# **Assessment Requirements for TLIF2068 Work at height in the stevedoring industry**

**Release: 1**

# Assessment Requirements for TLIF2068 Work at height in the stevedoring industry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- assisting in a vessel exception risk assessment and ensuring vessel inspection checklist has been completed prior to commencing work on a vessel
- communicating effectively with others
- completing relevant documentation
- complying with applicable legislative and procedural working at height requirements
- employing correct manual handling techniques
- identifying risk factors that might impact on working at height and implementing appropriate response measures
- identifying, selecting and using relevant working at height equipment
- implementing contingency plans
- inspecting working at height equipment
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate equipment to enable safe and efficient work
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using ancillary working at height equipment
- working collaboratively with others

- working from a workcage when working at height
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- Australian Standards, codes and regulations relevant to working at height
- manual handling methods for working at height
- procedures for using portable ladders when working at height
- relevant sections of Marine Orders Part 32 – Cargo handling equipment as promulgated by the Australian Maritime Safety Authority (AMSA)
- relevant WHS/OHS procedures and guidelines
- risk assessment policies and procedures
- risks and hazards involved in working at height and related precautions to control these risks and hazards
- working at height equipment checklist
- working at height rescue procedures
- working at height safe work instructions and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

situations that replicate workplace conditions.

This should be undertaken in a range of work environments, in all weather conditions working in ships' holds, on top of containers, in limited or restricted spaces while in a workbox or workcage.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- personal protective equipment, including:
  - gloves
  - safety headwear and footwear
  - safety glasses
  - protective clothing
  - high visibility clothing
  - full arrest safety harness
- relevant materials, tools and equipment currently used in the industry.
