meet task requirements for style and layout |
| | 3.3 <i>Storage of documents</i> is appropriate and applications are exited without damage to or loss of information |
| | 3.4 Manuals, training booklets and/or help-desks are used to overcome basic difficulties with document design and production |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Technology may include:

- computers
- scanners
- photocopiers
- printers

Software (a minimum of three packages) may include:

- word processing packages
- spreadsheet packages
- database packages
- accounting packages
- presentation packages

Business documents may include:

- newsletters
- client databases
- proposals
- reports
- accounts statements
- project reviews
- web pages

Range Statement

Organisational requirements may include:

- quality assurances and/or procedures manuals
- log-on procedures
- legal and organisational policy/guidelines and requirements
- correctly identifying and opening files
- locating data
- budgets
- Occupational Health and Safety policies, procedures and programs
- security
- saving and closing files
- storing data
- manufacturer's guidelines

Functions used when designing a document may include:

- using styles
- merging documents
- table formatting
- using columns
- spell checking
- editing
- alternating headers and footers

Input devices may include:

- keyboard
- numerical key pad
- mouse
- scanner

Storage of documents may include:

- storage in directories and sub-directories
- storage on CD-ROMs, disk drives or back up systems
- storage/filing of hard copies of computer generated documents
- storage/filing of hard copies of incoming and outgoing facsimiles
- storage/filing of incoming and outgoing correspondence

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Selecting and applying appropriate technology and software
- Designing and producing business documents using a minimum of three software applications
- Using of a range of functions which enhance the presentation and readability of the document
- Applying OHS procedures for set up of workstation and operation of computer
- Using data storage options

Underpinning Knowledge*

* At this level the learner must demonstrate some relevant theoretical knowledge.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding the organisation's policies, plans and procedures
- Understanding the functions and features of contemporary computer applications
- Techniques and methods used to check accuracy
- Understanding how to select appropriate technology for production requirements
- Knowledge of organisational requirements for document design eg. style guide

Underpinning Skills

- Literacy skills to read and understand a variety of texts; prepare general information and papers according to target audience; spell with accuracy; use grammar and punctuation effectively as an aid to understanding
- Proofreading and editing skills to ensure clarity of meaning and conformity to organisational requirements, check for accuracy and consistency of information
- Problem solving skills to determine document design and production processes
- Numeracy skills to access and retrieve data
- Keyboarding and computer skills to complete a range of formatting and layout tasks

Evidence Guide

- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 1	Level 1	Level 1	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to design document layout
- **Communicating ideas and information** – through appropriate presentation and format of documents
- **Planning and organising activities** – for self
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – as an aid to checking accuracy
- **Solving problems** – to identify application problems
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN308A Maintain financial records

Unit Descriptor This unit covers the maintenance of financial records for a business. It includes activities such as the maintenance of daily financial records, including reconciling debtors' and creditors' systems and preparing a maintaining a general ledger and preparing a trial balance. It also includes activities associated with the monitoring of cash control for accounting purposes.

This unit is related to BSBCMN207A Prepare and process financial/business documents and BSBCMN408A Report on financial activity.

Competency Field Common

Element	Performance Criteria
1. Maintain daily financial records	<p>1.1 Daily financial records are maintained correctly and in accordance with <i>organisational requirements</i> for accounting purposes</p> <p>1.2 <i>Discrepancies</i> or errors in <i>documentation</i> or transactions are identified and rectified or referred to <i>designated persons</i> in accordance with organisational requirements</p> <p>1.3 Credit and debit transactions are accurately and promptly entered into <i>journals</i> in accordance with organisational requirements</p>
2. Maintain general ledger	<p>2.1 General ledger is maintained in accordance with organisational requirements</p> <p>2.2 <i>Transactions</i> are posted into the general ledger in accordance with organisational reporting requirements</p> <p>2.3 <i>Debtors' and creditors' systems</i> are reconciled with general ledger</p> <p>2.4 Trial balance is accurately prepared from general ledger in accordance with organisational requirements</p>
3. Monitor cash control	<p>3.1 Cash flow is accurately accounted for in accordance with organisational requirements</p> <p>3.2 <i>Payments</i> are made and received in accordance with organisational requirements</p> <p>3.3 Outstanding accounts are collected or followed up within designated timelines</p> <p>3.4 Payment documentation is checked for accuracy of information and despatched to creditors within <i>designated timeline</i></p>

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- Legislation, codes and national standards relevant to the workplace which may include:**
- award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice

- Organisational requirements may include:**
- quality assurances and/or procedures manuals
 - procedures for totalling adjusted journals
 - resolution procedures
 - legal and organisational policy/guidelines and requirements
 - security procedures
 - Occupational Health and Safety policies, procedures and programs
 - guidelines for reconciling journals
 - Australian accounting and auditing standards
 - designated timelines

- Discrepancies may relate to:**
- bank charges
 - interest
 - dishonoured cheques
 - errors in transposing between source documents and journals

- Documentation may include:**
- sales invoices
 - purchase invoices
 - sales credit notes
 - purchase credit notes

Range Statement

Designated persons may include:

- supervisor
- bank
- organisation's authorisations department
- line management
- statutory body

Journals may include:

- sales and sales returns
- cash receipts
- purchases and purchase returns
- cash payments

Transactions may include:

- purchase of a fixed asset on credit
- sale of a fixed asset on credit
- correction of posting errors
- write-off a bad debt
- interest expense
- interest receivable
- commencing business entries
- withdrawal of stock/assets by owner
- non-cash transactions (eg writing off depreciation, stock losses)

Reconciling debtors'/creditors' systems may include:

- checking accuracy of debtor account balances (eg cash receipts journal, sales return journal, general journal)
- checking accuracy of creditor account balances (eg cash payments journal, purchases journal, purchases returns journal, general journal)
- checking the total of the debtor's schedule equals the balance of the debtor's control account
- checking the total of the creditor's schedule equals the balance of the creditor's control account

Payments may include:

- cheque
- credit card
- cash
- direct debit

Metal and Engineering Training Package

BSBCMN308A Maintain Financial Records

Range Statement

Designated timelines may specify:

- within agreed period
- monthly
- by month end
- within organisational deadline

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Identifying and responding to discrepancies and errors
- Transferring and recording financial data accurately
- Identifying and complying with organisational requirements
- Reconciling expenditures and revenue
- Recommending options for financial decision making

Underpinning Knowledge*

* At this level the learner must demonstrate some relevant theoretical knowledge.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Knowledge of organisational policies and procedures relating to maintaining financial records
- Understanding processes to identify relevant source documents and information contained within source documents
- Understanding of the importance of a general ledger chart of accounts in relation to maintain and reporting financial data
- Understanding the definition of credits/creditors and debits/debtors
- Principles of double entry bookkeeping and accrual accounting
- Understanding methods of presenting financial data
- Knowledge of financial legislation references and information
- Understanding practices to include ethical considerations in all areas of work

Evidence Guide

Underpinning Skills

- Literacy skills to identify financial information; to read and understand the organisation's accounting procedures
- Proofreading and editing skills to ensure conformity to organisational requirements, check for accuracy and consistency of information
- Communication skills to clarify information and refer errors or discrepancies to appropriate people
- Numeracy skills to reconcile figures; prepare cash analysis sheets
- Analysis skills to read and interpret financial data
- Problem solving skills for a defined range of problems
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 1	Level 2	Level 1	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to process financial documentation
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for payment of invoices etc within designated timeframes
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – in reconciling financial documents
- **Solving problems** – to identify discrepancies and errors
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCM402A Develop work priorities

Unit Descriptor This unit covers the skills and knowledge required to plan own work schedules, monitor and obtain feedback on work performance and development.

This unit is related to BSBCM302A Organise personal work priorities and development.

Competency Field Common

Element	Performance Criteria
1. Plan and complete own work schedule	<p>1.1 <i>Workgroup</i> plans are prepared to reflect consideration of resources, client needs and workgroup targets</p> <p>1.2 <i>Work objectives</i> and priorities are analysed and incorporated into personal schedules and responsibilities</p> <p>1.3 <i>Factors</i> affecting the achievement of work objectives are identified and contingencies established and incorporated into work plans</p> <p>1.4 <i>Business technology</i> is used efficiently and effectively to manage and monitor planning completion and scheduling of tasks</p>
2. Monitor own work performance	<p>2.1 Personal performance standards are identified and analysed through self-assessment and feedback from others on the achievement of work objectives</p> <p>2.2 <i>Feedback on performance</i> is actively sought from colleagues and clients and evaluated in context of individual and group requirements</p> <p>2.3 Variations in the quality of service and products are routinely identified and reported in accordance with <i>organisational requirements</i></p>
3. Coordinate professional development	<p>3.1 Personal knowledge and skills are assessed against <i>competency standards</i> performance descriptions to determine development needs and priorities</p> <p>3.2 Opportunities for improvement and sources of learning are researched and planned in liaison with colleagues</p> <p>3.3 <i>Feedback</i> is used to identify and develop ways to improve competence within available opportunities</p> <p>3.4 New skills are identified and <i>professional development activities</i> are accessed and completed to facilitate continuous learning and career development</p>

Element

Performance Criteria

- 3.5 Records and documents relating to achievements and assessments are stored and maintained in accordance with organisational requirements

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

They may use legislation, codes and national standards relevant to the workplace including:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Workgroup plans may include:

- sales plans
- reporting plans
- production plans
- budgetary plans
- team participation
- work schedules
- team and individual learning goals

Work objectives may include:

- sales targets
- reporting deadlines
- production targets
- budgetary targets
- team participation
- team and individual learning goals

Factors affecting the achievement of work objectives may include:

- competing work demands
- technology/equipment breakdowns
- unforeseen incidents
- personnel
- environmental factors such as time, weather, etc
- resource and materials availability
- budget constraints

Range Statement

Business technology may include:

- computers
- computer applications
- personal schedules
- modems
- scanners
- email and internet/intranet/extranet
- photocopiers
- facsimile machines
- printers

Feedback on performance may include:

- formal/informal performance appraisals
- obtaining comments from supervisors and colleagues
- obtaining comments from clients
- personal, reflective behaviour strategies
- routine organisational methods for monitoring service delivery

Organisational requirements may be included in:

- quality assurances and/or procedures manuals
- goals, objectives, plans, systems and processes
- legal and organisational policy/guidelines and requirements
- business and performance plans
- access and equity principles and practice
- ethical standards
- Occupational Health and Safety policies, procedures and programs
- quality and continuous improvement processes and standards
- defined resource parameters

Competency standards are standards which measure:

- all those personal and technical knowledge, skills and attitudinal aspects (competencies) required to effectively and efficiently undertake the day to day tasks and duties of the practitioner's work function

Range Statement

Professional development activities may include:

- coaching, mentoring and/or supervision
- formal/informal learning programs
- internal/external training provision
- work experience/exchange/opportunities
- personal study
- career planning/development
- performance appraisals
- workplace skills assessment
- Recognition of Prior Learning

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Preparing and communicating work plans
- Scheduling work objectives and tasks to support the achievement of goals
- Seeking and acting on feedback from clients and colleagues
- Reviewing own work performance against achievements through self-assessment
- Accessing learning opportunities to extend own personal work competencies
- Using business technology to monitor self development

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding the organisation's policies, plans and procedures
- Understanding of methods to elicit, analyse and interpret feedback
- Knowledge of techniques to prepare personal plans and establish priorities
- Knowledge of quality standards for products and services
- Knowledge of relevant business technology applications

Evidence Guide

- Understanding of methods to evaluate own performance
- Processes to interpret competency standards and apply them to self
- Methods to identify and prioritise personal learning needs
- Understanding range of professional development activities and criteria to apply in choosing between them

Underpinning Skills

- Literacy skills to understand the organisation's policies and procedures; interpret competency standards; use a variety of strategies for planning and reviewing own work
- Problem solving skills to develop contingency plans
- Evaluation skills for assessing outcomes
- Communication skills including giving and receiving constructive feedback on development needs
- Technology skills including the ability to select and use technology appropriate to a task
- Time management skills to complete tasks within agreed timeframes
- Observation skills for identifying opportunities for learning and development
- Participation skills for integrating as a member of a work team
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed

Evidence Guide

assessment guidelines in the Business Services Training Package

- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 2	Level 1	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to measure self-performance
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for self
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – as an aid to measure and schedule tasks
- **Solving problems** – as an aid to self-development
- **Using technology** – to manage scheduling and completion of tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN404A Develop teams and individuals

Unit Descriptor This unit covers the skills and knowledge required to determine individual and team development needs and facilitate the development of the workgroup.

This unit is related to BSBCMN304A Contribute to personal skill development and learning.

Competency Field Common

Element	Performance Criteria
1. Determine development needs	<p>1.1 <i>Learning and development needs</i> are systematically identified and implemented in line with <i>organisational requirements</i></p> <p>1.2 A learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and implemented</p> <p>1.3 Individuals are encouraged to self evaluate performance and identify areas for improvement</p> <p>1.4 <i>Feedback on performance</i> of team members is collected from relevant sources and compared with established team learning needs</p>
2. Develop individuals and teams	<p>2.1 Learning and development program goals and objectives are identified to match specific knowledge and skill requirements of <i>competency standards</i></p> <p>2.2 <i>Learning delivery methods</i> are appropriate to the learning goals, the learning style of participants, and availability of <i>equipment and resources</i></p> <p>2.3 Workplace learning opportunities and <i>coaching and mentoring assistance</i> are provided to facilitate individual and team achievement of competencies</p> <p>2.4 Development opportunities incorporate a range of activities and support materials appropriate to the achievement of identified competencies</p> <p>2.5 Resources and timelines required for learning activities are identified and approved in accordance with organisational requirements</p>
3. Monitor and evaluate workplace learning	<p>3.1 Feedback from individuals or teams is used to identify and implement improvements in future learning arrangements</p> <p>3.2 Outcomes and performance of individuals/teams are assessed and recorded to determine the effectiveness of development programs and the extent of additional development support</p>

Element

Performance Criteria

- 3.3 Modifications to learning plans are negotiated to improve the efficiency and effectiveness of learning
- 3.4 Records and reports of competency are documented and maintained within organisational requirements

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

They may use legislation, codes and national standards relevant to the workplace including:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Learning and development needs may include:

- coaching, mentoring and/or supervision
- formal/informal learning programs
- internal/external training provision
- work experience/exchange/opportunities
- personal study
- career planning/development
- performance appraisals
- workplace skills assessment
- Recognition of Prior Learning

Range Statement

Organisational requirements may be included in:

- quality assurances and/or procedures manuals
- goals, objectives, plans, systems and processes
- legal and organisational policy/guidelines and requirements
- Occupational Health and Safety policies, procedures and programs
- confidentiality and security requirements
- business and performance plans
- anti-discrimination and related policy
- access and equity principles and practice
- ethical standards
- quality and continuous improvement processes and standards
- defined resource parameters

Feedback on performance may include:

- formal/informal performance appraisals
- obtaining feedback from supervisors and colleagues
- obtaining feedback from clients
- personal, reflective behaviour strategies
- routine organisational methods for monitoring service delivery

Competency standards are standards which measure:

- all those personal and technical knowledge, skills and attitudinal aspects (competencies) required to effectively and efficiently undertake the day to day tasks and duties of the practitioner's work function

Learning delivery methods may include:

- on-the-job coaching or mentoring
- problem solving
- presentations/demonstrations
- formal course participation
- work experience
- involvement in professional networks
- conference and seminar attendance
- induction

Range Statement

Equipment and resources may include:

- funding
- facilities
- guest speakers
- training equipment such as whiteboards and audio-visual equipment
- technological tools and equipment
- time

Coaching and mentoring assistance may include:

- providing feedback to another team member
- fair and ethical practice
- non-discriminatory processes and activities
- respecting the contribution of all participants and giving credit for achievements
- presenting and promoting a positive image of the collective group
- problem solving
- providing encouragement

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Identifying and implementing learning opportunities for others
- Giving and receiving feedback constructively
- Facilitating participation of individuals in the work of the team
- Negotiating learning plans to improve the effectiveness of learning
- Preparing learning plans to match skill needs
- Accessing and designing learning opportunities

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Knowledge of the principles of coaching and mentoring for development of competence
- Understanding how to work effectively with team members who have diverse work styles, aspirations,

Evidence Guide

cultures and perspectives

- Understanding how to facilitate team development and improvement
- Knowledge of the organisation's policies, plans and procedures
- Understanding methods and techniques for eliciting and interpreting feedback
- Understanding methods for identifying and prioritising personal development opportunities and options
- Knowledge of career paths and competency standards in the industry

Underpinning Skills

- Literacy skills to read and understand a variety of texts; prepare general information and papers according to target audience; spell with accuracy; use grammar and punctuation effectively as an aid to understanding; maintain records of learning
- Communication skills including receiving feedback and reporting, maintaining effective relationships and conflict management
- Planning skills to organise required resources and equipment to meet learning needs
- Coaching and mentoring skills to provide support to colleagues
- Report writing skills to organise information; assess information for relevance and accuracy; identify and elaborate on learning outcomes
- Facilitation skills to conduct small group training sessions
- Time management skills for scheduling learning programs within work activities
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Evidence Guide

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 2	Level 2	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to measure team performance
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for learning opportunities
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – as an aid to measure learning outcomes
- **Solving problems** – as an aid to team-development
- **Using technology** – to manage scheduling of tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN406A Maintain business technology

Unit Descriptor This unit covers the skills and knowledge required to maintain the effectiveness of business technology in the workplace. It includes activities such as the maintenance of existing technology and the planning of future technology requirements.

This unit is related to BSBCMN307A Maintain business resources. Consider co-assessment with BSBCMN407A Coordinate business resources.

Competency Field Common

Element	Performance Criteria
1. Maintain performance of hardware and software	<p>1.1 Systems effectiveness is monitored and evaluated to ensure it meets <i>organisational and system requirements</i></p> <p>1.2 Operating system, drive and disk structure, reports and files are used to identify performance problems</p> <p>1.3 <i>Disk drives and peripherals are maintained</i> according to manufacturers' and organisational requirements</p> <p>1.4 <i>Consumables</i> are replaced in accordance with the manufacturers' and organisational requirements</p> <p>1.5 <i>Software</i> applications are installed and operated in accordance with developers' and organisational requirements</p>
2. Provide basic system administration	<p>2.1 System back up procedure is carried out at regular intervals according to organisational and system requirements</p> <p>2.2 Security access procedures are maintained in line with organisational requirements</p> <p>2.3 Licence for use of software is used, checked and recorded in accordance with organisational requirements</p> <p>2.4 Virus systems are maintained and updated on a regular basis in accordance with organisational requirements</p>
3. Identify future technology requirements	<p>3.1 <i>Sources of information</i> about new <i>technology</i> are accessed to maintain knowledge in current technology</p> <p>3.2 Feedback from clients and colleagues is used to identify and develop <i>improved technology systems</i></p> <p>3.3 Existing technology is assessed against newly available technology to determine future needs and</p>

Element

Performance Criteria

- priorities
- 3.4 New technologies are identified and selected to achieve and maintain continuous organisational development
- 3.5 Management and budget approval is obtained for new technologies identified and selected

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Organisational and system requirements may include:

- quality assurances and/or procedures manuals
- back up procedures
- security and confidentiality procedures
- legal and organisational policy/guidelines and requirements
- storage retrieval and type of product licenses
- storage of information technology documentation
- register of licenses
- Occupational Health and Safety policies, procedures and programs
- code of conduct
- ethical standards
- maintenance of customised software
- updating of virus protection systems

Disk drives and peripherals maintenance may include:

- creating more free space on the hard disk
- reviewing programs
- deleting unwanted files
- cleaning dust from internal and external surfaces
- backing up files before major maintenance
- checking hard drive for errors

Metal and Engineering Training Package

BSBCMN406A Maintain Business Technology

Range Statement

- defragmenting the hard disk
- using up-to-date anti-virus programs

Consumables may include:

- printer ribbons and cartridges
- print heads
- disks
- magnetic tape and cassettes
- print media

Software may include:

- word processing applications
- spreadsheet applications
- accounting applications
- database applications
- presentation applications
- internet/intranet/extranet related programs

Information sources on new technology may include:

- industry associations
- seminars, workshops and training sessions
- the Internet
- computer magazines and journals
- trade fairs
- computer software designers
- computer hardware manufacturers
- internal/external clients
- retail outlets

Technology may include:

- computers
- modems
- software
- client services
- data transfer devices
- scanners
- photocopiers
- printers

Range Statement

Improved technology systems may include:

- access protocols
- cable data transmissions
- delivery and installation systems
- maintenance options
- multi-media
- networking options
- resource usage monitoring

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Evaluating and mapping network operations
- Reviewing compliance with system protocols
- Installing software and hardware
- Organising and accessing software, materials and consumables
- Maintaining virus, backup and security systems in line with organisational requirements
- Identifying new technologies which match the future needs of the organisation

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Knowledge of the costs and benefits of technology maintenance strategies
- Knowledge of organisation's operating systems, including knowledge of networks
- Principles of developing a maintenance schedule for a network
- Knowledge of back up and security procedures, maintenance and diagnostic procedures, licensing and installation and purchasing procedures
- Understanding current industry accepted hardware and software products including knowledge of general features and capabilities
- Understanding organisational business plans, goals and directions
- Understanding methods and processes to prepare

Evidence Guide

budget and cost analysis

- Knowledge of access protocols (eg. internet, TP/TCP)

Underpinning Skills

- Literacy skills to interpret and evaluate the purposes and objectives of various uses of technology; display logical organisation of written information
- Research and analysis skills to analyse and identify organisation's future technology requirements
- Problem solving skills for common network problems
- Report writing skills to organise information from a range of sources to form recommendations
- Analytical skills in relation to systems administration
- Diagnostic skills in relation to identifying problems or faults
- Decision making skills for purchasing of new technology
- Interpersonal skills for cooperating with others on system use
- Presentation skills for explaining the operation of technology in a business environment
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or

Evidence Guide

simulated environment

- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels						
<i>NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.</i>						
Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 1	Level 2	Level 2	Level 3
<p>Three levels of performance denote level of competency required to perform a task. 1. Perform 2. Administer 3. BSBCM408A Report on financial activity

Unit Descriptor	This unit covers the reporting of financial activity for business both in response to client requests and to meet statutory requirements such as the completion of statutory requirement reports. This unit is related to BSBCM308A Maintain financial records.
Competency Field	Common

Element	Performance Criteria
1. Compile financial information and data	<ul style="list-style-type: none">1.1 Current <i>financial data</i> is collected, evaluated and coded to ensure consistency, quality and accuracy in accordance with <i>organisational requirements</i>1.2 <i>Conversion and consolidation procedures</i> are used to compile analysis in accordance with organisational requirements1.3 Asset and liability valuations are made, recorded and disclosed in accordance with organisational requirements1.4 <i>Discrepancies</i>, unusual features or queries are identified, resolved or referred to the appropriate authority
2. Prepare statutory requirement reports	<ul style="list-style-type: none">2.1 Income and expenditure is correctly recorded to ensure compliance with <i>statutory requirements</i>2.2 Liabilities for tax are calculated in accordance with current legislation and <i>revenue gathering practices</i>2.3 Relevant receipts, <i>revenue documentation</i> and payments are identified correctly2.4 Statements and claims take full advantage of <i>available benefits and allowances</i> in accordance with statutory requirements2.5 Statutory requirement reports are submitted to appropriate authorities within <i>stated deadlines</i>
3. Provide financial business recommendations	<ul style="list-style-type: none">3.1 <i>Recommendations</i> are logically derived and supported by <i>evidence</i> in report3.2 Recommendations propose constructive actions to enhance the effectiveness and efficacy of functions and services3.3 Recommendations are concise and facilitate direction and control of organisation's operations

Element

Performance Criteria

- 3.4 *Significant issues* in statements including comparative financial performances are identified and prioritised for review and decision-making
- 3.5 Structure and *format* of reports are clear and conform to organisational and statutory requirements

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Financial data may include:

- budgets and forecasts
- financial/operational statements and reports (eg. expenditures and receipts, profit and loss statements)
- market valuations
- budget variances
- cash flow/profit reports
- Australian Bureau of Statistics (ABS) economic data
- financial markets monitoring services (eg, Reuters)

Organisational requirements may include:

- quality assurances and/or procedures manuals
- price and exchange parameters
- reporting requirements
- legal and organisational policy/guidelines and requirements
- financial analysis assessments
- Occupational Health and Safety policies, procedures and programs
- recording and filing systems
- standard financial analysis techniques
- financial management manuals

Range Statement

Conversion and consolidation procedures may include:

- spreadsheets
- standardised variables
- moving averages
- unit costs
- trend analysis

Discrepancies may include:

- expenditure report mismatches
- incorrect payments
- absence of auditable trail
- inappropriate authorisations
- variances from budget and phasings
- unreconciled cash flows and operating statements
- incorrect report formats

Statutory requirements may include:

- reporting periods
- taxation payment timings
- delegated authorities
- internal control procedures

Revenue gathering practices may include:

- sales
- leasing
- investments
- billing schedules
- lending and financing
- fees and charges

Revenue documentation may include:

- invoices
- declarations
- bills
- sales proceeds
- cash received
- debit notes

Available benefits and allowances may include:

- depreciation
- donations
- sales tax deductions
- interest payments

Range Statement

Stated deadlines may include:

- monthly returns
- annual reports
- lodgement dates
- payment schedules

Recommendations may relate to:

- profit
- loss
- expenses
- consolidation
- write-offs
- cash flow

Evidence may include:

- budgetary analysis
- forecasts and estimates
- returns on investments
- order and supplier documentation
- taxation and statutory returns

Significant issues may include:

- profitability
- losses and returns
- cost structures
- suppliers
- internal controls
- statutory obligations

Format of reports may include:

- cash flow statements
- statutory forms
- financial year reports
- balance sheets
- operating statements
- spreadsheets
- electronic forms

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Organising financial data to highlight relevant features
- Presenting of information in comprehensive formats
- Completing of Business Activity Statements
- Interpreting and identifying applications of statutory requirements
- Referring discrepancies outside scope of own responsibility to the appropriate persons

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Knowledge of organisational policies and procedures relating to maintaining financial data, reporting, preparing statutory returns
- Principles of double entry bookkeeping and accrual accounting
- Knowledge of techniques for forecasting and analysis
- Understanding methods to present financial data
- Knowledge of State and Federal Government taxes and charges
- Knowledge of financial legislation
- Knowledge of options, methods and practices for deductions, benefits and depreciations
- Principles and practices for auditing and reporting

Evidence Guide

Underpinning Skills

- Literacy skills to identify financial information, to follow Australian Accounting and Auditing Standards and the organisation's accounting procedures
- Research skills to analyse the organisations financial and business status
- Proof reading skills to check accuracy and consistency of information by consulting additional resources
- Problem solving skills for a defined range of predictable problems
- Report writing skills to assess information for relevance and accuracy from a range of sources
- Decision making skills in a limited range of options
- Numeracy skills for calculating data, reconciling figures
- Planning skills for timetabling and scheduling reports and lodgements
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Evidence Guide

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 3	Level 2	Level 2	Level 2	Level 3	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to forecast and provide recommendations
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – for completion of statutory returns and reports
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – in reconciling financial documents
- **Solving problems** – to identify discrepancies and errors
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN410A Coordinate implementation of customer service strategies

Unit Descriptor This unit covers the skills and knowledge required to advise on, and carry out customer service strategies, and evaluate customer strategies on the basis of feedback and design strategies for improvement.

This unit is related to BSBCMN310A Deliver and monitor a service to customers.

Competency Field Common

Element	Performance Criteria
1. Advise on customer service needs	<ul style="list-style-type: none">1.1 Customer service <i>needs</i> are clarified and accurately assessed using appropriate <i>communication techniques</i>1.2 Problems matching service delivery to <i>customers</i> are diagnosed and options for improved service are developed within <i>organisational requirements</i>1.3 Advice is relevant, constructive and promotes the improvement of customer service delivery1.4 <i>Business technology</i> is used to structure and present information on customer service needs
2. Support implementation of customer service strategies	<ul style="list-style-type: none">2.1 Customer service strategies and opportunities are promoted to <i>designated individuals and groups</i>2.2 Available budget resources are identified and allocated to fulfil customer service objectives2.3 <i>Procedures to resolve customer difficulties and complaints</i> are actioned promptly within organisational requirements2.4 <i>Coaching and mentoring assistance</i> is provided to colleagues to overcome difficulties in meeting <i>customer service standards</i>2.5 Decisions to implement strategies are taken in consultation with designated individuals and groups
3. Evaluate and report on customer service	<ul style="list-style-type: none">3.1 Client satisfaction with service delivery is reviewed using verifiable data in accordance with organisational requirements3.2 Changes necessary to maintain service standards are identified and reported to designated groups and individuals

Element

Performance Criteria

- 3.3 Conclusions and recommendations are prepared from verifiable evidence and provide constructive advice on future directions of client service strategies
- 3.4 Systems, records and reporting procedures are maintained to compare changes in customer satisfaction

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Customer needs may relate to:

- advice or general information
- specific information
- further information
- making an appointment
- complaints
- purchasing organisation's products and services
- returning organisation's products and services
- accuracy of information
- fairness/politeness
- prices/value

Range Statement

Communication techniques may include:

- consultation methods, techniques and protocols
- analysing customer satisfaction surveys
- conducting interviews
- questioning
- summarising and paraphrasing
- seeking feedback to confirm understanding
- making recommendations
- obtaining management decisions
- analysing quality assurance data

Customers can be:

- internal or external
- other agencies
- individual members of the organisation
- corporate customers
- individual members of the public

Organisational requirements may include:

- quality assurances and/or procedures manuals
- goals, objectives, plans, systems and processes
- legal and organisational policy/guidelines and requirements
- Occupational Health and Safety policies, procedures and programs
- confidentiality and security requirements
- anti-discrimination and related policy
- access and equity principles and practice
- ethical standards
- quality and continuous improvement processes and standards
- defined resource parameters
- who is responsible for products or services
- pricing and discount policies
- replacement and refund policy and procedures
- payment and delivery options

Range Statement

Business technology may include:

- photocopier
- computer
- printer
- binder
- shredder
- answering machine
- fax machine
- telephone

Designated individuals and groups may include:

- supervisor
- customers
- colleagues
- external organisation
- committee
- line management

Procedures to resolve customer difficulties may include:

- using conflict management techniques
- refund of monies
- item replacement
- referrals to supervisor
- review of products or services
- external agencies (eg Ombudsman)

Customer complaints may include:

- damaged goods or goods not delivered
- administrative errors such as incorrect invoices or prices
- warehouse or store room errors such as incorrect product delivered
- service errors
- delivery errors
- products not delivered on time
- customer satisfaction with service quality

Metal and Engineering Training Package

BSBCMN410A Coordinate Implementation of Customer Service Strategies

Range Statement

Coaching and mentoring assistance may include:

- providing feedback to another team member
- fair and ethical practice
- non-discriminatory processes and activities
- respecting the contribution of all participants and giving credit for achievements
- presenting and promoting a positive image of the collective group
- problem solving
- providing encouragement

Customer service strategies may include:

- delivery times
- price offers
- product/service availability
- product/refund guarantees
- merchandise characteristics
- courtesy/politeness

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Identifying needs and priorities of the organisation in delivering services to customers
- Distinguishing between different levels of customer satisfaction
- Providing constructive advice on customer service practices
- Responding to and reporting on customer feedback
- Designing strategies to improve delivery of products and services

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding the principles of customer services
- Understanding the organisation's business structure, products and services
- Understanding the organisation's policy and procedures for customer service including handling customer complaints
- Knowledge of product and service standards and best practice models
- Knowledge of common problems relating to customer service
- Understanding consultation methods, techniques and protocols
- Knowledge of techniques for dealing with customers with special needs

Evidence Guide

Underpinning Skills

- Planning skills to develop implementation schedules
- Evaluation skills to assess effectiveness of customer service strategies
- Literacy skills to interpret a variety of texts; prepare information and papers; write formal and informal letters according to target audience
- Interpersonal skills to relate effectively to people from a range of social, cultural and ethnic backgrounds
- Technology skills including the ability to select and use technology appropriate to a task
- Problem solving skills to diagnose organisational problems relating to customer services
- Report writing skills to provide recommendations for the enhancement of products or services
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 2	Level 2	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to monitor and report on customer services
- **Communicating ideas and information** – on products and services
- **Planning and organising activities** – to enhance products and services
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – to determine service or product costs
- **Solving problems** – to respond to customer enquiries or complaints
- **Using technology** – to complete allocated tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBCMN411A Monitor a safe workplace

Unit Descriptor This unit is concerned with OHS responsibilities of employees with supervisory responsibilities to implement and monitor the organisation's Occupational Health and Safety policies, procedures and programs in the relevant work area to meet legislative requirements. This unit has been adapted from Generic Competency B in the *National Guidelines for Integrating Occupational Health and Safety Competencies into National Industry Competency Standards* [NOHSC:7025 (1998) 2nd edition].

This unit is related to BSBCMN311A Maintain workplace safety.

Competency Field Common

Element	Performance Criteria
1. Provide information to the work group about Occupational Health and Safety policies and procedures	<p>1.1 Relevant provisions of <i>Occupational Health and Safety legislation and codes of practice</i> are accurately explained to the work group</p> <p>1.2 Information on the <i>organisation's Occupational Health and Safety policies, procedures and programs</i> is provided in a readily accessible manner to the work group</p> <p>1.3 Information about <i>identified hazards</i> and the outcomes of <i>risk assessment</i> and control is regularly provided and clearly explained to the work group</p>
2. Implement and monitor participative arrangements for the management of Occupational Health and Safety	<p>2.1 The importance of effective consultative mechanisms in managing health and safety risks are explained</p> <p>2.2 Consultative procedures are implemented and monitored to facilitate participation of work group in management of work area hazards</p> <p>2.3 Issues raised through consultation are promptly dealt with in accordance with <i>organisational consultation procedures</i></p> <p>2.4 The outcomes of consultation over Occupational Health and Safety issues are recorded and communicated promptly to the work group</p>
3. Implement and monitor the organisation's procedures for providing Occupational Health and Safety training	<p>3.1 Occupational Health and Safety training needs are systematically identified in line with organisational requirements</p> <p>3.2 Arrangements are made to meet Occupational Health and Safety training needs of team members in consultation with relevant individuals</p>

Element	Performance Criteria
	3.3 Workplace learning opportunities and coaching and mentoring assistance are provided to facilitate team and individual achievement of identified training needs
	3.4 Costs associated with provision of training for work team are identified and reported to management for inclusion in financial plans
4. Implement and monitor procedures for identifying hazards and assessing risks	4.1 Hazards in work area are identified and reported in accordance with Occupational Health and Safety policies and procedures
	4.2 Team member hazard reports are actioned promptly in accordance with organisational procedures
5. Implement and monitor the organisation's procedures for controlling risks	5.1 <i>Procedures to control risks</i> are implemented using the hierarchy of controls and organisational requirements
	5.2 Inadequacies in existing risk control measures are identified and reported in accordance with hierarchy of controls
	5.3 Outcomes of reported inadequacies are monitored where appropriate to ensure a prompt organisational response
6. Implement and monitor the organisation's procedures for maintaining Occupational Health and Safety records for the team	6.1 <i>Occupational Health and Safety records</i> of incidents of occupational injury and disease in work area are accurately completed and maintained in accordance with OHS legal requirements
	6.2 Aggregate information and data from work area records are used to identify hazards and monitor risk control procedures in work area

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace including:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Occupational Health and Safety legislation will depend on State and Territory legislation and requirements and will include:

- common law duties to meet the general duty of care requirements
- requirements for the maintenance and confidentiality of records of occupational injury and disease
- provision of information, induction and training
- regulations and approved codes of practice relating to hazards present in work area
- health and safety representatives and health and safety committees
- prompt resolution of health and safety issues

Organisational Occupational Health and Safety policies and procedures may include:

- procedures for hazard identification
- procedures for risk assessment, selection and implementation of risk control measures
- incident (accident) investigation
- OHS audits and safety inspections
- consultative arrangements for employees in work area
- hazard reporting procedures
- safe operating procedures/instructions
- use & care of personal protective equipment
- emergency & evacuation procedures
- purchasing policy & procedures
- plant & equipment maintenance & use
- hazardous substances use and storage
- dangerous goods transport & storage
- OHS arrangements for on site contractors, visitors and members of public
- first aid provision/medical practitioner contact &

Range Statement

attention

- site access

Identifying hazards and assessing risk may occur through activities such as:

- workplace inspections in area of responsibility
- consulting work team members
- housekeeping
- Occupational Health and Safety audits and review of audit reports
- daily informal employee consultation and regular formal employee meetings
- checking equipment before and during work
- review of health and safety records including hazard reports, hazardous substances and dangerous goods registers, injury records

Organisational procedures for consultation may include:

- formal and informal meetings
- health and safety committees
- election of health and safety representatives in accordance with legislative requirements
- attendance of health and safety representatives at management and OHS planning meetings
- other committees, for example, planning and purchasing
- early response to employee suggestions, requests, reports and concerns put forward to management
- counselling/disciplinary processes

Controlling risks may include actions such as:

- removing the cause of a risk at its source (eliminating the hazard) eg. removing stored goods permanently from emergency exit passageways
- selecting control measures in accordance with the hierarchy ie work through hierarchy from most effective to least effective controls.
- job/process/workplace re-design eg introduce mechanical handling equipment, re-arrange materials' flow/timing/scheduling, raise/lower work platforms.
- consultation with employees and their representatives

Organisational health and safety records may include:

- audit & inspection reports
- workplace environmental monitoring records
- consultation eg meetings of Health & Safety Committees, work group meeting agendas including OHS items and actions

Range Statement

- induction, instruction & training
- manufacturer's and supplier's information including dangerous goods storage lists
- hazardous substances registers
- plant and equipment maintenance and testing reports
- workers compensation & rehabilitation records
- first aid/medical post records

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Apply organisational management systems and procedures to Occupational Health & Safety within work group area
- Identify and comply with Occupational Health and Safety legal and organisational requirements
- Apply procedures for Identifying hazards in the work area
- Apply procedures for assessing and controlling risks to health & safety associated with those hazards, in accordance with the hierarchy of control.
- Provide specific, clear and accurate information and advice on workplace hazards to work group
- Provide appropriate supervision of work group

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Knowledge of the legal responsibilities of employers, supervisors and employees in the workplace
- Knowledge of hazards and associated risks which exist in the workplace
- Knowledge of organisation's policies and procedures relating to hazard management, fire, emergency, evacuation, incident (accident) investigating and reporting
- Understanding the relevance of consultation as a key mechanism for improving workplace Occupational Health and Safety culture
- Knowledge of the principles and practices of

Evidence Guide

Occupational Health and safety management

- Knowledge of characteristics and composition of the workgroup

Underpinning Skills

- Analysing skills to identify hazards and assess risks in the work area
- Data analysis skills including:
 - incident (accident) monitoring
 - environmental monitoring
 - evaluation of effectiveness of risk control measures
- Assessment skills to assess resources required to apply risk control measures
- Literacy skills for comprehending documentation and interpreting Occupational Health and Safety requirements
- Technology skills including the ability to operate and shut down equipment
- Coaching and mentoring skills to provide support to colleagues
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services

Evidence Guide

Common Competencies for the particular AQF Level.
Refer to the Key Competency Levels at the end of
this unit

Key Competency Levels						
<i>NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.</i>						
Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 2	Level 2	Level 2	Level 2
<p>Three levels of performance denote level of competency required to perform a task. 1. Perform 2. Administer 3. Design</p> <ul style="list-style-type: none"> • Collecting, analysing and organising information – to obtain information to advise colleagues of safety responsibilities • Communicating ideas and information – to resolve safety and environmental issues with work team • Planning and organising activities – to plan resource requirements • Working with teams and others – to consult on the control of risk • Using mathematical ideas and techniques – to calculate resource requirements • Solving problems – to investigate improved work methods • Using technology – to use computing systems to access safety information <p>Please refer to the Assessment Guidelines for advice on how to use the Key Competencies</p>						

BSBCMN412A Promote innovation and change

Unit Descriptor This unit covers the skills and knowledge required to promote the use and implementation of innovative work practices to effect change.

This unit is related to BSBCMN312A Support innovation and change.

Competency Field Common

Element	Performance Criteria
1. Identify and develop opportunities for improved work practices	<ul style="list-style-type: none">1.1 Options for change incorporate identified improvements to work practices and procedures1.2 <i>Risk factors</i> affecting change are analysed to identify potential constraints1.3 Change is planned and resourced to promote the introduction and management of new processes1.4 Benefits of <i>change</i> are clear and consistent with <i>organisational requirements</i>1.5 Timelines and targets for implementation are realistic and support the achievement of change
2. Lead team to foster innovative work practices	<ul style="list-style-type: none">2.1 Team members are selected to maximise innovative opportunities2.2 Work assignments are organised to facilitate <i>innovative work skills</i>2.3 Team members are provided with guidance and coaching on innovation in the workplace2.4 Models of innovative work practice are provided and discussed
3. Facilitate commitment to workplace change	<ul style="list-style-type: none">3.1 Opinions and suggestions on improving work practices are encouraged to facilitate participation in change processes3.2 Goals and objectives of change are communicated clearly and promptly to individuals and teams3.3 <i>Business technology</i> is used to manage and provide access to information on progress towards objectives of change3.4 <i>Mentoring and coaching</i> is provided to support individuals and groups in introduction of change3.5 Decisions to overcome problems in the implementation of change are made in consultation with designated individuals and groups

Element	Performance Criteria
	3.6 Effective relations and communications are maintained with clients and stakeholders during the process of change
4. Monitor and evaluate change	4.1 Organisation's systems and technology are used to <i>monitor progress</i> towards objectives
	4.2 Team members are actively encouraged to reflect on team activities and opportunities for improvement and innovation
	4.3 Team activities are evaluated based on feedback from team members, management, clients and other interested people
	4.4 Suggestions for work improvements made by team members are positively received and acted on where appropriate
	4.5 <i>Evidence and information</i> on the impact of change is accurate, relevant and reported within organisational requirements
	4.6 Recommendations for improving methods or techniques to manage change are negotiated with designated individuals and groups using appropriate <i>negotiation skills</i>
	4.7 Systems, records and reporting procedures are maintained according to organisational requirements
	4.8 Feedback on individual and group work practices is prompt and constructive

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- They may use legislation, codes and national standards relevant to the workplace including:**
- award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice

Range Statement

Change may include:

- implementation of new work practices and/or services
- organisational restructures
- introduction of new technology
- change in work location
- new client base
- staffing changes
- job role changes
- work priorities

Innovative work skills are:

- the skills required to come up with and develop new ideas or the new use of an old idea. They include:
- interpretation
- conceptualisation
- representation
- reflection
- evaluation

Organisational requirements may be included in:

- quality assurances and/or procedures manuals
- goals, objectives, plans, systems and processes
- legal and organisational policy/guidelines and requirements
- Occupational Health and Safety policies, procedures and programs
- business and performance plans
- anti-discrimination and related policy
- access and equity principles and practice
- ethical standards
- quality and continuous improvement processes and standards
- defined resource parameters
- consultation and communication processes

Risk factors may include:

- disturbances to workflow
- confusion/loss of confidence
- cost blow out
- supplier problems
- product/service delivery problems
- time delays

Metal and Engineering Training Package

BSBCMN412A Promote Innovation and Change

Range Statement

Business technology may include:

- computer
- internet/extranet/intranet
- email
- software
- answering machine
- fax machine
- telephone

Mentoring and coaching may include:

- providing feedback to another team member
- fair and ethical practice
- non-discriminatory processes and activities
- respecting the contribution of all participants and giving credit for achievements
- presenting and promoting a positive image of the collective group
- problem solving
- providing encouragement

Monitoring progress may include:

- weekly report
- monthly report
- consultative groups
- Occupational Health and Safety
- union delegates
- financial departments
- public profiles

Evidence and information may include:

- customer surveys
- employee satisfaction
- industrial disputes
- supplier feedback
- productivity measures
- cost savings
- marketshare data

Range Statement

- Negotiation skills may include:**
- assertiveness
 - collaboration
 - solution designing
 - confidence building
 - conflict reduction
 - stress management
 - empathising

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

- Critical Aspects of Evidence**
- Analysing and evaluating problems associated with change
 - Developing processes to introduce change
 - Establishing plans and schedules to achieve the objectives of change
 - Presenting information on the causes and introduction of the change
 - Communicating priorities, goals and objectives
 - Gathering evidence on the effect of change

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- The relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Understanding of common effects of change and innovation in the workplace
- Understanding of industrial and organisational context of change
- Understanding of organisation's policies, plans, procedures and structure
- Knowledge of resources required by the organisation's operations
- Understanding processes to interpret and apply feedback
- Knowledge of principles and techniques of goal setting and recording priorities
- Knowledge of the principles of negotiation

Evidence Guide

Underpinning Skills

- Literacy skills to read and understand a variety of texts; prepare general information and papers according to target audience; spell with accuracy; use grammar and punctuation effectively as an aid to understanding
- Planning skills to schedule work activities for the implementation of change
- Team work skills for working as a member of a team during period of changes
- Consultation skills for including stakeholders in the change process
- Analytical skills for monitoring outcomes of change
- Negotiation skills for dealing with competing objectives
- Estimation skills for identifying resources necessary to support introduction of change
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the Business Services Common Competencies for the particular AQF Level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 2	Level 2	Level 2	Level 2	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to set goals and objectives
- **Communicating ideas and information** – with members of the work team
- **Planning and organising activities** – to promote change
- **Working with teams and others** – in completing scheduled tasks
- **Using mathematical ideas and techniques** – as an aid to measure impact of change
- **Solving problems** – to diagnose problems of implementation
- **Using technology** – to manage scheduling of tasks

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBRKG301A Control records

Unit Descriptor This unit describes the work required to classify, register, and track records and information about records within a business or records system.

Competency Field Business Information

Element	Performance Criteria
1. Identify records for capture	<ul style="list-style-type: none">1.1 Incoming material is categorised for records capture in accordance with organisational procedures1.2 Activity documented by the record is identified from the elements of the record in accordance with organisational procedures1.3 Area or action officer to which the record needs to be forwarded is identified from elements of the record, or its content, and in accordance with organisational procedures1.4 Incoming material is assessed against organisational checklist for determining what material needs to be captured.1.5 Material which does not need to be registered is dealt with in accordance with organisational procedures1.6 Records on which action is complete are located, removed, or copied from the active business or records system, in accordance with organisational procedures1.7 Where required by organisation procedures, the format/media of the record is modified in accordance with organisation requirements and procedures
2. Classify record(s)	<ul style="list-style-type: none">2.1 The identified transaction/action/activity documented by the record is matched to the organisation's classification scheme2.2 The full classification and sentencing of the record is selected in accordance with the system's rules and organisational procedures2.3 The classified/sentenced record is linked to other records in the business or records system in accordance with the system's rules and organisational procedures2.4 Indexing points (cross reference terms) are selected for the record in accordance with the system's rules and organisational procedures

Element

Performance Criteria

- | | |
|-----------------------|---|
| 3. Register record(s) | 3.1 Unique identifier is selected for record in accordance with organisational procedures and business or records system rules |
| | 3.2 Record is registered into business or records system with title, description, details of record creator, immediate location and any other control information to fulfil the system requirements in accordance with organisational procedures and business or records system rules |
| | 3.3 Any physical dependencies or format of a record that will assist with its management over time are recorded in accordance with business or records system rules |
| | 3.4 Access and security status are determined in accordance with organisational procedures and documented in accordance with business or records system rules |
| | 3.5 <i>Disposal</i> class and status of the record is determined and recorded in accordance with the business or records system's rules, and organisational procedures and schedules |
| | 3.6 Record is forwarded to its appropriate location, which is recorded, in accordance with the system rules and organisational procedures |
| | 3.7 The items identified for immediate destruction are separated from the rest of the body of records |
| 4. Track record(s) | 4.1 Unique identifier of record to be located is determined from request or instructions |
| | 4.2 Location of record is obtained from business or records system in accordance with system rules and organisational procedures |
| | 4.3 History of record location is obtained from business or records system in accordance with system rules and organisational procedures |
| | 4.4 Information about record is obtained from business or records system in accordance with system rules and organisational procedures |
| | 4.5 Information about the record is updated and amended in accordance with organisational procedures |
| | 4.6 All transactions on the business or records system are completed within the designated timeframe |

Element

Performance Criteria

- | | |
|---|--|
| 5. Audit records against predetermined criteria | 5.1 Records are <i>located</i> with action officer and in storage areas in accordance with supervisors instructions |
| | 5.2 Records are audited against predetermined <i>criteria</i> in accordance with organisational procedures and quality program |
| | 5.3 Any discrepancies found are noted, and <i>reported</i> , in accordance with organisational procedures |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

Legislation, codes and national standards relevant to the workplace which may include:

- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant industry codes of practice

Access status of records may be:

- confidential
- high security (restricted)
- open

Appropriate level may be:

- item level
- chronological group
- series
- business or records system

Quality assurance audit may be of part of, or all of, an organisation

Operating environment may be:

- under supervision
- a team effort
- solo

Range Statement

Record information to be updated may come from:

- supervisor
- user
- file transfer slips
- action officers
- results of quality assurance audit
- requests

Record media may be:

- electronic
- paper-based
- microform
- graphic
- mainframe
- PC-based applications

Records may be registered (captured) into:

- current business or records systems
- archival control systems
- business systems
- storage facilities systems

Records may be subject to special access conditions, arising from agreement with records creator or depositor, privacy or confidentiality considerations

Standard reports prepared from the business or records system may include:

- statistics
- resubmits for following day
- over due action reports
- daily correspondence

Storage may be:

- centralised or decentralised
- off-line or off-site
- in-house or out-sourced
- commercial storage service or government repository
- CD storage
- imaging systems
- microform
- audio-visual/multimedia formats

Range Statement

- Storage environment may be:**
- temperature controlled
 - dust free
 - air conditioned
 - fire secure
 - intrusion secure
- Location of record may be:**
- on a server
 - on a remote drive
 - physical
 - digital
- Disposal actions may include:**
- retention
 - destruction
 - conversion to other record formats
 - transfer
- Criteria for audit may include:**
- location
 - unique identifier
 - content
 - titling
 - compliance with recordkeeping metadata standards / requirements
- Discrepancies may be reported to:**
- colleague
 - supervisor
 - manager
- Form of reporting may be:**
- written
 - oral
 - reconciliation statement

Evidence Guide

The Evidence Guide identifies the critical aspects, knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Evidence Guide

Critical Aspects of Evidence

- *Demonstrate ability to:*
 - Understand the processes of capture, classification, registration and tracking the location of records
 - Identify activities documented by records and apply classifications schemes
 - Record metadata accurately

Underpinning Knowledge*

* At this level the learner must demonstrate some relevant theoretical knowledge.

- Relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Recordkeeping principles and processes
- Concepts of, and reasons for, effective records and archives management
- Knowledge and understanding of organisation's business, functions, structure, and culture
- Organisation's policies, strategies and procedures, particularly those relating to records access and security
- Organisational recordkeeping environments and culture including locations and nature of transactions
- Organisation's recordkeeping and information (including classification) systems

Evidence Guide

Underpinning Skills

- Explaining and clarifying procedures
- Understanding and interpreting instructions
- Listening to, questioning, and clarifying information requests
- Managing own activities within a timeframe
- Records management system and operation including access and security for vital records
- Systematic approach to work
- Using judgement and discretion with confidential information
- Working systematically with accuracy and attention to detail
- Reading and comprehending/interpreting nature of record content
- Interpreting retention and disposal schedules
- Interpreting and applying relevant access and security rules and conditions
- Accurately recording metadata
- Writing reports where precise meaning is required
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Evidence Guide

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the business services common competencies for the particular AQF level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 1	Level 1	Level 1	Level 0	Level 1	Level 1	Level 1

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to register, track and record the record within the guidelines of the organisation
- **Communicating ideas and information** – in documenting the location of records
- **Planning and organising activities** – in planning the classification and registration activities
- **Working with teams and others** –
- **Using mathematical ideas and techniques** – in following a logical process to classify, register and track the records
- **Solving problems** – presented by discrepancies between actual and nominal record locations
- **Using technology** – to register and track the records within the organisation’s systems

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBADM308A Process payroll

Unit Descriptor This unit covers processing of payroll from provided data in manual or computerised payroll systems.

This unit is related to BSBADM505A Manage payroll.

Competency Field Business Administration Services

Element

Performance Criteria

- | | | |
|---|--------------------------|--|
| 1 | Record payroll data | 1.1 Payroll data is checked and discrepancies clarified with <i>designated person/s</i>
1.2 Employee <i>pay period details, deductions and allowances</i> are entered in <i>payroll system</i> in accordance with <i>source data</i>
1.3 Payment due to individual employees is calculated to reflect standard pay and <i>variations</i> in accordance with employee source data |
| 2 | Prepare payroll | 2.1 <i>Payroll</i> is prepared within designated timelines in accordance with organisational policy and procedures
2.2 Total wages for pay period are reconciled, and irregularities checked and corrected, or referred to designated person/s for resolution
2.3 <i>Arrangements for payment</i> are made in accordance with organisational and individual requirements
2.4 Authorisation of payroll and individual pay advice is obtained in accordance with organisational requirements
2.5 <i>Payroll records</i> are produced, checked and stored in accordance with organisational policy and security procedures
2.6 Security procedures for processing payroll and maintaining payroll records are followed |
| 3 | Handle payroll enquiries | 3.1 Payroll <i>enquiries</i> are responded to in accordance with organisational and <i>legislative requirements</i>
3.2 Information is provided in accordance with organisational and legislative requirements
3.3 Enquiries outside area of responsibility / knowledge are referred to designated person/s for resolution
3.4 Additional information or follow-up action is completed within designated timelines in accordance with organisational policy and procedures |

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competency, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- Legislation, codes and national standards relevant to the workplace which may include:**
- Award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice
- Designated person/s may include:**
- those who have the authority to approve payroll decisions
 - immediate supervisor
- Pay period details may include:**
- salary
 - wage
 - casual wage
 - contract
 - piecework
 - commission
 - bonus
- Deductions and allowances may include:**
- income tax
 - superannuation contributions
 - health insurance
 - union dues
 - travel allowance
 - car allowance
 - meal allowance
- Payroll system may include:**
- manual or computerised
- Source documents may include:**
- employee records/history
 - employee earnings and payroll register
 - employee timesheets

Metal and Engineering Training Package

BSBADM308A Process Payroll

Range Statement

Variations may include:

- rates of pay
- overtime
- holiday loading
- paid leave
- unpaid leave
- long service leave
- taxation
- sick leave

Payroll preparation may include:

- calculation of gross pay
- taxation and other deductions
- net pay
- preparing cheques
- electronic funds transfer
- cash analysis
- preparing pay advice slips

Payroll records may include:

- pay advice slips
- employee summary report
- cash analysis sheets
- end of month reports
- electronic funds transfer
- taxation reports
- end of year reports
- group certificates

Enquiries may include:

- face-to-face
- email
- fax
- telephone

Legislative requirements may include:

- confidentiality and security of records
- Australian Tax Office regulations – eg Australian Business Number, Employment Declaration Forms
- payroll tax
- PAYE tax
- Medicare levy
- HECS

Evidence Guide

The Evidence Guide identifies the critical aspects, knowledge and skills to be demonstrated to confirm competency for this unit. This is an integral part of the assessment of competency and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Integrated demonstration of all elements of competency and their performance criteria
- Knowledge and application of legislative requirements
- Accurate data input
- Knowledge of organisational guidelines relating to security and confidentiality of information

Underpinning Knowledge*

* At this level the learner must demonstrate some relevant theoretical knowledge.

- Relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Organisational policy and procedures
- Structure of authority in organisation
- Types of payroll systems
- Specific legislative requirements

Underpinning Skills

- Literacy skills to read and understands the organisation's financial *policies and procedures* and legislative procedures, write cheque or salary authorisations; prepare pay advice slips; maintain records
- Numeracy skills for calculating gross and net pay, comparing differing rates of pay over a given time span of the same nature, preparing cash analysis sheets, reconciling figures
- Communication skills including questioning, clarifying, reporting
- Problem solving skills for reconciling figures and resolving employee enquiries within scope of own responsibility
- Time management to meet designated timelines
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

Resource Implications

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace which may include:

- workplace reference materials such procedural manuals and company policy
- calculator
- computer equipment and relevant software
- payroll data from preceding pay periods

Consistency of Performance

In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the business services common competencies for the particular AQF level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 1	Level 1	Level 1	Level 1	Level 1	Level 1	Level 1

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- Collecting, analysing and organising information – to input employee information
- Communicating ideas and information – to respond to enquiries
- Planning and organising activities – to process payroll and prepare pay advice slips
- Working with teams and others – to deal with irregularities outside area of responsibility
- Using mathematical ideas and techniques – to calculate gross and net pay
- Solving problems – to identify and correct irregularities
- Using technology – to process payroll if required

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

BSBADM402A Produce complex business documents

Unit Descriptor This unit covers design and development of business documents using complex technical features of word processing and/or desktop publishing software.

This unit is related to BSBADM304A Design and develop text documents and BSBADM506A Manage business document design and development.

Competency Field Business Administration Services

Element	Performance Criteria
1. Use safe work practices	<p>1.1 Workspace, furniture and equipment are adjusted to suit the <i>ergonomic requirements</i> of the user</p> <p>1.2 <i>Work organisation</i> meets organisational and statutory requirements for computer operation</p> <p>1.3 Energy and resource <i>conservation techniques</i> are used to minimise wastage in accordance with organisational and statutory requirements</p>
2. Analyse document requirements	<p>2.1 Organisational and task <i>requirements</i> are identified prior to document design</p> <p>2.2 <i>Complex technical functions</i> of the software are evaluated for their usefulness in fulfilling the requirements of the task</p> <p>2.3 Document requirements are matched with software functions to provide efficient production of documents</p>
3. Design complex documents	<p>3.1 Document <i>structure and layout</i> are designed to suit the purpose, audience and information requirements of the task</p> <p>3.2 Document is <i>designed</i> to enhance readability and appearance and meet organisational and task requirements for style and <i>layout</i></p> <p>3.3 Complex software functions are used to enable efficient manipulation of information and other material and ensure <i>consistency of design and layout</i></p> <p>3.4 Manuals, user documentation and on-line help are used to overcome problems with document design and production</p>

Element	Performance Criteria
4. Produce documents	<p>4.1 Complex operations used in development of documents achieve required results</p> <p>4.2 Documents are previewed, adjusted and <i>printed</i> in accordance with organisational and task requirements</p> <p>4.3 Documents are <i>named and stored</i>, in accordance with organisational requirements and the application exited without information loss/damage</p> <p>4.4 Documents are prepared within <i>designated timelines</i> and organisational requirements for speed and accuracy</p>

Range Statement

The Range Statement provides advice to interpret the scope and context of this unit of competence, allowing for differences between enterprises and workplaces. It relates to the unit as a whole and facilitates holistic assessment. The following variables may be present for this particular unit:

- Legislation, codes and national standards relevant to the workplace which may include:**
- award and enterprise agreements and relevant industrial instruments
 - relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
 - relevant industry codes of practice

Range Statement

Complex documents may include:

- long documents
- multiple sections
- multiple headers and footers
- different odd and even pages
- master documents
- subdocuments
- primary mail merge documents
- mail merge data documents
- templates
- multiple users
- hyperlinks
- concordance files
- document protection
- linked and/or embedded objects
- captions
- call outs
- drawing
- WordArt
- forms with fields

Software may include:

- wordprocessing
- advanced desktop publishing

Organisational policy and procedures may include:

- log-on procedures
- password protection
- storage / location of data
- standard formats
- author's instructions
- use of templates

Range Statement

Ergonomic requirements may include:

- workstation height and layout
- chair height, seat and back adjustment
- footrest
- screen position
- keyboard and mouse position
- document holder
- posture
- avoiding radiation from computer screens
- lighting
- noise minimisation

Work organisation may include:

- mix of repetitive and other activities
- rest periods
- exercise breaks

Conservation techniques may include:

- double-sided paper use
- re-used paper for rough drafts (observing confidentiality requirements)
- recycling used and shredded paper
- utilising power-save options for equipment

Organisational requirements may include:

- consistent corporate image
- company logo
- company colour scheme
- established guidelines and procedures for document production
- 'house styles'
- content restrictions
- templates
- organisation name, time, date, document title, filename, etc in header / footer
- observing copyright legislation

Range Statement

Complex technical functions may include:

- table of contents
- index
- importing
- exporting
- linking
- embedding
- merge criteria
- fields
- form fields
- formulae
- sort criteria
- macros
- templates
- display features
- data transfer

Structure and layout may include:

- white space
- typeface
- graphics
- photographs
- drawing
- boxes
- colour
- page layout
- headings
- columns
- letter and memo conventions

Design choices may include:

- simplicity
- diversity
- balance
- typography
- text flow
- relative positioning of graphics and headings

Range Statement

Consistency of design and layout may include:

- indentations
- spacings
- page numbers
- typeface styles and point size
- captions
- bullet/ number lists
- footnotes/endnotes
- annotated references
- borders
- consistency with other business documents

Printing may include:

- with drawing objects
- with comments
- with hidden text
- with field codes
- to fit specific number of pages
- print to file
- print merge

Naming and storage of documents may include:

- file names which are easily identifiable in relation to the content
- file/directory names which identify the operator, author, section, date etc
- file names according to organisational procedure eg numbers rather than names
- storage in folders / sub-folders
- storage on hard/floppy disk drives, CD ROM, tape backup
- organisation policy for backing up files
- organisation policy for filing hard copies of documents
- filing locations
- security
- authorised access

Designated timelines may include:

- timeline agreed with supervisor/person requiring spreadsheet
- timeline agreed with internal/external client
- organisation timeline eg deadline requirements

Evidence Guide

The Evidence Guide identifies the critical aspects, underpinning knowledge and skills to be demonstrated to confirm competence for this unit. This is an integral part of the assessment of competence and should be read in conjunction with the Range Statement.

Critical Aspects of Evidence

- Integrated demonstration of all elements of competency and their performance criteria
- Knowledge and application of complex software functions

Underpinning Knowledge*

* At this level the learner must demonstrate understanding of a broad knowledge base incorporating some theoretical concepts.

- Relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- Advanced functions of wordprocessing and/or desktop publishing software applications
- Impact of formatting and design on the presentation and readability of documents
- Organisational policies and procedures

Underpinning Skills

- Literacy skills to interpret and evaluate the purposes and objectives of various types of software; consider aspects of context, purpose and audience when generating and formatting texts; display logical organisation of written information through the use of coherently linked paragraphs; use a variety of strategies for planning and reviewing own work; demonstrate drafting techniques; use simple and complex syntactic structures; select vocabulary to create nuances of meaning in particular contexts
- Proofreading and editing skills to ensure clarity of meaning and conformity to organisational requirements; check for accuracy and consistency of information by consulting additional resources
- Problem solving skills to use processes flexibly and interchangeably
- Numeracy skills to collate and present data; graphs and annotated references
- Communication skills to follow complex oral instructions when using technology; listen to and interpret complex sequenced instructions
- Keyboarding skills
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and

Evidence Guide

mental abilities

Resource Implications

- The learner and trainer should have access to appropriate documentation and resources normally used in the workplace which may include:
- Workplace references such as computer user manuals, organisational policies and procedures and workplace procedural manuals
- Computer equipment including relevant software, printer
- Guide/examples of 'house style'
- Equipment (eg paper and other materials)

Consistency of Performance

- In order to achieve consistency of performance, evidence should be collected over a set period of time which is sufficient to include dealings with an appropriate range and variety of situations

Context/s of Assessment

- Competency is demonstrated by performance of all stated criteria, including paying particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope as defined by the Range Statement
- Assessment must take account of the endorsed assessment guidelines in the Business Services Training Package
- Assessment of performance requirements in this unit should be undertaken in an actual workplace or simulated environment
- Assessment should reinforce the integration of the key competencies and the business services common competencies for the particular AQF level. Refer to the Key Competency Levels at the end of this unit

Key Competency Levels

NB: These levels do not relate to the Australian Qualifications Framework. They relate to the seven areas of generic competency that underpin effective workplace practices.

Collect, analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
Level 2	Level 1	Level 1	Level 1	Level 1	Level 2	Level 2

Three levels of performance denote level of competency required to perform a task.

1. Perform 2. Administer 3. Design

- **Collecting, analysing and organising information** – to determine document requirements
- **Communicating ideas and information** – through well-designed business documents
- **Planning and organising activities** – to meet designated timelines
- **Working with teams and others** – to determine document purpose and audience
- **Using mathematical ideas and techniques** – to determine design requirements
- **Solving problems** – using manuals and on-line help
- **Using technology** – to produce complex business documents

Please refer to the Assessment Guidelines for advice on how to use the Key Competencies

FNBFIN71A Prepare financial reports to meet statutory requirements

Stream: Insurance - Finance

Functional Area: Analyse Information and Reporting

National Code: FNBFIN71A

Unit Description: This unit describes the functions involved in preparing financial reports to meet statutory requirements.

ELEMENT	PERFORMANCE CRITERIA
1. Identify statutory requirements for reports	1. Statutory rules are regularly and comprehensively reviewed to ensure all requirements for reporting are planned for and met in the required manner. 2. Sources are constantly reviewed to remain aware of changes and amendments. 3. Existing reports are used as a guideline for content and format where available.
2. Plan for provision of reports	4. Timelines are established in order to meet report deadlines. 5. Communication of data requirements to internal users is unambiguous and timely. 6. Lead times are set that ensure adequate time is available and allowance is made for contingencies.
3. Analyse and consolidate reports	7. Reports are reviewed to ensure accuracy with internal accounting records and completeness of data. 8. Reports are reviewed and cross referenced against detailed statutory requirements. 9. Explanation of report results is justified where necessary in required format. 10. Reports are prepared in an accurate, timely and thorough manner. 11. Reports are prepared with a detailed and clear audit trail to ensure comprehensive financial monitoring may be carried out.
4. Submit reports for authorisation	12. All reports comply fully with auditor requirements. 13. All required sign-offs are obtained from responsible parties.
5. Distribute reports	14. Reports are distributed to all parties in a timely manner.

Metal and Engineering Training Package

FNBFIN71A Prepare Financial Reports to Meet Statutory Requirements

ELEMENT	PERFORMANCE CRITERIA
	15. Confirmation of receipt of reports is obtained in order to complete company record of compliance.

RANGE OF VARIABLES	
VARIABLE	SCOPE
Internal accounting records	Internal accounting records include detailed working papers.
Statutory requirements	Statutory requirements are rules for operations determined by industry regulators. May be State or Federal government.
Sources of data	Sources of data input include: general ledger balances lease details related party transactions directors fees shareholders names claims data
Information on statutory requirements	Information on statutory requirements may include: financial consultants company secretariat ASC professional journals ISC company legal counsel external auditors industry associations media actuaries
Pro-formas for reports	Pro-formas for reports may include existing or sample reports showing information requirements and relationship to regulations.
Contingencies	Contingencies may include plans for: non-compliance with timetable omissions and errors computer error data late or not available in required format from source
Distribution	Distribution may be to both internal and external parties such as: Australian Securities Commission fire brigades ISC ISA auditors banks stock exchange Taxation department Australian Bureau of Statistics Stamp Duties Office motor accident authorities ICA shareholders company staff and directors brokers

RANGE OF VARIABLES	
VARIABLE	SCOPE
	work cover authorities policy holders management
Approvals	Approvals/authorisation may be provided by: auditors actuaries company directors chief accountant
Policy and procedures	'Policy' means a policy statement. 'Procedures' means operating procedures. Company policy and procedures may include: operations manuals internal control guidelines computer system documentation
Requirements	Industry and legislative requirements may cover: Australian Accounting Standards Relevant Insurance Act Consumer Credit legislation Trade Practices Act Stamp Duties Act Industry Code of Practice Australian Securities & Companies Code Life Insurance Act Privacy Act Taxation Act

EVIDENCE GUIDE
Interdependent assessment of units: This unit can be assessed independently.
Underpinning knowledge may include: company policy and procedures knowledge or awareness of relevant Acts and regulations legal systems and procedures industry codes of practice computer systems procedure writing Underpinning skills to be demonstrated may include: computerised spreadsheet and database data analysis and interpretation evaluative and general analytical negotiation and interpersonal
Resource implications: Unless otherwise specified, there are no significant resource implications for assessment of this unit, apart from access to a relevant workplace or closely simulated office environment and the use of a range of office equipment, technology and consumables. These may include

EVIDENCE GUIDE
standard commercial computer hardware, software, telephones, facsimiles, and other relevant office equipment.

EVIDENCE GUIDE						
Consistency in performance: This unit requires a variety of assessment contexts and assessment over a period of time sufficient to establish that competency has been demonstrated.						
Context for assessment: Assessment of performance requirements in this unit should be undertaken within the Financial Services Industry context and should cover aspects of personal/financial responsibility and accountability. Competency is demonstrated by performance of all stated criteria, including the Range of Variables applicable to the workplace environment. Aspects of competency, including the attainment of relevant knowledge and skills, may be assessed in a relevant workplace, a closely simulated work environment, or other appropriate means that clearly meet industry competency requirements.						
Key competencies:						
Communi- cating ideas and informatio n	Collecting, analysing and organising informatio n	Planning and organising activities	Working with others in a team	Using mathe- matical ideas and techniques	Solving problems	Using technology
3	3	3	3	3	3	3

<p>UNIT TITLE</p> <p>PMBHAN204B - Package goods/materials</p>
<p>UNIT DESCRIPTOR</p> <p>This competency covers the packaging of goods/materials for despatch or storage.</p> <p>This competency is typically performed by operators working either independently or as part of a work team.</p> <p>This competency in practice</p> <p>This competency applies to operators who package goods and/or loose materials for despatch or storage. The key factors are correctly identifying the packaging requirements and the technology required to package the goods/materials. It includes:</p> <ul style="list-style-type: none"> v identifying and interpreting the packaging requirements v selecting the appropriate technology for packaging v labelling the goods/materials after packaging. <p>PREREQUISITES</p> <p>This competency has no prerequisites.</p>

ELEMENT	PERFORMANCE CRITERIA
1. Prepare goods/materials for packaging.	1.1. Interpret packaging specifications 1.2. Interpret order packaging documentation 1.3. Select appropriate technology for packaging goods/materials 1.4. Identify packaging materials and match specifications.
2. Package goods.	2.1. Complete packaging following standard workplace procedures 2.2. Stack packaged goods/materials to minimise damage.
3. Label packed goods/materials.	3.1. Identify workplace labelling standards 3.2. Identify appropriate goods handling, labelling and other identification symbols 3.3. Attach appropriate label.
4. Complete documentation.	4.1. Complete workplace records/documentation 4.2. Attach invoices and picking slips (where required).

RANGE OF VARIABLES:

This application of this competency will vary according to the product requirements, range of equipment, technology and the varied range of process procedures within an enterprise.

This competency applies to all work environments and sectors within the plastics, rubber and cabling industry. It includes the operation of all relevant ancillary equipment.

The terms documentation, labels and records means any and all relevant information and data whether it is manual, paper based, electronic or verbal, either in person or by phone/radio.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

The processes covered by this unit include, but are not limited to:

- identification of goods
- organising the packaging of goods
- organising the labelling of packaged goods.

This competency includes the use of ancillary equipment such as:

- v shrink wrappers
- v tape machine labelers
- v loose bulk packing equipment.

Sources of documentation may include:

- v goods identification numbers and codes
- v manifests
- v picking slips, merchandising transfers, stock requisitions and bar codes
- v manufacturers specifications
- v supplier and/or client instructions.

Typical hazards include:

- v stationary and moving machinery, parts or components
- v noise, light, energy sources
- v humidity, air temperature, radiant heat
- v manual handling hazards.

Typical problems include:

- v insufficient goods to complete order
- v resolving conflicting priorities
- v incomplete or incorrect paperwork.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Knowledge of goods and the packaging processes and requirements sufficient to recognise non-standard situations and then determine appropriate action that is consistent with operating guidelines.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or describe:
- production workflow and requirements for packaging
- packaging methods to minimise waste
- identification symbols
- correct OH&S procedures
- approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup
- waste management and importance of reusing non-conforming materials wherever possible
- correct selection and use of equipment, materials, processes and procedures

- v plan own work including predicting consequences and identifying improvements
- v identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- v identify and describe own role and role of others involved directly in the packaging process
- v identify factors which may affect product quality and appropriate remedies
- v use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- v distinguish between causes of problems such as:
 - packaging and labelling requirements
 - goods being damaged after packaging.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

- v recognise the importance of material properties and qualities
- v apply approved procedures
- v take appropriate action to resolve problems or report problems.

Consistent performance should be demonstrated. In particular look to see that :

- v packaging standards are met consistently
- v upstream and downstream communication is timely and effective
- v procedures and work instructions are read and interpreted correctly
- v problems are identified and action is taken (ie, the problem is fixed or reported)
- v all safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg, to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

KEY COMPETENCIES

UNIT TITLE

PMBHAN201B - Process orders and despatch products

UNIT DESCRIPTOR

This competency covers the processing of orders and despatching of goods. It applies to all sectors of the industry.

This competency is typically performed by operators working either independently or as part of a work team.

This competency in practice

This competency applies to operators who process despatch orders, despatch stock and maintain records. The key factors are correctly identifying and selecting the goods to be despatched and ensuring they are despatched to the correct location. It includes:
 checking order requests/consignment note documentation for products to be despatched
 identifying and selecting the correct product(s)
 organising products to be moved into the right place by the right time, using the appropriate handling equipment
 completing and checking all documentation
 updating stock records.

PREREQUISITES

This competency has **no** prerequisites.

ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements.	1.1. Read and interpret order request and consignment note documentation 1.2. Identify required schedules for despatch 1.3. Identify product(s) in order 1.4. Plan sequence of events using workplace and product knowledge 1.5. Select appropriate materials handling equipment within required OH&S regulations and timeframe for the despatch.
2. Prepare goods for despatch.	2.1. Identify and read workplace procedures for assembling and completing orders 2.2. Select goods for despatch 2.3. Check goods for despatch against product knowledge, labels and other identification systems 2.4. Sort, assemble and consolidate products 2.5. Secure order and place in storage areas, in accordance with schedule 2.6. Check order against despatch schedule and order form.

ELEMENT	PERFORMANCE CRITERIA
3. Despatch product.	3.1. Complete workplace records 3.2. Attach appropriate labels and documentation 3.3. Check load labels and documentation and organise loading 3.4. Undertake final check of load labels and documentation 3.5. Explain transportation requirements to driver where appropriate.
4. Complete product movement records.	4.1. Complete product movement records 4.2. Update stock records as required 4.3. Complete other paperwork and records as required.

RANGE OF VARIABLES:

This competency unit covers the organisation of products to be moved within and out of a plant/storage. It is NOT intended for people who, as a major function, operate a warehouse. The appropriate Transport and Distribution competencies should be used here.

This competency applies to all work environments and sectors within the plastics, rubber and cabling industry. It includes the operation of all relevant ancillary equipment.

The terms order request, documentation, labels, transportation requirements, paperwork and records means any and all relevant information and data whether it is manual, paper based, electronic or verbal, either in person or by phone/radio.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

The processes covered by this unit include, but are not limited to:
 identification of products
 organising the movement of products
 organising the despatch of products.

This competency includes the use of ancillary equipment such as:
 computers
 mechanical and computerised measuring devices.

Typical problems include:
 insufficient product(s) to complete order
 resolving conflicting priorities
 ensuring the correct products arrive at the correct place at the right time
 incomplete or incorrect paperwork.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Knowledge of products and the materials handling processes and requirements sufficient to recognise non-standard situations and then determine appropriate action which is consistent with operating guidelines.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:
apply and/or explain:

product knowledge

inventory and ordering systems

transport requirements and restrictions for products

correct OH&S procedures

plan own work including predicting consequences and identifying improvements

identify and describe own role and role of others involved directly in the processing of orders and despatching of products

use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task

distinguish between causes of problems such as:

product requirements

job priority.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

apply approved procedures

take appropriate action to resolve problems or report problems to appropriate personnel.

Consistent performance should be demonstrated. In particular look to see that :

processing and despatching standards are met consistently

upstream and downstream communication is timely and effective

procedures and work instructions are read and interpreted correctly

problems are identified and appropriate action is taken (ie, the problem is fixed or reported)

all safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg, to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Assessment method and context:

Competence in this unit may be assessed:
 on an operating plant allowing for operation under all normal and a range of abnormal conditions
 by use of a suitable simulation and/or a range of case studies/scenarios
 by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

KEY COMPETENCIES

<p>UNIT TITLE</p> <p>PMBHAN202B - Load and unload goods</p>
<p>UNIT DESCRIPTOR</p> <p>This competency covers the loading, unloading and shifting of goods using mechanical aids. It applies to all sectors of the industry.</p> <p>This competency is typically performed by operators working either independently or as part of a work team.</p> <p>This competency in practice</p> <p>This competency applies to operators who move goods using mechanical aids. The key factors are identifying and using the correct equipment and method to move the goods. It includes:</p> <ul style="list-style-type: none"> v planning the correct method to move the goods v moving the goods safely without damage to the goods, personnel or equipment. <p>PREREQUISITES</p> <p>This competency has no prerequisites.</p>

ELEMENT	PERFORMANCE CRITERIA
1. Plan operation.	1.1. Correctly identify type and quantity of product or materials to be moved 1.2. Identify load characteristics including weight, volume, shape, balance and dimensions 1.3. Identify dangerous or other hazardous goods and correct handling procedures 1.4. Identify most efficient and appropriate piece of equipment to be used 1.5. Determine location of storage 1.6. Identify most efficient and appropriate movement route.
2. Relocate load.	2.1. Load specified products or materials using good OH&S practices and complying with all regulations and procedures 2.2. Shift products or materials according to instructions, using good OH&S practices 2.3. Unload products or materials without damage to goods, personnel or equipment using good OH&S practices 2.4. Check load for stability during the loading, shifting and unloading process 2.5. Return equipment to appropriate storage area.
3. Secure and protect load.	3.1. Secure load using appropriate load restraints and protection 3.2. Protect load in accordance with legal and workplace safety requirements 3.3. Check distribution of load to ensure it is even, legal and within safe working capacity.

ELEMENT	PERFORMANCE CRITERIA
4. Complete documentation.	4.1. Inspect load and check for security to travel 4.2. Check holding area conditions meet material requirements 4.3. Store materials as required for production and to meet health and safety needs 4.4. Complete required workplace documentation/records.

RANGE OF VARIABLES:

This competency unit includes the use of manual and mechanical handling aids. It does NOT include the use of licensed load shifting equipment.

This competency applies to all work environments and sectors within the plastics, rubber and cabling industry. It includes the operation of all relevant ancillary equipment.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

The processes covered by this unit include, but are not limited to:

- v movement of packages,
- v loose goods,
- v materials and products.

This competency includes the use of equipment such as:

- v hand carts, trolleys, self-propelled trolleys and dollies
- v wheelbarrows
- v block and tackle
- v pallet trucks
- v relevant personal protective equipment.

Typical hazards include:

- v irregular shaped loads
- v unlabelled goods, materials and products.

Typical problems include:

- v load too heavy, large for safe, easy moving
- v load in awkward position for safe, easy moving
- v clash of work priorities
- v correct equipment not available.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Knowledge of the materials handling processes and requirements sufficient to recognise non-standard situations and then determine appropriate action which is consistent with operating guidelines.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or describe:
 - appropriate lifting and moving equipment
 - load and operating limitations of equipment
 - inventory systems
 - correct OH&S procedures
- v plan own work including predicting consequences and identifying improvements
- v identify and describe own role and role of others involved directly in the loading and unloading process
- v use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- v distinguish between jobs which:
 - may be easily and safely done with a single person
 - require assistance from other people
 - require manual handling equipment
 - need mechanical lifting aids.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

- v apply approved procedures
- v take appropriate action to resolve problems or report problems to appropriate personnel.

Consistent performance should be demonstrated. In particular look to see that :

- v loading and unloading standards are met consistently
- v upstream and downstream communication is timely and effective
- v procedures and work instructions are read and interpreted correctly
- v problems are identified and appropriate action is taken (ie, the problem is fixed or reported)
- v all safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg, to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

KEY COMPETENCIES

UNIT TITLE

PMBFIN201B - Finish products and components

UNIT DESCRIPTOR

This competency covers a range of processes subsequent to the actual making of the product which have been grouped together under the heading of ‘finishing’. It applies to the finishing of products for customer use, and the finishing of components for use by a subsequent process or organisation which may then further process or assemble these components into a finished product, and similar activities. It applies across all sectors of the industry.

This competency is typically performed by personnel working either independently or as part of a work team.

This competency in practice

This competency applies to production support or moulding operators who are required to apply knowledge of product quality standards, and product defect classification, and operate value adding secondary processing units such as trimming and assembly, and, other personnel who perform initial finishing processes to products after the production process. The key factors are the removal of waste/excess material from the product and preparing the product for either further processing or customer delivery. It includes:

- v checking job sheets for work to be done
- v following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety legislative responsibilities
- v inspecting the product for routine and non-routine finishing processes
- v discussing finishing requirements with other workers
- v applying finishing process to product
- v inspecting finished product and sorting in accordance with job specifications
- v identifying and taking action on routine product imperfections
- v discussing non-routine product imperfections with designated person.

PREREQUISITES

This competency has **no** prerequisites.

ELEMENT	PERFORMANCE CRITERIA
1. Establish requirements for the finishing process.	1.1. Identify work requirements from procedures 1.2. Assemble equipment and consumables for the finishing process 1.3. Consult workplace procedures and materials safety data sheets to confirm the work planning process 1.4. Ensure safety equipment is available and in sound condition 1.5. Remove products from equipment if required using enterprise standard handling methods. 1.6. Recognise end-of-product run.

ELEMENT	PERFORMANCE CRITERIA
2. Check quality of product.	2.1. Inspect product to identify routine and non-routine finishing requirements 2.2. Identify significant finning, flash or other quality problems and report to appropriate person for investigation of <u>mould/die</u> closure/alignment 2.3. Check with appropriate personnel regarding modifications to finishing process 2.4. Identify and process non-conforming products in accordance with workplace procedures.
3. Undertake the finishing operation.	3.1. Trim product as required 3.2. Apply procedures to other finishing processes 3.3. Undertake other secondary process operations required 3.4. Follow waste and recycling procedures 3.5. Inspect finished product and compare to specifications for suitability for further processing or for customer delivery 3.6. Assemble finished products and sort in accordance with procedures 3.7. Pack as required 3.8. Record product data as required 3.9. Clean up work area and perform housekeeping.
4. Identify and rectify routine product imperfections.	4.1. Identify the range of routine imperfections that can occur during the production process 4.2. Determine and rectify routine product imperfections in accordance with procedures 4.3. Ensure appropriate records and log books are maintained to meet procedures/work instructions 4.4. Identify non-routine product imperfections and report to designated person.

RANGE OF VARIABLES:

This competency applies to all work environments and sectors within the plastics, rubber and cabling industry. It includes the operation of all relevant additional equipment where that equipment is integral to the finishing process.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency includes the use of equipment and tools such as:

- v electric and/or air powered routers, saws, drills, drivers and sanders
- v knives, files and scrapers
- v hand carts and trolleys
- v hoists/jigs/lifting equipment not requiring any special permits or licences
- v knives and knife sharpeners
- v band saws, hand saws
- v personal safety equipment such as gloves and goggles or face shields
- v handling aids such as jigs and gantries.

Typical hazards include:

- v manual handling hazards
- v knife hazards
- v humidity, air temperature, radiant heat
- v stationary and moving machinery, parts and components.

Typical process problems include:

- v movement of jigs or fixtures
- v power failures
- v non-supply of materials
- v broken cords
- v damaged or inoperable equipment.

Typical product problems include:

- v variations in materials
- v temperature of product to be finished
- v movement of inserts, reinforcements or fittings
- v size of some products.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification product imperfections and techniques necessary to finish products for customer use.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or explain:
 - selection and application of appropriate processes
 - selection of appropriate tools for the process
- v locate, interpret and apply relevant information to the finishing process
- v identify and safely handle products
- v select and apply appropriate finishing process
- v meet waste and recycling requirements
- v distinguish between causes of faults such as:
 - product defects such as: flashing; distortions; stress marks; sinks, voids; short shots; poor colour distribution; moisture marks; gassing; burn marks
 - inappropriate selection and use of finishing equipment/processes
 - poor surface finish
 - fining or shuts
 - variations in section thickness.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

- v recognise potential situations requiring action
- v implement appropriate action
- v understand procedures.

Consistent performance should be demonstrated. In particular look to see that:

- v production standards are met consistently
- v the importance of critical material properties and quantities to the finishing process is recognised
- v safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg, counting numbers of products and percentage of rejects.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

KEY COMPETENCIES

<p>UNIT TITLE</p> <p>PMBFIN202B - Fit attachments to products</p>
<p>UNIT DESCRIPTOR</p> <p>This competency covers the attachment of parts to products. It applies to all sectors of the industry.</p> <p>This competency is typically performed by all operators working either independently or as part of a work team.</p> <p>This competency in practice</p> <p>This competency applies to operators who attach parts to products as part of the finishing processes of the product. The key factors are the planning of the attachment process and following of the work plan. It includes:</p> <ul style="list-style-type: none"> v checking job sheets for work to be done v identifying hazards and appropriate measures to minimise risks v planning sequence of tasks v testing attachments and product v inspecting finished product v identifying and rectifying routine product imperfections v discussing non-routine product imperfections with designated person. <p>PREREQUISITES</p> <p>This competency has no prerequisites.</p>

ELEMENT	PERFORMANCE CRITERIA
1. Establish requirements for the finishing process.	1.1. Interpret product specifications 1.2. Identify availability of attachments, required materials and tools 1.3. Identify final use and any special characteristics of the product to be assembled in relation to the impact of the assembly process on product quality.
2. Plan fitting process.	2.1. Identify hazards connected with materials and process from observation of equipment and workplace reference materials 2.2. Identify appropriate measures to minimise risks from the identified hazards 2.3. Locate manufacturer's information and safety advice on products and use to plan work 2.4. Plan attachment process to conform to quality specifications, minimise time and economically use materials 2.5. Plan task sequences 2.6. Assemble required materials, tools and facilities and check for suitability of purpose.

ELEMENT	PERFORMANCE CRITERIA
3. Undertake finishing.	3.1. Follow work plan ensuring compliance with procedures 3.2. Test attachments and product for conformity with quality requirements when required 3.3. Inspect finished product and compare to specifications for suitability for further processing or for customer delivery 3.4. Assemble finished products and sort in accordance with procedures 3.5. Follow waste and recycling procedures 3.6. Clean up work area and perform housekeeping.
4. Identify and rectify routine product imperfections.	4.1. Identify the range of routine imperfections that can occur during the process 4.2. Determine and rectify routine product imperfections in accordance with procedures. 4.3. Make sure appropriate records and log books are maintained to meet procedures 4.4. Identify non-routine product imperfections and report to designated person.

RANGE OF VARIABLES:

This competency applies to all work environments and sectors within the plastics, rubber and cabling industry. It includes the operation of all relevant additional equipment.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency includes the use of equipment and tools such as:

- v jigs and gantries
- v powered equipment such as drills, drivers,
- v plastic welding equipment as appropriate
- v hand carts and trolleys
- v hoists/jigs/lifting equipment not requiring any special permits or licences
- v transfers, bolts, nuts, inserts, seals, screens and reinforcement
- v relevant personal protective equipment.

Typical hazards include:

- v manual handling hazards
- v humidity, air temperature, radiant heat
- v stationary and moving machinery, parts and components
- v component size and weight.

Typical process problems include:

- v movement of jigs or fixtures
- v power failures
- v non-supply of materials.

Typical product problems include:

- v variations in materials
- v temperature of product to be finished
- v movement of inserts, reinforcements or fittings.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise routine and non-routine product imperfections and techniques necessary to fit attachments as part of the finishing process for products.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or explain:
 - selection and application of appropriate fitting of attachment processes
 - selection of appropriate tools for the process
 - waste and recycling requirements
- v distinguish between causes of faults such as:
 - misaligned or obstructed inserts
 - selection and use of inappropriate finishing equipment/processes.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

- v recognise potential situations requiring action
- v implement appropriate action
- v understand procedures
- v recognise the importance of critical material properties and quantities.

Consistent performance should be demonstrated. In particular look to see that:

- v production standards are met consistently
- v safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg, counting numbers of products and percentage of rejects.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

UNIT TITLE

PMBFIN203B - Repair product imperfections

UNIT DESCRIPTOR

This competency covers the repair of product imperfections during or after production.

This competency is typically performed by all operators working either independently or as part of a work team.

This competency in practice

This competency applies to operators who conduct repairs to products following the manufacturing process. The key factors are the identification of the fault and its reparability, selecting an appropriate repair product or process and making the necessary repairs. It includes:

- v checking job sheets for work requirements
- v identifying the priority in which jobs/product will be completed
- v ensuring appropriate repair materials and equipment are available
- v ensuring the equipment and materials are appropriate for the job
- v carrying out the repair process
- v checking the repair for conformance with specification.

PREREQUISITES

This competency has **no** prerequisites.

ELEMENT	PERFORMANCE CRITERIA
1. Identify damage, and select materials and repair process.	1.1. Interpret product specifications and work order documentation 1.2. Identify product faults and make decisions as to the feasibility of the repair in terms of the intended use of the product and the quality specifications 1.3. Select technology appropriate for the repair 1.4. Identify appropriate repair materials and match to fault and repair method 1.5. Assemble materials and tools and check for suitability for purpose 1.6. Locate and use manufacturer's information and safety advice on products to plan work 1.7. Plan order of work to identify required work sequences, times, work process stages, <u>engineering controls</u> and personal protection equipment 1.8. Design repairs to conform to quality specification, minimise time and economically use consumable materials.
2. Conduct repairs.	2.1. Identify and eliminate sources of contamination 2.2. Prepare surfaces in accordance with manufacturer's instructions and workplace requirements 2.3. Conduct repairs in the appropriate locations and check for conformity with job specification.

ELEMENT	PERFORMANCE CRITERIA
3. Clean work area and prepare products for the next process.	3.1. Clean and inspect used equipment for serviceable condition and store appropriately 3.2. Tag unserviceable equipment, identify faults and inform appropriate personnel 3.3. Inspect and approve repaired products for suitability for further processing or for customer delivery 3.4. Tag products which do not meet quality specifications for further repair or treatment 3.5. Clean work area and return to approved condition.
4. Follow workplace procedures to finish product.	4.1. Follow waste and recycling procedures 4.2. Assemble and sort repaired products for delivery to other work sections in accordance with workplace procedures 4.3. Complete appropriate documentation.

RANGE OF VARIABLES:

This competency applies to all work environments and sectors within the plastics, rubber and cabling industry. It includes the operation of all relevant additional equipment.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency unit includes equipment and tools such as:

- v hand carts and trolleys
- v hoists/lifting equipment not requiring any special permits or licences
- v plastic or other filling compounds
- v basic hand tools required for cosmetic repairs of products
- v relevant personal protective equipment.

Typical hazards include:

- v spills
- v dusts/vapours
- v hazardous materials
- v manual handling hazards.

Typical process problems include:

- v inappropriate filling materials being selected and used
- v equipment failures
- v effect of weather on curing times.

Typical product problems include:

- v variations in materials
- v contamination of materials
- v separation of filling and parent materials.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and material faults.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or explain:
 - impact of incorrect or faulty materials
 - focus of operation of work systems and equipment
 - correct selection and use of equipment, materials, processes and procedures
 - hazards of the materials and process and appropriate hazard control procedures
- v distinguish between causes of routine finishing faults such as:
 - wrong raw materials/additives
 - incorrect quantity of materials/additives/catalyst
 - contaminated materials/additives/catalyst
 - equipment malfunctions
 - tool slips and mould or product inclusions.

Critical aspects:

It is essential that the competence is demonstrated in the ability to:

- v recognise the importance of critical material properties and quantities
- v maintain tools in a manner that promotes cleanliness and safety
- v identify problems and take appropriate action.

Consistent performance should be demonstrated. In particular look to see that:

- v production standards are met consistently
- v all safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg, to determine that 16 units and 46 units are equal to a total of 62 units.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

KEY COMPETENCIES

UNIT TITLE

PMBFIN205B - Hand decorate products

UNIT DESCRIPTOR

This competency covers the hand decorating of products as part of the finishing process of products for customer use. It applies to all sectors of the industry.

This competency is typically performed by all operators working either independently or as part of a work team.

This competency in practice

This competency applies to operators who perform hand decorating techniques to products as part of the finishing process. The key factors are identifying appropriate materials, correct positioning, alignment and cleanliness. It includes:

- v checking job sheets for work to be done
- v following approved hazard minimisation procedures for any hazards connected with materials and process, using work instructions, labels and materials safety data sheets, and in accordance with occupational health and safety legislative responsibilities
- v inspecting the product for routine and non-routine finishing processes
- v discussing finishing requirements with other workers
- v product surface cleanliness
- v applying decorating materials to product
- v inspecting finished product and sorting in accordance with job specifications
- v identifying and rectifying routine product imperfections
- v discussing non-routine product imperfections with designated person.

PREREQUISITES

This competency has **no** prerequisites.

ELEMENT	PERFORMANCE CRITERIA
1. Establish requirements for the finishing process.	1.1. Interpret customer order or product specifications 1.2. Check availability of materials and equipment 1.3. Identify and inspect products to be decorated for suitability of process 1.4. Report unsuitable products to designated person 1.5. Assemble materials, tools and facilities and check for suitability 1.6. Locate manufacturer’s information and safety advice on products and use to plan work 1.7. Identify required work sequences, times, work process stages, <u>engineering controls</u> and personal protective equipment, and plan order of work.
2. Prepare surfaces.	2.1. Inspect product surfaces for contamination or damage 2.2. Identify and eliminate sources of contamination 2.3. Prepare surfaces in accordance with manufacturer’s instructions and workplace requirements.

ELEMENT	PERFORMANCE CRITERIA
3. Hand decorate products.	3.1. Identify required decorations to meet job order requirements 3.2. Ensure decorations are fit for use and return those damaged or unusable 3.3. Apply decorations in the appropriate locations 3.4. Inspect finished product and compare specifications for suitability for further processing or for customer delivery 3.5. Assemble finished products and sort in accordance with procedures 3.6. Clean up work area and perform housekeeping.
4. Identify and rectify routine hand decorating problems.	4.1. Identify the range of <u>routine problems</u> that can occur during the hand decorating process 4.2. Determine and rectify routine hand decorating imperfections in accordance with procedures 4.3. Identify faults in equipment, tag unserviceable equipment and report to designated person 4.4. Ensure appropriate records and logbooks are maintained to meet procedures.

RANGE OF VARIABLES:

This competency applies to all work environments and sectors within the plastics, rubber and cablemaking industry. It includes the operation of all relevant additional equipment where that equipment is integral to the decorating process.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency includes equipment and tools such as:

- v hand carts and trolleys
- v hoists, jigs and gantries
- v lifting equipment not requiring any special permits or licences
- v relevant personal protective equipment.

Typical hazards include:

- v manual handling hazards
- v solvents and cleaning agents
- v humidity, air temperature, radiant heat
- v stationary and moving machinery, parts and components.

‘Rectify routine problems’ means ‘apply known solutions to a limited range of predictable problems’.

Typical process problems include:

- v non-supply of product
- v incorrect selection or supply of materials
- v misalignment of decals, transfers or other decorative materials.

Typical product problems include:

- v variations in materials
- v temperature of product to be finished
- v contamination of surfaces
- v decals/transfers or stamps not within specification or not fit for use.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise problems that can occur during the hand decorating process.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v locate, interpret and apply relevant information to finishing process
- v identify and safely handle products
- v select and apply appropriate finishing process
- v apply and/or explain:
 - waste and recycling requirements
 - non-adherence of transfers, decals or stamps.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

- v understand the importance of critical material properties and quantities
- v recognise potential situations requiring action and then implement appropriate action.

Consistent performance should be demonstrated. In particular look to see that:

- v production standards are met consistently
- v decorations are applied consistently and at an appropriate rate.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg, counting numbers of products and percentage of rejects.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

UNIT TITLE

PMBPROD315B - Produce polyurethane foam

UNIT DESCRIPTOR

This competency covers the application of knowledge of materials, product purpose and processes to the production of polyurethane foam.

This competency is typically performed by all operators working either independently or as part of a work team.

This competency in practice

This competency applies to operators producing polyurethane foam. The key factors are the adequate planning of the process stages, preparation of the equipment, checking on performance of the equipment and making approved adjustments and equipment corrections. It includes:

- v checking job sheets for work to be done and identifying the priority in which jobs/product will be made/completed
- v ensuring appropriate raw materials are available
- v ensuring the equipment and materials are appropriate for the job
- v carrying out the process
- v checking the outputs for conformance with specification
- v identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures
- v correcting materials, equipment or process variations and making appropriate adjustments
- v discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions
- v solving routine and non-routine equipment and process problems, seeking guidance where necessary or appropriate
- v completing logs and reports.

PREREQUISITES

This competency has **no** prerequisites.

ELEMENT	PERFORMANCE CRITERIA
1. Plan process stages for polyurethane foam production.	1.1. Plan the stages in the polyurethane foaming process and ensure these comply with the quality requirements for production 1.2. Identify and allow for changes in materials at each stage of the polyurethane foaming process 1.3. Plan the availability of the equipment and components for each production stage 1.4. Anticipate the impact of the process on product characteristics and product quality and useability 1.5. Plan work requirements based on procedures.

ELEMENT	PERFORMANCE CRITERIA
<p>2. Identify work requirements for polyurethane foaming operations.</p>	<p>2.1. Prepare materials including base raw materials and additives</p> <p>2.2. Recognise hazards and follow appropriate hazard control/minimisation methods</p> <p>2.3. Check materials, ancillary supplies and equipment are correct</p> <p>2.4. Check equipment and processes used for materials preparation, production process and for the downstream operations are available</p> <p>2.5. Check product quality requirements for the relevant process stage(s)</p> <p>2.6. Identify and check emergency stops, gauges, guards and controls</p> <p>2.7. Plan the task sequences including times and locations for product quality checks, equipment operation and required production outputs</p> <p>2.8. Provide for ongoing materials input, waste management and work area housekeeping requirements</p> <p>2.9. Arrange any required supplementary equipment for product quality testing or routine equipment maintenance and/or adjustments.</p>
<p>3. Check polyurethane foaming process setup.</p>	<p>3.1. Comply with equipment information, required quality specifications and setup procedures</p> <p>3.2. Set up equipment in accordance with required quality specifications and standard operating procedures</p> <p>3.3. Check polyurethane foaming equipment settings and adjustments and conformity to documented procedures</p> <p>3.4. Inspect materials for conformity with requirements including surface condition and materials thickness</p> <p>3.5. Discard non-conforming materials or make adjustments to processing operations in accordance with procedures.</p>
<p>4. Operate and make adjustments as required to the foam process.</p>	<p>4.1. Start up, operate and shut down foam equipment as required by procedures</p> <p>4.2. Monitor polyurethane foaming operations noting product quality, production outputs, equipment operating temperature, amperage, pressures, colour, thickness and product integrity</p> <p>4.3. Make adjustments to remedy faults and non-conformity to production standards where applicable</p> <p>4.4. Collect material which is able to be reprocessed and reused, and dispose of waste and scrap in accordance with workplace procedures</p> <p>4.5. Clean up equipment, lubricate, and adjust in accordance with procedures.</p>
<p>5. Respond to problems.</p>	<p>5.1. Identify possible routine and non-routine problems in the equipment, materials or process</p> <p>5.2. Determine problems needing action</p> <p>5.3. Determine possible fault causes</p>

ELEMENT	PERFORMANCE CRITERIA
	5.4. Rectify problems using appropriate solutions within area of responsibility 5.5. Report problems outside area of responsibility to designated person.

RANGE OF VARIABLES:

This competency applies to all work environments and sectors within the plastics industry. It includes the operation of all relevant ancillary equipment.

Standard procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency includes tools and equipment such as:

- v manual handling aids - hand carts and trolleys
- v knives and other bag opening equipment
- v hoists/lifting equipment not requiring any special permits or licences
- v basic hand tools required for opening of material packaging
- v relevant personal protective equipment
- v material loading equipment used for loading of raw materials.

Typical hazards include:

- v spills
- v dusts/vapours
- v slip and fall, particularly due to spilt granules
- v temperature
- v hazardous materials
- v manual handling hazards
- v equipment operations.

Respond to/rectify ‘non-routine problems’ means ‘apply known solutions to a variety of predictable problems’.

Typical process and product problems include:

- v machine malfunction
- v out of specification equipment operation
- v contamination of materials
- v variations in materials and/or contamination of materials
- v processing problems.

Key variables to be monitored include:

- v operating temperatures
- v speed
- v colour
- v cushion specification
- v cycle time
- v output rate
- v product weight
- v product integrity and general conformance to specification/sample.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or explain:
 - products, materials and material characteristics
 - behaviour of materials in relation to heat, pressure and time
 - impact of machine speed, temperature, pressure, time during cycles on product quality and production output
 - impact of variations in raw materials and equipment operation in relation to final product
 - changes to materials at various stages of production
 - waste management and importance of non-conforming materials
- v apply and/or explain:
 - impact of incorrect or faulty materials
 - production workflow sequences and materials demand
 - focus of operation of work systems and equipment
 - correct selection and use of equipment, materials, processes and procedures
 - hazards of the materials and process and appropriate hazard control procedures
- v distinguish between causes of faults such as:
 - wrong raw materials
 - incorrect quantity of materials
 - contaminated materials
 - inadequately mixed materials
- v plan own work including predicting consequences and identifying improvements
- v maintain output and product quality using appropriate instruments, controls, test information and readings
- v make adjustments to equipment operation to rectify variations in equipment operation or product quality
- v start up equipment and make appropriate adjustments to bring process on line
- v take samples when required and identify product out of specification
- v safely shut down equipment in normal or abnormal circumstances
- v identify and describe own role and role of others involved directly in the foam process
- v identify factors which may affect product quality or production output and appropriate remedies
- v identify when the operator is able to rectify faults and when assistance is required
- v identify hazards of the materials and process
- v implement appropriate procedures for hazard control
- v use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Critical aspects:

- It is essential that competence is demonstrated in the ability to
- v identify critical materials properties and polyurethane foaming process characteristics in relation to the process requirements and the end product
 - v plan own work process within workplace procedures and explain the reasons for the steps in the process
 - v take appropriate action to observe equipment, materials and products for out of specification results, make adjustments and identify problems to be reported.

Consistent performance should be demonstrated. In particular look to see that:

- v production quality and output standards are met consistently
- v problems are anticipated from process observations
- v problems are efficiently resolved
- v the process runs consistently and smoothly.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg, to determine that 16 units and 46 units are equal to a total of 62 units.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

<p>UNIT TITLE</p> <p>PMBPROD320B - Produce foam injected mouldings</p>
<p>UNIT DESCRIPTOR</p> <p>This competency covers the application of knowledge of materials, product purpose and processes to the production of foam injected mouldings.</p> <p>This competency is typically performed by operators working either independently or as part of a work team.</p> <p>This competency in practice</p> <p>This competency applies to operators of foam injection moulding equipment. The key factors are the adequate planning of the process stages, preparation of the equipment, checking on performance of the equipment and making approved adjustments and equipment corrections. It includes:</p> <ul style="list-style-type: none"> v checking job sheets for work to be done and identifying the priority in which jobs/product will be made/completed v ensuring the equipment and materials are appropriate for the job v producing the product v checking the product for conformance with specification v identifying and planning own work requirements from production requests v identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures v checking settings and adjustments of equipment v checking materials for conformity to job requirements v correcting materials, equipment or process variations and making appropriate adjustments v discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions v solving routine and non-routine foam injection moulding equipment and process problems, seeking guidance where necessary or appropriate v completing logs and reports. <p>PREREQUISITES</p> <p>This competency has no prerequisites.</p>

ELEMENT	PERFORMANCE CRITERIA
<p>1. Plan own work requirements.</p>	<p>1.1. Identify equipment and processes used for production process and upstream and downstream operations from production plan or request</p> <p>1.2. Identify materials required including additives</p> <p>1.3. Recognise hazards and follow appropriate hazard control/minimisation methods</p> <p>1.4. Identify and check emergency stops, guards and controls</p> <p>1.5. Identify requirements for materials, quality, production and equipment checks</p> <p>1.6. Identify materials, waste management and housekeeping needs.</p>

ELEMENT	PERFORMANCE CRITERIA
2. Check foam injection moulding process setup.	2.1. Determine equipment requirements 2.2. Set process to specifications as required 2.3. Check foam injection moulding equipment settings and adjustments are as required 2.4. Check materials are correct 2.5. Discard, or make adjustments to the process for, non-conforming materials 2.6. Set up date, batch and materials markings to specifications, as required 2.7. Complete other pre-start checks in accordance with procedures.
3. Operate and make adjustments as required to the foam injection moulding process.	3.1. Operate foam injection moulding equipment, noting key variables 3.2. Monitor controls/displays/terminals for production/process data 3.3. Monitor product/process quality in accordance with procedures 3.4. Make adjustments to remedy faults and nonconformity to standard as required 3.5. Maintain continuity of process 3.6. Collect and reprocess/discard scrap/trim and other materials in accordance with procedures 3.7. Clean, adjust and lubricate equipment as required 3.8. Pause equipment, or stop equipment in an emergency, following workplace and emergency procedures.
4. Respond to problems.	4.1. Identify possible routine and non-routine problems in the equipment, materials or process 4.2. Determine problems needing action 4.3. Determine possible fault causes 4.4. Rectify problems using appropriate solutions within area of responsibility 4.5. Report problems outside area of responsibility to designated person.

RANGE OF VARIABLES:

This competency applies to the production of foam injected moulded products in the plastics and rubber industries. It includes the operation of all relevant additional equipment where that equipment is integral to the foam injected moulding process.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency includes tools and equipment such as:

- v hand carts and trolleys
- v knives and other bag opening equipment
- v hoists/lifting equipment not requiring any special permits or licences
- v basic hand tools required for opening of material packaging
- v relevant personal protective equipment
- v hand tools used in the foam injected product moulding process
- v material loading equipment used for loading of raw materials.

Typical hazards include:

- v spills
- v dusts/vapours
- v hazardous materials
- v manual handling hazards
- v knife hazards.

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'.

Typical process and product problems include:

- v variations in materials
- v contamination of materials
- v out of specification machine operation
- v machine malfunction
- v mould/tooling problems
- v processing problems.

Key variables to be monitored include:

- v operating temperatures
- v speed
- v colour
- v cycle time
- v output rate
- v product integrity and general conformance to specification/sample.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or explain:
 - impact of incorrect or faulty materials
 - production workflow sequences and materials demand
 - focus of operation of work systems and equipment
 - correct selection and use of equipment, materials, processes and procedures
 - hazards of the materials and process and appropriate hazard control procedures
- v distinguish between causes of faults such as:
 - wrong raw materials/additives/catalyst
 - incorrect quantity of materials/additives/catalyst
 - contaminated materials/additives/catalyst
- v apply and/or explain:
 - quality requirements at each production stage
 - nature of mechanical, hydraulic, pneumatic, electrical and electronic principles which affect machine operation and product development
 - foam injection moulding cycle and the importance of machine setup and warm-up for effective processing of materials
 - the hierarchy of control including engineering controls
 - impact of variations in raw materials and equipment operation in relation to final product
 - changes to materials at various stages of production
 - waste management and importance of non-conforming materials
- v plan own work including predicting consequences and identifying improvements
- v maintain output and product quality using appropriate instruments, controls, test information and readings
- v make adjustments to equipment operation to rectify variations in equipment operation or product quality
- v check foam injection moulding machine for correct setup to job specifications and implement adjustments or report deviations immediately
- v start up equipment and make appropriate adjustments to bring process on line
- v take samples when required and identify product out of specification
- v safely shut down equipment in normal or abnormal circumstances
- v identify factors which may affect product quality or production output and appropriate remedies
- v identify when the operator is able to rectify faults and when assistance is required
- v identify hazards of the materials and process
- v implement appropriate procedures for hazard control.

Critical aspects:

- It is essential that competence is demonstrated in the ability to
- v identify critical materials properties and foam injection moulding process characteristics in relation to the process requirements and the end product
 - v plan own work process within workplace procedures and explain the reasons for the steps in the process
 - v take appropriate action to observe equipment, materials and products for out of specification results, make adjustments and identify problems to be reported.

Consistent performance should be demonstrated. In particular look to see that:

- v production quality and output standards are met consistently
- v problems are anticipated from process observations
- v problems are efficiently resolved
- v the process runs consistently and smoothly.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg, to determine that 16 units and 46 units are equal to a total of 62 units.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. UNIT TITLE

PMBPROD380A - Produce composites using chopper gun/depositor

UNIT DESCRIPTOR

This competency covers preparation and hand operation of a resin-glass depositor (chopper gun) to form a composite materials product and the solving of non-routine problems.

This competency is typically performed by operators working either independently or as part of a work team.

This competency in practice

This competency applies to operators who are required to apply knowledge of materials, product purpose and processes to the hand operation of chopper guns/depositors for the production of composites. The key factors are the production of material meeting quality standards and product requirements and the recognition and resolving of a range of routine and non-routine problems. It includes:

- v identifying and planning own work requirements from production requests
- v identifying and minimising any hazards connected with materials and process from materials safety data sheets, labels and workplace procedures
- v checking settings and adjustments of equipment
- v checking materials for conformity to job requirements
- v monitoring equipment operation and correcting process variations
- v correcting materials, equipment or process variations and making appropriate adjustments
- v discarding non-conforming products ensuring discarded materials are reused where possible and waste and scrap is disposed of in accordance with workplace instructions
- v solving routine and non-routine composites production equipment and process problems, seeking guidance where necessary or appropriate
- v completing logs and reports.

PREREQUISITES

This competency has **no** prerequisites.

ELEMENT	PERFORMANCE CRITERIA
1. Check work requirements.	1.1. Identify equipment and processes used for production process and upstream and downstream operations from production plan or request 1.2. Identify materials required including additives 1.3. Recognise hazards and follow appropriate hazard control/minimisation methods 1.4. Identify and check emergency stops, guards and controls 1.5. Identify requirements for materials, quality, production and equipment checks 1.6. Identify materials, waste management and housekeeping needs.

ELEMENT	PERFORMANCE CRITERIA
2. Set up equipment, mould and materials.	2.1. Determine equipment requirements 2.2. Adjust controls as required for factors such as ambient conditions, temperature and materials 2.3. Check equipment, raw material and mould all match job requirements 2.4. Check materials, resins, fibres, release agents are correct 2.5. Discard, or make adjustments to the process for, non-conforming materials 2.6. Set up date, batch and materials markings to specifications, as required 2.7. Complete other pre-start checks in accordance with procedures.
3. Hand operate chopper gun/depositor.	3.1. Use chopper gun/depositor to apply materials to the mould to procedures 3.2. Monitor product quality, thickness, colour and integrity 3.3. Remedy faults and non-conformances by adjusting the application of materials as required 3.4. Collect and reprocess/discard scrap/trim and other materials in accordance with procedures 3.5. Shut off machine safely and correctly as required to procedures.
4. Respond to problems.	4.1. Identify possible routine and non-routine problems in the equipment, materials or process 4.2. Determine problems needing action 4.3. Determine possible fault causes 4.4. Rectify problem using appropriate solution within area of responsibility 4.5. Report problems outside area of responsibility to designated person.

RANGE OF VARIABLES:

This competency unit includes the use of equipment and materials to form composite products using a chopper gun/depositor. It includes the operation of all relevant additional equipment where that equipment is integral to the process.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

This competency includes tools and equipment such as:

- v open moulds for composite products
- v hand tools for mixing and application
- v knives and cutters to trim fibres
- v chopper gun/depositor, pots, pumps and controls
- v relevant personal protective equipment.

Typical hazards include:

- v hazardous substances
- v manual handling hazards
- v knife hazards.
- v moving equipment
- v manual handling hazards.

Typical problems include:

- v cracks, dents or imperfections of the mould
- v variations in materials, colour, consistency or mix
- v adjustment and settings of the applicator
- v application of the materials to the mould as required
- v contamination of materials.

All operations are performed in accordance with procedures.

EVIDENCE GUIDE:

Essential knowledge and enterprise requirements:

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of the enterprise's procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Competence includes the ability for the practical completion of the job to:

- v apply and/or explain:
 - operation of resin-glass depositor, equipment and components
 - production workflow sequences and materials demand
 - properties of the materials required to form a composite structure of the required strength and surface finish, including the importance of gel coat properties and bonding
 - requirements for correct spraying of materials to the mould surface
 - pot life of the resins used
 - cleanout procedures
 - approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and clean up
 - potential effects of variations in raw materials and equipment operation in relation to quality of product
 - correct selection and use of equipment, materials, processes and procedures
- v plan own work including predicting consequences and identifying improvements
- v monitor equipment operation and product quality
- v identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- v identify and describe own role and role of others involved directly in the process
- v identify factors which may affect product quality or production output and appropriate remedies
- v use PPE, safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task
- v pause equipment, or shut down equipment in abnormal circumstances
- v explain the effect of unauthorised or emergency shutdown in relation to safety and

production requirements

v distinguish between possible causes of routine faults such as:

- incorrect quantity of materials
- contaminated materials/additives
- equipment faults
- mould damage
- wrong raw materials/additives
- incorrect quantity of materials/additives
- machine failure.

Critical aspects:

It is essential that competence is demonstrated in the ability to:

- v recognise the importance of material properties and qualities
- v apply approved procedures
- v take appropriate action to resolve faults or report faults to appropriate personnel
- v explain and implement emergency shutdown procedures.

Consistent performance should be demonstrated. In particular look to see that :

- v composites production standards are met consistently
- v upstream and downstream communication is timely and effective
- v operating procedures and work instructions are read and interpreted correctly
- v problems are identified and appropriate action is taken (ie, the problem is fixed or reported)
- v all safety procedures are followed.

Language, literacy and numeracy requirements:

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Numeracy is required to the level of determining required weights/volumes of materials in a resin mix for different circumstances (say using a data sheet), number of layers of impregnated matrix required to yield the required product laminate thickness, and similar activities.

Assessment method and context:

Competence in this unit may be assessed:

- v on an operating plant allowing for operation under all normal and a range of abnormal conditions
- v by use of a suitable simulation and/or a range of case studies/scenarios
- v by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and that the theoretical assessment will be combined with appropriate practical/simulation or similar assessment.

Resource implications:

This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Metal and Engineering Training Package

PRMCL12A Wash External Surfaces to Remove all Visible Dirt and Grime

PRMCL12A Wash external surfaces to remove all visible dirt and grime.

STREAM AM Asset Maintenance

FIELD CL Cleaning

UNIT PRMCL12A Wash external surfaces to remove all visible dirt and grime.

ELEMENT		PERFORMANCE CRITERIA	
1	Identify and confirm need to wash external walls	1	Walls to be washed are identified from client specifications or job instructions
		2	A knowledge of soil types, surfaces and cleaning agents is used to determine if washing will be effective in cleaning the surface
		3	Access to the area is confirmed
		4	Areas adjacent to wall are checked to determine if there is the possibility of damage occurring and preventative action planned
		5	Any pre-existing damage to work site is reported immediately
2	Obtain and set up washing equipment	1	A suitable cleaning agent is selected based on an assessment of the type of surfaces and type of grime to be washed
		2	Cleaning agent is pre-mixed where necessary at correct dilution and temperature as required by manufacturers' specifications in accordance with safety requirements
		3	All equipment is checked to be in good working order to manufacturers' specifications
		4	Where required, suitable wet area safety connections are used for all electrical fittings
		5	Suitable nozzle and extension equipment is fitted to pressure systems to suit operative size and strength
		6	Protective clothing is obtained and checked to be in good working condition
3	Apply washing equipment to external wall	1	Small and hidden areas are washed by hand and rinsed prior to commencing machine based wash
		2	Area is signed and barricaded to avoid accidents in terms of safety and company requirements

Metal and Engineering Training Package

PRMCL12A Wash External Surfaces to Remove all Visible Dirt and Grime

	3	All cleaning agent is rinsed from wall before dry to avoid discolouration	
	4	Pressure jets are applied from ground level using a sturdy two handed grip on pressure nozzle	
	5	Excess water is removed from wall or surrounding area before returning the area to general usage	
4	Clean and store washing implements	1	Washing implements and cleaning cloths are washed in a suitable cleaning agent to remove all dirt and grime
		2	All electrical cords are rewound without kinks or tangles
		3	All equipment is wiped down before storage and checked to be in good working condition
		4	Equipment faults or malfunctions are reported to site supervisor without delay
		5	Washed equipment is stored in an accessible location ready for reuse

RANGE OF VARIABLES

External walls are washed to a height of two (2) metres
Over this height the work is usually performed by specialist operators

Most external walls are cleaned with a high pressure water jet
Manual work is confined to restricted locations

Equipment may include:
high pressure water jet machine

Manufacturers' specifications and safety information may be pre printed on chemical containers; on material safety data sheets; on laminated safety cards at the work site or wall posters

Protective clothing may include:
gloves; safety glasses; safety shoes; face masks; ear muffs/plugs; overalls or as prescribed in regulations or by manufacturers of chemicals or equipment

EVIDENCE GUIDE

Underpinning knowledge

Safe work practices
External wall cleaning methods
Product knowledge
Enterprise and client job specifications
Cleaning and storage procedures
Environmental and work safety requirements

Underpinning skill

Application of cleaning agents
Use of pressure jets on solid surfaces
Reporting procedures
Cleaning and storing of equipment and materials
Safe placement of barricades and signs
Waste management and disposal
Site inspection reports
Problem solving and communication
Basic numeracy and literacy
Dexterity in operating pressure jet equipment

This unit may be assessed in combination with Unit PRM CL11: Spot clean external surfaces to remove all visible marks and Unit PRM CL37: Carry out high level cleaning.

Competence is to be demonstrated through practical demonstrations over the full range of performance criteria. Consistency of outcomes over a period of time should form the basis for assessing practical job requirements. All safety requirements must be strictly observed.

Underpinning knowledge should be assessed through **observation** of work undertaken on external surfaces involving:

- The identification of relevant cleaning requirements
- Planning and organising work, including the procurement of equipment and materials that match job requirements
- The application of cleaning agents to remove spots on external surfaces
- The use of pressure jets to remove stubborn stains
- The disposal of wastes and the cleaning and storage of materials and equipment
- The finish achieved in relation to the job specification

Appreciation of the candidate's understanding of job requirements may be obtained through **oral questioning** about environmental and safety regulations associated with the use of pressure jets on rigid surfaces, chemicals ph scales and the preparation and disposal of cleaning agents on and off-site.

Basic literacy requirements include the ability to read and comprehend the requirements of enterprise procedures (where written) workshop manuals/bulletins and manufacturers' specifications.

Basic numeracy requirements include the ability to understand units of pressure associated with pressure jets.

Particular consideration should be given to assessing the candidate's understanding of hydrostatic (pressure) testing and the identification and use of specialised pressure jet equipment.

Other forms of evidence may include supervisor reports and customer satisfaction surveys.

RESOURCES REQUIRED FOR ASSESSMENT

- Relevant equipment and materials, including cleaning agents, protective clothing and equipment, barricades and safety signs, equipment cleaning apparatus.
- Job specifications
- Site safety requirements, chemical colour code charts
- Equipment operating specifications
- Enterprise and manufacturer procedure manuals, where relevant
- Suitable venue with stained surface for cleaning
- Access to a registered provider of assessment services

SFISHIP201A Comply with organisational and legislative requirements

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves maintaining all records, including statutory requirements and ensuring that operations for which the individual has responsibility comply with *legislative requirements* including anti-pollution and other environmental legislation.

Element of Competency	Performance Criteria
1. Maintain operational records	1.1 Records are clear, concise and accurate 1.2 Record convention and format complies with legislative and organisational requirements 1.3 Level of detail is sufficient to meet the objectives of keeping the record 1.4 Corrections to records are undertaken in such a manner as to maintain their validity 1.5 Procedures for security and confidentiality are always maintained 1.6 Information technology back up procedure follows good operating practices 1.7 Records and reports are distributed to the required authority at appropriate times and places 1.8 Duration and method of storage complies with statutory and enterprise requirements.
2. Undertake work according to organisational legislative requirements	2.1 Procedures for monitoring <i>operations</i> and maintenance are followed according to legislative requirements 2.2 Checks and inspections are made regularly to equipment and to the area of direct <i>responsibility</i> according to enterprise procedures 2.3 Situations leading to potential non-compliance are promptly and fully identified

- | | |
|--|--|
| | 2.4 Remedial action is timely and designed to ensure compliance with legislative requirements |
| | 2.5 <i>Advice</i> given to others on the legitimacy of operations is accurate and is given at the appropriate time |
| | 2.6 Failure of personnel to comply with procedures is identified and reported according to enterprise procedures. |

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Legislative requirements

- the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78)
- fuelling and bunkering
- environmental legislation/regulations
- occupational health and safety standards
- taxation
- workers compensation
- anti-discrimination
- fisheries licensing
- marine safety regulations:
 - fire appliances
 - life saving appliances
 - musters and drills
 - automatic pilot and testing of steering gear
 - distress signals and prevention of collision
 - codes of safe working practice
 - general duties
 - protective clothing and equipment
 - guarding of machinery
 - means of access
 - entry into dangerous spaces
 - hatches and lifting equipment
 - safe movement on board a vessel
 - navigational equipment
 - pilot ladders and hoists
 - regulations on vessel construction and closing of openings.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- use of computers for record keeping
- use of recording instruments and charts
- entitlement or authorisations to view records
- importance of maintaining accurate records
- personal and corporate penalties for non-compliance
- organisational procedures for dealing with non-compliance
- content of relevant regulations to a level sufficient to carry out watch keeping and maintenance duties
- a general understanding of other legislation pertaining to the operation of the vessel
- what can and cannot be discharged at sea
- procedures for monitoring and disposal of pollutants at sea and by other methods.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- maintaining clear and accurate records.

Literacy skills used for:

- reading regulations and procedures
- making records.

Numeracy skills used for:

- making records.

Critical aspects of evidence

Assessment must confirm the ability to maintain and secure a range of records as detailed in the Range of Variables, in particular produce records, distribute records, store and secure records, maintain procedures and routines, deal with possible non-compliance, advise others, identify problems and remedial action to be taken, and ensure others comply with regulations.

Knowledge of how to gain access to:

- enterprise procedures
- International Convention for the Prevention of Pollution from Ships (MARPOL 73/78) regulations.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- examples of applicable regulations.

Metal and Engineering Training Package

SFSHIP201A Comply with Organisational and Legislative Requirements

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	1	1	2	1	1	2

SFISHIP202A**• Contribute to safe navigation****Functional area****Vessel operations****Prerequisite Unit/s:** nil
Descriptor

This unit involves assisting the officer of the watch safely navigate the vessel or conducting a watch in sole charge of a vessel.

Element of Competency	Performance Criteria
3. 1.	<p>3.1 1.1 <i>Information</i> required for the exchange of a <i>watch</i> is complete, accurate and relevant to both the personnel and the existing circumstances</p> <p>3.2 1.2 Hand over and relief of the watch conforms to accepted <i>principles and procedures</i></p> <p>3.3 1.3 Watch information/instructions that are unclear or ambiguous are always clarified</p> <p>3.4 1.4 Lights, shapes and sound signals displayed or given conform with the requirements contained in the International Regulations for Preventing Collisions at Sea and to instructions received</p> <p>3.5 1.5 Lookout is maintained at all times in such a manner as to conform to accepted principles and procedures</p> <p>3.6 1.6 Reports and exchanges of navigational information are clear and concise and in line with accepted principles and procedures</p> <p>1.7 Traffic, the vessel, weather watch keeping and <i>hazards</i> are <i>monitored</i> with a frequency and intensity conforming to accepted principles and procedures</p> <p>1.8 Frequency and degree of performance checks to navigational equipment complies with principles and procedures, and skipper's and owner's requirements</p> <p>3.7 1.9 Advice or clarification is sought immediately whenever in doubt and from the appropriate people.</p>

4. 2.

- 4.8 2.1 *Manoeuvres* are made so as to safely progress the planned voyage and comply fully with instructions received
- 4.9 2.2 *Engine control systems* are operated to progress the planned passage and are designed to complement helm movements
- 4.10 2.3 Course is steered steadily within acceptable limits with respect to the area of navigation and the existing *sea state*
- 4.11 2.4 Course alterations are smooth and controlled with minimal over shoot
- 4.12 2.5 Communication is clear, concise and acknowledged at all times according to accepted principles and procedures
- 4.13 2.6 Steering modes are changed according to operating instructions, area, wind and sea state and according to marine notices and accepted principles and procedures
- 4.14 2.7 Vessel steering systems remain within safe operating limits during normal manoeuvres.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Information	<ul style="list-style-type: none"> • obtained from: colleagues watch keeper skipper.
Watch	<ul style="list-style-type: none"> • routines to be maintained when in charge of the bridge watch: during the day at night in narrow waters in coastal waters in severe weather conditions in poor visibility during pilotage or at anchor.

Principles and procedures	<ul style="list-style-type: none">• as itemised in: International Maritime Organisation ‘Basic principles to be observed in keeping a navigational watch’ bridge procedures guide enterprise procedures and standing orders• routines to be maintained when watch keeping.
Hazards	<ul style="list-style-type: none">• with respect to: vessel position weather and sea state traffic and other obstructions status of equipment and systems bar and sea entrance crossings.
Monitored	<ul style="list-style-type: none">• using: sight RADAR sound echo sounder.
Maneuvers	<ul style="list-style-type: none">• may involve: stopping going astern crew overboard.
Engine control systems	<ul style="list-style-type: none">• steering systems• throttle• gear box.
Sea state	<ul style="list-style-type: none">• calm• rough• in a current• tidal conditions.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- principles and procedures relating to:
 - basic meteorology sufficient to recognise imminent change in the weather and assist in reading meteorological instruments
 - identification of sources of information
 - responsibilities of a look out
 - nautical terminology and the methods of reporting
 - operation of RADAR equipment
 - echo sounding equipment
- knowledge of:
 - classes of and responsibilities between vessels
 - give way and stand on rules
 - International Rules for Preventing Collisions at Sea (COLREG), 1972
 - sound signals
 - distress signals
 - buoyage and navigation mark lights
 - buoyage and navigation mark sound signals and top marks sufficient for them to be recognised
- procedures relating to:
 - emergency steering systems
 - bridge control failure
 - use of operational controls on an auto pilot
 - bridge communications
 - occasions when convention is to seek assistance
 - assessing the risk of collision by sight and RADAR
 - use of helm and engines
 - emergency manoeuvres
- information relating to:
 - International Regulations for Preventing Collisions at Sea (COLREG), 1972
 - bridge procedures guides
 - enterprise procedures

International Maritime Organisation operational guidance for officers in charge of a navigational watch.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- maintaining a watch keeping routine:
 - during the day

Metal and Engineering Training Package

SFSHIP202A Contribute to Safe Navigation

- in narrow waters
- in coastal waters
- in ocean areas
- in severe weather conditions
- in poor visibility
- pilotage
- at anchor
- monitoring:
 - traffic by RADAR, aural and visual means
 - sea state
 - navigation marks and hazards
 - depth
 - safety of the vessel and personnel
 - condition of vessel and personnel
 - weather
 - meteorological instruments
 - meteorological updates
 - communications equipment
- using steering systems:
 - primary
 - back up and emergency systems
 - hand steering
 - auto pilots including change over procedures and operation of system controls for optimum performance
- using engine control systems
- manoeuvring to:
 - maintain a steady course
 - offer timely and obvious responses to potential collision
 - steer a vessel under pilotage
 - berthing
 - crossing bars and narrow entrances.

Literacy skills used for:

- identifying buoyage and navigational marks from a chart
- reading meteorological information and instruments.

Critical aspects of evidence

Assessment must confirm the ability to perform basic navigation, monitoring and control to ensure the safety of a vessel when keeping a watch.

Ability to:

- hand over and take over a navigational watch
- display manoeuvring signals
- maintain a look out
- inform appropriate authority
- delay the need for a navigational response if in doubt
- identify hazards
- seek advice when required.

Knowledge of:

- negotiating buoyage in narrow waters
- negotiating traffic.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- operational vessel with the range of equipment described above
- facilities for negotiating buoyage systems and traffic.

Metal and Engineering Training Package

SFSHIP202A Contribute to Safe Navigation

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	1	2	1	1	2

SFISHIP203A • **Maintain the safety and security of the vessel**

Functional area

Vessel operations

**Prerequisite Unit/s:
Descriptor** **nil**

This unit involves securing the vessel when at anchor, moored and berthed and contributing to continued security at all times.

Element of Competency	Performance Criteria
Secure the vessel at anchor	<p><i>Operations</i> are carried out according to established <i>safety rules and regulations</i></p> <p>Preparations and the positioning of the anchor and equipment prior to letting go is appropriate with respect to depth of water, weather and sea conditions, and tidal range in area of operation</p> <p>Quantity of anchor cable run out or recovered complies with orders provided</p> <p>Control of the cable is maintained within safe operating limits of the equipment during normal operation</p> <p>Degree to which the anchor and equipment is secured on completion of anchoring operations is appropriate to anticipated conditions and complies with orders provided</p> <p>Anchor winch operation conforms to manufacturer's recommendations and anchoring requirements</p> <p>Anchoring area is kept free of loose ropes, wires and debris throughout all operations.</p>
Secure and adjust the vessel's position during mooring operations	<p><i>Operations</i> are carried out according to established safety rules and regulations</p> <p>Mooring lines and associated equipment are handled safely and efficiently at all times</p> <p>Mooring area is kept free of loose ropes, wires and debris throughout all operations</p>

	<p>Tension on mooring lines is maintained at a level appropriate to the stage and nature of the operation when warping the vessel or maintaining position</p> <p>Sufficient personnel are made available or sought to ensure the safety and efficiency of all aspects of the mooring operation</p> <p>Reports of incidents made to supervisory personnel are complete and at a time designed to maximise the mooring security of the vessel</p> <p>Mooring lines are secured in accordance with projected vessel operations, tidal conditions or orders provided</p> <p>Equipment malfunction or problems during operations are promptly recognised and appropriate <i>corrective action</i> is taken</p> <p>Communication is clear and concise at all times.</p>
<p>Monitor the situation of the vessel when moored</p>	<p><i>Operations</i> are planned and <i>carried out</i> in accordance with established safety rules and regulations</p> <p>Frequency, timing and coverage of scheduled checks and inspections comply with watch keeping instructions</p> <p>Action taken in the event of <i>irregularities or abnormal conditions</i> is appropriate to their significance and within the job holder's responsibility to implement</p> <p>Reports of incidents made to supervisory personnel are complete and at a time designed to maximise the safety and integrity of the vessel</p> <p>Personnel sufficient for monitoring the situation are made available or sought to ensure the safety and efficiency of all operations</p> <p>Limitations and restrictions on access to the vessel by visitors are in accordance with watch keeping instructions.</p>
<p>4. Secure the vessel for and at sea</p>	<p>4.15 4.1 <i>Operations</i> are planned and carried out in accordance with established safety rules and regulations</p> <p>4.16 4.2 Coverage and frequency of checks and inspections on the vessel's seaworthiness complies with orders received</p> <p>4.17 4.3 Degree to which the vessel is <i>secured</i> is commensurate with anticipated conditions and complies with orders received</p>

- 4.4 Powered equipment is operated in accordance with manufacturer's instructions and safety rules and regulations
- 4.5 Action taken in the event of irregularities is appropriate to their significance and within the job holder's responsibility to implement
- 4.18 4.6 Reports of conditions made to supervisory personnel are complete, accurate and completed in accordance with safety rules and regulations
- 4.19 4.7 Reports on irregularities beyond the job holder's ability to rectify are made in time to enable remedial action to be taken.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Operations	<p>manual handling of equipment driving powered winches communication and signalling anchoring operations:</p> <ul style="list-style-type: none">• routine• emergency• letting go and recovery <p>mooring operations:</p> <ul style="list-style-type: none">• mooring and unmooring to a single point• berthing and unberthing to a wharf• adjustment from both forward and aft mooring positions• rigging and recovering means of access to the vessel <p>monitoring operations:</p> <ul style="list-style-type: none">• routine fire and security rounds and inspections• display of signals, flags, lights and shapes• mooring integrity during tidal movements• safe access to and about the vessel• visitors to the vessel• environmental impact• departure <p>securing operations:</p> <ul style="list-style-type: none">• prior to departure• completion of operations and maintenance• heavy weather• routine situations.
-------------------	---

Safety rules and regulations	codes of safe working practice: <ul style="list-style-type: none">• industry• enterprise legislation.
Mooring	single point berthed along side a wharf.
Corrective action	adjustment temporary line repair communication.
Carried out	by day by night.
Irregularities or abnormal conditions	affecting the safety and integrity of: <ul style="list-style-type: none">• vessel• the crew• equipment• materials, for example cargo.
Secured	items include: <ul style="list-style-type: none">• openings• lifting appliances and associated equipment• stores and equipment• material, for example cargo• large objects likely to move in a sea way.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

procedures relating to:

- routing and emergency operation of anchors
- use of deck machinery
- preparing deck machinery for use in ambient conditions
- adjusting mooring lines when berthed alongside a wharf
- effect of the rise and fall of tide when berthed
- warping a vessel to various configurations at a wharf
- maintaining a deck watch in port
- display of signals, flags, lights and shapes
- operation of powered equipment in all modes including emergency operation
- checking and inspecting the seaworthiness of the vessel

principles relating to:

- how vessel displacement or profile and prevailing wind or current affect anchoring operations
- how a vessel normally lies to an anchor and cable
- mooring systems including the specific functions of the mooring leads
- effects of unequal tension on mooring lines and the use of fixed mooring lines
- mooring efficiency

information relating to:

- codes of safe working practice and safety rules and regulations
- anchor cable markings
- different types of anchor
- anchor, cable and equipment on a specific vessel
- characteristics of different types of mooring ropes
- hazards that could occur if the operation is not controlled properly
- indications of and hazards associated with breaking mooring lines
- requirements for access equipment
- means of access and regulations
- pilot ladders and hoist regulations
- securing the vessel for sea
- tides and tidal streams
- status of safety equipment
- status of vessel engines and the effect on vessel security
- construction of the vessel sufficient to understand which areas need to be made watertight
- the method of operation of cargo lifting and securing equipment
- how to make the vessel watertight.

Practical skills

The essential skills a person needs to perform work to the required standard include:

letting go and weighing anchor:

- single and twin anchor (such as a running moor) operations
- recovering a foul hawse
- removing debris from an anchor

handling of anchor securing arrangements

display of signals

use of anchor buoy

communications with controller

securing of anchor and equipment for:

- sea passage
- transit in port or ready for use

using and identifying synthetic rope and wire mooring lines:

- forward and aft springs
- back springs
- bow and stern ropes
- breast lines

different types of mooring operations:

- making fast and letting go fore and aft to a wharf
- making fast and letting go to a single point mooring
- preparing area for operation
- using springs that manoeuvre a vessel to and from a wharf
- adjusting mooring during a port stay
- rigging safe access to a vessel

contingency actions to take when encountering a malfunction or problem:

- failure of moorings and equipment
- damage to moorings
- insufficiency of mooring length or strength
- poor leads
- inability to maintain vessel in position
- caused by weather
- caused by cargo or cargo securing arrangements

handling ropes and wires:

- identifying different rope construction
- identifying the material that is used in rope construction
- attachment to bitts, bollards and other mooring equipment
- use of hitches and securing arrangements
- use of stoppers
- using deck machinery
- signalling to winch drivers

using different anchoring and mooring winches:

- tension winches operated in manual or self tensioning modes
- stand alone winches, windlasses and capstans with drum ends

perform routine fire, flooding and security rounds and inspections

rig and monitor signals, flags, lights and shapes

Metal and Engineering Training Package

SFSHIP203A Maintain the Safety and Security of the Vessel

use power operated equipment:

- cranes, derricks
- winches associated with fishing
- anchoring and mooring winches
- weather deck and 'tween deck hatches
- bow and stern doors

secure large objects such as:

- containers
- machinery spares
- large pieces of vessel equipment, such as gangways, spare fishing gear, anchors
- cargo

use securing arrangements such as:

- lashing
- impounding
- patent securing arrangements

routines such as:

- sounding vessel tank and void space contents
- checking bilge levels
- checking cargo and equipment security
- checking cargo condition, for example, catch temperature.

Literacy skills used for:

reading safety rules and regulations.

Numeracy skills used for:

reading levels of tanks and void spaces

reading temperature monitoring devices

estimating safe working loads of rope and wire.

Critical aspects of evidence

Assessment must confirm the ability to secure the vessel when at anchor, moored and berthed and to contribute to ensuring continued security at all times; the ability to perform checks and transfer fluids in routine and emergency situations.

Ability to:

prepare anchor equipment for operation
control anchor equipment during operation
secure anchoring equipment on completion of operations
progress mooring operations to completion
securing mooring area on completion of operations
identify malfunction or possible problems and the implementation of contingency plans
perform routing checks and inspections of vessel:

- security
- seaworthiness

secure the vessel
deal with security contingencies
report on conditions
monitor and control access.

Knowledge of:

safety rules and regulations during operation
procedures for entering dangerous spaces.

Interdependent assessment of units

This unit may be assessed with:

SFISHIP202A Contribute to safe navigation.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:
written or oral short answer testing
practical exercises
project work
observation of practical demonstration.

Metal and Engineering Training Package

SFSHIP203A Maintain the Safety and Security of the Vessel

Resources required for assessment

Resources may include:

fully operational vessel with a range of anchoring, mooring and berthing arrangements available

a range of devices requiring security.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	1	1	2	1	2	1

SFISHIP204A Maintain marine vessels and equipment

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves maintaining marine vessels and equipment, including wires, ropes, watertight fittings and safety equipment (life saving and fire fighting), using basic mechanical skills, and applying paint work and protective coatings.

Element of Competency	Performance Criteria
Plan maintenance	<p><i>Maintenance</i> requirements are defined by reference to the <i>type</i> of service required by specification</p> <p>Maintenance activities are planned according to technical, legislative and procedural specifications</p> <p>Activities are negotiated with <i>internal agencies</i> to complete the work requirements to schedule while minimising down time and disruption to production or work schedules.</p>
Carry out work to maintain and restore hull fabric and fittings	<p>Condition after repair, adaptation, service or replacement of <i>vessel component and/or equipment</i> is to <i>specification</i> and <i>government inspection requirements</i></p> <p>Variances to condition against specification are reported accurately and promptly according to enterprise procedures</p> <p>Indicators of contingencies and problems are identified and corrective action is instituted and negotiated with appropriate authority according to enterprise procedures</p> <p>Maintenance documentation is accurate and complete, filed and/or dispatched to appropriate person in accordance with enterprise requirements</p> <p>Variations to facilities and resources that are required to complete maintenance schedule are identified, rectified and reported in accordance with enterprise requirements</p> <p>Work practices, techniques and systems comply with specification and government requirements.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Maintenance	<ul style="list-style-type: none"> • planned, for example, survey or preventative • breakdown • unplanned or reactive • periodic, for example, slipping and docking • continuous, for example, washing a vessel down at the completion of a trip.
Type	<ul style="list-style-type: none"> • cleaning • lubrication • replacement or repair of components • preparation for, and application of, protective coatings: <ul style="list-style-type: none"> external and internal watertight skin fittings • repair of fittings: <ul style="list-style-type: none"> deck and internal • rope work and wire work • routine tests, checks and inspections.
Internal agencies	<ul style="list-style-type: none"> • enterprise • crew.
Vessel component/equipment	<ul style="list-style-type: none"> • hull materials of steel, timber, aluminium or fibreglass or glass reinforced plastic (GRP) • paint work and protective coatings • watertight fittings and sealing arrangements: <ul style="list-style-type: none"> external and internal watertight skin fittings <ul style="list-style-type: none"> • collision bulkheads • pumping systems • pumping arrangements • deck machinery: <ul style="list-style-type: none"> • winches, hydraulic and electric • lifting plant components • flexible steel wire rope and synthetic fibre rope • life saving and fire fighting appliances.
Specification and government inspection requirements	<ul style="list-style-type: none"> • as defined by the: <ul style="list-style-type: none"> • maintenance plan • manufacturer • regulatory requirements • vessel design.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- areas of responsibility of personnel the maintenance will affect
- construction and method of operation of the various watertight fittings and sealing arrangements
- component tasks necessary to complete all forms of maintenance across the range
- relevant sections of codes of safe working practice
- requirements for tests and inspections
- particular hazards associated with the maintenance being undertaken, for example, entering enclosed spaces, or applying chemicals
- machinery isolation procedures
- overhaul procedures.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- applying coatings:
 - brush
 - roller
 - air spray
 - airless spray
- preparing the surface:
 - shot blasting
 - mechanical scaling
 - hand scaling
- lubricating:
 - oils and greases for moving parts
 - protection from the environment to lubrication schedules
- carrying out rope work and wire work:
 - repair of running and standing rigging
 - mooring ropes
 - gant lines and safety lines
 - access equipment
 - slings, nets and other lifting equipment
 - knotting, splicing, seizing, whipping
- conducting tests, checks and inspections:
 - statutory and organisational requirements
 - rectification of minor faults found

- maintenance in excess of recommended minimum frequency
- as required by safety of life at sea convention
- using packing and jointing:
 - re-packing a valve on a work bench or in situ
 - jointing of all sizes of pipe work on board the vessel
 - packing on hatches
 - water tight doors
 - access covers to tanks
 - vent and fan flaps
 - items that maintain water tight integrity
- operating, using, caring and storing electrically or pneumatically operated power tools safely:
 - pistol drills
 - rotary grinders
 - mechanical scaling equipment
 - high pressure equipment
- operating and using hand tools safely:
 - spanner/wrench
 - files
 - hacksaws including blade replacement
 - chisels and nut splitters
 - screw drivers, pliers, tin snips
 - bell punches, packing knives and packing extractors
 - scrapers and other abrasive materials
 - wood working tools
- adopting safe working practices:
 - protective clothing
 - guarding machinery isolation
 - entry into enclosed spaces.

Literacy skills used for:

- reading and using maintenance schedules
- reading and following safety rules and regulations
 - from marine safety authorities
 - industry or enterprise codes of safe working practice
 - from manufacturer's material safety data sheets.

Critical aspects of evidence

Assessment must confirm the ability to perform general vessel maintenance. This includes the ability to maintain wires, ropes, watertight fittings and safety equipment (life saving and fire fighting) and to apply basic mechanical skills, paint work and protective coatings.

Ability to:

- identify component tasks
- plan the execution of component tasks
- communicate with other personnel and departments affected by maintenance
- identify and report product at variance from specification with routine checks, tests and

Metal and Engineering Training Package

SFSHIP204A Maintain Marine Vessels and Equipment

inspections

- complete maintenance to specification within and outside the planned maintenance schedule
- maintain documentation.

Knowledge of:

- planned maintenance
- hazards associated with the maintenance.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- working vessel with a range of maintenance requirements
- workshop containing a range of vessel components that require maintenance
- complete range of tools and facilities listed to complete the maintenance
- maintenance schedules.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	2	2	1	1	2

SFISHIP205A Maintain marine plant

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves routinely maintaining, restoring and repairing mechanical plant on board a vessel according to maintenance plans and instructions or as a result of an unacceptable or unscheduled variation. This unit also covers actions required to maintain a vessel in survey.

Element of Competency	Performance Criteria
<p>Comply with requirements for survey</p>	<p>4.20 1.1 Complete inventory survey documentation is maintained and accessible to appropriate authorities</p> <p>4.21 1.2 Applications for renewal of and extensions to certification are timely and ensure continuous validity</p> <p>4.22 1.3 State of survey items and equipment (with respect to certificate conditions) reflect continuing effective programs of tests, check and maintenance</p> <p>4.23 1.4 Arrangements made for survey are timely and comply with organisational and issuing authority requirements</p> <p>4.24 1.5 Survey certification reflects adherence to procedures where validity may be affected by damage, alterations or additions to the vessel or equipment.</p>
<p>Determine the sequence of work required to restore and maintain mechanical plant</p>	<p>Defined work sequence is according to the overall <i>maintenance plan specification</i></p> <p>Maintenance activities are correctly planned according to technical, legislative and procedural specifications</p> <p>Sequence and scope of the planned work is complete and within the <i>requirements</i> of agreed time scales</p> <p>Activities are negotiated with internal agencies to complete the work requirements to schedule, minimise downtime and reduce disruption to production schedules</p> <p>Anticipation of <i>restrictions and variances</i> to work schedules are realistic and made at appropriate times</p> <p>4.25 2.6 Action planned leads to the restoration of plant by the most suitable method consistent with available resources.</p>
<p>Prepare work area and resources for engineering maintenance</p>	<p>Equipment and materials selected are safe, serviceable and of the correct type and quantity required to carry out the tasks</p> <p>Restrictions and variances to resources are accurately identified, promptly recorded and reported according to relevant <i>legislative and enterprise</i> requirements</p> <p>Material and equipment are safely handled, stored and secured</p>

Metal and Engineering Training Package

SFSHIP205A Maintain Marine Plant

	<p>according to relevant legislative and enterprise requirements</p> <p>Work area, machinery and equipment are confirmed as <i>safe</i> for work to proceed and comply with relevant environmental, legislative and enterprise requirements</p> <p>Work area is accessible and free from obstruction for receiving and storing materials and resources needed for the work to proceed</p> <p>Specifications, plans, materials and equipment appropriate to the task are available at the enterprise according to schedule.</p>
<i>Service and maintain mechanical systems to schedule</i>	<p>Maintenance is carried out according to established safety rules and regulations</p> <p>Sequence and scope of work conforms to routine maintenance and servicing plans and schedules</p> <p>Equipment and components are correctly cleaned and prepared for the required inspection or maintenance to be carried out</p> <p><i>Variance</i> from plans and schedules is agreed prior to continuing</p> <p><i>Settings</i> are accurate and complete to specification</p> <p>Static checks and tests are completed satisfactorily to statutory regulations and technical requirements</p> <p>Work practices and techniques ensure completion of activity to specification, within an acceptable time frame.</p>
<i>Rectify unacceptable or unscheduled variation to mechanical plant</i>	<p>Maintenance is planned and carried out in accordance with established safety rules and regulations</p> <p>Procedures and equipment for dismantling and reassembly conform to <i>technical specification</i> and agreed work plan</p> <p>Dismantled parts are safely and correctly stored, handled and cleaned</p>

Appropriate method for restoring equipment or systems is selected, taking identified operational and physical *constraints* into account

Defective parts are repaired economically and to defined standards using correct engineering practices

Replacement parts meet system and equipment manufacturer's specifications

Product and components are restored to specification within the agreed time schedules and quality requirements

Static checks and tests are correctly completed to statutory regulations and technical requirements.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Specification	master schedule breakdown procedures planned maintenance unplanned maintenance.
Requirements	preparation of the work area preparation of resources preparation of the plant carrying out and completing restoration or maintenance.
Restrictions and variances	caused by: other maintenance operational requirements resources.

Maintenance

of marine mechanical plant and systems including:
propulsion plant
auxiliary machinery
service systems, LPG and fire hose including
associated pipework and fittings
techniques for scheduled maintenance and servicing
including:
replacement of consumables
minor adjustments
replacement of faulty components
operational changeovers
survey requirements:
steering gear check
fire extinguisher, water based
techniques for restoration including:
repair
recondition
replace
dismantle
construct
fabricate
insulate.

Prepare

and select:

- resources
- materials
- tools
- equipment
- documentation
- emergency services and equipment

the work area including:

- access
- lighting
- atmosphere
- lifting plant
- machinery
- isolation
- machinery preparation
- provision of alternative services

by ensuring the serviceability of:

- equipment
- tools
- machinery.

<p>Legislative and enterprise requirements</p>	<p>marine safety regulations code of safe working practices protective clothing and equipment guarding of machinery safe movement on board ship hatches and lifting plant.</p>
<p>Safe</p>	<p>by recognition of hazards to:</p> <ul style="list-style-type: none"> • personnel • plant • environment.
<p>Service and maintain</p>	<p>scheduled checks tests measurements and inspections replacement of consumables minor adjustments replacement of lifed components.</p>
<p>Variance</p>	<p>methods and techniques consumables components.</p>
<p>Settings</p>	<p>torques tension clearances adjustable control inputs and outputs.</p>
<p>Technical specifications</p>	<p>statutory requirements manufacturer's plans and drawings manufacturer's manuals supervisor's instructions.</p>
<p>Constraints</p>	<p>equipment design equipment position safety requirements availability of spares operational requirements for the equipment economical restraints.</p>

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes to some depth due to its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

maintenance objectives, priorities vessel and company maintenance plans

legislation relating to work methods and occupational health and safety

acceptable work rates and time scales

how proposed preparation will affect other personnel, equipment and departments

function of the component/system to be maintained and the affect it has on related components/systems

principles and methods relating to:

establishing a safe working environment

use of resources during maintenance

quality assurance and control

communicating with personnel on status of work

information relating to:

work objectives

acceptable types of work methods

how particular maintenance activities will affect other personnel, equipment or departments

current methods of preparation

factors which may cause preparations to be disrupted and contingency measure to deal with them

anticipated time scales

systems for monitoring effectiveness of work

survey requirements

compliance with procedures relating to survey and validation of certification including seeking extension

sources of information on detailed survey and certification requirements

company procedures for survey and validation of certification including seeking extension.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- preparing and carrying out maintenance on mechanical plant and systems incorporating pipework and all mechanical components including:
 - prime movers and associated systems
 - hydraulic systems
 - compressed air systems
 - refrigerant systems
 - lubrication systems
 - fuel systems
 - water systems
 - flammable gas systems
 - deck machinery
 - safety equipment and fixed systems
- preparing and carrying out maintenance on marine engineering systems including:
 - mechanical equipment and systems
 - electrical generation transmission systems
 - electronic equipment
 - control and instrumentation.

Literacy skills used for:

- reading manufacturers' technical information
- reading and recording operating parameters
- reading and producing reports for company and authorities
- reading statutory regulations.

Critical aspects of evidence

Assessment must confirm the ability to plan and carry out maintenance and repairs to mechanical plant onboard a vessel to ensure that the vessel remains operational and in survey.

- check completeness and validity of documentation
 - ensure maintenance of survey items and arrangements for survey
- identify requirements from schedule
plan activities to meet requirements
identify restrictions to maintenance
correctly choose and handle equipment and materials
prepare the work area and resources
carry out pre commissioning tests and inspections

Knowledge of:

efficiency of various methods
safe procedures
alternative work activities.

Interdependent assessment of units

This unit may be assessed after/with:

Metal and Engineering Training Package

SFSHIP205A Maintain Marine Plant

nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested

written or oral short answer testing
practical exercises
project work
observation of practical demonstration.

Resources required for assessment

Resources may include:

- operational machinery and equipment
- service equipment and maintenance instructions
- operation procedures and policies
- safety equipment
- spares and consumables
- maintenance tools and equipment.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	2	2	2	2	2

SFISHIP206A • Operate a small vessel

Functional area

Vessel operations

Prerequisite Unit/s: SFISHIP212A Take emergency action on board a vessel
Descriptor

This unit involves preparing, operating, maintaining, storing and securing small vessels within range of ready assistance and isolated from heavy boating traffic and navigational hazards. The operation is restricted to the basic use, manoeuvring and loading of the vessel, but not the interaction of the vessel with boat traffic or other hazards.

To assume control of an outboard powered dinghy, competence must be demonstrated in the unit SFISHIP207A Operate and maintain outboard motors.

Element of Competency	Performance Criteria
5. 1.	<p>5.26 1.1 Planned work activities accord with enterprise policies and procedures</p> <p>5.27 1.2 <i>Factors</i> that may compromise vessel safety are identified and addressed in the <i>work plan</i> and the operation of the vessel</p> <p>5.28 1.3 All essential <i>safety equipment and spares</i> required for area of operation and intended work are checked for presence and serviceability</p> <p>5.29 1.4 Vessel is loaded in accordance with manufacturer's specifications and enterprise procedures.</p>
6. 2.	<p>6.30 2.1 Vessel stability is maintained within safety limits by establishing a low center of gravity and securing and stowing <i>loads</i></p> <p>6.31 2.2 Vessel is operated at all times according to <i>government requirements</i> and enterprise procedures and in area of operation confined to <i>limits</i> of restricted area</p> <p>6.32 2.3 Vessel is <i>manoeuvred</i> safely using appropriate means to complete planned work <i>tasks</i></p>
7. 3.	<p>7.33 3.1 Vessel is secured, <i>maintained</i> and stored after use according to enterprise procedures</p> <p>3.2 Perishables and fuels are stored to minimise wastage, spoilage, environmental and fire hazards</p> <p>7.34 3.3 Unserviceable equipment and spares are repaired or removed for repair or replacement according to enterprise procedures.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of

Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Factors	<p>sea condition: wave height chop effect of current direction on wave height</p> <p>visibility: fog rain low light conditions</p> <p>operational limits navigational hazards fire.</p>
Work plan	<p>ability to make safe havens: mother ship shore alternative sources of propulsion</p> <p>ability to remove water from the vessel by: bailing bilge pump removing the drainage plug while planing</p> <p>ability to use alternative steering.</p>
Safety equipment and spares	<p>communications equipment bailing or bilge pumping arrangements fire extinguishers personal floatation devices alternative sources of propulsion and steering anchoring devices bilge removal systems distress signaling devices: flares, flags, emergency position indicating radio beacon (EPIRB), other methods</p> <p>water tools and spare parts torch and batteries.</p>
Loads	<p>distribution and securing procedures passengers catch cargo: fishing gear diving equipment oyster farm equipment aquaculture nets and gear stock feed monitoring equipment.</p>

Government requirements	relevant local, state/territory and Commonwealth legislation, regulations and orders.
Limits	distance from supervision distance from safe haven operational limits speed limits sectors proximity to dangers range of fuel tank.
Manoeuvred	using outboard motor using oars alternative steering.
Tasks	berthing unberthing anchoring, sea anchoring reversing maneuvering in confined areas or heavy seas towing approaching a beach or landing recovering person overboard.
Maintained	by controlling: corrosion hull fractures and fatigue hull damage cleanliness.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due to its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

vessel loading specifications and the location of this information
effect of load distribution on centre of gravity
impact of wind and current on sea conditions and the effect on dinghies
effect of a shift in cargo on stability.

Practical skills

The essential skills a person needs to perform work to the required standard include:

making an adequate stability assessment prior to loading
minimising free surface effect
manoeuvring small vessels using a range of propulsion techniques
sea survival, fire fighting and first aid techniques.

Literacy skills used for:

reading manufacturer's operational and loading specification and the use by date of flares
reading manufacturer's period of validity of pyrotechnics.

Critical aspects of evidence

Assessment must confirm the ability to manoeuvre, load, and operate a small vessel.

Ability to:

manoeuvre a small vessel while engaged in common tasks
ensure the vessel remains within operational limits.

Knowledge of:

effect of overloading and poor stability practices
effect of sea state on vessel performance
pre-operational checks of propulsion system, dinghy and safety equipment.

Interdependent assessment of units

This unit may be assessed with:

SFISHIP207A Operate and maintain outboard motors
but after:

SFISHIP212A Take emergency action on board a vessel.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Metal and Engineering Training Package

SFSHIP206A Operate a Small Vessel

Method of assessment

The following assessment methods are suggested:

written or oral short answer testing
practical exercises
project work
observation of practical demonstration.

Resources required for assessment

Resources may include:

fully operational vessel powered by an outboard motor.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 1	1	1	1	1	1	2

SFISHIP207A . Operate and maintain outboard motors

Functional area

Vessel operations

Prerequisite Unit/s: SFISHIP212A Take emergency action on board a vessel

Descriptor

This unit involves operating and maintaining outboard motors and diagnosing and rectifying basic faults when in isolated situations.

Element of Competency	Performance Criteria
Operate outboard motors	<p><i>Pre-start checks</i> are performed on the motor</p> <p>Outboard motors are <i>started</i> and stopped according to the engine manufacturer's instructions</p> <p>Outboard motor <i>controls</i> are used to maneuver a dinghy both ahead and astern, and port and starboard</p> <p>Outboard motor cooling systems are <i>checked</i> for operation according to manufacturer's recommendations</p> <p>Trim and tilt mechanisms are operated according to manufacturer's instructions.</p>
Maintain outboard motors	<p>Fuel filters are changed and <i>fuel quality</i> is maintained according to manufacturer's instructions</p> <p><i>Electrical systems</i> are maintained to ensure reliable electrical supply to the outboard motor</p> <p>Sea water is flushed from the internal and external parts of the outboard motor using the appropriate tools and fresh water, keeping water away from sensitive equipment</p> <p>Engine and gearbox oil is checked and changed and lubrication is applied according to manufacturer's instructions</p> <p>Engine mounting gear is secured and checked as necessary.</p>
Identify and rectify basic outboard motor faults	<p>Operating difficulties caused by fuel-related factors are identified and rectified where possible according to trouble shooting guides and manufacturer's instructions</p> <p>Electrical faults are identified and rectified according to trouble shooting guides and manufacturer's instructions</p> <p>Outboard engines that were immersed are serviced according to manufacturer's instructions</p> <p>Outboard motor <i>propulsion faults</i> are identified and rectified according to manufacturer's instructions.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Pre-start checks	<ul style="list-style-type: none"> • amount of fuel in the fuel tank • appropriate fuel • water depth • cooling water intake submerged • motor attachment points • fuel hose connected, full and free of constrictions • fuel tank depressurised.
Started	<ul style="list-style-type: none"> • pull start • electric start.
Controls	<ul style="list-style-type: none"> • remote throttle and gear levers • tiller • steering wheel • tilt and trim mechanisms.
Checked	<ul style="list-style-type: none"> • cooling water circulation indicator • temperature gauge • temperature warning sound.
Fuel quality	<ul style="list-style-type: none"> • by estimating fuel consumption at turning points • contamination • fuel/oil ratio • filter type and quality.
Electrical systems	<ul style="list-style-type: none"> • batteries: charge rate capacity • fuses • spark plugs.
Propulsion faults	<ul style="list-style-type: none"> • bent or broken propeller • broken shear pin or drive spline • fouling • pitch.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The essential knowledge and understanding a person needs to perform work to the required standard

Metal and Engineering Training Package

SFSHIP207A Operate and Maintain Outboard Motors

includes:

- outboard motor fuel systems
- outboard motor cooling systems
- outboard motor lubrication systems
- battery connection
- trouble shooting
- International Convention for the Prevention of Pollution from Ships (MARPOL) requirements.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- checking, operating and maintaining an outboard motor that is used to propel a small vessel.

Literacy skills used for:

- reading trouble shooting charts
- reading manufacturers' instruction manuals.

Numeracy skills used for:

- calculating fuel to oil ratios or using tables to find and add correct volume of lubricating oil
- estimating fuel consumption and time at turning points.

Metal and Engineering Training Package

SFSHIP207A Operate and Maintain Outboard Motors

Critical aspects of evidence

Assessment must confirm the ability to operate and maintain outboard motors and be able to diagnose and rectify basic faults when in isolated situations.

Ability to:

- start and stop an outboard motor
- operate all controls on an outboard motor to propel a dinghy ahead and astern
- perform basic maintenance on an outboard motor
- store an outboard motor.

Knowledge of:

- indicators of engine faults.

Interdependent assessment of units

This unit may be assessed with:

- SFISHIP206A Operate a small vessel
but after:
- SFISHIP212A Take emergency action on board a vessel.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- fully operational small vessel powered by an outboard motor
- remote steering and controls.

Metal and Engineering Training Package

SFSHIP207A Operate and Maintain Outboard Motors

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 1	1	1	1	1	1	2

SFISHIP208A • Operate low powered diesel engines

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves routinely operating low powered diesel engines within normal parameters.

Element of Competency	Performance Criteria
8. 1.	<p>8.35 1.1 <i>Operations</i> are planned and carried out according to established <i>safety rules and regulations</i></p> <p>8.36 1.2 Timing and degree of preparation of engine and systems is appropriate to the intended operation and complies with operating instructions</p> <p>8.37 1.3 Sequence and timing of start up and shut down of engine and systems meets the requirements for safe and efficient operation</p> <p>8.38 1.4 <i>Engine parameters</i> and instrument readings are maintained within defined levels during start up and shut down operations</p> <p>8.39 1.5 Deviations from the norm are promptly identified, rectified and reported</p> <p>8.40 1.6 Adjustments made achieve a safe and efficient operation and are within the role holder's responsibility</p> <p>8.41 1.7 Sufficient notice of operations is given to enable other relevant personnel to carry out their responsibilities safely and efficiently</p> <p>8.42 1.8 Inability to start up or shut down engine as required is reported promptly and accurately to an appropriate authority.</p>
9. 2.	<p>9.43 2.1 Operations are planned and carried out according to established safety rules and regulations</p> <p>9.44 2.2 Engine is monitored according to <i>schedules</i>, operating parameters and instructions</p> <p>9.45 2.3 Engine system condition is assessed accurately in light of information available from local/remote indicators and physical inspection</p>

<p>10.</p>	<p>10.46 2.4 Engine output meets notified demand conditions throughout normal operation</p> <p>10.47 2.6 Engine parameters are maintained within defined limits during normal running</p> <p>10.48 2.7 Sequence and timing of adjustments to engine is that required for optimum safety and efficiency in achieving the desired condition</p>
<p>11. 3.</p>	<p>11.49 3.1 Deviations from the norm are correctly identified, rectified and reported</p> <p>11.50 3.2 <i>Action</i> taken in the event of irregularities, defects and damage is appropriate to their significance and optimises the safety and efficiency of operations.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

<p>Operations</p>	<ul style="list-style-type: none"> • start up and shut down of engine as a routine with the system functioning correctly • emergency shut down to minimise damage • operate under direct instruction for malfunctioning engine system • manual adjustment of controls to correct minor deviation • monitoring of remote operation • fuelling and lubrication requirements are met.
<p>Safety rules and regulations</p>	<ul style="list-style-type: none"> • code of safe working practices • enterprise's occupational health and safety procedures.
<p>Engine</p>	<ul style="list-style-type: none"> • diesel engines burning diesel oil or marine diesel oil • as the power source for the propulsion of the vessel • as the power source for an auxiliary system.
<p>Parameters</p>	<ul style="list-style-type: none"> • pressure • levels • flow • temperature • speeds.

Monitoring	<ul style="list-style-type: none">• frequency• scope• timing• checks• tests• inspections• fuel requirements.
Schedules	<ul style="list-style-type: none">• parameters and instructions• manufacturers information• enterprise requirements• onboard management requirements.
Action	<ul style="list-style-type: none">• to be taken in the event of irregularities includes:<ul style="list-style-type: none">– informing authority– adjustment of engine and systems– appropriate investigative techniques and safety procedures– fuel and lubrication transfer contained and disposed meeting International Convention for the Prevention of Pollution from Ships (MARPOL) requirements.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- information relating to:
 - engine and system operating instructions
 - operating parameters and values
 - alarm and emergency shut down parameter values

Metal and Engineering Training Package

SFSHIP208A Operate Low Powered Diesel Engines

- different types of diesel engines and their variations likely to be encountered
- government requirements affecting operations and International Convention for the Prevention of Pollution from Ships (MARPOL) compliance
- method of operation of control systems
- procedures relating to:
 - sequence and timing of operations and adjustments
 - response to alarms and emergencies affecting engines including contingency plans
 - fuel isolation procedures and likely hazards.
- principles relating to:
 - operation of marine diesel engines sufficient to recognise malfunction, implement initial corrective action and seek advice
 - engineering science to appreciate the reasons for the method of safe operations.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- operating high, medium and slow speed diesel engines including the associated systems:
 - fuel, such as diesel oil or marine diesel oil
 - cooling
 - lubrication
 - purification, transfer and storage
 - control
 - starting and stopping
 - battery power generation and use.
- carrying out the start up from both warm and cold conditions to standby or full operating condition including pre- and post-start up checks
- carrying out emergency shut down and normal shut down for short and long term periods including checks and isolation to organisational requirements
- operating the engine in various modes including:
 - monitoring and setting restrictions on remote operation
 - local manual operation
- emergency modes of operation
- monitoring aspects of the engine and system condition including:
 - pressure
 - flows
 - temperatures
 - levels
 - speeds
 - vibrations
 - expansion
 - emissions
 - abnormalities.

Metal and Engineering Training Package

SFSHIP208A Operate Low Powered Diesel Engines

Literacy skills used for:

- reading manufacturer's technical information
- reading and recording operating parameters
- reading and producing reports for enterprise and authorities
- reading statutory regulations.

Numeracy skills used for:

- reading pressure, temperature and levels.

Critical aspects of evidence

Assessment must confirm the ability to operate, start up and shut down low powered diesel engines and respond appropriately to irregularities.

Assessment must also confirm ability to:

- ensure that preparations for the operations are complete
- start up, shut down, monitor and operate engines in a safe manner
- maintain steady running of the engine and comply with alarm acceptance procedures
- carry out adjustment and regulation of engine
- carry out alteration of output as required.

Knowledge of:

- contingency actions to be taken
- implementation of emergency response
- process of seeking advice and informing management.

Interdependent assessment of units

This unit may be assessed after/with:

- SFISHIP210A Operate marine plant and systems
- SFISHIP205A Maintain marine plant.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Metal and Engineering Training Package

SFSHIP208A Operate Low Powered Diesel Engines

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- operational diesel engine and system
- operation procedures and policies.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 1	1	1	1	2	1	2

SFISHIP209A . Operate marine communications equipment

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves using radiotelephony equipment, the global maritime distress and safety sub-systems (GMDSS) available for small commercial vessels, specifically digital selective calling (DSC), the emergency position indicating radio beacon (EPIRB) and the marine search and rescue system. This unit incorporates the competencies required for holding the 'Marine radio operators certificate of proficiency (MROCP)'.

Element of Competency	Performance Criteria
Transmit and receive communications with radiotelephony equipment	<p>Types of <i>radio equipment</i> are selected and used in accordance with their <i>limitations</i> and operational requirements</p> <p>Radiotelephony <i>procedures</i> are used to transmit and receive various <i>types of signal</i> with different types of equipment</p> <p><i>Regulations</i> applicable to ship stations equipped with radiotelephony and digital selective calling (DSC) facilities are obeyed.</p>
Repair and maintain communications equipment	<p>Fault finding <i>procedures</i> are used to identify and rectify defective radio equipment</p> <p>Routine maintenance is carried out on radio equipment.</p>
Access search and rescue facilities	<p>Access is made to the appropriate <i>organisation</i> for the provision of the required search and rescue <i>services</i></p> <p>Information required by the AUSREP (Australian ship reporting) system is supplied in the required format</p> <p><i>Emergency position indicating radio beacons (EPIRBs)</i> are deployed as required according to manufacturer's instructions and accepted search and rescue procedures.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Radio equipment	<ul style="list-style-type: none"> • radiotelephony equipment: medium frequency / high frequency equipment (MF/HF) • very high frequency equipment (VHF) • digital selective calling (DSC) equipment • emergency position indicating radio beacon (EPIRB) • single battery • two batteries connected in series, parallel or in combination of the two • aerials • electrical and radio cable connections • electrical fuses and their current carrying capacity.
Limitations	<ul style="list-style-type: none"> • changes in transmission ability with time of day • line of sight • transmission power and geographic range • COSPAS-SARSAT availability.
Procedures	<ul style="list-style-type: none"> • as contained in the current 'Marine Radio Operators Handbook for Small Craft': fault finding power supply transceiver antenna • DSC formats • general voice procedures and phonetic alphabet • safety, urgency, alarm and distress formats • silence periods • appropriate frequencies.
Types of signal	<ul style="list-style-type: none"> • via COSPAS-SARSAT • straight line • via atmospheric layers • relayed between various organisations • general • public correspondence: stations accepting radiotelegrams and radiotelephone calls ship to shore radiotelephone calls on demand service auto seaphone service

	<p>auto seaphone 999 service</p> <ul style="list-style-type: none">• safety• urgency• alarm and distress.
Regulations	<ul style="list-style-type: none">• arising from federal communications legislation: <i>Australian Communications Authority Act 1997</i> <i>Radiocommunications Act 1992</i> <i>Telecommunications Act 1997</i> <i>Telecommunications (Transitional Provisions and Consequential Amendments) Act 1997.</i>
Organisations	<ul style="list-style-type: none">• search and rescue coordination centre location and operator• state police forces• coast stations• limited coast stations• fishing organisations and cooperatives• private shore stations• volunteer coast guard stations.
Services	<ul style="list-style-type: none">• medical advice• AUSREP• search and rescue• public correspondence.
Emergency position indicating radio beacons (EPIRBs)	<ul style="list-style-type: none">• of the type: 406MHz 121.5/243 MHz.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due to its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- principles of signal transmission in order to avoid equipment limitations
- methods of communicating vessel position
- purpose for and monitoring of calling and working frequencies
- purpose of silence periods
- limitations on different types of radio equipment
- a basic understanding of the Australian marine search and rescue system
- hazards associated with radio transmission and the repair and maintenance of equipment.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- calling, replying and relaying procedures
- transmitting and decoding of the phonetic alphabet, excluding the figure code
- identifying different types of radio equipment
- measuring capacity of batteries and the specific gravity of the electrolyte
- measuring on and off load voltage.

Literacy skills used for:

- reading radio frequencies
- reading fuse capacity.

Numeracy skills used for:

- adjusting settings.

Critical aspects of evidence

Assessment must confirm the ability to operate and maintain the full range of radio equipment found aboard small vessels to send and receive routine and emergency signals.

Ability to:

- select frequencies appropriate for different types of signal transmission and reception
- use transceiver controls
- use message formats appropriate to general, safety, urgency, alarm and distress signals
- operate MF/HF and VHF radio equipment to transmit and receive signals
- test equipment and identify and rectify common faults occurring to radio equipment
- perform routine maintenance on radio equipment

Metal and Engineering Training Package

SFSHIP209A Operate Marine Communications Equipment

- deploy EPIRBs correctly
- take appropriate action on receipt of various signals
- access all services available from the various organisations listed
- transmit and decode messages with the phonetic alphabet, excluding the figure code.

Knowledge of:

- services available from organisations and the methods of accessing emergency and communications services
- authority to transmit and the circumstances of use of alarm and distress signals
- regulatory requirements covering:
 - ship station license
 - authority of skipper
 - secrecy of communications
 - false or deceptive distress or urgency signals
 - unnecessary transmissions
 - keeping a log
 - avoiding interference
 - ship station identification
 - information to be made available to coast stations
 - documentation to be kept on board
 - language to be used during transmission.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- fully operational radiotelephony equipment
- digital selective calling equipment
- equipment for assessing voice procedures
- equipment for assessing ability to identify and rectify faults with radio equipment and power supply
- EPIRBs
- radio communication simulation.

Key competencies

Metal and Engineering Training Package

SFSHIP209A Operate Marine Communications Equipment

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	1	1	2	2	2

SFISHIP210A • Operate marine plant and systems

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves routine starting up, running and shutting down of marine engineering plant and systems. This plant includes pumps, air and refrigeration compressors, fishing and cargo gear, electrical and hydraulic power generation and distribution plant and motors, steering gear and shafting associated with main propulsion system, reduction and power transfer gear associated with main propulsion and auxiliary systems.

Element of Competency	Performance Criteria
12. 1.	<p>12.51 1.1 Operations are planned and carried out according to established <i>safety rules and regulations</i></p> <p>12.52 1.2 Timing and degree of preparation of <i>plant</i> is appropriate to the intended operation and complies with <i>operating instructions</i></p> <p>12.53 1.3 Sequence and timing of start up or shut down of plant and systems are those required for safe and efficient operation</p> <p>12.54 1.4 Plant <i>parameters</i> and instrument readings are maintained within defined levels during start up and shut down operations</p> <p>12.55 1.5 Adjustments able to be made by the operator are identified and are executed to achieve a safe and efficient operation</p> <p>12.56 1.6 Notice of operations is given to enable other relevant personnel to carry out their responsibilities safely and efficiently</p> <p>12.57 1.7 Irregularities and malfunctions are promptly recognised and reported accurately to an appropriate person.</p>
13. 2.	<p>13.58 2.1 Operations are planned and carried out according to established safety rules and regulations</p> <p>13.59 2.2 Plant is monitored according to operating instructions</p> <p>13.60 2.3 Plant condition is assessed accurately in light of information available from local or remote indicators and physical inspection</p>
14.	<p>14.61 2.4 Plant output consistently meets notified demand throughout normal operation</p> <p>14.62 2.5 Plant parameters are maintained within defined limits during normal running</p>

	14.63 2.6	Sequence and timing of adjustments to plant is that required for optimum safety and efficiency in achieving a specified condition.
15. 3. Respond to irregularities	15.64 3.1	Irregularities, defects or damage are promptly recognised and the <i>action</i> taken maximises safety and is appropriate to the situation.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Operations	<ul style="list-style-type: none"> • routine start up and shut down of plant • manual adjustment of controls to correct minor problems
Safety rules and regulations	<ul style="list-style-type: none"> • monitoring of remote operation • action in the event of an emergency • meeting fuel requirements. • plant is operated according to: <ul style="list-style-type: none"> – occupational health and safety regulations – statutory regulations – enterprise policy and procedures.
Plant	<ul style="list-style-type: none"> • maintain output of: <ul style="list-style-type: none"> – pumps – air and refrigeration compressors – fishing and cargo gear – electrical power generation and distribution plant and motors – hydraulic power generation and distribution plant and motors – steering gear and shafting associated with main propulsion system – reduction and power transfer gear associated with main propulsion and auxiliary systems.

Operating instructions	<ul style="list-style-type: none">• operating instructions are correctly interpreted and adhered to including:<ul style="list-style-type: none">– manufacturer’s information– enterprise procedures– onboard management requirements– regulatory requirements are met.
Parameters	<ul style="list-style-type: none">• operating parameters are monitored and correctly interpreted:<ul style="list-style-type: none">– pressures– levels– flow– temperatures– speeds– fuel consumption rate.
Action	<ul style="list-style-type: none">• action to take in the event of an emergency:<ul style="list-style-type: none">– informing appropriate authority– adjustment of plant– shut down of plant.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- information relating to:
 - plant operating instructions
 - operating parameter values
 - alarm and emergency shut down parameter values
 - regulations affecting operation (statutory and enterprise)
 - the International Convention for the Prevention of Pollution from Ships (MARPOL) requirements
- procedures relating to:
 - sequence and timing of operations
 - emergency shut down and procedures.

Metal and Engineering Training Package

SFSHIP210A Operate Marine Plant and Equipment

Practical skills

The essential skills a person needs to perform work to the required standard include:

- operating and monitoring marine power systems including:
 - hydraulic
 - electric
- operating pumping systems:
 - bilge
 - ballast
 - fire
 - cargo
 - fuel
 - fresh water
 - pumps
 - air and refrigeration compressors
 - fishing and cargo gear
 - electrical power generation and distribution plant and motors
 - hydraulic power generation and distribution plant and motors
 - steering gear and shafting associated with main propulsion system
- reduction and power transfer gear associated with main propulsion and auxiliary systems
- carrying out start up from hot, warm and cold conditions, including pre and post start checks, setting up of distribution and supply systems
- carrying out the emergency and normal shut down including checks and isolation to organisational requirements.

Literacy skills used for:

- reading manufacturers technical information
- reading and recording operating parameters
- reading and producing reports for company and authorities
- reading statutory regulations.

Numeracy skills used for:

- determining fuel, lubrication and water capacity and consumption rates.

Metal and Engineering Training Package

SFSHIP210A Operate Marine Plant and Equipment

Critical aspects of evidence

Assessment must confirm the ability to start up, run and shut down marine engineering plant and systems under normal operating conditions, and to identify deviations from normal performance or where conditions might require running plant and systems outside normal parameters.

Interdependent assessment of units

This unit may be assessed after/with:

- SFISHIP208A Operate low powered diesel engines
- SFISHIP205A Maintain marine plant.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- operational plant and systems described
- service equipment and operating instructions
- operating procedures and policies.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 1	1	1	1	2	1	2

SFISHIP211A . Prepare for maintenance

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves preparing resources and the work area for maintenance using safe and environmentally sound methods.

Element of Competency	Performance Criteria
Select and prepare resources	<p>Materials are to quantity and type as stated in work instruction</p> <p>Equipment selected is serviceable and of the type and quantity required to carry out the specific task</p> <p>Machine and equipment <i>preparation</i> procedures are carried out according to <i>government requirements and enterprise procedures</i></p> <p>Restrictions and variances to <i>resources</i> are accurately identified and promptly reported according to government requirements and enterprise procedures</p> <p>Material and equipment are handled, stored and secured according to government requirements and enterprise procedures.</p>
Identify and prepare the work area	<p>Work area, machinery and equipment are confirmed as being safe for <i>work</i> to proceed and comply with relevant environmental, government and enterprise requirements</p> <p>Work area is appropriate to the operational requirements of the work instruction</p> <p>Work area is accessible and free from obstruction for receiving and storing materials and resources needed for the work to proceed</p> <p>Specifications, containment strategies, plans, materials and equipment are available at the workplace according to schedule and enterprise requirements.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Preparation	<ul style="list-style-type: none"> • of required consumables • of required equipment and tools • of relevant documentation including: <ul style="list-style-type: none"> legislative requirements storage requirements hazard recognition work specification work schedule • of the work area prior to commencing work including: <ul style="list-style-type: none"> access isolation warnings and barriers contingency equipment including containment devices.
Government requirements and enterprise procedures	<ul style="list-style-type: none"> relevant local, state/territory, Commonwealth legislation, regulations and orders enterprise procedures, such as occupational health and safety policies and procedures.
Resources	<ul style="list-style-type: none"> • necessary to progress the maintenance and deal with contingencies and emergencies.
Work	<ul style="list-style-type: none"> • maintenance of: <ul style="list-style-type: none"> steel work, both cleaning and preparation for, and application of, protective coatings wires and ropes life saving and fire fighting appliances lubrication of fittings and equipment packing of glands jointing of pipework.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- possible hazards likely to be encountered when preparing resources and the precautions necessary to minimise their effect
- ideal resources, their availability and acceptable alternatives
- hazards likely to be encountered when progressing maintenance and the resources necessary to minimise risk
- safety regulations and how they are applied on board vessels
- relevant sections of the code of safe working practice
- possible hazards associated with the work area
- possible hazards associated with equipment and machinery in the work area and the need to isolate systems
- familiarity with work place hazards including:
 - the environment
 - machinery and equipment in the area
 - tools and maintenance equipment
 - consumables
- knowledge of government requirements and enterprise safety at work rules and regulations including:
 - good vessel keeping practices
 - marine safety regulations
 - code of safe working practices
 - protective clothing and equipment
 - guarding of machinery
 - safe movement on board ship
 - entry into confined spaces
 - lifting equipment.

Practical skills

The essential skills a person needs to perform work to the required standard include:

carrying out maintenance of:

- steel work, both cleaning and preparation for, and application of, protective coatings
- wires and ropes
- life saving and fire fighting appliances

lubricating

packing

jointing

obtaining and preparing consumables for work including:

- paints
- solvents
- cleaning fluids and chemicals
- oils
- greases
- life saving and fire fighting appliances spares
- packing materials
- jointing materials

preparing equipment for work including:

- airless and air spray painting equipment
- shot blasting equipment
- water and chemical washing equipment
- personal protection equipment

preparing electrically or pneumatically operated power tools safely including:

- pistol drills
- rotary grinders
- mechanical scaling equipment
- high pressure equipment

selecting and preparing of hand tools including:

- spanners
- files
- hacksaws
- chisels and nut splitters
- screw drivers
- pliers
- tinsnips and guillotine
- wad punches
- packing knives and extractors
- scrapers and other abrasive materials
- woodworking tools

preparing storage requirements for:

- dismantled equipment and machinery necessary to progress work
- tools, equipment and consumables during maintenance

preparing documentation including:

- simple manuals
- plans

Metal and Engineering Training Package

SFSHIP211A Prepare for Maintenance

preparation instructions
personal protective advice
stock control documents
codes of practice
work instructions

preparing access and safety equipment including:

staging
bosuns' chairs
scaffolding and ladders
isolation of machinery, equipment and systems
erection of hazard warnings, barriers and safety equipment
positioning of contingency equipment.

Literacy skills used for:

reading manufacturer's technical information

- reading and producing reports for company and authorities
- reading statutory regulations.

Numeracy skills used for:

- reading and recording operating parameters.

Critical aspects of evidence

Assessment must confirm the ability to prepare resources and the work area to carry out maintenance on the vessel and its equipment.

Ability to:

prepare materials for work
prepare equipment for maintenance
prepare the equipment and/or area to be worked on to a suitable condition to commence maintenance
store resources and dismantled machinery and systems in the work area
prepare and collect reference material.

Knowledge of:

procedures to apply when resources vary from requirements
handling of resources.

Interdependent assessment of units

This unit may be assessed after/with:

nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- operational machinery and equipment
- service equipment and maintenance instructions
- operation procedures and policies
- safety equipment
- spares and consumables
- maintenance tools and equipment.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 1	1	1	1	2	1	1

SFISHIP212A . Take emergency action on board a vessel

Functional area

Vessel operations

Prerequisite Unit/s: **nil**
Descriptor

This unit involves responding to operational emergencies on board a vessel, including fire and vessel abandonment. Response would normally be under direct supervision of a ticketed/licensed vessel operator.

Element of Competency	Performance Criteria
Carry out emergency actions on board a vessel	<p>Mustering and evacuation procedures are followed as per instructions and in accordance with vessel standing orders and emergency requirements</p> <p>All survival equipment is immediately located and used/applied as per vessel emergency requirements and manufacturers instructions</p> <p>Participation in emergency drills complies with requirements of vessel standing orders and skipper.</p>
Respond to an emergency on board a vessel	<p>Action initially taken on becoming <i>aware</i> of an <i>emergency</i> conforms to the vessel's emergency procedures</p> <p>Evacuation, emergency main and auxiliary shut down and isolation procedures are implemented promptly</p> <p>Information given to assist internal and external emergency services is prompt, accurate, complete and clear</p> <p>Alarm is raised promptly using the most appropriate <i>alarm system</i> available.</p>
Fight fires on board a vessel	<p>Personal safety during <i>fire fighting</i> is maximised at all times</p> <p>Clothing and equipment are appropriate to the overall <i>requirements</i> of the emergency</p> <p>Timing and sequence of individual actions are appropriate to the overall requirements of the emergency and comply with instructions received</p> <p>Appropriate fire fighting medium is applied according to manufacturer's instructions and/or enterprise procedures</p> <p>15.65 3.5 Communications comply as closely as possible to recommended procedures as allowed by the circumstances.</p>
Maximise chances of survival at sea in the event of abandonment	<p>Procedures on identifying muster or abandonment signals comply fully with vessel emergency requirements</p> <p>Wearing of additional clothing and <i>survival equipment</i> complies with manufacturer's instructions and accepted <i>codes of practice</i></p>

Survival techniques used in the case of rapid abandonment make use of self reliance and initiative

Survival instructions from supervisory personnel are promptly and fully complied with

Preparations and *launching* of survival craft follow craft manufacturer's instructions

Survival positions adopted in water comply fully with those described in accepted codes of practice

Methods of *boarding* survival craft comply fully with those described in accepted codes of practice

Actions and management procedures taken on boarding survival craft maximise safety of self and others and comply with accepted codes of practice

Instructions from *rescue personnel* are fully complied with at all times.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Action	<ul style="list-style-type: none"> • includes: <ul style="list-style-type: none"> – emergency shut down and isolation of equipment and areas within the role holder's responsibility – notification to onboard personnel and external agencies – muster – preparation of gear in anticipation of a threat • taken in conditions of: <ul style="list-style-type: none"> – heavy weather or sea conditions – poor visibility.
Aware	<ul style="list-style-type: none"> • on discovering an emergency • on sounding or hearing an alarm signal or being informed of an emergency.

Emergencies	<ul style="list-style-type: none"> • fire • grounding • flooding • person over board • rescue and evacuation of injured or injured personnel • major mechanical damage • collision.
Alarm system	<ul style="list-style-type: none"> • verbal • automatic detection • bell.
Fire fighting	<ul style="list-style-type: none"> • attack and extinguish fire • control fire spread • monitoring stability and free surface effect when using water • using: <ul style="list-style-type: none"> – carbon dioxide, foam, dry chemical and water extinguishers – fire blankets – hoses and various nozzles for personal protection, extinguishing fire and boundary cooling – foam applicators – fixed systems – removal of fuel or heat source – boundary cooling techniques.
Requirements	<ul style="list-style-type: none"> • of fighting fires in: <ul style="list-style-type: none"> – accommodation spaces – machinery spaces – on open decks – in cargo spaces.
Survival	<ul style="list-style-type: none"> • personal sea survival • in various climates: <ul style="list-style-type: none"> – tropical – temperate – sub-polar • initial actions prior to and immediately after boarding • long term actions after clearing distress.
Survival equipment	<ul style="list-style-type: none"> • life jackets • exposure suits • immersion suits.

Codes of practice	<ul style="list-style-type: none"> • survival at sea manual.
Launching	<ul style="list-style-type: none"> • davit and hand launched inflatable life rafts • dinghies.
Boarding	<ul style="list-style-type: none"> • wet • dry • assisted • unassisted.
Rescue personnel arriving from	<ul style="list-style-type: none"> • aircraft • helicopters • rescue craft.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- procedures for:
 - mustering and reporting
 - emergency shut down and isolation of plant, equipment and areas of responsibility
 - isolating fire areas
 - protecting survivors in survival craft
 - preserving body fluids
 - search and rescue around Australia
 - launching and inflating life rafts
 - survival management
- location of:
 - alarm points
 - first aid emergency equipment
 - all fire fighting equipment and the location and method of operating fixed system controls
 - personal survival aids and extra survival equipment and their use
- hazards associated with:
 - different types of fire and by products of combustion
 - choosing an incorrect extinguishing method different methods of fire fighting
 - extremes of heat and humidity
 - immersion
 - exposure to sea or weather
 - heat or cold

Metal and Engineering Training Package

SFISHIP212A Take Emergency Action Onboard a Vessel

- lack of nourishment
- different types of alarm signal
- type of information to be provided and to whom
- basic principles of survival
- equipment available in inflatable life rafts
- additional equipment that may be used in a life raft
- importance of regular training drills and the actions to take on discovering an emergency
- effective communication techniques
- techniques for maximising morale and the will to live.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- using a range of fire extinguishers
- joining a life raft dry or wet
- righting an up turned life raft
- heat escape lessening positions.

Literacy skills used for:

- reading the survival at sea manual
- reading life raft launching instructions.

Critical aspects of evidence

Assessment must confirm the ability to deal with a range of emergencies encountered on board a small vessel, in particular fire on board a vessel, and the ability to maximise survival during abandonment.

Ability to:

- respond to a range of emergencies in various circumstances which are likely to be encountered on a small vessel, including deployment of life raft
- comply with procedures and contingency plans when:
 - discovering an emergency
 - being informed of an emergency
- take action to:
 - comply with muster procedures
 - rectify the situation within role holder's capability
 - raise the alarm
 - respond to emergency signals
 - minimise the chance of or deal with explosion.

Knowledge of:

- actions that may harm other personnel.

Interdependent assessment of units

This unit may be assessed with:

- FPPAID2A Administer first aid procedures.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

The ability to respond to emergencies will normally be demonstrated during onboard drills covering all components of reaction to emergencies involving:

- fire
- grounding
- flooding
- person over board
- rescue and evacuation of personnel
- major mechanical damage
- by demonstrating ability to:
 - respond to emergency signals
 - prepare for abandoning ship
 - comply with instructions
 - abandon ship
 - practice survival procedures after abandonment
 - select suitable clothing
 - apply appropriate fire fighting, and control techniques that limit the spread and duration of fire
 - use communication procedures.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- operational vessel in survey with all required fire fighting and survival equipment
- realistic emergency response simulator allowing the use of all equipment and procedures mentioned above.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	2	2	1	2	1

SFISHIP302A • Command and control maneuvers

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves manoeuvring the vessel for berthing, mooring and anchoring operations, maneuvering during an emergency and crossing bars and sea entrances.

Element of Competency	Performance Criteria
<p>Manoeuvre the vessel for berthing, mooring and anchoring operations</p>	<p><i>Manoeuvres</i> are made to safely progress the operation and keep the vessel in safe water</p> <p>Vessel's heading is maintained within acceptable limits with respect to the requirements of the manoeuvre and the existing sea state</p> <p>Alterations of heading or power are smooth and controlled at all times</p> <p><i>Communication</i> is clear, concise and acknowledged at all times according to <i>good seamanship</i></p> <p>Suitable mode of steering is selected for the manoeuvre with respect to the area, wind and sea state</p> <p>Engine movements are made as needed to progress the operation and are designed to complement helm movements</p> <p>Safe operating limits of vessel propulsion, steering and power systems are not exceeded in normal manoeuvres</p> <p>Adequate <i>resources</i> are made available prior to and during operations.</p>
<p>Manoeuvre the vessel during <i>exceptional circumstances</i></p>	<p>Manoeuvres are made to safely progress the operation and keep the vessel in safe water in narrow confined channels, crossing bars, and entering existing seaways</p> <p>Vessel's heading is maintained within acceptable limits with respect to the requirements of the manoeuvre and the existing sea state</p> <p>Alterations of heading or power are smooth and controlled at all times</p> <p>Communication is clear, concise and acknowledged at all times according to <i>good seamanship</i></p> <p>Suitable mode of steering is selected for the manoeuvre with respect to the area, wind and sea state</p> <p>Engine movements are made as needed to progress the operation and are designed to complement helm movements</p> <p>Safe operating limits of vessel propulsion, steering and power systems are not exceeded</p>

Adequate resources are made available prior to and during operations.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Manoeuvres	<ul style="list-style-type: none"> • in areas of: bars and sea entrances confined navigational spaces narrow waters coastal waters open ocean while personally controlling navigation • such as: berthing and unberthing mooring and departing a single point mooring anchoring towing • in normal conditions.
Communication	<ul style="list-style-type: none"> • to internal personnel • to external agencies • verbal • by radio.
Good seamanship	<ul style="list-style-type: none"> • USL code • International Convention of Standards of Training, Certification and Watchkeeping (STCW) 1978 • sea state and tidal conditions • contingency planning.
Resources	<ul style="list-style-type: none"> • personnel • equipment • machinery • vessel manoeuvring equipment: single screw twin screw thrusters tug drives.

Exceptional circumstances

- loss of rudder
- loss of propeller
- in severe weather including storm and cyclonic conditions
- when hove to
- in the event of fire or flooding on own vessel
- ebb tide with onshore wind sea.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes to more depth due to its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- information relating to:
 - stopping distances and vessel manoeuvring characteristics and how they vary with displacement, trim and list
 - the absolute limits on vessel's manoeuvring capability and any restrictions on helm and engine movements
 - tidal times and heights
 - sea conditions including wind direction and currents
- procedures relating to:
 - emergency manoeuvres
 - manoeuvring with tugs
 - bridge team work monitoring methods
 - storm and cyclone contingency planning
- principles relating to:
 - transverse thrust
 - limitations of bow thrusters and other systems
 - effects of shallow water and narrow channels
 - nature of own vessel's turning circle and the factors affecting it
 - interaction between vessels
 - effects of current and tide.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- berthing and unberthing using a fixed wharf
- mooring and leaving a single point mooring
- berthing, mooring and anchoring with and without a current
- anchoring with one or two anchors
- letting go and recovering anchors
- undertaking towing operations

Metal and Engineering Training Package

SFISHIP302A Take and Control Manoeuvres

- taking up and undertaking towing operations
- manoeuvring with:
 - single screw with or without controllable pitch
 - twin screw
 - tug drives
 - assistance of thrusters.
- correctly identifying wind and current direction.

Literacy skills used for:

- reading codes, standards and plans
- explaining manoeuvres

Numeracy skills used for:

- determining limits of manoeuvre
- reading nautical output.

Critical aspects of evidence

Assessment must confirm the ability to analyse the situation and select suitable manoeuvres, control manoeuvres, use resources effectively, and operate propulsion power.

Knowledge of:

- interaction of manoeuvres and conditions
- shallow water effects.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- a range of vessels with the various propulsion and control systems listed
- a range of berthing, mooring and anchoring facilities
- suitable site for tidal flow observation.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	1	2	2	1	1	2

SFISHIP303A Initiate response to navigation emergencies

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves initiating action in the event of an emergency affecting one's own vessel or on identifying a distress signal from another vessel, while on watch.

Element of Competency	Performance Criteria
Respond to problems that affect vessel navigation	Type and magnitude of any problem is promptly identified Decisions and <i>actions</i> taken to address identified problems minimise adverse effects on vessel systems and navigational status <i>Reports and advice</i> are offered to the skipper according to standing orders.
Provide a navigational response to emergencies affecting the vessel	Initial actions are designed to maximise the safety of the vessel and personnel and are in accordance with contingency plans Manoeuvres taken to avoid the emergency or minimise damage are <i>effective</i> Lights, shapes and <i>signals</i> used are appropriate to the nature of the emergency and comply with the International Rules for Preventing Collisions at Sea Order of and methods used for informing vessel personnel is appropriate to the nature of the emergency Emergency radio communications comply with <i>regulations</i> Navigational control of the vessel is handed over according to regulations.
Respond to a distress signal at sea	Distress or emergency signals are immediately recognised Communications with the distress comply with international regulations and procedures

Information obtained about the position and nature of distress is the most comprehensive available

Reports of the distress made to personnel are complete and timely

Further actions comply with contingency planning and skipper's instructions.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Respond	<p>to malfunctions involving systems found on the bridge:</p> <ul style="list-style-type: none"> propulsion steering bridge equipment communication alarm <p>in areas or conditions of:</p> <ul style="list-style-type: none"> narrow waters coastal waters congested waters restricted visibility heavy weather and sea <p>to maximise the safety of:</p> <ul style="list-style-type: none"> own vessel other vessels personnel the environment.
Actions	<p>limited to responding to the situation by:</p> <ul style="list-style-type: none"> change over start up communications temporary repair seeking assistance proceeding at safe speed steering by sight
	<p>taken within the job holder's responsibility when in charge of a navigational watch:</p> <ul style="list-style-type: none"> identify communicate inform and seek advice establish distress position implement contingency plans.

Reports and advice	from the skipper from personnel responsible for maintaining and repairing equipment.
Effective	in terms of: magnitude timeliness
Signals	radio: distress urgency safety visual.
Regulations	International Convention for the Safety of Life at Sea (SOLAS) 1960, 1974 International Regulations for Preventing Collisions at Sea (COLREG) 1972 International Standards of Training, Certification and Watchkeeping for Seafarers (STCW) 1978 International Convention on Maritime Search and Rescue (SAR) 1979.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- distress or emergency signals required by the International Regulations for Preventing Collisions at Sea (COLREG) 1972
- manoeuvring characteristics of the vessel without primary steering or main propulsion power
- vessel construction to a level sufficient to enable an appreciation of possible damage and watertight integrity
- limitations imposed on manoeuvring systems with respect to large, sudden manoeuvres
- how actions in general may affect the vessel, personnel and systems
- nature of information required from a vessel in distress
- specific types of distress, for example, stricken vessel, sunken submarine, downed aircraft
- procedures relating to:
 - actions to take in the event of malfunction or failure
 - changeover to backup systems where available
 - external and internal communications and warnings in an emergency
 - contingency plans for emergencies

Metal and Engineering Training Package

SFISHIP303A Initiate Response to Navigation Emergencies

initial actions to be taken on sighting or receiving a distress signal
type of response expected to distress, urgency and safety signals
search and rescue coordination
action taken upon sighting a wreck.

Practical skills

The essential skills a person needs to perform work to the required standard includes:

dealing with malfunction or failure of:

- main engine
- steering
- gyro or magnetic compass
- bridge controls

taking actions to:

- operate manoeuvring equipment
- use backup systems where available
- minimise damage to affected equipment
- use helm, engines or thruster units where available

dealing with:

- imminent collision
- collision
- stranding
- fire
- flooding
- person overboard
- dragging anchor
- systems failure affecting navigation
- steering by compass or sight
- cargo shift
- heavy seas
- sighting a wreck

using:

- helm and engines
- signaling apparatus
- systems for communicating internally and externally
- alarms
- remotely operated watertight doors
- other relevant equipment

dealing with a distress situation by:

- recognising different distress signals
- logging relevant information
- managing a watch after receipt of a distress signal.

Literacy skills used for:

- reading contingency plans
- reading standing orders
- reading the International Regulations for Preventing Collisions at Sea
- making log entries.

Metal and Engineering Training Package

SFISHIP303A Initiate Response to Navigation Emergencies

Numeracy skills used for:

reading bridge controls.

Critical aspects of evidence

Assessment must confirm the ability of a watch keeper to initiate effective action in the event of a range of emergencies affecting one's own vessel or on identifying a distress signal from another vessel.

Ability to:

recognise a malfunction

implement contingency plans

prioritise actions with respect to the nature of the problem and existing circumstances

inform the skipper when necessary

manoeuvre the vessel to advantage in an emergency

comply with signalling requirements of the International Regulations for Preventing Collisions at Sea

comply with emergency communications procedures

recognise a distress signal

obtain information on the distress

initiate positive action.

Knowledge of:

distress signals and relevant international conventions

manoeuvring characteristics of the vessel in various circumstances.

Interdependent assessment of units

This unit may be assessed after/with:

nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

written or oral short answer testing

practical exercises

project work

observation of practical demonstration

role playing.

Resources required for assessment

Resources may include:

damage control simulations

emergency response simulations

vessel simulator

signals and signalling devices.

Key competencies

Metal and Engineering Training Package

SFISHIP303A Initiate Response to Navigation Emergencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	2	2	1	2	1

SFISHIP304A • Manage the operation of auxiliaries and service plant outside normal parameters

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves managing the operation of auxiliary and service plant outside of normal operating parameters and methods when required by the needs of overall vessel safety or safe operation during malfunction.

Element of Competency	Performance Criteria
16. 1.	<p>16.66 1.1 <i>Operations</i> are planned and carried out in accordance with established <i>safety rules and regulations</i></p> <p>16.67 1.2 Need for alterations to routine operations are fully identified and justifiable</p> <p>16.68 1.3 Timing and degree of preparation of <i>plant</i> is appropriate to the actual condition of plant and the nature of any malfunction</p> <p>16.69 1.4 Planned alterations to <i>parameters</i> and methods are confirmed with all affected personnel</p> <p>16.70 1.5 Revised alterations to parameters and methods minimise the risk of plant damage and disruption to operations</p> <p>16.71 1.6 Revised parameters and methods are clearly and accurately <i>communicated</i> to all relevant operational personnel and subordinates</p> <p>16.72 1.7 Sequence and timings of start up or shut down of equipment and systems is determined by the actual condition of plant and the nature of any malfunction</p> <p>16.73 1.8 Abnormal operation of plant is minimised, commensurate with overall vessel safety.</p>

<p>17. 2.</p>	<p>17.74 2.1 Operations are planned and carried out in accordance with established safety rules and regulations</p> <p>17.75 2.2 Need for alterations to routine operations are fully identified and justifiable</p> <p>17.76 2.3 Revised alterations to parameters and methods minimise the risk of plant damage and disruption to operations</p> <p>17.77 2.4 Output is maintained as close to actual demand as the nature of any fault or condition permits</p> <p>17.78 2.5 Necessary alterations to output are made in good time and agreed with affected personnel</p> <p>17.79 2.6 Revised parameters and methods are clearly and accurately communicated to all relevant operational personnel and subordinates</p> <p>17.80 2.7 Abnormal operation of plant is minimised, commensurate with overall vessel safety.</p>
<p>18. 3.</p>	<p>18.81 3.1 Operations are planned and carried out according to established safety rules and regulations</p> <p>18.82 3.2 Need for alterations to routine operations are fully identified and justifiable</p> <p>18.83 3.3 New demand requirements are identified in sufficient time for safe operation</p> <p>18.84 3.4 Preparations for alterations in output comply with <i>good engineering practices and principles</i></p> <p>18.85 3.5 Timing and sequence of adjustments during alteration of output consistently meet the requirements of the operation</p> <p>18.86 3.6 Revised output matches demand as closely as the nature of any faults or conditions allows</p> <p>18.87 3.7 Abnormal operation of plant is minimised, commensurate with overall vessel safety.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Operations	<ul style="list-style-type: none"> • start up and shut down of plant • on request for assistance • necessary for malfunctioning plant, for example for safety of navigation • necessary for operating outside normal parameters • alterations in output of more than 10% • manual adjustment of controls to achieve new demand • monitoring of remote operation.
Safety rules and regulations	<ul style="list-style-type: none"> • codes of safe working practice • enterprise safety regulations • occupational health and safety standards.
Plant	<ul style="list-style-type: none"> • includes: electrical systems auxiliary systems.
Parameters	<ul style="list-style-type: none"> • to include: pressure level flow temperature speeds voltage electrical power electrical frequency.
Communicated	<ul style="list-style-type: none"> • by the following methods: verbally in writing.
Good engineering practices and principles	<ul style="list-style-type: none"> • communicating with those affected by changes • considering all occupational health and safety issues • making and implementing contingency plans • calculating, estimating and testing of safe working loads for new work • considering the effect of changes on other systems.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- plant operating instructions
- operating parameter values
- possible problems and faults that could occur
- different types and variations of systems likely to be encountered in the different types of marine system
- regulations affecting operations, for example safety, statutory and organisational
- alarm and emergency shut down parameter values
- methods of operation of control systems
- procedures relating to:
 - sequence and timing of operations and alterations to operations
 - emergency shut down and emergencies
 - isolation procedures and likely hazards
 - likely problems that could occur and how to deal with them
 - reporting inability to start up or shut down
- principles relating to:
 - operation of marine plant and other related systems
 - engineering sufficient to recognise operational limitations when operating outside normal parameters and to be able to redefine them
 - running plant outside normal parameters
 - engineering for the safe operation of plant, such as safe working loads, torques, vectors.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- diagnosing faults, repairing, modifying and planning the maintenance of electrical systems:
 - electrical generation control systems
 - integration of multiple generation units
 - electrical distribution and control systems
- diagnosing faults, repairing, modifying and planning the maintenance of auxiliary services:
 - steering gear and equipment
 - domestic systems
 - compressed air systems
 - bilge pumping systems
 - refrigeration and air conditioning systems
 - hydraulic systems
- controlling operations such as:
 - start up from hot, warm and cold conditions
 - start up to full operating condition

Metal and Engineering Training Package

SFISHIP304A Manage the Operation of Auxiliaries and Service Plant Outside Normal Parameters

- start up to stand by condition
- emergency and partial emergency shut down
- shut down of malfunctioning equipment
- controlling modes of operation such as:
 - monitoring remote operation
 - setting restrictions on remote operation
 - local manual operation
 - emergency modes of operation
- making adjustments:
 - single
 - multiple.

Literacy skills used for:

- reading manufacturer's instructions.

Numeracy skills used for:

- monitoring
 - pressure
 - flows
 - temperatures
 - levels
 - speeds
 - vibrations
 - expansion
 - emissions
 - abnormalities.

Critical aspects of evidence

Assessment must confirm the ability to manage the operation of auxiliary and service plant outside of normal operating parameters and methods when required by the needs of overall vessel safety or safe operation during malfunction.

Ability to:

- identify a need for change in parameters and methods
- implement operations
- revise operating parameters and methods
- agree actions and communications
- identify changes in requirements
- alter output
- diagnose defective systems and plant
- devise remedies that maximise the output of systems and plant.

Knowledge of:

safe operation of all auxiliaries and service plant on the vessel.

Interdependent assessment of units

This unit may be assessed with:

Metal and Engineering Training Package

SFISHIP304A Manage the Operation of Auxiliaries and Service Plant Outside Normal Parameters

- SFISHIP305A Manage the operation of low powered marine diesel engines outside normal parameters.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- fully operational surveyed vessel with the range of equipment described
- realistic simulations of engineering systems.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	3	3	2	3	3	3

SFISHIP305A • Manage the operation of low powered marine diesel engines outside normal parameters

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves managing the necessary operation of marine diesel propulsion plant and associated systems outside of normal parameters and methods when required by the needs of overall vessel safety or safe operation during malfunction.

Element of Competency	Performance Criteria
19. 1.	<p>19.88 1.1 <i>Operations</i> are planned and carried out according to established <i>safety rules and regulations</i></p> <p>19.89 1.2 Need for alterations to routine operations are fully identified and justifiable</p> <p>19.90 1.3 Timing and degree of preparation of <i>plant</i> is appropriate to the actual condition of plant and the nature of any malfunction</p> <p>19.91 1.4 Planned alterations to <i>parameters</i> and methods are confirmed with all affected personnel</p> <p>19.92 1.5 Revised alterations to parameters and methods minimise the risk of plant damage and disruption to operations</p> <p>19.93 1.6 Revised parameters and methods are clearly and accurately <i>communicated</i> to all relevant operational personnel and subordinates</p> <p>19.94 1.7 Sequence and timings of start up or shut down of equipment and systems is determined by the actual condition of plant and the nature of any malfunction</p> <p>19.95 1.8 Abnormal operation of plant is minimised, commensurate with overall vessel safety.</p>

Metal and Engineering Training Package

SFISHIP305A Manage the Operation of Low Powered Marine Diesel Engines Outside Normal Parameters

20. 2.	20.96	2.1	Operations are planned and carried out according to established safety rules and regulations
	20.97	2.2	Need for alterations to routine operations are fully identified and justifiable
21.	21.98	2.3	Revised alterations to parameters and methods minimise the risk of plant damage and disruption to operations
	21.99	2.4	Output is maintained as close to actual demand as the nature of any fault or condition permits
	21.100	2.5	Necessary alterations to output are made in good time and agreed with affected personnel
	21.101	2.6	Revised parameters and methods are clearly and accurately communicated to all relevant operational personnel and subordinates
	21.102	2.7	Abnormal operation of plant is minimised, commensurate with overall vessel safety.
22. 3.	22.103	3.1	Operations are planned and carried out according to established safety rules and regulations
	22.104	3.2	Need for alterations to routine operations are fully identified and justifiable
	22.105	3.3	New demand requirements are identified in sufficient time for safe operation
	22.106	3.4	Preparations for alterations in output comply with <i>good engineering practices and principles</i>
	22.107	3.5	Timing and sequence of adjustments during alteration of output consistently meet the requirements of the operation.
	22.108	3.6	Revised output matches demand as closely as the nature of any faults or conditions allows
	22.109	3.7	Abnormal operation of plant is minimised, commensurate with overall vessel safety.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Operations	<ul style="list-style-type: none"> • start up and shut down of plant • on request for assistance • necessary for malfunctioning plant, for example, for safety of navigation • necessary for outside normal parameters and methods • alterations in output of more than 10% • manual adjustment of controls to achieve new demand • monitoring of remote operation.
Safety rules and regulations	<ul style="list-style-type: none"> • codes of safe working practice • enterprise safety regulations • occupational health and safety standards.
Plant	<ul style="list-style-type: none"> • includes: high or medium speed diesel engines gearbox and shafting auxiliaries systems necessary to move the vessel.
Parameters	<ul style="list-style-type: none"> • to include: pressure level flow temperature speeds.
Communicated	<ul style="list-style-type: none"> • by the following methods: verbally in writing.
Good engineering practice and principles	<ul style="list-style-type: none"> • communicating with those affected by changes • considering all occupational health and safety issues • making and implementing contingency plans • calculating, estimating and testing of safe working loads for new work • considering the effect of changes on other systems.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- plant operating instructions
- operating parameter values
- possible problems and faults that could occur
- the different types and variations of systems likely to be encountered as marine plant
- regulations affecting operations for example safety, statutory and organisational
- alarm and emergency shut down parameter values
- methods of operation of control systems
- procedures relating to:
 - the sequence and timing of operations and alterations to operations
 - emergency shut down and emergencies
 - isolation procedures and likely hazards
 - likely problems that could occur and how to deal with them
 - reporting inability to start up or shut down
- principles relating to:
 - the operation of marine plant and other related systems
 - engineering science sufficient to recognise operational limitations when operating outside normal parameters and to be able to redefine them
 - running plant outside normal parameters
 - relevant engineering science relating to the safe operation of plant.

Practical skills

The essential skills a person needs to perform work to the required standard includes, within the context of the element:

- diagnosing faults, repairing, modifying and planning the maintenance of prime mover, shafting and auxiliary systems:
 - high speed engines
 - medium speed diesel engines
 - slow speed diesel engines
 - fuel systems for diesel oil, marine diesel oil, blended fuel or heavy fuel including purification, transfer and storage
 - cooling and lubrication systems
 - shafts and propellers including controllable pitch propellers
- operations such as:
 - start up from hot, warm and cold conditions
 - start up to full operating condition
 - emergency and partial emergency shut down
 - shut down of malfunctioning equipment
- modes of operation such as:
 - monitoring remote operation
 - setting restrictions on remote operation

Metal and Engineering Training Package

SFISHIP305A Manage the Operation of Low Powered Marine Diesel Engines Outside Normal Parameters

local manual operation
emergency modes of operation

- adjustments:
single
multiple.

Literacy skills used for:

- reading operating procedures and manufacturer's guidelines
- recording results of changes made.

Numeracy skills used for:

- monitoring:
pressure
flows
temperatures
levels
speeds
vibrations
expansion
emissions
abnormalities

calculating:

fuel and lubrication capacity
fuel and lubrication consumption.

Critical aspects of evidence

Assessment must confirm the ability to manage the necessary operation of marine diesel propulsion plant and associated systems outside of normal parameters and methods when required by the needs of overall vessel safety or safe operation during malfunction.

Ability to:

- identify a need for change in parameters and methods
- implement operations
- revise operating parameters and methods
- agree actions and communications
- identify changes in requirements
- alter output
- diagnose defective systems and plant
- devise remedies that maximises the output of systems and plant.

Knowledge of:

- safe operation.

Interdependent assessment of units

This unit may be assessed with:

- SFISHIP304A Manage the operation of auxiliaries and service plant outside normal parameters.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- fully operational surveyed vessel with the range of equipment described
- realistic simulations of engineering systems.

Metal and Engineering Training Package

SFISHIP305A Manage the Operation of Low Powered Marine Diesel Engines Outside Normal Parameters

SFISHIP306A • Monitor and control navigation in an inshore area

Functional area

Vessel operations

Prerequisite Unit:
Descriptor

SFISHIP202A Contribute to safe navigation

This unit involves monitoring and controlling navigation underway and at anchor in inshore areas only.

Element of Competency	Performance Criteria
23. 1.	23.110 1.1 <i>Charts, publications and documents</i> are the most up to date versions available
	23.111 1.2 Charts, publications and documents used reflect regular and accurate correction
	23.112 1.3 Presentation and filing of navigational warnings conforms to an approved format
	23.113 1.4 Handling and storage of charts and publications promotes their access, utility and length of life
	23.114 1.5 Chart correction records are accurate and conform to an approved format
	23.115 1.6 Information that is new or updated is selected from <i>relevant sources</i> at appropriate intervals.
24. 2.	24.116 2.1 <i>Primary position fixing</i> method selected is the most appropriate to the existing circumstances and conditions
	24.117 2.2 Time interval between fixes is appropriate to the prevailing navigation conditions
	24.118 2.3 Position is accurately obtained within acceptable instrument or system errors
	24.119 2.4 Continuous monitoring is used in addition to historic fixes
	2.5 Performance checks and tests of navigation position fixing systems comply with manufacturer's recommendations and enterprise procedures

Metal and Engineering Training Package

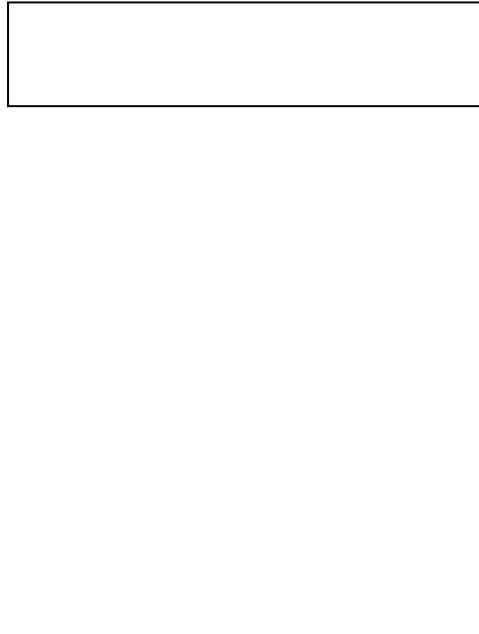

SFISHIP306A Monitor and Control Navigation in an Inshore Area

25.	25.120	2.6	Position of the vessel is recorded in a manner that complies with enterprise and <i>navigational rules and procedures</i>
	25.121	2.7	Verification of primary position fixing is frequent, regular and utilises the most appropriate method.
26. 3.	26.122	3.1	Decisions required for <i>amendments</i> to course or speed are timely, obvious and in accordance with accepted navigation practice
	26.123	3.2	Actions taken to alter the vessel's course or speed are timely and comply with the International Regulations for Preventing Collisions at Sea
	26.124	3.3	Vessel is navigated at a safe speed appropriate to the existing circumstances and conditions
	26.125	3.4	Adjustments made to the vessel's course and speed are effective and do not put the vessel at risk with respect to other traffic or hazards
	26.126	3.5	Adjustments made to the vessel's course and speed take account of overall passage plan requirements
	3.6		Signals relevant for manoeuvring required by the International Regulations for Preventing Collisions at Sea are made at the appropriate time
	3.7		Confirmation of the effectiveness of adjustments to course and speed is timely and utilises appropriate navigation techniques
	3.8		Operating limits of vessel propulsion, steering and power systems are not exceeded in normal manoeuvres.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Charts, publications and documents	<ul style="list-style-type: none"> • navigational charts • publications from the Australian Hydrographer or British Admiralty: <ul style="list-style-type: none"> radio signals light lists sailing directions tide tables catalogues • navigation warning records.
Relevant sources	<ul style="list-style-type: none"> • of information from: <ul style="list-style-type: none"> annual and weekly notices to mariners radio navigation warnings navigation warning files local navigation warnings.
Position fixing	<ul style="list-style-type: none"> • using methods of: <ul style="list-style-type: none"> visual RADAR continuous position monitoring.
Navigational rules and procedures	<ul style="list-style-type: none"> • collision • International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW), 1975 • USL code.
Amendments	<ul style="list-style-type: none"> • routines to be maintained when in charge of the bridge watch: <ul style="list-style-type: none"> during the day at night in narrow waters in coastal waters in severe weather conditions in poor visibility when under pilotage or at anchor

- of course or speed to:
 - avoid collision
 - correct for actual deviation from track
 - correct for anticipated deviation
 - correct for compass errors
 - avoid severe weather
- such as:
- stopping
 - going astern
 - manoeuvring in the vicinity of pilot vessels and other craft
 - picking up a pilot and regulatory personnel
 - turning short around
 - bringing the vessel up to a single anchor in an emergency
 - crew overboard.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- principles relating to:
 - passage planning
 - RADAR and automated plotting sufficient to understand their limitations and safe use
 - operation of RADAR equipment
 - ship stability with respect to angles of heel, lists, rolling and pitching
 - cause and effects of gyro and magnetic compass error
 - meteorology in sufficient depth to interpret weather forecasts, forecast weather for the watch by reference to physical observation, and identify imminent changes in weather
 - meteorology in sufficient depth to forecast wind speed and direction to estimate the sea state resulting from weather, fetch, swell and current
 - gyro compass
 - magnetic compasses
 - operation of Doppler and electromagnetic logs
 - echo sounding equipment
 - causes of tides and currents
 - effects of shallow water and narrow channels
 - manoeuvring characteristics of the vessel and the factors affecting it
 - interaction between vessels
 - transverse thrust
 - limitations of bow thrusters

- tugs
- other manoeuvring systems where performance evidence is sought
- procedures relating to:
 - ordering procedures for charts and publications and any system designed to automatically order new editions and replacements
 - cross checking information contained in notices to mariners to ensure the validity of charts and publications
 - occasions when convention is to seek assistance
 - information necessary to hand over a bridge watch
 - government and enterprise requirements for performance checking and recording
 - selection of primary and secondary position fixing methods from those available
 - frequency of position fixing
 - methods and use of the various position fixing systems
 - assessing the risk of collision by visual, RADAR and automatic plotting
 - use of helm and engines
 - assessing leeway
 - assessing set and drift
 - maintaining a proper lookout
 - communicating with bridge and engine room personnel
 - emergency manoeuvres
 - obtaining general meteorological information
 - obtaining information specific to the nature of a cyclone as it affects the operation
- symbols and abbreviations contained in charts and publications
- content of all navigational charts and publications available to the mariners contained in the chart catalogue
- chart folio system
- International Regulations for Preventing Collisions at Sea
- bridge procedures guides
- enterprise guidelines
- International Maritime Organisation (IMO) operational guidance for officers in charge of a navigational watch.
- further references to keeping a safe navigational watch contained in marine notices
- different types of anchor and their advantages
- bridge equipment and the possible types of faults and how they could affect safe navigation
- forces affecting the vessel in a seaway and how it is constructed to counter them
- buoyage systems
- fixed and variable errors on navigational systems including RADAR
 - operational control and adjustment of navigation systems including RADAR
 - expected reliability of fixes from the various navigation systems
 - steering and sailing rules contained in the International Regulations for Preventing Collisions at Sea (COLREG)
 - specific local regulations where applicable
 - effect of tides and currents on vessel track
 - a particular vessel's manoeuvring characteristics
 - practical limitations of the vessel's manoeuvring equipment and propulsion systems
 - information available on charts especially latitude, longitude, depth, distance and direction
 - effect of wind direction and speed and sea state

effect of cyclones on operations.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- laying off coastal passage plan
- monitoring:
 - traffic by radar, visual and aural methods
 - weather
 - the safety of the vessel and personnel
 - bridge equipment and instrumentation including performance checks, tests and identification of errors
 - position
- meteorology sufficient to forecast wind direction and speed and sea state
- obtaining information and assistance from:
 - colleagues
 - heads of department
 - skipper
- use RADAR to obtain optimal tuning for:
 - ranges
 - bearings
 - combinations
 - traffic targets
- use satellite navigation systems
- use continuous position monitoring:
 - parallel indexing techniques
 - observation of buoyage
 - use of echo sounding equipment
 - dead reckoning
- identifying anchorages:
 - in open waters
 - in restricted waters
- identifying causes of deviations from track:
 - wind
 - current
 - tide
 - sea state
- assessing:
 - risk of collision by visual means, RADAR and automatic plotting
 - magnitude and direction of leeway
 - set, rate and drift of current
 - position of a cyclone in order to make a decision on course of action including location of positions to seek shelter
- altering course and speed to:
 - return the vessel to a planned track when deviated
 - maintain a desired course made good
 - avoid a risk of collision when obliged to give way or stand on
- performing standard manoeuvres:
 - stopping
 - going astern

Metal and Engineering Training Package

SFISHIP306A Monitor and Control Navigation in an Inshore Area

- manoeuvring in the vicinity of pilot vessels and other craft
- picking up a pilot
- turning short around
- performing emergency manoeuvres:
 - bringing the vessel to a single anchor in an emergency
 - crew overboard
 - manoeuvres to minimise danger in the event of an imminent collision
 - turning in heavy weather
- using various vessel configurations:
 - fixed and controllable pitch propellers
 - single and twin screw
 - thrusters
 - nozzles
 - hull shape and factors.

Literacy skills used for:

- recording information:
 - on charts
 - in enterprise records
 - for supply to other personnel
 - to include notes on abnormalities or difficulties in operation
- reading information from:
 - charts
 - radio navigation warnings
 - lists of radio signals
 - light lists
 - sailing directions
 - catalogues.

Numeracy skills used for:

- reading:
 - tide tables
 - calculating time, speed and distance parameters.

Critical aspects of evidence

Assessment must confirm the ability to monitor and control the vessel in an inshore area by performing navigational tasks such as position fixing and course alterations.

Ability to:

- correct, update and replace charts and publications
- handle and store charts and publications
- maintain files of navigation warnings, if applicable
- ensure light and sound signals agree with existing circumstances and conditions
- ensure a proper lookout is maintained
- test and check bridge equipment
- identify hazards
- call the skipper
- comply with accepted navigational methodology and the skipper's requirements for

position fixing

- obtain, correct and plot position lines and positions on navigational charts
- comply with requirements and recommendations for the testing of position fixing systems for reliability
- make an assessment of a range of situations
- comply with the International Regulations for Preventing Collisions at Sea (COLREG)
- act effectively
- safely operate a vessel's manoeuvring system
- safely and effectively execute a range of manoeuvres
- control manoeuvres
- select steering systems.

Knowledge of:

- checking information or status and seeking assistance where necessary.

Interdependent assessment of units

This unit may be assessed after:

- SFISHIP202A Contribute to safe navigation.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- fully operational vessel with a range of buoyage, traffic and navigational conditions
- suitable simulations of the same.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	2	2	3	2	3

SFISHIP307A Plan maintenance for marine engineering systems

Functional area

Vessel operations

Prerequisite Unit/s: **nil**
Descriptor

This unit involves defining maintenance requirements and the short term planning and resourcing of maintenance for marine engineering and ancillary systems and equipment.

Element of Competency	Performance Criteria
Define <i>maintenance requirements for marine engineering and ancillary systems</i>	<p>Data on the factors affecting current or potential engineering maintenance is obtained from appropriate sources</p> <p>Interpretation and format of collated information is appropriate to determining maintenance requirements</p> <p><i>Information</i> on forecast condition is accurate with respect to known rates of deterioration</p> <p>Levels of priority and timing of maintenance requirements are accurately identified with respect to overall vessel safety, commercial operations and enterprise considerations</p> <p>Maintenance requirements are achievable and relevant to the needs and demands of safe and efficient plant operation.</p>
Plan the short term implementation of marine engineering and ancillary maintenance	<p>Maintenance <i>plans</i> project maintenance evenly over available time scale</p> <p>Maintenance plans are within the constraints of time, personnel and resources available</p> <p>Maintenance plans coordinate maintenance to minimise interdepartmental conflict</p> <p>Work methods and activities that are consistent with current operation priorities, enterprise objectives and government requirements and include opportunities for individual development</p> <p>Work methods and activities optimise the use of available material, capital and people and plans are made in close consultation with other departments</p> <p>Work methods and activities are specified to ensure maintenance objectives are achieved</p> <p>Plans are recorded in a suitable format for reference and comply with statutory and enterprise requirements.</p>
Organise resources for maintenance of marine engineering and ancillary systems	<p><i>Resource</i> requirements accurately match the projected demand obtained from maintenance plans and schedules</p> <p>Estimates of resource needs are supported by appropriate calculations</p> <p>Selection of resources is based on consideration of all relevant</p>

aspects of supply

Alternatives to first choice resources are acceptable within operating performance specification and enterprise, logistical and budgetary constraints

Refurbishments of replaced parts are correctly achieved within budgetary and re-use constraints.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Maintenance requirements

- with respect to:
 - long term maintenance programmes (one year and over)
 - short term implementation plans (one week to a month)
 - daily schedules including repair maintenance
 - production of specifications for maintenance in refit
 - data recording
 - routine maintenance and servicing
 - restoration and repair
 - protection from the environment.

Marine engineering and ancillary systems

- such as:
 - mechanical equipment and systems
 - electrical generation and transmission systems
 - control and instrumentation
 - safety equipment.

Information	<ul style="list-style-type: none">• regarding: maintenance intervals actual and desired condition routine servicing requirement restoration and repair requirements availability of resources safety requirements and precautions• sources compiled from: own experience and database classification society and statutory survey requirements manufacturers manuals and schedules actual condition forecast condition enterprise requirements, maintenance records, maintenance plans.
Plans	<ul style="list-style-type: none">• such as: short term implementation plans (one week to a month) daily schedules including repair maintenance• covering: resources methods and procedures safety precautions limits of responsibility quality requirements quantity requirements.
Resource	<ul style="list-style-type: none">• types include: personnel spares consumables.
Aspects of supply	<ul style="list-style-type: none">• to include: cost availability quantity quality standards.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- maintenance objectives and plans
- enterprise policies and procedures regarding long term and day-to-day maintenance
- consequences of not carrying out maintenance
- marine engineering systems and their component parts
- specific hazards involved with machinery systems and maintenance resources
- maintenance objectives, priorities and plans
- company policies and procedures regarding productivity, quality and working conditions
- legislation relating to work methods and health and safety
- vessel and enterprise objectives, priorities and plans
- relevant company policies and procedures
- profitability, productivity and financial control
- vessel and company procedures for resource allocation
- principles relating to:
 - assessing and evaluating information in terms of relevance, reliability, sufficiency and implications
 - obtaining information on maintenance requirements
 - organisation information to assist planning
 - evaluating information
 - establishing, defining and reviewing objectives and performance measures, including project planning and resource allocation
 - using an analytical approach to assess and optimise the use of resources
 - applying relevant legislation to actual and proposed circumstances
 - selection of resources
 - identify alternative resources
 - organisational methods for supply of resources
 - organisational procedures for contractors and specialists
- all aspects of maintenance for which the officer is responsible
- the effects the marine environment has on the vessel specifically with respect to machinery maintenance
- the different types of material used in ship and machinery construction and their properties
- the requirements for statutory and classification surveys
- work objectives and related performance measures and success criteria
- principal risks and contingent factors affecting maintenance activities
- resources available for maintenance
- acceptable types of work methods
- permit to work systems
- availability of resources.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- performing, organising and planning the maintenance required for:
 - long term maintenance programmes (one year and over)
 - short term implementation plans (one week to a month)

Metal and Engineering Training Package

SFISHIP307A Plan Maintenance for Marine Engineering Systems

- daily schedules including repair maintenance
- the production of specifications for maintenance in re-fit
- maintaining and planning the maintenance on marine engineering systems with respect to:
 - prime mover, shafting and associated auxiliaries
 - instrumentation and control systems
 - steering gear and equipment
 - domestic systems
 - deck machinery
 - fixed and portable fire fighting equipment
 - electrical generation equipment and distribution equipment
- developing work plans for:
 - routing greasing and oiling
 - inspections
 - replacement of components
 - work methods and procedures
 - safety precautions
 - break down repair
 - allocation of resources
 - preparation for statutory and class surveys
 - cleaning schedules
- organising resources such as:
 - spare gear
 - stores and consumables
 - personnel.

Literacy skills used for:

- using information regarding:
 - maintenance intervals
 - actual and desired condition
 - routine servicing requirement
 - restoration and repair requirements
 - availability of resources
 - safety requirements and precautions
- using information sources compiled from:
 - own experience
 - classification organisations and statutory survey requirements
 - manufacturers' manuals and schedules
 - actual condition
 - forecast condition
 - company requirements, maintenance records, maintenance plans.

Numeracy skills used for:

- estimating resource needs including:
 - voltage, wattage and current requirements
 - power point output capacity

Critical aspects of evidence

Metal and Engineering Training Package

SFISHIP307A Plan Maintenance for Marine Engineering Systems

Assessment must confirm the ability to define maintenance requirements and ensure short term planning and resourcing of maintenance to marine engineering and related systems and equipment.

Ability to:

- collect information necessary for planning
- identify maintenance requirements for the implementation of plans
- conduct the overall planning of maintenance
- identify suitable work methods
- record work and planning
- match resources with demand
- quantify and select resources and alternatives
- refurbish used resources.

Knowledge of:

- safe and effective work procedures.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested.

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- fully operational vessel with maintenance requirements.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	3	3	1	1	1

SFISHIP401A • Ensure the seaworthiness of the vessel (simplified stability criteria)

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves ensuring that the watertight integrity and stability on a small vessel is maintained using simplified stability data.

Unit of Competency	Performance Criteria
27. 1.	<p>27.127 1.1 Work is planned and carried out in accordance with established <i>safety rules and regulations</i></p> <p>27.128 1.2 Coverage and frequency of checks and inspections on the vessel's seaworthiness complies with safety rules and regulations</p> <p>1.3 Degree of <i>vessel security</i> is commensurate with anticipated physical conditions and necessary <i>vessel operations</i></p> <p>1.4 Action taken in anticipation of environmental changes are timely and appropriate to the change</p> <p>1.5 Instructions to subordinates are clear, concise and made at an appropriate time and place</p> <p>1.6 Powered equipment is operated in accordance with manufacturer's instructions and codes of safe working practice</p> <p>1.7 <i>Action taken</i> in the event of irregularities is appropriate to their significance and designed to maximise watertight integrity</p> <p>1.8 Records on actions taken to ensure watertight integrity are complete, accurate and comply with statutory commercial and enterprise requirements.</p>
28. 2.	<p>28.129 2.1 Stability analysis and weight distribution planning are conducted at a time, frequency and scope appropriate to the proposed nature of the voyage or operation</p> <p>2.2 Weight distribution is designed to maintain the vessel within acceptable <i>stability</i> limits for all states of the voyage</p> <p>2.3 Trim, draughts and list are suitable to safely and efficiently progress all vessel operations</p>
29.	<p>2.4 Stability monitoring is conducted at a frequency and scope relevant to the nature, loaded state and speed of vessel operations, and is sufficient to ensure that stress and stability remain within acceptable limits at all times</p> <p>2.5 Action taken where weight distribution has or could exceed</p>

- | | |
|-----|---|
| | acceptable limits is prompt and designed to maximise ship safety |
| 2.6 | Spurious or false information from stability analysis is promptly recognised. |

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Carried out	<ul style="list-style-type: none"> by self and subordinates in accordance with: <ul style="list-style-type: none"> statutory requirements commercial requirements operational requirements.
Safety rules and regulations	<ul style="list-style-type: none"> codes of practice: <ul style="list-style-type: none"> International Convention on Standards of Training, Certification and Watchkeeping for Fishing Vessel Personnel (STCW) 1995 USL Code codes of safe working practices company and organisation safety at work rules and regulations.
Vessel security	<ul style="list-style-type: none"> openings: <ul style="list-style-type: none"> vent hatches ducting lifting appliances and associated equipment stores and equipment large objects likely to be moved in a seaway other means of avoiding damage flooding and ensuring safe access security at cargo stowage assessment of possibility of cargo shift.
Vessel operations	<ul style="list-style-type: none"> operations involving loading, discharging and shifting of weights or fluids overall passage as consumables are used or replenished commercial operations.

Action taken	<ul style="list-style-type: none">• as a routine• prior to departure• on completion of operations or maintenance• in anticipation of change in environmental conditions.
Stability	<ul style="list-style-type: none">• transverse stability (static)• longitudinal stability (trim)• free surface effect.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- function of all items concerning masses affecting seaworthiness including liquid stowage and baffle effect
- construction of vessels and information available on ship's plans
- possible effects of moving objects in heavy weather
- enterprise policies and procedures relating to ensuring seaworthiness
- possible effects of heavy weather on vessel's structure
- occupational health and safety regulations
- principles and methods of ensuring water tight integrity
- weather and weather systems sufficient to anticipate heavy weather
- possible damage that can be caused by severe motion affecting the vessel, including cargo shift
- effects of heavy weather on main plant and associated systems
- factors which may cause problems with ensuring watertight integrity and contingency measures to deal with them
- systems for monitoring effectiveness of watertight integrity
- hydrostatic stability data and maximum loading conditions
- various factors affecting the position of the center of gravity and the effects of its position on the stability of the vessel especially during loading operations
- factors affecting GZ curves
- dangers to vessels with large angles of heel and precautions to be taken when righting them
- relevant notices to mariners
- the effects of bilging or flooding and the principles of damage control
- specific effects on stability and stress caused by the type of vessel or the nature of the operation
- possible causes of cargo shift.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- using power operated equipment such as cranes, derricks, winches, power-blocks and deck hatches within stability limits
- checking and inspecting vessel for seaworthiness
- securing gear using lashing, tomming, pound boards and patent securing arrangements
- loading, discharging and transferring stores, operational equipment, cargo, ballast fuel and consumables within stability limits.

Literacy skills used for:

- reading and interpreting:
 - codes of practices and regulations
 - manufacturer's instructions
 - weather data
 - keeping and maintaining records.

Numeracy skills used for:

- reading simplified stability data.

Critical aspects of evidence

Assessment must confirm the ability to ensure that the watertight integrity and stability of a small vessel is maintained using simplified stability data.

Ability to:

- comply with safety procedures
- check and inspect vessel for seaworthiness
- secure the vessel
- use power operated equipment
- anticipate and forecast change
- issue instructions
- deal with irregularities
- maintain records
- plan and analyse stability and stress for the proposed voyage
- ensure list, trim and stability is acceptable for vessel operations
- monitor vessel's stability by self and subordinates
- take remedial action to correct stability condition
- ensure stability analyses are reliable
- ensure adequate GM during lifting operations
- recognise causes and effects of free surface effect.

Knowledge of:

- the various factors effecting the position of the center of gravity and the effects of its position on the vessel including virtual rise of GM and free surface effect.

Metal and Engineering Training Package

SFISHIP401A Ensure the Seaworthiness of the Vessel (Simplified Stability Criteria)

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral answers to questions
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- power operated equipment
- surveyed vessel
- appropriate weather data systems
- simulator.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	3	2	1	2	1	2

SFISHIP403A • Monitor and control search and rescue operations

Functional area

Vessel operations

Prerequisite Unit/s: nil
Descriptor

This unit involves monitoring, controlling and undertaking search and rescue operations at sea. The action may be in response to instructions or requests received from an external agency.

Element of Competency	Performance Criteria
30. 1.	30.130 1.1 Distress and emergency signals are recognised immediately
	30.131 1.2 Communications relating to the distress comply with <i>international regulations and procedures</i>
	30.132 1.3 Identification derived on the position and nature of the distress is the most comprehensive information given
	30.133 1.4 Reports of the distress made to personnel are complete and at a time appropriate to the nature of the distress
	30.134 1.5 Further action complies with contingency planning and skipper's instructions.
31. 2.	31.135 2.1 <i>Level and nature of the assistance</i> provided is based on a realistic assessment of the practicability and ability of <i>own vessel</i> to help
	31.136 2.2 <i>Communications</i> are maintained in line with international regulations and procedures
	2.3 Plans for search and rescue procedures are designed to minimise risk to own vessel and crew and comply as close as possible with maritime search and rescue plans
	31.137 2.4 Organisation and command chain with other stations involved in the distress complies with maritime search and rescue plans
	31.138 2.5 Manoeuvres to implement search and rescue are taken promptly and with due regard to the existing circumstances and conditions
32.	2.6 Duration of search and rescue is appropriate to the level and nature of distress and the existing circumstances and conditions
	2.7 Records of the incident are complete and accurate and comply with statutory requirements.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Respond	<ul style="list-style-type: none"> • actions are taken within the limitations of the individual's responsibility when in charge of a navigational watch: <ul style="list-style-type: none"> identify communicate inform and seek advice establish distress position implement contingency plans • sources of distress signal or request for assistance include: <ul style="list-style-type: none"> ship at sea land based search and rescue coordination centre • in areas such as: <ul style="list-style-type: none"> narrow waters coastal waters ocean waters.
Signals	<ul style="list-style-type: none"> • radio: <ul style="list-style-type: none"> distress urgency safety • visual.
International regulations and procedures	<ul style="list-style-type: none"> • International Regulations for the Preventing Collisions at Sea (COLREG) 1972 • International Convention on Standards of Training, Certification and Watchkeeping (STCW), 1978 • USL code.

Level and nature of the assistance	<ul style="list-style-type: none">• record and relay distress• rendezvous with distress• implement search and rescue procedures: as only vessel involved as instructed.
Own vessel	<ul style="list-style-type: none">• only respondent to the distress• one of a number of respondents.
Communications	<ul style="list-style-type: none">• with the: distress other vessels search and rescue authorities aircraft.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due to its likely inclusion in a group of units that may be used as the basis for the issue of licences by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- distress and emergency signals
- nature of information required from a vessel in distress
- specific types of distress, for example, submarine sunk, aircraft down
- communications procedures in an emergency
- initial actions to be taken on sighting or receiving a distress signal
- procedures to be taken upon sighting a wreck, derelict or hazard to navigation
- type of response expected to distress, urgency and safety signals
- principles determining the length and duration of a search
- drift patterns of disabled vessels in relation to wind and current
- difficulties in sighting various types of vessel, aircraft and survival craft
- search and rescue procedures
- chain of command for search and rescue coordination
- procedures for taking survivors on board.

Metal and Engineering Training Package

SFISHIP403A Monitor and Control Search and Rescue Operations

Practical skills

The essential skills a person needs to perform work to the required standard include:

- recognising the distress signals listed in the current International Rules for Preventing Collisions at Sea
- fixing position of distress
- devising and charting a search plan.

Literacy skills used for:

- making log entries.

Numeracy skills used for:

- recording data.

Critical aspects of evidence

Assessment must confirm the ability to monitor and control search and rescue operations at sea.

Ability to:

- obtain and provide information on a distress
- initiate search and rescue action
- provide contingency plans
- manage a watch after receipt of a distress signal.

Knowledge of:

- distress signals.

Interdependent assessment of units

This unit may be assessed after/with:

- nil.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- search and rescue scenarios
- real or simulated distress signals
- appropriate international regulations and procedures.

Key competencies

Metal and Engineering Training Package

SFISHIP403A Monitor and Control Search and Rescue Operations

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	2	3	1	2	1

SFISHIP501A Control overall safety of navigation operations

Functional area

Vessel operations

Prerequisite Unit/s:
Descriptor

nil

This unit involves directing navigational personnel and issuing guidelines and instructions.

Element of Competency	Performance Criteria
<p>Define navigational policy for the voyage</p>	<p><i>Instructions and orders</i> are clear, implicit and comply with enterprise procedures</p> <p>Instructions and orders are based on up to date and reliable <i>information</i> and relate to the specific requirements of the <i>voyage</i></p> <p>Limits of responsibility are clearly defined</p> <p>Planned contingency action complies with <i>good navigational practice</i> and relates to realistic scenarios</p> <p>Necessary instructions reflect the differing navigational experience of personnel and the specific requirements of the voyage</p> <p>Crew are selected and instructed on operational practices to meet compliance and enterprise requirements.</p>
<p>Provide navigation support when required</p>	<p><i>Assessment</i> of the situation is complete and made at an optimum time with respect to the existing circumstances</p> <p><i>Advice</i> offered is timely, effective and best suited to the existing circumstances</p> <p>Necessary immediate <i>action</i> is effective and reflects the urgency of the situation</p> <p>Times and occasions for taking control of navigation recognise the competence of subordinate personnel and the complexity of the situation</p> <p>Written instructions are complete and reflect good navigation practice, enterprise and government</p>

Action taken maximises the navigational safety of the vessel at all times and complies with good navigational practice.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Instructions and orders	include: navigation standing orders limitations and guidelines for passage planning contingency plans for navigational incidents.
Information	from: own experience other departments navigational personnel publications outside bodies, for example, weather routing services radio stations.
Voyage	inshore offshore Australian coastal and middle waters world wide.
Good navigational practice	International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW), 1978 International Regulations for Preventing Collisions at Sea (COLREG), 1972.
Assessment	on arrival on bridge at regular intervals.
Advice	given: verbally in writing.

Action	monitoring subordinates advising subordinates relieving subordinates taken: on request for specified situations during contingencies when considered necessary.
---------------	--

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- vessel and company objectives, priorities, plans and delegation of responsibility with respect to safe navigation
- relevant company policies and procedures regarding navigational management
- navigational quality and working conditions
- application of legislation and international requirements
- operation of machinery and control systems
- vessel navigational objectives and plans
- operational procedures regarding navigation including approval of passage planning
- relevant navigational policies and procedures
- legislative requirements
- competence of watch keeping personnel
- operation of machinery and control systems
- principles and methods relating to:
 - establishing, defining and reviewing objectives and performance measures, including resource allocation
 - identifying competence requirements in relation to forecast navigational demands
 - forming and managing bridge teams
 - identifying, defining and assessing the competence of individual navigational personnel
 - defining and allocating responsibilities and authority
 - assessing and evaluating navigation information
 - seeking and exchanging navigational information and offering advice and support
 - assessing alternative courses of action
- processes and systems relating to the control of navigation
- the likely needs and concerns of watch keeping personnel for information and advice
- the courses of action that could be taken to deal with contingencies and the likely consequences of each
- available publications and sources of advice that may be referenced
- weather forecasting and weather routing
- navigation risks and contingent factors affecting voyage objectives

severe weather conditions
action to avoid collision in multiple vessel situations.

Practical skills

The essential skills a person needs to perform work to the required standard include:

producing standing orders and contingency plans for:

- calling the skipper
- conduct in restricted visibility
- requirements for lookouts
- use of steering systems
- use and correction of charts and publications
- use of navigational aids
- the watch complement in special circumstances
- the need for checking information in order to minimise the risk of ‘one person errors’
- radio communications
- plans for emergency situations
- explicit instructions for acting as watch keeper in sole charge of a watch
- acting as a watch keeper when skipper is in charge of navigation
- acting as a watch keeper with a pilot on board

producing passage planning guide lines addressing:

- type of sailing required
- route preferences and restrictions
- prohibited and hazardous areas

receiving and providing advice in situations when:

- restricted visibility is encountered or expected
- traffic conditions or other vessels are giving rise for concern
- difficulty is experienced in maintaining course
- land, navigation marks or soundings are not sighted or obtained by the expected time
- unexpected land or navigation marks are sighted or an unexpected change in sounding occurs
- heavy weather may result in damage or imperil the vessel
- meeting any hazard to navigation
- meeting any situation where the watch keeper is in doubt

receiving and providing advice during contingencies for:

- imminent collision or collision
- stranding
- fire
- flooding
- crew overboard
- dragging anchor
- systems failure effecting navigation, including main engine, steering, compass or bridge control.

Literacy skills used for:

providing written advice for:

- night orders
- specific instructions for areas of complex navigation
- relevant sections of navigation standing orders.

Metal and Engineering Training Package

SFISHIP501A Control Overall Safety of Navigation Operations

Numeracy skills used for:

using charts and other navigational aids.

Critical aspects of evidence

Assessment must confirm ability to direct navigational personnel and to issue guidelines and instructions.

Ability to:

develop the content of orders and instructions

define the limits of responsibility

develop contingency plans

amend and update navigational information

assess the situation

advise subordinates

implement immediate action

take control of navigation

write instructions

produce effective navigational procedures.

Knowledge of:

effective navigational policy, procedures and systems.

Interdependent assessment of units

This unit may be assessed with:

- SFISHIP503A Prepare and plan the voyage.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- realistic scenarios for assessing the systems developed
- vessel simulator.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 3	2	2	3	1	2	1

SFISHIP502A • Ensure the seaworthiness of the vessel

Functional area

Vessel operations

Prerequisite Unit/s:
Descriptor

nil

This unit involves ensuring the watertight integrity, stability and security of vessels operating inshore, offshore, in Australian coastal and middle waters and/or world-wide.

Element of Competency	Performance Criteria
33. 1.	<p>33.139 1.1 Work is planned and <i>carried out</i> in accordance with established <i>safety rules and regulations</i></p> <p>33.140 1.2 Coverage and frequency of checks and inspections on the vessel's seaworthiness complies with the established safety rules and regulations</p> <p>1.3 Degree of <i>vessel security</i> is commensurate with anticipated physical conditions and necessary <i>vessel operations</i></p> <p>1.4 Action taken in anticipation of <i>environmental changes</i> are timely and appropriate to the change</p> <p>1.5 Instructions to subordinates are clear, concise and made at an appropriate time and place</p> <p>1.6 Powered equipment is operated in accordance with manufacturer's instructions and codes of safe working practice</p> <p>1.7 <i>Action taken</i> in the event of <i>irregularities</i> is appropriate to their significance and designed to maximise watertight integrity</p> <p>1.8 Records on actions taken to ensure watertight integrity are complete, accurate and comply with statutory commercial and enterprise requirements.</p>
34. 2.	<p>34.141 2.1 Stability calculations and weight distribution planning is conducted at a time, frequency and scope appropriate to the proposed nature of the voyage or operation</p> <p>2.2 Weight distribution is designed to maintain the vessel within acceptable <i>stability and stress</i> limits for all states of the voyage</p>
35.	<p>2.3 Trim, draughts and list are suitable to safely and efficiently progress all vessel operations</p> <p>2.4 Stability and stress monitoring is conducted in time and scope relevant to the nature and speed of vessel operations, and sufficient enough to ensure that stress and stability remain</p>

- within acceptable limits at all times
- 2.5 Action taken where weight distribution is compromising ship safety, is prompt and designed to maximise safety
 - 2.6 Tests and checks that are performed on computer-based stability programs are conducted at a frequency and scope that conform to manufacturer's instructions
 - 2.7 Information from stress and stability calculations that is spurious or false is promptly recognised.

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Carried out	<ul style="list-style-type: none"> • by self and subordinates in accordance with: <ul style="list-style-type: none"> statutory requirements commercial requirements operational requirements.
Safety rules and regulations	<ul style="list-style-type: none"> • codes of practice: <ul style="list-style-type: none"> International Convention on Standards of Training, Certification and Watchkeeping for Seafarers (STCW), 1978 USL Code • codes of safe working practices, including application and interpretation of information and calculations in vessel stability booklet • enterprise safety at work rules and procedures.
Vessel security	<ul style="list-style-type: none"> • openings • lifting appliances and associated equipment • stores and equipment • large objects likely to be moved in a seaway • other means of avoiding damage • flooding and ensuring safe access • at cargo stowage • assessment of possibility of cargo shift.
Vessel operations	<ul style="list-style-type: none"> • operations involving loading, discharging and shifting of weights • overall passage as consumables are used or replenished • commercial operations • periods of re-fit including dry-docking.

Environmental changes	<ul style="list-style-type: none">• weather• tides• current• visibility.
Action taken	<ul style="list-style-type: none">• as a routine• prior to departure• on completion of operations or maintenance• in anticipation of change in environmental conditions.
Irregularities	<ul style="list-style-type: none">• flooding• heavy weather damage• damage to watertight sealing arrangements.
Stability and stress	<ul style="list-style-type: none">• transverse stability, both dynamic and static• longitudinal stability• free surface effect• torsion• bending moments• shear forces• damage stability.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- function of all aspects of loadline items for all areas affecting seaworthiness
- construction of vessels and the information available on ship's plans and stability parameters
- company policies and procedures relating to ensuring seaworthiness
- possible effects of heavy weather on ship's structure
- health and safety regulations
- principles of vessel stability
- principles and methods relating to ensuring watertight integrity
- weather and weather systems sufficient to anticipate heavy weather
- possible damage that can be caused by severe motion effecting the vessel
- the effects of heavy weather on the plant and associated systems
- factors which may cause problems with ensuring watertight integrity and contingency measures to deal with them
- systems for monitoring effectiveness of watertight integrity
- possible causes and effects of cargo shift.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- using power operated equipment such as cranes, derricks, winches, power-blocks and deck hatches
- checking and inspecting vessel for seaworthiness
- securing the vessel using lashing, tomking, pound boards and patent securing arrangements
- issuing instructions.

Literacy skills used for:

- reading and interpreting:
 - codes of practices and regulations
 - manufacturer's instructions
 - weather data
- keeping and maintaining records.

Numeracy skills used for:

- reading and calculating hydrostatic stability and stress data.

Critical aspects of evidence

Metal and Engineering Training Package

SFISHIP502A Ensure the Seaworthiness of the Vessel

Assessment must confirm the ability to ensure that the watertight integrity and stability is maintained on vessels involved in unlimited operational areas.

Ability to:

- comply with safety procedures
- check and inspect vessel for seaworthiness
- secure the vessel
- use power operated equipment
- anticipate and forecast weather change
- issue instructions
- anticipate and deal with irregularities
- maintain records
- plan and calculate stability and stress parameters for the proposed voyage
- correctly list and trim to acceptable standards for vessel operations
- monitor vessel's stability by self and subordinates
- take remedial action to correct stability condition
- ensure stability calculations are reliable
- initiate and perform tests and checks on computer-based stability programs
- perform stability and stress calculations
- ensure adequate GM during lifting operations
- recognise causes and effects of free surface effect.

Knowledge of:

- occupational health and safety rules and regulations
- hydrostatic stability and stress data
- various factors effecting the position of the centre of gravity and the effects of its position on the vessel, including virtual rise of GM and free surface effect
- factors affecting GZ curves
- stability at moderate and large angles of heel
- dangers to vessels with large angle of heel and precautions to be taken when righting them
- relevant marine notices
- effects of bilging or flooding and the principles of damage control
- torsional stress when applied to ships
- methods for compensating for discontinuity of strength, local and special stiffening
- longitudinal stability
- specific effects on stability and stress caused by type of ship or nature of trade.

Interdependent assessment of units

This unit may be assessed after/with:

- SFISHIP401A Ensure the seaworthiness of the vessel (simplified stability criteria).

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral answers to questions
- practical exercises
- project work
- observation of practical demonstration.

Resources required for assessment

Resources may include:

- power operated equipment
- surveyed vessel
- appropriate weather data systems
- stability information
- computer-based stability program
- simulator.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	3	2	1	3	1	3

SFISHIP503A . Prepare and plan the voyage

Functional area

Vessel operations

Prerequisite Unit/s:

SFISHIP306A Monitor and control navigation in an inshore area

Descriptor

This unit involves planning and recording a voyage (inshore, offshore, Australian coastal and middle waters and/or world-wide), including making amendments when on passage.

Element of Competency	Performance Criteria
Prepare a passage plan	<p>Charts and publications appropriate to the proposed <i>passage</i> are selected</p> <p>All relevant information required for an appraisal of the intended passage is obtained and collated</p> <p>Areas and safe havens in which it is possible to navigate and remain safely afloat are accurately identified</p> <p>Appropriate warnings and precautions are shown in the plan for specified areas of marine hazard</p> <p>Planned track is designed to clear hazards at as safe a distance as is practical and is within given guidelines and vessel limitations</p> <p>Courses and distances for the voyage are evaluated accurately</p> <p><i>Passage plan</i> is complete and fully documented</p> <p>Team members are briefed prior to voyage.</p>
Record and adjust the passage plan	<p>All relevant information is accurately plotted on the largest scale charts available</p> <p>Information is presented using accepted navigational notation</p> <p>Electronic navigational systems are correctly programmed and updated with passage plan information</p> <p>Records of key elements are in an approved format suitable for reference</p> <p>Approved alterations to the plan are accurately evaluated, plotted and recorded.</p>

Range of Variables

The Range of Variables places the competency in context and allows for differences between enterprises and workplaces, including practices, knowledge and requirements. The Range of Variables also provides a focus for assessment and relates to the unit as a whole. The following variables may be present.

Passage	<ul style="list-style-type: none">• from berth to berth• including: narrow waters coastal waters ocean areas.
Passage plan	<ul style="list-style-type: none">• to include evaluation and recording of: meteorological and oceanic conditions restricted visibility traffic courses and distances speeds course alteration points under keel clearance position fixing methods in high risk areas contingency plans• to be completely evaluated before commencement of voyage• to include 'on voyage' alterations made necessary during passage.

Evidence Guide

Each unit of competency has an Evidence Guide that relates directly to the Performance Criteria and the Range of Variables. Its purpose is to guide assessment of the unit in the workplace and/or training program. The following components provide information to assist this purpose.

Underpinning knowledge

The underpinning knowledge identified for this unit goes into more depth due its likely inclusion in a group of units that may be used as the basis for the issue of licenses by regulatory bodies.

The essential knowledge and understanding a person needs to perform work to the required standard includes:

- world-wide and local currents and tides
- use of sailing directions, routing charts and other routing publications
- range and characteristics of navigational marks
- availability and coverage of radio navigation systems
- world-wide and local climatological conditions
- vessel's manoeuvring characteristics
- principles relating to:
Mercator sailing
great circle sailing

Metal and Engineering Training Package

SFISHIP503A Prepare and Plan the Voyage

- composite sailing
- passage planning generally, including chart notations
- weather routing
- navigation in extremes of conditions
- tidal calculations
- features of Mercator and gnomonic charts
- continuous monitoring techniques using RADAR
- procedures relating to:
 - passage planning
 - plotting on navigational charts
 - evaluation of course and distance
 - rendezvousing with another vessel
 - operating electronic navigation equipment.

Practical skills

The essential skills a person needs to perform work to the required standard include:

- using courses and distances with Mercator and great circle sailing
- determining safe speeds, speed alterations required and the identification of areas where a change in engine status is required
- determining course alteration and wheel over positions
- determining minimum under keel clearance required in critical areas
- determining the height of tide required to:
 - pass over a point
 - pass under an obstruction
 - allow for squat and trim
- develop contingency plans for emergency situations in critical navigation areas
- determining position fixing methods:
 - identification of available methods
 - identification of points and areas where accuracy of position fixing is critical
 - recommended primary and secondary position fixing methods.

Literacy skills used for:

- reading sailing directions
- reading other sources of information
- making written instructions and annotations.

Numeracy skills used for:

- estimating time, speed and distance
- programming navigational systems.

Critical aspects of evidence

Assessment must confirm the ability to plan and record a voyage in inshore, offshore, Australian coastal and middle waters and/or world-wide, including amendments when on passage.

Ability to:

- prepare for the development of a passage plan
- 'outline plan' the route
- identify the intended route

Metal and Engineering Training Package

SFISHIP503A Prepare and Plan the Voyage

- evaluate and record key parts of the plan
- plot all relevant passage planning information on navigational charts using accepted notation
- program navigational systems to include way points on navigational systems and charts and clearing lines on RADAR systems
- record ancillary information for reference
- evaluate and record necessary alterations during passage
- highlighting zone hazards.

Knowledge of:

- resources available to assist passage planning.

Interdependent assessment of units

This unit may be assessed with:

- SFISHIP501A Control overall safety of navigation operations.

Context of assessment

Assessment is to be conducted at the workplace or in a simulated workplace environment.

Method of assessment

The following assessment methods are suggested:

- written or oral short answer testing
- practical exercises
- project work
- observation of practical demonstration.

Metal and Engineering Training Package

SFISHIP503A Prepare and Plan the Voyage

Resources required for assessment

Resources may include:

- sources of information required for passage planning
- appropriate charts covering intended routes
- navigation systems
- vessel simulator.

Key competencies

This refers to the seven areas of generic competency that underpin effective workplace practices. The Key Competencies cover the three levels of performance in the following areas:

Communicating ideas & information	Collecting, analysing & organising information	Planning & organising activities	Working with others and in teams	Using mathematical ideas and techniques	Solving problems	Using technology
Level 2	2	3	2	2	1	2

UNIT NAME	Provide emergency care
UNIT CODE	PUAEME001A
UNIT DESCRIPTOR	This unit covers the competency to provide emergency care pending the arrival of appropriately qualified personnel

ELEMENT	PERFORMANCE CRITERIA
1. Identify need for emergency care	<ol style="list-style-type: none"> 1. Initial assessment is made of extent and nature of emergency care required 2. Initial assessment is communicated to appropriate personnel in accordance with organisation's policies and procedures
2. Ensure personal safety of carer and casualty	<ol style="list-style-type: none"> 3. Hygiene is maintained for protection of self and casualty 4. Hazards to the carer are identified and appropriate action taken to safeguard against injury
3. Reassure casualty	<ol style="list-style-type: none"> 1. A calm, caring and reassuring manner is adopted in interaction with the casualty and others at the scene 2. Casualty is made comfortable using available resources
4. Assess casualty and implement emergency care procedures	<ol style="list-style-type: none"> 3. Casualty assessed for DRABC 4. Vital signs are continually monitored, recorded and any changes considered in planning treatment and reported as appropriate 5. Treatment appropriate to the casualty's injuries is provided in line with approved first aid techniques and standards 6. First aid equipment is operated in accordance with manufacturer's procedures and instructions, and organisational standards, policies. procedures and protocols 7. Casualty's condition is monitored and reported in accordance with organisation's policies and procedures and treatment modified as necessary 8. Treatment is maintained until qualified medical help takes over
5. Work cooperatively with personnel from other organisations	<ol style="list-style-type: none"> 9. Clear and comprehensive reports are provided to personnel involved in ongoing casualty care 10. Members of other emergency services are assisted in their tasks in accordance with organisation's standards and personal level of responsibility and competence
6. Recover and restore first aid equipment	<ol style="list-style-type: none"> 11. First aid equipment is recovered, cleaned, inspected/tested, stored, restocked and resupplied and medical waste disposed of safely according to organisation's policies and procedures 12. First aid equipment faults are rectified and/or reported in accordance with organisation's policies and procedures
7. Complete documentation	<ol style="list-style-type: none"> 13. Documentation is completed and processed in line with legislative, regulatory and organisation's requirements

RANGE OF VARIABLES

Conditions under which this competency may be required include	operating during any rescue or response situation including specialist rescue hazardous environmental conditions—adverse weather after dark operations difficult terrain debris traffic time pressures varying time frames—short term sudden impacts protracted response operations limited access to equipment necessitating the use of improvised techniques
Equipment may include	first aid kit personal protective equipment stretchers including improvised
Details of incident obtained from	casualty visual assessment of scene others at scene
Maintaining personal safety may include	washing hands using gloves
Caring manner may include	personal introduction and identification consistent with other priorities showing empathy communication with casualty voice tone and volume reassurance and gentle treatment all in a culturally appropriate manner
Hazards may include	bodily fluids traffic environmental hazards downed wires bystanders drugs sharps
First aid techniques and standards may include	Guidelines to Australian Resuscitation Council resuscitation standards State and Territory regulations
Others may include	family friends at scene
Appropriate action may include	protecting scene isolating scene relocating casualty

Reporting as appropriate may include	team leader supervisor medical personnel paramedical personnel emergency medical technician
Treatment includes	applying resuscitation techniques controlling bleeding managing fractures managing soft tissue injuries dressing burns and scalds
Qualified health care personnel may include	specialist personnel medical personnel
Organisation's standards, policies, procedures and protocols may include	legislation relevant to the provision of emergency care legislation relevant to the organisation operational Standard Operating Procedures operational performance standards
Reporting casualty's condition may include	need for confidentiality status on arrival treatment provided history observations made changes in conditions timeframes
Documentation may include	written reports casualty details approved forms verbal report personal notes
Moving casualty may include	individually or with assistance observing decency in regard to culture a range of manual handling techniques and lifts and carries
Processing documentation may include	providing reports to authorised personnel filing reports diary entries logs
EVIDENCE GUIDE	
Critical aspects of evidence	Competency in this unit must be established through the practical demonstration of first aid skills, maintaining universal precautions and safety awareness. Accurate documentation and a caring approach to injured persons during first aid activities are critical
Interdependent assessment of units	Pre-requisite units: PUAFIR201A Prevent injury (Fire Specific) Co-requisite units: Nil

Underpinning knowledge	Occupational health and safety guidelines for lifting and carrying systems of the body: respiratory, skeletal digestive circulatory nervous urinary skin causes and management of unconsciousness priorities for life support in emergencies including the DRABC (danger, response, airway, breathing ventilation and circulation assessments) model health department guidelines for personal hygiene Australian Resuscitation Council resuscitation guidelines applying resuscitation techniques controlling bleeding casualty assessment principles of initial casualty management management of fractures and soft tissue injuries management of burns personal level of responsibility limitations competency
Underpinning skills	remaining calm under time pressures and in difficult situations communicating verbally with casualties and others providing verbal reports to paramedical personnel completing forms writing reports following procedures working with others in a team situation
Resource implications	Access to first aid equipment used in general operations is essential
Consistency of performance	Evidence should be gathered over a period of time in a range of actual or simulated workplace environments
Context of assessment	Exercise or simulation, or a series of tasks are required to demonstrate competence in this unit. This may involve setting scenarios to be completed either individually or as a member of a team. Written or verbal questions may be used as supporting evidence

KEY COMPETENCY

Collect analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
1	1	1	1	1	1	1

UNIT NAME	Manage injuries at emergency incident
UNIT CODE	PUAEME002B
UNIT DESCRIPTOR	This unit covers competency in more advanced emergency care and may include the use of equipment

ELEMENT	PERFORMANCE CRITERIA
1. Assess of scene	<ul style="list-style-type: none"> 1. Initial assessment is made of extent and nature of emergency care required 2. Hazards to self and others are identified and appropriate action taken to safeguard against injury 3. Identify and communicate additional or specific resource requirements
2. Assess casualty	<ul style="list-style-type: none"> 4. Identified injuries are managed in line with approved emergency care 5. Treatment is monitored, assessed and management plan amended appropriately in response to changes in condition of the casualty and/or environment 6. Additional or specific resources are identified
3. Implement emergency management procedures	<ul style="list-style-type: none"> 7. Immediate life saving treatment is administered as determined 8. Signs and symptoms of shock are recognised and managed 9. Vital signs are monitored and recorded at regular intervals 10. Equipment is used according to casualty's condition, availability and to organisation's procedures
4. Move the casualty	<ul style="list-style-type: none"> 11. Moving casualty to a safer location is assessed 12. Casualty is moved in accordance with operational standards 13. Continual assessment of casualty is conducted in accordance with organisation's procedures 14. Treatment is maintained while moving patient
5. Complete documentation	<ul style="list-style-type: none"> 15. Details of casualties' condition, treatment and response to treatment are accurately recorded in line with organisation's procedures 16. Hand over of the casualty and records to medical personnel is conducted

RANGE OF VARIABLES

Treatment may include monitor vital signs
management of shock
checking and maintaining an airway
application of spinal immobilisation techniques
applying resuscitation techniques
utilisation of oxygen
managing wounds
managing fractures
use of life saving devices
giving fluids orally
use of bandages

Equipment may include oxygen resuscitation
defibrillation
first aid kit
stretchers
spinal immobilisation collards
spinal immobilisation frames/devices
fracture immobilisation devices
stokes litter

Assessment may include environmental considerations
casualty triage
primary survey
vital signs survey
secondary survey (head to toe examination)
evacuation procedures
helicopter access
nearest land/wharf based access

Moving a casualty may include individually
as a member of a team

Management plan may include written
protocols
verbal
transmitted

Resources may include equipment
personnel

EVIDENCE GUIDE

Critical aspects of evidence It is essential for this unit that competence be demonstrated in the practical demonstration of emergency care skills including:
maintaining universal hygiene precautions
accurate documentation
observation and assessment skills
correct use of life saving equipment
appropriate management techniques for emergency encountered

Interdependent assessment of units Pre-requisite units: PUAEME001A Provide emergency care
Co-requisite units: Nil

Underpinning knowledge	<p>applying resuscitation techniques</p> <p>casualty assessment</p> <p>casualty management</p> <p>crush injury syndrome</p> <p>contraindications</p> <p>wound management</p> <p>basic toxicology</p> <p>environmental exposure</p> <p>spinal injuries</p> <p>head injuries</p> <p>shock: absolute</p> <p>hypovolaemic</p> <p>relative</p> <p>legal and ethical issues in pre-hospital care</p> <p>anatomy and physiology</p> <p>haemorrhage</p> <p>cardiovascular emergencies</p> <p>hypoxia</p> <p>triage</p> <p>documentation</p> <p>communicate with casualties</p> <p>remain calm under pressure</p> <p>knowledge of current practices and procedures in emergency care</p>
Underpinning skills	<p>communicate verbally with casualties and others</p> <p>provide reports to paramedical personnel</p> <p>work with others in a team situation</p> <p>remain calm under pressure</p> <p>assess casualty</p>
Resource implications	<p>Access to first aid equipment used in general operations is essential.</p> <p>Access may also be required to shore based transport, an ambulance or helicopter, depending on the context.</p>
Consistency of performance	<p>Evidence should be gathered over a period of time in a range of actual or simulated workplace environments</p>
Context of assessment	<p>A real life incident, exercise or simulation, or a series of tasks are required to demonstrate competence in this unit. This may involve setting scenarios to be completed either individually or as a member of a team or as part of an interagency exercise. Written or verbal questions may be used as supporting evidence.</p>

KEY COMPETENCY

1	1	1	1	1	2	1

UNIT NAME Administer oxygen in an emergency situation

UNIT CODE PUAEME003B

UNIT DESCRIPTOR This unit covers competency in advanced techniques for management of the administration of oxygen and ventilation of the lungs in line with the requirements of the Australian Resuscitation Council and State and Territory regulatory bodies. Expired air resuscitation is covered in the Pre-requisite unit *Provide emergency care*

ELEMENT	PERFORMANCE CRITERIA
1. Assess casualty and develop management plan	<ol style="list-style-type: none"> 1. Assessment of casualty is undertaken including vital signs, details of incident, medical/casualty history, physical appearance and other signs and symptoms 2. Management plan is developed taking into account available equipment, condition of patient and special requirements of certain conditions 3. Where possible casualty is assisted to a comfortable position suitable for implementation of management plan 4. Casualty is encouraged and reassured as necessary to facilitate effective treatment 5. Medical aid is arranged as soon as possible consistent with maintaining casualty safety
2. Check equipment	<ol style="list-style-type: none"> 1. Pre-use check of safety and potential effectiveness of equipment is undertaken in accordance with operating procedures 2. Australian standards and regulatory requirements 3. Minor faults are diagnosed and repairs are carried out in accordance with organisation procedures to restore equipment to working order 4. Faults and defects are reported/recorded according to organisational procedures
3. Maintain unobstructed airway	<ol style="list-style-type: none"> 1. Airway is cleared and maintained using non-intervention techniques where possible 2. Appropriate steps are taken to reduce risk to self or others of contamination by the casualty's body fluids 3. Where carried, suction apparatus is safely inserted into pharynx and suction initiated using approved techniques to avoid injuring casualty
4. Resuscitate casualty	<ol style="list-style-type: none"> 1. Where appropriate face masks and other barriers are used according to ARC standards
5. Use oxygen to provide therapy	<ol style="list-style-type: none"> 1. Where indicated, oxygen therapy is used in the ventilation of casualty
6. Recover and restore equipment	<ol style="list-style-type: none"> 1. Equipment is cleaned, and discarded or disinfected, restocked and/or replenished and stored safely according to organisation procedures

RANGE OF VARIABLES	
Advanced techniques for management of administration of oxygen and/or ventilation of the lungs are	oxygen therapy, ventilation of the lungs by expired air resuscitation without oxygen added using ancillary device ventilation with ambient air by an operator powered resuscitation—bag valve or mask ventilation by an oxygen powered resuscitator
Oxygen equipment is	equipment which is used for storage and delivery of oxygen for medical purposes
Resuscitation may be performed on	adults small children under eight years newborn babies or infants
Regulatory requirements may include	Australian Resuscitation Council relevant State and Territory regulatory bodies
Reporting/recording faults and damage may include	verbal filling out and processing standard form
Pre-use check may include	checking existence of suitable prominent warnings about precautions to be observed checking for damage to replenish and/or restore
Barriers may include	facemasks unidirectional valves bidirectional valves filters
Non-intervention techniques for maintenance of unobstructed airway may include	head tilt jaw support jaw thrust
Inserted into pharynx	no further than the back teeth
EVIDENCE GUIDE	
Critical aspects of evidence	use of oxygen equipment in accordance with relevant standards and guidelines
Interdependent assessment of units	Pre-requisite units: PUAEME001A – Provide emergency care Co-requisite units: Nil

Underpinning knowledge	respiratory system—lungs air passages importance of oxygen to the body causes of hypoxia and hypoxic hypoxia the mechanism of respiration possible causes of hypoventilation indicators of obstructed breathing significance of respiratory noises lower airways diseases signs and symptoms of chronic obstructed airways disease and chronic airways lesions (COAD/CAL) management of COAD/CAL casualties correct use of oxygen cylinders and devices estimation of duration of oxygen supply precautions for safe storage and handling of oxygen cylinders resuscitation and kits—specifications principles of operation and troubleshooting techniques for maintenance of unobstructed airway Australian Resuscitation Council standards <i>Australian Standards relevant to resuscitation equipment</i>
Underpinning skills	reading oxygen content gauges determining oxygen pressure and volume content of cylinders use of resuscitation equipment
Resource implications	Access to resuscitation equipment/kit is essential
Consistency of performance	Evidence will need to be gathered over time across a range of variables
Context of assessment	On the job or in a simulated work environment

KEY COMPETENCY

Collect analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology
2	2	2	2	2	2	2

UNIT NAME	Operate communications systems and equipment
UNIT CODE	PUAOPE002A
UNIT DESCRIPTOR	This unit covers the competency to transmit and receive communications in routine and operational situations using the organisation's communication systems and equipment

ELEMENT	PERFORMANCE CRITERIA
1. Use communication systems and equipment	1. Equipment is used and operated safely to support communications consistent with organisation's policies and procedures 2. Communication equipment and techniques are selected to best meet the task, context and needs of the situation 3. The communication system is correctly utilised to facilitate transmission and reception 4. Communication systems are operationally maintained according to organisation's policies and procedures
2. Transmit and receive communications	5. Information is transmitted concisely and clearly to facilitate accurate reception of the message in accordance with organisation's policy and procedures 6. Contact is acknowledged, communication is confirmed and action initiated 7. Communication faults and deficiencies are reported according to organisation's policy and procedures 8. Alternative communication strategies are employed according to organisational procedures to address identified faults and deficiencies in communication 9. Communication is processed and recorded in accordance with organisation's policies and procedures
3. Maintain communications equipment	10. Fault finding techniques are applied and basic maintenance conducted according to organisational policies and procedures 11. Faulty equipment is identified and noted for repair

RANGE OF VARIABLES	
Communication equipment may include	personal computers and modems radio facsimiles signalling devices mobile landline and satellite telephones pagers
Communication systems may include	organisation's networks communication protocols verbal communication procedures geographical information systems relevant legislation such as Telecommunications Act

Verbal communication procedures may include	pro-words phonetic alphabet call signs coded messages use of abbreviations emergency procedures
Voice procedures may include	rhythm speed volume pitch sentences correcting mistakes repetitions

EVIDENCE GUIDE

Critical aspects of evidence	It is essential for this unit that competency be demonstrated in accurately transmitting and receiving communications using the organisation's communication system and equipment
Interdependent assessment of units	Pre-requisite units: Nil Co-requisite units: Nil
Underpinning knowledge	range of communication equipment available to the organisation the organisation's communication system organisational policy and procedures relevant to the operation of communication equipment
Underpinning skills	utilise the organisation's communication processes and systems use verbal communication procedures consistent with the organisation's communication system clean and service communication equipment according to organisational procedures report communication faults and deficiencies according to organisational procedures
Resource implications	access to relevant communication equipment
Consistency in performance	evidence should be gathered over a period of time in a range of actual or simulated workplace environments
Context of assessment	observation of the use of a range of communication equipment under non-operational and operational conditions or in a simulated environment

KEY COMPETENCY

Collect analyse and organise information	Communicate ideas and information	Plan and organise activities	Work with others and in teams	Use mathematical ideas and techniques	Solve problems	Use technology

SRO OPS 001A IMPLEMENT MINIMAL ENVIRONMENTAL IMPACT PRACTICES

OPS

Field operations

DESCRIPTION: This unit covers the basic knowledge and skills to ensure that practices are implemented to achieve minimal environmental impact whilst participating in outdoor activities under supervision.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Determine the environmental impacts of outdoor recreation activities</p>	<p>a. The <i>impacts</i> caused by participation in outdoor recreation activities are identified</p> <p>b. The possible causes of these <i>impacts</i> are determined</p> <p>c. The consequences of the <i>impact</i> on the <i>environment</i> are identified</p> <p>d. Information on <i>key practices and procedures</i> used to reduce the <i>impact</i> is sourced</p>
<p>2. Adopt minimal impact practices</p>	<p>a. <i>Minimal impact practices</i> and procedures, as recommended by land managers and peak activity groups, are used to reduce impact on the natural environment</p> <p>b. Equipment is used in a manner to reduce impact on the natural <i>environment</i></p> <p>c. Etiquette and appropriate behaviour are demonstrated when interacting with others in the immediate vicinity</p> <p>d. Use of heritage or cultural sites is in accordance with protocols, guidelines and/or directions from supervisors</p>

Range of Variables

IMPLEMENT MINIMAL ENVIRONMENTAL IMPACT PRACTICES

VARIABLE STATEMENT	CATEGORIES
1. Impacts	impacts on the environment may include: <ul style="list-style-type: none"> a. pollution with foreign matter (human waste, rubbish, soap, detergent) b. vegetation trampling and breakage c. breakage and dislodgment of rock and other formations d. compaction of soil and other deposits e. disturbance of fauna f. introduction of new flora and fauna g. chemical alteration of environments h. damage to, or inappropriate behaviour in, cultural sites i. graffiti j. reduction in decomposing timber k. campfire scars l. noise m. intrusion into private lives and culture n. development of facilities and signs
2. Key practices and procedures	<ul style="list-style-type: none"> a. restricting access b. limiting group size c. seasonal restrictions d. use of permits e. Codes of Ethics and Conduct
3. Minimal impact practices	<ul style="list-style-type: none"> a. avoidance of sensitive areas b. appropriate site and route selection c. limited party size d. removal of rubbish e. appropriate sanitation practices f. use of fuel stoves g. use of low impact equipment h. keeping to marked tracks or routes i. appropriate washing procedures j. respect and protection of heritage and cultural sites k. campfire management and rehabilitation
4. Workplace	<ul style="list-style-type: none"> a. includes locations/sites at which outdoor recreation

environment

- activities may be conducted, including:
 - a.1 land
 - a.2 water
 - a.3 air
 - a.4 underground
- b. includes those interacting in the environment, including:
 - b.1 flora and fauna
 - b.2 persons interacting in the immediate vicinity
- c. includes cultural and heritage sites

IMPLEMENT MINIMAL ENVIRONMENTAL IMPACT PRACTICES

<p>1. Critical aspects of evidence to be considered</p>	<ul style="list-style-type: none"> a. Assessment must confirm sufficient knowledge of the environmental impacts of at least one outdoor recreation activity area and the causes and consequences of those impacts b. Assessment of performance should be over a period of time covering all categories of minimal impact practice from the range of variables statement that are applicable in the learners environment c. In particular, assessment must confirm the ability to: <ul style="list-style-type: none"> c.1 Comply with general and activity-specific Codes of Ethics and/or Codes of Conservation c.2 Implement recommended minimal impact practices whilst participating in at least one type of outdoor recreation activity
<p>2. Interdependent assessment of units</p>	<ul style="list-style-type: none"> a. This unit must be assessed after attainment of competency in the following unit(s): <ul style="list-style-type: none"> a.1 Nil b. This unit must be assessed in conjunction with the following unit(s): <ul style="list-style-type: none"> b.1 SRO ORE 002A Participate in a supervised outdoor activity requiring basic skills b.2 Relevant units specific to a particular outdoor activity c. For the purpose of integrated assessment, this unit may be assessed in conjunction with other units
<p>3. Required knowledge and skills</p>	<ul style="list-style-type: none"> a. Underpinning knowledge <ul style="list-style-type: none"> a.1 Minimal impact codes of ethics/conservation relevant to State / Territory and activity area a.2 Area restrictions and land management requirements a.3 Basic ecological principles, life cycles and interrelationships b. Underpinning skills <ul style="list-style-type: none"> b.1 Minimal impact practices
<p>4. Resource implications</p>	<ul style="list-style-type: none"> a. Assessment of this competency requires access to an outdoor environment whilst participating in an outdoor activity

	<ul style="list-style-type: none"> b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines
5. Consistency in performance	<ul style="list-style-type: none"> a. Competence in this unit should be demonstrated whilst participating in an outdoor activity on more than one occasion in order to encounter the variety of impacts and minimal impact practices relevant to at least one area of outdoor activity
6. Context for assessment	<ul style="list-style-type: none"> a. Competency must be demonstrated whilst participating in an actual/real outdoor activity b. In cases where the learner does not have the opportunity to cover all categories of minimal impact practice from the range of variables statements in the work environment, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on “What if?” scenarios c. Assessment of this unit of competence will usually include observation of processes and procedures, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes d. Where performance is not directly observed and/or is required to be demonstrated over a “period of time” and/or in a “number of locations”, any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons

SRO OPS 002A

PLAN FOR MINIMAL ENVIRONMENTAL IMPACT

OPS

Field operations

DESCRIPTION: This unit covers the knowledge and skills to plan outdoor activities to ensure that minimal environmental impact occurs.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify the interrelationships occurring within a natural environment</p>	<p>a. Key ecological concepts and their relationships within natural ecosystems are identified</p> <p>b. Natural processes and interrelationships occurring within natural environments are determined</p> <p>c. The manner in which interrelationships between natural processes can be affected is identified</p>
<p>2. Identify sources of environmental impact</p>	<p>a. Human impact through recreational activities on natural processes and interrelationships is determined</p> <p>b. Aspects unique to a specific environment are determined</p> <p>c. Sensitive areas are identified after consultation with appropriate authorities</p> <p>d. Information on the types of impact likely to occur during specific outdoor activities in specific locations is sourced</p>
<p>3. Plan for minimal impact</p>	<p>a. Current strategies implemented by land managers for environmental asset management are identified</p> <p>b. Compliance with land management principles and policies is demonstrated when planning the activity location/site</p> <p>c. Planning demonstrates consideration of suitability and appropriate use of a specific recreational setting for the proposed outdoor recreation activity</p>
<p>4. Implement methods to minimise impact</p>	<p>a. Activities are planned and conducted in a manner which minimises environmental impact</p> <p>b. Policies and management plans relevant to the activity area are complied with</p> <p>c. Activity aims are balanced with regard to achieving minimal impact</p> <p>d. Unique aspects and specific impacts likely to occur during an activity are communicated to other participants in the activity</p> <p>e. A positive and caring attitude to the natural environment is adopted throughout activities</p> <p>f. A cooperative stance on sharing of environmental resources is demonstrated</p>
<p>5. Monitor and review minimal impact practices</p>	<p>a. Basic techniques to determine the degree of impact are identified</p> <p>b. Effectiveness of minimal impact practices is evaluated using basic techniques</p> <p>c. Impact reduction strategies are modified, where necessary, after evaluation</p>

Range of Variables

PLAN FOR MINIMAL ENVIRONMENTAL IMPACT

VARIABLE STATEMENT	CATEGORIES
1. Authorities	<ul style="list-style-type: none"> a. relevant state and local government authorities (eg, National Parks and Wildlife Services) b. land owners

SRO OPS 003A APPLY WEATHER INFORMATION

OPS Field operations

DESCRIPTION: This unit covers the basic knowledge and skills to access and interpret meteorological data in order to plan outdoor activities.

ELEMENT	PERFORMANCE CRITERIA
1. Apply weather information	<ul style="list-style-type: none">a. Identify <i>sources of relevant weather information</i>b. Obtain general <i>meteorological data</i>c. Access area specific information
2. Interpret weather information	<ul style="list-style-type: none">a. Interpret <i>meteorological data</i> in terms of likely weather conditions in areas which are to be used for an activityb. Interpret Bureau of Meteorology forecasts and warnings in terms of future weather conditions in areas which are to be used for an activityc. Assess <i>additional information</i> that is relevant to the predicted weatherd. Evaluate current and predicted weather conditions in terms of their effect on a planned outdoor activitye. Modify activity plans, if necessary, following consideration of weather information

Range of Variables

APPLY WEATHER INFORMATION

VARIABLE STATEMENT	CATEGORIES
1. Additional relevant information	<ul style="list-style-type: none"> a. river heights b. estimated water release from dams c. high and low tides d. snow cover
2. Meteorological data	<ul style="list-style-type: none"> a. synoptic charts b. satellite images c. daily and four day forecasts d. maximum and minimum temperatures e. rainfall f. snowfall g. barometric pressure h. warnings (wind, rain, storm, cyclone, hail, blizzard)
3. Sources of information	<ul style="list-style-type: none"> a. statutory bodies (eg, Bureau of Meteorology, Water Resources) b. media (newspapers, radio) c. National Parks and Wildlife Services d. Police e. local inhabitants f. motoring associations
4. Work environment	<ul style="list-style-type: none"> a. includes all situations, for example <ul style="list-style-type: none"> a.1 in a range of typical weather conditions a.2 at a range of different locations or sites b. includes locations/sites at which outdoor activities may be conducted, including: <ul style="list-style-type: none"> b.1 land (forested, desert, snowcovered) b.2 caves b.3 cliffs b.4 rivers b.5 underwater b.6 sheltered and open bodies of water (including oceans)

APPLY WEATHER INFORMATION

<p>1. Critical aspects of evidence to be considered</p>	<p>a. Assessment must confirm sufficient knowledge of types and sources of meteorological data in the work environment</p> <p>b. Assessment of performance should be over a period of time covering all categories of meteorological data and sources of information from the range of variable statements that are applicable in the learners environment</p> <p>c. In particular, assessment must confirm the ability to:</p> <p>c.1 Apply variables from within the range that are applicable to the activity-specific context to make reasonable predictions, based on different meteorological data.</p>
<p>2. Interdependent assessment of units</p>	<p>a. This unit must be assessed after attainment of competency in the following unit(s):</p> <p>a.1 Nil</p> <p>b. This unit must be assessed in conjunction with the following unit(s):</p> <p>b.1 Nil</p> <p>c. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):</p> <p>c.1 SRO ORE 003A Prepare to participate in outdoor activities</p>
<p>3. Required knowledge and skills</p>	<p>a. Underpinning knowledge</p> <p>a.1 Basic factors affecting global, regional and local climatic conditions</p> <p>a.2 Local climatic conditions and the effect of latitude</p> <p>a.3 Influence of local air masses, seasons and topography on weather</p> <p>a.4 Maritime influence on weather and climate</p> <p>a.5 Barometric pressure and its implications</p> <p>b. Underpinning skills</p> <p>b.1 Analysis of information</p> <p>b.2 Problem solving and decision making to determine the impact of meteorological data on planned activities</p> <p>b.3 Contingency planning</p>
<p>4. Resource implications</p>	<p>a. Assessment of this competency requires access to meteorological data and basic meteorological instruments</p> <p>b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines</p>
<p>5. Consistency in performance</p>	<p>a. Competence in this unit must be assessed over a period of time in order to ensure consistency of performance in all variables from within the range applicable to a specific outdoor activity</p>

6. Context for assessment

- a. Competency may be demonstrated in a simulated work environment
- b. In cases where the learner does not have the opportunity to cover all categories of meteorological data and sources of information from the range of variable statements that are applicable in the learners environment, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on “What if?” scenarios
- c. Assessment of this unit of competence will usually include observation of processes and procedures, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes
- d. Where performance is not directly observed and/or is required to be demonstrated over a “period of time” and/or in a “number of locations”, any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons. Assessment of this unit of competence will usually include oral and/or written questioning on underpinning knowledge and skills and analysis of meteorological data for specific locations and conditions

SRO OPS 005A APPLY SEARCH AND RESCUE SKILLS

OPS

Field operations

DESCRIPTION: This unit covers the knowledge and skills to conduct preliminary search and rescue procedures and determine the necessity for assistance.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Initiate a search/rescue</p>	<p>a. <i>Situation</i> and options are assessed.</p> <p>b. <i>Factors of an appreciation</i> are considered</p> <p>c. Appropriate information is obtained and documented.</p> <p>d. Safety of search/rescue party is considered and operational policies and procedures are implemented</p> <p>e. A workable response plan is developed and communicated to relevant persons</p> <p>f. An initial search and rescue is initiated</p> <p>g. The decision to locate and evacuate or call for assistance is soundly based and made without delay.</p>
<p>2. Carry out a search</p>	<p>a. The possible and probable search areas are defined, based on all available information including the missing party/person's <i>personal factors</i></p> <p>b. Communication processes and contingency plans are established and promulgated to all involved</p> <p>c. Search is conducted methodically, using appropriate <i>search techniques</i></p>
<p>3. Carry out a rescue</p>	<p>a. Where necessary, appropriate <i>rescue techniques</i> are used.</p> <p>b. Patient ambulatory status is determined and, if required, an <i>emergency evacuation structure</i> is built using available resources</p> <p>c. A process for constant monitoring of an injured person's condition and comfort is established and all actions taken are recorded</p> <p>d. <i>Situation</i> is assessed to determine whether to self evacuate or call for external assistance</p> <p>e. Injured party members are transported in a manner that minimises risk of further injury.</p> <p>f. Party members are advised to refer media enquiries to a nominated spokesperson</p>
<p>4. Assist in search and rescue</p>	<p>a. Situations requiring outside assistance are identified.</p> <p>b. Appropriate <i>search groups/agencies</i> are identified and the steps to alert them initiated</p> <p>c. Procedures for handing over a search and rescue to</p>

SRO OPS 006A USE AND MAINTAIN A TEMPORARY OR OVERNIGHT SITE

OPS Field operations

DESCRIPTION: This unit deals with the basic knowledge and skills to establish, use and maintain a temporary site.

ELEMENT	PERFORMANCE CRITERIA
1. Select a temporary site	<ul style="list-style-type: none"> a. Local area knowledge is accessed and used to identify suitable sites b. Additional <i>sources of information</i> to assist in site location are determined c. Factors affecting suitable <i>site selection</i> are identified d. The suitability of the site for the group size and objectives is considered
2. Establish a shelter	<ul style="list-style-type: none"> a. Hazards are identified and removed/avoided to reduce risks b. <i>Shelter is arranged appropriately for the prevailing weather and conditions</i> c. <i>Shelter</i> is established to ensure comfort and safety d. <i>Shelter</i> is erected in a manner to cause minimal environmental impact
3. Maintain a temporary site	<ul style="list-style-type: none"> a. Measures are taken, within the area of responsibility of the participant, to remove/avoid <i>hazards</i> and minimise risk at the temporary site b. Where relevant to the activity, <i>statutory and organisational procedures</i> with respect to the use of campfires are complied with c. Minimal impact practices are implemented with respect to camping or mooring and washing of self and utensils d. The consequences of unhygienic practices are identified e. Recommended procedures are followed to decrease potential health problems f. Individual and shared utensils are cleaned adequately g. Sanitation practices appropriate to the site and permit requirements are followed to minimise health problems and environmental impact

Range of Variables

USE AND MAINTAIN A TEMPORARY OR OVERNIGHT SITE

VARIABLE STATEMENT	CATEGORIES
1. General context	a. equipment for use at the site may be lightweight or heavyweight
2. Hazards	a. potential terrain hazards (loose debris, unstable or sloping terrain, sharp edges, slippery rocks, slippery decks, overhanging branches) b. environmental hazards (rising water levels, avalanches, storms, ice) c. people hazards (irresponsible use of campfires or stoves, irresponsible behaviour)
3. Shelters	include a. tents b. bivvies c. snow caves d. lean-to's e. mobile trailers and vans f. craft eg, yachts
4. Site selection	is affected by factors such as a. group size b. weather conditions c. time constraints d. degree of urgency e. type of shelter required f. access g. feeding and watering points of animals (domestic and native)
5. Sources of information	i. maps and charts j. guide books k. land management authorities l. port authorities m. local government authorities and councils
6. Statutory and organisational procedures	include a. permits from land management authorities/port authorities b. authority/permission from landowners, owners of wharves and jetties c. documented operating procedures and company/enterprise policies

USE AND MAINTAIN A TEMPORARY OR OVERNIGHT SITE

<p>1. Critical aspects of evidence to be considered</p>	<p>a. Assessment must confirm sufficient knowledge of site selection and maintenance in routine/controlled conditions using sites and shelter options applicable to a specific outdoor activity</p> <p>b. Assessment of performance should be over a period of time covering all categories of each range of variable statement applicable to the selection and use of site for a specific outdoor activity</p> <p>c. In particular, assessment must confirm the ability to:</p> <p>c.1 Select a suitable site for the activity after consideration of all relevant factors</p> <p>c.2 Establish safe shelter whilst causing minimal environmental impact</p> <p>c.3 Maintain a site in accordance with statutory and organisational procedures</p>
<p>2. Interdependent assessment of units</p>	<p>a. This unit must be assessed after attainment of competency in the following unit(s):</p> <p>a.1 Nil</p> <p>b. This unit must be assessed in conjunction with the following unit(s):</p> <p>b.1 SRO OPS 001A Implement minimal environmental impact practices</p> <p>b.2 Those relevant to participate in a specific outdoor recreation activity</p> <p>c. For the purpose of integrated assessment, this unit may be assessed in conjunction with other unit(s)</p>
<p>3. Required knowledge and skills</p>	<p>a. Underpinning knowledge</p> <p>a.1 Minimal impact codes and practices</p> <p>a.2 Sanitation procedures in outdoor environments</p> <p>a.3 Hazard identification</p> <p>a.4 Organisation and legislative requirements</p> <p>a.5 Shelter options and how to erect or moor them</p> <p>a.6 Weather information and how to apply it</p> <p>b. Underpinning skills</p> <p>b.1 Establishing/erecting shelter</p> <p>b.2 Applying weather information to determine suitable site locations</p>
<p>4. Resource implications</p>	<p>a. Assessment of this competency requires access to outdoor sites or moorings, activity-specific shelter options</p> <p>b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines</p>

Metal and Engineering Training Package

SROOPS006A Use and Maintain a Temporary or Overnight Site

5. Consistency in performance	a. Competence in this unit must be assessed over a period of time in order to ensure consistency of performance in a range of sites and conditions
6. Context for assessment	<p>a. Competency must be demonstrated when camping or mooring at an outdoor location</p> <p>b. In cases where the learner does not have the opportunity to cover all categories of each range of variable statement applicable to the selection and use of site for a specific activities, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on "What if?" scenarios</p> <p>c. Assessment of this unit of competence will usually include observation of processes and procedures at a campsite, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes</p> <p>d. Where performance is not directly observed and/or is required to be demonstrated over a "period of time" and/or in a number of locations, any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons</p>

SRO ORE 001A PREPARE TO PARTICIPATE IN A SUPERVISED OUTDOOR ACTIVITY REQUIRING BASIC SKILLS

ORE Outdoor recreation (generic)

DESCRIPTION: This unit covers the basic knowledge and skills to participate in supervised outdoor activities of limited duration in situations where extreme environmental conditions are not likely to occur.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Make logistical arrangements</p>	<ul style="list-style-type: none"> e. The suitability of the proposed activity site/location for personal objectives is evaluated to ensure appropriateness f. Local area knowledge is accessed and used to assist in the planning of transport and access g. Land management and relevant organisational/enterprise requirements are determined and complied with h. Where appropriate, specific sites within the designated activity location are identified and selected for use with reference to minimal impact on the environment i. Hazards associated with the activity are identified and risk minimisation procedures within the control of the participant are implemented during the planning and preparation
<p>2. Select suitable outdoor equipment</p>	<ul style="list-style-type: none"> a. Equipment needs are identified after consideration of contextual issues b. Sources of equipment are identified and evaluated according to needs c. Equipment is acquired a suitable time prior to the activity to allow for checking d. Equipment is checked for serviceability to ensure that it is in good working order e. Suitability of equipment to individual needs is confirmed f. Equipment is prepared for transportation to activity location in a manner to minimise loss or damage g. Where relevant to the activity, additional resources suitable to individual needs and the needs of the activity are identified, selected and prepared
<p>3. Identify and plan for food requirements</p>	<ul style="list-style-type: none"> a. Food requirements are correctly identified, based on principles of nutrition and energy requirements for a particular activity b. Factors affecting the choice of food within the activity constraints are identified c. Menu planning is appropriate for dietary requirements and personal tastes within the activity constraints d. Perishability of various foods, packaging and storage considerations are correctly addressed e. Emergency food requirements are identified and planned for f. Where relevant to the activity, food requirements of accompanying animals are determined and planned for
<p>4. Identify and plan for water needs and usage</p>	<ul style="list-style-type: none"> a. Fluid requirements are calculated, based on the requirements for a particular activity: b. Potential water sources are correctly identified c. Information on water purification techniques appropriate to the activity location is accessed d. Resources required for water purification are obtained e. Water is prepared for carrying and storage in a manner appropriate to

Metal and Engineering Training Package

SROORE001A Prepare to Participate in a Supervised Outdoor Activity Requiring Basic Skills

	<p>the activity and to minimise potential breakage of container</p> <p>f. Where relevant to the activity, water needs of accompanying animals are determined and planned for</p>
<p>5. Identify and plan clothing requirements</p>	<p>a. Sources of heat loss and causes of heat exhaustion /stroke during an activity are identified</p> <p>b. Clothing suitable to the activity is selected, based on consideration of contextual issues</p> <p>c. Where relevant to the activity, clothing is packed and stored in manner to ensure that it is waterproof</p>

Range of Variables

PREPARE TO PARTICIPATE IN A SUPERVISED OUTDOOR ACTIVITY REQUIRING BASIC SKILLS

VARIABLE STATEMENT	
	CATEGORIES
1. Activity constraints	a. all factors which may impact upon food and water requirements within a particular activity, including: a.1 weight constraints a.2 carrying capacity a.3 cooking method available a.4 water availability a.5 length/duration of activity a.6 temperature/season a.7 budget a.1.
2. Contextual issues	a. includes all factors which may impact upon the particular activity a.1 season a.2 activity location a.3 time of day a.4 weather a.5 length of activity a.6 budget a.7 participant size and ability a.8 weight constraints a.9 destination a.10 condition of terrain, activity location or medium a.11 group needs
3. Equipment	a. includes all aspects of equipment required for participation a.1 general outdoor equipment a.2 activity-specific equipment a.3 personal equipment a.4 safety equipment a.5 group equipment
4. General context	a. participation in outdoor activity is under supervision, generally within a team environment b. duration is dependant on the specific activity and may range from several hours for intense physical activities up to 2 days for other activities
5. Hazards	c. potential terrain hazards d. environmental hazards (heat, cold, rain, snow, flood) e. people hazards f. equipment failure
6. Impacts	g. includes impact on a.1 the natural environment a.2 other users a.3 cultural and heritage sites

Metal and Engineering Training Package

SROORE001A Prepare to Participate in a Supervised Outdoor Activity Requiring Basic Skills

7. Relevant additional resources suitable to the activity	d. craft (eg, for SCUBA activities) e. backup vehicles (eg, for cycle touring) f. persons to drive craft or vehicles g. horses h. fuel
8. Workplace environment	h. includes all situations, for example a.1 in a range of typical weather conditions a.2 at a range of different locations or sites i. includes locations/sites at which outdoor activities may be conducted, including: b.7 land (forested, desert, snowcovered) b.8 oceans and coastal waters (on and underwater) b.9 caves b.10cliffs b.11 rivers and dams b.12artificial surfaces

PREPARE TO PARTICIPATE IN A SUPERVISED OUTDOOR ACTIVITY REQUIRING BASIC SKILLS

<p>7. Critical aspects of evidence to be considered</p>	<ul style="list-style-type: none"> i. Assessment must confirm sufficient knowledge of the factors influencing the selection and preparation (from a limited range provided) of equipment, food, fluid and clothing requirements for participation in a specific outdoor activity j. Assessment of performance should be over a period of time covering all categories of the range of variable statements that are applicable to planning for participation in a specific outdoor activity under supervision k. In particular, assessment must confirm the ability to <ul style="list-style-type: none"> c.1 Apply knowledge of factors affecting the activity context c.2 Plan for safe participation under supervision c.3 Assess contextual issues and activity constraints whilst planning c.4 Plan for possible contingencies c.5 Select suitable clothing and equipment from the range provided by supervisors or indicated in checklists
<p>8. Interdependent assessment of units</p>	<ul style="list-style-type: none"> c. This unit must be assessed after attainment of competency in the following unit(s): <ul style="list-style-type: none"> a.2 Nil d. This unit must be assessed in conjunction with the following unit(s): <ul style="list-style-type: none"> b.1 SRO ORE 002A Participate in a supervised outdoor activity requiring basic skills b.2 Relevant units specific to the particular outdoor activity d. For the purpose of integrated assessment, this unit may be assessed in conjunction with other units
<p>9. Required knowledge and skills</p>	<ul style="list-style-type: none"> a. Underpinning knowledge <ul style="list-style-type: none"> a.1 Activity specific knowledge a.2 Minimal impact codes and practices a.3 Factors that affect physiological well-being a.4 Factors affecting general equipment selection <ul style="list-style-type: none"> a.4.1 Advantages a.4.2 Disadvantages a.4.3 Cost a.5 Factors affecting activity specific equipment choice <ul style="list-style-type: none"> a.5.1 Fabric or construction materials and features/limitations a.5.2 Weight a.5.3 Ability to repair a.5.4 Cost a.6 Dietary requirements, and their source a.7 Types of food available to suit activity constraints a.8 Clothing requirements for specific activities a.9 Hazard identification a.10 Land management and legislative requirements b. Underpinning skills <ul style="list-style-type: none"> b.1 Activity specific skills

Metal and Engineering Training Package

SRO YAC 001A COMPLY WITH MARITIME RULES AND REGULATIONS

YAC Yachting (Ballasted yachts)

DESCRIPTION: This unit covers the knowledge and skills to determine the Rules and regulations applicable to a marine activity and to apply them in the context of that activity.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Determine relevant rules and regulations</p>	<p>a. Relevant International Regulations for the Prevention of Collision at Sea are accessed, where appropriate to the maritime activity</p> <p>b. Regulations applying to the use of Inland Waters are accessed, where appropriate to the activity</p> <p>c. Regulations applicable to a particular maritime activity, craft and location are determined</p> <p>d. Other relevant state/territory or local legislation governing the use of an area for specific activities are sourced</p>
<p>2. Comply with relevant rules and regulations with respect to a specific activity</p>	<p>a. Situations where Rules must be applied in order to avoid collisions are recognized and the correct application determined</p> <p>b. Minimum safety requirements for a specific activity, as specified by relevant legislation, are determined</p> <p>c. Compliance with all relevant rules and legislation whilst participating in an activity is demonstrated</p>

Range of Variables

COMPLY WITH MARITIME RULES AND REGULATIONS

VARIABLE STATEMENT	CATEGORIES
<p>1. Maritime activities</p>	<ul style="list-style-type: none"> a. windsurfing b. small boat sailing c. motor cruising d. yachting e. power boating f. sea kayaking g. recreational fishing h. charter boat operations
<p>2. SRO YAC 002A

CREW A BALLASTED YACHT INSHORE

YAC

Yachting (Ballasted yachts)

DESCRIPTION: This unit covers the knowledge and skills to become an effective member of the crew on board a ballasted yacht sailing on short passages within sheltered waters with reasonable access to safe anchorages.

ELEMENT	PERFORMANCE CRITERIA
<p>3. Handle rope safely</p>	<p>a. Potential dangers from unsafe practices when handling ropes are identified and strategies are implemented to ensure safety of self and others</p> <p>b. Ropes are correctly coiled, stowed and secured to cleats and single and double bollards</p> <p>c. The advantages, disadvantages of different knots are determined and use appropriate to the situation is demonstrated</p>
<p>4. Use correct nautical terminology</p>	<p>a. The safety considerations related to the use of correct terminology on board a sailing vessel are identified</p> <p>b. Correct nautical terms for the craft, rigging, sails, process of sailing and all equipment are used to ensure accurate communication on board</p>
<p>5. Get under way and return to berth</p>	<p>a. Potential dangers associated with unsafe practices when getting under way and returning to berth are identified and minimised through adequate precautions and practices</p> <p>b. Specific tasks associated with getting under way and berthing when using different types of berth are identified and demonstrated</p>
<p>6. Set and handle sails</p>	<p>f. Sails appropriate to the situation are selected and, where appropriate, reefing of sails is performed in accordance with existing conditions and requirements</p> <p>g. A mainsail and headsail are correctly set and lowered according to standard procedures</p> <p>h. Correct and timely communication with other crew ensures efficient operations with respect to hoisting, setting and lowering</p> <p>i. Procedures when hoisting, setting and lowering sails indicate an understanding of the purpose of running rigging to associated components</p> <p>j. Strategies are developed and implemented to minimise potential dangers to crew and equipment from incorrect handling of sails and rigging</p>
<p>7. Apply sailing theory</p>	<p>d. Differences between true and apparent wind, and its affect on sailing and steering, are identified and applied when trimming sails</p> <p>e. Knowledge of the points of sailing and how sails work in each situation with reference to wind direction are applied to trim sails to achieve the desired sailing effect</p> <p>f. Crewing techniques are correctly applied to achieve the various points of sailing efficiently and with appropriate timing with respect to the craft's direction</p> <p>g. An accurate compass course is maintained, under sail and engine power</p>
<p>8. Sail in a safe and courteous manner</p>	<p>a. Safe sailing practices and etiquette are applied when sailing, mooring and interacting with others sailors</p> <p>b. Nautical regulations with respect to efficient lookouts and Collision are applied</p>

	<ul style="list-style-type: none">c. National, State and local legislation with respect to the safety equipment required on board and safety drills is complied with and safety equipment is used and maintained in accordance with regulations and manufacturer's recommendationsd. Fire hazards on board are identified and fire prevention strategies implementede. Recovery drill procedures are correctly applied in 'person' overboard situationsf. Knowledge of weather forecasts and wind observations is used to determine prevailing and future sailing conditionsg. Adequate levels of personal fitness are maintained in order to sail in the prevailing conditionsh. Specific boat handling requirements of crew on sailing vessels are identified and the tasks at each area performedi. Differences between crew organisation on different size vessels, and consequent task allocation, are identified and applied to handling a vessel as part of a team approach
<p>9. Operate auxiliary engines and craft</p>	<ul style="list-style-type: none">a. Pre-start and stop checks of craft's engine are conducted in accordance with operating procedures and manufacturer's guidelinesb. Starting and stopping procedures are performed in accordance with operating procedures and manufacturer's guidelinesc. Correct use of main engine controls is demonstrated to ensure adequate control of craftd. Strategies to minimise the risk of ropes fouling with the propeller are implementede. Dangers associated with the incorrect use of marine heads are identified and correct procedures are demonstrated for the open up/shut down of a marine headf. A dinghy is correctly used as a yacht tender, demonstrating safe handling during launching, boarding, loading, rowing, use of outboard and recovery

Range of Variables

CREW A BALLASTED YACHT INSHORE

13. Critical aspects of evidence to be considered

- a. Assessment must confirm sufficient knowledge of safety practices and procedures on board yachts
- b. Assessment of performance should be over a period of time covering all categories of each range of variables statement that are applicable in the learners environment
- c. In particular, assessment must confirm the ability to
 - c.1 Act as an effective crew member as part of a team to sail a yacht within sheltered waters (smooth or partially smooth waters) with reasonable access to safe anchorages
 - c.2 Apply knowledge of sailing theory and practice to set and trim sails to achieve the various points of sailing when required
 - c.3 Perform all aspects of crew work

14. Interdependent assessment of units

- a. This unit must be assessed after attainment of competency in the following:
 - a.1 Handling of small power boats (unit of competency to be developed in Maritime and/or Seafood Training Packages)
- b. This unit must be assessed in conjunction with the following unit(s):
 - b.1 SRO YAC 001A Comply with maritime rules and regulations
 - b.2 SRO ORE 001A Prepare to participate in a supervised outdoor activity requiring basic skills
 - b.3 SRO ORE 002A Participate in a supervised outdoor activity requiring basic skills
 - b.4 SRO OPS 006A Use and maintain a temporary or overnight site
 - b.5 SRO OPS 001A Implement minimal environmental impact practices
- c. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):
 - c.1 SRO OPS 003A Apply weather information
 - c.2 Relevant units from the Maritime Training Package

15. Required knowledge and skills

- b. Underpinning knowledge
 - a.1 Nautical terms as applied to sailing
 - a.2 Nautical regulations
 - a.3 Sailing practices and etiquette with respect to mooring, flag etiquette, speed observation, environmental impact
 - a.4 Regulations with respect to carrying and use of safety equipment
 - a.5 Person overboard procedures
 - a.6 Sources of weather information and interpretation of forecasts
 - a.7 Wind indicators
 - a.8 Rope handling and knots (figure of eight, clove hitch, rolling hitch, bowline, round turn and two half hitches)
 - a.9 Operation of yacht engines
 - a.10 safe operation of a dinghy as a yacht tender
- c. Underpinning skills
 - b.1 Setting sails to achieve points of sail

<p>16. Resource implications</p>	<p>a. Assessment of this competency requires access to a yacht, other crew and sheltered waters with reasonable access to safe anchorages</p> <p>b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines</p>
<p>17. Consistency in performance</p>	<p>a. Competence in this unit must be assessed over a period of time in order to ensure consistency of performance over the range of variables and contexts applicable to sailing a yacht in sheltered waters with reasonable access to safe anchorages and to cover all aspects of crew work</p>
<p>18. Context for assessment</p>	<p>g. Competency must be demonstrated whilst acting as crew on yachts cruising in sheltered waters with reasonable access to safe anchorages</p> <p>h. In cases where the learner does not have the opportunity to cover all categories of each range of variables statement in the work environment, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on “What if?” scenarios</p> <p>i. Assessment of this unit of competence will usually include observation of processes and procedures, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes</p> <p>j. Where performance is not directly observed and/or is required to be demonstrated over a “period of time” and/or in a “number of locations”, any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons</p>

SRO YAC 003A

SKIPPER A BALLASTED YACHT INSHORE

YAC

Yachting (Ballasted yacht)

DESCRIPTION: This unit covers the knowledge and skills to skipper a ballasted yacht sailing on short passages within sheltered waters with reasonable access to safe anchorages.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Handle rope safely</p>	<ul style="list-style-type: none"> a. Strategies are implemented to ensure safety of self and others when using and handling ropes b. Measures are taken to ensure that ropes are correctly coiled, stowed and secured to cleats and single and double bollards c. Knowledge of the properties of synthetic ropes is used to determine the most appropriate rope for each on board situation d. Warps are handled correctly to ensure efficient mooring e. Safe and correct use of winches is demonstrated f. The advantages, disadvantages of different knots are determined and their use appropriate to the situation is demonstrated g. Splicing and whipping are used to conduct routine maintenance and repair work
<p>2. Plan and prepare for passage</p>	<ul style="list-style-type: none"> a. Yacht is prepared for passage with adequate supervision/checking of all relevant contextual issues b. A plan for crew action and delegation of responsibility in a variety of condition and situations is developed and implemented c. Knowledge of design and loading factors is applied to ensure the stability of the vessel and crew safety d. Gear is correctly secured and stowed on upper deck and below to minimise loss and/or water damage or injury whilst maintaining proper access within and on the vessel e. Strategies are implemented to ensure the security and safety of passengers and crew on deck and below when the yacht is underway f. A short passage, on tidal/estuary waters is planned, taking account of relevant navigational hazards and limitations imposed by the type of boat and the strength of the crew g. A victualling list is developed and victualling organisation is supervised for the passage h. Watches at sea and in harbour are organised and supervised
<p>3. Get under way and return to berth or mooring</p>	<ul style="list-style-type: none"> a. Potential dangers associated with unsafe practices when getting under way and returning to berth are identified and minimised through adequate precautions, practices and crew supervision b. Personal boat handling skills and effective and timely direction to crew enables the yacht to be safely brought to and from a mooring buoy under sail c. Personal boat handling skills and effective and timely direction to crew enables the yacht to be safely brought to and from an alongside berth, mooring buoy and anchor under power d. Specific tasks associated with getting under way and berthing when using different types of berth are identified and demonstrated e. Factors to be considered when accepting and being towed are identified and applied in these situations f. Under personal steerage, a tow is accepted and the yacht is maneuvered and steered whilst under tow

<p>4. Handle craft</p>	<ul style="list-style-type: none"> k. Knowledge of the effects and efficient use of centre of effort, lateral resistance and the keel or centreplate is used to assist in managing the yacht and reducing leeway l. Correct and timely communication with crew ensures efficient operations with respect to hoisting, setting and lowering sails m. Steering practices when supervising the hoisting, setting and lowering sails indicate an understanding of the points of sail and sail setting techniques n. Sails are changed appropriately to suit prevailing conditions o. Strategies are developed and implemented to minimise potential dangers to crew and equipment from incorrect handling of sails and rigging
<p>5. Sail in a safe and courteous manner</p>	<ul style="list-style-type: none"> a. Safe sailing practices and etiquette are applied when sailing, mooring and interacting with others sailors b. International Regulations for the Prevention of Collisions at Sea are applied by self and crew c. National, State and local legislation with respect to the safety equipment required on board and safety drills is complied with and safety equipment is stored, used and maintained in accordance with regulations and manufacturer's recommendations d. Fire hazards on board are identified, fire prevention strategies are implemented and fire fighting procedures are demonstrated e. Procedures are followed to ensure that inexperienced crew or passengers are familiar with safety procedures and requirements f. Recovery drill procedures are correctly applied in 'person' overboard situations and correct action as helmsman is taken g. The correct use of distress flares and Emergency Position Indicating Radio Beacon is demonstrated and situations in which they may be used correctly detailed h. Correct procedures to be followed as skipper in the event of a helicopter rescue are outlined i. Knowledge of weather forecast interpretation and use of forecasting aids is used to determine future sailing conditions
<p>6. Navigate in sheltered waters with reasonable access to safe anchorages</p>	<ul style="list-style-type: none"> a. Knowledge of navigation principles and techniques is applied to carry out routine navigational duties and prepare navigational plans b. The IALA system of buoyage and other visual aids to navigation are correctly interpreted c. Accurate position fixing is demonstrated, taking into account variables and sources of inaccuracies d. Techniques to apply in restricted visibility are identified and applied, where relevant
<p>7. Operate and maintain inboard engine</p>	<ul style="list-style-type: none"> a. Complete engine pre start checks and shut down procedures are conducted in accordance with operating procedures and manufacturer's guidelines b. The engine is started, stopped and operated with correct use of controls c. Serviceable engine parts are identified and located

Range of Variables

SKIPPER A BALLASTED YACHT INSHORE

VARIABLE STATEMENT	CATEGORIES
1. Berths	<ul style="list-style-type: none"> a. along side docks and jetties b. pens c. mooring buoys d. anchors
2. Contextual issues for preparation	<ul style="list-style-type: none"> a. selection of crew b. crew abilities c. consideration of weather, tides and winds d. selection of sails e. engine checks f. food and water requirements g. safety equipment
3. Design and loading factors	<ul style="list-style-type: none"> u. simple static and dynamic stability v. limit of positive stability w. proper stowage and security of loose or moveable items x. maintenance of proper access within and on the vessel y. security, safety and comfort of passengers and crew
4. Factors when accepting and being towed	<ul style="list-style-type: none"> a. passing tow ropes b. use of bridles c. securing tow ropes, suitable knots and strong points d. taking the strain e. towing alongside or astern f. communication between craft g. casting off h. manoeuvring while towing and undertow
5. Fire hazards	<ul style="list-style-type: none"> a. fixed fuel tanks b. cooling appliances c. freezers d. complex electrical systems e. inboard engine installations
6. Inshore	<ul style="list-style-type: none"> a. within sheltered waters (smooth or partially smooth) with reasonable access to safe anchorages
7. Knots	<ul style="list-style-type: none"> a. figure of eight b. clove hitch c. rolling hitch d. reef knot e. bowline f. single and double sheet bend

	g. round turn and two half hitches
8. Recovery drill procedures	apply to: p. helicopter rescue q. 'quick stop' r. lifesling
9. Routine navigational duties	a. taking and plotting fixes b. estimation of tidal heights and fixes c. course calculations to allow for tidal stream, leeway and drift d. maintenance of navigational records e. use of echo sounder and lead line
10. Safety equipment	a. personal buoyancy aids b. harnesses c. fire fighting equipment d. distress flares e. Emergency Position Indicating Radio Beacon
11. Sailing practices and courtesies	apply to: a. laying anchor b. mooring alongside c. berthing d. leaving and returning to berths and moorings e. unnecessary noise f. speed observations g. flag etiquette h. environmental impact
12. Splicing and whipping	o. eye splice p. common whipping q. sail-makers whipping
13. Variety of conditions and situations	a. berthing and unberthing b. anchoring c. reduced visibility d. adverse weather conditions e. emergency conditions f. persons overboard situations g. victualling

SKIPPER A BALLASTED YACHT INSHORE

1. Critical aspects of evidence to be considered

- q. Assessment must confirm sufficient knowledge of safety practices and supervision of crew practices and procedures on board yachts
- r. Assessment of performance should be over a period of time covering all categories of the range of variables statements that are applicable in the learners environment
- s. In particular, assessment must confirm the ability to
 - c.1. Apply knowledge of sailing theory and practice to direct crew to set and trim sails to achieve the various points of sailing when required
 - c.2. Act as a competent skipper on sheltered waters with reasonable access to safe anchorages, ensuring crew and, where relevant, passenger safety
 - c.3. Act as skipper or watch leader
 - c.4. Skipper a vessel on a minimum of two four-hour night passages
 - c.5. Skipper a vessel in a variety of weather conditions

2. Interdependent assessment of units

- a. This unit must be assessed after attainment of competency in the following unit(s):
 Handling a small power boat (unit of competency to be developed in Maritime and/or Seafood Training Packages)
 SRO YAC 002A Crew a ballasted yacht inshore
 SRO ORE 001A Prepare to participate in a supervised outdoor activity requiring basic skills
 SRO ORE 002A Participate in a supervised outdoor activity requiring basic skills
 SRO OPS 006A Use and maintain a temporary or overnight site
 SRO OPS 001A Implement minimal environmental impact practices
- b. This unit must be assessed in conjunction with the following unit(s):
 - b.1 SRO ORE 003A Prepare to participate in outdoor activities
 - b.2 SRO ORE 004A Participate in outdoor activities
 - b.3 SRO ORE 002A Plan for minimal environmental impact
 - b.4 SRO OPS 003A Apply weather information
 - b.5 SRO YAC 001A Comply with maritime rules and regulations
 - b.6 SRO NAV 001A Navigate in tracked or easy untracked areas (or equivalent units from the Maritime Training Package)
 - b.7 PUA OPEO 04A Operate Communications systems
- c. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):
 - c.3 SRO OPS 005A Apply search and rescue skills
 - c.4 Units from the Maritime Training Package

<p>3. Required knowledge and skills</p>	<p>a. SRO YMC 001A CREW A MOTOR CRUISER INSHORE

YMC Yachting (Motor cruiser)

DESCRIPTION: This unit covers the knowledge and skills to become an effective member of the crew on board a motor cruising yacht sailing on short passages within sheltered waters with reasonable access to safe anchorages.

ELEMENT	PERFORMANCE CRITERIA
10. Handle rope safely	<ul style="list-style-type: none"> d. Potential dangers from unsafe practices when handling ropes are identified and strategies are implemented to ensure safety of self and others e. Ropes are correctly coiled, stowed and secured to cleats and single and double bollards f. The advantages, disadvantages of different knots are determined and use appropriate to the situation is demonstrated
11. Use correct nautical terminology	<ul style="list-style-type: none"> c. The safety considerations related to the use of correct terminology on board a vessel are identified d. Correct nautical terms for the craft and all equipment are used to ensure accurate communication on board
12. Get under way and return to berth	<ul style="list-style-type: none"> c. Potential dangers associated with unsafe practices when getting under way and returning to berth are identified and minimised through adequate precautions and practices d. Specific tasks associated with getting under way and berthing when using different types of berth are identified and demonstrated
13. Travel in a safe and courteous manner	<ul style="list-style-type: none"> j. Safe practices and etiquette are applied when motoring, mooring and interacting with others sailors k. Nautical regulations with respect to efficient lookouts and Collision are applied l. National, State and local legislation with respect to the safety equipment required on board and safety drills is complied with and safety equipment is used and maintained in accordance with regulations and manufacturer's recommendations m. Fire hazards on board are identified and fire prevention strategies implemented n. Recovery drill procedures are correctly applied in 'person' overboard situations o. Knowledge of weather forecasts and wind observations is used to determine prevailing and future conditions p. An accurate compass course is maintained, under engine power q. Specific boat handling requirements of crew on vessels are identified and the tasks at each area performed r. Differences between crew organisation on different size vessels, and consequent task allocation, are identified and applied to handling a vessel as part of a team approach
14. Operate auxiliary engines and craft	<ul style="list-style-type: none"> g. Pre-start and stop checks of craft's engine are conducted in accordance with operating procedures and manufacturer's guidelines h. Starting and stopping procedures are performed in accordance with operating procedures and manufacturer's guidelines i. Correct use of main engine controls is demonstrated to ensure adequate control of craft j. Strategies to minimise the risk of ropes fouling with the propeller are implemented k. Dangers associated with the incorrect use of marine heads are

Metal and Engineering Training Package

SROYMC001A Crew a Motor Cruiser Inshore

- identified and correct procedures are demonstrated for the open up/shut down of a marine head
- I. A dinghy is correctly used as a yacht tender, demonstrating safe handling during launching, boarding, loading, rowing, use of outboard and recovery

SRO YMC 002A SKIPPER A MOTOR CRUISER INSHORE

YMC Yachting (Motor cruising)

DESCRIPTION: This unit covers the knowledge and skills to skipper a motor yacht cruising on short passages within sheltered waters with reasonable access to safe anchorages.

ELEMENT	PERFORMANCE CRITERIA
8. Handle rope safely	<ul style="list-style-type: none"> h. Strategies are implemented to ensure safety of self and others when using and handling ropes i. Measures are taken to ensure that ropes are correctly coiled, stowed and secured to cleats and single and double bollards j. Knowledge of the properties of synthetic ropes is used to determine the most appropriate rope for each on board situation k. Warps are handled correctly to ensure efficient mooring l. Safe and correct use of winches is demonstrated m. The advantages, disadvantages of different knots are determined and their use appropriate to the situation is demonstrated n. Splicing and whipping are used to conduct routine maintenance and repair work
9. Plan and prepare for passage	<ul style="list-style-type: none"> i. Yacht is prepared for passage with adequate supervision/checking of all relevant contextual issues j. A plan for crew action and delegation of responsibility in a variety of condition and situations is developed and implemented k. Knowledge of design and loading factors is applied to ensure the stability of the vessel and crew safety l. Gear is correctly secured and stowed on upper deck and below to minimise loss and/or water damage or injury whilst maintaining proper access within and on the vessel m. Strategies are implemented to ensure the security and safety of passengers and crew on deck and below when the vessel is underway n. A short passage, on tidal/estuary waters is planned, taking account of relevant navigational hazards and limitations imposed by the type of boat and the strength of the crew o. A victualling list is developed and victualling organisation is supervised for the passage p. Watches at sea and in harbour are organised and supervised
10. Get under way and return to berth or mooring	<ul style="list-style-type: none"> g. Potential dangers associated with unsafe practices when getting under way and returning to berth are identified and minimised through adequate precautions, practices and crew supervision h. Personal boat handling skills and effective and timely direction to crew enables the vessel to be safely brought to and from an alongside berth, mooring buoy and anchor under power i. Specific tasks associated with getting under way and berthing when using different types of berth are identified and demonstrated j. Factors to be considered when accepting and being towed are identified and applied in these situations k. Under personal steerage, a tow is accepted and the vessel is maneuvered and steered whilst under tow
11. Handle craft	<ul style="list-style-type: none"> p. Knowledge of the effects and efficient use of centre of effort, lateral resistance and the keel or centreplate is used to assist in managing the yacht and reducing leeway

<p>12. Sail in a safe and courteous manner</p>	<ul style="list-style-type: none"> j. Safe sailing practices and etiquette are applied when motoring, mooring and interacting with others sailors k. International Regulations for the Prevention of Collisions at Sea are applied by self and crew l. National, State and local legislation with respect to the safety equipment required on board and safety drills is complied with and safety equipment is stored, used and maintained in accordance with regulations and manufacturer's recommendations m. Fire hazards on board are identified, fire prevention strategies are implemented and fire fighting procedures are demonstrated n. Procedures are followed to ensure that inexperienced crew or passengers are familiar with safety procedures and requirements o. Recovery drill procedures are correctly applied in 'person' overboard situations and correct action as helmsman is taken p. The correct use of distress flares and Emergency Position Indicating Radio Beacon (EPIRB) is demonstrated and situations in which they may be used correctly detailed q. Correct procedures to be followed as skipper in the event of a helicopter rescue are outlined r. Knowledge of weather forecast interpretation and use of forecasting aids is used to determine future conditions
<p>13. Navigate in sheltered waters with reasonable access to safe anchorages</p>	<ul style="list-style-type: none"> e. Knowledge of navigation principles and techniques is applied to carry out routine navigational duties and prepare navigational plans f. The IALA system of buoyage and other visual aids to navigation are correctly interpreted g. Accurate position fixing is demonstrated, taking into account variables and sources of inaccuracies h. Techniques to apply in restricted visibility are identified and applied, where relevant
<p>14. Operate and maintain inboard engine</p>	<ul style="list-style-type: none"> d. Complete engine pre start checks and shut down procedures are conducted in accordance with operating procedures and manufacturer's guidelines e. The engine is started, stopped and operated with correct use of controls f. Serviceable engine parts are identified and located and periodic maintenance checks on engine and electrical installations are performed g. Sufficient engine and electrical tool kits and spares are carried on board and stowed correctly h. Fuel consumption at different speeds is known and sufficient fuel is carried for the planned passage

SRO YSB 001A

USE BASIC SKILLS TO SAIL A SMALL BOAT IN CONTROLLED CONDITIONS

YSB

Yachting (Small boat)

DESCRIPTION: This unit deals with the knowledge and skills to rig and sail a small boat on a marked course in controlled conditions, under supervision.

ELEMENT	PERFORMANCE CRITERIA
<p>15. Select equipment and prepare for participation</p>	<ul style="list-style-type: none"> a. Information on weather and wind conditions is sourced to enable selection of a location to suit personal skill level b. Clothing suitable for the prevailing and expected conditions is selected c. Risks associated with the sailing environment are identified and strategies are implemented to reduce risks d. Safety equipment is worn/used in accordance with state/territory legislation and weather and light conditions e. Collision and water traffic regulations relevant to the activity area are identified and other safety signals, such as code flags, are recognised
<p>16. Rig and de-rig a small boat</p>	<ul style="list-style-type: none"> q. Correct terminology is used to identify the main parts of a small boat r. Sails, and their component parts, are correctly identified s. Fittings on mast, and boom are correctly identified and sails are correctly rigged using appropriate knots, under supervision
<p>17. Leave and return to beach/launching facility</p>	<ul style="list-style-type: none"> a. Wind direction is accurately determined to enable safe, easy launching and return b. The small boat is launched and landed efficiently in calm conditions whilst maintaining stability, correct direction and a controlled speed c. Correct position on the small boat is adopted and the centreboard and rudder are secured d. Centreboard and rudder are correctly prepared for return and raised on return
<p>18. Sail a marked course in calm conditions using basic skills</p>	<ul style="list-style-type: none"> a. Primary boat controls, and their effects on boat movement are recognised and correctly applied b. Common terminology with respect to the wind is identified and knowledge of wind, wind indicators and directional change in relation to wind is applied to determine the sailing directions, based on current wind direction c. Wind awareness, wind indicators and angle of the sail is used to slow and speed up the small boat using a basic heave to as a reference point d. Indicators identifying that the boat is being sailed close hauled are used to sail the boat to destination directly upwind/to windward e. The No-Go Zone perimeters are identified and the boat is tacked from close-hauled to close-hauled f. Indicators identifying that the boat is being sailed on a dead run are recognised and the mainsail is gybed while the boat remains sailing on a dead run g. Potential hazards when sailing downwind and gybing are identified and strategies to avoid the unexpected gybe are implemented h. Knowledge and awareness of wind direction relative to the boat, sail setting and a combination of techniques is used to manoeuvre a small boat through tacks and gybes where necessary to sail a small marked course which requires a range of points of sailing, including but not limited to close-hauled reaching and running, to complete the course

Metal and Engineering Training Package

SROYSB001A Use Basic Skills to Sail a Small Boat in Controlled Conditions

	<ul style="list-style-type: none">i. Compliance with all relevant collision and water traffic regulations is demonstrated and the boat is sailed within designated/defined areasj. Communication with other craft and with other crew members, where appropriate, is maintained.
6. Perform capsize drills	<ul style="list-style-type: none">a. Reasons for capsize are identifiedb. In a capsize situation, strategies to avoid injury are implementedc. Procedures in the event of a capsize are correctly implemented, including visual means of attracting attentiond. Adequate communication, correct technique and order of events is displayed to right a small boat, as part of a team
7. Participate in rescue and towing drills	<ul style="list-style-type: none">a. Reasons for towing a small boat are identified and boat is prepared for towing and handled safely under tow with instructor guidanceb. The small boat is released from tow under instructor guidancec. Under direct supervision and instructor guidance, a crew recovery drill is correctly implemented, demonstrating the procedures to be undertaken in the event of separation of a crew member from the craft
8. Handle small boat ashore	<ul style="list-style-type: none">a. Small boat is carried and stowed in accordance with supervisor's directionsb. Equipment is stowed or stored in accordance with manufacturer's recommendations and/or supervisor's directions

USE BASIC SKILLS TO SAIL A SMALL BOAT IN CONTROLLED CONDITIONS

25. Critical aspects of evidence to be considered

- a. Assessment must confirm sufficient knowledge of sailing theory and sailing conditions to perform basic manoeuvres
- b. Assessment of performance should be over a period of time covering one category of small boat and all categories of each range of variables statements that are applicable to the type of boat sailed and the learners environment
- c. In particular, assessment must confirm the ability to manoeuvre a small boat in calm conditions, demonstrating the ability to:
 - c.1 Prepare and launch the small boat
 - c.2 Sail a small course which includes a range of points of sailing including but not limited to close-hauled, reaching and running
 - c.3 Right a small boat
 - c.4 Participate in a crew recovery drill
 - c.5 Participate in a towing drill
 - c.6 Return the craft to shore/launching point safely
 - c.7 Apply knowledge to select equipment for personal use as well as to care for equipment appropriately

Note: Where learners sail in small boats with more than one crew member, ability to perform all roles required to sail the boat, eg, crewing and helming, must be demonstrated.

26. Interdependent assessment of units

- g. This unit must be assessed after attainment of competency in the following unit(s):
 - a.4 Nil
- b. This unit must be assessed in conjunction with the following unit(s):
 - b.6 SRO ORE 001A Prepare to participate in a supervised outdoor activity requiring basic skills
 - b.7 SRO ORE 002A Participate in a supervised outdoor recreation activity requiring basic skills
 - b.8 SRO OPS 001A Implement minimum environmental impact practices
 - b.9 SRO YAC 001A Comply with maritime rules and regulations
- f. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):
 - c.7 SRO NAV 001A Navigate in tracked or easy untracked areas

27. Required knowledge and skills

- a. Underpinning knowledge
 - a.1 Types of all small boats and rigs, sizes and suitability
 - a.2 Types of Personal Floatation Devices (PFD) (1,2 and 3) and situations where each is applicable
 - a.3 Types, uses and capabilities of wetsuits and drysuits
 - a.4 Other necessary equipment (boots, gloves, hats)

Metal and Engineering Training Package

SROYSB001A Use Basic Skills to Sail a Small Boat in Controlled Conditions

	<ul style="list-style-type: none"> a.5 Parts of a small boat a.6 Equipment maintenance a.7 The main points of sailing and sail positions a.8 Principles of tacking and gybing a.9 Sailing terms/terminology (port/starboard, windward, leeward) a.10 Locations for sailing <ul style="list-style-type: none"> b. SRO YSB 002A SAIL A SMALL BOAT IN LIGHT TO MODERATE CONDITIONS USING ENHANCED SKILLS

YSB

Yachting (Small boat)

DESCRIPTION: This unit deals with the enhanced knowledge and skills necessary to rig and sail a small boat to best advantage, using a variety of techniques in light to moderate conditions and under minimal guidance.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Select equipment and prepare for participation</p>	<p>a. Information on weather and wind conditions is sourced to enable selection of a location to suit personal skill level</p> <p>b. Clothing suitable for the prevailing and expected conditions is selected</p> <p>c. Risks associated with the sailing environment are identified and strategies are implemented to reduce risks</p> <p>d. Safety equipment is worn/used in accordance with state/territory legislation and weather and light conditions</p>
<p>2. Rig and de-rig a small boat</p>	<p>a. Running and standing rigging</p> <p>b. The different types of cleat, and their use is identified</p> <p>c. Cunningham eye system and outhaul</p> <p>d. Features of different sails, and their uses, are correctly identified</p> <p>e. Fittings on mast, and boom are correctly identified and sails are correctly rigged using appropriate knots</p> <p>f. Knots which are useful in the activity of sailing are tied, and their advantages, disadvantages and applications described</p>
<p>3. Sail a marked course in light to moderate conditions using enhanced skills</p>	<p>a. The points of sailing are identified</p> <p>b. The points of sailing given the direction of the wind relative to the small boat are identified</p> <p>c. Primary boat controls are utilised to sail the boat through tacks and gybes and the techniques of roll tacking and roll gybing are correctly demonstrated where appropriate</p> <p>d. Common terminology with respect to the wind is identified and knowledge of wind, wind indicators and directional change in relation to wind is applied to determine the sailing directions, based on current wind direction</p> <p>e. Steering, speed and balance are maintained</p> <p>f. Knowledge and awareness of wind direction relative to the boat, points of sail and a combination of techniques is used to manoeuvre a small boat in light to moderate conditions using the tiller extension where necessary to sail a course which includes windward and downwind legs</p> <p>g. Compliance with all relevant collision and water traffic regulations is demonstrated and small boat is sailed within designated/defined areas</p> <p>h. Communication with other craft and with other crew members, where appropriate, is maintained</p>
<p>4. Handle a spinnaker</p>	<p>a. Situations in which the spinnaker can be utilised are identified</p> <p>b. Component parts of the spinnaker are correctly identified and situations in which a spinnaker could be used are determined</p> <p>c. A spinnaker is correctly rigged, set, gybed and dropped in light to moderate conditions</p> <p>d. The ability to steer a small boat under spinnaker in light to moderate conditions is demonstrated</p>
<p>5. Use a trapeze</p>	<p>h. Situations in which trapezing is used are identified and demonstrated</p>

	<ul style="list-style-type: none"> i. Component parts of the trapeze system are identified and the trapeze harness is adjusted and fitted in accordance with manufacturer's recommendations j. The ability to sail on trapeze in favourable conditions is demonstrated k. A boat is steered with a crew on trapeze in favourable conditions, demonstrating the ability to get in, get out, tack and gybe
<p>6. Perform crew recovery and towing drills independently</p>	<ul style="list-style-type: none"> a. Reasons for the loss of crew overboard are identified b. A crew member lost overboard is recovered in a safe and effective manner, using effective communication, correct technique and order of events, as part of a team c. Appropriate recovery side, approach speed and stopping technique is demonstrated to ensure efficient recovery and minimize risk of injury to crew in water d. A small boat is prepared for towing correctly and efficiently e. The boat is towed safely in single and/or multiple tow situations f. The boat is released from the tow safely, demonstrating awareness of factors to be considered when releasing from a multiple-tow situation
<p>7. Bring a small boat alongside a fixed or unfixed structure</p>	<ul style="list-style-type: none"> a. Small boat is safely and accurately brought alongside a wharf or anchored vessel/object without damage or injury to boat or persons
<p>8. Care for and stow/store equipment</p>	<ul style="list-style-type: none"> a. Factors causing equipment damage in the sailing environment are identified, and strategies implemented to improve equipment wear b. Sail and rig are maintained and stowed, in accordance with manufacturer's recommendations c. Other equipment is washed, dried and stowed in accordance with manufacturer's recommendations to ensure maximum lifespan and reduce damage d. Small boat is carried in a manner to minimize hull damage e. Trailers and trolleys are maintained to minimize rust on frames and bearings

Range of Variables

SAIL A SMALL BOAT IN LIGHT TO MODERATE CONDITIONS USING ENHANCED SKILLS

VARIABLE STATEMENT	CATEGORIES
1. Appropriate knots	<ul style="list-style-type: none"> hh. figure of eight ii. bowline jj. half hitch kk. reef knot ll. rolling hitch
2. Cleats	<ul style="list-style-type: none"> a. cam b. clam c. horn d. V cleats
3. Collision and water traffic regulations	<ul style="list-style-type: none"> a. Port gives way to starboard b. windward boat keeps clear c. overtaking boat keeps clear d. keep to the right in channels - turn right, pass port to port e. power gives way to sail f. right of way for commercial vessels
4. Enhanced skills	<ul style="list-style-type: none"> a. roll tacking b. roll gybing c. spinnaker handling d. trapezing e. perform crew recovery drill f. perform towing drill
5. Equipment	<ul style="list-style-type: none"> a. wetsuits b. boots c. gloves d. spray jacket e. hats/caps f. Personal Floatation Devices g. craft
6. Equipment care	<ul style="list-style-type: none"> a. sail and rig care b. carrying/transport of small boat c. washing and stowage of small boat and sail d. care of Personal Floatation Devices and wetsuits e. maintenance of trailers and trolleys
7. Factors to be considered when releasing from a multiple-tow situation	<ul style="list-style-type: none"> aa. clear communication between all boats and tow boat bb. awareness of position of main tow line cc. staying to appropriate side of main tow line dd. order of release ee. release synchronisation
8. Light to	<ul style="list-style-type: none"> a. winds 8-18 knots

moderate conditions	b. wave height to 0.5m
9. Parts of a spinnaker	ff. halyard gg. sheets hh. pole ii. up haul jj. kicker kk. corners - head and clews ll. luff/leeches and foot
10. Primary boat controls	a. mainsail b. jib c. balance d. trim e. centreboard
11. Risks	a. sun burn b. windburn c. marine stingers d. drowning e. dehydration f. hypothermia
12. Safe and accurate coming alongside	a. safe approach b. consideration of protruding body parts c. slow, controlled approach d. holding on and making fast
13. Sails	mm. mainsail nn. jib oo. spinnaker
14. Small boats	a. small (18ft and under) unballasted mono or multi hulled vessel with one mast b. stayed or unstayed mast c. one, two or three sails d. one or more crew members
15. Towing correctly and efficiently	a. secure line to fixed object close to the boat's centreline with turns to take load (not knots) b. main towline is positioned correctly c. centreboard is at least half up d. crew weight aft
16. Trapeze	a. full harness b. half harness
17. Wind direction	may be determined by: a. flags b. smoke c. ripples on the water d. moored boats e. wind on the face
18. Wind terminology	a. wind aft b. upwind c. downwind d. wind abeam e. head to wind f. luffing g. windward h. leeward

Metal and Engineering Training Package

SROYSB002A Sail a Small Boat in Light to Moderate Conditions Using Enhanced Skills

Evidence Guide

SAIL A SMALL BOAT IN LIGHT TO MODERATE CONDITIONS USING ENHANCED SKILLS

1. Critical aspects of evidence to be considered

- a. Assessment must confirm sufficient knowledge of sailing theory and sailing conditions to perform basic manoeuvres
- b. Assessment of performance should be over a period of time covering one category of small boat and all categories of each range of variables statements that are applicable to the type of boat sailed and the learner's environment
- c. In particular, assessment must confirm the ability to manoeuvre a small boat in light to moderate conditions, demonstrating the ability to:
 - c.1 Sail around a marked course including all major points of sailing in light to moderate conditions without instructor guidance
 - c.2 Use sails and balance (primary boat controls) to steer/sail the small boat around a marked course
 - c.3 Independently perform a crew recovery drill in light to moderate conditions
 - c.4 Select equipment for personal use as well as to care for equipment appropriately

Note: Where learners sail in small boats with more than one crew member, ability to perform all roles required to sail the boat, eg, crewing and helming, must be demonstrated.

2. Interdependent assessment of units

- a. This unit must be assessed after attainment of competency in the following unit(s):
 - a.1 SRO YAC 001A Comply with maritime rules and regulations
 - a.2 SRO YSB 001A Use basic skills to sail a small boat in controlled conditions
- b. This unit must be assessed in conjunction with the following unit(s):
 - b.1 SRO ORE 003A Prepare to participate in outdoor activities
 - b.2 SRO ORE 004A Participate in outdoor activities
 - b.3 SRO OPS 002A Plan for minimal environmental impact
- c. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):
 - c.1 SRO NAV 001A Navigate in tracked or easy untracked areas

3. Required knowledge and skills

- a. Underpinning knowledge
 - Wind indicators
 - Equipment maintenance
 - The main points of sailing and sail positions
 - Principles of tacking and gybing
 - Sailing terms/terminology (port/starboard, windward, leeward)
 - Use of spinnaker and trapeze

	<ul style="list-style-type: none"> b. Underpinning skills <ul style="list-style-type: none"> b.1 Tacking upwind b.2 Gybing downwind b.3 Sailing close hauled b.4 Running b.5 Reaching b.6 Rescue drills b.7 Use of spinnaker and trapeze
4. Resource implications	<ul style="list-style-type: none"> a. Assessment of this competency requires access to a suitable location and conditions (enclosed water, light winds), a small boat, and buoys to mark a course b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines
5. Consistency in performance	<ul style="list-style-type: none"> a. Competence in this unit must be assessed over a period of time (ie over several marked courses in light to moderate conditions) in order to ensure consistency of performance over the range of variables and contexts applicable
6. Context for assessment	<ul style="list-style-type: none"> a. Competency must be demonstrated in a sailing activity in the specified conditions. Some components may be assessed on land b. In cases where the learner does not have the opportunity to cover one category of small boat and all categories of each range of variables statements that are applicable to the type of boat sailed and the learners environment, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on "What if?" scenarios c. Assessment of this unit of competence will usually include observation of processes and procedures, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes d. Where performance is not directly observed and/or is required to be demonstrated over a "period of time" and/or in a "number of locations", any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons

SRX EME 002A PARTICIPATE IN THE CONTROL OF MINOR EMERGENCIES

EME Emergency response

DESCRIPTION: This unit covers the knowledge and skills to deal with, or participate in the control of, emergencies which are not initially or potentially life threatening.

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate the emergency	a. The emergency situation is correctly established and classified and the likely effectiveness of initial response action determined b. Advice sought from relevant people , if appropriate, in evaluating the emergency c. Situations where initial response actions are not safe or are likely to be ineffective are reported according to procedures
2. Safely confine emergencies	a. Emergencies are confined to the area of origin, where possible, according to operating procedures b. Emergency control equipment and facilities used to confine emergency situations are used in a manner that will promote and enhance safe working conditions for self and others c. Emergency control equipment and facilities are used within the limitations imposed by current skills and relevant operating procedures d. Manufacturer's specifications, environmental requirements and operating procedures are identified and applied throughout
3. Use initial response emergency equipment	a. Appropriate equipment is selected to address emergency situations b. Equipment is checked to ensure it is safe and ready for use c. Equipment is used in accordance with accepted safety practices d. Use of equipment is coordinated with other emergency actions
4. Report the use of initial response emergency equipment	a. Emergency equipment is marked or positioned after use to indicate it requires servicing or replacing b. The use of initial response emergency equipment is reported according to organisation's policies and procedures

Range of Variables

PARTICIPATE IN THE CONTROL OF MINOR EMERGENCIES

VARIABLE STATEMENT	CATEGORIES
1. Checking procedures	<ul style="list-style-type: none"> a. written instructions b. company literature c. Occupational Health and Safety legislation d. codes of practices e. legislative requirements
2. Classification of the emergency	<p>Factors to be considered</p> <ul style="list-style-type: none"> a. nature and size b. likely development c. availability of support d. means of escape e. availability of control equipment or facilities f. likely effects on activity, clients and others
3. Confinement methods	<ul style="list-style-type: none"> a. closing doors b. shutting down equipment c. using emergency control equipment such as fire blankets, spill control kits d. sport and recreation or activity-specific confinement methods
4. Emergency control equipment and facilities	<ul style="list-style-type: none"> a. fire doors b. fire sprinkler systems and alarm systems c. first aid kits d. portable fire extinguishers and fire hose-reels e. smoke vents f. fire blankets g. spill control kits h. ice packs i. water j. thrown bags and buoys k. sport and recreation or activity-specific emergency equipment and facilities
5. Emergency situations	<ul style="list-style-type: none"> a. fires b. fuel and other spills

	<ul style="list-style-type: none"> c. process overheating d. equipment loss or failure e. activity and site specific situations
6. Initial response	<ul style="list-style-type: none"> a. use of portable fire extinguishers b. hose reels suppression systems c. removal of the emergency d. use of first aid kit e. pressure immobilisation f. throwing buoyant objects g. throwing water or blanket over a fire h. isolating victims and others from danger i. application of ice pack
7. Marking and positioning equipment to indicate it has been operated	<ul style="list-style-type: none"> a. not replacing emergency response equipment in usual storage site and/or manner b. disposing of contaminated spill absorbent correctly c. completion of usage forms and re-ordering of supplies in first aid kits d. procedures specific to sport and recreation or activity specific emergency response equipment (eg, indicating need for refilling, recoiling, retesting, repackaging, refreezing, refolding)
8. Operating procedures	<ul style="list-style-type: none"> a. the organisation's emergency procedures or practices and/or operating instructions or procedures for emergency control equipment
9. Other emergency actions	<ul style="list-style-type: none"> a. shutdown procedures and evacuation
10. Relevant people	<ul style="list-style-type: none"> a. other emergency team members b. emergency response related persons as detailed in emergency procedures
11. Reporting procedures	<ul style="list-style-type: none"> a. chief warden b. emergency response team leader c. fire/safety officer d. security officer or supervisor
12. Reports	<ul style="list-style-type: none"> a. initiate incident investigations b. record details of emergencies c. upgrade emergency equipment d. ensure equipment is restored to service

SRX EME 003A

RESPOND TO EMERGENCY SITUATIONS

EME

Emergency response

DESCRIPTION: This unit covers the knowledge and skills to recognise potential risks and emergency situations and to take action, within own area of responsibility and ability.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Evaluate the emergency</p>	<ul style="list-style-type: none"> a. Emergency reports and signals are correctly identified and actioned and emergency and potential emergency situations are promptly recognised and assessed b. Advice is sought from relevant people, if appropriate, in evaluating the emergency c. Situations where initial response actions are not safe or are likely to be ineffective, are not attacked and are reported according to procedures d. The possible development of the emergency situation is assessed and further potential hazards to clients and staff are evaluated e. Injuries are assessed and treated appropriately f. The situation variables are examined g. Needs, including those for assistance, are prioritised promptly and accurately
<p>2. Develop a plan of action</p>	<ul style="list-style-type: none"> t. Options for action are identified and evaluated u. Available resources are used efficiently v. The plan developed balances group and individual safety with contextual issues w. The involvement of other individuals in the plan is outlined x. Organisational emergency procedures and policies are correctly implemented as part of the plan of action y. Occupational health and safety requirements and safe working practices are applied in the plan of action, including the selection of personal protective clothing and equipment to suit the emergency situation
<p>3. Control the emergency</p>	<ul style="list-style-type: none"> d. The plan of action is implemented using techniques appropriate to the situation and available resources and abilities e. Equipment is operated safely and, where necessary, equipment and techniques are improvised f. Strategies for group control are identified and implemented and clients and other individuals are removed from danger g. The condition of all clients, staff and others assisting is constantly monitored h. The information required to assist emergency services, where relevant, is acquired and documented i. Where required, emergency services are notified j. The plan of action is changed to accommodate changes in the situation variables k. Casualty evacuation methods are demonstrated where relevant to the context l. Organisational procedures and policies and legal requirements are correctly implemented in the event of a major injury or death
<p>4. Debrief the emergency</p>	<ul style="list-style-type: none"> l. Management authorities are notified m. The information appropriate to be given to facility or land management authorities is obtained n. Clients and others directly involved are debriefed and arrangements made for further counselling, if required o. Clients and others directly involved are advised to refer media enquires to a nominated spokesperson

Range of Variables

SRX EME 004A

COORDINATE EMERGENCY RESPONSE

EME

Emergency response

DESCRIPTION: This unit covers the knowledge and skills to coordinate a response to an emergency situation, in accordance with an organisation's policies and procedures.

ELEMENT	PERFORMANCE CRITERIA
1. Coordinate response to emergency reports or signals	e. Emergency <i>reports and signals</i> are correctly identified and actioned f. Where appropriate, <i>emergency stations</i> are attended and operated according to procedures g. <i>Emergency situations</i> are assessed and details reported according to procedures h. Emergency response actions are coordinated according to <i>procedures</i>
2. Anticipate the behaviour and characteristics of typical emergencies	a. An examination of the situation is conducted b. Emergency action plan is based on current situation and possible <i>development</i> c. Needs are prioritised promptly and accurately
3. Coordinate and apply operating instructions	a. Organisational emergency <i>procedures</i> and policies are correctly implemented b. <i>Occupational health and safety requirements</i> and safe working practices are applied
4. Coordinate the rescue procedure	a. The safe use of <i>emergency equipment</i> is determined and coordinated b. Equipment selection to match the type of emergency is supervised c. Selection of rescue technique is supervised to ensure safety and effectiveness d. Where necessary, equipment and techniques are improvised
5. Coordinate, initiate and control evacuation	a. Situations beyond the capability of the emergency team are referred promptly to the appropriate authorities for assistance b. Information and assistance is provided to relevant authorities c. If necessary, <i>emergency evacuation</i> is controlled and coordinated to organisational procedures or directions from relevant authorities

Metal and Engineering Training Package

SRXEMEOO4A Coordinate Emergency Response

	d. The <i>welfare</i> of non-evacuated persons is arranged and coordinated
6. Coordinate operational procedures	<p>a. An operational log is maintained throughout the rescue activity or completed immediately thereafter</p> <p>b. Emergency team members are advised to refer media inquiries to the nominated spokesperson</p>

Range of Variables

COORDINATE EMERGENCY RESPONSE

VARIABLE STATEMENT	CATEGORIES
1. Development	<ul style="list-style-type: none"> a. spread of fire b. threat to adjoining areas c. danger of explosion d. loss of communications and involvement of additional persons
2. Emergency equipment according to local policy	<ul style="list-style-type: none"> a. hoses, hose reels b. monitors c. foam equipment and extinguishers d. blankets e. spill kits f. personal protective clothing/equipment g. ladders h. salvage gear i. rescue equipment j. first aid and evacuation equipment /resources
3. Emergency evacuation	<ul style="list-style-type: none"> a. total b. partial c. to an external refuge d. to an internal refuge
4. Emergency situations	<ul style="list-style-type: none"> a. fire b. hazardous releases and uncontrollable processes c. smoke spread d. bomb threats or civil disorder e. environmental (severe storms, earthquakes, floods) f. other natural or man-made disasters g. specific emergencies occurring during participation in/conduct of sport and recreation activities
5. Emergency stations	<ul style="list-style-type: none"> a. emergency warning and control points b. assembly points c. fire points d. appropriate locations in <ul style="list-style-type: none"> d.1 snow

	<ul style="list-style-type: none">d.2 waterd.3 bush or cavesd.4 positions along the edge of the waterd.5 at the top or base of a pitch
6. Occupational health and safety requirements	<ul style="list-style-type: none">a. state legislationb. Australian standardsc. Occupational Health and Safety legislationd. industry codes of practicee. organisation's procedures
7. Procedures	<ul style="list-style-type: none">a. practices may be written or verbalb. instructions outlining the organisations fire and/or emergency procedures or practices and/or operating instructions and/or procedures for emergency control equipment
8. Reports and signals	<ul style="list-style-type: none">a. observationb. verbalc. emergency warning systemd. emergency alarm systeme. hand signalsf. verbal reportsg. telephone communicationsh. radio communicationsi. whistles
9. Welfare	<ul style="list-style-type: none">a. relocating evacuated person to other areasb. advising relativesc. arranging transport and collecting personal items

COORDINATE EMERGENCY RESPONSE

<p>1. Critical aspects of evidence to be considered</p>	<p>z. Assessment must confirm sufficient knowledge of the organisation's procedures and relevant Occupational Health and Safety legislation to assess emergency situations and coordinate a response to emergency situations within the community recreation, fitness, outdoor recreation or sport industry</p> <p>aa. Assessment of performance should be over a period of time covering all categories of each range of variable statement that are applicable in the learners environment</p> <p>bb. Assessment must confirm the ability to apply knowledge of emergency procedures to the coordination of general and sport or recreation activity-specific emergencies</p> <p>cc. In particular, assessment must confirm the ability to</p> <p>d.1 classify the emergency and recognise situations that must not be attacked because of risk of life</p> <p>d.2 recognise hazards and precautions to be taken during emergency response and actions to take in response to developing situations</p> <p>d.3 anticipate the escalation/development of the emergency situation</p> <p>d.4 correctly apply operating procedures, occupational health and safety requirements and legislation to the coordination of a response</p> <p>d.5 supervise the correct use of rescue techniques and equipment</p> <p>d.6 recognise equipment operation characteristics, limitations and procedures</p> <p>d.7 identify damaged, faulty or unserviceable equipment and recognise the hazards involved with the use of emergency equipment</p> <p>d.8 assess the need, type and level of evacuation and apply correct emergency evacuation procedures</p> <p>d.9 understand and/or use emergency evacuation signals or alarms</p> <p>d.10 maintain an operational log of the emergency actions</p> <p>d.11 deal with media inquiries in accordance with the organisation's procedures</p>
<p>2. Interdependent assessment of units</p>	<p>a. This unit must be assessed after attainment of competency in the following unit(s):</p> <p>a.1 SRX EME 003A Respond to emergency situations</p> <p>b. This unit must be assessed in conjunction with the following unit(s):</p> <p>b.1 activity specific or community recreation/fitness/outdoor recreation/sport specific emergency response or rescue units</p> <p>c. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):</p> <p>c.1 SRX OHS 002A Implement and monitor the organisation's Occupational Health and Safety policies, procedures and programs and maintain Occupational Health and Safety standards</p>
<p>3. Required knowledge and skills</p>	<p>a. Underpinning knowledge</p> <p>a.1 First aid knowledge and procedures</p> <p>a.2 Use of communications equipment</p> <p>a.3 Organisational and legal policies and procedures in the</p>

	<p>event of an accident/incident</p> <p>a.4 Activity specific rescue techniques</p> <p>a.5 Legal requirements in the event of a death</p> <p>a.6 Relevant emergency response agencies within the activity area/location and the process to contact them</p> <p>a.7 Organisation’s emergency plan and contingency plan</p> <p>b. Underpinning skills</p> <p>b.1 First aid procedures appropriate to the activity location</p> <p>b.2 Activity specific rescue techniques</p> <p>b.3 Problem solving to assess emergency situation and develop action plan</p> <p>b.4 Contingency management</p> <p>b.5 Adaptability and resourcefulness to improvise equipment/techniques</p>
<p>4. Resource implications</p>	<p>a. Assessment of this competency requires access to emergency response procedural documents and equipment appropriate to the learner’s work environment (ie, within the community recreation, fitness, outdoor recreation or sport industry)</p> <p>b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines</p>
<p>5. Consistency in performance</p>	<p>a. Competence in this unit must be assessed over a period of time in order to ensure consistency of performance over the range of variables, contexts and types of emergency situations applicable to a particular work environment within the sport and recreation industry</p>
<p>6. Context for assessment</p>	<p>a. Competency must be demonstrated in a real work environment</p> <p>b. In cases where the learner does not have the opportunity to cover all relevant categories of the range of variables statements in the work environment, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on “What if?” scenarios</p> <p>c. Assessment of this unit of competence will usually include observation of processes and procedures, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes</p> <p>d. Where performance is not directly observed and/or is required to be demonstrated over a “period of time” and/or in a “number of locations”, any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons</p>

SRX RES 002A IMPROVE CLIENT AWARENESS AND IMPLEMENTATION OF ENVIRONMENTAL MANAGEMENT PRACTICES

RES Resource management

DESCRIPTION: This unit covers the knowledge and skills to improve awareness of environmental management practices within an organisation and inform external clients of the organisation’s practices.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify level of staff awareness and implementation of environmental management practices</p>	<p>a. Criteria for determining <i>staff awareness</i> and <i>effectiveness</i> of implementation of existing practices are developed</p> <p>b. Criteria are applied in order to determine relative effectiveness</p> <p>c. The need for modification or improvement of staff implementation of existing environmental practices is identified</p> <p>d. New areas which require implementation of environmental management practices in accordance with the organisation’s policies and environmental management plan are determined</p>
<p>2. Develop and rank methods to improve staff awareness and implementation of environmental management practices</p>	<p>a. Relevant information to assist staff awareness in environmental management is identified, researched and collated</p> <p>b. Specialist knowledge and skills are applied to determine the most suitable method</p> <p>c. Criteria to develop an effective ranking of practices is developed</p> <p>d. <i>Methods for improving staff awareness</i> and reaching identified areas of need is determined</p> <p>e. Information needs and opportunities for community involvement in improving awareness are established</p>
<p>3. Implement appropriate methods to improve staff awareness</p>	<p>a. Financial resources are identified and procured within budget cycles to support the achievement of required outcomes</p> <p>b. Personnel are identified, trained and assigned to tasks so that strategy requirements for skills and knowledge are met</p> <p>c. Physical facilities and equipment are identified and procured within budget cycles</p> <p>d. Information materials are prepared and distributed to ensure required awareness levels are achieved</p>

	<p>e. Improvement in staff awareness of environmental issues is achieved in accordance with local policy, procedures and relevant <i>legislative requirements</i></p>
<p>4. Monitor and review the levels of community awareness</p>	<p>a. Regular data are collected and analysed to provide accurate measures of performance</p> <p>b. Comparisons are made with required outcomes to assess performance</p> <p>c. Recommendations are made for changes to methods and systems</p> <p>d. Changes to methods and systems are made to ensure outcomes are achieved</p> <p>e. Information obtained during monitoring and review is used to develop new methods and systems which are based on accumulated knowledge and experience</p>
<p>5. Inform external clients of environmental management practices</p>	<p>a. Advantages of informing external clients of organisation's environmental management practices are identified and used to determine methods to improve their awareness</p> <p>b. Opportunities to inform external clients of organisation's environmental management practices are identified and supervisors/management are notified of new opportunities</p> <p>c. Resources and information required to inform external clients are identified and accessed within budget cycles</p> <p>d. Interactions with clients are used as an opportunity to inform them of the organisation's environmental management practices</p> <p>e. Strategies are developed to enable clients to participate in the implementation of the environmental management practices</p>

Range of Variables

IMPROVE CLIENT AWARENESS AND IMPLEMENTATION OF ENVIRONMENTAL MANAGEMENT PRACTICES

VARIABLE STATEMENT	CATEGORIES
1. Staff awareness	<ul style="list-style-type: none"> a. level of knowledge b. need for information c. awareness of methods of information distribution d. methods for suggesting improvements in systems e. internal system within the organisation
2. Effectiveness	<ul style="list-style-type: none"> a. the range of methods used b. consistency of involvement c. level and quality of training provided d. level and quality of involvement e. funding and resources required f. quality and level of benefit derived g. outcomes achieved and goals for improvement
3. Legislative context	<ul style="list-style-type: none"> a. State/Territory statutory requirements b. local laws, by-laws, ordinances and policy
4. Methods for improving awareness	<ul style="list-style-type: none"> a. significant use of resources b. minimal input of resources c. use of existing systems within the organisation d. high quality materials e. use of experts or consultants with relevant skills
5. Work environment	<p>varies with respect to</p> <ul style="list-style-type: none"> a. size of the organisation b. location c. organisational structure d. nature of service provided e. resource availability

IMPROVE CLIENT AWARENESS AND IMPLEMENTATION OF ENVIRONMENTAL MANAGEMENT PRACTICES

<p>1. Critical aspects of evidence to be considered</p>	<ul style="list-style-type: none"> a. Assessment must confirm sufficient knowledge of methods to determine staff awareness of the organisation’s environmental management strategies and the effectiveness of staff implementation of the strategies in the work environment b. Assessment of performance should be over a period of time covering all categories of the range of variables statements that are applicable in the learners work environment c. In particular, assessment must confirm the ability to: <ul style="list-style-type: none"> c.1 Determine the level of staff implementation of the organisation’s environmental management practices c.2 Develop appropriate methods to improve staff implementation of the organisation’s environmental management practices c.3 Accurately assess any improvement in implementation c.4 Assess client awareness of the organisation’s environmental management practices c.5 Improve external client awareness of the organisation’s environmental management practices
<p>2. Interdependent assessment of units</p>	<ul style="list-style-type: none"> a. This unit must be assessed after attainment of competency in the following unit(s): <ul style="list-style-type: none"> a.1 Nil b. SRXRESOO2A Improve Client Awareness and Implementation of Environmental Management Practices

SRX RES 004A MINIMISE WASTE AND POLLUTION AND THEIR ENVIRONMENTAL IMPACT

RES Resource management

DESCRIPTION: This unit covers the knowledge and skills to identify sources of waste and pollution, assess their impact and develop appropriate strategies to manage and minimise their environmental impact.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Identify quantity, composition and sources of waste and environmental pollution</p>	<p>a. Existing <i>data</i> is identified and collated in a comprehensive manner</p> <p>b. Additional <i>data</i> is obtained to ensure comprehensive <i>data</i> is available for analysis</p>
<p>2. Assess the impact of waste and pollution on the environment</p>	<p>a. Specialist skills and most effective method of assessing <i>waste</i> and <i>pollution</i> are identified</p> <p>b. The community is surveyed to determine awareness of <i>waste</i> and <i>pollution</i></p> <p>c. Relevant existing waste management practices and pollution conditions are assessed against legislation, industry standards, organisation and community requirements and expectations</p> <p>d. A cost impact analysis is undertaken of existing pollution condition on the <i>environment</i></p> <p>e. A <i>cost benefit</i> analysis is undertaken of existing waste management practices</p> <p>f. The effects of existing waste practices and pollution on the <i>environment</i> are regularly monitored</p> <p>g. The pollution cycle is established for each <i>pollution</i> component in the organisation area</p> <p>h. The waste impact cycle is established for each component of the <i>waste stream</i> in the organisation area</p> <p>i. Resource usage in the waste impact cycle and pollution cycle is measured accurately</p>
<p>3. Determine the effectiveness of current methods and standards in minimising</p>	<p>a. Waste minimisation and pollution standards are specified in accordance with community standards and relevant authority regulations</p> <p>b. Performance is measured accurately, regularly and in a cost effective manner</p> <p>c. Statistically valid comparisons are made between</p>

<p>waste and pollution</p>	<p>objectives and performance to accurately establish if standards have been met</p>
<p>4. Investigate, develop and prioritise achievable waste and pollution minimisation strategies</p>	<ul style="list-style-type: none"> a. Consultation with the community and relevant <i>authorities</i> is undertaken to determine appropriate objectives and levels of performance b. Practical and appropriate <i>strategies</i> to minimise <i>waste</i> and <i>pollution</i> are determined c. The effectiveness of <i>strategies</i> is assessed through a comparison with methods in practice elsewhere d. <i>Strategies</i> are assessed for cost effectiveness e. Trial and sampling techniques are implemented in a controlled manner and results assessed against strategy objectives f. <i>Strategies</i> are prioritised for implementation based on organisation and other relevant <i>authority</i> criteria g. <i>Strategies</i> are implemented within available resources in accordance with agreed priorities
<p>5. Implement strategies to minimise waste and environmental pollution</p>	<ul style="list-style-type: none"> a. Financial resources are identified and procured within budget cycles to support the achievement of required outcomes b. Personnel are identified, trained and assigned to tasks so that strategy requirements for skills and knowledge are met c. Physical facilities and equipment are identified and procured within budget cycles to support the achievement of required outcomes d. Community information materials are prepared and distributed based on outcomes of trials and sampling to ensure on-going support for the strategy e. Strategy is implemented in accordance with organisation policy and procedures
<p>6. Monitor and review the effectiveness of minimisation strategies</p>	<ul style="list-style-type: none"> a. Regular <i>data</i> is collected and analysed to provide accurate measures of performance b. Comparisons are made with strategy objectives to assess effectiveness c. Changes to implemented strategy are made as required in a timely manner to ensure outcomes are achieved d. Information obtained during monitoring and review is used to develop new <i>strategies</i> which are based on accumulated knowledge and experience

Range of Variables

MINIMISE WASTE AND POLLUTION AND THEIR ENVIRONMENTAL IMPACT

VARIABLE STATEMENT	CATEGORIES
1. Authorities	<ul style="list-style-type: none"> a. state environment protection authorities b. waste management bodies c. recycling and resource recovery bodies
2. Cost benefits	<ul style="list-style-type: none"> a. financial b. health c. amenity d. flora and fauna e. social f. fee for service
3. Data	<ul style="list-style-type: none"> a. types of waste/ pollution b. costs of reduction/disposal c. legislation d. impact details e. sources f. experimental controls g. quantities/levels
4. Data types	<ul style="list-style-type: none"> a. complaints b. officer observation c. monitoring and sampling d. historical records and reports e. water board (local) f. comparative external reports g. community environmental programs h. SRX RES 008A CONSERVE AND RE-ESTABLISH NATURAL SYSTEMS

RES Resource management

DESCRIPTION: This unit covers the knowledge and skills to prepare an inventory of natural systems, asses threats and opportunities and develop and implement strategies to conserve and re-establish natural systems.

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare an inventory of natural systems and their components</p>	<p>a. <i>Natural systems</i> and components are identified within community and organisation expectations and requirements</p> <p>b. The significance of <i>natural systems</i> is specified in accordance with scientific criteria and community expectations</p> <p>c. <i>Existing data</i> is identified and reviewed to enable characteristics of the natural system to be specified</p> <p>d. Data is collected on <i>natural systems</i> accurately and objectively</p> <p>e. A comprehensive inventory of <i>natural systems</i> is prepared with full and detailed descriptors</p>
<p>2. Assess threats and opportunities for the conservation and re-establishment of natural systems</p>	<p>a. <i>Threats</i> and opportunities are identified in accordance with <i>legislative</i> and authority expectations so that all factors are fully assessed</p> <p>b. <i>Threats</i> and opportunities are prioritised based on type, level, land tenure and classification of <i>natural systems</i> in accordance with community expectations</p>
<p>3. Develop strategies for the conservation and re-establishment of natural systems</p>	<p>a. Consultation with the community and relevant authorities is undertaken to determine appropriate objectives and levels of performance</p> <p>b. Practical and appropriate strategies to conserve and re-establish <i>natural systems</i> are determined</p> <p>c. The effectiveness of strategies is assessed through a comparison with methods in practice elsewhere</p> <p>d. Proven techniques for the conservation and re-establishment of <i>natural systems</i> are applied within accepted procedures and environmental standards</p> <p>e. Alternative and innovative approaches are developed where appropriate to meet local requirements</p>

<p>4. Implement suitable strategies to conserve and re-establish natural systems</p>	<ul style="list-style-type: none">a. Financial resources are identified and procured within budget cycles to support the achievement of required outcomesb. Personnel are identified, trained and assigned to tasks so that strategy requirements for skills and knowledge are metc. Physical facilities and equipment are identified and procured within budget cycles to support the achievement of required outcomesd. Community information materials are prepared and distributed to ensure on-going support for the strategye. Innovative and alternative techniques are trialed so that results can be assessedf. Strategy is reviewed in accordance with trials undertakeng. Strategy is implemented within organisation policy and procedures and <i>legislative requirements</i>
<p>5. Monitor and review the effectiveness of strategies to conserve and re-establish natural systems</p>	<ul style="list-style-type: none">a. Regular data are collected and analysed to provide accurate measures to performanceb. Comparisons are made with strategy objectives to assess effectivenessc. Changes to implemented strategy are made as required in a timely manner to ensure outcomes are achievedd. Information obtained during monitoring and review is used to develop new strategies which are based on accumulated knowledge and experience

Range of Variables

CONSERVE AND RE-ESTABLISH NATURAL SYSTEMS

VARIABLE STATEMENT	CATEGORIES
1. Existing data sourced from	<ul style="list-style-type: none"> a. university b. consultants reports c. conservation and natural resources d. Land Conservation Council e. Port Authority f. state and federal bodies g. State Environmental Protection Authority h. interest groups i. referral bodies j. Municipal Planning Scheme k. environmentalists
2. Legislative context	<ul style="list-style-type: none"> a. state/territory statutory requirements b. local laws, by-laws, ordinances and policy
3. Natural systems	<ul style="list-style-type: none"> a. flora b. fauna c. species d. communities e. habitats f. regeneration g. re-vegetation h. fire management i. degradation factors
4. Threats	<ul style="list-style-type: none"> a. political emphasis b. economic rationalisation c. community attitude d. interest groups

CONSERVE AND RE-ESTABLISH NATURAL SYSTEMS

<p>1. Critical aspects of evidence to be considered</p>	<p>a. Assessment must confirm sufficient knowledge of techniques to determine the components of natural systems within a specific location/area and develop strategies to conserve and re-establish natural systems</p> <p>b. Assessment of performance should be over a period of time covering all relevant categories of data source and components of natural systems within the range of variable statements that are applicable to the location/area analysed</p> <p>c. In particular, assessment must confirm the ability to</p> <p>c.1 Prepare an accurate inventory of natural systems within a specific location/area</p> <p>c.2 Assess threats and opportunities for conservation of natural systems within a specific location/area</p> <p>c.3 Develop and implement suitable strategies to enable the conservation and re-establishment of natural systems within a specific location/area</p> <p>c.4 Monitor the effectiveness of the strategies and modify if required</p>
<p>2. Interdependent assessment of units</p>	<p>a. This unit must be assessed after attainment of competency in the following unit(s):</p> <p>a.1 SRX RES 004A Minimise waste and pollution and their environmental impact</p> <p>b. This unit must be assessed in conjunction with the following unit(s):</p> <p>b.1 Nil</p> <p>c. For the purpose of integrated assessment, this unit may be assessed in conjunction with the following unit(s):</p> <p>c.1 SRX RES 009A Achieve sustainable land management</p> <p>c.2 SRX RES 012A Develop a comprehensive and integrated environmental management strategy</p>
<p>3. Required knowledge and skills</p>	<p>a. Underpinning knowledge</p> <p>a.1 Conservation principles</p> <p>a.2 Research and analysis techniques</p> <p>a.3 Re-establishment of environments</p> <p>a.4 Community needs, expectations and attitudes</p> <p>a.5 Organisation's policies, goals and objectives</p> <p>a.6 Natural systems and interrelationships between</p>

	<p>components</p> <p>a.7 Political and economic trends</p> <p>a. Underpinning skills</p> <p>b.1 Research and analysis</p> <p>b.2 Monitoring and evaluation</p> <p>b.3 Collation of material from a range of sources</p> <p>b.4 Strategic planning</p> <p>b.5 Advanced communication skills to enable consultation with a diversity of stakeholders including community groups, government bodies and statutory authorities</p> <p>b.6 Budgeting</p>
<p>4. Resource implications</p>	<p>a. Assessment of this competency requires the learner to have access to a natural system for research, monitoring and evaluation</p> <p>b. Assessment of this competency will require human resources consistent with those outlined in the Assessment Guidelines</p>
<p>5. Consistency in performance</p>	<p>a. Competence in this unit must be assessed over a period of time in order to ensure consistency of performance over the range of variables and contexts applicable to the work environment</p>
<p>6. Context for assessment</p>	<p>a. Competency must be demonstrated in a real work environment</p> <p>b. In cases where the learner does not have the opportunity to cover all relevant categories of the range of variables statements in the work environment, the remainder should be assessed through realistic simulations, projects, previous relevant experience or oral questioning on “What if?” scenarios</p> <p>c. Assessment of this unit of competence will usually include observation of processes and procedures, oral and/or written questioning on underpinning knowledge and skills and consideration of required attitudes</p> <p>d. Where performance is not directly observed and/or is required to be demonstrated over a “period of time” and/or in a “number of locations”, any evidence should be authenticated by colleagues, supervisors, clients or other appropriate persons</p>

THHCOR02B Work in a socially diverse environment

Unit Descriptor

This unit deals with the cultural awareness that is required by all people working in the tourism and hospitality industries. It includes the cultural awareness required for serving customers and working with colleagues from diverse backgrounds.

Element	Performance Criteria
1 Communicate with customers and colleagues from diverse backgrounds	1.1 Value customers and colleagues from different cultural groups and treat them with respect and sensitivity.
	1.2 Take into consideration cultural differences in all verbal and non-verbal communication.
	1.3 Communicate through the use of gestures or simple words in the other person's language, where language barriers exist.
	1.4 Obtain assistance from colleagues, reference books or outside organisations when required.
2 Deal with cross cultural misunderstandings	2.1 Identify issues which may cause conflict or misunderstanding in the workplace.
	2.2 Address difficulties with the appropriate people and seek assistance from team leaders or others where required.
	2.3 Consider possible cultural differences when difficulties or misunderstandings occur.
	2.4 Make efforts to resolve misunderstandings, taking account of cultural considerations.
	2.5 Refer issues and problems to the appropriate team leader/supervisor for follow up.

Range Statement

This unit applies to all tourism and hospitality sectors. The following explanations identify how this unit may be applied in different workplaces, sectors and circumstances.

Cultural differences may arise from:

- race
- language
- special needs
- disabilities
- family structure
- gender
- age
- sexual preference.

Possible cultural differences may include those arising from:

- language spoken
- forms of address
- levels of formality/informality
- non-verbal behaviour, understandings and interpretations
- work ethics
- personal grooming
- dress
- family and social obligations and status
- observance of special religious, feast or other celebratory days
- customs, beliefs and values
- special needs
- product preferences.

Attempts to overcome language barriers may be made in order to:

- meet and greet/farewell customers
- give simple directions
- give simple instructions
- answer simple enquiries
- prepare for, serve and assist customers
- describe goods and services.

Outside organisations may include:

- interpreter services
- diplomatic services
- local cultural organisations
- appropriate government agencies
- educational institutions.

Evidence Guide

Essential Knowledge and Skills to Be Assessed

The following knowledge and skills must be assessed as part of this unit:

- principles that underpin cultural awareness
- characteristics of the different cultural groups in Australian society
- basic knowledge of the cultures of Australia's indigenous and non-indigenous peoples
- identification of various international tourist groups, as appropriate to the sector and individual workplace
- principles of Equal Employment Opportunity (EEO) and anti-discrimination legislation as they apply to individual employees.

Linkages to Other Units

This unit must be assessed with or after the following unit. These units describe skills and knowledge that are essential to this unit of competence. Continued training and assessment in this unit is recommended:

- THHCOR01B Work with colleagues and customers

This unit also has linkages to the following units and combined training and assessment is recommended:

- THHGCS02B Promote products and services to customers
- THHGCS03B Deal with conflict
- THTLANO101A Conduct basic workplace oral communications in a language other than English, and other Language Other than English units

Critical Aspects of Assessment

Evidence of the following is critical:

- cultural understanding and sensitivity in responding to different types of customers
- ability to identify and respond to the cultural context of the workplace
- ability to apply knowledge of different cultures and cultural characteristics appropriately to communication with colleagues and customers
- ability to communicate effectively with customers and colleagues from a broad range of backgrounds as required for the relevant job role.

Context of Assessment and Resource Implications

Assessment must ensure:

- project or work activities that allow the candidate to demonstrate knowledge and awareness of diversity issues in the workplace.

For generic pre-employment training and assessment, a range of industry contexts must be addressed. Where the focus is sector or workplace specific, training and assessment must be tailored to meet particular needs.

Assessment Methods

Assessment methods must be chosen to ensure that candidates are able to respond constructively to issues which arise in a culturally and socially diverse workplace. Methods must include assessment of knowledge as well as assessment of practical skills.

The following examples are appropriate for this unit:

- observation of the candidate interacting with colleagues and customers from diverse backgrounds
- case studies or projects to consider particular conflict situations arising from diversity and to suggest appropriate means of dealing with them
- questions about effective communication, problem-solving techniques and cultural values and differences
- review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Key Competencies in this Unit

Key competencies are an integral part of all workplace competencies. The table below describes those applicable to this unit. Trainers and assessors should ensure that they are addressed in training and assessment.

Level 1 = Perform Level 2 = Administer and Manage Level 3 = Design and Evaluate

Key Competencies	Level	Examples
Collecting, Organising and Analysing Information	1	Identifying different cultural beliefs and values
Communicating Ideas and Information	2	Explaining how to do something to a colleague or customer from another language or cultural background
Planning and Organising Activities	1	Considering ways to deal with cultural conflicts or problems, or to improve workplace communication
Working with Others and in Teams	2	Working co-operatively with other members of the work team, including those from diverse backgrounds
Using Mathematical Ideas and Techniques	-	-
Solving Problems	2	Dealing with problems such as communication breakdowns and misunderstandings
Using Technology	-	-

THHGCS01B Develop and update local knowledge

Unit Descriptor

This unit deals with the skills and knowledge required to build and maintain the local knowledge that is required to effectively respond to general customer information requests in a range of tourism and hospitality enterprises. This unit reflects a context where the provision of information is not the primary job role (eg within an attraction or a restaurant). The unit has a link to unit THTSOP02B Source and provide destination information and advice, (Tourism Training Package) which reflects a context where provision of advice is the primary job role (eg. a visitor information officer or travel consultant).

Element	Performance Criteria
1 Develop local knowledge	1.1 Identify and access appropriate sources of information on the local area.
	1.2 Record and file information for further use as appropriate and in accordance with enterprise procedures.
	1.3 Identify and obtain the types of information commonly requested by customers.
2 Update local knowledge	2.1 Identify and use opportunities to update local knowledge.
	2.2 Share updated knowledge with customers and colleagues as appropriate and incorporate into day-to-day working activities.

Range Statement

This unit applies to all tourism and hospitality sectors. The following explanations identify how this unit may be applied in different workplaces, sectors and circumstances.

The range of local information required will vary according to the particular industry sector, location and individual workplace. Information must include:

- enterprise specific information
- local transport options
- local attractions
- local events
- general visitor facilities including shopping locations, currency exchanges, post offices, banks, emergency services.

Information may include:

- specific shopping details, markets
- restaurants, cafes and other dining venues
- other facilities and services such as hairdressers, dentists, travel agencies
- theatres and entertainment venues
- sporting facilities
- tours, local outings and trips
- travelling routes
- weather conditions.

Sources of information on the local area may include:

- brochures
- timetables
- local visitor guides
- library and local council
- local people
- enterprise information
- room directories
- maps
- Internet.

Opportunities to update local knowledge may include:

- talking and listening to colleagues and customers
- participation in local familiarisation tours
- visiting the local information centre
- personal observation/exploration
- watching TV, videos and films
- listening to radio
- reading local newspapers.

Evidence Guide

Essential Knowledge and Skills to be Assessed

The following knowledge and skills must be assessed as part of this unit:

- sources of information for enterprise and local knowledge
- general knowledge of the enterprise, local attractions, events, transport options, general visitor facilities including shopping, currency exchanges, post offices, banks, emergency services.

Linkages to Other Units

This unit underpins effective performance in a range of other units and combined training and assessment may be appropriate. Examples include:

- THHBH01B Provide housekeeping services to guests
- THHBF010B Provide porter services
- THHBF02B Provide accommodation reception services
- WRRS2B Advise on products and services
- many other units in the Attractions and Theme Parks section

Critical Aspects of Assessment

Evidence of the following is critical:

- ability to source accurate and current information on the local area
- general knowledge of the local area sufficient to answer commonly asked customer questions as relevant to the job role.

Context of Assessment and Resource Implications

Assessment must ensure:

- project or work activities that allow the candidate to respond to a range of commonly asked customer questions.

Assessment Methods

Assessment methods must be chosen to ensure that the application of knowledge to different customer service situations can be practically demonstrated. Methods must include assessment of knowledge as well as assessment of practical skills.

The following examples are appropriate for this unit:

- project to research information on local area
- direct observation of the candidate using local knowledge to answer customer questions
- oral or written questions to assess knowledge of local information and information sources
- role-play to provide information for variety of different customers
- review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Metal and Engineering Training Package

THHGCS01B Develop and Update Local Knowledge

Key Competencies in this Unit

Key Competencies are an integral part of all workplace competencies. The table below describes those applicable to this unit. Trainers and assessors should ensure that they are addressed in training and assessment.

Level 1 = Perform Level 2 = Administer and Manage Level 3 = Design and Evaluate

Key Competencies	Level	Examples
Collecting, Organising and Analysing Information	1	Organising the enterprise's local information folder
Communicating Ideas and Information	1	Explaining the location of the nearest bus stop to a customer
Planning and Organising Activities	1	Contacting local attractions to request information brochures for display
Working with Others and in Teams	1	Assisting a colleague to answer a customer question
Using Mathematical Ideas and Techniques	1	Calculating the amount of time to reach a local attraction
Solving Problems	1	Helping a lost customer who speaks very little English
Using Technology	1	Using the phone or Internet to source information on the local area

THHGGA03B Source and present information

Unit Descriptor

This unit deals with the skills and knowledge required to conduct basic research and present information in response to an identified need. It covers typical situations found in tourism and hospitality workplaces where there is a need to research information for a specific workplace need. It does not cover the development and presentation of more complex or strategic reports.

Element	Performance Criteria
1 Find information	1.1 Identify a range of current and accurate information sources appropriate to the task.
	1.2 Access a range of information sources and assess for relevance and applicability.
	1.3 Obtain information within designated timelines.
2 Prepare and present information	2.1 Review information and select content to suit the specific need.
	2.2 Draft text if required, including all appropriate information.
	2.3 Express information within the draft text clearly, concisely and accurately.
	2.4 Present information according to enterprise guidelines, and in a format appropriate to the circumstances.
	2.5 Deliver information to the appropriate person within designated timelines.

Range Statement

This unit applies to hospitality and tourism enterprises. The following explanations identify how this unit may be applied in different workplaces, sectors and circumstances.

For generic pre-employment training and assessment, a range of industry contexts must be addressed. Where the focus is sector or workplace specific, training and assessment must be tailored to meet particular needs.

Information to be researched may include:

- information from product suppliers eg for sourcing a new supplier or product
- information from other departments in the enterprise (eg. about available products or services)
- customer service research eg getting feedback from customers about a particular product or service
- information on new workplace systems or equipment
- career or general industry information.

Sources of information may include:

- other colleagues and personnel
- product suppliers
- general and trade media (print and electronic)
- reference books
- Internet
- lectures and presentations
- trade shows and exhibitions
- customer feedback.

Information may be presented orally, in note form, or in simple report form.

Evidence Guide

Essential Knowledge and Skills to be Assessed

The following skills and knowledge must be assessed as part of this unit:

- basic research skills, encompassing:
 - identification of sources of information required (eg. Internet, industry journals)
 - questioning and active listening skills to elicit information
 - note-taking
 - sorting and processing information
- written and oral communication skills for conveying information clearly, concisely and coherently
- types of information resources available for a range of topics and how to access them
- organisational policies and procedures in regard to the presentation of information.

Linkages to Other Units

This unit has linkages to the following units and combined training and assessment may be appropriate:

- THHHCO04B Develop and update hospitality industry knowledge
- THTTCO01B Develop and update tourism industry knowledge

Critical Aspects of Assessment

Evidence of the following is critical:

- ability to find and review current and correct information on various topics related to the particular job role
- ability to present information in a logical, well-organised and appropriate manner.

Context of Assessment and Resource Implications

Assessment must ensure:

- industry-realistic timelines and conditions for completion of tasks.
- use of current information and data

Assessment Methods

Assessment methods must be chosen to ensure that researching and presenting information on a particular topic can be practically demonstrated. Methods must include assessment of knowledge as well as assessment of practical skills.

The following examples are appropriate for this unit:

- project to research a work-related topic and deliver the information sourced in a brief presentation
- simple report with recommendations on a prospective product to be purchased
- review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Key Competencies in this Unit

Key Competencies are an integral part of all workplace competencies. The table below describes those applicable to this unit. Trainers and assessors should ensure that they are addressed in training and assessment.

Level 1 = Perform Level 2 = Administer and Manage Level 3 = Design and Evaluate

Key Competencies	Level	Examples
Collecting, Organising and Analysing Information	1	Researching information using a range of different sources Organising information researched into a logical order, or filing system
Communicating Ideas and Information	1	Presenting information clearly to various audiences Writing simple reports, making simple presentations
Planning and Organising Activities	1	Working out a schedule for research activities

Metal and Engineering Training Package

THHGGA03A Source and Present Information

Working with Others and in Teams	1	Asking questions of colleagues about a given topic
Using Mathematical Ideas and Techniques	1	May involve researching mathematical information such as prices and quantities Comparing prices, doing very simple statistical analysis
Solving Problems	1	Dealing with inability to find information, conflicting information
Using Technology	1	Using the Internet to access information

THTTCO01B Develop and update tourism industry knowledge

Unit Descriptor

This unit deals with the skills and knowledge required to develop and update knowledge of the tourism industry, including the role of different industry sectors and key legislation. This knowledge underpins effective performance in all sectors and applies to all people working in the tourism industry. In-depth knowledge is therefore not required.

Element

Performance Criteria

Seek information on the tourism industry

- | | |
|-----|--|
| 1.1 | Identify sources of information on the tourism industry correctly including information relating to: <ul style="list-style-type: none">economic and social significance of the tourism industry and the role of local communitiesdifferent tourism markets and their relevance to industry sectorsrelationships between tourism and other industriesdifferent sectors of the industry, their inter-relationships and the services available in each sectormajor tourism industry bodiesenvironmental issues for tourismindustrial relationsspecific features of the local/regional industrycareer opportunities within the industrythe roles and responsibilities of individual staff members in a successful tourism business including ethical practiceswork organisation and time managementquality assurancecurrent and emerging industry technology including e-business. |
| 1.2 | Access and update specific information on relevant sector(s) of work. |
| 1.3 | Access and use knowledge of the tourism industry in the correct context to enhance the quality of work performance. |

2	Source and apply information on legal and ethical issues which impact on the tourism industry	2.1	Obtain information on legal and ethical issues to assist effective work performance.
		2.2	Conduct day-to-day activities in accordance with legal obligations and ethical industry practices.
3	Update tourism industry knowledge	3.1	Identify and use a range of opportunities to update general knowledge of the tourism industry.
		3.2	Monitor current issues of concern to the industry.
		3.3	Share updated knowledge with customers and colleagues as appropriate, and incorporate into day-to-day work activities.

Range Statement

This unit applies to all sectors of the tourism industry.

Information sources and opportunities to update knowledge may include:

- media
- reference books
- libraries
- unions
- industry associations and organisations
- industry journals
- computer data, including Internet
- personal observations and experience
- industry seminars or training courses
- informal networking.

Legal issues which impact on the industry include:

- consumer protection
- duty of care
- equal employment opportunity
- anti-discrimination
- workplace relations.
- child sex tourism.

Metal and Engineering Training Package

THTTCO01B Develop and Upgrade Tourism Industry Knowledge

Ethical issues impacting on the industry may relate to:

- confidentiality
- commission procedures
- overbooking
- pricing
- tipping
- familiarisations
- gifts and services free of charge
- product recommendations.

Industries other than tourism may include:

- hospitality
- entertainment
- arts
- sports
- agriculture
- conservation
- science and research
- retail.

Environmental issues may include:

- protection of natural and cultural integrity
- minimal impact operations
- environmental sustainability
- waste management
- energy-efficient operations
- land ownership
- land access and usage.

Economic and social issues may include:

- employment
- effect on local amenities/facilities
- population change due to tourism development
- community role in tourism.

Issues of concern to the industry may be related to:

- government initiatives
- emerging markets
- environmental and social issues
- labour issues
- industry expansion or retraction.

Evidence Guide

Essential Knowledge and Skills to be Assessed

The following knowledge and skills must be assessed as part of this unit:

- different sectors of the tourism industry and their inter-relationships, including a general knowledge of the structure, roles and functions of the following sectors:

accommodation

attractions and theme parks

tour operators

tour wholesalers

retail travel agents

information services and co-ordination sector (local, regional, national)

meetings and events.

- major cross-industry and sector-specific organisations.
- overview of quality assurance in the tourism industry and the roles and responsibilities of individual staff members in quality assurance.
- overview of how to organise time and work in different industry contexts.
- tourism industry information sources.
- basic research skills:

identification of relevant information

questioning techniques to obtain information

sorting and summarising information.

- legislation (both State and Federal) which applies across the industry in the following areas (name, primary objective and impact on individual staff only):

consumer protection

duty of care

equal employment opportunity

anti-discrimination

workplace relations.

child sex tourism

- overview of current and emerging technology used across the tourism industry, including e-business.

Linkages to Other Units

This is a core unit that underpins effective performance in all other units and combined training and assessment may be appropriate.

Critical Aspects of Assessment

Evidence of the following is critical:

- ability to source industry information
- general knowledge of the tourism industry, including main roles, functions and inter-relationships of different sectors, with a more detailed knowledge of issues which relate to a specific sector or workplace.

Context of Assessment and Resource Implications

Assessment must ensure:

- project or work activities that allow the candidate to demonstrate the application of knowledge to specific tourism industry contexts and situations.

Assessment Methods

Assessment methods must be chosen to ensure that ability to develop and update knowledge can be practically demonstrated. Methods must include assessment of knowledge as well as assessment of practical skills.

The following examples are appropriate for this unit:

- case studies and problem-solving exercises to assess application of knowledge to different situations and contexts
- questions to assess knowledge of different aspects of the tourism industry
- review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Key Competencies in this Unit

Key Competencies are an integral part of all workplace competencies. The table below describes those applicable to this unit. Trainers and assessors should ensure that they are addressed in training and assessment.

Level 1 = Perform Level 2 = Administer and Manage Level 3 = Design and Evaluate

Key Competencies	Level	Examples
Collecting, Organising and Analysing Information	2	Deciding whether to join an industry association based on promotional materials
Communicating Ideas and Information	1	Liaising with colleagues from other industry sectors to meet a particular customer request
Planning and Organising Activities	1	Organising a personal program of professional development activities for the upcoming year
Working with Others and in Teams	1	Discussing industry events with colleagues
Using Mathematical Ideas and Techniques	-	-
Solving Problems	1	Responding to a situation which involves dealing with a sector of the industry of which you have limited knowledge
Using Technology	1	Using the Internet to source information on the tourism industry

THTSMA01B

Coordinate the production of brochures and marketing materials

Unit Descriptor

This unit deals with the skills and knowledge required to coordinate the development of promotional brochures and other printed marketing materials. Sales and marketing personnel, managers or owners of small businesses generally undertake this role.

Element

Performance Criteria

- | | | |
|--|-----|---|
| 1 Plan the production of brochures and marketing materials | 1.1 | Plan production in accordance with enterprise objectives, marketing focus and other issues that impact on the production process. |
| | 1.2 | Create detailed action plans for the production process including timelines, responsibilities and budget. |
| 2 Produce information for inclusion | 2.1 | Produce or obtain from the appropriate source accurate and complete information for inclusion. |
| | 2.2 | Present information in a clear and easily understood format. |
| | 2.3 | Present information in a culturally appropriate way. |
| 3 Obtain quotations for artwork and printing as appropriate | 3.1 | Provide accurate and complete specifications to quoting organisations within appropriate timeframe. |
| | 3.2 | Obtain comprehensive quotations with full details of potential variations to cost and conditions that may apply. |

- | | | | |
|----------|---|-----|---|
| 4 | Develop final copy for brochures and marketing materials | 4.1 | Develop copy using basic creative writing techniques where appropriate to sell the products presented. |
| | | 4.2 | Produce copy that provides accurate practical and operational details. |
| | | 4.3 | Present all costs accurately with notes about conditions which may apply. |
| | | 4.4 | Present general conditions clearly and accurately according to enterprise policy. |
| | | 4.5 | Check all copy for accuracy prior to submission to external/internal arthouse or printers. |
| 5 | Coordinate the production of brochures and marketing materials | 5.1 | Liaise with production house or responsible staff member in a manner that permits accurate monitoring of production schedule. |
| | | 5.2 | Check and correct all production work as required. |
| | | 5.3 | Re-check and gain approval of appropriate authority only when totally accurate. |
| | | 5.4 | Approve artwork according to enterprise guidelines prior to commencement of printing. |
| | | 5.5 | Obtain and deliver brochures and marketing materials on schedule and establish contingency plans to allow for situations where timelines may be exceeded. |

Range Statement

This unit applies to all tourism and hospitality industry sectors. The following explanations identify how this unit may be applied in different workplaces, sectors and circumstances.

Actual production/printing may be conducted either in-house or by an external agency.

Brochures and marketing materials may include:

- product brochures
- destinational guides
- promotional flyers and leaflets
- conference programs/registration forms
- event prospectus
- display materials
- product support manuals
- advertising materials
- direct mail pieces
- invitations.

Factors that must be considered in the planning of brochures are:

- objectives of the material
- market for which material is required
- review of competitive materials
- style and size of material
- time parameters
- budget available
- in-house production capabilities
- distribution considerations - internal and external
- availability of required information
- any legal requirements or restrictions.

Information for inclusion may include:

- supplier information
- photos
- maps
- tariff details
- special offers or incentives
- advertisements
- sponsor messages
- logos.

Metal and Engineering Training Package

THTSMA01B Coordinate the Production of Brochures and Marketing Materials

Accurate and complete specifications must include:

- size
- number of colours
- type of paper
- number of photographs
- layout and style of text
- total number required
- conditions of contract
- production and delivery deadlines.

Evidence Guide

Essential Knowledge and Skills to be Assessed

The following knowledge and skills must be assessed as part of this unit:

- market context for the materials being produced, including general awareness of potential for use on websites
- print production processes and terminology including copy, film, artwork, 2-colour process, 4-colour process, final art, proofreading, bromide, print-ready, PDF file, author's corrections, transparencies
- printing and industry conventions in relation to placement of information, page numbering, copyright information
- quality indicators in brochure production including readability, photographic quality, effective use of colour, spacing requirements
- current production technology
- techniques used in brochure-writing
- procedures and requirements for preparation and proofing of copy
- legal issues that affect the production of printed materials as appropriate to individual sectors/workplaces including copyright laws.

Linkages to Other Units

There is a strong link between this unit and the following units and combined training and assessment may be appropriate:

- THHGCS07B Coordinate marketing activities

Critical Aspects of Assessment

Evidence of the following is critical:

- ability to co-ordinate all elements of the brochure development process within a required timeframe
- ability to produce materials that meet stated objectives, provide current and accurate information and are free of errors
- knowledge and understanding of current production processes and terminology.

Context of Assessment and Resource Implications

Assessment must ensure:

- the actual production of brochures and marketing materials to meet a specified market need
- access to technology and materials for the production of brochures and marketing materials.

For generic pre-employment training and assessment, a range of industry contexts must be addressed. Where the focus is sector or workplace specific, training and assessment must be tailored to meet particular needs.

Assessment Methods

Assessment methods must be chosen to ensure that brochure co-ordination and production skills can be practically demonstrated. Methods must include assessment of knowledge as well as assessment of practical skills.

The following examples are appropriate for this unit:

- evaluation of brochures or other marketing materials produced by the candidate
- oral or written questions to assess knowledge of brochure co-ordination and production processes
- review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate.

Key Competencies in this Unit

Key Competencies are an integral part of all workplace competencies. The table below describes those applicable to this unit. Trainers and assessors should ensure that they are addressed in training and assessment.

Level 1 = Perform Level 2 = Administer and Manage Level 3 = Design and Evaluate

Key Competencies	Level	Examples
Collecting, Organising and Analysing Information	3	Gathering and preparing data from multiple suppliers for a touring brochure
Communicating Ideas and Information	3	Writing copy for a destination brochure aimed at the youth market
Planning and Organising Activities	3	Co-ordinating the print production process
Working with Others and in Teams	2	Negotiating with printers in relation to print costs
Using Mathematical Ideas and Techniques	1	Calculating total costs of production
Solving Problems	2	Dealing with a situation where print production will not be completed until after the date of a major promotional show
Using Technology	1	Using the editing function within 'Word' to edit brochure copy

WRRCA1B

OPERATE RETAIL EQUIPMENT

This unit involves the skills, knowledge and attitudes to operate of a variety of retail equipment. It involves identifying the correct equipment required for a given task, maintaining retail equipment, applying keyboard skills and operating data entry equipment.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
1 Maintain retail equipment	<p>1.1 Purpose of equipment used in store/department identified accurately.</p> <p>1.2 Equipment operated according to design specifications.</p> <p>1.3 Equipment faults identified and reported to appropriate personnel.</p> <p>1.4 Maintenance program for retail equipment identified and applied according to store policy.</p>
2 Apply keyboard skills	<p>2.1 Keyboard operated using typing techniques within designated speed and accuracy requirements.</p> <p>2.2 Information entered and edited accurately.</p>
3 Operate data entry equipment	<p>3.1 Data entered using relevant equipment according to store policy and procedures.</p> <p>3.2 Price marking equipment operated according to manufacturer's instructions and store policy.</p> <p>3.3 Data entered accurately and within designated time limits.</p>

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - store administration
 - clerical systems
- Retail equipment may include:
 - point of sales terminals
 - electronic bar coding equipment for price labelling and stocktaking
 - portable data entry
 - printers
 - electronic ordering equipment
 - wrapping and packing equipment such as shrink wrapping
 - equipment for carrying or moving merchandise
 - equipment for storage of merchandise including refrigerators
 - weighing machines
 - thermometers
 - dye tag removers
 - trolley return equipment
 - computers
 - scanners
 - numerical keyboard equipment including calculators
- Appropriate personnel may include:
 - supervisor
 - team leader
 - manager

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Operates a range of store retail equipment according to store policy and procedures and industry codes of practice.
- Operates and maintains a range of store retail equipment according to manufacturers' instructions and design specifications.
- Applies store maintenance program and reports faults/problems.
- Consistently applies safe work practices, in the operation and maintenance of store retail equipment, according to occupational health and safety legislation/regulations/ codes of practice.
- Reads and interprets operation manuals to solve routine faults/errors and maintains and uses the equipment effectively.
- Uses keyboard skills to enter and edit data accurately.
- Completes tasks in set time frame.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - the operation of store retail equipment
 - maintenance of store retail equipment
 - reporting problems and faults
- Relevant legislation and statutory requirements
- Relevant occupational health and safety regulations
- Relevant industry codes of practice
- Purpose and impact of using electronic technology
- Operation and maintenance of store retail equipment
- Licensing requirements for carrying/moving merchandise (if applicable)

Skills in:

- Completing tasks in set time frame
- Dealing with different types of transactions
- Following common fault finding procedures
- Operation and use of store retail equipment
- Literacy and numeracy skills in regard to:
 - reading store procedures for
 - operating equipment

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Reporting equipment faults to appropriate personnel will require the communication of ideas and information.	1
How can information be collected, analysed and organised ?	Maintaining retail equipment according to store policy will require information to be collected, analysed and organised.	1
How are activities planned and organised ?	Entering and editing information will require activities to be planned and organised.	1
How can team work be applied?	Team work will be applied when reporting to other staff members.	1
How can the use of mathematical ideas and techniques be applied?	Entering data will require the use of mathematical ideas and techniques.	1
How can problem solving skills be applied?	Maintaining equipment and identifying faults will require problem solving skills.	1
How can the use of technology be applied?	The use of technology will be applied when operating retail equipment.	1

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRCA1B can be assessed with other units which make up a particular job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - store policy and procedure manuals
 - manufacturer's instructions/operation manuals
- A range of store retail equipment

WRRCA5B

OPERATE RETAIL INFORMATION TECHNOLOGY SYSTEMS

This unit encompasses the competencies required to use and apply store information technology systems in a retail environment. It involves demonstrating knowledge of the hardware and software in use, editing and updating information and solving problems in relation to equipment/hardware/software.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
1 Use store information technology system	<ul style="list-style-type: none">1.1 Knowledge of store information technology system accurately demonstrated and conveyed to other staff members as required.1.2 Hardware accurately identified and operated according to manufacturer's instructions and store procedures.1.3 Software accurately identified and used according to manufacturer's instructions and store procedures.1.4 Application and uses of software available, accurately identified and used according to store procedures.1.5 Data transmitted according to Electronic Data Interchange procedures as required.1.6 Keyboard skills used accurately to enter information as required by store policies.1.7 Back up procedures regularly performed according to store procedures.
2 Edit/update information	<ul style="list-style-type: none">2.1 Information to be edited/updated correctly identified according to store procedures.2.2 Information on system accurately edited/updated according to store procedures.2.3 Price changes accurately identified and entered into store system as required.2.4 Matching of shelf data price and computer records ensured.
3 Solve problems	<ul style="list-style-type: none">3.1 Equipment/hardware/software faults identified and rectified where possible or expert assistance sought without delay.3.2 Maintenance program for hardware and software systems monitored and implemented according to manufacturer's specifications and store procedures.3.3 Routine problems handled using appropriate problem solving techniques and referred to appropriate personnel as required.3.4 Problems arising at point of sale evaluated and resolved according to store procedures.3.5 Assistance positively and actively provided to staff as

Metal and Engineering Training Package

WRRCA5B Operate Retail Information Technology Systems

problems arise.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - information technology systems
- Types of equipment used may include:
 - personal computers/terminals which may be stand alone or networked
 - scanning equipment
 - bar coding
 - point of sale terminals
 - pricing equipment
- Software may include:
 - menus
 - word processing
 - databases
 - electronic data interchange (E.D.I.)
- Systems used may include:
 - centrally based
 - store based
 - networked
- Applications and use of information technology systems may include:
 - point of sale operations
 - EFTPOS
 - credit cards
 - smart cards
 - loyalty cards
 - fly buys
 - credit checks granting of credit, loans
 - arrangement of credit for customer via a third party
 - customer details, records
 - financial details
 - pricing, price changes
 - store specials, suppliers deals (direct to store)
 - inventory control/stock losses
 - ordering of stock
 - stock transfers
 - staff productivity, scanning rates, sales volume
 - staff payroll (from staff log in and log out)

RANGE OF VARIABLES (CONTINUED)

- staff rosters
- sales reports
- individual/department/item sales performances
- profitability of lines/items
- Information to be entered may include:
 - price changes (manually or electronically)
 - staffing information
 - customer details/records including names, addresses, consumer information/profiles
 - stock records
 - stock transfers
 - orders
- Stock ordering/selling may include:
 - electronic cataloguing
 - use of multi-media
 - selling from computer screen
 - electronic data interchange (E.D.I.)
 - delivery management
 - use of internet facilities
 - suppliers using shopping pages to communicate information direct to customer
- System problems may relate to:
 - hardware faults, breakdowns
 - software

Metal and Engineering Training Package

WRRCA5B Operate Retail Information Technology Systems

- staff abilities/training
- point of sale, eg. EFTPOS, credit facilities, cheque clearances
- pricing variations
- Problems may be solved by:
 - routine procedures
 - manufacturers recommendations
 - lateral thinking
 - operator or manager
 - referral to specialist/expert
- Back up procedures may include:
 - zip drives
 - CD ROM
 - digital tape
 - floppy discs
- Relevant personnel may include:
 - store/area manager
 - supervisor
 - team leader
 - technical specialist

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures in regard to information technology systems including:
 - resolution of system faults
 - use and application of store credit and EFTPOS
 - reviewing and entering information on store system.
- Follows requirements of relevant legislation and statutory requirements including consumer law and credit procedures.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to use and operation of store information technology systems including:
 - use and maintenance of hardware and software systems
 - solutions to problems/breakdowns
 - operation of equipment
- Relevant legislation and statutory requirements including:
 - consumer law
 - credit procedures
 - occupational health and safety
- Relevant industry codes of practice
- Store product and services range, including pricing structure
- Manufacturer specifications in regard to operation of hardware and software
- Software licensing specifications
- Techniques for problem solving

Skills in:

- Using store technology information systems
- Application and use of hardware and software
- Interpersonal communication skills
- Literacy and numeracy skills in regard to:
 - processing, recording and documenting information

–

EVIDENCE GUIDE (CONTINUED)**Generic Process Skills**

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Knowledge of store information technology systems will need to be conveyed to others.	2
How can information be collected, analysed and organised ?	Information on hardware and software will need to be collected, analysed and organised.	2
How are activities planned and organised ?	Editing and updating information requires activities to be planned and organised.	2
How can team work be applied?	Team work will be applied when demonstrating information to others.	2
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may be required when using specific software packages.	2
How can problem solving skills be applied?	Problem solving skills will be applied when identifying problems at point of sale and establishing a suitable resolution.	2
How can the use of technology be applied?	The use of technology will be applied throughout this unit.	2

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRCA5B can be assessed with other units which make up a particular job function.

Evidence gathering methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Hardware and software instruction manuals
- Information technology system
- Relevant documentation, such as:
 - store/sample policies and procedures on management of information technology systems
 - legislation and statutory requirements
 - occupational health and safety requirements
 - industry codes of practice

WRRCS2B

APPLY POINT OF SALE HANDLING PROCEDURES

This unit encompasses the skills, knowledge and attitudes required at the point of sale in any retail store. It includes operating the point of sale equipment, applying store policies and procedures to a range of transactions, dealing appropriately with the customer and packing or wrapping the item for transportation.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Operate point of sale equipment

- 1.1 Point of sale equipment operated according to design specifications.
- 1.2 Point of sale terminal opened and closed according to store procedure.
- 1.3 Point of sale terminal cleared and tender transferred according to store procedure.
- 1.4 Cash handled according to store security procedures.

1.5

Sup

plies of change in point of sale terminal maintained according to store policy.

- 1.6 Active point of sale terminals attended according to store policy.
- 1.7 Records completed for transaction errors according to store policy.
- 1.8 Adequate supplies of dockets, vouchers and point of sale documents maintained.
- 1.9 Customers informed of delays in the point of sales operation.

2 Perform point of sale transactions

- 2.1 Point of sale transactions completed according to store policy.
- 2.2 Store procedures identified and applied in respect of cash and non-cash transactions.
- 2.3 Store procedures identified and applied in regard to exchanges and returns.
- 2.4 Goods moved through point of sale area efficiently and with attention to fragility and packaging.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

- | | | |
|----------|----------------------------|--|
| | 2.5 | Information entered into point of sale equipment accurately. |
| | 2.6 | Price/total/amount of cash received stated verbally to customer. |
| | 2.7 | Correct change tendered. |
| 3 | Complete sales | |
| | 3.1 | Customer order forms, invoices, receipts completed accurately. |
| | 3.2 | Customer delivery requirements identified and processed accurately, without undue delay. |
| | 3.3 | Sales transactions processed without undue delay or customers directed to point of sale terminals according to store policy. |
| 4 | Wrap and pack goods | |
| | 4.1 | Adequate supplies of wrapping material or bags maintained/requested. |
| | 4.2 | Appropriate packaging material selected. |
| | 4.3 | Merchandise wrapped neatly and effectively where required. |
| | 4.4 | Items packed safely to avoid damage in transit, and labels attached where required. |
| | 4.5 | Transfer of merchandise for parcel pick-up or other delivery methods arranged if required. |

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - operation of point of sale equipment
 - security
 - sales transactions
 - handling techniques of stock
- Point of sale equipment may include:
 - cash registers
 - cash drawers
 - scanners
- Customer interactions may include:
 - greetings
 - price confirmation
 - delivery inquiries
 - reward point inquiries
 - regular and new customers
 - routine or special requirements
- Transactions may include:
 - EFTPOS
 - cheques
 - Travellers cheques
 - credit cards/store cards
 - smart cards
 - lay-by
 - returns
 - exchanges
 - gift vouchers
- Packing and wrapping materials may include:
 - boxes
 - bags
 - paper
 - bubble wrap
 - gift wrapping
- Staff may include:
 - full time
 - casual
 - part time

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently operates point of sale equipment according to manufacturer's instructions and store policies and procedures.
- Consistently applies store policies and procedures in regard to cash handling and point of sale transactions.
- Processes sales transaction information responsibly and accurately according to store policies and procedures.
- Constantly applies store policies and procedures in regard to the handling, packing and wrapping of goods/merchandise.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures in relation to:
 - customer service
 - point of sale transactions
 - allocated duties and responsibilities
 - exchanges and returns
 - handling, packing and wrapping of goods/merchandise
- The range of services provided by the store
- Stock availability
- Relevant legislation and statutory requirements including:
 - Trade Practices Act
 - consumer law
 - industry codes of practice
 - occupational health and safety
- Cash and non-cash handling procedures including:
 - opening and closing point of sale terminal
 - clearance of terminal and transference of tender
 - maintenance of cash float
 - tendering of change
 - counting cash
 - calculating non-cash documents
 - balancing point of sale equipment
 - recording takings
 - security of cash and non cash transactions
 - change required and denominations of change

EVIDENCE GUIDE (CONTINUED)

- Functions and procedures for operating point of sale equipment including:
 - registers
 - numerical display board
 - calculators
 - electronic scales
 - scanners

Skills in:

- Following set routines and procedures
- Verbal and non verbal communication
- Questioning and active listening
- Dealing with different types of transactions
- Wrapping and packing techniques
- Store bag checking procedures
- Merchandise handling techniques
- Literacy skills in regard to written sales and delivery documentation
- Numeracy skills in regard to rendering change

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	By communicating with the customer in relation to the amount owed and identifying delivery requirements.	1
How can information be collected, analysed and organised ?	By identifying customer requirements in relation to picking up parcels or having them delivered and to where.	1
How are activities planned and organised ?	By organising the wrapping and packaging of goods and maintaining adequate supplies.	1
How can team work be applied?	This skill may not be applicable to this unit.	0
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques need to be used when receiving money from customer and in giving correct change.	1

Metal and Engineering Training Package

WRRCS2B Apply Point of Sale Handling Procedures

How can problem solving skills be applied?	Organising delivery and packaging goods will require problem solving skills.	1
---	--	---

EVIDENCE GUIDE (CONTINUED)

How can the use of technology be applied?	Using various point of sale equipment requires the use of technology.	1

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRCS2B can be assessed with the following units:

- WRRLP2B Minimise theft
- WRRCS3B Interact with customers
- WRI1B Perform stock control procedures
- WRRF1B Balance the register/terminal

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - stock/inventory/price lists
 - financial transaction dockets/slips
 - lay by/credit/product return slips
 - store policy and procedures manuals
- A range of point of sale equipment

WRRCS3B

INTERACT WITH CUSTOMERS

This unit encompasses the skills, knowledge and attitudes required to deliver service to customers. It entails being able to communicate effectively with customers, respond to their complaints, receive and process sales orders and identify customers special requirements.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Deliver service to customers

- 1.1 Communication with customers conducted in a professional, courteous manner, according to store policy.
- 1.2 Customer needs and reasonable requests met or referred to supervisor according to store policy or legislative requirements.
- 1.3 Customer details and information recorded where necessary.
- 1.4 Possible problems identified, anticipated and action taken to minimise the effect on customer satisfaction.
- 1.5 Opportunities to deliver additional levels of service beyond the customer's immediate request recognised and acted upon.
- 1.6 Contact with customer maintained until sale is completed according to store policy.
- 1.7 Customer farewelled appropriately and courteously according to store policy.
- 1.8 Verbal and non-verbal communication used to develop rapport with customers during service delivery.
- 1.9 Repeat customers encouraged by promotion of appropriate services or products according to store policy.
- 1.10 Customer returns or refunds processed according to store policy and procedures.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
2 Respond to customer complaints	<ul style="list-style-type: none">2.1 Positive helpful attitude conveyed to customers when handling complaints.2.2 Complaints handled sensitively, courteously and with discretion.2.3 Nature of complaint established by active listening and questioning and confirmed with the customer.2.4 Action taken to resolve complaint to customers' satisfaction wherever possible.2.5 Unresolved customer dissatisfaction or complaints promptly referred to supervisor.2.6 Opportunities taken to turn incidents of customer dissatisfaction into a demonstration of high quality service to customers in line with store policy.2.7 Documentation regarding customer dissatisfaction or complaints completed accurately and legibly.2.8 Follow up action taken as necessary to ensure customer satisfaction.
3 Receive and process sales orders	<ul style="list-style-type: none">3.1 Customers' details and information recorded accurately.3.2 Customers promptly referred to appropriate area as required.3.3 Customers provided with information in clear, concise manner.3.4 Sales orders processed, recorded and acted upon according to store policy.
4 Identify customers special requirements	<ul style="list-style-type: none">4.1 Customers with special needs or requirements identified promptly by observation and questioning.4.2 A willingness to assist conveyed verbally and non-verbally.4.3 Customers' needs promptly serviced, referred or redirected as required.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - customer service
 - dealing with customer complaints
 - processing sales orders
- Customers may include:
 - regular and new customers
 - people from a range of social, cultural, ethnic backgrounds and physical and mental abilities
 - people with a routine or special requests
- Sales orders may be in:
 - verbal
 - written
 - electronic form
- Legislative requirements may include:
 - Trade Practices Act
 - tobacco laws
 - lottery acts
 - liquor licensing regulations
 - sale of X and R rated products
 - sale of second hand goods
 - trading hours
 - transport, storage and handling of goods
 - sale of X and R rated products
- Customer service may include:
 - all store activities
 - internal and external customers
 - follow up in event of delays in service provision
- Customer needs may include:
 - information regarding store facilities and services
 - location of specific items within the store
 - returns or refunds

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures and industry codes of practice in regard to customer service.
- Provides a quality service environment by treating customers and team members in a courteous and professional manner through all stages of the service/sales procedure.
- Accurately identifies the nature of customer complaints, resolves complaints and provides service to customers according to store policies.
- Uses effective questioning/active listening and observation skills to identify customers' special requirements.
- Accesses, records and processes sales orders accurately and responsibly according to store policies and procedures.
- Collaboratively works within a team to meet customers' needs.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - customer service
 - dealing with difficult customers
 - handling and recording complaints
 - allocated duties and responsibilities
 - customer returns and refunds
 - lay by/gift voucher/rain check procedures
- Merchandise and service range of store departments
- Location of store departments
- Functions and procedures for operating the store telephone system and other communication equipment and the relevant numbers
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Relevant occupational health and safety requirements
- Questioning/active listening
- Conflict resolution
- Following set routines and procedures
- Handling difficult or abusive customers

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Greeting/farewelling techniques
- Add on selling concepts
- Literacy skills in the following areas:
 - written procedures for orders, in person, by telephone or electric format
 - message taking in person or by telephone
 - written record of complaints
 - sales, stock and delivery documentation
- Numeracy skills in regard to:
 - handling of tender
 - weighing and measuring goods

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Delivering service to customers requires ideas and information to be communicated.	1
How can information be collected, analysed and organised ?	Dealing with customer complaints requires information to be collected, analysed and organised.	1
How are activities planned and organised ?	Receiving and processing sales orders requires activities to be planned and organised.	1
How can team work be applied?	Referring customers to relevant personnel will require team work to be applied.	1
How can the use of mathematical ideas and techniques be applied?	Processing sales orders will require the use of mathematical ideas and techniques.	1
How can problem solving skills be applied?	Dealing with customer complaints will require problem solving skills.	1
How can the use of technology be applied?	The use of technology may not be required in this unit.	0

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRCS3B can be assessed with the following units:

WRRCS2B Apply point of sale handling procedures

WRRLP1B Minimise theft

WRR11B Perform stock control procedures

WRRF1B Balance the register/terminal

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - sales order forms
 - complaint/return forms
 - stock/inventory/price lists
 - store policy and procedures manuals
- Access to a range of customers with different requirements
- Point of sale equipment and materials
- A communication system or a range of communication equipment

WRRF1B

BALANCE REGISTER/TERMINAL

This unit encompasses the skills, knowledge and attitudes required to balance the register/terminal in a retail environment. It involves clearing the register, counting money, calculating non-cash transactions and reconciling takings.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Remove takings from register/terminal

- 1.1 Register/terminal balance performed at designated times according to store policy and procedures.
- 1.2 Cash float separated from takings prior to balancing procedure and secured according to store policy.
- 1.3 Change supplied to register/terminal according to store policy.
- 1.4 Register/terminal reading or print out accurately determined.
- 1.5 Cash and non-cash documents removed and transported according to store security policies and procedures.

2 Reconcile takings

- 2.1 Cash counted accurately.
- 2.2 Non-cash documents calculated accurately.
- 2.3 Balance between register/terminal reading and sum of cash and non-cash transactions determined accurately.
- 2.4 Records for store and individual department takings recorded accurately and according to store policy.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - register/terminal balance
 - security
- Register/terminals may be:
 - manual
 - electronic
- Non-cash transactions may include:
 - credit cards
 - cheques
 - hire purchase
 - lay-by
 - cash on delivery (C.O.D.)
 - customer refunds
 - customer credit ratings
- Register/terminals may be cleared by:
 - operator
 - specialist staff
 - at intervals during or at close of trading

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Operates register/terminal equipment according to manufacturers' instructions and store policy.
- Consistently applies store policies and procedures in regard to handling cash and removing takings from register/terminal.
- Consistently applies store policies and procedures in regard to reading registers and recording information.
- Processes documentation/records responsibly and according to store policies and procedures.
- Reconciles takings according to store policies and procedures.

EVIDENCE GUIDE (CONTINUED)

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - register/terminal balance
 - cash and non-cash transactions security
 - cash float
 - operation of equipment used at register/terminal
- Cash and non-cash handling procedures, including:
 - opening and closing point of sale terminal
 - clearance of terminal and transference of tender
 - maintenance of cash float
 - counting cash
 - calculating non-cash documents
 - balancing point of sale terminal
 - recording takings
 - security of cash and non-cash transactions
 - change required and denominations of change
 - EFTPOS/credit cards
 - gift vouchers/lay by
 - credit and returns

Skills in:

- Completing tasks in a set time frame
- Literacy skills in regard to interpreting documentation
- Numeracy skills in regard to:
 - counting cash
 - calculating non-cash transactions
 - reporting on takings

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Errors in readings may need to be communicated to relevant personnel.	1

How can information be collected, analysed and organised ?	Counting cash and non-cash documents and balancing readings requires information to be collected, analysed and organised.	1
How are activities planned and organised ?	Reconciling takings requires activities to be planned and organised.	1
How can team work be applied?	Team work may be required when establishing individual and store department takings.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques will be required when balancing register/terminal.	1
How can problem solving skills be applied?	Problem solving skills will be applied when balancing register/terminal reading and sum of cash and non-cash transactions.	1
How can the use of technology be applied?	The use of technology will be applied through using the register/terminal.	1

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

EVIDENCE GUIDE (CONTINUED)

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRF1B can be assessed with the following units:

WRRCS2B Apply point of sale handling procedures

WRRLP2B Minimise theft

WRRCS3B Interact with customers

WRR11B Perform stock control procedures

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - financial transaction dockets/slips/invoices
 - sample debit, credit card vouchers
 - recording/tally sheets
 - store policy and procedure manuals in regard to register/terminal balance
- Register/terminal and related equipment

WRRF2B

PERFORM RETAIL FINANCE DUTIES

This unit encompasses the skills, knowledge and attitudes required to perform retail finance duties. It involves processing petty cash and non-cash transactions, preparing banking documents, reconciling invoices for payment and preparing invoices for debtors.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
1 Process petty cash transactions	<ul style="list-style-type: none">1.1 Petty cash claims checked for approval, accuracy and authenticity before processing.1.2 Transactions balanced and checked according to store policy and procedures.1.3 Irregularities noted and referred to relevant personnel for resolution.1.4 Petty cash transactions processed and recorded within designated time limits.
2 Prepare banking documents	<ul style="list-style-type: none">2.1 Cashbook entries balanced against record of takings.2.2 Deposit entries accurately compiled and balanced.2.3 Cash and non-cash transactions listed on banking deposit forms in accordance with the banking institution's guidelines.2.4 In-store credit systems processed according to store policy.
3 Process non-cash transactions	<ul style="list-style-type: none">3.1 Credit card transactions balanced and presented to relevant personnel for checking.3.2 Irregularities noted and referred to relevant personnel for resolution.

—

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

4 Reconcile invoices for payment to creditors

- 4.1 Discrepancies between invoices and delivery and delivery notes identified and reported to relevant personnel/section for resolution.
- 4.2 Errors in invoice charges identified and reported to relevant personnel/section for correction/resolution.
- 4.3 Discrepancies and errors rectified, as directed.
- 4.4 Corrected and authorised invoices processed for payment within designated time limits.
- 4.5 Creditor inquiries resolved and/or referred to relevant personnel/section for resolution.

5 Prepare invoices for debtors

- 5.1 Preparatory calculations performed to produce accurate customer invoices.
- 5.2 Relevant documentation completed to ensure accuracy of contents.
- 5.3 Documents distributed to relevant personnel/section for certification prior to being dispatched.
- 5.4 Verified documents dispatched within designated time limits.
- 5.5 Documents copied and filed for auditing purposes.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - store financial systems
- Financial recording systems may be:
 - manual
 - electronic
- Business source documents used may include:
 - purchase requisitions
 - purchase orders
 - invoices
 - receipts
 - delivery dockets/receipts
 - credit notes
 - statements
 - remittance advices
 - cash register rolls
 - deposit books
- Non-cash transactions may include:
 - credit cards
 - customer credit ratings
 - cheques
 - hire purchase
 - lay-by
 - cash on delivery (C.O.D.)
 - customer refunds
- Relevant personnel may include:
 - manager
 - supervisor
 - team leader

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures, in regard to petty cash and non-cash transactions, invoicing, banking processes and processing delivery and document discrepancies.
- Consistently and responsibly applies skills pertaining to the reconciliation and payments of invoices for creditors and debtors, in accordance with store policies and procedures.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures in regard to:
 - register/terminal balance
 - cash and non-cash transactions security
 - petty cash
 - cash balances
 - banking procedures
 - purchase requisitions/orders
 - issuing of receipts
 - delivery dockets
 - credit notes
 - statements
 - remittance advices
 - cash register rolls
 - deposit books
 - change required and denomination of change
 - operation of equipment used at register/terminal
 - processing delivery and delivery document discrepancies
 - invoicing procedures for debtors and creditors
- Payment/invoice procedures including Goods and Services Tax (GST) requirements
- Cash and non-cash handling procedures, including:
 - opening and closing point of sale terminal
 - clearance of terminal and transference of tender
 - maintenance of cash balances
 - counting cash
 - calculating non-cash documents
 - customer credit ratings
 - balancing point of sale terminal
 - recording takings
 - security of cash and non-cash transactions
 - change required and denominations of change

–

EVIDENCE GUIDE (CONTINUED)

- EFTPOS/credit cards
- processing of cheques
- gift vouchers/lay by
- cash on delivery (COD)
- lay-by
- credits and returns
- customer refunds

Skills in:

- Completing tasks in set timeframes
- Literacy skills in regard to interpreting documentation
- Numeracy skills in regard to:
 - processing petty cash transactions
 - balancing cashbook entries and takings

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Irregularities in petty cash transactions need to be referred to relevant personnel for resolution.	1
How can information be collected, analysed and organised ?	Preparing banking documents requires information to be collected, analysed and organised.	1
How are activities planned and organised ?	Processing petty cash transactions requires activities to be planned and organised.	1
How can team work be applied?	Team work may be required when referring irregularities to others.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques will be applied when processing petty cash transactions.	1
How can problem solving skills be applied?	Problem solving skills will be applied when identifying discrepancies between invoices and delivery.	1

Metal and Engineering Training Package

WRRF2B Perform Retail Finance Duties

How can the use of technology be applied?	The use of technology will be applied when processing in-store credit systems.	1

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRF2B can be assessed with the following units:

WRRCA2B Apply retail office procedures

WRRCA3B Apply retail office keyboard skills

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - store policy and procedures manuals
 - financial transaction dockets/slips/invoices
 - banking deposit forms
- EFTPOS facilities and equipment
- Registers and related equipment

WRI1B

PERFORM STOCK CONTROL PROCEDURES

This unit encompasses the skills, knowledge and attitudes required to handle stock in a retail environment. It involves receiving and processing incoming goods, rotating stock, participating in stocktakes, reordering stock and dispatching goods.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Receive and process incoming goods

- 1.1 Cleanliness and orderliness in receiving bay maintained according to store policy.
- 1.2 Goods unpacked using correct techniques and equipment in line with store policy.
- 1.3 Packing materials removed and disposed of promptly according to store policy.
- 1.4 Incoming stock accurately checked and validated against purchase orders and delivery documentation according to store policy.
- 1.5 Items received inspected for damage, quality, use-by dates, breakage or discrepancies and recorded according to store policy.
- 1.6 Stock levels accurately recorded on store stock systems, according to store policy.
- 1.7 Secure storage of goods arranged according to store policy and legislative requirements.
- 1.8 Stock dispatched to appropriate area/department.
- 1.9 Stock price and code labels applied when required according to store policy.

2 Rotate stock

- 2.1 Stock rotation procedures for merchandise and wrapping and packing materials carried out routinely and accurately according to store policy.
- 2.2 Excess stock placed in storage or disposed of in accordance with store policy and legislative requirements.
- 2.3 Safe lifting and carrying techniques maintained in line with store occupational health and safety policy and legislative requirements.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
3 Participate in stocktake	<p>3.1 Stocktaking and cyclical counts assisted with, according to store policy/procedures.</p> <p>3.2 Stock records documentation completed according to store stock control system.</p> <p>3.3 Discrepancies in stock recorded and reported to relevant personnel.</p> <p>3.4 Electronic recording equipment operated and maintained according to manufacturer's specifications.</p>
4 Reorder stock	<p>4.1 Minimum stock levels identified according to store policy.</p> <p>4.2 Stock requisition forms or electronic orders completed accurately.</p> <p>4.3 Undelivered stock orders identified on stock system and followed up without undue delay.</p>
5 Dispatch goods	<p>5.1 Goods to be returned to supplier identified and labelled with date, supplier and reason for return or referred to management if required.</p> <p>5.2 Credit request documentation completed according to store procedure.</p> <p>5.3 Goods stored securely while awaiting dispatch.</p> <p>5.4 Delivery documentation completed according to store procedures.</p> <p>5.5 Special delivery instructions noted.</p> <p>5.6 Items packed safely and securely to avoid damage in transit.</p>

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - stock control
 - dispatch
- Stock recording may be:
 - manual
 - electronic
- Stocktakes may be:
 - cyclical
 - compliance driven
- Store stock control may include:
 - checking incoming or existing stock
 - special orders
- Stock may be moved:
 - manually
 - mechanically
- Handling techniques may vary according to:
 - stock characteristics
 - industry codes of practice
- Reporting of faults may involve:
 - telephone
 - fax
 - email
 - letter
 - face to face
- Legislative requirements may include:
 - occupational health and safety
 - hazardous substances and dangerous goods
 - labelling of workplace substances
 - waste removal and environmental protection
 - transport, storage and handling of goods
- Relevant personnel may include:
 - team leader
 - supervisor
 - store/area manager

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures, industry codes of practice, relevant legislation and statutory requirements in regard to stock control.
- Consistently applies safe work practices in the manual handling and moving of stock, according to occupational health and safety legislation/regulations/codes of practice.
- Interprets and applies manufacturers' instructions with regard to handling stock and using relevant equipment.
- Receives and processes incoming goods and dispatches outgoing goods according to store policies and procedures.
- Rotates stock and reorders stock/maintains stock levels according to store policies and procedures.
- Assists with stocktaking and cyclical counts according to store policies and procedures.
- Interprets and processes information accurately and responsibly.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed on the following page:

Knowledge of:

- Store policies and procedures, in regard to:
 - stock control
 - store labelling policy
 - product quality standards
 - correct unpacking of goods
 - out of date, missing or damaged stock
 - equipment used
 - stock location
 - waste disposal
 - methods of storage
 - delivery documentation
 - stock record documentation
 - dispatch documentation
- Reporting faults and problems
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Relevant occupational health and safety regulations

Skills in:

- Following set routine and procedures
- Using electronic labelling/ticketing equipment
- Literacy and numeracy skills in regard to:
 - stock records and delivery documentation

EVIDENCE GUIDE (CONTINUED)

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Reordering stock may require ideas and information to be communicated.	1
How can information be collected, analysed and organised ?	Maintaining stock levels, receiving and processing incoming goods will require information to be collected, analysed and organised.	1
How are activities planned and organised ?	Identifying stock levels and reordering requires activities to be planned and organised.	1
How can team work be applied?	Team work may be applied when undertaking stocktake procedures.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may be required when receiving goods and checking and validating delivery.	1
How can problem solving skills be applied?	Problem solving skills may be applied when identifying excess stock and determining storage or return of items.	1
How can the use of technology be applied?	The use of technology may be applied when recording stock and reporting faults and problems.	1

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Metal and Engineering Training Package

WRR11B Perform Stock Control Procedures

EVIDENCE GUIDE (CONTINUED)

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRR11B can be assessed with the following units:

WRRCS2B Apply point of sale handling techniques

WRRLP2B Minimise theft

WRRCS3B Interact with customers

WRRF1B Balance the register/terminal

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- Access to relevant equipment including
 - stock moving equipment
 - manual and electronic labelling/ticketing equipment
 - computers/stock recording equipment
- Relevant documentation, such as:
 - invoices/packing slips/dispatch documents/order forms
 - recording/tally sheets
 - store policy and procedures manuals
 - occupational health and safety regulations
 - legislation and statutory requirements
 - industry codes of practice

WRR15A

MAINTAIN AND ORDER STOCK

This unit encompasses the competencies required to maintain and order stock in a retail environment. It involves monitoring receipt and dispatch of goods, maintaining stock records, coordinating stocktake, identifying stock losses, processing orders and following up on orders.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Monitor receipt and dispatch of goods

- 1.1 Responsibility for receipt and dispatch of goods delegated to appropriate staff.
- 1.2 Store procedures implemented in regard to receipt, dispatch and secure storage of goods.
- 1.3 Staff functions observed to ensure store procedures are followed and documentation is completed correctly.
- 1.4 Store procedures implemented to ensure goods inspected for quantity and quality on receipt.
- 1.5 Variations to quantity and quality of delivered goods acted upon according to store policy.
- 1.6 Safe handling and storage of goods supervised in line with store policy.

2 Maintain stock records

- 2.1 Stock levels monitored and maintained at required levels.
- 2.2 Stock reorder cycles maintained, monitored and adjusted as required.
- 2.3 Team members informed of their individual responsibilities in regard to recording of stock.
- 2.4 Stock storage and movement records maintained in line with store policy.
- 2.5 Stock discrepancies recorded and procedures followed according to store policy.
- 2.6 Stock performance monitored and fast/slow selling items identified and reported according to store policy.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

3 Coordinate stocktake/cyclical count

- 3.1 Policies and procedures in regard to stocktaking and cyclical counts interpreted and explained to team members.
- 3.2 Staff rostered according to allocated budget and time constraints.
- 3.3 Stocktaking tasks allocated to individual team members.
- 3.4 Team members provided with clear directions for the performance of each task.
- 3.5 Team members allocated to ensure effective use of staff resources to complete task.
- 3.6 Accurate reports on stocktake data, including discrepancies produced for management.

4 Identify stock losses

- 4.1 Losses accurately identified, recorded and assessed against potential loss forecast on a regular basis.
- 4.2 Avoidable losses identified and reasons established.
- 4.3 Possible solutions recommended and implemented.

5 Process order

- 5.1 Orders for stock processed/raised as requested according to store policies and procedures.
- 5.2 Ordering and recording system accurately maintained.
- 5.3 Availability of sample range ensured according to buying plan.
- 5.4 Pricing materials ordered as required.
- 5.5 Negotiated purchase and supply agreements recorded accurately and filed for retrieval.

6 Follow up order

- 6.1 Delivery process monitored to meet agreed deadlines.
- 6.2 Routine supply problems handled or referred to management as required by store policy.
- 6.3 Continuous liaison with buyers, store/departments, warehouse and suppliers to

ensure continuity of supply.

6.4 Stock distributed according to store/department allocation.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - Stock control
 - stock control system
 - recording procedures
 - procedures for investigating discrepancies
 - store merchandise and marketing
 - pricing, labelling and packaging requirements
 - quality control policies and procedures
- Ordering and recording systems may be:
 - Manual
 - electronic
- Stock transfers may involve:
 - inter and intra store/department
- Suppliers may include:
 - existing contacts
 - new contacts
 - local suppliers
 - overseas supplies
- Reporting of faults may be achieved by:
 - fax
 - telephone
 - email
 - letter
 - verbally
- Handling techniques may vary according to:
 - stock characteristics
 - industry codes of practice

Metal and Engineering Training Package

WRR15A Maintain and Control Stock

- Staff rostering requirements may include:
 - varying levels of staff training
 - staffing levels
 - routine or busy trading conditions
 - full time, part time or casual staff
 - range of staff responsibilities
- Reports for management may include:
 - financial reports
 - business documents
 - informal reports
 - stocktake reports

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently implements and monitors store policy/procedures regarding receipt, dispatch and secure storage of goods.
- Regularly monitors staff implementation of store procedures and documentation in regard to receipt, dispatch and secure storage of goods.
- Monitors stock levels, storage, movement and reorder cycles on a regular basis.
- Organises and coordinates stock take, according to store policy and procedures.
- Consistently raises/processes stock orders and maintains record system according to store policies and procedures.
- Monitors delivery processes and distributes stock to ensure continuity of supply.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - stock control
 - store merchandising system
 - current and future stock levels
 - bar codes
 - labels
 - price tags
 - store stock recording system
 - stock replenishment/reorder procedures
 - inter and intra store/department transfers
 - reporting of stock discrepancies/damage
 - identifying and recording stock losses
 - identifying and recording discrepancies
 - existing suppliers
 - quality control procedures and requirements
 - receipt and dispatch of goods including inspection for quality and quantity
- Relevant licensing requirements for moving stock mechanically
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Relevant occupational health and safety legislation/regulations/codes of practice
- Principles and techniques for interpersonal communication skills

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Store stocktaking systems
- Use of electronic recording equipment
- Interpersonal communication skills
- Time management
- Negotiation skills
- Report preparation and presentation
- Literacy and numeracy skills in regard to:
 - stock control reports and documentation
 - processing orders
 - maintaining delivery and supply records
 - stock distribution records
 - maintaining stock ordering and recording systems

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	By informing staff of relevant roles and responsibilities for monitoring and ordering stock.	2
How can information be collected, analysed and organised ?	Monitoring stock levels and processing orders will require information to be collected, analysed and organised.	2
How are activities planned and organised ?	By implementing procedures for receipting, dispatching and storing goods.	2
How can team work be applied?	Directing and allocating team members in particular roles and responsibilities requires team work.	2
How can the use of mathematical ideas and techniques be applied?	Processing orders and maintaining stock levels requires the use of mathematical ideas and techniques.	2
How can problem solving skills be applied?	Assessing stock losses and developing solutions requires problem solving skills.	2

Metal and Engineering Training Package

WRR15A Maintain and Control Stock

How can the use of technology be applied?	Ordering and recording stock requires the use of technology.	2

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRR15A can be assessed with other units which make up a specific job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- Relevant documentation, such as:
 - store policy and procedures for receipt and dispatch of goods
 - store procedures for stocktake
 - occupational health and safety legislation/regulations/codes of practice
 - industry codes of practice
 - legislation and statutory requirements
 - store merchandising and marketing policy and procedures
 - inter and intra store/department transfer procedures
 - store quality control procedures and requirements

WRRLP1B

APPLY SAFE WORKING PRACTICES

This unit incorporates the National Occupational Health and Safety Commission (NOHSC) guidelines for occupational health and safety. It encompasses the skills, knowledge and attitudes to maintain a safe work environment for staff, customers and others. It involves observing basic safety and emergency procedures.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Observe basic safety procedures

- 1.1 Procedures to achieve a safe working environment followed and maintained in accordance with all relevant occupational health and safety legislation, including codes of practice, relating to particular hazards in the workplace or industry.
- 1.2 Unsafe work practices, including faulty equipment and plant are followed and reported according to store policy.
- 1.3 Dangerous goods and substances managed in accordance with store policy and relevant State and Territory legislation.
- 1.4 Tasks identified for potential manual risks and managed according to store policy.
- 1.5 Reporting of work related incidents and accidents to designated personnel observed.
- 1.6 Consultative processes for occupational health and safety demonstrated and procedures followed.

2 Observe basic emergency procedures

- 2.1 Fire and emergency procedures, including store evacuation, are followed in accordance with store policy and relevant State and Territory legislation.
- 2.2 Designated personnel responsible for first aid and evacuation procedures identified correctly.
- 2.3 Safety alarms identified accurately.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - observing basic safety procedures
 - observing emergency procedures
- Safety procedures may include:
 - hazard identification eg workplace inspections
 - fire or store evacuation involving staff or customers
 - emergency, fire and accident procedures
 - personal safety procedures
 - procedures for the use of personal protective clothing and equipment
 - issue resolution procedures
 - reporting incidents and accidents in the workplace
- Occupational health and safety procedures may deal with:
 - safe manual handling and lifting
 - dangerous goods
 - customers
 - staff
 - equipment/tools
 - premises
 - stock
- Emergency procedures may include:
 - sickness
 - accidents
 - fire
 - storms/cyclones
 - store evacuation
 - armed hold up
- Unsafe situations may deal with but are not restricted to:
 - sharp cutting tools and instruments
 - electricity and water
 - damaged packing material or containers
 - toxic substances
 - inflammable materials and fire hazards
 - lifting practices
 - spillages
 - waste and debris
 - ladders

- trolleys
- broken or damaged equipment
- glue guns/burns

RANGE OF VARIABLES

- Designated personnel may include:
 - safety representative
 - supervisor/team leader
 - manager
- Checking plant and equipment may include:
 - guarding of machinery
 - sharp cutting tools and instruments
 - broken or damaged equipment
 - damaged packing material or containers
- Safe manual handling practices may include:
 - lifting practices
 - use of equipment such as ladders, trolleys
 - job procedures
- Communication and consultation processes may include:
 - minutes from staff meetings, occupational health and safety meetings
 - identification of health and safety representatives
 - suggestions from staff for improving existing tasks and procedures

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies safe work practices, in all areas of the store, according to occupational health and safety legislation/regulations/codes of practice.
- Consistently applies store policies and procedures in regard to following basic safety procedures and for reporting faults/problems to relevant person/department/committee.
- Identifies hazardous situations and rectifies where appropriate, or reports to the relevant personnel according to store policy and procedures.
- Reads, accurately interprets and consistently applies manufacturers' instructions for storage and use of hazardous goods.
- Knows store policies and procedures with regard to emergency situations, evacuation or accident/illness in the store.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - occupational health and safety and emergency procedures, which will take into account where applicable, State and Territory legislation and regulations
 - rights and responsibilities of designated personnel responsible for health and safety in the workplace
- Relevant industry codes of practice
- Management of occupational health and safety in the workplace including:
 - communication and consultation processes
 - reporting procedures
 - manual handling procedures
 - interpreting symbols for occupational health and safety signage
- First aid procedures
- Identification what hazards exist in the workplace including:
 - managing broken or of faulty equipment
 - storage of dangerous goods and hazardous substances
 - fire/chemical/electrical hazards
 - spills/leakage of materials
 - appropriate waste disposal
 - slips/trips/falls

- Controlling risks through the 'hierarchy of control' including:
 - eliminating hazards
 - isolating hazards
 - use of engineering controls
 - use of administrative controls
 - appropriate use of personal protective clothing

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Locating and using safety alarms/fire extinguishers/emergency exits
- Identifying hazardous goods and substances
- Interpreting symbols used for occupational health and safety signage
- Storing and using chemicals and hazardous substances
- Handling broken or damaged equipment
- Manual handling procedures
- Using personal protective gear/equipment
- Appropriate waste disposal
- Literacy skills in regard to:
 - reading and interpreting instructions
- Numeracy skills in regard to:
 - estimating weights, size, quantities and mixtures

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Reporting unsafe situations requires communication of ideas and information.	1
How can information be collected, analysed and organised ?	Information on fire and safety hazards needs to be collected, analysed and organised.	1
How are activities planned and organised ?	Identifying evacuation procedures requires planning and organisation.	1
How can team work be applied?	Team work will be applied when maintaining a safe work environment for staff, customers and others.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may be applied when estimating weights, size, quantities and mixtures.	1
How can problem solving skills be applied?	Problem solving skills will be applied when identifying correct procedures for accidents or illness.	1

How can the use of technology be applied?	The use of technology may not be required in this unit.	0
--	---	---

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRLP1B can be assessed with the following units:

WRRCS1B	Communicate in the workplace
WRRER1B	Work effectively in a retail environment
WRRM2B	Perform routine housekeeping duties
WRRCA1B	Operate retail equipment

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

EVIDENCE GUIDE (CONTINUED)

Resources Required

- A real or simulated work environment
- Suitable equipment and materials for lifting
- Relevant documentation, such as:
 - store policy and procedures manuals
 - manufacturer's instructions/operation manuals
 - occupational health and safety regulations
 - legislation and statutory requirements
 - industry codes of practice

WRRLP2B

MINIMISE THEFT

This unit encompasses the competencies required to minimise theft in a retail environment. It involves applying routine store security, taking appropriate action to minimise theft and maintaining security of cash, registers/terminals and keys.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Apply routine store security

- 1.1 Store security systems and procedures applied according to store policy.
- 1.2 Cash handled and secured according to store policy.
- 1.3 Suspect behaviour by customers observed and dealt with according to store policy.
- 1.4 Internal and external theft dealt with according to store policy.
- 1.5 Products and equipment stored in a secure manner.

2 Minimise theft

- 2.1 Appropriate action taken to minimise theft by applying store procedures.
- 2.2 Merchandise matched to correct price tags.
- 2.3 Surveillance of merchandise maintained according to store policy and legislative requirements.
- 2.4 Customers' bags checked as required at point of sale according to store policy and legislative requirements.
- 2.5 Security of cash, cash register and keys maintained according to store policy.
- 2.6 Security of stock, cash and equipment in regard to customers, staff and outside contractors maintained according to store policy.
- 2.7 Suspected or potential thieves dealt with according to store policy and procedures.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - security
 - surveillance of merchandise
- Security procedures may deal with:
 - customers
 - staff
 - keys
 - visitors, sales representatives, contractors, vendors
 - stock
 - records
 - cash, credit cards
 - equipment
 - premises
 - armed hold-up
- Security equipment may include:
 - alarm systems
 - video surveillance
 - mirrors
 - locked and secure areas
- Legal requirements may include:
 - privacy/confidentiality laws
 - Trade Practices and Fair Trading Acts
 - consumer law
 - property offences
 - credit laws
 - reporting procedures
 - criminal law

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures and industry codes of practice, in regard to store security and theft prevention in a range of contexts and situations.
- Consistently applies store policies and procedures in regard to following security procedures and for reporting theft/suspicious behaviour to relevant personnel.
- Monitors stock, work area, customers and staff to minimise opportunities for theft.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit of competency in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - security
 - checking customers' bags and purchases
 - reporting problems and faults
- Relevant legislation and statutory requirements, particularly in regard to checking customers' bags and purchases
- Trade Practices and Fair Trading Acts
- Store merchandising system
- Security procedures relating to cash and non-cash transactions
- Location and operation of store security equipment
- Reporting procedures for external/internal theft or suspicious circumstances

Skills in:

- Literacy and numeracy skills in:
 - recording of stolen items
 - reporting of theft

EVIDENCE GUIDE (CONTINUED)**Generic Process Skills**

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Identifying suspect behaviour and relaying to relevant personnel may require information and ideas to be communicated.	1
How can information be collected, analysed and organised ?	Information of security systems needs to be collected, analysed and organised.	1
How are activities planned and organised ?	Checking customer bags may require activities to be planned and organised.	1
How can team work be applied?	Team work may be required when identifying suspect customer behaviour.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may not be required in this unit.	0
How can problem solving skills be applied?	Problem solving may be required when dealing with theft.	1
How can the use of technology be applied?	Use of technology may be required when reporting and recording theft.	1

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRLP2B can be assessed with the following units:

WRRCS2B Apply point of sale handling procedures

WRRCS3B Interact with customers

WRR11B Perform stock control procedures

WRRF1B Balance the register/terminal

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated work environment
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - store policy and procedures manuals
 - legislation and statutory regulations
 - industry codes of practice
 - Trade Practices and Fair Trading Acts
- Relevant security equipment
- Point of sale equipment

WRRLP3B

MAINTAIN STORE SAFETY

This unit is based on the National Occupational Health and Safety Commission (NOHSC) Guidelines and encompasses the competencies required to maintain store safety in a retail environment. It involves informing and involving team members, monitoring and maintaining a safe working environment, implementing emergency procedures, identifying the need for occupational health and safety training and maintaining occupational health and safety records.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Inform team members

- 1.1 Store policies and procedures in regard to occupational health and safety and emergency procedures clearly and accurately explained to team members.
- 1.2 Team members given access to store policy.
- 1.3 Relevant provisions of occupational health and safety legislation and codes clearly and accurately explained to team members.
- 1.4 Information on identified hazards and risk control procedures regularly provided and clearly and accurately explained to team members.

2 Involve team members

- 2.1 Provide opportunities and processes for team members to consult and contribute on occupational health and safety issues according to store policy.
- 2.2 Issues raised are resolved promptly or referred to relevant personnel according to store policy.
- 2.3 Outcomes of issues raised on occupational health and safety matters promptly conveyed to team members.

3 Monitor and maintain a safe working environment

- 3.1 Store policies and procedures implemented with regard to identification, prevention and reporting of potential hazards.
- 3.2 Prompt action taken to deal with hazardous events according to store policies.
- 3.3 Unsafe or hazardous events investigated to identify cause and inadequacies in risk control measures or resource allocation for risk control measures identified and reported to relevant personnel.
- 3.4 Control measures to prevent re-occurrence and minimise risks of unsafe and hazardous events implemented and monitored according to store

policy and the hierarchy of control.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

3 Monitor and maintain a safe working environment (cont.)

- 3.5 Hazardous goods handled and stored in accordance with store policy and occupational health and safety regulations.
- 3.6 Equipment maintained in accordance with store policy and occupational health and safety regulations.
- 3.7 Team performance monitored to ensure use of safe manual handling techniques.

4 Implement emergency procedures

- 4.1 Store emergency policies and procedures implemented promptly in the event of an emergency.

5 Identify need for occupational health and safety training

- 5.1 Occupational health and safety training needs identified accurately, specifying gaps between occupational health and safety competencies required and those held by team members.
- 5.2 Training organised/arranged according to store policy.

6 Maintain occupational health and safety records

- 6.1 Occupational health and safety records and legal requirements for the maintenance of records for occupational injury and disease completed accurately and legibly, according to store policy.
- 6.2 Information from records used to identify hazards and monitor risk control procedures according to store policy.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - occupational health and safety
 - emergency procedures
- Occupational health and safety procedures may deal with:
 - customers
 - staff
 - equipment
 - premises
 - stock
 - manual handling
- Emergencies may include:
 - sickness
 - accidents
 - fire
 - store evacuation involving staff or customers
 - product recall/contamination
 - bomb threat
 - cyclones
 - dealing with dangerous customers
- Hazardous goods/equipment may include:
 - use and storage of hazardous/chemical sprays
 - handling products treated with chemicals
 - poisonous/allergenic effects of products
 - electricity and water
- Correct use of equipment and protective gear may include:
 - correct foot wear
 - protective gear (eyes, face, hands)
- Occupational health and safety information may include:
 - general duty of care
 - requirements for the maintenance and confidentiality of records of occupational injury and disease
 - provision of information and training
 - regulations and codes of practice relating to hazards present in work area
 - health and safety representatives and occupational health and safety committees
 - issue resolution

RANGE OF VARIABLES (CONTINUED)

- Hazardous events may include:
 - accidents
 - fires
 - chemical spills
 - bomb threats
- Procedures for dealing with hazardous events may include:
 - evacuation
 - chemical containment
 - first aid procedures
- Store emergency policies and procedures may include:
 - alarm systems and procedures
 - fire fighting procedures
 - store evacuation procedures for staff and customers
 - transport arrangements for sick and/or injured persons
 - medical attention procedures
 - events likely to endanger staff or customers
 - product recall/contamination

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Applies and monitors store policies and procedures, industry codes of practice, relevant legislation and statutory requirements in regard to occupational health and safety and emergency procedures.
- Applies and monitors safe work practices in the handling and moving of stock, according to occupational health and safety legislation/regulations/codes of practice.
- Interprets and monitors the implementation of manufacturers' instructions with regard to handling stock and using relevant equipment.
- Applies and monitors safe work practices in the handling, storage and disposal of unsafe or hazardous materials.
- Identifies occupational health and safety training needs and maintains occupational health and safety records.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - occupational health and safety
 - emergency procedures
 - unsafe or hazardous goods
 - handling and storage
 - disposal
 - bomb threat procedures
 - store evacuation
- Manual handling and safe lifting techniques
- Possible fire and safety hazards
- Sickness and accident procedures
- Location of nearest first aid assistant/facility
- Hierarchy of risk control:
 - elimination of hazards
 - engineering controls to reduce risk
 - administrative controls
 - use of personal protective equipment
- Relevant occupational health and safety legislation/regulations/codes of practice
- Principles and techniques in interpersonal communication

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Interpersonal communication skills including:
 - giving feedback
 - coaching
 - performance analysis
 - questioning/listening/observation
 - group presentation
 - team motivation
 - negotiation
 - verbal and non verbal communication
 - team leadership
- Literacy and numeracy skills in regard to:
 - interpreting and applying occupational health and safety documents
 - reporting procedures

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	By informing team members of store policies and procedures.	2
How can information be collected, analysed and organised ?	By identifying relevant occupational health and safety policies and procedures.	2
How are activities planned and organised ?	Developing emergency policies and procedures requires activities to be planned and organised.	2
How can team work be applied?	Encouraging team members to contribute to occupational health and safety issues requires team work to be applied.	2
How can the use of mathematical ideas and techniques be applied?	The use of mathematical ideas and techniques may not be applicable to this unit.	0

Metal and Engineering Training Package

WRRLP3B Maintain Store Safety

How can problem solving skills be applied?	Identifying hazardous events and implementing control procedures requires problem solving skills to be applied.	2
How can the use of technology be applied?	Maintaining records may require the use of technology.	2

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated competency assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRLP3B can be assessed with the following unit:

WRRLP4B Maintain store security

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Access to relevant equipment such as:
 - stock moving equipment
 - alarm systems
 - first aid equipment
 - fire fighting equipment
 - communication equipment
- Relevant documentation, such as:
 - occupational health and safety legislation
 - store evacuation procedures
 - store policy and procedures manuals

WRRLP6C

APPLY RETAIL FOOD SAFETY PRACTICES

This unit involves the skills and knowledge required for personal hygiene, food handling, cleaning practices and procedures and implementing a Food Safety Plan, according to health and hygiene requirements and store procedures. It is based on and is equivalent to the units FDFCORFS1A Apply Basic Food Safety Practices and FDFCORFS2A Implement the Food Safety Plan from the National Food Processing Industry Training Package, but has been customised with additional outcomes.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

- | | |
|--|--|
| 1 Apply personal hygiene and sanitation | 1.1 Personal hygiene practices identified and practised.
1.2 Protective clothing and equipment identified, maintained and used.
1.3 Personal movement within and outside workplace conforms to work area requirements.
1.4 Personal presentation maintained according to store procedures. |
| 2 Identify food safety plan/program | 2.1 Store food safety plan/program accurately identified and interpreted.
2.2 Food safety plan/program implemented. |
| 3 Handle product hygienically | 3.1 Correct product handling practices identified and practised.
3.2 Procedures to ensure that products are protected from contamination identified and practised.
3.3 Implements for handling products identified and used.
3.4 Food handling implements changed between handling different products. |
| 4 Clean work area and equipment | 4.1 Cleaning requirements for work areas identified and practised according to work area standards.
4.2 External and internal cleaning requirements for equipment identified and practised.
4.3 Cleaning tools, consumables and equipment for a variety of applications identified and used.
4.4 Routine maintenance requirements for work areas and equipment identified and practised.
4.5 Maintenance requirements/problems reported to |

appropriate personnel without delay.

- 4.6 Handling and storage requirements for cleaning chemicals identified and observed.
- 4.7 Waste disposal and pest control procedures identified and performed according to legislative requirements.

—

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
5 Monitor food safety	<p>5.1 Critical control points monitored to control food safety risk.</p> <p>5.2 Out of control processes or situations identified and corrective action taken.</p> <p>5.3 Food safety information, including equipment breakdowns, accurately recorded according to critical control points and work area standards.</p>
6 Contribute to continuous improvement	<p>6.1 Hygiene and sanitation problems/situations, including potential sources of food contamination, identified promptly and rectified or reported to relevant personnel.</p> <p>6.2 Conditions which promote microbial growth, identified promptly and rectified or reported to relevant personnel.</p>

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - hygiene and sanitation practices
- Legislation and statutory requirements may include:
 - occupational health and safety
 - environmental protection legislation
 - waste disposal
 - hazardous substances and dangerous goods
 - manual handling
 - food safety regulations
- Personal hygiene practices may include:
 - hand washing procedures
 - personal presentation and cleanliness
 - hair tied back, under net or under cap
 - not touching hair
 - not sneezing near food
 - wearing of jewellery
 - reporting of personal illnesses/infections
 - wounds, cuts, wearing of bandages or dressings
 - changing gloves when handling different products
- Personal movement may include:
 - removing protective clothing prior to moving outside or from one area to another
 - not moving into defined areas
- Safety requirements may include:
 - wearing gloves to protect hands from cleaning chemicals, heat or cold (insulation)
 - wearing mesh gloves when using or cleaning sharp equipment
 - wearing protective clothing, footwear
 - use of equipment, such as ovens, slicers, knives, tongs
- Protective clothing may include:
 - preventing contamination/cross contamination of food
 - wearing of gloves, hairnets, hats, shoes, uniforms, outer garments and aprons when handling food as required
 - clothing maintenance, laundering and storage requirements

RANGE OF VARIABLES (CONTINUED)

- Product handling procedures may include:
 - variety of products eg, meat, chicken, fish, seafood, milk products
 - cooked/uncooked, hot/cold products
 - avoidance of contamination/cross contamination
 - proximity of chemicals to food products
 - use and storage of chemicals
- Food handling implements may include:
 - gloves
 - tongs
 - spoons
 - scoops
- Work areas and equipment may include:
 - walls to required levels
 - benches
 - storage/display units
 - cool rooms, refrigerators
 - ovens, bain maries, rotisseries, grills, deep fryers, hot plates
 - knives, slicers
 - drink machines, milk shake makers, coffee makers
- Cleaning requirements may include:
 - time of day
 - work area
- Relevant personnel may include:
 - store supervisor
 - manager
 - team leader
- Improvement in continuous improvement may include:
 - participation in structured improvement program
 - day to day problem solving

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures which comply with consumer law and legislative requirements in regard to hygiene and sanitation practices.
- Consistently follows and applies relevant legislation and statutory requirements including consumer law, occupational health and safety, hygiene and sanitation, environmental issues and store policies and procedures especially in regard to safe handling and storage of product.
- Consistently applies industry codes of practice.
- Consistently and accurately identifies, interprets, applies and implements the store food safety plan/program, according to health and hygiene requirements and store procedures.
- Consistently follows and applies store policies and procedures with regard to use of cleaning equipment and safe handling and disposal of waste.
- Consistently follows store policies and procedures with regard to personal hygiene practices including:
 - personal cleanliness, reporting of personal illness/infections
 - store personal presentation requirements for hair, clothes, footwear, jewellery
 - hand washing procedures
 - use and maintain clothing/footwear and related apparatus to meet hygiene requirements.
- Consistently inspects own work area and identifies common food safety hazards and possible causes.
- Consistently follows and applies store policies and procedures with regard to removal and isolation of suspect product and/or taking other corrective action.
- Consistently maintains personal conduct to minimise risk to food safety.
- Consistently monitors critical control points to identify food safety risks in own work area. This may include carrying out checks, inspections and tests.
- Consistently investigates contamination/cross-contamination events and takes action to prevent contamination from occurring/recurring.
- Consistently records food safety information according to store policies and procedures.
- Consistently contributes to continuous improvement in own work area.

–

EVIDENCE GUIDE (CONTINUED)

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - personal hygiene practices
- Correct protective clothing
- Safety requirements to protect self and others
- Food handling and hygiene principles including:
 - awareness of the store food safety plan/program, its purpose and implications for own work
 - own roles and responsibilities and those of food safety personnel for food handling requirements from raw material to finished product
 - methods/techniques for minimising contamination and spoilage
 - common sources and types of contamination/food safety hazards, including conditions conducive to microbial growth and known allergens associated with food handling and processing
 - common types of physical, chemical and micro-biological agents which can contaminate food
 - conditions which can cause physical, chemical and micro-biological contamination
 - correct storage of food including hot/cold, raw/cooked and relevant critical control points
 - causes of deterioration of food, contamination, cross contamination
 - store procedures for identifying and reporting potential or actual sources of contamination
 - food handling implements eg. gloves, tongs
 - need for change of implements between products
 - need for frequent change of storage medium for serving implements
 - shelf life of products
 - Hazards Analysis and Critical Control Points (HACCP)
- Load limits of storage, display units to maintain correct temperatures including:
 - effects of breaking temperature curtain, effects of blocking coils/air vents
 - overloading
- Procedures for recording failures in the food safety plan/program, including equipment breakdowns, and immediate action to be taken
- Cleaning of work area:
 - store cleaning procedures/schedules for work areas and equipment (internal/external)
 - purpose and importance of cleaning and sanitation procedures
 - safe use and storage of cleaning tools, equipment and cleaning chemicals/insecticides/pesticides
 - routine maintenance for work areas and equipment
 - waste collection and disposal, recycling and handling procedures
 - pest control procedures used in the workplace
- Relevant legislation and statutory requirements

–

EVIDENCE GUIDE (CONTINUED)

- Relevant occupational health and safety requirements
- Food safety policies, plans and responsibilities including an understanding of the relationship between the quality system, the food safety plan/program and audit requirements
- Characteristics of materials, product and processes used to carry out work responsibilities
- Relevant industry codes of practice

Skills in:

- Handling of chemicals
- Maintaining work area
- Product handling
- Use of personal protective equipment
- Literacy and numeracy skills in regard to:
 - reading and understanding store procedures

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Hygiene and sanitation problems/situations need to be communicated to relevant personnel.	1
How can information be collected, analysed and organised ?	Store food safety plan/program needs to be identified, analysed and organised.	2
How are activities planned and organised ?	Maintaining and cleaning work area and equipment requires activities to be planned and organised.	2
How can team work be applied?	Team work will be required to maintain work areas.	1
How can the use of mathematical ideas and techniques be applied?	Handling cleaning chemicals will require the use of mathematical ideas and techniques.	2

Metal and Engineering Training Package

WRRLP6C Apply Retail Food Safety Practices

How can problem solving skills be applied?	Problem solving skills will be required when rectifying hygiene and sanitation problems/situations.	2
How can the use of technology be applied?	Various equipment throughout this unit will require the use of technology.	2

–

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRLP6C can be assessed with the other units that make up a particular job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- Simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- A food safety plan/program, based on Hazards Analysis and Critical Control Points (HACCP)
- Protective clothing
- Cleaning materials and chemicals
- Pest control equipment/chemicals
- Suitable merchandise
- Relevant documentation such as store policy and procedures on hygiene and sanitation practices
- Food handling implements
- Food storage and display equipment

WRRM1B

MERCHANDISE PRODUCTS

This unit encompasses the skills, knowledge and attitudes required to merchandise products within a retail store. It involves the arrangement and presentation of merchandise, setting up and maintaining displays and labelling or pricing stock.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Place and arrange merchandise

- 1.1 Merchandise unpacked in accordance with store procedures.
- 1.2 Merchandise placed on floor, fixtures and shelves in determined locations.
- 1.3 Merchandise displayed to achieve a balanced fully stocked appearance and promote sales.
- 1.4 Damaged, soiled or out of date stock identified and corrective action taken as required according to store procedure.
- 1.5 Stock range placed to conform with fixtures, ticketing, prices or bar codes.
- 1.6 Stock rotated according to stock requirements and store procedure.
- 1.7 Stock presentation conforms to special handling techniques and other safety requirements.

2 Prepare display labels/tickets

- 2.1
Labels/
tickets for window, wall or floor displays prepared according to store policy.
- 2.2 Tickets prepared using electronic equipment or neatly by hand according to store procedures.
- 2.3 Soiled, damaged, illegible or incorrect labels/tickets identified and corrective action taken.
- 2.4 Electronic ticketing equipment used and maintained according to design specifications.
- 2.5 Ticketing equipment maintained and stored in a secure location.

3 Place, arrange and display price tickets and labels

- 3.1 Tickets/labels are visible and correctly placed on merchandise.
- 3.2 Labels/tickets replaced according to store policy.
- 3.3 Correct pricing and information maintained on

merchandise according to store procedures,
industry codes of practice and legislative
requirements.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
4 Maintain displays	4.1 Special promotion areas reset and dismantled. 4.2 Supervisor assisted in selection of merchandise for display. 4.3 Merchandise arranged/faced up as directed and/or according to layout specifications and load bearing capacity of fixtures. 4.4 Unsuitable or out of date displays identified, reset and/or removed as directed. 4.5 Optimum stock levels identified and stock replenished according to store policy. 4.6 Display areas maintained in a clean and tidy manner. 4.7 Excess packaging removed from display areas.
5 Protect merchandise	5.1 Correct handling, storage and display techniques identified and used according to stock characteristics and legislative requirements.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - merchandising of stock
 - preparing and displaying tickets/labels
 - maintaining displays
- Displays may include:
 - setting new displays
 - maintaining existing ones
- Tickets and pricing requirements may include:
 - pricing gun
 - shelf tickets
 - shelf talkers
 - written labels
 - swing ticketing
 - bar coding
 - price boards
 - header boards
- Handling techniques may vary according to:
 - stock characteristics
 - industry codes of practice
- Merchandise may be characterised by:
 - type
 - brand
 - size
 - customer needs
 - colour
 - price
- Legislative requirements may include:
 - pricing requirements including Goods and Services Tax (GST) requirements
 - industry codes of practice
 - discounted items
 - Trade Practices and Fair Trading Acts
- Safety requirements may include:
 - transport, storage and handling of goods
 - hazardous substances
 - labelling of workplace substances

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures in regard to displaying, merchandising, ticketing, pricing and storage of stock.
- Displays merchandise on floor, fixtures, shelves/display areas, in determined locations, in accordance with special manual handling techniques and other safety requirements.
- Prepares display labels and price tickets for merchandise with regard to store policies and procedures.
- Operates, maintains and stores a range of ticketing equipment according to:
 - store policy and procedures
 - industry codes of practice
 - manufacturers' instructions and design specifications.
- Arranges correct pricing and information on merchandise according to store procedures, industry codes and government requirements.
- Identifies damaged, soiled or out of date stock and takes corrective action as required by store procedures and legislative requirements.
- Maintains display areas and replenishes stock as required in accordance with store procedures and legislative requirements.
- Performs correct manual handling, storage and display techniques according to:
 - stock characteristics
 - industry codes of practice
 - occupational health and safety legislation/regulations/codes of practice.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed on the following page:

Knowledge of:

- Store policies and procedures, in regard to:
 - merchandising, ticketing and pricing of stock
 - correct storage of stock
 - store promotional themes, including advertising, catalogues and special offers
 - location of display areas
 - availability and use of display materials
 - stock rotation
 - stock replenishment
 - merchandise range
 - scheduling for building or rotating displays
 - correct storage procedures for labelling/ticketing equipment and materials
- Correct manual handling techniques for protection of self and merchandise

EVIDENCE GUIDE (CONTINUED)

- Principles of display
- Elements and principles of design and trends in retail design
- Relevant occupational health and safety regulations including:
 - manual handling
 - hygiene and sanitation
 - hazardous substances
 - labelling of workplace substances
- Relevant legislation and statutory requirements
- Pricing procedures including inclusion/exclusion of Goods and Services Tax (GST)
- Relevant industry codes of practice

Skills in:

- Use and maintenance of manual and electronic labelling/ticketing equipment
- Completing tasks in a set time frame
- Literacy and numeracy skills in relation to:
 - reading and interpreting store procedures and guidelines
 - machine or manual preparation of labels/tickets
 - reading and understanding manufacturer's instructions

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Information on arranging merchandise may need to be communicated to others.	1
How can information be collected, analysed and organised ?	Store procedures for arranging merchandise and preparing display tickets/labels will need to be collected, analysed and organised.	1
How are activities planned and organised ?	Placing and arranging merchandise will require planning and organising.	1
How can team work be applied?	Team work may be required to complete and maintain display areas.	1
How can the use of mathematical ideas and techniques be applied?	Maintaining stock levels and replenishing stock may require the use of mathematical ideas and techniques.	1

Metal and Engineering Training Package

WRRM1B Merchandise Products

How can problem solving skills be applied?	Problem solving skills may be applied when identifying merchandise for display.	1
How can the use of technology be applied?	The use of technology may be required for preparing display tickets/labels.	1

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRM1B can be assessed with the following units:

WRRS2B Advise on products and services

WRRS1B Sell products and services

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- A range of ticketing and pricing equipment
- Merchandise for display
- Display materials and props
- Cleaning materials
- Relevant documentation, such as:
 - store policy and procedure manuals on housekeeping, merchandising and occupational health and safety
 - manufacturer's instructions/operation manuals on electronic ticketing equipment
 - relevant legislation and industry codes of practice

WRRM2B

PERFORM ROUTINE HOUSEKEEPING DUTIES

This unit encompasses the skills, knowledge and attitudes required to maintain and organise work areas in a retail environment. It involves applying personal hygiene practices by staff members and the organisation of the work area to keep the workplace tidy, clean and safe.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Organise work area

- 1.1 Work areas maintained in a safe, uncluttered and organised manner according to store policy.
- 1.2 All routines carried out safely, effectively and efficiently with minimum inconvenience to customers and staff, according to store policy.
- 1.3 Store policies and procedures for tidying work areas and placing items in designated areas applied.

2 Clean work area

- 2.1 Store policies and procedures for personal hygiene applied.
- 2.2 Store policies and procedures applied for cleaning of work area.
- 2.3 Waste promptly removed and disposed of according to store policy and legislative requirements.
- 2.4 Spills, food, waste, or other potential hazards reported to appropriate personnel and removed from floors according to store policy and legislative requirements.
- 2.5 Signage promptly displayed in regard to unsafe areas.
- 2.6 Equipment and consumable materials maintained and stored correctly after use.
- 2.7 Tools and equipment (including guards) cleaned and used in accordance with manufacturer's instructions and legislative requirements.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - housekeeping practices
 - personal hygiene
 - maintenance and storage of cleaning equipment
 - use and storage of cleaning chemicals
- Work areas may include:
 - counters
 - benches
 - sinks
 - point of sale terminals
 - point of sale areas
 - preparation areas
 - walkways and aisles
 - displays
 - fixtures and other working surfaces
- Handling and cleaning techniques may vary according to:
 - stock characteristics
 - industry codes of practice
- Unsafe areas may include:
 - spills
 - sharp edges
 - loose wiring
- Reporting of faults/problems may be conducted by:
 - face to face
 - email
 - phone
 - fax

Metal and Engineering Training Package

WRRM2B Perform Routine Housekeeping Duties

- Legislative requirements may include:
 - waste removal
 - environmental protection
 - transport, storage and handling of goods
 - hazardous substances and dangerous goods
 - labelling of workplace substances
 - occupational health and safety
 - use of protective clothing/equipment
- Appropriate personnel may include:
 - manager
 - area supervisor
 - team leader
 - colleagues

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies housekeeping duties to work area, point of sales terminals, walkways and fixtures/display areas.
- Consistently applies safe work practices in the operation and maintenance of a range of cleaning/housekeeping equipment according to:
 - store policy and procedures
 - occupational health and safety legislation/regulations/codes of practice
 - industry codes of practice
 - manufacturers' instructions and design specifications.
- Applies store housekeeping program of work area and reports faults/problems to relevant person/department.
- Reads, accurately interprets and consistently applies manufacturers' instructions for cleaning products, tools and equipment.
- Completes tasks in set time frame.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed on the following page:

Knowledge of:

- Store policies and procedures, in regard to:
 - housekeeping
 - use and maintenance of store cleaning equipment
 - personal hygiene
 - waste disposal and environmental protection
 - reporting problems and faults
- Relevant occupational health and safety regulations
- Relevant labels to identify chemicals and hazardous substances/HAZCHEM labels
- Manufacturer's instructions for use of cleaning materials or hazardous substances
- Manufacturer's instructions for use of cleaning equipment
- Relevant legislation and statutory requirements
- Relevant industry codes of practice

Skills in:

- Using and maintaining cleaning equipment
- Using and storing chemicals, hazardous substances and flammable materials
- Using electrical and other equipment safely

EVIDENCE GUIDE (CONTINUED)

- Literacy and numeracy skills in:
 - reading and understanding manufacturer’s instructions
 - reading and understanding warning labels and instructions for the use of chemicals and hazardous substances

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Faults or problems will need to be communicated to relevant personnel.	1
How can information be collected, analysed and organised ?	Store policies and procedures for cleaning work areas will need to be collected, analysed and organised.	1
How are activities planned and organised ?	Cleaning work areas and disposing of waste will require activities to be planned and organised.	1
How can team work be applied?	Team work may be required when carrying out routine procedures and reporting to relevant personnel.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may be required when measuring out chemicals.	1
How can problem solving skills be applied?	Problem solving skills may be required to clean particular areas.	1
How can the use of technology be applied?	Technology may be required when operating a range of cleaning equipment.	1

**Context of Assessment
Assessment Process**

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Metal and Engineering Training Package

WRRM2B Perform Routine Housekeeping Duties

EVIDENCE GUIDE (CONTINUED)

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRM2B can be assessed with the following units:

WRRCS1B Communicate in the workplace
WRRER1B Work effectively in a retail environment
WRRLP1B Apply safe working practices
WRRCA1B Operate retail equipment

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Cleaning/store housekeeping equipment and materials
- Relevant documentation, such as:
 - store policy and procedures manuals on housekeeping, cleaning and occupational health and safety
 - manufacturer's instructions/operation manuals on cleaning equipment and materials
 - manual handling regulations and industry codes of practice
 - plant and equipment regulations

WRRO1B

Manage Merchandise and Store Presentation

This unit encompasses a range of competencies required to manage merchandise and store presentation. It involves managing store merchandising, planning and managing store advertising and promotions, managing store pricing policies and managing housekeeping.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

- | | | |
|----------|---|---|
| 1 | Manage store merchandising | <ul style="list-style-type: none">1.1 Layout and presentation support market position and promote customer flow according to store policy.1.2 Layout assessment checks developed and implemented.1.3 Standards for visual presentations and displays defined and clearly communicated to all staff.1.4 Staff consulted to assess customer response to space allocations. |
| 2 | Plan and manage store advertising and promotions | <ul style="list-style-type: none">2.1 Store policies and procedures, managed and implemented in regard to store promotional activities.2.2 Activities organised in line with anticipated/researched customer requirements.2.3 Promotions managed in order to achieve maximum customer impact.2.4 Arrangements with suppliers negotiated in regard to special promotional activities.2.5 Store activities coordinated to complement shopping centre/retail complex promotions.2.6 Assessment checks developed and implemented to measure effectiveness of promotions including layout, visual impact and customer response.2.7 Promotional activities accurately documented and reported on. |

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
3 Manage store pricing policies	<ul style="list-style-type: none">3.1 Store policies and procedures maintained in regard to pricing.3.2 Accurate information on pricing trends and changes maintained and communicated to relevant staff.3.3 Procedures developed and implemented for pricing according to store policies and legislative requirements.
4 Manage housekeeping	<ul style="list-style-type: none">4.1 Store policies and procedures developed and implemented in regard to store housekeeping and maintenance.4.2 Roster/schedules developed and managed, ensuring store housekeeping standards are monitored and maintained.4.3 Contingency plan initiated in the event of merchandise or store presentation problems.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - promotion of products and services
 - housekeeping
- Pricing procedures may include:
 - marking down of slow moving stock
 - soiled or damaged goods
 - goods close to use-by date
 - end of season stock
- Store merchandising plan may include:
 - target market/market research
 - store image
 - store layout and space availability
 - seasonal lines
 - pricing policy
- Customer market research may be:
 - formal
 - informal
- Promotions may include:
 - advertising
 - catalogues
 - newspapers
 - posters
 - radio or TV
 - suppliers
 - Internet/website
- Promotions may involve:
 - external and in-store activities
 - corporate or locally based
 - dealing with advertising agencies and consultants

RANGE OF VARIABLES (CONTINUED)

- Pricing policies may include:
 - long term and short term
 - internal and external considerations
 - pricing policies including Goods and Services Tax (GST) requirements
- Legislative requirements may include:
 - Trade Practices and Fair Trading Acts
 - consumer law
- Housekeeping may include:
 - store premises
 - fittings
 - fixtures
 - equipment
- Contingency plans may include:
 - major spillages
 - flood/storm
 - breakages
 - black out
 - break in

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Collaboratively plans layout and presentation of merchandise according to store policies and procedures.
- Assesses effectiveness of layout and presentation according to sales targets and/or predetermined objectives.
- Collaboratively plans, coordinates and implements advertising and promotions activities according to store policies and procedures.
- Assesses and reports on effectiveness of advertising and promotions to staff and management according to store policies and procedures.
- Collaboratively plans, coordinates and implements pricing activities according to store policies and procedures.
- Collaboratively plans, coordinates and implements housekeeping activities according to store policies and procedures and occupational health and safety legislation/regulations/codes of practice.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - layout and presentation
 - advertising and promotions
 - pricing/marketing down of goods, including risk assessment
 - housekeeping for premises, fittings, fixtures and equipment
 - store merchandise and service range
 - store merchandising plan
 - range and availability of new products and services
 - customer demand and market trends
 - product quality standards
- Occupational health and safety legislation/regulations/codes of practice
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Pricing procedures including Goods and Services Tax (GST) requirements
- Principles and techniques in:
 - visual merchandising
 - project management

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Providing feedback on performance
- Communicating store standards and expectations
- Report presentation
- Literacy skills in regard to:
 - researching, analysing and interpreting a broad range of written material
 - preparing reports
 - documenting results

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Pricing trends and changes need to be communicated to relevant staff.	3
How can information be collected, analysed and organised ?	Developing and implementing assessment checks requires information to be collected, analysed and organised.	3
How are activities planned and organised ?	Coordinating store activities to complement shopping centre/retail complex promotions requires activities to be planned and organised.	3
How can team work be applied?	Team work will be applied when consulting with staff to assess customer response to space allocations.	3
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may be applied when developing pricing procedures.	2
How can problem solving skills be applied?	Problem solving skills will be applied when initiating a contingency plan in the event of merchandise or store presentation problems.	3
How can the use of technology be applied?	The use of technology may be applied when developing rosters/schedules and developing promotional activities.	2

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRO1B can be assessed with other units which make up a particular job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- Relevant documentation, such as:
 - store policy and procedures manuals
 - store merchandising plan
 - legislation and statutory requirements
 - occupational health and safety legislation/regulations/codes of practice
- Access to a work team

WRRO2B

MANAGE SALES AND SERVICE DELIVERY

This unit encompasses the competencies required to monitor, maintain and improve sales and service delivery. It involves market research, developing new markets and marketing products and services within the culture of the overall store policy.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Maintain and improve operations

- 1.1 Policies and procedures for sales and service delivery implemented, communicated and reviewed on a regular basis.
- 1.2 Resource allocation for client service provision is adequate and maintained in line with store policy.
- 1.3 Customer complaints which have been referred by staff, resolved according to store policy.
- 1.4 Sales and service targets/plans consistent with quality and functional specifications.
- 1.5 Sales and service targets/plans monitored to ensure that customer requirements are met and appropriate remedial action taken if required.
- 1.6 Sales and service targets/plans communicated to relevant personnel according to implementation schedules.
- 1.7 Feedback given to staff on operations and outcomes.
- 1.8 Staff encouraged to take responsibility for meeting customer requirements.
- 1.9 Feedback from customers sought and used to improve future operations.
- 1.10 Corrective measures taken to minimise factors which may cause operations to be disrupted.
- 1.11 Corrective actions monitored and evaluated for effectiveness and used for future operational planning.
- 1.12 Current and accurate records on sales are available to authorised personnel.
- 1.13 Relevant reports interpreted and acted upon as required.

—

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

2 Negotiate supply of goods

- 2.1 Arrangements with suppliers negotiated and implemented according to store policies and procedures and communicated to relevant personnel.
- 2.2 Special pricing arrangements and customer payment agreements authorised and communicated to relevant staff and management personnel according to store policy.
- 2.3 Records of suppliers and stock monitored for accuracy and legibility and appropriate action taken where necessary.
- 2.4 Market factors affecting supply identified and communicated to relevant personnel.
- 2.5 Complete and accurate records of negotiations and agreements conveyed to appropriate personnel within designated time limits.
- 2.6 Immediate corrective action taken where potential or actual problems with supply indicated.
- 2.7 New suppliers identified and developed to maintain and improve sales and service delivery.

3 Establish customer requirements

- 3.1 Strategies planned and developed to enhance customer service provision according to store policy.
- 3.2 Customer needs researched and analysed accurately in regard to local geographic and cultural issues.

4 Provide productive work environment

- 4.1 Sufficient supply of resources of the necessary quantity and quality established and maintained to meet customer requirements.
- 4.2 Access to, and use of, resources regulated and monitored for maximum efficiency.
- 4.3 Staff working conditions meet current legislation and store policy.
- 4.4 Maintenance frequency and use of equipment conform to recommended schedules and procedures.
- 4.5 Resources which do not meet requirements replaced, repaired or adapted as soon as is practicable and with minimum disruption to work activity.
- 4.6 Recommendations for improving conditions communicated to relevant personnel within designated time frame.
- 4.7 Complete, accurate records maintained and made available to authorised personnel.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - sales and service delivery
- Policies and procedures may involve:
 - service standards
 - staff presentation
 - customer complaints
 - staff induction
 - customer service and sales training
- Sources of supply may include:
 - people
 - external organisations
 - internal departments/teams
- Resources may include:
 - people
 - material
 - equipment/technology
 - financial
 - external consultants
- Customers may include:
 - external
 - internal
- Service and products may include:
 - current
 - potential
- Negotiations may be conducted by:
 - face to face contact
 - correspondence
 - meetings
 - telephone
 - email
- Specifications for services and products may involve:
 - quality
 - quantity
 - coverage/content

Metal and Engineering Training Package

WRRO2B Manage Sales and Service Delivery

- time schedules/scales
- cost

RANGE OF VARIABLES (CONTINUED)

- Specifications may include:
 - customer agreements
 - operational means for meeting agreements
 - specific functional duties within the organisation
- Specifications, recommendations and information may be communicated to:
 - higher level managers
 - subordinates
 - colleagues, specialists, staff from other departments
 - external organisations which have a health, safety or environmental responsibility
 - government bodies
- Feedback may be sought and given:
 - verbally
 - in writing
- Analysis methods may be:
 - quantitative
 - qualitative
- Factors which disrupt operations may include:
 - supply
 - operational resources
 - quality of materials

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Maintains, monitors and evaluates sales and service delivery.
- Communicates sales and service targets/plans and provides feedback on operations and outcomes to relevant personnel.
- Proactively improves sales and service delivery operations.
- Interprets and maintains data on sales and services delivery.
- Negotiates and arranges supply of goods according to store policies and procedures.
- Authorises pricing and payment agreements according to store policies and procedures.
- Maintains, monitors and evaluates supply of stock.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures in regard to:
 - sales and service delivery
 - supply specifications
 - quality assurance and control
 - stock maintenance and control
 - pricing
- Store merchandise and service range
- Store merchandising plan
- Range and availability of new products and services
- Customer demand and market trends
- Product quality standards
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Occupational health and safety legislation/regulations/codes of practice
- Pricing procedures including Goods and Services Tax (GST) requirements
- Principles and techniques in:
 - purchasing and supply specifications
 - stock control

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Interpersonal communication skills
- Negotiating with suppliers and customers
- Presentation skills
- Using new technology
- Literacy skills in regard to:
 - researching, analysing and interpreting a broad range of written material
 - preparing reports
 - documenting results
- Numeracy skills in regard to:
 - interpreting and maintaining data

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this competency standard. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	By communicating policies and procedures to suppliers, staff and management.	3
How can information be collected, analysed and organised ?	Monitoring sales and service targets/plans requires information to be collected, analysed and organised.	3
How are activities planned and organised ?	Through identifying suppliers, monitoring stock and pricing arrangements.	3
How can team work be applied?	Communicating with staff and maintaining sales and service requires team work.	3
How can the use of mathematical ideas and techniques be applied?	Maintaining sales and service targets/plans requires use of mathematical ideas and techniques.	3
How can problem solving skills be applied?	Identifying and resolving customer complaints requires problem solving skills.	3
How can the use of technology be applied?	Completing accurate records and maintaining equipment requires use of technology.	3

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRO2B can be assessed with other units that make up a particular job function.

Evidence gathering methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources required

- A retail work environment
- Relevant documentation, such as:
 - store policy and procedures manuals
 - sales and service delivery targets/plans
 - records of sales service
 - legislation and statutory requirements
 - industry codes of practice
 - occupational health and safety legislation/regulations/codes of practice
- Access to suppliers
- Access to a team

WRRO3B

PROVIDE A SAFE WORKING ENVIRONMENT

This unit is based on the National Occupational Health and Safety Commission (NOHSC) guidelines for occupational health and safety. It encompasses the competencies involved in developing and implementing policies and procedures relating to occupational health and safety issues. It involves consulting with staff, assessing and controlling risks, establishing and maintaining record systems and evaluating policies and procedures.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Develop policies to establish and maintain a safe working environment

- 1.1 Store policies and procedures developed based upon a commitment to occupational health and safety and with regard to relevant legislation.
- 1.2 Occupational health and safety responsibilities and duties clearly defined, allocated and included in job descriptions and duty statements for all relevant positions.
- 1.3 Financial and human resources for the operation of the occupational health and safety system identified, sought and/or provided promptly and consistently.
- 1.4 Information on the occupational health and safety system readily accessible and clearly explained to staff.
- 1.5 Procedures established to identify existing and potential hazards.
- 1.6 Procedures established and maintained to facilitate the reporting of all safety related incidents.
- 1.7 Control measures developed according to the hierarchy of control.
- 1.8 Systems established to encourage staff members to report /identify all matters likely to affect workplace safety.

2 Consult with staff

- 2.1 Appropriate consultation processes established and maintained in consultation with staff according to occupational health and safety legislation and store policy.
- 2.2 Issues raised through consultation dealt with and resolved promptly according to store policy.
- 2.3 Information on outcomes of consultation provided to staff clearly and promptly.

–

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
3 Establish and maintain a safe working environment	<p>3.1 Policies and procedures established and maintained to facilitate identification and prevention of hazards.</p> <p>3.2 Identification of potential and existing hazards, addressed at planning, design and evaluation stages of workplace changes to prevent creation of new hazards according to relevant legislation and codes of practice.</p> <p>3.3 Procedures established and maintained to ensure safe handling and storage of hazardous goods.</p> <p>3.4 Procedures established and maintained to ensure equipment is maintained and stored safely in line with store policy.</p> <p>3.5 Procedures established and maintained to ensure safe lifting and manual handling techniques are employed by staff.</p> <p>3.6 Store emergency procedures established and maintained.</p>
4 Assess risks	<p>4.1 Risks presented by identified hazards correctly assessed in accordance with occupational health and safety legislation and codes of practice.</p> <p>4.2 Procedure for ongoing risk assessment developed and integrated with systems of work and procedures.</p> <p>4.3 Staff activities monitored to ensure this procedure is adopted effectively.</p> <p>4.4 Risk identification and assessment addressed at planning, design and evaluation stages of workplace changes to prevent creation of new hazards.</p>
5 Control risks	<p>5.1 Measures to control assessed risks developed according to the hierarchy of control and implemented according to store policy, occupational health and safety legislation and codes of practice.</p> <p>5.2 Interim or contingency measures established and implemented when control measures not immediately practicable, until permanent control measures are implemented.</p>

—

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
6 Establish and maintain policies for hazardous events	<p>6.1 Potentially hazardous events correctly identified.</p> <p>6.2 Procedures to control risks associated with hazardous events and meet legislative requirements, developed in consultation with appropriate emergency services.</p> <p>6.3 Appropriate information and training provided to all employees to enable implementation of the correct procedures in all relevant circumstances.</p>
7 Train staff	<p>7.1 Occupational health and safety training program developed and implemented to ensure all staff are trained in occupational health and safety issues.</p>
8 Establish and maintain record system	<p>8.1 System for maintaining occupational health and safety records established and monitored to facilitate identification of patterns of occupational injury and disease according to store policy.</p>
9 Evaluate policies and procedures	<p>9.1 Effectiveness of the occupational health and safety system and related policies, procedures and programs assessed according to store policy.</p> <p>9.2 Improvements to the occupational health and safety system developed and implemented to ensure more effective achievement of store policy.</p> <p>9.3 Compliance with occupational health and safety legislation and codes of practice assessed to ensure that legal occupational health and safety standards are maintained.</p>

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - occupational health and safety
 - emergency procedures
- Occupational health and safety issues may include:
 - customers and staff, equipment, premises or stock
 - sickness and accident reporting procedures
 - storage and use of flammable materials
 - safe lifting and manual handling procedures
 - store evacuation
 - chemical containment
 - first aid procedures
 - range of responsibilities/job description including general duty of care of employees and employers
 - workplace inspection and safety audits
 - checking equipment prior to and during work
 - reporting process for and issues resolution, injury or accidents
- Store emergency procedures may include:
 - locating and using alarms
 - events likely to endanger staff or customers
 - sickness
 - accidents
 - fire
 - store evacuation
 - chemical spills
 - bomb scares
 - armed robbery
- Processes for consultation may include:
 - minutes from health and safety meetings
 - suggestions for improvements put forward by employees
 - staff meetings, management meetings
- Assessing risks may include:
 - conducting regular reviews of injury/accident registers
 - consultation processes including discussions with employees
 - maintenance of plant and equipment
 - assessment of individual tasks and job design

–

RANGE OF VARIABLES (CONTINUED)

- Hierarchy of control may include:
 - elimination of hazards
 - substitution
 - isolating hazards
 - use of engineering controls
 - use of administrative controls
 - appropriate use of personal protective clothing and equipment
- Staff training may include:
 - induction training
 - training for specific hazards identified in the industry
 - fire and emergency evacuation training
 - ongoing professional development training which includes occupational health and safety implications
- Training may be provided to trainees:
 - on the job
 - off the job
 - combination of both
- Records may include:
 - workplace inspection and audit reports
 - training records for new employees
 - ongoing employee training records
 - manufacturer's instructions including MSDS maintenance records
 - revision of policies and procedures to ensure relevance through audits against State and Territory legislation and regulations

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Maintains, manages and applies safe work practices including necessary resources, control measures and risk assessments, in all areas of the store, according to occupational health and safety, and health and hygiene legislation/regulations/industry codes of practice and equal opportunity principles.
- Maintains, manages and applies emergency procedures according to store policies and procedures.
- Develops and/or manages store policies and procedures in regard to the consistent application by staff members of safe working practices, for the provision of services and safe use of products.
- Establishes and maintains consultative processes in regard to occupation health and safety legislation/regulations/industry codes of practice.
- Allocates and manages staff responsibilities for occupational health and safety guidelines and health and hygiene legislation/regulations and industry codes of practice.
- Develops and implements staff training programs that relate to occupational health and safety, and health and hygiene legislation/regulations and industry codes of practice.
- Establishes and maintains a recording system for accident, illness and emergency situations details.
- Evaluates, reviews and makes recommendations for improvements with regard to store policies and procedures in occupational health and safety and store emergency procedures

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this standard in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed on the following page:

Knowledge of:

Metal and Engineering Training Package

WRRO3B Provide a Safe Working Environment

- Store policies and procedures, in regard to:
 - occupational health and safety and emergency procedures, taking into account local and state government legislation/regulations/codes of practice
 - emergency evacuation of store
 - events likely to endanger staff or customers
 - hierarchy of control in emergency situations
 - place of consultative committees
 - recording system for accidents, incidents, illness
- Relevant occupational health and safety legislation/regulations/codes of practice
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- First aid procedures
- Handling and storage procedures of hazardous and non hazardous goods and equipment
- Procedures for spills/leakage of materials/accidents/sickness
- Safe lifting and manual handling procedures
- Waste disposal methods, including hazardous substances

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Consultation processes
- Identifying and preventing fire and safety hazards, including fire/chemical/electrical hazards
- Negotiation skills
- Using safety alarms/fire extinguishers/emergency exits
- Developing processes and procedures
- Literacy skills in regard to:
 - researching, analysing and interpreting a broad range of written material
 - preparing reports
 - documenting results
- Numeracy skills in relation to:
 - finance and risk assessment

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Policies and procedures need to be communicated to all staff members.	3
How can information be collected, analysed and organised ?	Identifying existing and potential hazards requires information to be collected, analysed and organised.	3
How are activities planned and organised ?	Developing a training program requires activities to be planned and organised.	3
How can team work be applied?	Team work will be applied when consulting with staff on workplace safety.	3
How can the use of mathematical ideas and techniques be applied?	The use of mathematical ideas and techniques will be applied when identifying patterns of occupational injury and disease.	2
How can problem solving skills be applied?	Problem solving skills will be applied when establishing contingency measures until permanent control measures are implemented.	3

Metal and Engineering Training Package

WRRO3B Provide a Safe Working Environment

How can the use of technology be applied?	The use of technology will be applied when establishing and maintaining record systems.	3

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRO3B can be assessed with the following units:

WRRPM1B Administer human resources policy

WRRPM2B Recruit and select personnel

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or a simulated environment. Evidence might include:

- Observation of the person in the workplace
- Simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - occupational health and safety legislation/regulations/codes of practice
 - store policy and procedures manuals
 - industry codes of practice
 - enterprise agreements in regard to consultative committees
- Access to other staff members
- Access to emergency equipment

WRRO4B

CONTROL STORE SECURITY/LOSS

This unit involves the skills and knowledge required to control store security. It involves developing and implementing security procedures for the prevention of theft, ensuring safety of all personnel in the event of a robbery and monitoring all security procedures.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
-------------------------------	-----------------------------

- | | |
|---------------------------------|--|
| 1 Control store security | <ul style="list-style-type: none">1.1 Security procedures to facilitate the detection and prevention of internal or external theft developed and implemented according to store policy.1.2 Procedures to ensure maximum safety and security for all personnel in the event of robbery developed and implemented.1.3 Procedures for opening and closing premises and cash registers, cash security, credit card and cheque transactions developed and implemented.1.4 Security procedures monitored, maintained and communicated to all staff.1.5 Stocktaking procedures established and implemented to monitor, control and minimise stock losses. |
|---------------------------------|--|

–

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - security
- Type of security equipment in regard to:
 - type of equipment used
 - level of security required
- Theft may involve:
 - internal personnel
 - external personnel
- Security procedures/equipment may include:
 - dye tags
 - alarms
 - locks
 - security cameras
 - security guards

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Develops and implements security procedures to facilitate the detection and prevention of theft.
- Develops and implements procedures to ensure safety and security of internal and external clients in the event of robbery.
- Develops and implements procedures for:
 - opening and closing premises
 - cash security
 - credit card transactions, EFTPOS
 - cheque transactions
 - stocktaking to control and minimise theft.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - security
 - detection and apprehension of thieves
 - credit card transactions
 - cheque transactions
 - stocktaking
- Relevant legislation and statutory requirements, including
 - case law or common law
 - state laws relating to property offences
- Relevant industry codes of practice
- Occupational health and safety legislation/regulations/codes of practice
- Principles and techniques in:
 - safety of personnel in the event of robbery
 - detection and prevention of theft

Skills in:

- Negotiation
- Record maintenance
- Development of procedures
- Interpersonal communication skills

EVIDENCE GUIDE (CONTINUED)**Generic Process Skills**

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Security procedures need to be communicated to all personnel.	3
How can information be collected, analysed and organised ?	The development of security procedures requires information to be collected, analysed and organised.	3
How are activities planned and organised ?	Stocktaking procedures to minimise stock losses requires activities to be planned and organised.	3
How can team work be applied?	Team work will be applied when implementing and communicating store security procedures.	3
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques will be applied during stocktaking procedures.	2
How can problem solving skills be applied?	Problem solving skills will be applied when developing security procedures to facilitate the detection and prevention of internal or external theft.	3
How can the use of technology be applied?	The use of technology will be applied through the use of security equipment, registers and credit card facilities.	3

–

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRO4B can be assessed with other units which make up a particular job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context or from a simulated work environment. Evidence might include:

- Observation of the person in the workplace
- A simulated role play
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A real or simulated work environment
- Relevant documentation, such as:
 - store policy and procedures on security
 - store policy and procedures on credit card transactions and cheque transactions
 - store policy and procedures on stocktaking
 - legislation and statutory requirements
 - industry codes of practice
 - occupational health and safety legislation/regulations/codes of practice
- Access to a team
- Access to a range of security equipment

WRRO5B

CONTROL INVENTORY

This unit covers the skills and knowledge required to control inventory in a retail environment. It involves managing receipt, dispatch and storage of merchandise, and managing stock control.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

- | | | |
|----------|--|--|
| 1 | Manage receipt, dispatch and storage of merchandise | 1.1 Merchandise received, dispatched and stored according to store policies and procedures.
1.2 Cost effective and efficient methods for goods movement determined according to store policy.
1.3 Maintenance procedures for storage areas and equipment implemented according to store policy. |
| 2 | Manage stock control | 2.1 Store policies and procedures implemented in regard to stock control and inventories.
2.2 Store procedures established and implemented to monitor and control stock levels.
2.3 Budgeted stock levels maintained.
2.4 Stocktaking procedures established and implemented.
2.5 Contingency plans established and implemented in regard to stock delivery times.
2.6 Reports on stock inventories accurately documented and prepared. |

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - receipt of goods from suppliers
 - dispatch of goods
 - shrinkage prevention
 - waste controls
 - safety controls
 - secure storage
 - stock control and inventories
- Stocktaking procedures may include:
 - stock control
 - stock levels
 - cyclical counts
 - minimisation of out of date stock
 - quality control
- Contingency plans may include:
 - breakdowns
 - delays
 - floods
 - breakages

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Plans, coordinates and implements activities associated with receipt, dispatch, storage and movement of merchandise according to store policies and procedures, including occupational health and safety policies and guidelines.
- Implements maintenance procedures for storage areas and equipment according to store policy.
- Plans, coordinates and implements activities associated with stock control, including:
 - monitoring and controlling stock levels
 - establishing and maintaining stocktaking procedures
 - documenting and reporting on inventories according to store policies and procedures.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - receipt of goods from suppliers
 - dispatch of goods
 - shrinkage prevention
 - waste controls
 - safety controls
 - secure storage in an appropriate environment
 - equipment used to move stock
- Store systems and equipment for stock recording and control
- Inventory control
- Storage security
- Licensing requirements for operating moving equipment (if applicable)
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Occupational health and safety legislation/regulations/codes of practice

Skills in:

- Stocktaking procedures
- Record maintenance
- Literacy skills in regard to:
 - documenting and recording procedures
- Numeracy skills in regard to:
 - interpreting data and cost effectiveness/efficiency

–

EVIDENCE GUIDE (CONTINUED)**Generic Process Skills**

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Implementing stock taking procedures requires communication of ideas and information.	3
How can information be collected, analysed and organised ?	Establishing procedures to monitor and control stock levels requires information to be collected, analysed and organised.	3
How are activities planned and organised ?	Developing contingency plans requires activities to be planned and organised.	3
How can team work be applied?	Team work will be required to implement store policies and procedures in regard to stock control.	3
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques will be applied when developing reports on stock inventories.	3
How can problem solving skills be applied?	Developing contingency plans in regard to stock delivery times will require problem solving skills.	3
How can the use of technology be applied?	The use of technology will be applied when developing reports on stock inventories.	3

EVIDENCE GUIDE (CONTINUED)

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRO5B can be assessed with other units which make up a particular job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- Relevant documentation, such as:
 - store policies and procedures on inventory control
 - legislation and statutory requirement
 - industry codes of practice
 - occupational health and safety legislation/regulations/codes of practice
- Access to:
 - a stock control system
 - stock control equipment
 - a team

WRRO6B

MANAGE STORE FACILITIES

This unit encompasses the competencies required to manage store facilities in a retail environment. It involves the management of the store maintenance and housekeeping program, negotiating and monitoring maintenance contracts and identifying and locating facilities requirements.

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
1 Manage store maintenance program	<ul style="list-style-type: none">1.1 Premises, fittings, fixtures and equipment monitored and maintained according to store policy.1.2 Deficiencies in store maintenance procedures identified and remedial action taken.1.3 Expert or specialist advice obtained as required according to store policy.1.4 Contingency plan initiated in the event of maintenance problems.
2 Manage retail equipment maintenance	<ul style="list-style-type: none">2.1 Policies and procedures developed and implemented to ensure retail equipment maintained according to store policy.2.2 Maintenance program for retail equipment monitored and implemented according to manufacturer's design specifications and store policy.2.3 Equipment faults identified and rectified where possible, without undue delay.2.4 Equipment faults or failures reported according to service agreements and store policy.
3 Negotiate maintenance contracts	<ul style="list-style-type: none">3.1 Maintenance contracts with contractors and suppliers negotiated according to store policies and procedures.3.2 Contract terms and conditions negotiated and implemented to maximise benefits for the store, and communicated to relevant staff.3.3 Maintenance procedures monitored to ensure products/tasks meet contract specifications.
4 Identify facilities/space requirements	<ul style="list-style-type: none">4.1 Facilities/space requirements identified according to store policy and budget requirements.4.2 Suitable facilities/space located.4.3 Space utilisation maximised with consideration to existing configuration.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policies and procedures in regard to:
 - store maintenance
 - facilities management
- Contracts may be negotiated:
 - externally
 - internally
- Contracts may involve:
 - quality standards
 - maintenance services
 - cleaning
 - security
 - electrical services
 - plumbing services
 - equipment maintenance
- Recording methods may include:
 - electronic
 - manual
- Reporting of faults may include:
 - service personnel
 - contractors
 - store/area manager
 - supervisor
- Retail equipment may include:
 - point of sale terminals
 - computers/scanners/printers
 - pricing equipment
 - electronic bar coding equipment
 - portable data entry

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Plans, coordinates and implements activities associated with monitoring and maintaining premises, fittings, fixtures and equipment according to store policies and procedures.
- Initiates contingency plans in response to maintenance problems.
- Negotiates, monitors and implements maintenance contracts according to store policies and procedures.
- Identifies and utilises space and facilities to maximise space utilisation.
- Evaluates and reports on effectiveness of maintenance contracts.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - maintenance of store facilities
 - maintenance of retail equipment
- Maintenance contract terms and options
- Contract specifications
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Occupational health and safety legislation/regulations/codes of practice
- Principles and techniques in:
 - monitoring performance of contracts
 - negotiating, in particular contract negotiation

Skills in:

- Record maintenance
- Negotiation skills
- Literacy skills in regard to:
 - developing, documenting and recording procedures
- Numeracy skills in regard to:
 - accounting and recording data

–

EVIDENCE GUIDE (CONTINUED)**Generic Process Skills**

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Negotiating maintenance contracts with contractors requires information and ideas to be communicated.	3
How can information be collected, analysed and organised ?	Identifying facilities/space requirements requires information to be collected, analysed and organised.	3
How are activities planned and organised ?	Developing a maintenance program for retail equipment requires activities to be planned and organised.	3
How can team work be applied?	Team work will be applied when seeking expert advice for maintenance program and communicating with relevant staff.	3
How can the use of mathematical ideas and techniques be applied?	The use of mathematical ideas and techniques will be applied when identifying budget requirements.	2
How can problem solving skills be applied?	Problem solving skills will be applied when rectifying equipment faults.	3
How can the use of technology be applied?	The use of technology will be applied when developing contracts and maintaining retail equipment.	3

Context of Assessment**Assessment process**

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

EVIDENCE GUIDE (CONTINUED)

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRO6B can be assessed with other units which make up a particular job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- Relevant documentation, such as:
 - maintenance contracts
 - store policies and procedures on maintenance of facilities, maintenance contracts
 - legislation and statutory requirements
 - industry codes of practice
 - occupational health and safety legislation/regulations/codes of practice
- Access to a team
- Access to equipment/technology

WRRS1B

SELL PRODUCTS AND SERVICES

This unit involves the skills, knowledge and attitudes required to sell products and services in a retail environment. It involves the use of sales techniques and encompasses the key selling skills from approaching the customer to closing the sale. It requires a basic level of product knowledge.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

- | | |
|----------------------------------|--|
| 1 Apply product knowledge | 1.1 Knowledge of the use and application of relevant products and services demonstrated according to store policy and legislative requirements.
1.2 Product knowledge developed by accessing relevant sources in information. |
| 2 Approach customer | 2.1 Timing of customer approach determined and applied.
2.2 Effective sales approach identified and applied.
2.3 Positive impression conveyed to arouse customer interest.
2.4 Knowledge of customer buying behaviour demonstrated. |
| 3 Gather information | 3.1 Questioning techniques applied to determine customer buying motives.
3.2 Listening skills used to determine customer requirements.
3.3 Non-verbal communication cues interpreted and clarified.
3.4 Customers identified by name where possible.
3.5 Customer directed to specific merchandise. |
| 4 Sell benefits | 4.1 Customer needs matched to appropriate products and services.
4.2 Knowledge of products' features and benefits communicated clearly to customers.
4.3 Product use and safety requirements described to customers.
4.4 Customers referred to appropriate product specialist as required.
4.5 Routine customer questions about merchandise are answered accurately and honestly or referred to more experienced senior sales staff. |

ELEMENTS OF COMPETENCY	PERFORMANCE CRITERIA
5 Overcome objections	<p>5.1 Customer objections identified and accepted.</p> <p>5.2 Objections categorised into price, time and merchandise characteristics.</p> <p>5.3 Solutions offered according to store policy.</p> <p>5.4 Problem solving applied to overcome customer objections.</p>
6 Close sale	<p>6.1 Customer buying signals monitored, identified and responded to appropriately.</p> <p>6.2 Customer encouraged to make purchase decisions.</p> <p>6.3 Appropriate method of closing sale selected and applied.</p>
7 Maximise sales opportunities	<p>7.1 Opportunities for making additional sales recognised and applied.</p> <p>7.2 Customer advised of complementary products or services according to customer's identified need.</p> <p>7.3 Personal sales outcomes reviewed to maximise future sales.</p>

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - selling products and services
- Customers may include:
 - people with routine or special needs
 - regular or new customers
 - people from a range of social, cultural or ethnic backgrounds and physical and mental abilities
- Product knowledge may include:
 - warranties
 - features and benefits
 - use by dates
 - handling/storage requirements
 - stock availability
 - safety features
 - price
- Selling may involve:
 - face to face
 - over the telephone
 - over the Internet
- Routine customer questions may relate to:
 - price and price reductions
 - quality
 - features and benefits
- Legislative requirements may include:
 - Trade Practices Act
 - tobacco laws
 - liquor laws
 - sale of second hand goods
 - occupational health and safety
 - industry codes of practice
 - Lottery Acts
- Relevant sources of information may include:
 - Internet
 - relevant staff members
 - store or supplier product manuals
 - product profiles
 - videos
 - demonstrations
 - labels
 - store tours

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Applies product knowledge and uses appropriate sales approach to sell the benefits of products, overcome objections and close sales.
- Uses questioning, listening and observation skills to determine customer requirements.
- Consistently applies store policies and procedures in regard to selling products and services.
- Maximises sales opportunities according to store policies and procedures.
- Consistently applies industry codes of practice, relevant legislation and statutory requirements in regard to selling products and services.
- Evaluates personal sales performance to maximise future sales.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Store policies and procedures, in regard to:
 - selling products and services
 - allocated duties and responsibilities
- Store merchandise and service range
- Specific product knowledge for area/section
- Relevant legislation and statutory requirements
- Relevant industry codes of practice
- Customer types and needs including:
 - customer buying motives
 - customer behavior and cues
 - individual and cultural differences
 - demographics/lifestyle/income
 - types of customer needs, eg functional, psychological

Skills in:

- Selling techniques including:
 - opening techniques
 - buying signals
 - strategies to focus customer on specific merchandise
 - add ons and complimentary sales
 - overcoming customer objections
 - closing techniques

EVIDENCE GUIDE (CONTINUED)

- Verbal and non verbal communication skills
- Handling difficult customers
- Negotiation skills
- Sales performance appreciation
- Questioning/listening/observation
- Literacy skills in regard to:
 - reading and understanding product information
 - reading and understanding store policies and procedures
 - recording information
- Numeracy skills in regard to:
 - handling of tender
 - weighing and measuring goods

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Relaying product features and benefits to customers requires the communication of ideas and information.	1
How can information be collected, analysed and organised ?	Establishing customer requirements requires information to be collected, analysed and organised.	1
How are activities planned and organised ?	Identifying opportunities to make additional sales requires activities to be planned and organised.	1
How can team work be applied?	Team work will be applied when referring to other staff members or seeking product information.	1
How can the use of mathematical ideas and techniques be applied?	Mathematical ideas and techniques may be required when reviewing personal sales outcomes.	1
How can problem solving skills be applied?	Problem solving skills may be applied when overcoming customer objections.	1

Context of Assessment

Assessment Process

For valid and reliable assessment of this unit, evidence should be gathered through a range of methods to indicate consistent performance.

It can be gathered from assessment of the unit of competency alone, through an integrated assessment activity or through a combination of both.

Evidence should be gathered as part of the learning process.

Integrated Competency Assessment

Evidence is most relevant when provided through an integrated activity which combines the elements of competency for each unit, or a cluster of units of competency.

The candidate will be required to:

- Apply knowledge and skills which underpin the process required to demonstrate competence, including appropriate key competencies.
- Integrate knowledge and skills critical to demonstrating competence in this unit.

Unit WRRS1B can be assessed with other units which make up a specific job function.

Evidence Gathering Methods

Evidence should include products, processes and procedures from the workplace context. Evidence might include:

- Observation of the person in the workplace
- Third party reports from a supervisor
- Customer feedback
- Answers to questions about specific skills and knowledge

Resources Required

- A retail work environment
- Relevant documentation, such as:
 - store policy and procedures manuals
- Access to a range of customers with different requirements
- A range of merchandise and products appropriate to the retail workplace
- Product labels and sources of product information

WRRS2B

ADVISE ON PRODUCTS AND SERVICES

This unit builds on unit WRRS1B Sell products and services. It requires a greater depth of specialist or general product knowledge and a greater need for experience and skill in offering advice to customers.

ELEMENTS OF COMPETENCY

PERFORMANCE CRITERIA

1 Develop product/service knowledge

- 1.1 Product knowledge developed and maintained according to store policy and legislative requirements.
- 1.2 Product knowledge conveyed to other staff members as required.
- 1.3 Comparisons between products and services researched and applied.
- 1.4 Knowledge of competitors' product and service range and pricing structure demonstrated.

2 Recommend specialised products/services

- 2.1 Merchandise evaluated according to customer requirements.
- 2.2 Features and benefits of products and services demonstrated to customer to create a buying environment.
- 2.3 Detailed specialised knowledge of product applied to provide accurate advice to customers.

RANGE OF VARIABLES

The Range of Variables provide the range of applications of this unit of competency to allow for differences within enterprises and workplaces. It provides details of practices, knowledge and requirements referred to in the elements and performance criteria. The variables chosen in training and assessment will depend on the work contexts.

The following variables may include but are not limited to:

- Store policy and procedures in regard to:
 - selling products and services
- Legislative requirements may include:
 - Trade Practices Act
 - tobacco laws
 - liquor laws
 - Lottery Acts
 - industry codes of practice
 - occupational health and safety
 - sale of second hand goods
 - sale of X and R rated products
 - trading hours
 - transport, storage and handling of goods
- Product knowledge may include:
 - brand options
 - product features/benefits
 - warranties
 - safety features
- Product knowledge may be developed and maintained by:
 - accessing the Internet
 - attending product launches
 - attending product seminars
 - discussions with staff members
 - accessing product information booklets/pamphlets
- Pricing structure may include:
 - sales reductions
 - pricing procedures including Goods and Services Tax (GST) requirements
 - mark downs
- Customers may include:
 - people with routine or special requests
 - people with special needs
 - regular and new customers
 - people from a range of social, cultural or ethnic backgrounds and physical and mental abilities
- Customer requirements may include:
 - specific brand
 - sizing
 - quality
 - quantity
 - price range
 - usage

EVIDENCE GUIDE

The following components of the evidence guide relate directly to the performance criteria and the range of variables for the unit of competency and provide guidance for assessment of the unit in the workplace and/or training program.

Critical Aspects of Evidence

Competency in this unit requires evidence that the candidate:

- Consistently applies store policies and procedures and industry codes of practice in regard to customer service and selling products and services.
- Develops, maintains and conveys product knowledge to customers.
- Applies detailed and specialised product knowledge to provide accurate advice according to the needs of the customer.

Underpinning Skills and Knowledge

Knowledge and skills are essential to apply this unit in the workplace, to transfer to other contexts and deal with unplanned events. The requirements for this unit of competency are listed below:

Knowledge of:

- Specialised product knowledge including:
 - warranties
 - benefits and features
 - shelf life/use by date
 - storage requirements
 - ingredients or materials contained in product
 - product/ingredient origins
 - care and handling of products
 - corresponding or complementary products and services
 - stock availability
- Store/industry manuals and documentation
- Stock and merchandise range
- Service range
- Procedures for taking orders
- Pricing procedures including Goods and Services Tax (GST) requirements
- Other relevant policies and procedures
- Relevant legislation and statutory requirements
- Relevant industry codes of practice

EVIDENCE GUIDE (CONTINUED)

Skills in:

- Interpersonal communication skills
- Using a range of communication/electronic equipment
- Accessing relevant product/service information
- Literacy skills in regard to:
 - reading and understanding product information
 - reading and understanding store policies and procedures
 - recording information
- Numerical skills in regard to:
 - estimating and calculating costs relevant to pricing products

Generic Process Skills

There are a number of processes that are learnt throughout work and life which are required in all jobs. They are fundamental processes and generally transferable to other work functions. Some of these are covered by the **key competencies**, although others may be added. The questions below highlight how these processes are applied in this unit of competency. Following each question a number indicates the level to which the key competency needs to be demonstrated where 0 = not required, 1 = perform the process, 2 = perform and administer the process, and 3 = perform, administer and design the process.

Key Competency	Example of Application	Performance Level
How can communication of ideas and information be applied?	Recommending specialised products to customers requires ideas and information to be communicated.	2
How can information be collected, analysed and organised ?	Developing product knowledge requires information to be collected, analysed and organised.	2
How are activities planned and organised ?	Developing knowledge of competitor's products and services may require activities to be planned and organised.	1
How can team work be applied?	Team work may be required when developing and relaying product knowledge to other team members.	1
How can the use of mathematical ideas and techniques be applied?	Making comparisons with competitor's pricing structure will require the use of mathematical ideas and techniques.	2
How can problem solving skills be applied?	Problem solving will be applied when evaluating merchandise according to customer requirements.	2

Metal and Engineering Training Package

WRRS1B Sell Products and Services

How can the use of technology be applied?	The use of technology will be applied when developing product knowledge through accessing the Internet.	2
