**Assessment Requirements for RIICSG401E
Supervise civil concrete structure
construction**

Release: 1

Assessment Requirements for RIICSG401E Supervise civil concrete structure construction

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- supervise civil concrete structure construction on at least two occasions, including:
 - providing recommendations for the improvement of civil concrete structure construction tasks, including:
 - interpreting project contract
 - specification requirements
 - procedures to problem solve
 - make decisions for activity
 - carry out continuous improvement in meeting task outcomes.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- implement procedures and techniques for the supervision of civil concrete structure construction tasks, including:
 - calculating quantities for executing tasks, including:
 - volumes
 - grades
 - percentages
 - areas
 - resource consumption figures, including required supply rates
 - interpreting civil concrete structure construction materials properties and test results, including:
 - concrete slump tests
 - concrete cylinder tests
 - completing written records and reporting systems, including:

- preparing and presenting job reports
- preparing and maintaining logbooks and diaries
- work with others to plan, prepare and conduct civil concrete structure construction tasks, including:
 - providing instruction and supervision to those involved in civil concrete structure construction tasks using communication techniques and equipment
 - preparing for and conducting briefings, toolbox and site meetings.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to supervise civil concrete structure construction
- policies, procedures and documentation required to supervise civil concrete structure construction, including those relating to:
 - risk assessment and management
 - statutory compliance
 - work health and safety
 - emergency response
 - environmental management
 - quality management
 - culture and heritage of site
 - coordination, timing and budgeting
 - materials quality and delivery
 - contract management
 - assessing operational techniques
 - assessing resource requirements
 - scheduling work activities
 - communication techniques and equipment
 - managing workplace relationships
 - organisational, client and site operational requirements
 - reporting requirements, including:
 - task specifications
 - task drawings
 - activity scheduling
 - unit costs
 - overall task costs
- principles and techniques required to supervise civil concrete structure construction, including those related to:
 - civil concrete structures, including:
 - bridges

- jetties and wharves
- retaining walls
- water storage tanks
- noise barriers
- culverts
- foundations
- civil concrete structures construction tasks, including:
 - site preparation
 - site set out
 - excavation
 - shoring
 - slope management
 - formwork installation
 - reinforcement placement
 - concrete transport, placement, compaction and finishing
 - concrete curing
 - formwork stripping
- job plan development
- devising and implementing training plans
- team leadership
- civil works construction sequencing
- civil concrete structure construction monitoring, including engineering surveys
- ground surface treatment requirements and procedures, including proof rolling
- pavement drainage requirements
- relationship between various areas of civil works
- civil concrete structure construction plant and equipment capabilities and application, including maintenance requirements
- civil concrete structure construction and related activities terminology.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to supervise civil concrete structure construction
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,

- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and	3-6	3 years

Civil Infrastructure		
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
