	2.7 Crane is shut down and secured during periods of non-operation according to manufacturers specifications and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
3 Monitor lift conditions	3.1 Load is constantly monitored to ensure load and structural stability
	3.2 Conditions which may affect the continuing stability of the crane are identified and monitored
	3.3 Unplanned situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment
	3.4 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions, or conflict with customer request
	3.5 Supervisor/allocator is advised of any concern about completing the job within timeframe
	3.6 Shut-down procedures are implemented in accordance with manufacturers instructions in the event of an emergency
	3.7 The relevant motion locks and brakes are applied
	3.8 Crane is shut down using the correct sequence of procedures in accordance with manufacturers specifications and workplace procedures
	3.9 Routine post-operational equipment checks are carried out in accordance with manufacturers specifications
4 Pack up crane	4.1 All lifting equipment and crane components are checked for any signs of deterioration or damage in accordance with the appropriate Australian standard
	4.2 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
	4.3 Crane equipment is correctly stowed and secured in accordance with manufacturers instructions and the appropriate Australian standard
	4.4 Crane is immobilised and secured for travel in accordance with manufacturers instructions, workplace guidelines and regulatory requirements
5 Complete job records	5.1 Customer feedback is sought regarding satisfaction with the completed job and any areas of concern reported according to workplace procedures
	5.2 Customer's signature on job completion documentation is obtained
	5.3 Required workplace records are updated accurately and promptly and processed according to workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Company work procedures concerning the setting up and rigging of a mobile crane at a work site
- Problems that may arise when operating a vehicle-mounted loading crane and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:

- Communicate effectively with others when operating a vehicle-mounted loading crane
- Read and interpret instructions, procedures, information and signs relevant to the operation of a vehicle-mounted loading crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a vehicle-mounted loading crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a vehicle-mounted loading crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a vehicle-mounted loading crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when operating a vehicle-mounted loading crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a vehicle-mounted loading crane
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

environments

- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of crane and its equipment and take appropriate action where required
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

	• applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:	• day or night • in a variety of weather conditions
Environment may include movement of:	• equipment • goods • materials • vehicular traffic
Customers may be:	• internal or external
Mobile crane may be involved in work in a range of industry sectors including:	• construction and demolition • manufacturing • waterfront • mining • primary industry • utilities (electricity, gas, water) • arboricultural • swimming pool • quarrying
Hazards may include:	• power lines • noise, light, energy sources

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• overhead service lines • surrounding buildings, structures, facilities • underground services • obstructions • uneven or unstable ground and recently filled trenches • stationary and moving machinery and equipment • hazardous or dangerous materials • traffic hazards and congestion
Hazard management is:	• consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Consultative processes may involve:	• other employees and supervisors • management • union representatives • clients • industrial relations and OH&S specialists • other professional or technical staff
Requirements for access and/or lift may include:	• site restrictions and procedures • authorities and permits • hours of operation • induction • slings, chains, nets, brackets and other specialised lifting equipment • noise restrictions • personal protective equipment • support trucks • additional gear and equipment • communications equipment
Personal protective equipment may include:	• gloves • safety headwear and footwear • sunscreen, sunglasses and safety glasses • two-way radios • high visibility clothing
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures • site procedures
Documentation/records may	• operations manuals for vehicle-mounted loading cranes

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

include:	• Safe Working Load (SWL) and Working Load Limit (WLL)
	• material safety data sheets
	• induction documentation
	• competency standards and training materials
	• job specifications and procedures
	• manufacturers specifications for vehicle-mounted loading cranes
	• workplace operating procedures and policies
	• supplier and/or client instructions
	• communications technology equipment, oral, aural or signed communications
	• personal and work area work procedures and practices
	• conditions of service, legislation and industrial agreements including:
	  • workplace agreements and awards
	  • occupational health and safety procedures
	  • standards and certification requirements
	  • quality assurance procedures
	  • emergency procedures

Applicable procedures and codes may include:	• relevant state/territory regulations and licence/permit requirements pertaining to vehicle-mounted loading cranes • relevant state/territory road rules • relevant state/territory OH&S legislation • relevant state/territory fatigue management regulations • relevant state/territory environmental protection legislation

TLID3036A Lift and move load using a mobile crane

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to lift and move a load using a non-slewing mobile crane or a slewing mobile crane. It includes operating the mobile crane to complete job requirements, monitoring lift conditions, implementing shut-down procedures, packing up crane after operations, and completing all required job records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles, procedures and regulations to lift and move loads using slewing and non-slewing mobile cranes in a variety of operational contexts.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Operate mobile crane	1.1 In ascent and descent to/from crane correct use is made of the means provided in accordance with codes of practice and workplace procedures 1.2 Planned hazard control strategies are implemented 1.3 Required signals are correctly given, interpreted and followed in accordance with appropriate workplace procedures 1.4 Boom is positioned to ensure load to be lifted is plumbed under hook 1.5 Load is hoisted and lowered into position using crane movements in accordance with the appropriate workplace procedures 1.6 Crane controls are operated smoothly 1.7 Crane is shut down and secured during periods of non-operation according to manufacturers specifications and workplace procedures
2 Monitor lift conditions	2.1 Load is constantly monitored to ensure load and structural stability 2.2 Conditions which may affect the continuing stability of the crane are identified and monitored 2.3 Unplanned situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment 2.4 Dogger is advised of any new information which affects the lift 2.5 Any necessary changes to job plan are discussed and confirmed with rest of crew 2.6 Advice is sought from supervisor where there is doubt about

ELEMENT	PERFORMANCE CRITERIA
	correct response to unanticipated conditions, or conflict with customer request
	2.7 Supervisor/allocator is advised of any concern about completing the job within timeframe
3 Implement shut-down procedures	3.1 The relevant motion locks and brakes are applied
	3.2 Crane is shut down using the correct sequence of procedures in accordance with manufacturers specifications and workplace procedures
	3.3 Routine post-operational equipment checks are carried out in accordance with manufacturers specifications
4 Pack up crane	4.1 Crane is de-rigged with other crane personnel in accordance with manufacturers instructions
	4.2 All lifting equipment and crane components are checked in consultation with crane personnel for any signs of deterioration or damage in accordance with the appropriate Australian Standard
	4.3 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
	4.4 Crane and equipment are correctly stowed and secured in accordance with manufacturers instructions and the appropriate Australian Standard
5 Complete job records	5.1 Customer feedback is sought regarding satisfaction with the completed job, and any areas of concern are reported according to workplace procedures
	5.2 Customer's signature on job completion documentation is obtained
	5.3 Required workplace records are updated accurately and promptly and processed according to workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED KNOWLEDGE AND SKILLS

- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Risks and hazards involved in mobile crane operation, and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures concerning the operation of a mobile crane at a worksite
- Problems that may occur during a lift, and associated action that can be taken to address the problems concerned
- Communication systems used during a lift
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when lifting and moving a load using a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to the lifting and moving of a load using a mobile crane
- Complete documentation related to the lifting and moving of a load using a mobile crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when lifting and moving a load using a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when lifting and moving a load using a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when lifting and moving a load using a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the lifting and moving of a load using a mobile crane
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
	  • applying the underpinning knowledge and skills
	  • applying relevant legislation and workplace procedures
	  • complying with OH&S licensing legislation
	  • applying risk assessment and management procedures for mobile crane operations
	  • effectively completing the pre-operational checks, positioning, stabilising, set-up, post-operational checks of a mobile crane
	  • using mathematical procedures to determine the weight of a load and the lifting equipment required for the lift
	  • using load charts to determine the limitations of the crane and/or crane set-up required
	  • operating the crane including all functions to their maximum extension in the lifting and moving of a load

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through appropriately simulated activities at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:	• by day or night • in a variety of weather conditions
Environment may include movement of:	• equipment • goods • materials and vehicular traffic
Customers may be:	• internal or external
Mobile crane may be any slewing and non-slewing crane and may be involved in work in a range of industry sectors including:	• construction and demolition • manufacturing • waterfront • mining • primary industry • utilities (electricity, gas, water) • arboricultural • swimming pool • quarrying
Hazards may include:	• power lines • noise, light, energy sources

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Respond to the incident	1.1 Response to the incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements 1.2 Details of the cause(s) and effects of the incident are identified and reported 1.3 Assistance requirements for accidents and emergencies are clarified and reported immediately to the appropriate parties 1.4 Requests for assistance are made to relevant personnel and emergency services
2 Control and assist at accident or emergency site	2.1 Site is controlled and protected until the arrival of authorised personnel 2.2 Assistance is provided to injured persons, within the limitations of duty of care and workplace procedures 2.3 Relevant authorities at the site are cooperated with and assisted within workplace policies
3 Finalise accident - emergency process and complete records	3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures 3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant regulatory and code requirements applicable in accident/emergency situations
- Relevant OH&S and environmental protection policies and procedures
- Workplace procedures for accident-emergency response
- Workplace emergency, fire and accident procedures
- Site layout
- Focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- Typical problems that can occur during a safety incident, accident or emergency and related action that can be taken

Required skills:

- Communicate effectively with others when responding to an accident or an emergency
- Read and interpret instructions, procedures and information relevant to a response to an accident or an emergency
- Interpret and follow operational instructions and prioritise work
- Negotiate and resolve issues when responding to an accident or an emergency
- Complete documentation related to a response to an accident or an emergency
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to an accident or an emergency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when responding to an accident or an emergency
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S control procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when responding to an accident or an emergency
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and policies during a safety incident, accident or emergency

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests • Practical assessment must occur:

EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:	• in a range of work environments • by day or night
Customers may be:	• internal or external
Workplaces may comprise:	• large, medium or small worksites
Work may be conducted in:	• limited or restricted spaces • exposed conditions • controlled or open environments • even or uneven surfaces • wet or dry surfaces
Workplace hazards may include but are not restricted to:	• moving heavy loads in an unsafe work environment • unsecured machinery, components or repaired equipment • slippery floors • welding equipment • sharp tools and implements • power tools • moving and rotating machinery • flammable liquids, vapours and fuel • faulty machinery equipment handling equipment and lifting gear • using equipment beyond safe working limits • poor housekeeping procedures • non-compliance with safe working procedures • electrical wiring and systems, including exposed electrical circuits • working at heights and in confined spaces • toxic gases and substances

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• chemicals and other harmful substances • damaged goods, pallets and containers • dangerous/hazardous goods
Consultative processes may involve:	• OH&S specialists • trainers • other employees and supervisors • management • union representatives • manufacturers representatives • supplier representatives • customers/clients • other maintenance, professional or technical staff
Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:	• company plans/procedures • enterprise plans/procedures • organisational plans/procedures • established plans/procedures
Information/documentation may include:	• workplace accident-emergency procedures and policies • workplace OH&S management system including hazard/safety risk control strategies • OH&S training notes and materials • journals and work related literature concerning OH&S • competency standards • customer/client instructions • customer service standards and procedures • workplace products and services information • quality assurance standards and procedures • relevant agreements, codes of practice including the national standards for services and operations • manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions • workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information • regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements • emergency procedures
Applicable regulations and legislation may include:	• relevant regulations, standards and codes of practice • hazardous substances and dangerous goods codes • relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

hazards present in the workplace or industry, including:

- general duty of care under OH&S legislation and common law
- requirements for the maintenance and confidentiality of records of occupational injury and disease
- requirements for provision of OH&S information and training
- provisions relating to health and safety representatives and/or OH&S committees
- provisions relating to OH&S issue resolution

- environmental protection regulations
- relevant Australian standards and certification requirements including Australian Standard AS 1885.1

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to apply fatigue management strategies, including identifying and acting upon signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in accordance with legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable federal and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under some supervision generally within a team environment. It involves the application of the relevant regulations, codes and guidelines of the federal government and state/territory authorities concerning fatigue management during work activities and in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify and act upon signs of fatigue	1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures 1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures to ensure that effective work capability and alertness are maintained
2 Implement strategies to minimise fatigue	2.1 Workplace procedures are assessed to minimise fatigue 2.2 Factors which increase the risk of fatigue-related accidents and safety incidents are understood and minimised 2.3 Strategies to manage fatigue are implemented in accordance with company policy 2.4 Lifestyle choices are made which promote the effective long-term management of fatigue 2.5 Effective practices in combating fatigue are adopted and applied 2.6 Personal fatigue management strategies are communicated to other relevant people 2.7 Appropriate counter measures are planned to combat fatigue

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Sources of information on fatigue
- The risks and hazards created by fatigue in the workplace
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Causes and effects of fatigue on workers/drivers
- Factors which increase fatigue-related accidents
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when applying fatigue management strategies
- Read and interpret instructions, procedures, regulations and signs related to fatigue management and apply them to work activities
- Recognise symptoms of fatigue and take appropriate action in accordance with fatigue management regulations and workplace procedures
- Work collaboratively with others to manage and minimise the effects of fatigue during work activities
- Adjust lifestyle patterns to ensure effective fatigue management during work activities
- Modify activities and take appropriate initiatives to manage fatigue in the workplace depending on differing work contexts, risk situations and environments
- Apply precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- Adapt to changes in rosters and standard operating procedures as they may relate to fatigue management
- Participate in identifying and meeting own learning needs on matters related to fatigue management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and other/or simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and/or equipment, and/or
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:	• any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night
The need for fatigue management in a range of industry situations including:	• operations conducted at all times but particularly at night • typical weather conditions • while working and/or driving at a workplace, depot, base or warehouse • while working and/or driving at a client's workplace or worksite • driving a motor vehicle on the open road • driving a motor vehicle on a private road • driving a train, locomotive or motive power unit • operating a marine vessel in coastal or international waters • operating an aircraft • operating load shifting equipment • operating safety critical industrial plant and equipment
Work-related factors that may contribute to fatigue include:	• work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (such as working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks) • organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work
Worker/operator-related factors that may contribute to fatigue include:	• lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends • working multiple jobs • personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms
Responsibilities of individual for fatigue risk management may include:	• following the organisation's fatigue management policy and procedures • using time away from work appropriately to rest and recover • checking and ensuring fitness for work • reporting symptoms of fatigue

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• taking action to minimise risk when symptoms of fatigue are recognised
Schedules may include:	• rosters • vehicle schedules • timetabling • workplans
Depending on the organisation, operating procedures may include:	• standard operating procedures • company procedures • enterprise procedures • organisational procedures • established procedures
Information and documents may include:	• federal and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations • workplace instructions and procedures on fatigue management • relevant OH&S regulations and procedures • work schedules and shift rosters • emergency procedures • log book or record book (where required) • records and reports of fatigue-related errors and safety incidents • relevant standards and certification requirements • quality assurance procedures
Applicable legislation, regulations and codes may include:	• relevant regulations and codes of the federal government and the state/territory regulatory authorities concerning fatigue management • relevant state/territory road rules • relevant rail industry safe working codes and regulations (where applicable) • relevant state/territory permit regulations and requirements • relevant state/territory OH&S legislation

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to apply safe handling strategies when handling dangerous goods or explosives, including driving the vehicle concerned in a safe manner and consulting with relevant authorities/persons in accordance with regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant Australian and state/territory regulations and codes, including the current Australian Dangerous Goods Code, the Australian Explosives Code, and the Code of Practice for the Safe Transport of Radioactive Substances.

Work is performed under limited or minimum supervision. It involves the application of the basic principles, routine procedures and regulatory requirements to safe handling/transport of dangerous goods/explosives/hazardous substances in a range of operational situations.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Operate equipment and/or vehicle in a safe manner	1.1 Safety equipment is checked for serviceability and required quantities and types 1.2 Equipment/vehicle is operated safely in accordance with the relevant industry regulations, licence/permit requirements/or standards and as directed by police and/ or competent authority 1.3 Safety guidelines and codes are correctly applied 1.4 Dangerous goods/explosives/hazardous substances are handled/conveyed in accordance with the relevant government regulations and codes 1.5 Relevant emergency procedures are assessed relative to the dangerous goods/explosives/hazardous substances concerned 1.6 Emergency procedures are instigated in accordance with the relevant codes and government regulations to ensure precautions are taken consistent with directions set out in the emergency procedures 1.7 Procedures are implemented to minimise damage to equipment, facilities and the environment and minimise injury to personnel
2 Consult with relevant authorities/persons	2.1 Dangerous goods occurrences are reported to the competent authority, fire brigade and/or police using appropriate workplace procedures, in specified timeframes in accordance with relevant regulatory requirements 2.2 Assistance is provided to the competent authority as requested 2.3 Other persons within affected emergency area are warned about the hazard in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and state/territory regulations and codes pertaining to the identification, handling and marking of dangerous goods, explosives or hazardous substances including the current Australian Dangerous Goods Code
- OH&S procedures and guidelines concerning the lifting and movement of loads
- The company's incident reporting system, and the responsibility of the employer to report incidents to the relevant State or Government authority
- Risks and hazards when handling and conveying dangerous goods, explosives or hazardous substances, and related precautions to control the risk
- Workplace procedures and policies for the handling and transport of dangerous goods, explosives or hazardous substances
- Characteristics of various dangerous goods, explosives or hazardous substances and their implications for handling and transport
- Compatibility of various types of dangerous goods, explosives or hazardous substances
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when handling or transporting dangerous goods or explosives
- Read and interpret instructions, procedures, information and signs relevant to the handling or transporting of dangerous goods or explosives
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the handling or transporting of dangerous goods or explosives
- Operate electronic communication equipment to required protocol
- Work collaboratively with others handling or transporting dangerous goods or explosives
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when handling or transporting dangerous or hazardous goods or explosives in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise during the handling or

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

transporting of dangerous goods or explosives

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the handling or transporting of dangerous goods or explosives
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in handling and transportation equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
	  • identifying characteristics and hazards of the dangerous goods/explosives/hazardous substances being handled
	  • interpreting relevant signs, labels and codes
	  • locating, interpreting and applying relevant information
	  • safely handling/transporting dangerous goods/explosives/hazardous substances in accordance with workplace procedures and regulatory requirements
	  • identifying, selecting and using appropriate handling/transport equipment, vehicles, personal protection equipment and related procedures

Context of and specific resources	• Performance is demonstrated consistently over a period

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

for assessment	of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:	• in a range of work environments and weather conditions • by day or night
Customers may be:	• internal or external
Workplaces may comprise:	• internal or external
Work may be conducted in:	• restricted spaces • exposed conditions • controlled or open environments

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• a workplace, warehouse or depot • a vehicle on the road • client's workplace • convoy of a group of vehicles
Goods/cargo being handled/conveyed may require:	• special precautions for handling, stacking and transport
Classes of dangerous goods/explosives/hazardous substances are:	• as defined in the respective Australian Codes
Standard marking and signage for identified explosives and dangerous goods is as required:	• in the respective Australian Codes
Personnel in the work area may include:	• workplace personnel • site visitors • contractors • official representatives
Communication in the work area may include:	• phone • electronic data interchange • fax • email • internet • radio • oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures
Handling operations may be carried out:	• both manually and with the aid of lifting equipment and/or appliances
Load restraint procedures and equipment are:	• as specified in mass and loading regulations and guidelines
Personal protective equipment may include:	• gloves • safety headwear and footwear • safety glasses • two-way radios • high visibility clothing • protective clothing

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

Information/documents may include:	• goods/materials identification numbers, codes and signs • manifests, bar codes, goods and container identification • manufacturers specifications for equipment/tools • workplace procedures and policies for the handling of dangerous goods, explosives and radioactive and other hazardous substances, and incident reporting • supplier and/or client instructions • material safety data sheets • relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Code of Practice for the Safe Transport of Radioactive Substances, the Industry Safety Code, and National Standards for Manual Handling • National Load Restraint Guide • award, enterprise bargaining agreement, other industrial arrangements • standards and certification requirements • quality assurance procedures • emergency procedures

Applicable regulations and legislation may include:	• Australian and state/territory regulations pertaining to the handling of dangerous goods/explosives/hazardous substances
	• Australian and international regulations and codes of practice for the handling and transport of explosives, dangerous goods and hazardous substances, including:
	  • Australian and International Dangerous Goods Codes
	  • Australian Marine Orders and the International Maritime Dangerous Goods Code
	  • IATA Dangerous Goods by Air regulations
	  • Australian and International Explosives Codes
	  • Code of Practice for the Safe Transport of Radioactive Substances
	  • state/territory legislation covering the safe handling of infectious substances
	• relevant state/territory environmental protection legislation
	• equal opportunity
	• workplace relations regulations
	• equal employment opportunity and affirmative action legislation
	• relevant state/territory OH&S legislation

TLIF3063A Administer the implementation of fatigue management strategies

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to administer the implementation of fatigue management strategies, including monitoring the implementation of fatigue management strategies; and recognising breaches of fatigue management policies, procedures and regulations. It also includes developing and assessing staff competence in fatigue management; providing feedback to staff on any shortcomings in their fatigue management skills and knowledge; and reporting to management on the implementation of fatigue management policy. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Persons achieving competence in this unit will need to fulfil the requirements of the applicable Commonwealth and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under limited supervision generally as a team leader or supervisor. It involves the application of relevant regulations and the principles of fatigue management when administering the implementation of an organisation's fatigue management strategies during work operations in a defined workplace.

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Monitor the implementation of fatigue management strategies	1.1 Work activities of employees, subcontractors and suppliers in the supply chain of products and services are monitored in accordance with the organisation's fatigue risk management implementation plan 1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation
2 Recognise breaches of fatigue management policies, procedures and regulations	2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures 2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are recognised and reported as per standard procedures 2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures 2.4 Appropriate action is taken in conjunction with employees, subcontractors or suppliers concerned to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures
3 Develop and assess staff	3.1 Appropriate training programs and learning resources are

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
competence in fatigue management	developed and provided to ensure that employees understand the organisation's fatigue management policies and procedures and the risks, causes and consequences of fatigue
	3.2 Employees are assessed to confirm that they are competent in their understanding of the organisation's fatigue management strategies and can apply them to their day-to-day work activities and responsibilities
	3.3 Any deficiencies in the competence of individual employees to apply the organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided to the employee to enable her or him to achieve the competence required
4 Provide feedback to employees on any shortcomings in fatigue management skills and knowledge	4.1 Evidence of any shortcomings in an employee's implementation of fatigue management strategies is obtained and interpreted from observation of signs and symptoms of fatigue in their work activities, periodic evaluations of work performance, and assessments of competence carried out as part of training and learning activities
	4.2 Employees are provided with feedback on any identified shortcomings in their implementation of fatigue management strategies and appropriate support and counselling is provided on how they might address these shortcomings
	4.3 Where appropriate, further learning opportunities and information are provided to the employees to assist them in implementation of organisation's fatigue management strategies in their area of work activity
5 Report on the implementation of fatigue management policy	5.1 Periodic audits of the implementation of fatigue management strategies in the work areas of responsibility are carried out as per standard procedures
	5.2 Accidents and safety incidents are investigated and analysed to identify the extent to which fatigue might have been a contributing factor
	5.3 Reports on the implementation of the organisation's fatigue risk management system are prepared and submitted to designated personnel as per standard procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Organisation's fatigue risk management system as it relates to the operational areas being administered
- Organisation's fatigue risk management system and the workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Responsibilities of both the organisation and individual employees for the implementation of fatigue management regulations and policies in an organisation including suppliers and sub-contractors in the supply chain of the organisation's services and products
- Procedures for the auditing and review of an organisation's fatigue risk management rystem and related policy and procedures, and for reporting the outcomes of audits
- The risks and hazards created by fatigue in the workplace
- Causes and consequences of fatigue on both employees and an organisation
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Factors which increase fatigue-related accidents
- Lifestyles which promote the effective long-term management of fatigue
- Ways of assisting individuals to assess their own sleep patterns and to evaluate their own fitness for work. This may include information on identifying sleep disorders and obtaining appropriate treatment
- Options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management
- Processes and resources for assessing employees' competence in fatigue management
- Ways of providing feedback to employees on any identified deficiencies in their competence to implement fatigue management strategies

Required skills:

- Communicate effectively with others when implementing the organisation's fatigue risk management system
- Read and interpret documentation on an organisation's fatigue risk management system and related policy, instructions, procedures and regulations related to fatigue management and

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

apply them to supervisory activities

- Recognise breaches of fatigue management strategies and regulations and take appropriate action in accordance with organisation's fatigue risk management system
- Work collaboratively with employees and other management staff others to implement the organisation's fatigue risk management system
- Plan and organise training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system
- Plan and carry out audits and reviews of an organisation's fatigue risk management system
- Modify activities and take appropriate initiatives to administer the implementation of an organisation's fatigue risk management system depending on differing contexts, risk situations and environments
- Adapt to any changes in regulations policies and procedures as they may relate to fatigue management
- Assist employees to identify their own learning needs on matters related to fatigue management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

	required to: • relevant and appropriate materials and equipment, and • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:	• any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night
Components of a fatigue risk management system include:	• risk management policy documents • risk management procedures • risk management competence assessment processes • risk management training and learning opportunities • hazard control system
The need for fatigue management in a range of industry situations including:	• operations conducted at all times but particularly at night • typical weather conditions • while working and/or driving at a workplace, depot, base or warehouse • while working and/or driving at a client's workplace or work site • driving a motor vehicle on the open road • driving a motor vehicle on a private road

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• driving a train, locomotive or motive power unit • operating a marine vessel in coastal or international waters • operating an aircraft • operating load shifting equipment • operating safety critical industrial plant and equipment
Work-related factors that may contribute to fatigue include:	• work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (e.g. .working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks) • organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work
Worker/operator-related factors that may contribute to fatigue include:	• lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends • working multiple jobs • personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms
Responsibilities of organisation for fatigue risk management may include:	• providing support such as: complying with fatigue management regulations, developing and implementing appropriate policy and procedures, providing assessment, training and learning opportunities, and establishing and implementing error and incident reporting systems • ensuring work schedules provide adequate opportunity for rest and recovery between shifts • assessing work tasks for fatigue related risk and redesigning if necessary • managing fatigued employees
Responsibilities of individual for fatigue risk management may include:	• following the organisation's fatigue management policy and procedures • using time away from work appropriately to rest and recover • checking and ensuring fitness for work • reporting symptoms of fatigue
Fatigue management competency-based training may include:	• initial induction training (incorporating a basic fatigue management component) • fatigue management awareness training • in-depth training on fatigue and fatigue management techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• remedial training where existing competence is assessed as being insufficient • refresher training on fatigue management
Depending on the organisation operating procedures may include:	• standard operating procedures • company procedures • enterprise procedures • organisational procedures • established procedures
Information and documents may include:	• Commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations • fatigue risk management system documents • workplace instructions and procedures on fatigue management • reports of audits of fatigue risk management system • error and safety incident reports • relevant OH&S regulations and procedures • relevant standards and certification requirements • quality assurance procedures
Applicable legislation, regulations and codes may include:	• relevant regulations and codes of the Commonwealth Government and the state/territory roads and traffic authorities concerning fatigue management • relevant state/territory road rules • relevant rail industry safe working codes and regulations (where applicable) • relevant state/territory permit regulations and requirements • relevant state/territory OH&S legislation

TLIF3093A Implement chain of responsibility regulations

Modification History

Not applicable.

Unit Descriptor

This unit involves the skills and knowledge required to implement chain of responsibility regulations.

It includes identifying and interpreting relevant regulations, and reviewing operations in line with chain of responsibility regulations.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit

Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to those who provide leadership of others, individually or in teams.

Associated units relating to chain of responsibility can be found in TLI10 Transport and Logistics Training Package.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Interpret chain of responsibility regulations	1.1 State or territory chain of responsibility regulations are identified as they apply to the workplace 1.2 Individual chain of responsibility regulations are identified for job roles/functions within the workplace 1.3 Information on chain of responsibility regulations is clearly explained to parties and responsible persons 1.4 Responsibilities of all job roles within chain of responsibility are determined within work environment
2 Implement and review workplace procedures	2.1 Chain of responsibility workplace policy and procedures are regularly reviewed to ensure they meet regulatory requirements 2.2 Workplace policy and procedures are continually updated to ensure chain of responsibility regulations are followed 2.3 Chain of responsibility workplace policy and procedure plans are implemented for relevant parties 2.4 Records relating to chain of responsibility are completed and maintained
3 Complete reporting for chain of responsibility policy	3.1 Records and information relevant to chain of responsibility requirements are collected 3.2 Records and information relevant to chain of responsibility are analysed 3.3 Findings are developed and reported

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state or territory regulations relating to job function
- Regulations, and workplace policy and procedures relating to job function
- Effects of a breach on applicable job role and related penalties
- Job roles and functions in the workplace that are affected by chain of responsibility
- Reporting systems within the organisation
- Consequences of non-compliance with chain of responsibility regulations
- Where to locate current chain of responsibility information
- Action required within limits of own job role or function when possible breaches are identified
- Required workplace documentation
- Understanding of the five key aspects: load restraint, mass, dimensions, speed, and fatigue management

Required skills:

- Apply strategies to prevent breaches of chain of responsibility
- Recognise a breach of the workplace policy and procedure
- Take appropriate action if a breach takes place
- Complete relevant documentation in relation to chain of responsibility
- Implement change as it relates to chain of responsibility
- Review and implement updates to the chain of responsibility regulations as they occur
- Apply communication strategies within the organisation for chain of responsibility

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and

© Commonwealth of Australia, 2025 Powering Skills Organisation

demonstrate competency in this unit	include demonstration of: • an understanding of chain of responsibility • an understanding of associated state or territory regulations in which the job is, relative to chain of responsibility • techniques used to implement relevant workplace policy and procedures as they pertain to chain of responsibility • an analysis of records relevant to chain of responsibility as they apply at a company level

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment
	  • applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• As a minimum, assessment of knowledge must be conducted through appropriate assessments using written, practical and oral assessments
	• Practical assessment must occur:
	  • through appropriately simulated activities at the training organisation, and/or
	  • in an appropriate range of situations in the workplace
	• Online assessment is not suitable for final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Parties and responsible persons within the chain include:	• consigner • consignee

TLIF3096A Carry out emergency response to a dangerous goods incident

Modification History

Not applicable.

Unit Descriptor

This unit involves the skills and knowledge required to carry out an emergency response in the event of a dangerous goods incident, including responding to the incident, controlling and assisting at the site, identifying the product being carried, and completing reports and other required documentation in accordance with regulatory requirements and workplace procedures.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with OH&S codes and regulations and workplace requirements.

Work is performed under limited supervision. It involves the application of regulatory requirements and workplace emergency response procedures when responding to accidents and emergencies.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Identify incident response procedures	1.1 Company procedures for responding to incidents and emergencies are identified and explained
	1.2 Procedures for accessing first aid are determined
	1.3 Relevant personal protective equipment (PPE) is selected and used
	1.4 Familiarisation with the use of fire safety equipment is demonstrated
Respond to the incident	2.1 Nature, extent and degree of threat from the incident are assessed in accordance with emergency procedures
	2.2 Guides for product being carried are located and UN number and shipping/technical name are obtained from available documents
	2.3 Resources and vulnerability of the situation are analysed
	2.4 Key people and relevant support agencies are identified and notified of the incident and the product details
	2.5 Instructions and support are sought from key people and support agencies in accordance with emergency procedures and transport emergency response plan (TERP)
Apply emergency strategies	3.1 Safety and security procedures are complied with in all actions
	3.2 PPE is selected and used according to the requirements of the situation in accordance with OH&S and emergency procedures
	3.3 Welfare of people is guarded and protected as the first priority in any action
	3.4 Exclusion zone is established around the incident site

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.5 Safe access and exit are maintained for emergency services in accordance with emergency procedures and situational analysis
	3.6 Controls are selected and applied to achieve objectives with minimum damage to people and the environment
	3.7 Immediate response to threat or danger to people is provided while preserving personal safety in accordance with emergency procedures
	3.8 Emergency first aid treatment of minor injuries is carried out correctly and details of any treatment administered are reported accurately to incident response leader
Communicate with and complement other personnel	4.1 Effective communication and documentation with key people and support agencies are constantly maintained
	4.2 Activities are consistent with the incident response leader's plan of action
	4.3 Activities support the work of other key people and support agencies
Monitor the environment and the incident	5.1 Factors that may create or increase risk of injury or damage are constantly assessed and reported to incident response leader
	5.2 Hazard controls are monitored to ensure continued effectiveness
	5.3 Own and others' health and morale are monitored and maintained
	5.4 Changes in conditions and behaviour are identified and reported
Assist with recovery from incident	6.1 Evidence relating to the cause of the incident is preserved and recorded as far as possible
	6.2 Appropriate assistance is provided in accordance with emergency procedures
	6.3 Emergency equipment is returned to a state of readiness as soon as is reasonably possible
	6.4 Debriefings are attended and participated in as appropriate

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills required at the completion of this unit.

Required knowledge:

- Appropriate PPE and clothing
- Concept of dynamic risk assessment
- Emergency equipment operating characteristics, limitations, hazards, precautions, procedures and general care
- General emergency priorities and strategies
- Hazard analysis
- Hazards and the precautions necessary during control activities
- Survival, rescue and recovery procedures
- Tactics for safely handling emergencies involving dangerous goods
- Organisational emergency procedures

Required skills:

- Access and use PPE and clothing safely and effectively under emergency conditions
- Use communication skills during emergencies
- Care for protective clothing and equipment
- Re-stow response equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of: • applying own responsibilities in line with company procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- communicating understanding of own responsibility in control of various incidents until authorities arrive
- clearly describing an incident

Context of and specific resources for assessment

- Assessment must ensure access to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Company procedures include:

- TERP
- standard operating procedures (SOP)
- emergency procedures guide (EPG)
- emergency information procedure (EIP)

Types of incidents include:

- recovery
- in depot
- on road
- at unloading point

Personal safety measures include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• eye wash kit • emergency shutdown controls • evacuation controls
Key people and support agencies include:	• fire brigade/CFA • ambulance • government agencies
Evidence to be preserved or recorded includes:	• workplace documentation • load documentation • details of incident

Applicable legislative procedures and codes include:	• Australian code for the transport of dangerous goods by road or rail: the Australian Dangerous Goods (ADG) Code
	• relevant state and territory:
	  • roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
	  • road rules
	  • OH&S legislation
	  • fatigue management regulations
	  • environmental protection legislation and regulations

Documentation and records include:	• transport regulations as they apply to the enterprise, including local authority regulations and procedures • workplace policies and procedures • relevant Australian standards and certification requirements • relevant internal data entry books, including log books, data sheets and load sheets • TERP

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to implement and coordinate accident-emergency procedures, including responding to the incident, conducting on-site activities, and completing follow-up actions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in the event of an emergency, fire or accident.

Work is performed under some supervision generally within a team environment. It involves the application of the basic emergency response principles to the implementation of accident-emergency procedures including the provision of assistance ranging from simple injuries to the application of life support systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Respond to the incident	1.1 Details of incidents, accidents and emergencies are received, analysed and confirmed 1.2 Immediate coordination requirements are identified and actioned in accordance with organisation procedures 1.3 Travel to the incident site is by the shortest, fastest, legal means and routes
2 Coordinate on-site activities	2.1 Control of site activities is assumed on arrival and the operator and other authorities present are informed of this action 2.2 Assistance is provided to clients and operators within the limitations of duty of care and organisation requirements 2.3 Details of personnel, including names and nature of injuries, are notified to relevant personnel, following enterprise procedures 2.4 Assistance is provided to relevant authorities within legal and policy limitations
3 Complete follow-up actions	3.1 Details of affected personnel, including names, nature of injuries and follow-up treatments are notified to next-of-kin in accordance with organisation procedures 3.2 Incidents resulting in a near miss, accident or emergency are investigated and a report, including recommendations, is completed in accordance with enterprise policies and procedures 3.3 Accident procedures and emergency plans are reviewed for effectiveness and recommendations for changes are prepared and submitted to appropriate persons

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S and other regulatory codes, procedures and guidelines concerning response to accidents and emergencies
- Risks and hazards in the workplace and related precautions to control the risk
- Workplace procedures and policies for responding to accident/emergency situations
- Types of accidents and emergencies that can occur in a workplace and the appropriate action to be taken in each case
- Types of emergency equipment in the workplace and instructions for its use
- Site layout and obstacles
- Means to control and organise the accident scene, provide practical assistance and cooperate with others at the scene
- Focus of operation of work systems, equipment, management and site operating systems

Required skills:

- Communicate effectively with others when implementing and coordinating accident and emergency procedures
- Read and interpret instructions, procedures, information and signs relevant to the implementation and coordination of accident and emergency procedures
- Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation and coordination of accident and emergency procedures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing and coordinating accident and emergency procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when implementing and coordinating accident and emergency procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when implementing and coordinating accident and emergency procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use emergency equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

	operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:	• in a range of work environments and weather conditions • by day or night
Customers may be:	• internal or external
Workplaces may comprise:	• large, medium or small worksites
Work may be conducted in:	• restricted spaces • exposed conditions • controlled or open environments
Action to be taken in the event of an accident-emergency may include:	• identifying and following established emergency procedures • assessing the nature and extent of the emergency • rendering assistance and first aid • isolating and coordinating safety of the scene • alerting relevant organisational personnel and emergency services • recording relevant information and reporting on accident/emergency situation in accordance with regulatory and workplace requirements
Emergency equipment may include:	• first aid kit • fire extinguishers • fire hose

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• fire blanket • resuscitation equipment
Hazards in the work area may include:	• exposure to chemicals • exposure to dangerous or hazardous substances • movements of equipment, goods and materials • accidents involving chemicals, toxic substances and other harmful substances • accidents involving equipment and vehicles • explosion and/or fire • personal accidents including lifting injuries • waste management and disposal • violent incidents such as armed robberies
Consultative processes may include:	• workplace personnel and management • designated workplace emergency officers • emergency services personnel including ambulance, police, fire services, etc. • union representatives • industrial relations and OH&S specialists • other professional or technical staff • site visitors • contractors • official representatives
Communication in the work area may include:	• phone • electronic data interchange • fax • email • internet • radio • oral, aural or signed communications
Personal protective equipment may include:	• gloves • safety headwear and footwear • safety glasses • two-way radios • high visibility clothing • breathing apparatus
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures
Information/documents may	• workplace emergency/fire/accident procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

include:	• workplace procedures for the use of emergency equipment and personal protection equipment • first aid instructions and procedures • manufacturers instructions concerning the use and servicing of equipment • manifests, bar codes, goods and container identification goods identification numbers and codes • material safety data sheets • codes of practice including the Dangerous Goods Code • IMDG code markings, HAZCHEM codes and where applicable emergency information panels • relevant legislation, regulations and related documentation related to emergency response situations • award, enterprise bargaining agreement, other industrial arrangements • relevant Australian standards and certification requirements • quality assurance procedures • supplier and/or client advice on the hazards involved with goods or cargo
Applicable regulations and legislation may include:	• relevant state/territory OH&S legislation • relevant state/territory environmental protection legislation • emergency procedures regulations • dangerous goods and hazardous goods regulations • relevant Australian standards and certification including Australian Standard AS 2865 - Safe Working in a Confined Space Code • workplace relations regulations • workers compensation regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Ensure responsibilities for handling dangerous goods are defined	1.1 Responsibilities and duties for the transport and handling of dangerous goods are clearly defined, and allocated and included in job descriptions and duty statements for all relevant positions
	1.2 Any relevant licensing requirements for employees are confirmed
2 Manage performance and control risks	2.1 Ongoing system for the control of risks, based on a hierarchy of control is developed and integrated within general work procedures
	2.2 Measures to control assessed risks and monitor conformance are developed and implemented, in accordance with relevant dangerous goods transport regulations, code of practice and priorities identified in the workplace
	2.3 Non-conformance is investigated and procedures for rectification instituted
	2.4 Inadequacies in dangerous goods transport procedures are identified and measures are implemented to improve workplace practice
3 Maintain records	3.1 A dangerous goods records system is established in accordance with relevant legislative framework
	3.2 Accurate and legible records for operation within the workplace are completed in accordance with dangerous goods transport enterprise policies and legislative requirements
4 Evaluate effectiveness	4.1 Feedback about the effectiveness of the dangerous goods transport policies, procedures and programs is collected from the workgroup and provided to senior management
	4.2 Improvements to dangerous goods transport procedures are proposed to senior management

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice, including detailed knowledge and understanding of the Australian Dangerous Goods Code, the conditions and the employees to whom it applies
- Relevant OH&S and environmental procedures and regulations particularly as they overlap with the current ADG Code
- Operational procedures for safe transfer and storage of dangerous goods and hazardous materials
- Requirements for completing relevant documentation in line with requirements of the current ADG Code
- Code of practice for working collaboratively with others
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:

- Communicate effectively with others when completing work activities, particularly in order to ensure their understanding of the current ADG Code and their responsibilities in relation to it
- Read and interpret the current ADG Code, related documents and procedures, and information materials provided as guidance notes
- Complete documentation related to work activities
- Work collaboratively with others to ensure compliance and safety
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events, particularly to deal with any potential breaches of the current ADG Code
- Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities and engage others in the process
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities of team members in terms of planned schedule
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - complying with the applicable regulations and the current ADG Code
  - complying with the relevant and current documentation for compliance of the current ADG Code
  - demonstrating an understanding of the hierarchy of control
  - demonstrating the using of effective communication techniques to give clear and accurate information in a form which is preferred and understood by the receiver

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Licensing requirements may include:	• specific licences to deal with named dangerous goods • specific licences or permits required by states, territories or regions to transport dangerous goods into or through their jurisdiction
Documentation and records may include:	• regulations and codes of practice relevant to the current ADG code, including safeworking and local authority regulations and procedures • relevant OH&S and environmental protection regulations • workplace policies and procedures related to the current ADG code • quality assurance procedures • emergency procedures • operations manuals, job specifications and induction documentation • technical instructions • dangerous goods declarations and material safety data sheets, where applicable • goods manifest • relevant Australian Standards and certification requirements
Applicable legislation and regulations may include:	• Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, specifically the ADG Code • relevant state/territory OH&S and environmental protection legislation • workplace relations regulations • equal opportunity legislation • equal employment opportunity and affirmative action

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify and interpret relevant regulations	1.1 Types of goods to be transported are correctly identified in accordance with workplace procedures and regulatory requirements 1.2 Sources of relevant state/territories transport regulations are identified 1.3 Information is accessed regarding state/territories transport regulations 1.4 Information is accurately interpreted 1.5 Responsibilities and duties according to state/territories regulations of the transport of goods are clearly identified
2 Carry out operations complying to transport regulations	2.1 Procedures for the transportation of goods are carried out in accordance with requirements for the type of goods 2.2 Activities are carried out according to industry regulations/guidelines, and OH&S, environmental and enterprise legislation, policies/procedures 2.3 Accurate and legible records for operation within the workplace are completed in accordance with transport regulations and enterprise policies and legislative requirements 2.4 Compliance with transport regulations and codes of practice are assessed to ensure legal requirements are maintained as a minimum and exceeded where possible
3 Review operations according to transport regulations	3.1 Improvements to transport procedures are identified 3.2 Improvements to the effectiveness of the transport regulations, policies, procedures and programs are suggested 3.3 Compliance with transport regulations is assessed and modifications made if required

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of transport regulations as they apply to the enterprise, including state or territory and national regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Typical defects that can occur and related action that should be taken
- Procedures for identifying equipment defects and assessing for appropriate action
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities, including the relevant parts of transport regulations, or related implementation materials
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events, particularly any breaches, or threatened breaches of the relevant transport regulations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Operate equipment in accordance with standard operating procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Monitor performance of equipment in terms of its potential effect on compliance

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation • As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

TLIF4094A Ensure compliance with chain of responsibility

Modification History

Not applicable.

Unit Descriptor

This unit involves the skills and knowledge required to ensure workplace compliance with chain of responsibility legislation.

It includes the ability to identify the requirements, undertake the appropriate activity, and monitor and review procedures.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit

Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to people in a management level position in an organisation with responsibility for ensuring the entire organisation or work place is compliant with the relevant state or territory regulations around chain of responsibility.

Associated units relating to chain of responsibility can be found in TLI10 Transport and Logistics Training Package.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Understand chain of responsibility requirements	1.1 State or territory chain of responsibility regulations as they apply to the workplace and the organisation are identified 1.2 Impact of chain of responsibility requirements as they apply to all parties and responsible persons are analysed 1.3 Responsibilities of all parties and responsible persons are identified and explained to relevant persons
2 Undertake appropriate action to achieve compliance	2.1 Compliance requirements for individual job roles in the workplace or organisation relating to chain of responsibility are developed 2.2 Risk assessment is undertaken to guide the development of workplace chain of responsibility policy and procedures 2.3 Accurate records relating to chain of responsibility are completed and maintained
3 Monitor and review workplace policy and procedures	3.1 Workplace compliance with chain of responsibility is monitored and reviewed 3.2 Organisational records and information relevant to chain of responsibility are analysed and audited 3.3 Changes and amendments are made to organisational procedures to maintain chain of responsibility compliance

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- How to access and interpret relevant state and territory regulations
- State and territory regulations and workplace procedures relating to job function
- Range of penalties relevant to the workplace
- Consequences of non-compliance with chain of responsibility regulations
- Where to access updated chain of responsibility state or territory regulations
- Understanding of the five key aspects: load restraint, mass, dimensions, speed and fatigue management
- Required workplace documentation

Required skills:

- Use basic interpersonal and communication skills to ensure compliance within the workplace.
- Apply strategies to prevent breaches of chain of responsibility regulations
- Identify warning signs of a possible breach
- Take appropriate action when breach occurs
- Review updates to the chain of responsibility regulations as they occur
- Undertake an audit of organisational requirements for chain of responsibility
- Conduct risk assessment of organisational policy and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of: • an understanding of chain of responsibility • an understanding of regulations of state or territory in

© Commonwealth of Australia, 2025 Powering Skills Organisation

	which the company operates relating to chain of responsibility • establishing relevant workplace policy and procedures around chain of responsibility • conducting a risk assessment of organisational policy and procedure to ensure they meet current chain of responsibility regulations • maintaining and reviewing policy and procedures to ensure they meet current regulation around chain of responsibility

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment
	  • applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• As a minimum, assessment of knowledge must be conducted through appropriate assessments using written, practical and oral assessments
	• Practical assessment must occur:
	  • through appropriately simulated activities at the training organisation, and/or
	  • in an appropriate range of situations in the workplace
	• Online assessment is not suitable for final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Parties and responsible persons within the chain may include:	• consigner • consignee

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• packer • loader • scheduler • driver • receiver • carrier • manufacturer • employee • employer • owner • board of directors • senior official • dispatch officer • operator • person in charge or apparently in charge of a vehicle • agent • subcontractor • authorised officer • elected councillor
Customers may include:	• external customer • receiver • forwarder • dispatcher • yard foreman • safety regulator • police or enforcement official • public • subcontractor
Depending on the organisation concerned, workplace procedures may be called:	• standard operating procedures (SOPs) • company procedures • enterprise procedures • organisational procedures • established procedures
Communication in the work area may include:	• telephone • electronic data interchange (EDI) • fax • email • internet • oral, aural or signed communications
Documentation and records may include:	• transport regulations as they apply to the enterprise, including local authority regulations and procedures • relevant OH&S regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

Applicable legislation and regulations may include:	• workplace policies and procedures relating to chain of responsibility regulations • relevant Australian standards and certification requirements • relevant internal data entry books, including work diaries, data sheets and load sheets • transport and journey documentation • relevant transport regulations for the enterprise, including Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances • relevant state and territory OH&S and environmental protection legislation • workplace relations regulations

TLIL4059A Implement asset management systems

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to implement asset management systems. It includes determining management control processes; implementing existing practices, procedures and systems; and reviewing service levels. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work may be undertaken in various contexts within the transport and logistics industry.

The unit generally applies to those who provide leadership of others individually or in teams and have responsibility for the implementation and monitoring of asset management systems.

This unit is normally packaged at AQF IV or above.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine management control process	1.1 Roles and responsibilities of business units or departments are clarified to ensure effective management of assets in line with organisation policy and procedures
	1.2 Specific reporting and monitoring standards required by enterprise requirements are understood and complied with
	1.3 Information systems that provide the information necessary for effective and efficient asset management for all levels within the organisation are maintained
	1.4 Regular audits are arranged, where appropriate to the organisation, to establish a continuous improvement cycle
2 Implement existing practices, procedures and systems	2.1 Assessments of current status of asset management activities within business units or departments are conducted regularly in accordance with asset management plan
	2.2 Milestones and targets are adhered to by the groups responsible
	2.3 Areas of difficulty are identified and strategies are followed to overcome these difficulties
3 Review service levels	3.1 Current levels of service provided by asset stock are critically examined
	3.2 Areas of possible improvement in the effectiveness and efficiencies of owning and operating assets are identified in consultation with relevant personnel
	3.3 Appropriate benchmarking is undertaken to enable continuous improvement in asset management strategies and practices

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Code of practice for working collaboratively with others particularly with those involved in inputting data into asset management systems
- Requirements for completing relevant documentation including asset management reports
- Benchmarking practices
- Quality management principles and procedures
- Organisational and industry functions
- Detail of different approaches to asset management, including theoretical knowledge
- Characteristics of different types of information systems used to provide and assist in asset management
- Procedures for operating electronic communications equipment
- Procedures for identifying equipment defects and assessing for appropriate action

Required skills:

- Communicate effectively with others when implementing asset management systems
- Consult and liaise as required when working with a team of staff
- Manage team and encourage team participation
- Use critical analysis in order to determine the best approach to asset management for the enterprise
- Use lateral thinking in order to solve problems as they arise, or to generate ideas
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities and convey reports to senior management
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
	  • the underpinning knowledge and skills
	  • relevant legislation and workplace procedures
	  • other relevant aspects of the range statement

Context of and specific resources for assessment	• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
	• Resources for assessment include:
	  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
	  • access to an appropriate range of relevant operational situations in the workplace
	• In both real and simulated environments, access is required to:
	  • relevant and appropriate materials and equipment, and
	  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment	• Assessment of this unit must be undertaken by a registered training organisation
	• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
	• Practical assessment must occur:
	  • through activities in an appropriately simulated environment at the registered training organisation, and/or
	  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Asset management activities may	• introduction of information systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

include:	• data capture program • studies
Areas of possible improvement may include:	• spot checks • number of assets • complexity of assets, including their sophistication and issues involved • age of the asset base • quality of the assets constructed • levels of service provided or demanded
Regular audits may include:	• internal • external
Assets may include:	• equipment • buildings • employees • enterprise relationships
Depending on the organisation concerned, workplace procedures may be called:	• standard operating procedures (SOPs) • company procedures • enterprise procedures • organisational procedures • established procedures
Communication in the work area may include:	• phone • electronic data interchange (EDI) • fax • email • internet • RF systems • oral, aural or signed communications
Consultative processes may involve:	• other employees and supervisors • relevant authorities and institutions • management and union representatives • industrial relations and OH&S specialists
Documentation and records may include:	• reports of assets held and their status • relevant OH&S and environmental protection regulations • quality assurance procedures • emergency procedures • technical instructions • relevant Australian Standards and certification requirements
Applicable legislation and	• relevant national, state/territory legislation, including OH&S and environmental protection requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

regulations may include:	• workplace relations regulations

TLILIC0012A Licence to operate a vehicle loading crane (capacity 10 metre tonnes and above)

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor	This unit specifies the outcomes required to operate a vehicle loading crane with a capacity of 10 metre tonnes or more, mounted on a vehicle for the principle purpose of loading and unloading such a vehicle, including the application of load estimation and slinging techniques to move a load, for licensing purposes.

Application of the Unit

Application of the Unit	This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads and shut down and secure crane. This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	*Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work	1.1 Potential workplace ***hazards*** are identified 1.2 ***Hazard control measures*** are identified consistent with ***appropriate standards*** to ensure the safety of personnel and equipment 1.3 The weight of the load is identified and estimated in consultation with ***associated personnel*** (where applicable) 1.4 Suitable lifting points on the load are identified in consultation with ***associated personnel*** 1.5 Appropriate ***lifting equipment*** is obtained following consultation with ***associated personnel*** 1.6 ***Crane*** is ***appropriate*** to the load/s and workplace conditions 1.7 Appropriate paths for the movement of loads in the work area are inspected and determined 1.8 Appropriate ***communication methods*** are identified with ***associated personnel***
2. Conduct routine checks	2.1 ***Crane*** is visually checked for any damage or defects 2.2 All ***signage and labels*** are visible and legible according to the ***appropriate standard***. 2.3 Routine pre-operational crane checks are carried out according to ***procedures***

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	2.4 All ***controls*** are located and identified 2.5 Crane ***service logbook*** is checked for compliance 2.6 ***Crane*** is started according to ***procedures*** and checked for any abnormal noises 2.7 All crane ***safety devices*** are tested according to ***procedures*** 2.8 Post-start operational checks are carried out according to ***procedures*** 2.9 All ***communication equipment*** is checked for serviceability 2.10 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken
3. Set up crane	3.1 ***Ground suitability*** is checked 3.2 ***Crane*** is driven to the work area according to ***procedures*** 3.3 ***Crane*** is positioned for work application and ***stability*** according to ***procedures*** 3.4 Boom/jib and configuration data is input into the crane computer (as required) 3.5 Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to ***procedures*** 3.6 All ***communications equipment*** is tested for functionality 3.7 ***Lifting equipment*** is prepared for load according to ***procedures*** 3.8 ***Load destination*** is prepared
4. Transfer loads	4.1 Loads are determined within the capacity of the crane 4.2 Boom/jib and hoist block is positioned over load following directions from ***associated personnel*** 4.3 ***Lifting equipment*** is attached and secured using ***defined techniques*** according to ***procedures*** 4.4 ***Test lift*** is carried out according to ***procedures*** 4.5 Loads are transferred using all ***relevant crane movements*** according to ***procedures*** and the ***appropriate standard*** 4.6 All required ***communication signals*** are correctly interpreted according to ***procedures*** and the ***appropriate standard***

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	4.7 The load is landed ensuring stability and security from movement 4.8 ***Lifting equipment*** is removed or disconnected from load and/or lifting hook according to ***procedures*** (where applicable) 4.9 ***Crane*** is operated according to ***procedures*** 4.10 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability 4.11 ***Unplanned and/or unsafe*** situations are responded to in line with ***procedures***
5. Shut down and secure crane	5.1 ***Crane*** boom/jib and equipment are stowed and secured according to ***procedures*** and the ***appropriate standard*** 5.2 Relevant motion locks and brakes are applied (where applicable) 5.3 Outriggers/stabilisers are stowed and secured according to ***procedures*** 5.4 Plates or packing are stowed and secured. 5.5 ***Crane*** is ***shut down*** according to ***procedures*** 5.6 Routine post-operational crane checks are carried out according to ***procedures*** 5.7 ***Lifting equipment*** is stored according to ***procedures*** and the ***appropriate standards*** 5.8 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.
Required skills:
• Accurately record and maintain information relating to crane operations • Use communication techniques in the workplace including hand signals, whistles and two-way radios • Use interpersonal communication skills at a level sufficient to communicate with

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE
other site personnel • Operate crane including all functions to their maximum extension in the loading and unloading of loads to the safe working rated capacity of the crane, in conjunction with other associated personnel • Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined by workplace procedures • Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the vehicle loading crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions and vehicle tipping) • Use and interpret crane manufacturer's specifications and data, including load charts to enable the vehicle loading crane to be configured for the load • Verify problems and equipment faults and demonstrate appropriate response procedures
Required knowledge:
• Appropriate mathematical procedures for estimation of loads • Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate the crane • Awareness of the boom/jib movements and particularly the safe positioning of the operator for any lift • Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class • Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined by workplace procedures • Understanding of the hierarchy of hazard identification and control • Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs • Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class • Procedures for the recording, reporting and maintenance of workplace records and information • Typical routine problems encountered in the process and with equipment and adjustments required for correction • Crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads

Evidence Guide

EVIDENCE GUIDE

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.	
Overview of assessment	• Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work. • State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Compliance with OH&S licensing legislation. • Communicate and work safely with others in the work area. • Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate the vehicle loading crane. • Risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the vehicle loading crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping). • Set up, position stabilise and operate a vehicle loading crane including all functions to their maximum extension in the loading and unloading of loads to the safe working rated capacity. • Move loads from the vehicle to the ground and/or ground to the vehicle as described in the endorsed assessment tool. • Appropriate mathematical procedures for estimation of loads. • Use of lifting equipment and basic slinging techniques suitable for the loads to be loaded/unloaded as defined in the workplace procedures. • Awareness of the boom/jib movements and particularly the safe positioning of the operator for any lift.
Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument. • Assessment of performance must be undertaken

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	

	either in the workplace or in a realistically simulated workplace setting.
	• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with appropriate standard requirements.
	• Applicants must have access to:
	  • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
	  • appropriate vehicle loading crane (10 metre tonne or more) and associated equipment in safe condition
	  • appropriate lifting gear in safe condition
	  • Suitable loads as specified by the endorsed Assessment Instrument
	  • communication equipment (e.g. two-way radios, whistles, etc.)
	  • other associated personnel to sling and direct the loads.

Method of assessment	• Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application. • The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for assessment	• Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.	
Hazards	May include but not limited to: • ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. powerlines, service pipes) • traffic (e.g. pedestrians, vehicles, other plant) • Insufficient lighting • environmental conditions (e.g. wind, lightning, storms, etc.) • positioning of crane operator • other specific hazards (e.g. dangerous materials)
Hazard control measures	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk: 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standards	May include but not limited to: • codes of practice • legislation • Australian standards especially AS2550.1 - 2002 (6.5) • manufacturer's specifications • industry standards
Associated personnel	May include but not limited to: • doggers

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• riggers
Lifting equipment	May include but not be limited to: • chain slings • wire and synthetic slings • shackles • eyebolts
Crane	A crane with a capacity of 10 metre tonnes and above mounted on a vehicle for the principle purpose of loading and unloading such a vehicle
Appropriate	May include but not limited to: • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc.)
Communication method	May include but not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	May include but not limited to: • crane data plates/labels • load charts • crane decals • control labels
Procedures	May include but not limited to: • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Controls	May include but not limited to: • luffing levers • knuckling levers • hoisting and lowering levers

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• slewing levers including brake • boom extension levers (where fitted)
Service logbook	May include but not limited to: • any logbook • service book • history record system where the service and maintenance history is kept
Crane safety devices	May include but not limited to: • horns/sirens • audible and visual warning devices • lights
Communication equipment	May include but not limited to: • fixed frequency two-way radios • whistles
Ground suitability	May include but not limited to: • rough uneven ground • backfilled ground • soft soils • hard compacted soil • rock • bitumen • concrete
Stability	May include but not limited to: • deploying outriggers • establishing correct size plates or packing • correctly positioning plates or packing
Hazard prevention/control measures	May include but not limited to: • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and controls • pedestrian controls • trench covers • movement of obstructions • personal protective equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• adequate illumination
Load destination	May include but not limited to: • ground • vehicles
Defined techniques	May include but not limited to: • fixed lifting points • basic reeved slings
Test lift	The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that: • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all equipment is functioning properly • adjustments to the slinging can be made in a safe manner
Relevant crane movements	May include but not limited to: • luffing • slewing • knuckling • telescoping • raise and lower hoist
Communication signals	May include but not limited to: • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle • telescope out - hand • telescope out - whistle

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• telescope in - hand • telescope in - whistle
Unplanned and/or unsafe situations	May include but not limited to: • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning, storms, etc.)
Shut down	May include but not limited to: • retracting boom/jib (where applicable) • retracting hoist rope and hook block • folding boom/jib into the transport position • retracting outriggers/stabilisers • idling engine to stabilise temperature • turning off engine (where applicable) • removing key from ignition (where applicable) • locking and securing cabin (where applicable) • securing crane for travel

TLILIC2001A Licence to operate a forklift truck

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor	This unit specifies the outcomes required for the operation of a powered industrial truck equipped with a mast and an elevating load carriage to which is attached a pair of fork arms or other attachment, for licensing purposes. This definition also includes a truck on which the operator is raised with the attachment for order-picking.

Application of the Unit

Application of the Unit	THIS UNIT REQUIRES THE OPERATOR TO BE ABLE PLAN THE WORK, CONDUCT ROUTINE CHECKS ON THE FORKLIFT, SHIFT LOADS IN A SAFE MANNER, AND SHUT DOWN AND SECURE THE EQUIPMENT AFTER THE COMPLETION OF OPERATIONS. This unit is based on the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

	2.8 Defects and damage are reported and recorded according to ***procedures***, and appropriate action is taken
3. Shift load	3.1 The weight of load is assessed to ensure compliance with ***forklift*** truck data plate specifications 3.2 Appropriate ***hazard prevention***/***control measures*** are implemented and communicated with personnel in the work area 3.3 ***Forklift*** is operated at a safe speed and according to ***procedures*** 3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards 3.5 Load movement is monitored constantly ensuring safety to personnel and load, and structural stability 3.6 ***Unplanned and***/***or unsafe situations*** are responded to in line with ***procedures***
4. Shut down and secure forklift truck	4.1 ***Forklift*** truck is parked to avoid hazards 4.2 Forklift is ***shut down*** according to ***procedures*** 4.3 Routine post-operational forklift checks are carried out according to ***procedures*** 4.4 Forklift is secured to prevent unauthorised access/use 4.5 All defects and damage are reported and recorded according to ***procedures***, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.
Required skills:
• Accurately interpret information relating to conducting forklift truck operations (e.g. procedures) • Safely conduct forklift truck operations including all functions to the maximum height and load capacity • Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified • Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures)

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE
• Drive forklift with load in forward and reverse, maintaining visibility • Verify problems and equipment faults and demonstrate appropriate response procedures
Required knowledge:
• Methodology of determining the weight of a load • Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks • Understanding of forklift characteristics and capabilities (including use of load data plates) • Understanding of the hierarchy of hazard identification and control • Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class • Procedures for the recording, reporting and maintenance of workplace records and information • Forklift truck operations and safe operating techniques • Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.	
Overview of assessment	• Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work. • State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Compliance with OH&S licensing legislation. • Communicate and work safely with others in the work area. • Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
	• Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures. • Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights. • Drive forklift truck with load in forward and reverse, maintaining visibility.

Context of and specific resources for assessment	• Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
	• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
	• Applicants must have access to:
	  • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
	  • associated equipment appropriate to forklift truck operations
	  • suitable loads as described by the endorsed Assessment Instrument
	  • manufacturers specifications
	  • appropriate forklift truck in a safe condition.

Method of assessment	• Assessment must be conducted using the endorsed Assessment Instrument. These Instruments provide instruction on their application. • The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
Guidance information for	• Further information about endorsed Assessment Instruments may be obtained from state/territory

EVIDENCE GUIDE	
assessment	OH&S regulators.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.	
Hazards	May include but not limited to: • ground conditions (e.g. condition of pavement, slopes) • overhead hazards (e.g. powerlines, service pipes) • insufficient lighting • traffic (e.g. pedestrians, vehicles, other plant) • weather (e.g. wind, lightning, rain) • forklift instability (e.g. overloading, poor load placement, irregular loads) • other hazards (e.g. dangerous materials)
Hazard control measures	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk: 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standards	May include but not limited to: • legislation • Australian standards • manufacturer's specifications • industry standards (where applicable)

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
Forklift truck	May include but not be limited to: • counterbalanced • reach trucks • rough terrain • internal combustion petrol, diesel, gas • electric
Communications methods	May include but not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Procedures	May include but not limited to: • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Pre-start operational checks	May include but not limited to: • safety devices fitted where appropriate • forklift data plate fitted and interpreted • logbook, handbook or operating manuals available • external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out • forklift attachment is checked for security • approved modifications and/or attachments fitted to manufacturer's specifications (e.g. as per forklift or attachment data plate) are identified • checks for adaptations or modifications outside manufacturer's specifications (e.g. not listed on the forklift or attachment data plate) are carried out • maintenance logbook/records checked

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
Post-start operational checks	May include checks of the forklift truck and equipment after start-up to ensure: • hazard warning systems (for example lights and horns), are functional • attachment movements and control functions are smooth and comply with operating requirements • steering, transmission and brake functions comply with operating requirements
Hazard prevention/control measures	May include but not limited to: • barricades and traffic control • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • pedestrian control (barricades, signs, etc.) • excavation safeguards • movement of obstructions • personal protective equipment • adequate illumination
Unplanned and/or unsafe situations	May include but not limited: • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental condition
Shut down	May include, but is not limited to: • parking in a suitable location away from dangerous areas • fork arms are correctly positioned (tips down, tilted forward, lowered to ground) • appropriate transmission/gear is selected for parking (relevant to transmission type) • hand/parking brake is applied • engine power is turned off • ignition key is removed (if applicable) • LPG gas cylinder valve is shut off (where fitted) • securing equipment against unauthorised operation • securing the site • ensuring access ways are clear • identifying and segregating defective equipment

TLILIC2014B Licence to drive a light rigid vehicle

Modification History

New release. THis unit replaces and is equivalent to TLILIC2014A.

Unit Descriptor

This unit involves the skills and knowledge required to obtain a licence to drive a light rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

Application of the Unit

This unit applies to driving that is carried out in compliance with the licence requirements and regulations of the relevant state/territory driver licensing authority pertaining to light rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and operate a light rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Light Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Light Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	**Drive a light rigid vehicle**	1.1 Light rigid vehicle is started, steered, manoeuvred, positioned and stopped according to traffic regulations, manufacturer instructions and relevant vehicle handling procedures
		1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
		1.3 Braking system of light rigid vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
		1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
		1.5 Light rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
		1.6 Light rigid vehicle is parked, shutdown and safely secured according to traffic regulations
		1.7 Load is safely and effectively restrained
2	**Monitor traffic and road conditions**	2.1 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
		2.2 Interaction with other road users is conducted courteously according to road rules to ensure safe and efficient traffic flow
3	**Monitor and maintain vehicle performance**	3.1 Vehicle performance is maintained through pre-operational inspections and vehicle checks
		3.2 Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Driving hazards and related defensive driving techniques
- Efficient driving techniques
- Engine power management and safe driving strategies
- Light rigid vehicle controls, instruments and indicators and their use
- Light rigid vehicle handling procedures
- Pre-operational checks carried out on vehicle and related action
- Relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements

Required skills:

- Anticipate and monitor and traffic hazards and take appropriate action
- Apply precautions and required action to eliminate, minimise or control hazards that may exist when driving a light rigid vehicle
- Carry out pre-operational vehicle checks
- Communicate effectively with others when driving a light rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to driving a light rigid vehicle

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include: • applying relevant procedures that reflect legislative requirements • negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings).

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment	Resources for assessment include access to: • range of relevant exercises, case studies and/or other simulated practical and knowledge assessment • appropriate range of relevant on-road operational situations or in the workplace • relevant and appropriate materials and equipment • applicable documentation such as workplace procedures, regulations, codes of practice and operation manuals.
Method of assessment	Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted. The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements. The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Light rigid vehicle includes:	• Rigid truck above 4.5 tonnes GVM but less than or equal to 8 tonnes GVM • Rigid bus with less than or equal to 8 tonnes GVM or seats more than 12 adults, including driver
Vehicle handling procedures may include:	• Accelerating and braking • Managing engine performance • Operating vehicle controls, instruments and indicators • Positioning and stopping a vehicle • Reversing a vehicle • Starting a vehicle • Steering and manoeuvring a vehicle • Using defensive driving techniques
Driving hazards may include:	• Animals and objects on road • Faulty: • brakes • steering mechanism on vehicle • Fire in vehicle

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• Flooded sections of road • Foggy conditions • Leaking fuel • Oil on road • Parked vehicles on road • Pedestrians crossing road • Wet and iced roads • Windy sections of road
Traffic and road conditions may include:	• Negotiating a range of more complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings) • On open or private roads including roads with moderate inclines and declines • Operations conducted during the day or night • Typical weather conditions • While at a depot, base or warehouse • While at a client workplace or work site

Pre-operational inspections and equipment checks may include:	• Checking and topping up fluid levels
	• Checking:
	  • brakes
	  • operation of vehicle lights and indicators
	  • tyre pressures
	• Visually checking vehicle

TLILIC2015B Licence to drive a medium rigid vehicle

Modification History

NEw release. THis unit replaces and is equivalent to TLILIC2015A.

Unit Descriptor

This unit involves the skills and knowledge required to obtain a licence to drive a medium rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

Application of the Unit

This unit applies to driving that is carried out in compliance with the licence requirements and regulations of the relevant state/territory driver licensing authority pertaining to medium rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and operate a medium rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Medium Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Medium Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Drive a medium rigid vehicle	1.1	Medium rigid vehicle is started, steered, manoeuvred, positioned and stopped according to traffic regulations, manufacturer instructions and relevant vehicle handling procedures
	1.2	Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
	1.3	Braking system of medium rigid vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
	1.4	Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
	1.5	Medium rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
	1.6	Medium rigid vehicle is parked, shutdown and safely secured according to traffic regulations
	1.7	Load is safely and effectively restrained
2 Monitor traffic and road conditions	2.1	Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities
	2.2	Interaction with other road users is conducted courteously according to road rules to ensure safe and efficient traffic flow
3 Monitor and maintain vehicle performance	3.1	Vehicle performance is maintained through pre-operational inspections and vehicle checks
	3.2	Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Driving hazards and related defensive driving techniques
- Efficient driving techniques
- Engine power management and safe driving strategies
- Medium rigid vehicle controls, instruments and indicators and their use
- Medium rigid vehicle handling procedures
- Pre-operational checks carried out on vehicle and related action
- Relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements

Required skills:

- Anticipate and monitor and traffic hazards and take appropriate action
- Apply precautions and required action to eliminate, minimise or control hazards that may exist when driving a medium rigid vehicle
- Carry out pre-operational vehicle checks
- Communicate effectively with others when driving a medium rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to driving a medium rigid vehicle

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include: • applying relevant procedures that reflect legislative requirements • negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings).

Context of and specific resources for assessment	Resources for assessment include access to: • range of relevant exercises, case studies and/or other simulated practical and knowledge assessment • appropriate range of relevant on-road operational situations or in the workplace • relevant and appropriate materials and equipment • applicable documentation such as workplace procedures, regulations, codes of practice and operation manuals.
Method of assessment	Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted. The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements. The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Medium rigid vehicle includes:	• Two axle rigid truck, not being a prime mover, above 8 tonnes GVM • Two axle bus above 8 tonnes GVM
Vehicle handling procedures may include:	• Accelerating and braking • Managing engine performance • Operating vehicle controls, instruments and indicators • Positioning and stopping a vehicle • Reversing a vehicle • Starting a vehicle • Steering and manoeuvring a vehicle • Using defensive driving techniques
Driving hazards may include:	• Animals and objects on road • Faulty: • brakes • steering mechanism on vehicle • Fire in vehicle • Flooded sections of road

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• Foggy conditions • Leaking fuel • Oil on road • Parked vehicles on road • Pedestrians crossing road • Wet and iced roads • Windy sections of road
Traffic and road conditions may include:	• Negotiating a range of more complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railwaylevel crossings) • On open or private roads including roads with moderate inclines and declines • Operations conducted during the day or night • Typical weather conditions • While at a depot, base or warehouse • While at a client workplace or work site

Pre-operational inspections and equipment checks may include:	• Checking and topping up fluid levels
	• Checking:
	  • brakes
	  • operation of vehicle lights and indicators
	  • tyre pressures
	• Visually checking vehicle

TLILIC2016B Licence to drive a heavy rigid vehicle

Modification History

New release. This unit replaces and is equivalent to TLILIC2016A.

Unit Descriptor

This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

Application of the Unit

This unit applies to driving that is carried out in compliance with the licence requirements and regulations of the relevant state/territory driver licensing authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and operate a heavy rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Heavy Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Driving hazards and related defensive driving techniques
- Efficient driving techniques
- Engine power management and safe driving strategies
- Heavy rigid vehicle controls, instruments and indicators and their use
- Heavy rigid vehicle handling procedures
- Pre-operational checks carried out on vehicle and related action
- Relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements

Required skills:

- Anticipate and monitor and traffic hazards and take appropriate action
- Apply precautions and required action to eliminate, minimise or control hazards that may exist when driving a heavy rigid vehicle
- Carry out pre-operational vehicle checks
- Communicate effectively with others when driving a heavy rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to driving a heavy rigid vehicle

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include: • applying relevant procedures that reflect legislative requirements • negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings).

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment	Resources for assessment include access to: • range of relevant exercises, case studies and/or other simulated practical and knowledge assessment • appropriate range of relevant on-road operational situations or in the workplace • relevant and appropriate materials and equipment • applicable documentation such as workplace procedures, regulations, codes of practice and operation manuals.
Method of assessment	Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted. The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements. The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Heavy rigid vehicle includes:	• Rigid vehicle, not being an unladen prime mover, with a minimum of three axles and a minimum 15 tonnes GVM • Modified three axle prime mover with a certified detachable tray (with capacity to carry 75% of its specified GVM) with a GVM of 15 tonnes • Three axle articulated bus • Three axle bus above 15 tonnes GVM
Vehicle handling procedures may include:	• Accelerating and braking • Managing engine performance • Operating vehicle controls, instruments and indicators • Positioning and stopping a vehicle • Reversing a vehicle • Starting a vehicle • Steering and manoeuvring a vehicle • Using defensive driving techniques
Driving hazards may include:	• Animals and objects on road • Faulty:

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• brakes • steering mechanism on vehicle • Fire in vehicle • Flooded sections of road • Foggy conditions • Leaking fuel • Oil on road • Parked vehicles on road • Pedestrians crossing road • Wet and iced roads • Windy sections of road
Traffic and road conditions may include:	• Negotiating a range of more complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railwaylevel crossings) • On open or private roads including roads with moderate inclines and declines • Operations conducted during the day or night • Typical weather conditions • While at a depot, base or warehouse • While at a client workplace or worksite

Pre-operational inspections and equipment checks may include:	• Checking and topping up fluid levels
	• Checking:
	  • brakes
	  • operation of vehicle lights and indicators
	  • tyre pressures
	• Visually checking vehicle

TLILIC3006A Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor	This unit specifies the outcomes required to operate a mobile crane of greater than 3 tonnes capacity that incorporates a boom or jib which includes articulated type mobile cranes and locomotive cranes, but does not include vehicle tow trucks, for licensing purposes.

Application of the Unit

Application of the Unit	This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads, and shut down and secure the crane. This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Elements and Performance Criteria

ELEMENT *Elements describe the essential outcomes of a unit of competency.*	**PERFORMANCE CRITERIA** *Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.*
1. Plan work	1.1 1.1 Potential workplace ***hazards*** are identified 1.2 ***Hazard control measures*** are identified consistent with ***appropriate standards*** to ensure the safety of personnel and equipment 1.3 The weight of the load is identified and estimated in consultation with ***associated personnel*** 1.4 ***Crane*** is ***appropriate*** to the load/s and workplace conditions 1.5 The appropriate path for the movement of loads in the work area is inspected and determined 1.6 Appropriate ***communication methods*** are identified with ***associated personnel***
2. Conduct routine checks	2.1 Crane is visually checked for any damage or defects 2.2 ***Crane*** is accessed in a safe manner 2.3 All ***signage and labels*** are visible and legible according to the ***appropriate standard*** 2.4 Routine pre-operational crane checks are carried out according to ***procedures*** 2.5 All controls are located and identified 2.6 Crane ***service logbook*** is checked for compliance 2.7 Crane is started according to ***procedures*** and checked for any abnormal noises 2.8 All ***crane safety devices*** are tested according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

	procedures 2.9 Pos-start operational checks are carried out according to ***procedures*** 2.10 All ***communication equipment*** is checked for serviceability 2.11 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken
3. Set up crane	3.1 ***Ground suitability*** is checked 3.2 ***Crane*** is driven to the work area according to ***procedures*** 3.3 ***Crane*** is positioned for work application and ***stability*** according to ***procedures*** 3.4 Appropriate ***crane configuration*** for work task is determined according to ***procedures*** (where applicable) 3.5 Boom/jib and counterweight configuration data is input into the crane computer (where applicable) 3.6 Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to ***procedures*** 3.7 All ***communications equipment*** is tested for functionality
4. Transfer load	4.1 Lifts are determined within the capacity of the crane 4.2 Boom/jib and hoist block is positioned over load following directions from ***associated personnel*** 4.3 ***Test lift*** is carried out according to ***procedures*** 4.4 Loads are transferred using all ***relevant crane movements*** according to ***procedures*** and the ***appropriate standard*** 4.5 All required ***communication signals*** are correctly interpreted according to ***procedures*** and the ***appropriate standard*** 4.6 ***Crane*** is operated according to ***procedures*** 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability 4.8 ***Unplanned and***/***or unsafe*** situations are responded to in line with ***procedures***
5. Mobile load	5.1 Suitability of ***planned route*** is checked for the crane according to ***procedures*** 5.2 ***Crane*** is configured to mobile load according to procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	5.3 Load is moved using ***best mobile practice*** according to the appropriate standard
6 Shut down and secure crane	6.1 ***Crane*** boom/jib and equipment is stowed and secured, where appropriate, according to ***procedures*** and the ***appropriate standard*** 6.2 Relevant motion locks and brakes are applied (where applicable) 6.3 Outriggers/stabilisers are stowed and secured according to ***procedures*** (where applicable) 6.4 Crane is ***shut down*** according to procedures 6.5 Routine post-operational crane checks are carried out according to ***procedures*** 6.6 Plates or packing are stowed and secured (where applicable) 6.7 All damage and defects are recorded and reported according to ***procedures***, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
• Accurately record and maintain information relating to crane operations • Use communication techniques in the workplace including whistles, hand signals and use of two-way radios • Use communication skills at a level sufficient to communicate with other site personnel • Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to operate crane • Operate crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel • Mobile loads using best mobile practice • Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites) • Use and interpret crane manufacturer's specifications and data, including load charts

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE
to enable the crane to be configured for the load • Verify problems and equipment faults and demonstrate appropriate response procedures
Required knowledge:
• Appropriate mathematical procedures for estimation and measurement of loads • Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class • Ability to read and comprehend manufacturer's instructions, procedures and safety signs • Understanding of crane characteristics and capabilities (including use of load charts) to allow the configuration of the crane to suit the range of loads • Understanding of the hierarchy of hazard identification and control • Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class • Procedures for the recording, reporting and maintenance of workplace records and information • Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.	
Overview of assessment	Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work. State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Compliance with OH&S licensing legislation. • Communicate and work safely with others in the work area. • Risk assessment and management procedures (particular awareness of the risks associated with

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
	overhead powerlines/electrical cables, ground conditions, crane tipping, other vehicles and personnel). • Operation of a non-slewing mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of non-slewing mobile cranes (over 3t capacity) in conjunction with other associated personnel. • Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
	• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
	• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant appropriate standard requirements.
	• Applicants must have access to:
	  • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
	  • appropriate non-slewing crane (greater than 3 tonnes) and associated equipment in safe condition
	  • suitable loads as specified by endorsed assessment instrument
	  • communication equipment (e.g. two-way radios, whistles, etc.)
	  • other associated personnel to sling and direct the loads.

Method of assessment	• Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
	• The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.
Guidance information for assessment	• Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.	
Hazards	May include but not limited to: • ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. powerlines, service pipes) • insufficient lighting • traffic (e.g. pedestrians, vehicles, other plant) • environmental conditions (e.g. wind, lightning, storms, etc.) • other specific hazards (e.g. dangerous materials)
Hazard control measures	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk: 1 elimination

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standards	May include but not limited to: • codes of practice • legislation • Australian standards • manufacturer's specifications • industry standards (where applicable)
Associated personnel	May include but not limited to: • doggers • riggers
Appropriate	May include but not limited to: • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc.)
Crane	May include: • a crane (greater than 3 tonnes capacity) which meets the requirements of AS1418 • articulated type mobile cranes • locomotive cranes Does not include vehicle tow truck operations
Communication method	May include but not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	May include but not limited to: • crane data plates/labels • load charts • crane decals

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• control labels
Procedures	May include but not limited to: • manufacturer's guidelines (instructions, specifications, operators manual or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Controls	May include but not limited to: • luffing levers • hoisting and lowering levers • slewing levers including brake • boom extension levers (where fitted)
Service logbook	May include but not limited to: • any logbook • service book • history record system where the service and maintenance history is kept
Crane safety devices	May include but not limited to: • horns/sirens • audible and visual reversing devices • operator restraint devices • lights
Communication equipment	May include but not limited to: • fixed channel two-way radios • whistles • bells • buzzers NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane
Ground suitability	May include but not limited to: • rough uneven ground • backfilled ground • soft soils • hard compacted soil

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• rock • bitumen • concrete
Stability	May include but not limited to: • deploying outriggers • establishing correct size plates or packing • correctly positioning plates or packing
Crane configuration	May include but not be limited to: • boom/jib • fly-jib • counterweights
Hazard prevention/control measures	May include but not limited to: • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and control/s • pedestrian controls • trench covers • movement of obstructions • personal protective equipment • adequate illumination
Test lift	The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that: • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all crane equipment is functioning properly • adjustments to the slinging can be made in a safe manner
Relevant crane movements	May include but not limited to: • telescope in and out • boom/jib up and down • articulating (as applicable)

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• raise and lower hoist (as applicable)
Communication signals	May include but not limited to: • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle • slew/articulate right - hand • slew/articulate right - whistle • slew/articulate left - hand • slew/articulate left - whistle
Unplanned and/or unsafe situations	May include but not limited to: • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning, storms, etc.)
Planned route	May include but not limited to: • unusual or difficult terrains • obstacles or obstruction
Best mobile practice	May include but not limited to: • minimum speed • gentle acceleration and braking (to minimise load swing) • minimum boom/jib length • carrying the load near to the ground surface • use of handheld taglines
Shut down	May include but not limited to: • retracting boom/jib/fly (where applicable)

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• retracting hoist rope and hook block • idling engine to stabilise temperature • retracting outriggers/stabilisers (where applicable) • turning off engine

TLILIC3008A Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor	This unit specifies the outcomes required to operate a slewing mobile crane (up to 20 tonnes) for licensing purposes. It encompasses the requirement for non-slewing mobile crane licence and the vehicle loading crane licence.

Application of the Unit

Application of the Unit	This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane. This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	*Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work	1.1 Potential workplace ***hazards*** are identified 1.2 ***Hazard prevention***/***control measures*** are identified consistent with ***appropriate standards*** to ensure the safety of personnel and equipment 1.3 The weight of the load is identified and estimated in consultation with ***associated personnel*** 1.4 ***Crane*** is ***appropriate*** to the load/s and workplace conditions 1.5 Appropriate path for the movement of loads in the work area is inspected and determined 1.6 Appropriate ***communication methods*** are identified with ***associated personnel***
2. Conduct routine checks	2.1 ***Crane*** is visually checked for any damage or defects 2.2 ***Crane*** is accessed in a safe manner 2.3 All ***signage and labels*** are visible and legible according to the ***appropriate standard*** 2.4 Routine pre-operational crane checks are carried out according to ***procedures*** 2.5 All ***controls*** are located and identified 2.6 Crane ***service logbook*** is checked for compliance 2.7 ***Crane*** is started according to ***procedures*** and checked for any abnormal noise

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	2.8 All ***crane safety devices*** are tested according to ***procedures*** 2.9 Post-start operational checks are carried out according to ***procedures*** 2.10 All ***communication equipment*** is checked for serviceability 2.11 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken
3. Set up crane	3.1 ***Ground suitability*** is checked 3.2 ***Crane*** is driven to the work area according to ***procedures*** 3.3 ***Crane*** is positioned for work application and ***stability*** according to ***procedures*** 3.4 Appropriate ***crane configuration*** for work task is determined according to ***procedures*** (where applicable) 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required) 3.6 Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to ***procedures*** 3.7 All ***communications equipment*** is tested for functionality
4. Transfer load	4.1 Lifts are determined within the capacity of the crane 4.2 Boom/jib and hoist block is positioned over load following directions from ***associated personnel*** 4.3 ***Test lift*** is carried out according to ***procedures*** 4.4 Loads are transferred using all ***relevant crane movements*** according to ***procedures*** and the ***appropriate standard*** 4.5 All required ***communication signals*** are correctly interpreted according to ***procedures*** and the ***appropriate standard*** 4.6 ***Crane*** is operated according to ***procedures*** 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability 4.8 ***Unplanned and/or unsafe*** situations are responded to in line with ***procedures***
5. Mobile load	5.1 Suitability of ***planned route*** is checked for the crane according to ***procedures*** 5.2 ***Crane*** is configured to mobile load according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	procedures 5.3 Load is moved using ***best mobile practice*** according to the ***appropriate standard***
6. Shut down and secure crane	6.1 ***Crane*** boom/jib and equipment are stowed and secured where appropriate according to ***procedures*** and the ***appropriate standard*** 6.2 Relevant motion locks and brakes are applied (where applicable) 6.3 Outriggers/stabilisers are stowed and secured according to ***procedures*** 6.4 Crane is ***shut down*** according to ***procedures*** 6.5 Plates or packing are stowed and secured 6.6 Routine post-operational crane checks are carried out according to ***procedures*** 6.7 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.
Required skills:
• Accurately record and maintain information relating to crane operations • Use communication techniques in the workplace including whistles, hand signals and use of two-way radios • Use interpersonal communication skills at a level sufficient to communicate with other site personnel • Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration • Operate a slewing mobile crane (up to 20t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel • Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability) • Use and interpret crane manufacturer's specifications and data, including load

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE
charts, to enable the crane to be configured for the load • Verify problems and equipment faults and demonstrate appropriate response procedures
Required knowledge:
• Appropriate mathematical procedures for estimation and measurement of loads • Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class • Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs • Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads • Mobile slewing crane operating techniques • Understanding of the hierarchy of hazard identification and control • Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class • Procedures for the recording, reporting and maintenance of workplace records and information • Rated capacity and working load limits (including use of crane load charts) • Typical routine problems encountered in the process and with equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.	
Overview of assessment	• Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work. • State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
Critical aspects for assessment and evidence required to demonstrate	• Compliance with OH&S licensing legislation. • Communicate and work safely with others in the work area.

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
competency in this unit	• Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites). • Complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 20 tonne capacity in conjunction with other associated personnel. • Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
	• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
	• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant appropriate standard requirements.
	• Applicants must have access to:
	  • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
	  • appropriate slewing mobile crane (up to 20 tonne) and associated equipment in safe condition
	  • suitable loads as specified by the endorsed Assessment Instrument
	  • communication equipment (e.g. two-way radios, whistles, etc.)
	  • other associated personnel to sling and direct the loads

Method of assessment	• Assessment must be conducted using the endorsed

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
	Assessment Instruments. These Instruments provide advice on their application. • Assessment may be in conjunction with the assessment of other units of competency. • The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.
Guidance information for assessment	Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.	
Hazards	May include but not limited to: • ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. powerlines, service pipes) • traffic (e.g. pedestrians, vehicles, other plant) • insufficient lighting • environmental conditions (e.g. wind, lightning, storms, etc.) • other specific hazards (e.g. dangerous materials)
Hazard control measures	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls It includes the application of the hierarchy of control, the six-step preference of control measures to manage

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	and control risk: 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standard	May include but not limited to: • codes of practice (mobile crane) • legislation • Australian standard • manufacturer's specifications • industry standards (where applicable)
Associated personnel	May include but not limited to: • riggers • doggers
Appropriate	May include but not limited to: • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc.)
Crane	May include a boom or jib, which is capable of being slewed (up to 20 tonnes capacity) The slewing mobile crane up to 20 tonnes classification encompasses the requirements for the non-slewing mobile crane classification and the vehicle loading crane classification NB: This excludes front-end loader, backhoe, excavator or like equipment when configured for crane operation
Communication method	May include but not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
Signage and labels	May include but not limited to: • crane data plates/labels • load charts • crane decals • control labels
Procedures	May include but not limited to: • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Controls	May include but not limited to: • luffing levers • hoisting and lowering levers • slewing levers including brake • boom extension levers (where fitted)
Service logbook	May include but not limited to: • any logbook • service book • history record system where the service and maintenance history is kept
Crane safety devices	May include but not limited to: • horns/sirens • audible and visual reversing devices • operator restraint devices • lights
Communication equipment	May include but not limited to: • two-way radios • whistles • bells • buzzers NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane
Ground suitability	May include but not limited to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• rough uneven ground • backfilled ground • soft soils • hard compacted soil • rock • bitumen • concrete
Stability	May include but not limited to: • deploying outriggers • establishing correct size plates or packing • correctly positioning plates or packing
Crane configuration	May include but not be limited to: • boom/jib • fly-jib • counterweights
Hazard prevention/control measures	May include but not limited to: • safety tags on electrical switches/isolators • insulated powerlines • safety observer used inside exclusion zone • disconnected power • traffic barricades and control • pedestrian barricades • trench covers • movement of obstructions • personal protective equipment • adequate illumination
Test lift	The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that: • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all crane equipment is functioning properly • adjustments to the slinging can be made in a safe manner

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
Relevant crane movements	May include but not limited to: • telescope in and out • boom/jib up and down • slew boom/jib • operation of outriggers/stabilisers • raise and lower hoist • travel
Communication signals	May include but not limited to: • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle • slew left - hand • slew left - whistle • slew right - hand • slew right - whistle • travel - hand
Unplanned and/or unsafe situations	May include but not limited to: • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning, storms, etc.)
Planned route	May include but not limited to: • unusual or difficult terrains • obstacles or obstruction
Best mobile practice	May include but not limited to: • minimum speed

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• gentle acceleration and braking (to minimise load swing) • minimum boom/jib length • carrying the load near to the ground surface • boom/jib in line with the crane • boom/jib as low as possible • load faces uphill • use of handheld taglines
Shut Down	May include but not limited to: • retracting boom/jib • retracting hoist rope and hook block • positioning/securing boom/jib • retracting outriggers/stabilisers • idling engine to stabilise temperature • turning off engine (where applicable) • removing key from ignition (where applicable) • locking and securing cabin (where applicable)

TLILIC3013A Preparation to transport dangerous goods by road

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit addresses the skills and knowledge requirements for a driver to obtain a licence for the transport of dangerous goods by road.

Application of the Unit

Application of the Unit

The unit covers preparing to comply with regulatory requirements and does not address all the skills and knowledge for the transportation of dangerous goods. Upon achieving this unit and obtaining a licence, further industry specific training will be required to satisfy legislative requirements for the transportation of dangerous goods.

Licensing/Legislative Requirements

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to the transport of dangerous goods, the current version of the Australian code for the Transport of Dangerous Goods by Road and Rail (ADG Code), relevant Australian Standards (AS) and relevant Occupational Health and Safety (OH&S) legislation including licensing and assessment requirements.

Obtaining this competency is a necessary requirement for obtaining a Dangerous Goods Driver Licence. However, it is only one of several criteria for obtaining the licence. Registered training organisations must advise each prospective student that there are a number of non-competency related requirements that must be satisfied to meet the licensing requirements. Depending on the jurisdiction these may include: age limits; relevant and valid driver licence; suitable driver traffic history; satisfactory medical report; criminal history or suitable person check; English standard - Score 5 in International English Language Testing System (IELTS).

It is a licensing requirement that this course be conducted over two or more training days including a minimum of 16 hours of

© Commonwealth of Australia, 2025 Powering Skills Organisation

supervised training and assessment.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify individual organisations and systems for the transport of dangerous goods	1.1 Responsibilities and duties for the transport of dangerous goods are clearly defined, and allocated and included in job descriptions and duty statements for all relevant positions 1.2 Systems, organisations, and other persons that effect the transport of dangerous goods are identified
2 Identify UN numbers, UN classes and UN divisions of dangerous goods including packing groups	2.1 Proper shipping names and other relevant information from Dangerous Goods List are identified 2.2 UN class and UN division labels for dangerous goods are determined in accordance with the current ADG Code and regulatory requirements 2.3 Packing groups for dangerous goods are identified and assessed for their significance 2.4 The Dangerous Goods List is evaluated in relation to its special

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	provisions and other instructions
3 Check vehicle	3.1 The suitability of a transport vehicle to carry dangerous goods is assessed including roadworthiness, fittings and accessories, test date tags, knowledge of operation of control systems, awareness of mass, configuration, and other relevant requirements for the intended load
	3.2 The requirements for driver and vehicle licensing and how to check vehicle for licence and registration labels, and conformity with the current ADG Code and other regulatory requirements are identified
	3.3 Checks are made to determine that the transport vehicle has the correct placarding for the class or division of the intended load
4 Assess suitability of transport mode for intended load	4.1 The suitability of dangerous goods packaging is assessed to ensure that it is suitable for purpose, free from obvious defects and residue
	4.2 Ullage in large compartments is identified and assessed for compliance with the current ADG Code and regulatory requirements
	4.3 Transport documentation is checked to ensure that dangerous goods markings and vehicle placards are consistent with the load being carried and are legible and clearly visible
	4.4 Dangerous goods loads are checked for compatibility and segregation in accordance with regulatory requirements
5 Follow emergency procedures	5.1 Hazchem codes are understood and appropriately applied in emergency response situations
	5.2 Hazchem codes for a mixed load of dangerous goods are identified
	5.3 Emergency information required for the dangerous goods being transported is appropriately identified
	5.4 Driver's role and obligations in an emergency situation, are identified in accordance with a Transport Emergency Response Plan
	5.5 Appropriate communication to notify relevant personnel and emergency services is identified and applied
	5.6 Safety equipment is used for containment, clean up or recovery as appropriate
6 Check safety equipment and its use	6.1 Safety equipment is determined according to the type of dangerous goods being transported in accordance with current ADG Code and regulatory requirements
	6.2 The suitability and compliance of personal protective equipment required is assessed
	6.3 Personal protective equipment and safety equipment is used in

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	accordance with workplace and regulatory requirements
7 Maintain dangerous goods documentation	7.1 Transport documentation is accurate and completed in accordance with workplace and regulatory requirements including the current ADG Code
	7.2 Transport documentation is appropriately amended according to regulations and enterprise procedures
	7.3 Transport documentation is correctly located in the cabin in accordance with regulatory requirements
8 Secure and protect vehicle load	8.1 Load restraint method/s for the transport of dangerous goods in accordance with current ADG Code and other regulatory requirements are appropriately established
	8.2 Load restraint systems and securing points are inspected for suitability, excessive wear, and obvious defects
9 Plan, control and manage transfer of dangerous goods	9.1 Positioning of vehicle for dangerous goods bulk transfer is in accordance with current regulatory and enterprise procedures
	9.2 Suitable safety measures for each class of dangerous goods being transferred are identified
	9.3 Operation of battery isolation switches is clearly identified
	9.4 Transfer equipment and adequacy of lighting levels are identified and checked for compatibility
	9.5 Responsibilities of drivers during transfer of dangerous goods are identified
	9.6 Emergency procedures in the event of a spill or leak during transfer are identified
	9.7 Hoses used to transfer dangerous goods have been appropriately tested in accordance with regulatory requirements
10 Plan and manage safe transport of dangerous goods	10.1 Regulatory procedures for carrying passengers while transporting dangerous goods are identified
	10.2 Prohibited practices and the carrying of prohibited objects during transport are identified
	10.3 Regulatory and enterprise procedures for planning routes covering driving, parking, loading and unloading, uncoupling and/or securing the vehicle are assessed
	10.4 Transport routes are planned to ensure prohibited areas and restricted routes are observed
	10.5 Appropriate parking requirements are identified in accordance with regulatory requirements
	10.6 Regulatory requirements relating to the transport of empty or nominally empty packaging used to transport dangerous goods are identified in accordance with the current ADG code
	10.7 Regulatory and enterprise procedures and driver's role in vehicle breakdown situations are appropriately indentified and

ELEMENT	PERFORMANCE CRITERIA
	implemented

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- The current ADG Code and relevant state/territory dangerous goods legislation as they apply to vehicles transporting dangerous goods by road
- Procedures and guidelines concerning the transport of dangerous goods
- Risks associated with the transporting of dangerous goods by road and related precautions to control those risks
- Housekeeping standards and procedures required in the workplace
- Assess suitability of transport vehicles intending to carry dangerous goods
- Ability to read and interpret information on transport documentation including consignment/manifest sheets
- Plan appropriate transport routes and appropriate rest stops
- Methods of securing a vehicle following loading and unloading of dangerous goods, including bulk transfer of dangerous goods
- Relevant permit and/or licence requirements
- Ability to complete/amend appropriate documentation

Required skills:

- Ability to identify and correctly use equipment required for the bulk load/transfer of dangerous goods
- Ability to modify activities depending on differing workplace contexts, risk situations and environments
- Ability to read and comprehend simple statements in English (to Level 5, International English Language Testing System)
- Ability to identify dangerous goods labelling and placarding such as emergency information panels
- Ability to select and place appropriate placarding on vehicle/s transporting dangerous goods by road
- Ability to understand mass, volume and special requirements of a load
- Ability to identify and follow emergency procedures in the event of accident/incident

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required skills:

- Ability to use personal protection and safety equipment including eye wash kit
- Ability to identify/demonstrate appropriate load restraint methods

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying the following:
  - identify UN classes, UN division, packing group, class and subsidiary risk labels for dangerous goods
  - compliance with ADG and relevant dangerous goods legislation
  - determine proper shipping names for UN numbers
  - identify the level of risk within particular dangerous goods classes/divisions
  - identify other persons, organisations, systems involved in the transport of dangerous goods by road
  - identify the required information on a transport document for the transport of dangerous goods
  - identify emergency information document and its storage location
  - apply segregation methods to incompatible dangerous goods
  - demonstrate the ability to appropriately placard dangerous goods vehicles
  - identify required information on an emergency information panel
  - assess operational suitability of equipment and vehicles pertinent to dangerous goods transportation
  - locate, interpret and apply relevant information
  - select appropriate equipment and work systems to enable safe, efficient work

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

	• identify hazards and plan work to minimise risks when transporting dangerous goods • determine (if any) required permits • use appropriate communication strategies and equipment • maintain workplace records and documentation including completing dangerous goods declarations • identify and safely handle equipment and goods • apply hierarchy of hazard control
Context of and specific resources for assessment	• Assessment of this unit must be undertaken by a registered training organisation: • As a minimum, assessment of knowledge must be conducted through appropriate oral and/or written questioning • Appropriate practical assessment must occur at the registered training organisation, and/or in an appropriate work situation or realistic simulated work environment • Assessment is to comply with relevant regulatory requirements and correspond with the current version of the ADG Code and relevant Australian Standards in relation to the transport of dangerous goods by road
Method of assessment	• Assessment must be conducted using the Mandatory Assessment Instrument. This instrument includes requirements for application and is available from the relevant state/territory Competent Authority • Assessment must include questioning (verbal and/or written) • Assessment may be in conjunction with the assessment of other units of competency
Specific resources	• Access is required to opportunities to: • participate in a range of exercises, case studies and other real and/or three dimensional simulated practical and knowledge assessments that demonstrate the skills and knowledge to prepare for the transport of dangerous goods, and/or • prepare for the transport of dangerous goods by road in an appropriate range of operational situations • For the purpose of training and assessment all applicants must be provided or have direct access to a copy of the current ADG Code and relevant dangerous goods legislation for their state/territory • The Competent Authority may require RTOs to provide

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

	copies of learning materials used for training. The Competent Authority may disallow the use of any learning materials it considers unsuitable
Access and equity considerations	• All workers in the transport industry should be aware of access and equity issues in relation to their own area of work • All workers should develop their ability to work in a culturally diverse environment • Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander transport drivers and communities

Consistency of performance	• Applies underpinning knowledge and skills when:
	  • assessing operational suitability of equipment and vehicles pertinent to the transport of dangerous goods by road
	  • identifying class and subsidiary risk labels for dangerous goods
	  • estimating weight and dimensions of load and any special requirements
	  • selecting appropriate equipment and work systems to enable safe, efficient work
	  • identifying hazards and planning work to minimise risks when transporting dangerous goods by road
	  • determining required permits, approvals or licences to transport dangerous goods by road
	  • using appropriate communication strategies and equipment
	  • locating, interpreting and applying relevant information
	  • maintaining transport documentation, driving records and any other workplace records
	  • identifying and safely handling equipment and goods
	  • applying hierarchy of hazard control
	• Shows evidence of application of relevant transport procedures including:
	  • current state/territory dangerous goods legislation and procedures
	  • current ADG Code and associated Australian Standards
	  • current OH&S regulations and hazard prevention policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

- current workplace procedures and work instructions concerning the preparation and transport of dangerous goods by road
- relevant and current guidelines relating to the use of loading equipment
- current housekeeping procedures
- current environmental protection procedures when transporting dangerous goods by road

- Action is taken promptly to report any accidents, incidents or potential difficulties in the preparation and transport of dangerous goods by road in accordance with legislation and workplace procedures
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Work is completed systematically with required attention to detail without damage to goods, equipment or personnel

Guidance information for assessment

- Assessors must confirm the identity of the student at the time of each assessment component
- Team based assessment models must not be used for assessment of this competency unit
- The assessment must be conducted using the Mandatory Assessment Instrument nominated by the Competent Authority
- The assessment must be conducted in accordance with the requirements of the Competent Authority as specified in the Mandatory Assessment Instrument document and the accompanying assessment delivery guide
- The Mandatory Assessment Instrument challenge test is required for all forms of assessment including recognition of prior learning
- Further information about the Mandatory Assessment Instrument may be obtained from the Competent Authority in each state/territory
- It is a licensing requirement that assessors must satisfy the following requirements of the Competent Authority in addition to any requirements of the AQTF. Assessors must:
  - Pass an assessment test approved by the Competent Authority; and
  - Have at least 5 years relevant dangerous goods industry and operational experience; and

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

- Meet any additional mandatory skills or qualifications required by the Competent Authority; and
- Must not have been disallowed by a Competent Authority in any jurisdiction

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:	• in a range of work environments and weather conditions • by day or night
Customers may be:	• internal or external
Workplaces may comprise:	• large, medium or small worksites
Work may be conducted in:	• restricted spaces • exposed conditions • controlled or open environments
Vehicle refers to:	• all applicable transportation modes
Hazards in the work area may include exposure to:	• hazardous or dangerous materials • contamination of, or from, materials being handled • noise, light, energy sources • stationary and moving machinery, parts or components • service lines • spills, leakages, ruptures • dust/vapours
Hazard management is:	• consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
Personal protective equipment may include:	• gloves • safety headwear and footwear • safety glasses • mask or respirator • breathing apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

	• high visibility clothing
Load restraint systems are:	• as detailed in the National Load Restraint Guide
Preparation of packaged dangerous goods for transport may:	• require special precautions as specified by the manufacturer
Transport documentation may include:	• Transport Emergency Response Plan • Emergency Procedure Guide • Material Safety Data Sheet (MSDS) • descriptions for dangerous goods (i.e. proper shipping name, class and division number, packing group, subsidiary risk(s) if any) • UN or ID number
Requirements for work may include:	• site restrictions and procedures • use of safety and personal protective equipment • communications equipment • specialised lifting and/or handling equipment • incident breakdown procedures • additional gear and equipment • noise restrictions • hours of operation • authorities and permits
Consultative processes may involve:	• other employees and supervisors • suppliers, potential customers and existing clients • management and union representatives • industrial relations, OH&S specialists, and other maintenance, professional or technical staff
Communication in the work area may include:	• phone • electronic data interchange (EDI) • fax • email • internet • radio • oral, aural or signed communications
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:	• company procedures • enterprise procedures • organisational procedures • established procedures • site procedures
Safety equipment on vehicle may	• fire extinguishers

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

include:	• portable warning devices • eye wash kit
Information/documents may include:	• current Australian Dangerous Goods Code, relevant Australian and international Standards • manifests, bar codes, goods and product identification • manufacturers specifications for equipment/tools • workplace procedures and policies for the preparation and transport of dangerous goods • goods identification numbers, codes and signs • supplier and/or client instructions • award, enterprise bargaining agreement, other industrial arrangements • relevant standards and certification requirements • quality assurance procedures • emergency procedures • manufacturers specifications, instructions and labelling advice for the transport of dangerous goods, including material safety data sheets
Applicable regulations and legislation may include:	• state/territory mass and loading regulations • Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including current Australian and International Dangerous Goods Codes, Australian Marine Orders and the International Maritime Dangerous Goods Code and International Air Transport Association (IATA) Dangerous Goods by Air regulations • Australian and state/territory regulations related to the transport of dangerous goods by road • relevant Australian and international Standards • relevant state/territory environmental protection legislation • relevant state/territory OH&S legislation

TLILIC3017B Licence to drive a heavy combination vehicle

Modification History

New release. This unit replaces and is equivalent to TLILIC3017A.

Unit Descriptor

This unit involves the skills and knowledge required to obtain a licence to drive a heavy combination vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, coupling and uncoupling of trailer, and effectively managing hazardous situations.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

Application of the Unit

This unit applies to driving that is carried out in compliance with the licence requirements and regulations of the relevant state/territory driver licensing authority pertaining to heavy combination vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and operate a heavy combination vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Heavy Combination Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Heavy Combination Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	**Drive a heavy combination vehicle**	1.1 Heavy combination vehicle is started, steered, manoeuvred, positioned and stopped according to traffic regulations, manufacturer instructions and relevant vehicle handling procedures
		1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and gear damage
		1.3 Braking system of heavy combination vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
		1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
		1.5 Heavy combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
		1.6 Heavy combination vehicle is parked, shutdown, uncoupled and safely secured according to traffic regulations
		1.7 Load is safely and effectively restrained
2	**Monitor traffic and road conditions**	2.1 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
		2.2 Interaction with other road users is conducted courteously according to road rules to ensure safe and efficient traffic flow
3	**Monitor and maintain vehicle**	3.1 Vehicle performance is maintained through pre-operational inspections and vehicle checks

© Commonwealth of Australia, 2025 Powering Skills Organisation

performance	3.2 Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations
	3.3 Prime mover and trailer are correctly aligned and coupled
	3.4 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm it is fully operational

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Driving hazards and related defensive driving techniques
- Efficient driving techniques
- Engine power management and safe driving strategies
- Heavy combination vehicle controls, instruments and indicators and their use
- Heavy combination vehicle handling procedures
- Pre-operational checks carried out on vehicle and related action
- Relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements

Required skills:

- Anticipate and monitor and traffic hazards and take appropriate action
- Apply precautions and required action to eliminate, minimise or control hazards that may exist when driving a heavy combination vehicle
- Carry out pre-operational vehicle checks
- Communicate effectively with others when driving a heavy combination vehicle
- Monitor performance of vehicle, its trailers and its equipment, and take appropriate action where required
- Read and interpret instructions, procedures, information and signs relevant to driving a heavy combination vehicle

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include: • applying relevant procedures that reflect legislative requirements • negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings).
Context of and specific resources for assessment	Resources for assessment include access to: • range of relevant exercises, case studies and/or other simulated practical and knowledge assessment • appropriate range of relevant on-road operational situations or in the workplace • relevant and appropriate materials and equipment • applicable documentation such as workplace procedures, regulations, codes of practice and operation manuals.
Method of assessment	Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted. The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements. The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Heavy combination vehicle includes:	• Prime mover with a minimum of three axles and a semi-trailer with a minimum of two axles - vehicle must have a GCM rating of at least 24 tonnes • Heavy rigid vehicle towing a trailer - trailer must have at least two axles and a GVM of 12 tonnes or more
Vehicle handling procedures may include:	• Accelerating and braking • Managing engine performance • Operating vehicle controls, instruments and indicators • Positioning and stopping a vehicle

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• Reversing a vehicle • Starting a vehicle • Steering and manoeuvring a vehicle • Using defensive driving techniques

Driving hazards may include:	• Animals and objects on road
	• Faulty:
	  • brakes
	  • steering mechanism on vehicle
	• Fire in vehicle
	• Flooded sections of road
	• Foggy conditions
	• Leaking fuel
	• Oil on road
	• Parked vehicles on road
	• Pedestrians crossing road
	• Wet and iced roads
	• Windy sections of road

Traffic and road conditions may include:	• Negotiating a range of more complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings) • On open or private roads including roads with moderate inclines and declines • Operations conducted during the day or night • Typical weather conditions • While at a depot, base or warehouse • While at a client workplace or worksite

Pre-operational inspections and equipment checks may include:	• Checking and topping up fluid levels
	• Checking:
	  • brakes
	  • operation of vehicle lights and indicators
	  • tyre pressures
	• Visually checking vehicle

TLILIC3018B Licence to drive a multi combination vehicle

Modification History

New release. This unit replaces and is equivalent to TLILIC3018A.

Unit Descriptor

This unit involves the skills and knowledge required to obtain a licence to drive a multi-combination vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, coupling and uncoupling of dollies, and effectively managing hazardous situations.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

Application of the Unit

This unit applies to driving that is carried out in compliance with the licence requirements and regulations of the relevant state/territory driver licensing authority pertaining to multi-combination vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and operate a multi-combination vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Multi-Combination Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Multi-Combination Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	**Drive a multi-combination vehicle**	1.1 Multi-combination vehicle is started, steered, manoeuvred, positioned and stopped according to traffic regulations, manufacturer instructions and relevant vehicle handling procedures
		1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
		1.3 Braking system of multi-combination vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
		1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
		1.5 Multi-combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
		1.6 Multi-combination vehicle is parked, shutdown, uncoupled and safely secured according to traffic regulations
		1.7 Load is safely and effectively restrained
2	**Monitor traffic and road conditions**	2.1 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
		2.2 Interaction with other road users is conducted courteously according to road rules to ensure safe and efficient traffic flow
3	**Monitor and maintain vehicle**	3.1 Vehicle performance is maintained through pre-operational inspections and vehicle checks

© Commonwealth of Australia, 2025 Powering Skills Organisation

performance	3.2 Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations
	3.3 Prime mover, dollies and trailer are correctly aligned and coupled in proper sequence
	3.4 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm it is fully operational

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Driving hazards and related defensive driving techniques
- Efficient driving techniques
- Engine power management and safe driving strategies
- Multi-combination vehicle controls, instruments and indicators and their use
- Multi-combination vehicle handling procedures
- Pre-operational checks carried out on vehicle and related action
- Relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements

Required skills:

- Anticipate and monitor and traffic hazards and take appropriate action
- Apply precautions and required action to eliminate, minimise or control hazards that may exist when driving a multi-combination vehicle
- Carry out pre-operational vehicle checks
- Communicate effectively with others when driving a multi-combination vehicle
- Monitor performance of vehicle, its trailers and its equipment, and take appropriate action where required
- Read and interpret instructions, procedures, information and signs relevant to driving a multi-combination vehicle

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include: • applying relevant procedures that reflect legislative requirements • negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings).
Context of and specific resources for assessment	Resources for assessment include access to: • range of relevant exercises, case studies and/or other simulated practical and knowledge assessment • appropriate range of relevant on-road operational situations or in the workplace • relevant and appropriate materials and equipment • applicable documentation such as workplace procedures, regulations, codes of practice and operation manuals.
Method of assessment	Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted. The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements. The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Multi-combination vehicle includes:	• Heavy combination B-double rated vehicle at least 22 metres in length with more than one trailer, which has all pertinent documentation permits etc. • Three axle prime mover with an A and B trailer each with bogie axles
Vehicle handling procedures	• Accelerating and braking • Managing engine performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

may include:	• Operating vehicle controls, instruments and indicators • Positioning and stopping a vehicle • Reversing a vehicle • Starting a vehicle • Steering and manoeuvring a vehicle • Using defensive driving techniques

Driving hazards may include:	• Animals and objects on road
	• Faulty:
	  • brakes
	  • steering mechanism on vehicle
	• Fire in vehicle
	• Flooded sections of road
	• Foggy conditions
	• Leaking fuel
	• Oil on road
	• Parked vehicles on road
	• Pedestrians crossing road
	• Wet and iced roads
	• Windy sections of road

Traffic and road conditions may include:	• Negotiating a range of more complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings) • On open or private roads including roads with moderate inclines and declines • Operations conducted during the day or night • Typical weather conditions • While at a depot, base or warehouse • While at a client workplace or worksite

Pre-operational inspections and equipment checks may include:	• Checking and topping up fluid levels
	• Checking:
	  • brakes
	  • operation of vehicle lights and indicators
	  • tyre pressures
	• Visually checking vehicle

TLILIC4009A Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor	This unit specifies the outcomes required to operate a slewing mobile crane (up to 60 tonnes) for licensing purposes. It encompasses the requirement for the up to 20 tonnes licence.

Application of the Unit

Application of the Unit	This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane. This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency	*Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work	1.1 Potential workplace ***hazards*** are identified 1.2 ***Hazard control measures*** are identified consistent with ***appropriate standards*** to ensure the safety of personnel and equipment 1.3 The weight of the load is identified and estimated in consultation with ***associated personnel*** 1.4 The ***crane*** is ***appropriate*** to the load/s and workplace conditions 1.5 Appropriate paths for the movement of loads in the work area are inspected and determined 1.6 Appropriate ***communication methods*** are identified with ***associated personnel***
2. Conduct routine checks	2.1 ***Crane*** is visually checked for any damage or defects 2.2 ***Crane*** is accessed in a safe manner 2.3 All ***signage and labels*** are visible and legible according to the ***appropriate standard*** 2.4 Routine pre-operational crane checks are carried out according to ***procedures*** 2.5 All ***controls*** are located and identified 2.6 Crane ***service logbook*** is checked for compliance 2.7 ***Crane*** is started according to ***procedures*** and checked for any abnormal noises

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	2.8 All ***crane safety devices*** are tested according to ***procedures***
	2.9 Post-start operational checks are carried out according to ***procedures***
	2.10 All ***communication equipment*** is checked for serviceability
	2.11 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken
3. Set up cane	3.1 ***Ground suitability*** is checked
	3.2 ***Crane*** is driven to the work area according to ***procedures***
	3.3 ***Crane*** is positioned for work application and ***stability*** according to ***procedures***
	3.4 Appropriate ***crane configuration*** for work task is determined according to ***procedures*** (where applicable)
	3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required)
	3.6 Appropriate ***hazard prevention***/***control measures*** are applied to the work area according to ***procedures***
	3.7 All ***communications equipment*** is tested for functionality
4. Transfer load	4.1 Lifts are determined within the capacity of the crane
	4.2 Boom/jib and hoist block is positioned over load following directions from ***associated personnel***
	4.3 ***Test lift*** is carried out according to ***procedures***
	4.4 Loads are transferred using all ***relevant crane movements*** according to ***procedures*** and the ***appropriate standard***
	4.5 All required ***communication signals*** are correctly interpreted according to ***procedures*** and the ***appropriate standard***
	4.6 ***Crane*** is operated according to ***procedures***
	4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability
	4.8 ***Unplanned and/or unsafe*** situations are responded to in line with ***procedures***
5. Mobile load	5.1 Suitability of ***planned route*** is checked for the crane according to ***procedures***
	5.2 ***Crane*** is configured to mobile load according to ***procedures***
	5.3 Load is moved using ***best mobile practice*** according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	the ***appropriate standard***
6. Shut down and secure crane	6.1 ***Crane*** boom/jib and equipment are stowed and secured where appropriate according to ***procedures*** and the ***appropriate standard*** 6.2 Relevant motion locks and brakes are applied (where applicable) 6.3 Outriggers/stabilisers are stowed and secured according to ***procedures*** 6.4 Crane is ***shut down*** according to ***procedures*** 6.5 Plates or packing are stowed and secured 6.6 Routine post-operational crane checks are carried out according to ***procedures*** 6.7 All damage and defects are reported and recorded according to ***procedures***, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level required for this unit.
Required skills:
• Accurately record and maintain information relating to crane operations • Use communication techniques in the workplace including whistles, hand signals and use of two-way radios • Use interpersonal communication skills at a level sufficient to communicate with other site personnel • Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration • Operate a slewing mobile crane (21t up to 60t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel • Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability) • Use and interpret crane manufacturer's specifications and data, including load charts, to enable the crane to be configured for the load • Verify problems and equipment faults and demonstrate appropriate response procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge:
• Appropriate mathematical procedures for estimation and measurement of loads • Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class • Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs • Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads • Mobile slewing crane operating techniques • Understanding of the hierarchy of hazard identification and control • Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class • Procedures for the recording, reporting and maintenance of workplace records and information • Rated capacity and working load limits (including use of crane load charts) • Typical routine problems encountered in the process and with equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.	
Overview of assessment	• Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work. • State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Compliance with OH&S licensing legislation. • Effectively communicate and work safely with others in the work area. • Risk assessment and management procedures (particular awareness of the risks associated

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
	with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites). • Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 60 tonne capacity in conjunction with other associated personnel. • Appropriate mathematical procedures for estimation of loads.

Context of and specific resources for assessment	• Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
	• Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
	• Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
	• Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
	• Assessment is to comply with relevant appropriate standard requirements.
	• Applicants must have access to:
	  • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment.
	  • appropriate slewing mobile crane (21tonne up to 60 tonne) and associated equipment in safe condition
	  • suitable loads as specified by the endorsed Assessment Instrument
	  • communication equipment (e.g. two-way radios, whistles, etc.)
	  • other associated personnel to sling and direct the loads.

Method of assessment	• Assessment must be conducted using the

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE	
	endorsed Assessment Instruments. These Instruments provide advice on their application. • The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**. • Assessment may be in conjunction with the assessment of other units of competency. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.
Guidance information for assessment	• Further information about endorsed Assessment Instruments may be obtained from State/territory OH&S regulators.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.	
Hazards	May include but not limited to: • ground stability (e.g. ground condition, recently filled trenches, slopes) • overhead hazards (e.g. powerlines, service pipes) • traffic (e.g. pedestrians, vehicles, other plant) • insufficient lighting • environmental conditions (e.g. wind, lightning, storms, etc.) • other specific hazards (e.g. dangerous materials)
Hazard control measures	Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls It includes the application of the hierarchy of control, the six-step preference of control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	to manage and control risk: 1 elimination 2 substitution 3 isolation 4 engineering control measures 5 using safe work practices 6 personal protective equipment
Appropriate standard	May include: • codes of practice (mobile crane) • legislation • Australian standards • manufacturer's specifications • industry standards (where applicable)
Associated personnel	May include but not limited to: • riggers • doggers
Appropriate	May include but not limited to: • crane capabilities • environmental conditions (e.g. wind, lightning, storms, etc.)
Crane	May include a boom or jib, which is capable of being slewed (up to 60 tonnes capacity) The slewing mobile crane up to 60 tonnes classification encompasses the requirements for the up to 20 tonnes classification
Communication method	May include but not limited to: • verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Signage and labels	May include but not limited to: • crane data plates/labels • load charts

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• crane decals • control labels
Procedures	May include but not limited to: • manufacturer's guidelines (instructions, specifications or checklists) • industry operating procedures • workplace procedures (work instructions, operating procedures, checklists)
Controls	May include but not limited to: • luffing levers • hoisting and lowering levers • slewing levers including brake • boom extension levers (where fitted)
Service logbook	May include but not limited to: • any logbook • service book • history record system where the service and maintenance history is kept
Crane safety devices	May include but not limited to: • horns/sirens • audible and visual reversing devices • operator restraint devices • lights
Communication equipment	May include but not limited to: • fixed channel two-way radios • whistles • bells • buzzers NB: where radio communication equipment is used the transmitting frequencies of the equipment must be selected to prevent interference to or from other radio equipment being used in the vicinity of the crane
Ground suitability	May include but not limited to: • rough uneven ground • backfilled ground • soft soils

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• hard compacted soil • rock • bitumen • concrete
Stability	May include but not limited to: • deploying outriggers • establishing correct size plates or packing • correctly positioning plates or packing
Crane configuration	May include but not be limited to: • boom/jib • fly-jib • counterweights
Hazard prevention/control measures	May include but not limited to: • safety tags on electrical switches/isolators • powerlines insulated • safety observer used inside exclusion zone • power disconnected • traffic barricades and control • pedestrian barricades • trench covers • movement of obstructions • personal protective equipment • adequate illumination
Test lift	The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that: • near capacity loads do not overload the crane • loads of unusual shape or weight distribution are correctly slung • load measuring equipment can be used to verify the calculated weight of the load • all crane equipment is functioning properly • adjustments to the slinging can be made in a safe manner
Relevant crane movements	May include but not limited to: • telescope in and out • boom/jib up and down

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• slew boom/jib • operation of outriggers/stabilisers • raise and lower hoist • travel
Communication signals	May include but not limited to: • stop - hand • stop - whistle • hoist up - hand • hoist up - whistle • hoist down - hand • hoist down - whistle • luff boom down - hand • luff boom down - whistle • luff boom up - hand • luff boom up - whistle • telescope out - hand • telescope out - whistle • telescope in - hand • telescope in - whistle • slew left - hand • slew left - whistle • slew right - hand • slew right - whistle • travel - hand
Unplanned and/or unsafe situations	May include but not limited to: • failure/loss of control (e.g. brakes and steering) • failure of equipment (e.g. hydraulic system) • environmental conditions (e.g. wind, lightning, storms, etc.)
Planned route	May include but not limited to: • unusual or difficult terrains • obstacles or obstructions
Best mobile practice	May include but not limited to: • minimum speed • gentle acceleration and braking (to minimise load swing) • minimum boom/jib length • carrying the load near to the ground surface

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT	
	• boom/jib in line with the crane • boom/jib as low as possible • load faces uphill • use of handheld taglines
Shut down	May include but not limited to: • retracting boom/jib • retracting hoist rope and hook block • positioning/securing boom/jib • retracting outriggers/stabilisers • idling engine to stabilise temperature • turning off engine (where applicable) • removing key from ignition (where applicable) • locking and securing cabin (where applicable)

UEENEEC001B Maintain documentation

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the maintenance of the variety of documentation required to record work activities, purchases and expenses and compliance obligations. It encompasses documentation typically required in an electrotechnology enterprise, work instructions and procedures and time management.

Application of the Unit

Application of the Unit **2)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

There are no prerequisite competencies for this unit.

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to maintain documentation	1.1 Documentation requirements and methods for the organisation/enterprise are identified, obtained and understood
	1.2 Advice is sought from the work supervisor, when necessary, to ensure the work is correctly documented and coordinate d effectively with others
	1.3 Forms required to document work are obtained in accordance with established routines and procedures
	1.4 OHS risk assessment and control measures are documented before work is commenced in accordance with established routine/procedures.
2 Maintain documentation.	2.1 Activities are documented promptly and at the appropriate time in accordance with established routine/procedures
	2.2 Documentation is checked for accuracy and clarity and any anomalies corrected
	2.3 Where applicable, signature is obtained from an appropriate person and the person's identification documented
	2.4 Where applicable, a copy of any required documentation is forwarded to an appropriate person in accordance with established routine/procedures
	2.5 Procedures for referring non-routine events to immediate supervisor for directions are followed

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

maintaining documentation.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EC001B Maintaining documentation

Evidence shall show an understanding of maintaining documentation to an extent indicated by the following aspects:

T1. Enterprise communication methods encompassing:

- Communicating with personnel encompassing:
  - Oral communications
  - Written procedures and work instructions
- Communicating with suppliers
- Communicating with customers

T2. Work activities records encompassing:

- Purpose and extent of maintaining work activities records in an enterprise
- Types of records for maintaining work activities in an enterprise
- Methods for recording and maintaining work records
- Work records required by regulation requirements

T3. Using basic computers and applications encompassing:

- Starting up
- Selecting application
- Entering information
- Saving
- Printing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1)** Longitudinal competency development approaches to

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Maintain documentation in any electrotechnology enterprise information system, including:

    A Following enterprise documentation requirements.

    B Enabling documentation to communicate clearly to others.

    C Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to maintaining documentation.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by maintaining documentation in any electrotechnology enterprise information system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to use computer applications.	1.1	OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
		1.2	Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
		1.3	Information required for the use of the application is obtained from appropriate sources.
		1.4	Computer is started up and desktop icons are manipulated to access desired application, directories and files.
		1.5	On-screen instructions in relation to any anomaly such as a virus warning are followed.
		1.6	Help directory is used to resolve any straightforward start up or access issues or anomalies.
2	Use computer basic application.	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Information is added, altered or deleted as needed in accordance with application user instructions.
		2.3	Routine checks are made to ensure accuracy of information in accordance with quality requirements.
3	Output information	3.1	Completed files are stored appropriately in

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Use basic computer applications relevant to workplace as described in 8) and including:

A	Correctly starting-up a computer.
B	Dealing with anomalies appropriately.
C	Following application instructions to input and output information.
D	Storing information appropriately.

© Commonwealth of Australia, 2025 Powering Skills Organisation

E	Outputting information to a printer.
F	Forwarding information via email and/or web mail in a readable format.
G	Producing, storing and forwarding engineering related reports and/or results using at least three computer applications according to requirements
H	Shutting down a computer correctly
I	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency to produce, store and forward engineering related reports and/or results using a range of

© Commonwealth of Australia, 2025 Powering Skills Organisation

computer applications.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to at least three of the following using computer applications to produce, store and forward engineering related reports and/or results at a basic level.

- Word processing
- Spread sheet
- Drawings
- Business management
- Apparatus set-up
- Note:

Apparatus set-up applications are invariably vendor specific and include

outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for dismantling, assembling and fabrication work.	1.1 OHS procedures for a given work area are obtained and understood through established routines and procedures.
	1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazard not previously identified are reported and advice on risk control measures is sought from the work supervisor.
	1.4 The nature of the work is obtained from documentation and from work supervisor to establish the scope of work to be undertaken.
	1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.6 Materials required for the work are obtained in accordance with established routines and procedures.
	1.7 Tools, equipment and measuring devices needed to carry out the work are obtained and checked for correct operation and safety.
	1.8 Cutting tools such as drills and chisels are sharpened to suit the material on which they are to be used.
2 Dismantle and assemble utilities industry apparatus.	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.3 Appropriate tools are selected and used correctly and safely in dismantling and assembling apparatus.
	2.4 Manufacturer apparatus dismantling and assembling guides are used where applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.5	Components are marked or tagged during the dismantling to help ensure correct and efficient reassembly.
		2.6	Dismantled components and parts are stored to protect them against loss or damage.
		2.7	Apparatus is dismantled and assembled efficiently without waste of materials and energy and/or damage to apparatus and the surrounding environment or services.
		2.8	Procedures for referring non-routine events to immediate supervisor for directions are followed.
		2.9	Routine quality checks are carried out in accordance with work instructions.
		2.10	OHS risk control work completion measures and procedures are followed.
		2.11	Work site is cleaned and made safe in accordance with established procedures.
		2.12	Work supervisor is notified of the completion of the work in accordance with established procedures.
3	Fabricate utilities industry components.	3.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		3.2	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		3.3	Appropriate tools are selected and used correctly and safely in fabricating components.
		3.4	Drawings and instruction for the fabrication of components are followed.
		3.5	Component dimensions are determined directly or by calculation from information given in job drawings and instructions.
		3.6	Components are fabricated efficiently without waste of materials and energy and/or damage to the surrounding environment or services.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.7	Procedures for referring non-routine events to immediate supervisor for directions are followed.
	3.8	Routine quality checks are carried out in accordance with work instructions.
	3.9	OHS risk control work completion measures and procedures are followed.
	3.10	Work site is cleaned and made safe in accordance with established procedures.
	3.11	Work supervisor is notified of the completion of the work in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fabricating, dismantling, assembling of utilities industry components.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE102A Hand and power tools and their application

Evidence shall show an understanding of hand and power tools and their application to an extent indicated by the following aspects:

T1 Mechanical drawing interpretation and sketching encompassing:

- drawing standards and conventions used in drawings of mechanical components as specified in AS1100
- basic abbreviations and symbols used in drawing of mechanical components
- interpretation of mechanical drawings commonly used in the electrotechnology industry (orthogonal projection, third angle - detail and assembly drawings, pictorial views)
- laying out a drawing of mechanical components using engineering drawing convention.
- freehand drawings of mechanical components showing all information needed for its manufacture/fabrication

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T2 Workshop planning and materials encompassing:

- methods used to work safely in an industrial work environment.
- typical non-electrical hazards in the workplace
- control measures for dealing with hazards identified.
- Conducting a risk assessment on a given work environment, documenting and assessing the risks identified
- type of metallic and non-metallic materials used in the electrotechnology industry and application of the common materials
- planning process

T3 Measuring and marking out encompassing:

- reasons for measuring and marking out
- tools used for marking out
- measuring and marking out a project accurately following correct procedures.
- sustainable energy work practices related to reducing waste when marking out.

T4 Holding and cutting encompassing:

- common tools for holding (bench vices, multi-grips, vice grips, wrenches).
- common tools for cutting metallic and non-metallic material (hacksaws, wood saws, chisels, pliers, files)
- procedure for using a range of tools for cutting, shaping, and finishing metallic and non-metallic materials
- safety procedures when using holding and cutting tools

T5 Drills and drilling encompassing:

- types of drills used in the electrotechnology industry
- sharpening twist drills
- drilling metallic and non-metallic components
- safe use of a bench drill

T6 Tapping and threading encompassing:

- type and size of commonly used threads used in electrotechnology work
- taps and tap wrenches
- tapping metallic and non-metallic components
- stock and die tools
- threading metallic and non-metallic components

T7 General Hand Tools encompassing:

- hammers used in electrotechnology work
- screwdrivers used in electrotechnology work
- spanners and sockets used in electrotechnology work
- pliers used in electrotechnology work
- assembling components applicable to electrotechnology industry using a variety of

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

hand tools.

T8 Joining techniques encompassing:

- types of machine screws and nuts
- forms of welding (Oxy-acetylene, electric arc welding).
- forms of brazing and hard soldering
- process of soft soldering
- joining components using machine screws
- joining components using welding, brazing or soldering techniques

T9 Portable electric power tools encompassing:

- portable electric power tools (grinders, drills, jigsaws, saws)
- applications of portable electric power tools used in the electrotechnology work.
- using portable power tools.
- fabricating components using power tools (drills, grinders)

T10 Sheet metal work encompassing:

- types of sheet metal materials used in the electrotechnology work.
- names and applications of the types of fabrication materials.
- tools used with sheet metals in electrotechnology work (hacksaw, tinsnips, guillotines, punches, notching tools, folding machines)
- techniques used in fabricating sheet metal (cutting, bending, drilling/punching, joining, cutting mitres).
- marking out, cutting, bending, drilling and/or cutting and/or punching holes, joining and cutting mitred joints using sheet metal.
- sustainable energy work practices to reducing waste when fabricating using sheet metal.
- fabricating components using sheet metal and fabrication tools.

T11 Low tolerance measurement encompassing:

- tolerance
- techniques in using vernier callipers
- techniques in using micrometers.
- using vernier callipers to measure engineering components
- using micrometers to measuring engineering components

T12 Dismantling and assembly techniques encompassing:

- tools used in dismantling and assembling electrotechnology equipment (spanners, screwdrivers, bearing pullers, etc).
- procedures for ensuring the safe treatment of dismantled components.
- dismantling electrical, electronic, instrumentation or refrigeration/air conditioning piece of equipment using correct procedures.
- assembling electrical, electronic, instrumentation or refrigeration/air conditioning piece of equipment using correct procedures.

Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Fabricate, dismantle, assemble of utilities industry components as described in 8) and including:

    A Selecting and using hand tools appropriate to a task correctly and safely

    B Selecting and using power tools appropriate to a task correctly and safely

    C Sharpening at least two drill bits each for use different types of material.

EVIDENCE GUIDE

D Interpreting mechanical drawings/diagrams and instructions correctly.

E Dismantle and assemble an apparatus relevant to utilities industry discipline in which competency is sought.

F Fabricate a component relevant to the utilities industry discipline in which competency is sought.

G Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to dismantling, assembling and fabricating utilities industry components.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent

EVIDENCE GUIDE

assessment and relationship with other units	For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation, fault finding, maintenance, repair or development work functions in any of the following disciplines:

- Electrotechnology Disciplines
- Gas industry Disciplines
- ESI Transmission, Distribution and Rail Disciplines
- ESI Generation Disciplines

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

Unit Descriptor **1**)

1.1) **Descriptor**

This unit covers the use of drawings, diagrams, cable schedules, standards, codes and specifications as they apply to the various electrotechnology work functions. It encompasses the rudiments for communicating with schematic, wiring and mechanical diagrams and equipment and cable/connection schedules, manuals, site and architectural drawings and plans showing the location of services, apparatus, plant and machinery and understanding the use and format of compliance standards and job specifications.

Application of the Unit

Not Applicable

Licensing/Regulatory Information

1.2) **License to practice**

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to use drawings, diagrams, schedules and manuals.	1.1	Established OHS risk control measures and procedures are followed.
		1.2	The need for drawings, diagrams, schedules or manuals is determined from the nature of the work to be undertaken.
		1.3	Established routines and procedures are followed to obtain drawings, diagrams, schedules or manuals required for the work to be undertaken.
2	Use drawings, diagrams, schedules and manuals to obtain job information.	2.1	Drawings, diagrams, schedules and/or manuals are selected, appropriate to the work being undertaken.
		2.2	Drawings, diagrams and schedules are interpreted using knowledge of drawing layouts, conventions and symbols.
		2.3	Dimensions are extracted from drawings and diagrams for application to work undertaken.
		2.4	Location of equipment is determined from equipment schedules and location diagrams.
		2.5	Manuals are reviewed to ascertain their format and where information relevant to the work to be undertaken is located.
		2.6	Information given in manuals is interpreted in relation to the work to be undertaken.
3	Use drawings, diagrams, schedules and manuals to	3.1	Drawing conventions are used in neat freehand drawings to convey information and ideas to others involved in the work to be undertaken.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
convey information and ideas.	3.2	Drawing conventions are used to neatly correct freehand original job drawing to show final 'as-installed' arrangement.
	3.3	Corrected drawings are forwarded to appropriate person(s) in accordance with established procedures.
4 Prepare to use compliance standards, codes and specifications.	4.1	Compliance Standards and Codes that apply to particular disciplines are sought and obtained.
	4.2	The format of compliance Standards and Codes that apply to particular disciplines are reviewed and understood.
	4.3	The purpose and format and typical content of job specifications are reviewed and understood.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using drawings, diagrams, cable schedules, standards, codes and specifications.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

KS01-EE107A Drawings, diagrams and schedules

Evidence shall show an understanding of drawings, diagrams and schedules used in electrotechnology work to an extent indicated by the following aspects:

T1 Architectural drawings encompassing:

- site plans, floor plans detailed drawings and standard drawings
- architectural floor plan to determine the power and lighting or communications / audio/ video layouts required in a domestic installation
- site plan to locate the service point, consumers mains, communication services, main switchboard, distribution boards and/or builders supplies.
- standard drawing scales to determine the actual lengths represented by dimensions on an architectural drawing.
- reading and interpretation of floor plans to determine the location of the electrical/

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

communication/audio accessories and appliances.

- Australian standard symbols used on floor plans to show the location of the accessories and appliances as detailed in an electrical schedule.

T2 Electrical drawings encompassing:

- types of electrical drawings: block, circuit, wiring and ladder diagrams
- purpose and application of block, circuit, wiring diagrams and ladder diagrams
- Australian standard symbols used to represent components on electrical diagrams.
- conventions used in and the features of circuit diagrams
- converting a circuit diagram to a wiring diagram
- identification of cable type, origin and route from a cable schedule.
- developing a cable schedule for a given installation.

T3 Circuit diagrams encompassing:

- purpose of circuit diagrams in the electrotechnology industry
- conventions used in and the features of circuit diagrams
- sketching basic circuit diagrams
- common symbols used in circuit diagram (Australian Drawing Standard AS/NZS 1102)
- developing switching charts to identify the terminals of various types of switches
- connecting equipment using circuit diagrams.

T4 Wiring diagrams encompassing:

- purpose of wiring diagrams in the electrotechnology industry
- conventions used in and the features of wiring diagrams
- sketching basic wiring diagrams
- common symbols used in wiring diagram (Australian Drawing Standard AS/NZS 1102)
- connecting equipment using wiring diagrams.

T5 Building construction drawings and diagrams encompassing:

- building types: timber frame, brick veneer, double brick and metal frame.
- identification of different types of: footings, floors, external walls, roofs, interior walls
- typical cable routes through buildings, structures and premises
- sequence of each constructional stage for brick, brick veneer and timber cottages
- identification of the stages at which the electrical/communications - first and second fixing occurs in the constructional sequence
- areas of cooperation between electrical/communications and other building trades

KS02-EE107A Introduction to regulations, compliance standards and codes

Evidence shall show an understanding of regulations, compliance standards and codes that apply to electrical work to an extent indicated by the following aspects:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T1 Regulation for undertaking electrical work encompassing:

- scope of work covered by licensing in the electrotechnology industry (Electrical licensing)
- legislative requirements for ensuring electrical or electronic equipment is safe i.e. compliance requirements of electrical installations

T2 Standards philosophy and format encompassing:

- performance verses prescriptive requirements
- purpose of technical standards and their development
- role of standards Australia/New Zealand, International Organisation for Standardisation (ISO) and the International Electrotechnical Commission (IEC)
- how standards are used in compulsory and accreditation compliance schemes.
- arrangement and use of technical standards in relation to electrical and electronic work
- how to read and apply a standard.
- Standards and codes that apply to all types of electrical installations
- Standards include Standards mandated under regulation (e.g. Wiring Rules) or by an authority, deemed-to-comply standard and local service requirements (e.g. Service rules).
- Codes include those applicable to electrical safe working practices and some aspects of the Building Code of Australia.

T3 Purpose, format and content of typical job specifications encompassing:

- NATSPEC specification system - provide the most common templates on which job specification are written.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1**) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.**2**)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Use drawings, diagrams, schedules, standards, codes and specifications as described in 8) Range and including:

    A Identifying drawings, diagrams, schedules and manuals relevant to the work to be undertaken.

    B Interpreting drawings, diagrams, schedules and manuals correctly.

    C Using correct conventions in freehand drawings.

    D Giving correct information in freehand drawings.

    E Obtaining compliance Standards and Codes applicable to particular disciplines

    F Reviewing and understanding the format of compliance Standards and Codes that apply to particular disciplines

    G Reviewing the format and content of typical job specifications.

    H Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment

EVIDENCE GUIDE

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to using drawings, diagrams, schedules and manuals.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering the use of drawings, diagrams, schedules, standards, codes or specifications is required.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembly, installation, fault finding, maintenance or development work functions in any of the following disciplines:

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the mandatory requirements of persons in a supervisory role to implement and monitor an organisation's occupational health and safety policies, procedures and programs. It encompasses understanding an organisation's OHS obligations, providing safety information to staff, implementing and monitoring participative arrangements, safety procedures and training and maintaining safety records.

Application of the Unit

Application of the Unit **2)**

This unit addresses information, processes and techniques for the application of general occupational health and safety requirements in workplaces and is essential for employees work supervisory responsibilities. The unit is based on Generic Competency A in the National Guidelines for Integrating OHS Competencies into National Industry Competency Standards [NOHSC: 7025 (1998) 2nd Edition].

Note:
All States/Territories and the Commonwealth have enacted legislation that establishes a general duty of care for workplace parties to ensure healthy and safe working conditions. In most workplaces, the final responsibility for providing a healthy and safe working environment, as far as practicable, rests with the employer. Employees also have a duty of care in relation to OHS that ensures their health and safety and that of others in the

© Commonwealth of Australia, 2025 Powering Skills Organisation

workplace. The relevant jurisdictional OHS legislation should always be consulted to ascertain the exact duties set down for employers and employees.

Licensing/Regulatory Information

License to practice **3)**

The competency described in this unit does not directly require a license to practice but is subject to regulations for occupational health and safe and contracts of training where they apply.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

There are no prerequisite competencies for this unit.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Provide OHS information to the work group.	1.1 Relevant provisions of occupational health and safety legislation and codes of practice are accurately and clearly explained to the work group.
	1.2 Information on the organisation's occupational health and safety policies, procedures and programs is provided in a readily accessible manner and is accurately and clearly explained to the work group.
	1.3. Information about identified hazards and the outcomes of risk assessment and risk control procedures is regularly provided and is accurately and clearly explained to the work group.
2 Implement and monitor participative arrangements for the management of OHS.	2.1 Organisational procedures for consultation over occupational health and safety issues are implemented and monitored to ensure that all members of the work group have the opportunity to contribute.
	2.2 Issues raised through consultation are dealt with and resolved promptly or referred to the appropriate personnel for resolution in accordance with workplace procedures for issue

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		resolution.
	2.3	The outcomes of consultation over occupational health and safety issues are made known to the work group promptly.
3. Implement and monitor the procedures for identifying hazards, assessing risk and controlling risks.	3.1	Existing and potential hazards in the work area are identified and reported so that risk assessment and risk control procedures can be applied.
	3.2	Work procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures.
	3.3	Existing procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures.
	3.4	Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control and reported to designated personnel.
	3.5	Inadequacies in resource allocation for implementation of risk control measures identified and reported to designated personnel.
4 Implement the procedures for dealing with hazardous events.	4.1	Workplace procedures for dealing with hazardous events are implemented whenever necessary to ensure that prompt control action is taken.
	4.2	Hazardous events are investigated to identify their cause in accordance with investigation procedures.
	4.3	Control measures to prevent recurrence and minimise risks of hazardous events are implemented based on the hierarchy of control if within scope of responsibilities and competencies or alternatively referred to designated personnel for implementation.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
5 Implement and monitor the procedures for OHS training.	5.1 Occupational health and safety training needs are identified accurately, specifying gaps between occupational health and safety competencies required and those held by work group members.
	5.2 Arrangements are made for fulfilling identified occupational health and safety training needs in both on and off-the-job training programs in consultation with relevant parties.
6 Implement and monitor the procedures for maintaining OHS records.	6.1 Occupational health and safety records for work area are accurately and legibly completed in accordance with workplace requirements for occupational health and safety records and legal requirements for the maintenance of records of occupational injury and disease.
	6.2 Aggregate information from the area's occupational health and safety records is used to identify hazards and monitor risk control procedures within work according to organisational procedures and within scope of responsibilities and competencies.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and implementing and monitoring energy sector OHS policies and procedures

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EE117A Energy sector Occupational Health and Safety, supervisory responsibilities

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

T1 Provisions of relevant occupational health and safety legislation

T2 Principles and practice of effective occupational health and safety management

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T3 Workplace hazards, range and selection of control measures

T4 Organisational health and safety management systems and policies and procedures needed for legislative compliance

T5 Impact of characteristics and composition of the workforce on occupational health and safety management

T6 Relevance of occupational health and safety management to other organisational management policies, procedures and systems.

T7 Analysis of entire work environment and judge occupational health and safety interventions

T8 Analysis of relevant workplace data

T9 Ability to assess resources needed for risk control.

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

© Commonwealth of Australia, 2025 Powering Skills Organisation

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge

© Commonwealth of Australia, 2025 Powering Skills Organisation

and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Implement and monitor energy sector OHS policies and procedures as described in 8) and including:

A Providing OHS information to the work group.

B Implementing and monitoring participative arrangements for the management of OHS.

C Implementing and monitoring the procedures for identifying procedures for identifying hazards, assessing risks and controlling risks.

D Implementing the procedures for dealing with hazardous events.

E Implementing and monitoring the procedures for OHS.

F Implementing and monitoring the procedures for maintaining OHS records.

G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to implementing and monitoring energy sector OHS policies and procedures.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to implementing and monitoring energy sector OHS policies and procedures with the following attributes:

- organisation's OHS obligations
- safety information to staff
- participative arrangements implementation and monitoring
- safety procedures
- training
- safety records maintained

Implementing and monitoring the mandatory requirements of persons in a supervisory role an organisation's occupational health and safety policies, procedures and programs shall be demonstrated in the following:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Implementation of OHS and the specific safety procedures and work instructions for particular workplace

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEENEEM020A Attend to breakdowns in hazardous areas - gas atmospheres

Modification History

Unit Descriptor

Unit Descriptor **1**)

1.1) **Descriptor**

This unit covers the explosion-protection aspects of attending to a breakdown in a hazardous area or of explosion-protected and associated equipment. It requires the ability to ascertain the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown.

This unit is directly equivalent to the Unit *2.3 Attend to breakdowns in hazardous areas* in the Australian/New Zealand Standard *AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas* (*EEHA*) *Part 1*: *Competency Standards*. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Application of the Unit

Application of the Unit **4**)

This unit augments other formally-acquired competencies in a relevant industry and shall be used only in conjunction such competencies and is intended to apply to plant/equipment service and maintenance job functions in the disciplines of electrical, instrumentation, communication or at AQF 3 or higher. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) **2)**

2.1) Competencies

Granting competency in this unit shall be made after or concurrently with confirming competency in any one of the following units.

UEENEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area

AND

Competencies in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent. Examples are (but not limited to):

UEENEEG005B	Verify compliance and functionality of general electrical installations
UEENEEI012B	Verify compliance and functionality of process control installations
MEM7.1B	Perform operational maintenance of machines/equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **3)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to attend breakdown.	1.1 Nature of the breakdown is confirmed with appropriate personnel to establish the need to enter the hazardous area.
	1.2 Maintenance records of equipment related to the reported breakdown are review for possible causes.
	1.3 Safety to enter the hazardous area is established in accordance with established procedures and relevant clearance to do the work is obtained.
	1.4 Testing devices and tools, anticipated as being needed for the work, are obtained and checked for correct operation and safety.
2 Evaluate extent of work.	2.1 OHS policies and procedures for working in a hazardous area are followed.
	2.2 Extent of breakdown is evaluated and confirmed with appropriate personnel.
	2.3 Other personnel required to determine cause and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		rectify breakdown is ascertained from available evidence and arrangements made for their attendance where applicable.
	2.4	Extent of repair work is ascertained from available evidence and confirmed with appropriate personnel.
	2.5	Limits of repair work that can be carried out in-situ are established with regards to explosion risk and in accordance with established procedures and requirements.
3 Arrange repair work.	3.1	Equipment is isolated in accordance with established procedures.
	3.2	Circuits of equipment being withdrawn from service are terminated or isolated safely and in manner approved for the classification of the area.
	3.3	Certification documentation for replacement equipment is sighted to ensure that it is identical with the equipment it replaces and is in accordance with the explosion-protection system design.
	3.4	Repair work carried out in-situ is done in accordance with established procedures and requirements.
4 Confirm completion of work.	4.1	Explosion-protected equipment and systems are inspected and tested by appropriately qualified personnel after repairs are completed to ensure the integrity of the system.
	4.2	Appropriate personnel are notified of the completion of the repair work and details are documented in accordance with established procedures and requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and attending to breakdowns in hazardous areas.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EM020 Explosion protection, certification and techniques A

Evidence shall show an understanding of Ex certification schemes and techniques to accepted Standards to an extent indicated by the following aspects:

T1 Explosion-protection equipment — Ex certification schemes encompassing:

- Purpose and scope of certification schemes.
- Schemes accepted in Australia and New Zealand.
- Schemes commonly used in countries other than Australia and New Zealand.
- Processes for having equipment certified under the acceptable Ex schemes — scheme procedures; quality management requirements; conformance testing and assessment; and requirements for ongoing certification.

T2 Flameproof (Ex ‘d’) explosion-protection technique encompassing:

- The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex ‘d’) technique. (Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries).
- Typical situations where the flameproof explosion-protection technique is used;
- Actions or conditions that would void the protection provided the Flameproof technique;
- The use of Standards in determining the requirements to which the installation of flameproof explosion-protected apparatus shall comply.

T3 Increased safety (Ex ‘e’) explosion-protection technique encompassing:

- The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex ‘e’) technique (Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries).
- Typical situations where the Increased safety explosion-protection technique is used;

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Actions or conditions that would void the protection provided the Increased safety technique;
- The use of Standards in determining the requirements to which the installation of Increased safety explosion-protected apparatus shall comply.

T4 Non-sparking (Ex ‘n’) explosion-protection technique encompassing:

- The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex ‘n’) technique (Examples of characteristics and design features are creepage and clearance distances and restricted breathing).
- Typical situations where the Non-sparking explosion-protection technique is used;
- Actions or conditions that would void the protection provided the Non-sparking technique; and
- The use of Standards in determining the requirements to which the installation of Non-sparking explosion-protected apparatus shall comply.

T5 Intrinsic safety (Ex ‘i’) explosion-protection technique encompassing:

- The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex ‘i’) technique (Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances).
- Typical situations where the Intrinsic safety explosion-protection technique is used;
- Actions or conditions that would void the protection provided the Intrinsic safety;
- The use of Standards in determining the requirements to which the installation of Intrinsic safety explosion-protected apparatus shall comply.

T6 Pressurization (Ex ‘p’) explosion-protection technique encompassing:

- The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex ‘p’) technique (Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release).
- Typical situations where the pressurization explosion-protection technique is used;
- Actions or conditions that would void the protection provided the pressurization technique;
- The use of Standards in determining the requirements to which the installation of pressurization explosion-protected apparatus shall comply.

T7 Enclosures for dusts (Ex ‘tD’) - explosion-protection technique encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts (Examples of characteristics and design features are for enclosures; pressurization; encapsulation; and intrinsic safety).
- Typical situations where the each dust explosion-protection technique is used;
- Actions or conditions that would void the protection provided the each dust technique;
- The use of Standards in determining the requirements to which the installation of dust explosion-protected apparatus shall comply.

T8 Common characteristics of explosion-protection techniques encompassing:

- The purposes of ‘temperature classification’ and ‘gas grouping/apparatus grouping’.
- Compliance plate markings.
- Limitations of non-metallic or specific alloy enclosures.
- The purpose of conformity and certification/approval for equipment used in hazardous areas.
- Environmental conditions that may impact on explosion-protection techniques.
- The principles and applications of other and mixed explosion-protection techniques (Other techniques include encapsulation Ex ‘m’; oil-immersion Ex ‘o’; powder-filling Ex ‘q’, ventilation Ex ‘v’ and special protection Ex ‘s’).
- Features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (These include conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires).

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Attend to breakdowns in hazardous areas as described in 8) and including:
    - A Following work permits and clearance procedures
    - B Monitoring hazards and following evacuation procedures
    - C Following plant and electrical isolation procedures
    - D Correctly evaluating extent of breakdowns
    - E Interpreting certification documentation in relation to repair and replacement
    - F Following established breakdown procedures
    - G Applying relevant contingency management skills

Context of and specific resources for assessment

9.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to attending to breakdowns in hazardous areas.

Method of assessment

9.**4**)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.**5**)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area

Competency unit in attending to breakdowns in general electrical or instrumentation equipment mechanical plant/equipment service and maintenance at least at AQF 3 or equivalent chosen as a prerequisite.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

This unit shall be demonstrated in relation to any classified gas hazardous area and all the following explosion-protection techniques:

- Flameproof, (Ex 'd')
- Increased safety, (Ex 'e')
- Intrinsic safety, (Ex 'i')
- Non-sparking, (Ex 'n')

The following constants and variables included in the element/performance criteria in this unit are fully described in the Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Unit Descriptor

Unit Descriptor **1**)

1.1) **Descriptor**

This unit covers the gas detection aspects of ensuring a work place is safe from explosive and toxic gases and vapours. It requires the ability to use measuring instruments accurately, follow written instructions and to write instructions for others.

This unit is directly equivalent to the Unit *2.4 Use and maintain the integrity of portable gas detection devices* in the Australian/New Zealand Standard *AS/NZS 4761.1 Competencies for working with electrical equipment for hazardous areas* (*EEHA*) *Part 1*: *Competency Standards*. Equivalence includes endorsement in the explosion-protection techniques listed in the Range statement of this unit.

Application of the Unit

Application of the Unit **4**)

This unit augments other formally-acquired competencies in a relevant industry and shall be used only in conjunction such competencies. It applies to job function that requires entry to a designated hazardous area to undertake repair, maintenance or construction work at AQF 3 level or higher. It is suitable for employment-based programs under an approved contract of training.

Note:

Examples of relevant industries include aviations, electrical installation and maintenance, fuel storage and dispensing industrial process, instrumentation and control,

© Commonwealth of Australia, 2025 Powering Skills Organisation

Application of the Unit **4**)

marine, material handling and storage, mining, and petrochemical.

Licensing/Regulatory Information

1.**2**) **License to practice**

The skills and knowledge described in this unit require a license to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) **2)**

2.1) Competencies

Granting competency in this unit shall be made after or concurrently with confirming competency in any one of the following units.

UEENEEM080A	Report on the integrity of explosion-protected equipment in a hazardous area

AND

Competencies required by a given industry or enterprise for plant or machinery operation or installations, maintenance or service functions at least at AQF 2 or equivalent.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **3**)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to use portable gas detection device.	1.1 The need to initiate gas detection is identified by OHS requirements and established procedures.
	1.2 The gas or vapour to be detected is established from plant/site records or consultation with relevant personnel.
	1.3 Gas detection device(s) for the gas/vapour to be detected is/are checked for calibration and response in accordance with manufacturer instructions.
	1.4 Gas detection devices are checked for factors that could nullify the Ex rating. Note: This would include damaged casing, use of incorrect batteries and/or chargers, use of incorrect spare parts and accessories.
2 Establish safety of the area with regards to the presence of gases	2.1 OHS policies and procedures relating to gas/vapour detection are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	or vapours.	
	2.2	Gas detection device is used in accordance with manufacturer instructions and with regards to environmental conditions.
	2.3	Observations of gas detection readings are recorded in accordance with established procedures.
	2.4	Safe-to-work is determined from gas detection reading and then clearance to work is issued in accordance with established procedures.
3 Monitor gas detection devices for the presence of gases/vapours.	3.1	The frequency of monitoring is determined from the nature of gas/vapour and the effect of environmental and local conditions (e.g. ambient temperature rise, density of gas/vapour, flash point, dew point and detector position).
	3.2	Others are instructed in procedures to carry out monitoring and these instructions are documented.
4 Follow procedures to maintain gas detection devices.	4.1	Gas detection devices are stored in accordance with manufacturer recommendations.
	4.2	Gas detection devices are formally checked and calibrated periodically in accordance with established site requirements and instrument accuracy.
	4.3	Storage, use and calibration record of the gas detection devices is maintained, in accordance with the established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

using and maintaining the integrity of portable gas detection devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EM07 Portable gas detection devices 6A

Evidence shall show an understanding of portable gas detection devices to an extent indicated by the following aspects:

T1 Principles of gas detection and the use and care of portable gas detection devices encompassing:

- Fundamental principles in the use of gas and vapour instruments.
- Use of manufacturer's instruction manual (Instruction manuals include operating instructions, adjustment procedures, operational limitations, and storage).
- Calibration and response checking.

T2 Detecting gases and vapours encompassing:

- apparatus capability and users' knowledge;
- propagation of gases - This includes release of gas and vapours, ventilation, density, temperature and location.
- gases to be detected and not to be detected;
- intended application;
- environmental effects;
- safety when monitoring for flammable gases where personnel could be present;
- common properties of gases and vapours - This includes density of gases, vapours and their mixtures; effect of temperature on density; LEL and UEL of combustibles and toxicity.
- the differences between detecting gases and vapours - These include added complication of evaporation, condensation and temperature effects of vapours and their effect on propagation, calibration and detection, including sampling.

T3 Oxygen deficiency and effects on safety encompassing:

- chemical reaction of oxygen with solid products;
- chemical reaction of oxygen with gaseous products; and
- dilution of the air by displacement by some other gas or vapour.

T4 Measuring principles of catalytic sensors, electrochemical sensors, infrared sensors and semi-conductor sensors encompassing:

- common applications;
- limitations and safety;
- interferences of other gases with the measurement; and

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- poisoning of the sensor.

NOTE: Detailed information on gas detection is given in AS/NZS 60079.29.2.

T5 Limits of gas detection of flammable (combustible) gas equipment, encompassing—

- limit to which flammable gas detection equipment will only detect gases and vapours that are present in the vicinity of the detector (or in the line of sight of open path apparatus); and
- limit to which flammable gas equipment will not detect combustible liquids as such, or combustible mists, dusts, or fibres.

T6 Limits of vapour detection of flammable (combustible) gas equipment (flammable gas detection equipment will only detect those vapours that do not condense at the temperature of the detector or its sampling equipment).

T7 Interpretation of gas detection instrument readings (behaviour) encompassing:

- upscale reading in the presence of a gas for which an instrument is not calibrated;
- causes of erratic indications;
- reading of low concentrations of gas of interest; and
- off-scale readings.

T8 Toxicity level of flammable gases and vapours and their potential for occurring in a given situation.

T9 Issues with gas and vapour detection in confined spaces.

T10 Use of the manufacturer’s instruction manual (operating instructions, adjustment procedures, operational limitations, storage).

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.**2**)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline,

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Use and maintain the integrity of portable gas detection devices as described in 8) and including:
    - A Following work permits and clearance procedures.
    - B Monitoring hazards and following evacuation procedures.
    - C Determining whether the gas/vapour level in a work area is safe from explosive, toxic and oxygen deficiency aspects.
    - D Following procedures to maintain the integrity of gas detection devices
    - E Instructing others in the use of a portable gas detection device in relation to a specific activity.
    - F Applying relevant contingency management skills.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to using and maintaining the integrity of portable gas detection devices.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort competency development in this unit may be arranged concurrently with the following units

UEENEEM080A Report on the integrity of explosion-protected equipment in a hazardous area

and

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work in hazardous area.	1.1 Nature of the explosion hazard in the area is known and the status of the explosion hazard is ascertained through established procedures.
	1.2 Operation and condition of plant and machinery, with regards to explosion-protection, is ascertained through established procedures.
	1.3 Established procedures for use of the plant and machinery, with regards to explosion-protection techniques used in the area, are followed.
2 Observe condition of explosion-protection system area.	2.1 OHS policies and procedures, with regards to explosion-protection, are followed.
	2.2 Performance of plant and machinery is monitored to identify faults that may affect the integrity of the explosion-protected equipment and wiring system.
	2.3 Observations of explosion-protected equipment and wiring are made during normal operations and visual non-conformances that may affect the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		integrity of the explosion-protection technique are identified.
	2.4	Explosion hazard monitoring equipment is observed and a potentially dangerous state of the hazard is identified, e.g. by using gas detectors.
3 Take actions to limit risk of an explosion.	3.1	Variations outside normal operating conditions are reported and documented in accordance with established procedures
	3.2	Non-conforming tools, equipment and testing devices are reported and documented in accordance with established procedures.
	3.3	Established procedures are followed in the event of a potential or immediate hazardous condition arising from any non-conformance identified in equipment/wiring or changes in the explosion hazard to a potentially dangerous state.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and reporting on the integrity of explosion protected equipment in hazardous areas.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EM080A Hazardous areas and explosion-protection principles

Evidence shall show an understanding of hazardous areas and explosion-protection principles (including working safely in hazardous areas), principles of the following explosion-protection techniques and visible conditions of explosion-protection equipment that indicate the protection is void and changes in the nature of the explosion hazard that may render the explosion-protection unsafe. to an extent indicated by the following aspects:

T1 Occupational Health and Safety responsibilities related to hazardous areas

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

encompassing:

- the main features and purpose of a 'clearance to work' system (includes hot work permit systems).
- typical safety procedures that should be followed before entering a hazardous area;
- the purpose of gas detectors and their limitations;
- effects of temperature on gas and vapour detection;
- frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
- factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
- safety in use of gas detectors, for example, 'read and run concept'
- the safety precautions to be taken when working in a hazardous area.

T2 The roles of the parties involved in the safety of hazardous areas encompassing:

- common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
- where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and
- the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

T3 Properties of combustible substances and their potential to create an explosive hazard encompassing:

- condition in the workplace that will lead to an explosion;
- the terms 'combustion', 'ignition' and 'propagation';
- explosive range of substances encountered in the workplace i.e. LEL/UEL;
- explosive parameters of substances as given in tables of substance properties

Note: Combustible materials are gases, vapours (from liquids), and dusts; flash point.

- the difference between gases and vapours; and
- the toxic nature of gases and vapours and potential harmful consequences.

T4 The nature of hazardous areas encompassing:

- the Standards definition of a 'hazardous area';
- the recommended methods for classifying the type and degree of explosion hazard

REQUIRED SKILLS AND KNOWLEDGE

in an area;

- hazardous area classifications as defined by Standards; and
- factors that are considered when a hazardous area is classified.
- the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.

T5 Explosive-protected equipment encompassing:

- The principles of each explosion-protection technique, the methods used and how each technique works (Flameproof (Ex ‘d’); Increased safety (Ex ‘e’); Non-sparking (Ex ‘n’); Intrinsic safety (Ex ‘i’) and Pressurization (Ex ‘p’) for gas atmospheres and Dust-exclusion enclosures (Ex ‘tD’); Pressurization (Ex ‘pD’); Encapsulation (Ex ‘mD’); and Intrinsic safety (Ex ‘iD’) for dusts)
- How explosion-protected equipment is identified by the ‘Ex’ symbol marked on the equipment, including old equipment and equipment certified in another country.
- Visible conditions or actions that would void the explosion-protection provided by a particular technique.

T6 Explosion-protection visual checks encompassing:

- occupational, health and safety procedures to be followed before entering hazardous areas; and while conducting visual inspection.
- Visible defects in explosion-protected equipment and wiring.
- Conditions that may indicate a change in a given explosion hazard.
- Reporting defects in explosion-protected equipment and wiring - the purpose of a verification dossier; and various ways for reporting defects in explosion-protected equipment and wiring.
- procedures to be followed in the event of a change in the explosion hazard.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1**) Longitudinal competency development approaches to

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Report on the integrity of explosion-protected equipment in hazardous areas as described in 8) and including:
    - A Following work permits and clearance procedures.
    - B Monitoring hazards and following evacuation procedures.
    - C Correctly operation of plant and machinery.
    - D Following plant and electrical isolation procedures.
    - E Identifying visual damage or deterioration of explosion-protected equipment.
    - F Reporting visual defects.
    - G Applying relevant contingency management skills.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to reporting on the integrity of explosion protected equipment in hazardous areas.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged in combination with other competencies required by a given industry or enterprise for plant or machinery operation or in relation to installation, maintenance or service functions.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and

UEGNSG004A Locate, prove and protect utility assets

Modification History

This unit is a revised version of the UEG11 unit UEGNSG003A Locate, prove and protect gas distribution assets

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers locating, proving and protecting utility assets in accordance with established procedures.

This encompasses low level short term protection of assets on basic work sites where utility industry operations occur including the gas industry, electricity supply industry, electrotechnology industry and the water industry.

Note: This competency standard unit does not include the supervision of third party works near a utility asset.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where utility industry operations occur including the gas industry, electricity supply industry, electrotechnology industry and the water industry, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 competency and is suitable for employment-based programs under an

© Commonwealth of Australia, 2025 Powering Skills Organisation

approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training.

In the workplace

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/ water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to locate, prove and protect utility assets	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the site are provided and discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed, including relevant clearances/ no-go zones.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures.
	1.6	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.7	Tools, equipment and personal protective equipment needed to carry out the work are identified, obtained and checked for correct operation and safety.
	1.8	Materials, plans, diagrams, drawing and resources required for the work are obtained in accordance with established routines and procedures.
	1.9	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Locate, prove and protect utility assets	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Machines/plant/equipment are checked as being isolated where necessary in strict accordance WHS/OHS requirements and procedures.
	2.3	Appropriate materials, tools and equipment are selected and used correctly and safely.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.4	Asset is located and clearly marked using appropriate equipment and tools.
	2.5	Location of the asset proven using approved methods where permitted.
	2.6	Effective communication occurs with third parties when necessary prior to undertaking activities to ensure the protection of the utility asset
	2.7	Utility asset is adequately protected physically to ensure it is safe and secure.
	2.8	Work is carried out efficiently, to the required quality standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.9	Any WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.10	Procedures for referring non-routine events to immediate supervisor for directions are followed.
3 Complete work and of relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe in accordance with established procedures or handed over for further work.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures.
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with and established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices and identifying, locating, proving and protecting utility assets.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the Required Skills and Knowledge is provided below. It forms an integral part of this unit.

KS01-G004A Utility assets

Evidence shall show an understanding of identifying, locating, proving and protecting utility assets in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, regulations, codes

T2. Enterprise procedures, plans and drawings

- asset plan reading

T3. Relevant Safety and Environmental hazards and mitigation measures

T4. Locate and mark utility and asset services

- relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and storm water) including Dial Before You Dig.
- visual identification of utilities and service
- types of electronic and manual service locators

T5. Prove assets

- clearances and no-go zones requirements
- hand excavation techniques
- non-destructive methods (Hydrovac or Airvac)

T6. Identification of utilities and services conduits and cables

T7. Protection of assets:

- communication with relevant personnel
- installation of protection systems (barricades and signage)
- marking of assets

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence

8.2)

© Commonwealth of Australia, 2025 Powering Skills Organisation

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Locating, proving and protecting utility assets as described in the 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A –	All	• PPE

© Commonwealth of Australia, 2025 Powering Skills Organisation

Tools and Equipment		• Service locators • Traffic barricades
B – Procedures	All	• Interpret alignment sheets, maps/plans, technical drawings and symbols • Obtain and interpret procedures and/or work instructions • Apply relevant OHS legislation, regulations, codes of practice, policies and procedures • Advise stakeholders of upcoming work, and • Utilise Dial-Before-You-Dig information • Prove location of asset • Visually inspect asset • Protecting assets
C – Unplanned Events	At least one occasion	Deal with an unplanned event by drawing on required skills and knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for*

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to identifying, locating, proving and protecting utility assets in accordance with relevant legislation, standards, codes and established procedures. This encompasses basic and safe work sites where utility industry operations occur including the gas industry, electricity supply industry, electrotechnology industry and the water industry.

It includes low level short term protection of assets, required for example while excavation is taking place. This includes communication with relevant personnel, installation of protection systems (barricades and signage) and marking of assets.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Legislation
- Safety equipment
- Emergency and hazardous work situations
- Established procedures and requirements
- Personal Protective equipment

Unit Descriptor

Unit Descriptor **1)**

1.1) Descriptor

This unit covers the basic mandatory requirements of the regulations, codes and practices and how they apply to various gas industry work functions.

It encompasses an overview of the industry, types of gases, relevant mandatory safety regulations and organisational policies, procedures and work practices required for working in the Australian gas industry.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where Gas Industry operations occur including the transmission, distribution and LPG sectors. It is subject to all Environmental Legislative requirements, Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and Duty of Care requirements being met for the environment and the workplace.

This unit is intended as an entry level competency at AQF 2 for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under an approved contract of training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice

3) License to practice

During Training:

Competency development activities are subject to regulations directly related to licencing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Environmental Legislation, Chemical Management, Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements

Pre-Requisites

Prerequisite Unit(s)

4)

4.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

There are no pre-requisite competencies for this unit.

4.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a unit of competency.* *Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to determine the requirements for working in the Australian gas industry	1.1 Instructions for determining the relevant regulations, codes and practices are communicated and confirmed to ensure clear understanding.
	1.2 WHS/OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.
	1.3 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.
	1.4 Resources and materials needed to do the work are confirmed and obtained in accordance with established procedures.
	1.5 Schedule for the work is confirmed in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		instructions and requirements.
2. Determine the requirements for working in the Australian gas industry	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.
	2.2	Schedule for the work is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.
	2.3	Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.
	2.4	Ongoing checks of work quality are undertaken in accordance with instructions and requirements.
3. Complete work and relevant documentation	3.1	Final checks are made to ensure the work conforms with instructions and to requirements.
	3.2	Appropriate personnel are notified of completion of the work.
	3.3	Work area is cleaned up and made safe and sustainable energy practices are followed.
	3.4	Appropriate documentation of the relevant regulations, codes and practices is completed in accordance with instructions and established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level for this unit.*

Evidence shall show that knowledge has been acquired of the mandatory safety, regulatory and industry requirements for working in the Australian gas industry. The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

The extent of the required skills and knowledge is given below. It forms an integral

part of this unit.

KS01-G002A Australian gas industry policies and procedures

Evidence shall show an understanding of the mandatory safety, regulatory and industry requirements for working in the Australian gas industry to an extent indicated by the following aspects:

T1. Overview of the gas industry in Australia, encompassing:

- Production
- Transmission
- Distribution
- LPG/Gaseous Fuels
- Industrial, commercial and domestic applications

T2. Australian gas resources, encompassing:

- Major Gas Fields

T3. Gases produced in Australia(details required)Types of gases, encompassing:

- properties
- characteristics
- applications
- combustion
- ventilation

T4. Overview of statutory authorities and regulatory bodies that operate in the Gas Industry, encompassing:

- Federal and State/Territory, Local Government
- Roles and functions
- Employer and employee responsibilities
- Overview of relevant licencing/regulatory requirements

T5. Overview of Australian Standards, guidelines, codes of practice and regulations

- Hierarchy of legislation/codes
- Federal and State/Territory Acts and Regulations
- Australian Standards, guidelines, codes of practice
- Employer and employee responsibilities, rights and obligations.
- Overview of relevant Australian Standards, Guidelines, codes of practice and regulations

T6. Industry stakeholders, encompassing:

- Industry associations;
- Employee organisations
- Other relevant organisations

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement encompassing:
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the required skills and knowledge as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Prepare to work in the Australian gas industry as described in 8) Range Statement and including:

    A Requirements to enter the workplace including, the use of work permits and clearances and isolation permissions.

    B Risk control and safe work methods.

    C Need and requirements of work procedures and instructions.

    D Requirements for dealing with accidents and emergencies within the scope of responsibility.

    E Procedures/protocols for dealing with unplanned events

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS
- policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying WHS/OHS practices in the workplace.

Method of assessment

8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Range Statement

RANGE STATEMENT

9) *This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to mandatory safety, regulatory and practice requirements for working in the Australian gas industry. This includes an overview of the gas industry and resources in Australia, types of gases, relevant statutory authorities and regulatory bodies, Australian Standards, guidelines, codes of practice and regulations, and industry stakeholders.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEGNSG006A Use a portable gas detector to locate escape

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1)**

1.1) Descriptor

This unit covers the use of portable gas detection devices to locate and pin point gas escapes and ensure a work place is safe from explosive and toxic gases and vapours in accordance with relevant legislative, standard and code requirements.

It encompasses requires the ability to accurately use measuring instruments, interpreting readings, converting them to known quantities and evaluating the probable locations that gases will accumulate by applying properties of gases being detected and environmental conditions.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit augments other formally-acquired competencies in a relevant industry and shall be used only in conjunction such competencies. It applies to job function that requires entry to a potentially hazardous area to undertake repair, maintenance or construction work at AQF 2 level or higher.

It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

4.1) Competencies

Granting competency in this unit shall be made after or concurrently with confirming competency in any one of the following units.

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a gas industry work environment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a unit*	*Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to use portable gas	1.1	The need to initiate gas detection is identified by WHS/OHS requirements and established

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
detection device.		procedures.
	1.2	The gas or vapour to be detected is established from maps and asset records or consultation with relevant personnel.
	1.3	Gas detection device(s) for the gas/vapour to be detected is/are checked for calibration and response in accordance with manufacturer instructions.
	1.4	Appropriate PPE is available and checked
	1.5	Gas detection devices are checked for factors that could prevent the equipment from being used correctly and safely.
2 Use gas detectors and pin point escapes	2.1	WHS/OHS policies and procedures relating to gas/vapour detection are followed.
	2.2	Gas detection device is used in accordance with manufacturer instructions and with regards to environmental conditions.
	2.3	Gas detection readings are recorded in accordance with established procedures.
	2.4	Probable areas that gases could accumulate are monitored dependant on Gas Properties and environmental conditions
	2.5	Gas detector readings are interpreted correctly and converted to relevant % i.e. GIA to LEL etc.
	2.6	Gas escapes are located and pin pointed in accordance with established procedures.
	2.7	Required actions are determined and communicated to relevant persons in accordance with established procedures.
	2.8	Environmental conditions are used to assist in location of gases
	2.9	The frequency of monitoring is determined from the nature of gas/vapour and the effect of environmental and local conditions

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete the use of gas detectors and relevant documentation.	3.1	Gas detection devices are purged, disassembled and stored in accordance with manufacturer recommendations.
	3.2	Gas detection devices are formally checked and calibrated periodically in accordance with established site requirements and instrument accuracy.
	3.3	Storage, use and calibration record of the gas detection devices is maintained, in accordance with the established procedures.
	3.4	Appropriate persons are notified of completion of the work
	3.5	Reports and documentation are completed with readings accurately recorded and maintained for potential use as evidence in accordance with company procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices and using and maintaining the integrity of portable gas detection devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G006 Portable gas detection devices

Evidence shall show an understanding of use of portable gas detection devices in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Safety requirements

- hazards, risk assessment and control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T3. Gases and vapours

- types
- basic properties and application
  - behaviour
  - specific gravity
  - flammability ranges and toxicity
- detection
  - methods
  - probable areas that gases could accumulate i.e. High for low SG gases and low for High SG gases, voids, wind conditions, etc.
  - factors affecting the frequency of monitoring
    - nature of gas/vapour and the effect of environmental and local conditions (e.g. ambient temperature rise, density of gas/vapour, flash point, dew point and detector position).

T4. PPE

- requirements
- types and applications

T5. Portable gas detection devices

- purpose, types, applications
- manufacturer's instructions
- start up and shut down procedures
- use of gas detection equipment
- calibration requirements and methods
- storage requirements
- basic maintenance
- factors that could prevent the equipment from being used correctly and safely including damaged casing, use of incorrect batteries and/or chargers, use of incorrect spare parts and accessories.

T6. Interpreting and converting readings and indications

- identifying highest reading locations
- locating and pin pointing gas escape procedures
- third party asset influences
- verifying actual escape location

T7. Use of Environmental indicators to assist in gas detection, i.e. effect on vegetation, insects, wind direction soil discoloration etc.

T8. Relevant documentation

- signs, symbols terminology and legends as used in industry procedures and documents

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- workplace forms and reports

Evidence Guide

EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to

© Commonwealth of Australia, 2025 Powering Skills Organisation

safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEG11. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the required knowledge and skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Use a portable gas detector to locate escape as described in 9) and including:

    A Following work permits/authorisations and clearance

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures.

B Monitoring gases and hazards and following evacuation procedures.

C Determining whether the gas/vapour level in a work area is safe from explosive, toxic and oxygen deficiency aspects based on gas properties and environmental conditions.

D Locating and pin pointing gas escapes

E Following procedures to maintain the integrity of gas detectors

F Identification of PPE required for conditions.

G Applying relevant contingency management skills.

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to using portable gas detectors.

Method of assessment

8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

For optimisation of training and assessment effort competency development in this unit may be arranged concurrently with the following units:

UEGNSG132A	Carry out basic work activities in a gas industry work environment

Range Statement

RANGE STATEMENT

9) *This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to carrying out work activities in a gas industry work environment with a potentially hazardous area or confined space to locate and pin point gas escapes.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Volume 2, Part 2.1.

- Appropriate persons
- Safe working procedures
- Legislative requirements
- Personal Protective Equipment

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit describes the skills and knowledge required to coordinate the repair of gas pipelines, facilities and equipment. The competency standard will also cover the types of faults that are found; the facilities and equipment used; the documentation and the reports and record keeping that is performed.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance,

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for the coordination of repair of pipelines, facilities and equipment	1.1	Work schedule(s), including drawings, plans, requirements, established procedures and material lists are received, analysed and confirmed if necessary by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	OHS, environmental and sustainable energy policies and procedures related to the coordination of repair of pipelines, facilities and equipment are obtained and confirmed for the purposes of the work performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.6	Relevant work permits are obtained to access and perform work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed to be in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.8	Relevant persons at work site are confirmed to be current in First Aid and other related work procedures according to requirements
		1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved to carry out work where necessary
		1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
		1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
		1.12	Road signs, barriers and warning devices are positioned in accordance with requirements
2	Coordinate repair of pipeline, facilities and equipment	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
		2.2	Lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
		2.3	Essential Knowledge and Associated Skills are applied for coordinating the repair of pipelines, facilities and equipment to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
		2.4	Performing the coordinating the repair of pipelines, facilities and equipment is carried out in accordance with the work schedule and to requirements and established procedures
		2.5	Pipeline facilities/equipment and conditions and all environment hazards, safety risks and control measures are monitored and preventative action

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		taken and referred to appropriate authorities in accordance with requirements and established procedures
	2.6	Unplanned events in coordinating the repair of pipelines, facilities and equipment are undertaken within the scope of established procedures
	2.7	Known solutions to a variety of problems are applied using acquired Essential Knowledge and Associated Skills
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Recommission systems and equipment	3.1	Repaired/installed equipment is brought back on line at the desired operational parameters and work undertaken is checked against works schedule for conformance with requirements and in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Work completion records, reports and documentation and information is finalised and processed and appropriate persons notified

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for the coordination and repair of pipeline, facilities and equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G106B Pipeline, facilities and equipment repairs

G 3.2.38 Plan and prepare coordination of repair of pipelines, facilities and equipment

Evidence shall show an understanding of the requirements to plan and prepare coordination of repairs to pipelines, facilities and equipment on a Gas Industry pipelines (Distribution), indicated by the following:

- identification of the types of problems and faults that may require repair
- obtaining, interpreting and using relevant technical drawings, plans or specifications during preparation and planning of repair work
- identification of hazards (including confined spaces) and explanation of ohs, procedures and environmental requirements that require implementation prior to and during repair work
- identification of procedures, persons, equipment and processes required for the repair work and plan the coordination of resources
- required work permits
- locating and securing of emergency equipment and ensuring all persons are familiar with emergency plans.

G 3.2.39 Secure work area and equipment prior to repair

Evidence shall show an understanding of the requirements to secure work area and equipment prior to repair on a Gas Industry pipeline (Distribution), indicated by the following:

- discuss the requirements for and use of work permits, safety plans, non-routine procedures and safety checks
- implementation and adherence to procedures, ohs and

© Commonwealth of Australia, 2025 Powering Skills Organisation

environmental requirements to ensure a safe worksite is established and maintained
- equipment for repair work is depressurised, tagged and locked out
- routine checks and documentation of facilities/equipment and overall repair process
- verification that facilities/equipment are safe for repair work to commence by ensuring that all procedures have been followed and requirements met.

G 3.2.40 Coordinate repair of pipelines, facilities and equipment

Evidence shall show an understanding of the requirements to coordinate repairs of pipelines, facilities and equipment on a Gas Industry pipeline (Distribution), indicated by the following:

- different types of repair procedures relevant to repairing pipelines, facilities and equipment
- management plan and repair procedures relevant to the required work
- procedures to monitor systems, equipment and environmental conditions to ensure procedures, OHS and environmental requirements are maintained during repair work
- repair work and validate the standard to ensure it meets OHS and environmental and legislative requirements
- progress of repair work to evaluate required amendments or modifications and communicate changes to appropriate persons/regulatory authority
- completion/adjustment documentation to reflect the repair work carried out.

G 3.2.41 Recommission systems and equipment

Evidence shall show an understanding of the requirements to recommission systems and equipment on a Gas Industry pipeline (Distribution), indicated by the following:

- procedures to recommission repaired systems and equipment
- identification of the persons and authorities that need to be notified in relation to the recommissioning of the systems and the procedures to carry out the notification
- cancel/sign off of relevant work permits
- restoration of sites in compliance with OHS and environmental legislative and operational requirements
- completion and filing of records and documentation that accurately indicate extent of work performed, results of repair and completion of work with the appropriate

© Commonwealth of Australia, 2025 Powering Skills Organisation

persons and departments.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to

© Commonwealth of Australia, 2025 Powering Skills Organisation

safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Interpret technical drawings and symbols Ensure emergency response procedures are in place Communicate with other authorities and stakeholders Communicate schedules /coordinate to persons Carry out job safety analysis Obtain work permit Ensure practical application of AS2865 Interpret MSDSs Use and interpret dial before you dig report
B	At least 3	Excavation Trenching Shoring Stitch bore Horizontal drilling Directional drilling
C	At least 3	Nylon (polymide) pipeline laying techniques Nylon gluing Nylon stop off Horizontal drilling Directional drilling

© Commonwealth of Australia, 2025 Powering Skills Organisation

D	At least 5	PE pipeline laying techniques Large diameter PE PE electro fusion PE butt fusion Saddle fusion Socket fusion PE stop off Compression couplings or flanges Connection of PE to nylon Practical application of AS3723 Installation and Maintenance of plastic pipe systems
E	At least 4	UPVC pipeline laying techniques UPVC solvent cemented joints UPVC moulded joints UPVC stop off UPVC couplings or flanges Connection of UPVC to steel Practical application of AS3723 Installation and maintenance of plastic pipe systems
F	At least 2	Steel pipeline coating repair Steel pipeline coating testing (Jeeper) Steel, field joint coating
G	At least 3	Connection of PE to steel mains Steel mains welding

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Steel mains repair Sleeve application Clamp application Hot tap and stopple
H	At least 2	High pressure stop off 312 Bagtube Squash off jacks Squash off pliers
I	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working in coordinating repair of pipeline, facilities and equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG102B	Carry out work activities in a utilities industry work environment
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEGNSG104B	Comply with environmental policies and procedures
UEGNSG105B	Establish the work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan for operation	1.1	Operational area is checked for hazards and the works schedule(s), including drawings, plans, requirements, established procedures and material lists are detailed, analysed if necessary by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe and technical working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.8	Clients are provided with possible solutions and options within the scope, acceptable cost and requirements
		1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
		1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
		1.11	Status of the system is sought through communication with pipeline control centre in accordance with established procedures
2	Operate and monitor system	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
		2.2	First Aid and other related work procedures are performed according to requirements and established procedures
		2.3	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
		2.4	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
		2.5	Hazard warnings and safety signs are recognised and hazards assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
		2.6	Operating conditions of equipment are monitored through gauge levels, temperatures, flow indicators in order to determine performance of equipment and system

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.7	Information concerning the operation of the pipeline system is monitored and conveyed to relevant persons to ensure safe and efficient operation of the pipeline system
		2.8	Fault finding and troubleshooting techniques are applied to operational systems and equipment to identify any repairs or maintenance that is required according to requirements and established procedures
		2.9	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
		2.10	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills
		2.11	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality like outcome is achieved for the client and to a community and industry standard
3	Shutdown system and equipment	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies which are reported and solutions identified in accordance with established procedures
		3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
		3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
		3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
		3.5	Relevant work permit(s) are signed off

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		accordance with requirements
	3.6	Works completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for operating and monitoring pipeline control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G108B Pipeline control systems

G 4.1.1 Operating and supervising in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant,

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicating effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence **9.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Interpret technical drawings and symbols

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Ensure emergency response procedures are in place Communicate with other authorities and stakeholders Communicate schedules/coordinate to persons Ensure practical application of AS2865 Interpret MSDSs Carry out job safety analysis Obtain work permit Use and interpret dial before you dig or its equivalent report
B	At least 3	Excavation Trenching Shoring Stitch bore Horizontal drilling Directional drilling
C	At least 3	Nylon (polymide) pipeline laying techniques Nylon gluing/stop off Horizontal drilling Directional drilling
D	At least 5	PE pipeline laying techniques Large diameter PE PE electro fusion PE butt fusion Saddle fusion Socket fusion

© Commonwealth of Australia, 2025 Powering Skills Organisation

		PE stop off Compression couplings or flanges Connection of PE to nylon Practical application of AS3723 Installation and Maintenance of plastic pipe systems
E	At least 4	UPVC pipeline laying techniques UPVC solvent cemented joints UPVC moulded joints UPVC stop off UPVC couplings or flanges Connection of UPVC to steel Practical application of AS3723 Installation and maintenance of plastic pipe systems
F	At least 2	Steel pipeline coating repair Steel pipeline coating testing (Jeeper) Steel, field joint coating
G	At least 3	Connection of PE to steel mains Steel mains welding Steel mains repair Sleeve application Clamp application Hot tap and stopple
H	All	Isolate, vent and purge gas pipeline systems Operation of gas detector

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Operate service locator Where relevant, calculate nitrogen volume needed
I	At least 2	High pressure stop off 312 Bagtube Squash off jacks/squash off pliers
J	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in operating and monitoring pipeline control systems

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment must also integrate the employability skills in section 3.1 of this competency standard.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to operating and monitoring pipeline control systems. The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Pipeline control systems

Prime movers

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the skills and knowledge required to control field pipeline operations on a gas pipeline. This competency standard refers to Resources; Operational; Monitoring; Relevant Persons; Types of Faults; Reports.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan control of operation	1.1	Works schedule(s), including drawings, plans, requirements, established procedures and material lists are detailed, analysed if necessary by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.7	Resources to meet pipeline operations are determined in accordance with standard operating procedures
	1.8	Clients are provided with possible solutions and options within the scope, acceptable cost and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		requirements
	1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Control operations	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	First Aid and other related work procedures are performed according to requirements and established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
	2.4	Operating conditions, pressures and temperatures are monitored and observed to determined correct operating parameters of the pipeline are being maintained
	2.5	Alarms and codes are correctly interpreted and acknowledged to ensure the correct response strategy is selected and applied to the situation
	2.6	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and established procedures
	2.7	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a

ELEMENT		PERFORMANCE CRITERIA	
			minimum of waste according to requirements
		2.8	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills
		2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client and to a community and industry standard
3	Shut down pipeline system	3.1	Emergency shutdown procedures are applied in the event of serious equipment failure or operational parameters being set and work undertaken in accordance with established procedures
		3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
		3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
		3.4	Shutdown is completed in accordance with standard operating procedures
		3.5	Shift hand over procedures are performed in accordance with standard operating procedures and pre-shutdown checks are completed and documented in accordance with standard operating procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8)This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for

REQUIRED SKILLS AND KNOWLEDGE

the control of field pipeline operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G109B Field pipeline operations

G 4.1.1 Operating and supervising in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and

		rupture leaks Instruments out of calibration Non-flow of gas
E	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in controlling field pipeline operations.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3

© Commonwealth of Australia, 2025 Powering Skills Organisation

'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan and prepare to supervise operations	1.1	Project activities are planned to prevent damage and to ensure minimal disruption to gas supply
	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe and technical working order
	1.8	Clients are provided with possible solutions and options within the scope, acceptable cost and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
	1.11	Expenditure is forecast and managed to keep within operational budget constraints
2 Supervise during projects	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	First Aid and other related work procedures are performed according to requirements and established procedures
	2.3	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.5	Fault finding and troubleshooting techniques are applied to operational systems and equipment to identify any repairs or maintenance that is required according to requirements and established procedures
	2.6	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.7	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.8	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client and to a community and industry standards
		2.9	Relevant persons are informed of project status/requirements according to company standard operating procedures
3	Finalise completion details	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies which are reported and solutions identified in accordance with established procedures
		3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
		3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
		3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
		3.5	Relevant work permit(s) are signed off in accordance with requirements
		3.6	Works completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of safe working practices for supervising technical operations for gas distribution/transmission.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G110B Technical operations for gas distribution/transmission

G 5.1.4 Management techniques for Gas Industry supervision

Evidence shall show an understanding and application of management techniques required of Gas Industry operators in a supervisory capacity, indicated by the following:

- industrial awards and employee entitlements
  - industrial conflict
  - industrial relations issues
  - understanding industrial awards and employee entitlements
  - individual and collective bargaining and agreements
- characteristics of ethnic and cultural groups
- Applicable environmental requirements
- relevant organisational standard operating procedures, site specific safety legislation and requirements
- correct waste management procedures
- application of OHS management in relation to other organisational management systems.
- Related organisational policies and procedures such as business planning, training, purchasing.

G 5.1.5 Demonstrate an understanding of the operation of Gas Industry equipment, tools and materials

Evidence shall show an understanding of how Gas Industry tools, equipment and materials operate, indicated by the following:

- relevant organisational maintenance procedures
- operating principles of gas industry infrastructure and equipment including pipelines and facilities
- methodology for location of third-party services
- emergency response systems
- correct pressure adjustment techniques and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- correct procedures for identifying, diagnosing, assessing, analysing, locating, repairing of faults in gas infrastructure and the generation of applicable fault reports.
- use and operation of pipeline PIG’s and 'pigging' techniques
- cathodic protection system, installation, adjustment, replacement, checking and maintenance of applicable cathodic levels
- pipeline construction techniques and jointing procedures
- pipeline inspecting and testing techniques
- commissioning and decommissioning procedures of gas infrastructure including pipelines and equipment as applicable
- applicable coating procedures to protect against corrosion.

G 5.1.7 Manage Gas Industry maintenance

Evidence shall show an understanding and application of relevant gas industry infrastructure maintenance and practices at a supervisory level indicated by the following:

- planning of scheduled and non-scheduled maintenance of applicable gas infrastructure
- coordination of maintenance activities
- Implement safety and environmental controls during maintenance activities
- Comply with relevant regulations such as building Codes and Australian Standards during the planning and implementation of maintenance activities
- understanding of applicable project management techniques in maintenance planning and implementation
- manage gas industry projects
- understanding of applicable Human Resource requirements in maintenance activities including appropriate training and qualifications of maintenance personnel.
- Understanding and implementation of relevant aspects of organisational Quality Assurance requirements when planning and implementing maintenance activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**

© Commonwealth of Australia, 2025 Powering Skills Organisation

A	At least 4	Resources: Appropriate relevant personnel Materials Tools and equipment Personal protective equipment and clothing Company standard operating procedures Equipment manuals Training resources
B	At least 3	Project activities: Maintenance, repairs and modifications Construction and upgrade Rectification of gas system faults Installation and commissioning of New plant, piping and equipment System security Scheduling work
C	All	Legislative requirements: OHS legislation Relevant Government Acts, regulations and codes of practice Australian standards Environmental legislative requirements
D	At least 3	Relevant authorities: Local and shire councils Local government authorities Road transport authorities

H	All	Management techniques for Gas Industry supervision Understanding the operation of Gas Industry equipment, tools and materials
I	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in supervising technical operations for gas distribution/transmission.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of ssessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to supervising technical operations for gas distribution/transmission.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the development of producing maintenance strategies and plans for a gas production facility. The competency standard involves strategies; budgeting; reference information; communication; producing documentation; preparation and implementation strategies.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance,

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Research and plan to implement strategies	1.1 Existing strategies are reviewed for maintenance requirements and directions against work schedule
	1.2 Enterprise and site plans are reviewed for impact on maintenance work
	1.3 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.4 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.5 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.6 Cost estimating and economic evaluation is performed and legal implications are investigated to ensure work can be undertaken in accordance with requirements
	1.7 Resources including persons and equipment required are identified, scheduled, coordinated and confirmed
	1.8 Clients are provided with possible solutions and options within the scope, acceptable cost and requirements
	1.9 Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		carry out work
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Establish strategies for implementing a maintenance plan	2.1	OHS, environmental and sustainable energy policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Resources required to implement strategies are identified and detailed and the work is performed in accordance with a work schedule and to requirements
	2.3	Timeframes and potential variances for maintenance scheduling are defined and potential risks and control measures are monitored and preventative action taken where necessary
	2.4	Planned objectives are documented in accordance with enterprise requirements
	2.5	Essential Knowledge and Associated Skills is applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality like outcome is achieved for the client and to a community and industry standards
3	Implement maintenance strategy	3.1	Strategies and plans are implemented in order to facilitate required outcomes as per enterprise requirements
		3.2	Strategies are implemented and variances are identified and corrective action is taken in accordance with risk management planning process
		3.3	Final reporting is performed as per enterprise requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8)This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of maintenance strategies and plans for a gas facility.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G111B Maintenance plans

G 5.1.1 Gas Industry concepts for supervising operations

Evidence shall show an understanding of the requirements to undertake the supervision of Gas Industry operations, indicated by the following:

- Implementation of risk management and Occupational Health and Safety (OHS) practices and principles including, but not limited to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- risk assessment, risk control and risk control measures
- hierarchy of control
- personal protective equipment — strengths and weaknesses
- identifying hazards and their consequences
- identifying hazards, assessing associated risks and implementing appropriate control measures
- developing hazard checklists
- reporting hazards including hazardous events

- planning theory and study of HAZOPS and HAZANS
- knowledge of applicable legislative requirements and Australian/New Zealand and ISO standards and codes of practice for the Gas Industry
- Implementation of relevant organisational policies and procedures
- identification and implementation of control measures
- establishing emergency management techniques
- principles and guidelines including critical incident analysis.

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation
  - strategy and tactics of bargaining
  - pre-negotiation essentials
  - communication in negotiation
- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 5.1.3 Plan for, respond to and manage emergencies

Evidence shall show an understanding and application of emergency management techniques in a Gas Industry environment, indicated by the following:

- emergency management concepts and principles:
  - auditing and planning
  - systems analysis
  - policies and procedures for non-employees and contractors
  - types of emergencies
  - dealing with an emergency
  - elements of an emergency plan
  - employee assistance programs.
- Develop an emergency management plan which includes:
  - First Aid and welfare
  - recovery and post recovery plans
  - legislative requirements
  - interaction with authorities/emergency services
  - communication with key stakeholders
  - initial response/assessment and make safe

G 5.1.4 Management techniques of utilities industry supervision

Evidence shall show an understanding and application of management techniques required of Gas Industry operators in a supervisory capacity, indicated by the following:

- industrial awards and employee entitlements
  - industrial conflict
  - industrial relations issues
  - understanding industrial awards and employee entitlements
  - individual and collective bargaining and agreements
- characteristics of ethnic and cultural groups
- Applicable environmental requirements
- relevant organisational standard operating procedures, site specific safety legislation and requirements
- correct waste management procedures
- application of OHS management in relation to other organisational management systems.
- Related organisational policies and procedures such as business planning, training, purchasing.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 5.1.6 Technical knowledge for Gas Industry managers

Evidence shall show an understanding and application of the technical knowledge required of Gas Industry managers, indicated by the following:

- development of organisational operational strategies as required
- understanding maintenance philosophies
- engineering principles
- risk management in a Gas Industry environment
- principles of planning including project management planning.

G 5.1.7 Manage Gas Industry maintenance

Evidence shall show an understanding and application of relevant gas industry infrastructure maintenance and practices at a supervisory level indicated by the following:

- planning of scheduled and non-scheduled maintenance of applicable gas infrastructure
- coordination of maintenance activities
- Implement safety and environmental controls during maintenance activities
- Comply with relevant regulations such as building Codes and Australian Standards during the planning and implementation of maintenance activities
- understanding of applicable project management techniques in maintenance planning and implementation
- manage gas industry projects
- understanding of applicable Human Resource requirements in maintenance activities including appropriate training and qualifications of maintenance personnel.
- Understanding and implementation of relevant aspects of organisational Quality Assurance requirements when planning and implementing maintenance activities

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Establish and maintain participative arrangements for the management of OHS	1.1	Purpose of the OHS management system is established after data is analysed and expected outcomes of the work are confirmed with the appropriate personnel
	1.2	Legislative requirements and established procedures on policies and specifications for the OHS management system are obtained or established with the appropriate personnel
	1.3	Work roles and tasks are allocated according to requirements and individual's competencies
	1.4	Work is prioritised and sequenced for the most efficient outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.5	Appropriate participative processes with employees and their representatives are established and maintained in accordance with relevant industry standards consistent with enterprise procedures
	1.6	Issues raised through participation and consultation are dealt with and resolved promptly and effectively in accordance with procedures for issues resolution
	1.7	Information is provided to employees about the outcome of participation and consultation in a manner accessible to employees
2 Establish and maintain procedures for identifying	2.1	OHS management system(s) decisions are made on the basis of safety and effective outcomes according to requirements and established

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	hazards, assessing and	procedures
	controlling risks as well as dealing with hazardous events	2.2 Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
		2.3 Work teams are arranged to ensure planned goals are met according to established procedures
		2.4 Solutions to non-routine problems are identified and actioned, using acquired Essential Knowledge and Associated Skills, according to requirements
		2.5 Quality of work is monitored against personal performance agreement and established organisational and professional standards
		2.6 Strategic plans are developed incorporating organisation initiatives as per established procedures
		2.7 Workplace procedures are developed for hazard identification, assessment and control of risks as well as dealing with hazardous events
		2.8 Identification of all hazards is addressed at the planning, design and evaluation stages of any changes in the workplace to ensure that new hazards are not created by the proposed changes
		2.9 Procedures for selection and implementation of risk control measures are developed and maintained in accordance with the hierarchy of control
		2.10 Inadequacies in existing control measures are identified in accordance with the hierarchy of control and resources enabling implementation of new measures are provided promptly
3	Maintain an OHS induction and training program, maintain a systems for OHS	3.1 Final inspections of the OHS management systems are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
records and evaluate		complete the project
the OHS system including policies, procedures and programs	3.2	Appropriate personnel are notified of completion and reports and completion documents are finalised
	3.3	Reports and completion documents are submitted to relevant personnel for approval and where applicable, statutory or regulatory approval
	3.4	Approved copies of the OHS management systems documents are issued and records are updated in accordance with established procedures
	3.5	OHS training needs are identified and an OHS induction and training program developed to fulfil employee's OHS training needs as a part of the enterprise general training program
	3.6	Training management system(s) are maintained so that individual employee's OHS training needs are easily identified, training attendance monitored and non attendance followed up
	3.7	Monitoring systems for keeping OHS records to meet regulatory requirements are maintained according to OHS legislative arrangements including identification of patterns of occupational injury and disease within area of managerial responsibility
	3.8	OHS system including policies, procedures and programs is assessed according to organisational aims with respect to OHS
	3.9	Recommendations and improvements to the OHS system are developed, documented and implemented to ensure effectiveness according to established procedures
	3.10	Compliance with OHS legislative requirements and established procedures is assessed to ensure that legal OHS standards are maintained as a minimum

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.11 Appropriate personnel are notified on the outcomes of the evaluation(s) and recommendations and completion documents are finalised/commissioned according to established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired for managing a utilities industry OHS management system.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G113B OH&S management systems

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation
  - strategy and tactics of bargaining
  - pre-negotiation essentials
  - communication in negotiation
- resolve conflict with internal or external stakeholders

© Commonwealth of Australia, 2025 Powering Skills Organisation

- dealing with negotiation breakdowns
- social context of negotiation
- power in negotiation
- ethics in negotiation.

G 5.1.4 Management techniques for utilities industry supervision

Evidence shall show an understanding and application of management techniques required of Gas Industry operators in a supervisory capacity, indicated by the following:

- industrial awards and employee entitlements
  - industrial conflict
  - industrial relations issues
  - understanding industrial awards and employee entitlements
  - individual and collective bargaining and agreements
- characteristics of ethnic and cultural groups
- Applicable environmental requirements
- relevant organisational standard operating procedures, site specific safety legislation and requirements
- correct waste management procedures
- application of OHS management in relation to other organisational management systems.
- Related organisational policies and procedures such as business planning, training, purchasing.

G 6.1.4 Communication for utilities industry supervisors

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
  - motives for communication
  - communication networks: who communicates with whom
  - verbal and non-verbal communication
  - choosing the medium and the flow of a message
  - blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication
  - understanding how to use information technology
  - effective use of email, internet and other communication mediums.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures;
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Note: Competence may be demonstrated working individually or under the guidance of or as a member of a team, with specialist OHS staff, managers or consultants

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Communicate and consult with work groups Develop, implement and maintain the organisational OHS policies and procedures Manage a systematic approach to OHS Understand the relevance to OHS management to other organisational systems, policies and procedures Understand the impact of the characteristics and composition of the workforce on OHS systems
B	All	Understand principles and practice of OHS management including hierarchy of control measures, risk management, OHS training and incident and accident investigation Identify hazards, analyse and manage risks in the workplace and design and implement appropriate OHS management systems Analyse relevant workplace data and deliver information sessions Understand and be able to apply relevant state and territory legislation, regulations, advisory codes

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and standards Develop reports to manage OHS Identify when expert advice is needed, to obtain that advice and to act on it appropriately Assess resources needed to establish and maintain OHS systems including a range of control measures
C	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in managing a utilities industry OHS management system.

Assessment of this competency must also be undertaken in either

© Commonwealth of Australia, 2025 Powering Skills Organisation

an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG115B Manage gas system projects

UEGNSG116B Manage gas system physical resources

UEGNSG141A Manage environmental performance

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

RANGE STATEMENT

This Unit shall be demonstrated in relation to managing a utilities industry OHS management system to be performed in a utilities industry work environment. The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section.

OHS legislative arrangements

Hazard (5)

Organisational procedure for managing risks including an OHS framework

Work instructions

Designated personnel for OHS

OHS issues

Contributions to OHS

Participative arrangements

Assessing/controlling risks

OHS information to co-workers including training

OHS safety records

Workplace hazard reports

OHS management system

Unit Sector(s)

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the coordination and monitoring of the implementation of the company risk management plan in the workplace. This competency standard refers to Risk Management Plans; Persons; Control Measures; Relevant Persons; Legislative Requirements; Emergency Exercises; Emergency Appliances; Safety Devices and Relevant Documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety,

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan to implement risk management plan	1.1	OHS principles and practices and environmental and sustainable energy procedures which may influence the systems are reviewed and determined
	1.2	Purpose of the implementation of a risk management plan is established after data is analysed and expected outcomes of the work are confirmed with the appropriate persons
	1.3	Organisational established procedures on policies and specifications for the implementation of a risk management plan are obtained or established with the appropriate persons
	1.4	Work roles and tasks are allocated according to requirements and individual's competencies
	1.5	Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.6	Liaison and communication issues with authorised persons are resolved and activities coordinated to carry out work
	1.7	Appropriate risk management plan and legislative requirements are identified to determine requirements for the workplace
	1.8	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and monitored including emergency exits kept clear according to established procedures
	1.9	Assessed risks are rated and priorities allocated according to risk management plan
	1.10	Control measures are identified and implemented to suit the relevant workplace conditions according to risk management plan
2 Implement risk management plan	2.1	Decisions regarding the implementation of the risk management plan are made on the basis of safety and effective outcomes according to requirements and established procedures
	2.2	Technical advice is given in relation to hazards, assessed risks and control measures so that monitoring can be undertaken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.3	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.4	Testing of the risk management plan is undertaken according to requirements and established procedures
	2.5	Work teams are coordinated to ensure that planned goals are met according to the risk management plan
	2.6	Contingency plans for critical incidents are invoked in accordance with requirements where critical incidents of an abnormal nature are experienced
	2.7	Strategic plans are developed incorporating organisation initiatives as per established procedures
	2.8	Persons selected are trained for emergency exercises to increase response times and knowledge of hazards and control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		according to Risk Management Plan
	2.9	Emergency exercises are coordinated and monitored according to the risk management plan
3 Review risk management plan	3.1	Final evaluation of the risk management plan is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the project
	3.2	Appropriate persons are notified of completion and reports and completion documents are finalised
	3.3	Reports and completion documents are submitted to relevant persons for approval and where applicable, statutory or regulatory approval
	3.4	Approved copies of the risk management plan are issued and records are updated in accordance with established procedures
	3.5	The risk management plan and associated activities are reviewed and assessed for relevance and quality

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8)This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for coordinating and monitoring the implementation of risk management plans for a utilities industry facility.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G114 Risk management plan

© Commonwealth of Australia, 2025 Powering Skills Organisation

B

G 5.1.1 Gas Industry concepts for supervising operations

Evidence shall show an understanding of the requirements to undertake the supervision of Gas Industry operations, indicated by the following:

- Implementation of risk management and Occupational Health and Safety (OHS) practices and principles including, but not limited to:
  - risk assessment, risk control and risk control measures
  - hierarchy of control
  - personal protective equipment — strengths and weaknesses
  - identifying hazards and their consequences
  - identifying hazards, assessing associated risks and implementing appropriate control measures
  - developing hazard checklists
  - reporting hazards including hazardous events
- planning theory and study of HAZOPS and HAZANS
- knowledge of applicable legislative requirements and Australian/New Zealand and ISO standards and codes of practice for the Gas Industry
- Implementation of relevant organisational policies and procedures
- identification and implementation of control measures
- establishing emergency management techniques
- principles and guidelines including critical incident analysis.

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation

© Commonwealth of Australia, 2025 Powering Skills Organisation

- strategy and tactics of bargaining
- pre-negotiation essentials
- communication in negotiation

- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

G 5.1.3 Plan for, respond to and manage emergencies

Evidence shall show an understanding and application of emergency management techniques in a Gas Industry environment, indicated by the following:

- emergency management concepts and principles:
  - auditing and planning
  - systems analysis
  - policies and procedures for non-employees and contractors
  - types of emergencies
  - dealing with an emergency
  - elements of an emergency plan
  - employee assistance programs.
- Develop an emergency management plan which includes:
  - First Aid and welfare
  - recovery and post recovery plans
  - legislative requirements
  - interaction with authorities/emergency services
  - communication with key stakeholders
  - initial response/assessment and make safe

Evidence Guide

EVIDENCE GUIDE

Overview of 9.1)

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Hazards: Confined spaces Electricity Gas Manual handling Noise Plant and equipment

		Infected blood Chemicals Temperature extremes Lighting Radiation
B	All	Risk management plans: Identification of hazards Assessment of risks Identification of control measures Implementation of control measures and review of control measures Reference to conduct and reporting of hazard operational studies HAZOPS and HAZANS Recognition of six categories of exposures (see range statement)
C	At least first 5	Persons: Organisation employees Contractors Consultants Maintenance persons Appropriately experienced and qualified persons Drivers Cleaners Grounds and site security persons
D	At least 6	Control measures: Elimination of hazards Work procedures Standard operating procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Personal protective equipment Fire safety Plant and equipment isolation Training of appropriate persons Communication with appropriate persons Supervision of appropriate persons Maintenance of control measures
E	All	Gas Industry concepts for supervising operations Problem solving, decision making and conflict resolution Emergency management
F	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in coordinating and monitoring implementation of a risk management plan for a utilities industry facility

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare project plan	1.1	OHS principles and practices and environmental and sustainable energy procedures which may influence the systems are reviewed and determined
	1.2	Resources are identified, tender documents and projected scope are prepared and tenders called for in accordance with company policy and procedures
	1.3	Performance measures are identified and project management plan is implemented in accordance with established procedures
	1.4	Testing procedures are discussed with appropriate persons in order to ascertain the project brief
	1.5	Testing parameters are established from organisational established procedures on policies and specifications
	1.6	Equipment, tools and personal protective equipment are selected and coordinated based on specified requirements and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual's competencies
	1.8	Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
		1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
		1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
2	Implement and manage project plan	2.1	Project schedule and project administration plan is developed and communication strategy with contractors, company representatives and technical experts is developed and implemented
		2.2	OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and established procedures
		2.3	Applications for work permits, access permits and licences are prepared and submitted to authorities and stakeholders for approval and resources are acquired and administered in accordance with the project plan
		2.4	Contractors are selected and managed in accordance with the project plan and that project variations are negotiated with all stakeholders and progress reports are prepared and presented with explanations of any over runs
		2.5	Technical advice is given to hazards, assessed risks and control measures so that monitoring can be undertaken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
		2.6	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.7	Testing is undertaken according to requirements and established procedures
	2.8	Work teams are arranged to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills
	2.10	Quality of work is monitored against personal performance agreement and established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives as per established procedures
3 Finalise and hand over projects	3.1	Remedial work is identified, scheduled and completed
	3.2	Final inspections are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.3	Appropriate persons are notified of completion and reports and completion documents are finalised.
	3.4	Reports and completion documents are submitted to relevant persons for approval and where applicable, statutory or regulatory approval
	3.5	Approved copies of documents are issued and records are updated in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

8)This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for managing gas systems projects.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G115B Gas system projects

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 5.1.1 Supervise Gas Industry operations

Evidence shall show an understanding of the requirements to undertake the supervision of Gas Industry operations, indicated by the following:

- Implementation of risk management and Occupational Health and Safety (OHS) practices and principles including, but not limited to:
  - risk assessment, risk control and risk control measures
  - hierarchy of control
  - personal protective equipment — strengths and weaknesses
  - identifying hazards and their consequences
  - identifying hazards, assessing associated risks and implementing appropriate control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- developing hazard checklists
- reporting hazards including hazardous events

- planning theory and study of HAZOPS and HAZANS
- knowledge of applicable legislative requirements and Australian/New Zealand and ISO standards and codes of practice for the Gas Industry
- Implementation of relevant organisational policies and procedures
- identification and implementation of control measures
- establishing emergency management techniques
- principles and guidelines including critical incident analysis.

G 5.1.3 Plan for, respond to and manage emergencies

Evidence shall show an understanding and application of emergency management techniques in a Gas Industry environment, indicated by the following:

- emergency management concepts and principles:
  - auditing and planning
  - systems analysis
  - policies and procedures for non-employees and contractors
  - types of emergencies
  - dealing with an emergency
  - elements of an emergency plan
  - employee assistance programs.
- Develop an emergency management plan which includes:
  - First Aid and welfare
  - recovery and post recovery plans
  - legislative requirements
  - interaction with authorities/emergency services
  - communication with key stakeholders
  - initial response/assessment and make safe

G 5.1.7 Manage Gas Industry maintenance

Evidence shall show an understanding and application of relevant gas industry infrastructure maintenance and practices at a supervisory level indicated by the following:

- planning of scheduled and non-scheduled maintenance of applicable gas infrastructure
- coordination of maintenance activities
- Implement safety and environmental controls during maintenance activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Comply with relevant regulations such as building Codes and Australian Standards during the planning and implementation of maintenance activities
- understanding of applicable project management techniques in maintenance planning and implementation
- manage gas industry projects
- understanding of applicable Human Resource requirements in maintenance activities including appropriate training and qualifications of maintenance personnel.
- Understanding and implementation of relevant aspects of organisational Quality Assurance requirements when planning and implementing maintenance activities

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level calculations, data processing requirements and reports
- engineering principles and operating principles of pipeline systems
- understanding of safe design principles
- appropriate environmental requirements
- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

G 6.1.2 Understand and utilise information for Gas Industry supervisors

Evidence shall show an understanding of the requirements to undertake supervision/management in a Gas Industry environment, indicated by the following:

- principles of gas flow and gas metering
- organisational standard operating procedures
- site specific safety legislation and safety requirements
  - overview of Occupational Health and Safety including systematic approaches to OHS
  - health and safety stakeholders (union, employers, workers, contractors and managers) hazards
  - risk assessment and control relating to areas such as:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- electrical safety
- vibration
- outdoor work
- stress
- equipment, tools and plant
- noise
- chemicals and substances
- manual handling
- confined spaces

- Stakeholder Relations
  - managing contractors, industry awards, and employee entitlements
  - understanding government and business relations
  - employee associations
  - industry associations
  - awards and agreements
  - collective bargaining and individual agreements
  - conciliation, arbitration, mediation and negotiation
  - coordinate the work of others

- adhere to OHS legislation and regulations
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety and risk management
  - Occupational Health and Safety legislation and regulations
- observe environmental and legislative requirements
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety
  - environmental and other legislative requirements
- apply applicable permit to work system including types of permit limitations
  - understanding the permit to work system
  - identifying the limitations in a permit to work system
- develop and review standard operating procedures
- review and report on completed work
- employ correct waste management procedures
  - appropriate waste management procedures
  - organisational requirements for waste management

© Commonwealth of Australia, 2025 Powering Skills Organisation

- consequences of not managing waste effectively
- knowledge of native title issues and legislation
- analyse relevant workplace data eg incident and environmental monitoring to evaluate the effectiveness of the OHS management system.

G 6.1.3 Commission/decommission pipelines and cathodic protection principles for Gas Industry supervisors

Evidence shall show an understanding of commission/decommissioning and cathodic protection principles required of Gas Industry supervisors, indicated by the following:

- commissioning and decommissioning procedures for pipeline and gas industry facilities and infrastructure
- cathodic protection systems
- plan and design commissioning procedures
- plan and design cathodic protection commissioning procedures

G 6.1.4 Communicate effectively

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
  - motives for communication
  - communication networks: who communicates with whom
  - verbal and non-verbal communication
  - choosing the medium and the flow of a message
  - blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication
  - understanding how to use information technology
  - effective use of email, internet and other communication mediums.

G 6.1.6 Plan and carry out project management

Evidence shall show an understanding and application of the requirements to undertake project management in a Gas Industry environment, indicated by the following:

- project management and costing
  - project planning processes

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - determining project costing
    - planning for events and milestones
    - determining inputs
    - producing outputs to a plan
- planning theory and its processes
    - the importance of planning
    - the planning process
    - organisational goals and objectives
    - strategic planning
    - operational planning
    - forecasting
- prioritise techniques
    - organising/prioritise work flows
    - time management
    - stress management
- managing persons and resources including consultants
    - understanding people
    - understanding behaviour
    - perceiving the causes of behaviour
    - defining leadership
- manage meetings
    - understanding organisational communication
    - formal and informal organisational communication
    - managing meetings and recording minutes
    - drafting minutes
- prepare reports
    - planning the writing process
    - developing the scope and outline of a document/report
    - drafting documents/reports utilising a plan and outline
    - finalising documents/reports
- facilitate contracts and employment
    - parliament, government and the law
    - statute law
    - common law
    - contracts and contract law
    - employment law
- understanding of sound business principles and performance measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding organisational behaviour
- business fundamentals
- establishing the principles of performance management
- establishing performance measures

- understanding of competition policy, budgets and product pricing and tariffs
  - understanding of government business relations in the Gas Industry
  - how tariffs are determined
  - working within legislative guidelines in tariffs and pricing.

G 6.1.7 Understand chemical and physical behaviours of gas

Evidence shall show an understanding of the chemical and physical behaviour of gases, and their effects in a gas system indicated by the following:

- chemical and physical behaviours of natural and liquefied petroleum gas
  - understanding of basic chemistry and physics of gases
  - the chemical makeup and properties of natural gas and LPG
  - dangers of working with natural gas and LPG and how to manage natural gas and LPG
- transportation of LPG and natural gas
  - understanding of issues associated with transporting of natural gas and LPG
- LPG supply logistics
  - correct filling procedures for LPG
  - identifying abnormal cylinder conditions
  - correct storage of LPG.

G 6.1.8 Managing environmental and cultural sensitive issues

Evidence shall show an understanding and implementation of the effective management of environmental and culturally sensitive issues in a Gas Industry environment, indicated by the following:

- understanding applicable environmental legislative compliance and regulation
  - understanding government and laws
  - penalties
  - acting in compliance with laws
- understanding of cultural and community standards and

© Commonwealth of Australia, 2025 Powering Skills Organisation

their sensitivities
    - communities and their interaction with government and business in Australia
    - cultural issues in Australia
    - using ethical behaviour in approaching cultural issues
    - anti discrimination legislation in Australia
    - native title issues in Australia
- understanding the impacts of gas installations and infrastructure on the environment and its impacts to native title
    - government and business environmental obligations
    - Australian environmental legislation and its affect on industry
    - the impact of construction of assets to the Australian environment
    - native title considerations for Gas Industry asset owners
- managing sensitive negotiations and communicating with a wide variety of stakeholders
    - understanding stakeholder politics in Australia
    - negotiation and bargaining
    - conciliation and arbitration
    - understanding of sensitive issues and the implications for negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 2	Resources: Relevant persons Materials, tools and equipment Personal protective equipment and clothing company standard operating procedures Equipment manuals, training resources.
B	At least 3	Project activities: Major construction and maintenance activities in

		the LPG or natural gas sector, Transmission and distribution pipelines LPG storage facilities greater than 50kL Underground storage Tankers and ships Control systems Custody transfer stations Odourising plant Corrosion control Interconnecting systems.
C	At least 2	Appropriate persons: Organisation employees Maintenance persons Appropriately experienced and qualified persons Site security persons Contractors and their employees Inspectors and regulatory authority representatives.
D	All	Legislative and company requirements: Occupational Health & Safety legislation Relevant Government Acts, regulations and codes of practice Australian Standards and Environmental legislative requirements Company Standard Operating Procedures and authorisation requirements and technical standards requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

E	At least 2	Relevant authorities and other stakeholders: Authorities Local councils Emergency services Road and rail transport authorities Government departments Land owners/Traditional land owners Contractors and other organisational persons
F	All	Communication strategy: Verbal directions Relevant documentation Project records/reports Electronic communications, internet communication.
G	At least 4	Relevant documentation: Specifications Drawings/plans; ‘as-constructed’ drawings/plans Manufacturer’s specifications Work permits Company standard operation and safety procedures Company management plans and policies Hot work permits Company forms and files OHS, laws and codes of practice Relevant Government

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Acts, regulations and codes of practice Environmental legislative requirements Quality assurance; expenditure reports and budgets
H	At least 2	Records/reports: Relevant documentation Routine inspections (daily readings, monthly checks) Scheduled maintenance activities Mandatory or statutory inspections Hazard and incident reports
I	All	Interpreting Gas Industry drawings Understanding emergency management Concepts and skills for Gas Industry supervisors Understanding commission/decommission pipelines and cathodic protection principles for Gas Industry supervisors Communication for Gas Industry supervisors Understanding of project management techniques Understanding of chemical and physical behaviours of gas Managing environmental and cultural sensitive issues
J	At least one occasion	Deal with an unplanned event by drawing on

© Commonwealth of Australia, 2025 Powering Skills Organisation

		essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency of managing gas systems projects.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all

© Commonwealth of Australia, 2025 Powering Skills Organisation

necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG113B Manage a utilities industry OHS management system

UEGNSG116B Manage gas system physical resources

UEGNSG120B Manage gas system environmental compliance

Or, with the following units of competency if delivered in the Advanced Diploma qualification:

UEGNSG116B Manage physical resources

UEGNSG117B Plan and implement the data acquisition and metering requirements of a gas system

UEGNSG118B Select and commission equipment to meet pressure and temperature control specifications

UEGNSG119B Manage workplace risk

UEGNSG120B Manage gas system environmental compliance

UEGNSG121B Prepare and design specifications for a gas system

UEGNSG122B Manage a customer service gas business unit

UEGNSG123B Manage financial resources

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance..

This Unit shall be demonstrated in relation to managing gas systems projects.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Resources

Project activities

Appropriate persons (6)

Legislative and company requirements:

Relevant authorities and other stakeholders

Communication strategy

Relevant documentation (6)

Records/reports (6)

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Cross discipline.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the competency to authorise the acquisition and management of physical resources to achieve the business's objectives. This competency standard refers to Physical resources; Acquisition and allocation of resources; Organisational policy and procedures that may vary between sectors and organisations; Budget formats; Budgets; Relevant authorities and other stakeholders; Expected lifetime of equipment.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where gas industry operations occur.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other then those directly related to Occupational Health and Safety, gas industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain

License to practice **3)**

equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the Performance Criteria describe the required performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

essential outcomes of a competency standard unit	needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Plan, determine and review physical resource requirements	1.1	Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
		1.2	Liaison and communication issues with authorised persons, authorities, clients and land-owners are resolved and activities co-ordinated to carry out work
		1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
		1.4	Physical resource requirements are determined in line with demonstrated needs and cost benefit analysis determined to demonstrate the return to the organisation
		1.5	Physical resource requirements are consolidated, rationalised and negotiated and acquired in the context of organisational requirements and budgets
		1.6	Replacement/acquisition/refurbishment of major items are scheduled based on expected lifetime of equipment and anticipated needs of the organisation
2	Direct and coordinate the acquisition and allocation of physical resources	2.1	Physical resource inventory is established and maintained for easy tracking of resource location/history
		2.2	Maintenance schedules and budgets are developed and approved in consultation with stakeholders with due regard to occupational health and safety needs and in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures
	2.3	Mathematical models are used to analyse the effectiveness of the finished product as per requirements and established procedures
	2.4	Systems are developed and implemented which facilitate collection, processing and management of data on resource use and maintenance/asset management
	2.5	Technical advice is given to hazards, assessed risks and control measures so that monitoring can be undertaken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Work teams are arranged to ensure planned goals are met according to established procedures
	2.8	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired essential knowledge and associated skills
	2.9	Quality of work is monitored against personal performance agreement and established procedures and professional standards
	2.10	Strategic plans are developed incorporating organisation initiatives as per established procedures
3 Complete and coordinate physical resource requirements	3.1	Final inspections are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Effectiveness of acquisition and allocation of resources is monitored and assessed to meet

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		organisational needs
	3.3	Inefficiencies in resource provision are identified and corrected
	3.4	Acquisition and allocation of resources and costs incurred are recorded and reported
	3.5	Appropriate persons are notified of completion and reports and completion documents are finalised
	3.6	Reports and completion documents are submitted to relevant persons for approval and where applicable, statutory or regulatory approval
	3.7	Approved copies of documents are issued and records are updated in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired for managing gas industry physical resources.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G116B Gas industry physical resources

G 5.1.6 Technical knowledge for Gas Industry managers

Evidence shall show an understanding and application of the technical knowledge required of Gas Industry managers, indicated by the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- development of organisational operational strategies as required
- understanding maintenance philosophies
- engineering principles
- risk management in a Gas Industry environment
- principles of planning including project management planning.

G 6.1.9 Understand and implement financial management

Evidence shall show an understanding of the requirements to perform applicable Gas Industry financial management activities, indicated by the following:

- Understanding financial management with the ability to reporton project and company budgets utilising financial statements as required by organisational policies and procedures. These include but are not limited to:understanding financial management fundamentals and the how the following are tracked through in an accounting system:
  - assets and liabilities
  - revenue
  - expenses
  - equity
  - source documents
  - journals
  - ledgers
  - trial balance
- reading, interpreting and reporting on project/company progress using accounting reports such as budget and cash flow reports
- understanding of resource management systems to monitor inventory, stock, consumables and physical resources and other assets
  - managing resources
  - maintaining assets/assets management
  - stock/consumables control
  - maintaining assets register
- understanding of computer accounting/bookkeeping software effectively
  - accounting software systems
  - invoicing
  - reconciling accounts
  - purchasing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- stock control
- general ledger
- payroll
- reporting.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered

© Commonwealth of Australia, 2025 Powering Skills Organisation

will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit is based, shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 5	Physical resources: Property/facilities Fixtures and plant Vehicles Equipment Stocks and supplies Gas systems and plant Works depot Pipelines Distribution systems Storage depots and installations
B	At least 5	Acquisition and allocation of resources: Identified priorities Sustainability Type of physical resource Urgency Cost of use Accessibility Endurance Maintenance demands Deployment time Customer needs Hazard and risk analysis
C	At least 1	Budget formats:

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Zero based budgeting Program budgeting Line item budgeting Organisation specific budgets Output/outcome budgeting
D	All	Budget: Capital expenditure Recurrent expenditure Output investment proposal Cash flow
E	At least 4	Relevant authorities and other stakeholders: Staff Managers Government (state, local, federal) Unions Community Industry Owners of leased property
F	At least 3	Reports: Spread sheets Written reports Completion of proformas Completion of forms Verbal reports Government budget submission proformas
G	All	Work is conducted observing relevant anti-discrimination policies, procedures and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working realistic environment and a variety of conditions.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Concurrent assessment and relationship with other units	**9.5)**
	There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to the managing of gas industry physical resources.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

Physical resources

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan data acquisition and metering requirements of a gas system	1.1 OHS principles and practices and environmental and sustainable energy procedures which may influence the systems are reviewed and determined
	1.2 Purpose of the data acquisition and metering requirements of a gas system are established after data is analysed and expected outcomes of the work are confirmed with the appropriate persons
	1.3 Properties and characteristics of the gas to be measured are identified as per established procedures on the development of a data acquisition and metering requirements system
	1.4 Design capacity of gas system is identified
	1.5 Back up systems are specified
	1.6 Legislative requirements are identified
	1.7 Data storage and communication systems are specified
	1.8 Work is prioritised and sequenced for the most efficient outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.9 Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
2 Determine specific equipment and maintenance requirements	2.1	Systems modelling is used to evaluate alternative proposals as per established procedures
	2.2	Maintenance activities are designed and scheduled according to requirements and established procedures
	2.3	OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and established procedures
	2.4	Technical advice is given to hazards, assessed risks and control measures so that monitoring can be undertaken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.5	Essential Knowledge and Associated Skills are applied to analyse specific data and compared with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.6	Maintenance recording system is developed incorporating organisation initiatives as per established procedures
	2.7	Metering equipment is selected to meet performance specifications and is optimally located in the system
	2.8	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills
	2.9	Quality of work is monitored against personal performance agreement and established organisational and professional standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Commission data collection and metering system	3.1	Final inspections of the metering and data acquisition plan is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate resources are obtained and scheduled according to the plan
	3.3	Company OHS policies and procedures are followed and the metering and data acquisition system is commissioned in accordance with the plan
	3.4	Appropriate persons are notified of completion and reports
	3.5	Reports are submitted to relevant persons for approval
	3.6	Approved copies of metering and data acquisition plan is issued and records are updated in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for planning and implement the data acquisition and metering requirements of a gas system.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G117 Data acquisition and metering requirements B

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.5 3SCADA system operation

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 5.1.6 Technical knowledge for Gas Industry managers

Evidence shall show an understanding and application of the technical knowledge required of Gas Industry managers, indicated by the following:

- development of organisational operational strategies as required
- understanding maintenance philosophies
- engineering principles
- risk management in a Gas Industry environment
- principles of planning including project management planning.

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level calculations, data processing requirements and reports
- engineering principles and operating principles of pipeline systems
- understanding of safe design principles
- appropriate environmental requirements
- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 6.1.2 Understand and utilise information for Gas Industry supervisors

Evidence shall show an understanding of the requirements to undertake supervision/management in a Gas Industry environment, indicated by the following:

- principles of gas flow and gas metering
- organisational standard operating procedures
- site specific safety legislation and safety requirements
  - overview of Occupational Health and Safety including systematic approaches to OHS
  - health and safety stakeholders (union, employers, workers, contractors and managers) hazards
  - risk assessment and control relating to areas such as:
    - electrical safety
    - vibration
    - outdoor work
    - stress
    - equipment, tools and plant
    - noise
    - chemicals and substances
    - manual handling
    - confined spaces
  - Stakeholder Relations
    - managing contractors, industry awards, and employee entitlements
    - understanding government and business relations
    - employee associations
    - industry associations
    - awards and agreements
    - collective bargaining and individual agreements
    - conciliation, arbitration, mediation and negotiation
    - coordinate the work of others
- adhere to OHS legislation and regulations
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety and risk management
  - Occupational Health and Safety legislation and regulations
- observe environmental and legislative requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding government and the development of statute and common law
- principles of Occupational Health and Safety
- environmental and other legislative requirements

- apply applicable permit to work system including types of permit limitations
  - understanding the permit to work system
  - identifying the limitations in a permit to work system
- develop and review standard operating procedures
- review and report on completed work
- employ correct waste management procedures
  - appropriate waste management procedures
  - organisational requirements for waste management
  - consequences of not managing waste effectively
- knowledge of native title issues and legislation
- analyse relevant workplace data eg incident and environmental monitoring to evaluate the effectiveness of the OHS management system.

G 6.1.3 Commission/decommission pipelines and cathodic protection principles for Gas Industry supervisors

Evidence shall show an understanding of commission/decommissioning and cathodic protection principles required of Gas Industry supervisors, indicated by the following:

- commissioning and decommissioning procedures for pipeline and gas industry facilities and infrastructure
- cathodic protection systems
- plan and design commissioning procedures
- plan and design cathodic protection commissioning procedures

G 6.1.4 Communicate effectively

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
  - motives for communication
  - communication networks: who communicates with whom
  - verbal and non-verbal communication
  - choosing the medium and the flow of a message

© Commonwealth of Australia, 2025 Powering Skills Organisation

- blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication
  - understanding how to use information technology
  - effective use of email, internet and other communication mediums.

G 6.1.7 Understand chemical and physical behaviours of gas

Evidence shall show an understanding of the chemical and physical behaviour of gases, and their effects in a gas system indicated by the following:

- chemical and physical behaviours of natural and liquefied petroleum gas
  - understanding of basic chemistry and physics of gases
  - the chemical makeup and properties of natural gas and LPG
  - dangers of working with natural gas and LPG and how to manage natural gas and LPG
- transportation of LPG and natural gas
  - understanding of issues associated with transporting of natural gas and LPG
- LPG supply logistics
  - correct filling procedures for LPG
  - identifying abnormal cylinder conditions
  - correct storage of LPG.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

© Commonwealth of Australia, 2025 Powering Skills Organisation

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 5	Gas systems: Custody Transfer Stations Tanker transfer Decantation Tempered Liquid Petroleum systems Field or District Regulators LPG systems Meters and regulators Transmission and distribution systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

B	At least 4	Data acquisition: Temperature Pressure and flow rates from regulator or custody transfer stations Water bath heater operation (water temperature, pilot light and main burner operation) Faulty equipment (over pressure and under pressure, slam shut operation and filter problems) Pipeline ruptures Security system monitoring and pressure and volume data for 'balancing the system'
C	At least 4	Resources: Relevant persons Relevant authorities Company standard operating procedures Materials Equipment manuals/specifications Personal protective equipment Fire safety systems and training resources
D	All	Legislative requirements: Occupational Health and Safety legislation Relevant Government Acts, regulations and codes of practice Australian standards and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		codes of practice Environmental legislative requirements
E	At least 3	Relevant authorities: Government authorities Landowners Stakeholders Local councils Fire authorities Other utilities
F	At least 8	Relevant documentation: Specifications, drawings and plans Manufacturer's specifications Company standard operational and safety procedures Company management plans and policies Work permits Hot work permits Company forms and files Acts and regulations Contracts Recording/reporting Maintenance activities Inspection and incident reports
G	All	Commission/decommission pipelines and cathodic protection principles for Gas Industry supervisors Communication for Gas Industry supervisors Chemical and physical

© Commonwealth of Australia, 2025 Powering Skills Organisation

		behaviours of gas
H	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in planning and implementing the data acquisition and metering requirements of a gas system.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG118B	Select and commission equipment to meet pressure and temperature control specifications
UEGNSG119B	Manage workplace risk
UEGNSG120B	Manage gas system environmental compliance
UEGNSG121B	Prepare and design specifications for a gas system
UEGNSG115B	Manage gas systems projects
UEGNSG122B	Manage a customer service gas business unit
UEGNSG123B	Manage financial resources
UEGNSG116B	Manage physical resources

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to planning and implementing the data

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the selection and commissioning of equipment for pressure and temperature control in a natural gas or LPG system. This competency standard refers to Gas Systems; Gas Characteristics; Relevant resources; Legislative requirements; Relevant authorities and other stakeholders; Relevant documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance,

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Determine performance parameters for the system to be controlled	1.1 OHS principles and practices and environmental and sustainable energy procedures which may influence the systems are reviewed and determined
	1.2 Purpose of the performance parameters for the system to be controlled are established after data is analysed and expected outcomes of the work is confirmed with the appropriate personnel
	1.3 Organisational established procedures on policies and specifications for performance parameters for the system to be controlled are obtained or established with the appropriate personnel
	1.4 Properties and gas characteristics are identified and discussed with appropriate personnel
	1.5 Relevant documentation, standards and legislative requirements are analysed
	1.6 Growth requirements are factored into the performance requirements
	1.7 Work roles and tasks are allocated according to requirements and individual's competencies
	1.8 Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.9 Liaison and communication issues with authorised personnel, authorities, clients and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Site requirements are identified and relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
2 Plan and oversee the commissioning of the equipment	2.1	Equipment and materials are selected to meet performance, budgetary and OHS requirements
	2.2	A commissioning plan and testing criteria are developed and implemented
	2.3	All relevant resources are scheduled
	2.4	All relevant supply authorities and statutory bodies are consulted and notified
	2.5	A performance monitoring plan is developed
	2.6	All relevant documentation is completed and authorised by the relevant authorities
	2.7	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.8	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills
	2.9	Quality of work is monitored against personal performance agreement and established organisational and professional standards
3 Validate system performance	3.1	Final inspections to validate system performance are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the project

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.2 System performance is reviewed to ensure performance of the system is within specifications
	3.3 System performance is reviewed to ensure balance is maintained with interconnected systems
	3.4 System performance is reviewed to ensure security of supply is within acceptable risk factors
	3.5 All reports and performance data are completed and lodged with the relevant authorities
	3.6 Appropriate personnel are notified of completion and reports and completion documents are finalised.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for selecting and commissioning equipment to meet pressure and temperature control specifications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G118B Pressure and temperature control

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Process and Instrumentation Diagrams (PID)
- Facility and pipeline construction and as-built drawings
- Geographical Information System (GIS) drawings and data
- Electrical drawings
- Survey maps
- Pipeline route maps and alignment sheets

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level calculations, data processing requirements and reports
- engineering principles and operating principles of pipeline systems
- understanding of safe design principles
- appropriate environmental requirements
- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

G 6.1.2 Understand and utilise information for Gas Industry supervisors

Evidence shall show an understanding of the requirements to undertake supervision/management in a Gas Industry environment, indicated by the following:

- principles of gas flow and gas metering
- organisational standard operating procedures
- site specific safety legislation and safety requirements
  - overview of Occupational Health and Safety including systematic approaches to OHS
  - health and safety stakeholders (union, employers, workers, contractors and managers) hazards
  - risk assessment and control relating to areas such as:
    - electrical safety
    - vibration
    - outdoor work
    - stress

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - equipment, tools and plant
        - noise
        - chemicals and substances
        - manual handling
        - confined spaces
      - Stakeholder Relations
        - managing contractors, industry awards, and employee entitlements
        - understanding government and business relations
        - employee associations
        - industry associations
        - awards and agreements
        - collective bargaining and individual agreements
        - conciliation, arbitration, mediation and negotiation
        - coordinate the work of others
    - adhere to OHS legislation and regulations
        - understanding government and the development of statute and common law
        - principles of Occupational Health and Safety and risk management
        - Occupational Health and Safety legislation and regulations
    - observe environmental and legislative requirements
        - understanding government and the development of statute and common law
        - principles of Occupational Health and Safety
        - environmental and other legislative requirements
    - apply applicable permit to work system including types of permit limitations
        - understanding the permit to work system
        - identifying the limitations in a permit to work system
    - develop and review standard operating procedures
    - review and report on completed work
    - employ correct waste management procedures
        - appropriate waste management procedures
        - organisational requirements for waste management
        - consequences of not managing waste effectively
    - knowledge of native title issues and legislation

© Commonwealth of Australia, 2025 Powering Skills Organisation

- analyse relevant workplace data eg incident and environmental monitoring to evaluate the effectiveness of the OHS management system.

G 6.1.3 Commission/decommission pipelines and cathodic protection principles for Gas Industry supervisors

Evidence shall show an understanding of commission/decommissioning and cathodic protection principles required of Gas Industry supervisors, indicated by the following:

- commissioning and decommissioning procedures for pipeline and gas industry facilities and infrastructure
- cathodic protection systems
- plan and design commissioning procedures
- plan and design cathodic protection commissioning procedures

G 6.1.4 Communicate effectively

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
  - motives for communication
  - communication networks: who communicates with whom
  - verbal and non-verbal communication
  - choosing the medium and the flow of a message
  - blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication
  - understanding how to use information technology
  - effective use of email, internet and other communication mediums.

G 6.1.5 Optimise performance of Pressure and temperature control equipment

Evidence shall show an understanding of the requirements of pressure and temperature control equipment at a supervision level in a Gas Industry environment, indicated by the following:

- operating principles of pressure and temperature control equipment and their performance characteristics including but not limited to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Electronic control equipment
- Pneumatic control equipment

- Designing and modification to pressure and temperature equipment

G 6.1.6 Plan and carry out project management

Evidence shall show an understanding and application of the requirements to undertake project management in a Gas Industry environment, indicated by the following:

- project management and costing
  - project planning processes
  - determining project costing
  - planning for events and milestones
  - determining inputs
  - producing outputs to a plan
- planning theory and its processes
  - the importance of planning
  - the planning process
  - organisational goals and objectives
  - strategic planning
  - operational planning
  - forecasting
- prioritise techniques
  - organising/prioritise work flows
  - time management
  - stress management
- managing persons and resources including consultants
  - understanding people
  - understanding behaviour
  - perceiving the causes of behaviour
  - defining leadership
- manage meetings
  - understanding organisational communication
  - formal and informal organisational communication
  - managing meetings and recording minutes
  - drafting minutes
- prepare reports
  - planning the writing process
  - developing the scope and outline of a document/report
  - drafting documents/reports utilising a plan and

© Commonwealth of Australia, 2025 Powering Skills Organisation

outline
    - finalising documents/reports
- facilitate contracts and employment
    - parliament, government and the law
    - statute law
    - common law
    - contracts and contract law
    - employment law
- understanding of sound business principles and performance measures
    - understanding organisational behaviour
    - business fundamentals
    - establishing the principles of performance management
    - establishing performance measures
- understanding of competition policy, budgets and product pricing and tariffs
    - understanding of government business relations in the Gas Industry
    - how tariffs are determined
    - working within legislative guidelines in tariffs and pricing.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline,

© Commonwealth of Australia, 2025 Powering Skills Organisation

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 2	Gas systems: Transmission and distribution pipelines Storage facilities Underground storage LPG installations Tanker and storage facilities
B	At least 2	Gas characteristics: Temperature Chemical composition Pressures and pressure reduction

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Reserve quantities LPG evaporation rates
C	At least 4	Relevant resources: Relevant personnel Materials and equipment Personal protective equipment Company standard operating procedures Equipment manuals Training resources
D	All	Legislative requirements: Occupational Health and Safety, government acts and regulations Australian standards and codes of practice Environmental legislative requirements
E	At least 3	Relevant requirements: Government authorities Landowners/Traditional land owners Stakeholders Local councils Fire authorities Other utilities Statutory authorities
F	At least 5	Relevant documentation: Contracts Specifications Drawings/plans Manufacturer's specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Work permits Company standard operation and safety procedures Company management plans and policies Company forms and files Laws and codes of practice
G	All	Interpret Gas Industry drawings Understand the commission/decommission pipelines and cathodic protection principles Communicate to Gas Industry supervisors Understand pressure and temperature control equipment Project manage
H	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in selecting and commissioning equipment to meet pressure and temperature control specifications.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the managing of risk management systems and practices in the workplace. This competency standard refers to Risk Management principles; Risk Management Plans; Appropriate persons; Authorisation; Risks; Hazards; Control measures; Relevant documentation; Legislative requirements; Emergency exercises; Emergency appliances; Contingency plans and Safety devices.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety,

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Manage the identification and development of a risk management system using risk management principles	1.1	OHS principles and practices and Environmental and Sustainable Energy procedures which may influence the systems are reviewed and determined
		1.2	Purpose of the risk management plan is established after data is analysed and expected outcomes are confirmed with the appropriate persons
		1.3	Organisational established procedures on policies and specifications for the development of a risk management plan are obtained
		1.4	Work roles and tasks are allocated according to requirements and individual's competencies
		1.5	Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
		1.6	Liaison and communication issues with authorised persons, authorities and clients are resolved and activities coordinated to carry out work
2	Manage the minimisation of risks in the work environment for	2.1	Decisions regarding the risk management plan are made on the basis of safety and effective outcomes according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
specific projects		
	2.2	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.3	Risk management plan and critical incident report responsibilities are confirmed and managed for specific project activities to minimise risk
	2.4	Project schedule to establish time frame, work activities and procurement of materials is approved
	2.5	Procedures and work instructions are received and approved for project activities according to the risk management plan
	2.6	Appropriate persons are counselled, where appropriate, for compliance with company risk management policies, standard operating procedures and relevant documentation
	2.7	Appropriate persons are assessed to ensure they comply with the company/site-specific procedures, health, safety and environmental requirements
	2.8	Project compliance to risk management plan is evaluated and reported and approved in accordance with company policies, procedures and relevant documentation processes
3 Manage and review critical incident contingency plans	3.1	Critical incident report is received for evaluation to determine appropriate remedial measures according to company policies, procedures and relevant documentation processes are completed
	3.2	Appropriate persons are authorised for training and qualified to the type of emergency exercises required according to company policies, procedures and relevant documentation processes are completed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.3 Emergency appliances are authorised for selection and secured appropriate to the type of emergency exercise required according to company policies and procedures
	3.4 Emergency appliances and safety devices are authorised for testing according to company standard operating policies and procedures, legislative requirements and manufacturers specifications
	3.5 Emergency exercises are authorised and conducted according to developed contingency plans and monitored for performance and recorded accordingly
	3.6 Final inspections of the risk management plan are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.7 Risk management plan report is submitted to relevant persons for approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for managing workplace risk in a Gas Industry facility.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G119B Workplace risk

G 5.1.1 Supervise Gas Industry operations

Evidence shall show an understanding of the requirements to

© Commonwealth of Australia, 2025 Powering Skills Organisation

undertake the supervision of Gas Industry operations, indicated by the following:

- Implementation of risk management and Occupational Health and Safety (OHS) practices and principles including, but not limited to:
  - risk assessment, risk control and risk control measures
  - hierarchy of control
  - personal protective equipment — strengths and weaknesses
  - identifying hazards and their consequences
  - identifying hazards, assessing associated risks and implementing appropriate control measures
  - developing hazard checklists
  - reporting hazards including hazardous events
- planning theory and study of HAZOPS and HAZANS
- knowledge of applicable legislative requirements and Australian/New Zealand and ISO standards and codes of practice for the Gas Industry
- Implementation of relevant organisational policies and procedures
- identification and implementation of control measures
- establishing emergency management techniques
- principles and guidelines including critical incident analysis.

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation
  - strategy and tactics of bargaining
  - pre-negotiation essentials
  - communication in negotiation

© Commonwealth of Australia, 2025 Powering Skills Organisation

- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

G 5.1.3 Plan for, respond to and manage emergencies

Evidence shall show an understanding and application of emergency management techniques in a Gas Industry environment, indicated by the following:

- emergency management concepts and principles:
  - auditing and planning
  - systems analysis
  - policies and procedures for non-employees and contractors
  - types of emergencies
  - dealing with an emergency
  - elements of an emergency plan
  - employee assistance programs.
- Develop an emergency management plan which includes:
  - First Aid and welfare
  - recovery and post recovery plans
  - legislative requirements
  - interaction with authorities/emergency services
  - communication with key stakeholders
  - initial response/assessment and make safe

G 5.1.4 Management techniques for utilities industry supervision

Evidence shall show an understanding and application of management techniques required of Gas Industry operators in a supervisory capacity, indicated by the following:

- industrial awards and employee entitlements
  - industrial conflict
  - industrial relations issues
  - understanding industrial awards and employee entitlements
  - individual and collective bargaining and agreements
- characteristics of ethnic and cultural groups
- Applicable environmental requirements
- relevant organisational standard operating procedures, site specific safety legislation and requirements
- correct waste management procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- application of OHS management in relation to other organisational management systems.
- Related organisational policies and procedures such as business planning, training, purchasing.

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level calculations, data processing requirements and reports
- engineering principles and operating principles of pipeline systems
- understanding of safe design principles
- appropriate environmental requirements
- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

G 6.1.4 Communicate effectively

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
  - motives for communication
  - communication networks: who communicates with whom
  - verbal and non-verbal communication
  - choosing the medium and the flow of a message
  - blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication
  - understanding how to use information technology
  - effective use of email, internet and other communication mediums.

G 6.1.6 Plan and carry out project management

Evidence shall show an understanding and application of the requirements to undertake project management in a Gas Industry environment, indicated by the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- project management and costing
  - project planning processes
  - determining project costing
  - planning for events and milestones
  - determining inputs
  - producing outputs to a plan
- planning theory and its processes
  - the importance of planning
  - the planning process
  - organisational goals and objectives
  - strategic planning
  - operational planning
  - forecasting
- prioritise techniques
  - organising/prioritise work flows
  - time management
  - stress management
- managing persons and resources including consultants
  - understanding people
  - understanding behaviour
  - perceiving the causes of behaviour
  - defining leadership
- manage meetings
  - understanding organisational communication
  - formal and informal organisational communication
  - managing meetings and recording minutes
  - drafting minutes
- prepare reports
  - planning the writing process
  - developing the scope and outline of a document/report
  - drafting documents/reports utilising a plan and outline
  - finalising documents/reports
- facilitate contracts and employment
  - parliament, government and the law
  - statute law
  - common law
  - contracts and contract law
  - employment law

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding of sound business principles and performance measures
  - understanding organisational behaviour
  - business fundamentals
  - establishing the principles of performance management
  - establishing performance measures
- understanding of competition policy, budgets and product pricing and tariffs
  - understanding of government business relations in the Gas Industry
  - how tariffs are determined
  - working within legislative guidelines in tariffs and pricing.

G 6.1.7 Understand chemical and physical behaviours of gas

Evidence shall show an understanding of the chemical and physical behaviour of gases, and their effects in a gas system indicated by the following:

- chemical and physical behaviours of natural and liquefied petroleum gas
  - understanding of basic chemistry and physics of gases
  - the chemical makeup and properties of natural gas and LPG
  - dangers of working with natural gas and LPG and how to manage natural gas and LPG
- transportation of LPG and natural gas
  - understanding of issues associated with transporting of natural gas and LPG
- LPG supply logistics
  - correct filling procedures for LPG
  - identifying abnormal cylinder conditions
  - correct storage of LPG.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to **9.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Risk Management principles: Six categories of exposures

© Commonwealth of Australia, 2025 Powering Skills Organisation

		(personal, property, financial, environmental, product and administrative, legislative compliance, Occupational Health and Safety, procedure systems, vicarious liability, professional liability.
B	At least 4	Risk Management Plans: Identification of hazards assessment of risks Identification of control measures Implementation of control measures and review of control measures Reference to conduct and reporting of hazard and operability studies (HAZOPS) and hazard analysis studies (HAZANS) for critical incidents Recognition of six categories of exposures (see range statement for further information) Identification and use of Manufacturer's specifications and Australian/New Zealand and ISO standards Contingency plans for response to critical incidents
C	All	Risks (assessment for): Injury death, illness, damage to plant/equipment, financial loss, non-compliance with legislation, damage to products

© Commonwealth of Australia, 2025 Powering Skills Organisation

D	All	Hazards: Confined spaces, gas, electricity, manual handling, noise, plant and equipment, infected blood, chemicals, temperature, lighting, radiation.
E	All	Control measures: Elimination of hazards, work procedures, Standard Operating Procedures, Personal Protective Equipment, fire safety, plant and equipment isolation, selection and training of appropriate persons, communications with appropriate persons, supervision of appropriate persons, management of control measures
F	All	Relevant documentation: Australian/New Zealand and ISO Standards; company risk management policy; codes of practice; standard operating procedures; Australian Dangerous Goods; trade practices; Occupational Health and Safety reporting requirements; injury reporting; claims management; contractor control; hazardous substances management
G	At least 2	Emergency exercises: Desktop and in-field simulation emergency exercises (involving fire; explosion; vapour/liquid leak; excavated/ruptured pipeline)

© Commonwealth of Australia, 2025 Powering Skills Organisation

		LPG road/rail accidents Loss of supply Lost or unaccounted for persons Medical emergencies
H	All	Emergency appliances: Emergency trucks/trailers Emergency plant (compressors, cranes, welding equipment etc) Breathing apparatus Fire fighting equipment
I	All	Contingency plans: Emergency responses to a range of abnormal operating conditions Plans for responses to critical incidents Prioritise proposed responses
J	All	Knowledge of problem solving, decision making and conflict resolution Emergency management Communication for Gas Industry supervisors Ability to apply project management techniques Understanding of chemical and physical behaviours of gas
K	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above

© Commonwealth of Australia, 2025 Powering Skills Organisation

		listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in managing workplace risk in a Gas Industry facility.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG117B	Plan and Implement the data acquisition and metering requirements of a gas system
UEGNSG118B	Select and commission equipment to meet pressure and temperature control specifications
UEGNSG120B	Manage gas system environmental compliance
UEGNSG121B	Prepare and design specifications for a gas system
UEGNSG115B	Manage gas systems projects
UEGNSG122B	Manage a customer service gas business unit
UEGNSG123B	Manage financial resources
UEGNSG116B	Manage physical resources

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to managing workplace risk in Gas Industry facility.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the skills and knowledge required to ensure that all gas installations and assets comply with legal, environmental, Occupational Health and Safety and community standards. This competency standard refers to Gas systems; Legislative compliance; Environmental issues; Safety issues and Relevant personnel.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection,

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Identify and document environmental issues for a proposed gas system	1.1 OHS principles and practices and Environmental and Sustainable Energy procedures which may influence the system are reviewed and determined
	1.2 Legislative requirements are identified and impact assessments are conducted or arranged as appropriate according to established procedures
	1.3 Organisational established procedures on policies and specifications for the work are obtained or established with the appropriate personnel
	1.4 Testing parameters are established from organisational established procedures on policies and specifications
	1.5 Testing procedures are discussed with persons in order to ascertain the project brief
	1.6 Equipment, tools and personal protective equipment are selected and coordinated based on specified requirements and established procedures
	1.7 Work roles and tasks are allocated according to requirements and individual's competencies
	1.8 Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
2 Facilitate negotiations for compliance with all Regulations, Standards and Codes of Practice	2.1	All internal and external stakeholders are identified and relevant and qualified persons are consulted on compliance needs
	2.2	Negotiated decisions are made on the basis of safety and environmental compliance and effective outcomes according to requirements and established procedures
	2.3	Technical advice is given regarding hazards, assessed risks and control measures so that monitoring can be undertaken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.4	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.5	Work teams are arranged to ensure planned goals are met according to established procedures
	2.6	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills
	2.7	Quality of work is monitored against personal performance agreement and established

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		organisational and professional standards
	2.8	Strategic plans are developed incorporating organisation initiatives as per established procedures
3 Review environmental and OHS management plans for a gas system	3.1	Environmental and OHS risks and their likely impacts for a gas system on the installation assets and to communities are identified and analysed to determine control options
	3.2	Options for addressing potential impacts are identified, proposed and costed
	3.3	Requisite environmental and OHS management strategies are determined and recommendations made according to company policies, procedures and processes
	3.4	Requisite environmental and OHS management strategies are determined and recommendations made according to company policies, procedures and processes
	3.5	Final inspections of the work are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.6	Persons are notified of completion and reports and completion documents are finalised
	3.7	Reports and completion documents are submitted to relevant personnel and organisations for approval and where applicable, statutory or regulatory approval
	3.8	Approved copies of documents are issued and records are updated in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for managing gas system environmental compliance.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G120B Gas system environmental compliance

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 5.1.1 Supervise Gas Industry operations

Evidence shall show an understanding of the requirements to undertake the supervision of Gas Industry operations, indicated by the following:

- Implementation of risk management and Occupational Health and Safety (OHS) practices and principles including, but not limited to:
  - risk assessment, risk control and risk control measures
  - hierarchy of control
  - personal protective equipment — strengths and weaknesses
  - identifying hazards and their consequences
  - identifying hazards, assessing associated risks and implementing appropriate control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- developing hazard checklists
- reporting hazards including hazardous events

- planning theory and study of HAZOPS and HAZANS
- knowledge of applicable legislative requirements and Australian/New Zealand and ISO standards and codes of practice for the Gas Industry
- Implementation of relevant organisational policies and procedures
- identification and implementation of control measures
- establishing emergency management techniques
- principles and guidelines including critical incident analysis.

G 5.1.3 Plan for, respond to and manage emergencies

Evidence shall show an understanding and application of emergency management techniques in a Gas Industry environment, indicated by the following:

- emergency management concepts and principles:
  - auditing and planning
  - systems analysis
  - policies and procedures for non-employees and contractors
  - types of emergencies
  - dealing with an emergency
  - elements of an emergency plan
  - employee assistance programs.
- Develop an emergency management plan which includes:
  - First Aid and welfare
  - recovery and post recovery plans
  - legislative requirements
  - interaction with authorities/emergency services
  - communication with key stakeholders
  - initial response/assessment and make safe

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level calculations, data processing requirements and reports
- engineering principles and operating principles of

© Commonwealth of Australia, 2025 Powering Skills Organisation

pipeline systems
- understanding of safe design principles
- appropriate environmental requirements
- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

G 6.1.2 Understand and utilise information for Gas Industry supervisors

Evidence shall show an understanding of the requirements to undertake supervision/management in a Gas Industry environment, indicated by the following:

- principles of gas flow and gas metering
- organisational standard operating procedures
- site specific safety legislation and safety requirements
  - overview of Occupational Health and Safety including systematic approaches to OHS
  - health and safety stakeholders (union, employers, workers, contractors and managers) hazards
  - risk assessment and control relating to areas such as:
    - electrical safety
    - vibration
    - outdoor work
    - stress
    - equipment, tools and plant
    - noise
    - chemicals and substances
    - manual handling
    - confined spaces
  - Stakeholder Relations
    - managing contractors, industry awards, and employee entitlements
    - understanding government and business relations
    - employee associations
    - industry associations
    - awards and agreements
    - collective bargaining and individual agreements
    - conciliation, arbitration, mediation and negotiation
    - coordinate the work of others
- adhere to OHS legislation and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding government and the development of statute and common law
- principles of Occupational Health and Safety and risk management
- Occupational Health and Safety legislation and regulations

- observe environmental and legislative requirements
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety
  - environmental and other legislative requirements
- apply applicable permit to work system including types of permit limitations
  - understanding the permit to work system
  - identifying the limitations in a permit to work system
- develop and review standard operating procedures
- review and report on completed work
- employ correct waste management procedures
  - appropriate waste management procedures
  - organisational requirements for waste management
  - consequences of not managing waste effectively
- knowledge of native title issues and legislation
- analyse relevant workplace data eg incident and environmental monitoring to evaluate the effectiveness of the OHS management system.

G 6.1.6 Plan and carry out project management

Evidence shall show an understanding and application of the requirements to undertake project management in a Gas Industry environment, indicated by the following:

- project management and costing
  - project planning processes
  - determining project costing
  - planning for events and milestones
  - determining inputs
  - producing outputs to a plan
- planning theory and its processes
  - the importance of planning
  - the planning process
  - organisational goals and objectives
  - strategic planning
  - operational planning

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - forecasting
- prioritise techniques
    - organising/prioritise work flows
    - time management
    - stress management
- managing persons and resources including consultants
    - understanding people
    - understanding behaviour
    - perceiving the causes of behaviour
    - defining leadership
- manage meetings
    - understanding organisational communication
    - formal and informal organisational communication
    - managing meetings and recording minutes
    - drafting minutes
- prepare reports
    - planning the writing process
    - developing the scope and outline of a document/report
    - drafting documents/reports utilising a plan and outline
    - finalising documents/reports
- facilitate contracts and employment
    - parliament, government and the law
    - statute law
    - common law
    - contracts and contract law
    - employment law
- understanding of sound business principles and performance measures
    - understanding organisational behaviour
    - business fundamentals
    - establishing the principles of performance management
    - establishing performance measures
- understanding of competition policy, budgets and product pricing and tariffs
    - understanding of government business relations in the Gas Industry
    - how tariffs are determined
    - working within legislative guidelines in tariffs and

© Commonwealth of Australia, 2025 Powering Skills Organisation

pricing.

G 6.1.7 Understand chemical and physical behaviours of gas

Evidence shall show an understanding of the chemical and physical behaviour of gases, and their effects in a gas system indicated by the following:

- chemical and physical behaviours of natural and liquefied petroleum gas
  - understanding of basic chemistry and physics of gases
  - the chemical makeup and properties of natural gas and LPG
  - dangers of working with natural gas and LPG and how to manage natural gas and LPG
- transportation of LPG and natural gas
  - understanding of issues associated with transporting of natural gas and LPG
- LPG supply logistics
  - correct filling procedures for LPG
  - identifying abnormal cylinder conditions
  - correct storage of LPG.

G 6.1.8 Manage environmental and culturally sensitive issues

Evidence shall show an understanding and implementation of the effective management of environmental and culturally sensitive issues in a Gas Industry environment, indicated by the following:

- understanding applicable environmental legislative compliance and regulation
  - understanding government and laws
  - penalties
  - acting in compliance with laws
- understanding of cultural and community standards and their sensitivities
  - communities and their interaction with government and business in Australia
  - cultural issues in Australia
  - using ethical behaviour in approaching cultural issues
  - anti discrimination legislation in Australia
  - native title issues in Australia
- understanding the impacts of gas installations and infrastructure on the environment and its impacts to native title
  - government and business environmental obligations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Australian environmental legislation and its affect on industry
- the impact of construction of assets to the Australian environment
- native title considerations for Gas Industry asset owners

- managing sensitive negotiations and communicating with a wide variety of stakeholders
  - understanding stakeholder politics in Australia
  - negotiation and bargaining
  - conciliation and arbitration
  - understanding of sensitive issues and the implications for negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	Any 1	Gas systems Natural gas transmission, distribution and storage Liquefied petroleum gas tanker and ship transport Storage and processing terminals and distribution systems
B	All	Legislative compliance Occupational Health and Safety legislation Relevant Government Acts, regulations and codes of practice Australian Standards and Codes of Practice Environmental legislative requirements
C	All	Environmental issues; Political, legal, community and aesthetic impact of installations
D	All	Safety issues

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Occupational Health and Safety operatives Ongoing maintenance of facilities Emergency plans Safety cases and environmental impact assessments for major hazardous facilities (MHFs)
E	At least 6	Relevant personnel: Managers Other supervisors Inter-company departments Other utilities Council representatives Producers, transporters/shippers Consultants Government bodies/agencies Refinery personnel Customers Land owners/Traditional land owners
F	All	Relevant authorities: Government authorities Land owners both current and traditional Local councils Land management groups Other utilities In-house quality control groups and management
G	All	Interpreting Gas Industry drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Understanding emergency management Ability to apply project management techniques Understanding chemical and physical behaviours of gas Managing environmental and cultural sensitive issues
H	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in managing gas system environmental compliance.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to basic use of managing gas system environmental compliance.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Gas systems

Legislative compliance

Environmental issues

Safety issues

Relevant personnel

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the requirements to identify safe systems design specifications based on the required Performance Criteria for a gas system/installation, covering natural or liquefied petroleum gas. The competency standard refers to Gas systems; Environmental hazards; System logistics; Resources; Relevant Documentation; Legislative compliance; Relevant authorities.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance,

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare input and output Performance Criteria for the system	1.1	OHS principles and practices and Environmental and Sustainable Energy procedures which may influence the systems are reviewed and determined
	1.2	Proposed system usage is analysed and technical requirements of the system are investigated and expected outcomes of the work are confirmed with the appropriate persons
	1.3	Organisational established procedures on policies and specifications for the job are obtained or established with the appropriate persons
	1.4	Testing parameters are established from organisational established procedures on policies and specifications
	1.5	Testing procedures are discussed with appropriate persons in order to ascertain the project brief
	1.6	Equipment, tools and personal protective equipment are selected and coordinated based on specified requirements and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual's competencies
	1.8	Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
2 Assess the impact of the system on the external environment	2.1	System logistics are determined and impact on interconnected systems is assessed
	2.2	OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and established procedures
	2.3	Decisions are made on the basis of safety and effective outcomes according to requirements and established procedures
	2.4	Mathematical models are used to analyse the effectiveness of the finished product as per requirements and established procedures
	2.5	Technical advice is given to hazards, assessed risks and control measures so that monitoring can be undertaken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing is undertaken according to requirements and established procedures
	2.8	Work teams are arranged to ensure planned goals are met according to established

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired Essential Knowledge and Associated Skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisational initiatives as per established procedures
3 Identify options for the system and evaluate options and prepare specifications	3.1	Final inspections are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the project
	3.2	Design and construction resources are identified and availability and price is determined and maintenance requirements are documented
	3.3	Cost benefit analysis is prepared and evaluation criteria are determined, any shortfalls in recommended option are justified and all compliance requirements are met
	3.4	Appropriate persons are notified of completion and reports and completion documents are finalised.
	3.5	Reports and completion documents are submitted to relevant persons for approval and where applicable, statutory or regulatory approval
	3.6	Approved copies of documents are issued and records are updated in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for preparing design specifications of a gas system.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G121B Gas system design specifications

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 5.1.1 Supervise Gas Industry operations

Evidence shall show an understanding of the requirements to undertake the supervision of Gas Industry operations, indicated by the following:

- Implementation of risk management and Occupational Health and Safety (OHS) practices and principles including, but not limited to:
  - risk assessment, risk control and risk control measures
  - hierarchy of control
  - personal protective equipment — strengths and weaknesses
  - identifying hazards and their consequences

© Commonwealth of Australia, 2025 Powering Skills Organisation

- identifying hazards, assessing associated risks and implementing appropriate control measures
- developing hazard checklists
- reporting hazards including hazardous events

- planning theory and study of HAZOPS and HAZANS
- knowledge of applicable legislative requirements and Australian/New Zealand and ISO standards and codes of practice for the Gas Industry
- Implementation of relevant organisational policies and procedures
- identification and implementation of control measures
- establishing emergency management techniques
- principles and guidelines including critical incident analysis.

G 5.1.3 Plan for, respond to and manage emergencies

Evidence shall show an understanding and application of emergency management techniques in a Gas Industry environment, indicated by the following:

- emergency management concepts and principles:
  - auditing and planning
  - systems analysis
  - policies and procedures for non-employees and contractors
  - types of emergencies
  - dealing with an emergency
  - elements of an emergency plan
  - employee assistance programs.
- Develop an emergency management plan which includes:
  - First Aid and welfare
  - recovery and post recovery plans
  - legislative requirements
  - interaction with authorities/emergency services
  - communication with key stakeholders
  - initial response/assessment and make safe

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level

© Commonwealth of Australia, 2025 Powering Skills Organisation

calculations, data processing requirements and reports
- engineering principles and operating principles of pipeline systems
- understanding of safe design principles
- appropriate environmental requirements
- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

G 6.1.2 Understand and utilise information for Gas Industry supervisors

Evidence shall show an understanding of the requirements to undertake supervision/management in a Gas Industry environment, indicated by the following:

- principles of gas flow and gas metering
- organisational standard operating procedures
- site specific safety legislation and safety requirements
  - overview of Occupational Health and Safety including systematic approaches to OHS
  - health and safety stakeholders (union, employers, workers, contractors and managers) hazards
  - risk assessment and control relating to areas such as:
    - electrical safety
    - vibration
    - outdoor work
    - stress
    - equipment, tools and plant
    - noise
    - chemicals and substances
    - manual handling
    - confined spaces
  - Stakeholder Relations
    - managing contractors, industry awards, and employee entitlements
    - understanding government and business relations
    - employee associations
    - industry associations
    - awards and agreements
    - collective bargaining and individual agreements
    - conciliation, arbitration, mediation and negotiation

© Commonwealth of Australia, 2025 Powering Skills Organisation

- coordinate the work of others
- adhere to OHS legislation and regulations
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety and risk management
  - Occupational Health and Safety legislation and regulations
- observe environmental and legislative requirements
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety
  - environmental and other legislative requirements
- apply applicable permit to work system including types of permit limitations
  - understanding the permit to work system
  - identifying the limitations in a permit to work system
- develop and review standard operating procedures
- review and report on completed work
- employ correct waste management procedures
  - appropriate waste management procedures
  - organisational requirements for waste management
  - consequences of not managing waste effectively
- knowledge of native title issues and legislation
- analyse relevant workplace data eg incident and environmental monitoring to evaluate the effectiveness of the OHS management system.

G 6.1.4 Communicate effectively

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
  - motives for communication
  - communication networks: who communicates with whom
  - verbal and non-verbal communication
  - choosing the medium and the flow of a message
  - blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding how to use information technology
- effective use of email, internet and other communication mediums.

G 6.1.6 Plan and carry out project management

Evidence shall show an understanding and application of the requirements to undertake project management in a Gas Industry environment, indicated by the following:

- project management and costing
  - project planning processes
  - determining project costing
  - planning for events and milestones
  - determining inputs
  - producing outputs to a plan
- planning theory and its processes
  - the importance of planning
  - the planning process
  - organisational goals and objectives
  - strategic planning
  - operational planning
  - forecasting
- prioritise techniques
  - organising/prioritise work flows
  - time management
  - stress management
- managing persons and resources including consultants
  - understanding people
  - understanding behaviour
  - perceiving the causes of behaviour
  - defining leadership
- manage meetings
  - understanding organisational communication
  - formal and informal organisational communication
  - managing meetings and recording minutes
  - drafting minutes
- prepare reports
  - planning the writing process
  - developing the scope and outline of a document/report
  - drafting documents/reports utilising a plan and outline

© Commonwealth of Australia, 2025 Powering Skills Organisation

- finalising documents/reports
- facilitate contracts and employment
  - parliament, government and the law
  - statute law
  - common law
  - contracts and contract law
  - employment law
- understanding of sound business principles and performance measures
  - understanding organisational behaviour
  - business fundamentals
  - establishing the principles of performance management
  - establishing performance measures
- understanding of competition policy, budgets and product pricing and tariffs
  - understanding of government business relations in the Gas Industry
  - how tariffs are determined
  - working within legislative guidelines in tariffs and pricing.

G 6.1.7 Understand chemical and physical behaviours of gas

Evidence shall show an understanding of the chemical and physical behaviour of gases, and their effects in a gas system indicated by the following:

- chemical and physical behaviours of natural and liquefied petroleum gas
  - understanding of basic chemistry and physics of gases
  - the chemical makeup and properties of natural gas and LPG
  - dangers of working with natural gas and LPG and how to manage natural gas and LPG
- transportation of LPG and natural gas
  - understanding of issues associated with transporting of natural gas and LPG
- LPG supply logistics
  - correct filling procedures for LPG
  - identifying abnormal cylinder conditions
  - correct storage of LPG.

G 6.1.8 Manage environmental and culturally sensitive issues

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an understanding and implementation of the effective management of environmental and culturally sensitive issues in a Gas Industry environment, indicated by the following:

- understanding applicable environmental legislative compliance and regulation
  - understanding government and laws
  - penalties
  - acting in compliance with laws
- understanding of cultural and community standards and their sensitivities
  - communities and their interaction with government and business in Australia
  - cultural issues in Australia
  - using ethical behaviour in approaching cultural issues
  - anti discrimination legislation in Australia
  - native title issues in Australia
- understanding the impacts of gas installations and infrastructure on the environment and its impacts to native title
  - government and business environmental obligations
  - Australian environmental legislation and its affect on industry
  - the impact of construction of assets to the Australian environment
  - native title considerations for Gas Industry asset owners
- managing sensitive negotiations and communicating with a wide variety of stakeholders
  - understanding stakeholder politics in Australia
  - negotiation and bargaining
  - conciliation and arbitration
  - understanding of sensitive issues and the implications for negotiation.

Evidence Guide

EVIDENCE GUIDE

		appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in preparing safe design specifications of a gas system.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1. Assess potential in the market place	1.1	Organisational, strategic and business plans and other relevant documentation is analysed and market analysis and environmental scans are performed according to established procedures
	1.2	Products and services to form part of the business are selected consistent with the needs of the marketplace and the objectives of the organisation
	1.3	Work roles and tasks are allocated according to requirements and individual's competencies
	1.4	Work is prioritised and sequenced for the most effective outcome and completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.5	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.6	Risk control measures are identified, prioritised and evaluated against the work schedule
2 Develop business plans for the business unit	2.1	Business unit objectives and key performance indicators are developed in consultation with relevant personnel and principle stakeholders
	2.2	A marketing strategy is developed and budgets and business unit objectives are promoted through effective communication to appropriate personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.3	Decisions are made on the basis of safety and effective outcomes according to requirements and established procedures
	2.4	Mathematical models are used to analyse the effectiveness of the finished product as per requirements and established procedures
	2.5	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.6	Testing is undertaken according to requirements and established procedures
	2.7	Work teams are arranged to ensure planned goals are met according to established procedures
	2.8	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills,
	2.9	Quality of work is monitored against personal performance agreement and established organisational and professional standards
	2.10	Strategic plans are developed incorporating organisation initiatives as per established procedures
3 Manage the business unit and review and assess performance of the business unit	3.1	Distribution systems are developed and sales and product pricing schedules are developed and confirmed with appropriate personnel
	3.2	Key performance indicators are reviewed with appropriate personnel and barriers to performance are identified, analysed and recommendations for improvements made
	3.3	Product quality and sales trends are monitored and recommendations made for replacement of product or review of marketing strategies

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.4 Customer energy needs are projected and new products identified and forward estimates made according to established procedures
	3.5 Reports and completion documents are submitted to relevant persons for approval and where applicable, statutory or regulatory approval
	3.6 Approved copies of documents are issued and records are updated in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for managing a customer service gas business unit.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G122B Gas business unit customer service

G 6.1.1 Understand and utilise concepts and skills for Gas Industry supervisors

Evidence shall show an understanding and interpretation of the concepts and skills required of Gas Industry supervisors to undertake activities, indicated by the following:

- applicable mathematical techniques and principles to enable production of relevant supervisory level calculations, data processing requirements and reports
- engineering principles and operating principles of pipeline systems
- understanding of safe design principles
- appropriate environmental requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

- correctly read, analyse, interpret and record data
- third-party service location methods
- construction principles and safety
- applicable gas chemistry, properties and characteristics.

G 6.1.2 Understand and utilise information for Gas Industry supervisors

Evidence shall show an understanding of the requirements to undertake supervision/management in a Gas Industry environment, indicated by the following:

- principles of gas flow and gas metering
- organisational standard operating procedures
- site specific safety legislation and safety requirements
  - overview of Occupational Health and Safety including systematic approaches to OHS
  - health and safety stakeholders (union, employers, workers, contractors and managers) hazards
  - risk assessment and control relating to areas such as:
    - electrical safety
    - vibration
    - outdoor work
    - stress
    - equipment, tools and plant
    - noise
    - chemicals and substances
    - manual handling
    - confined spaces
  - Stakeholder Relations
    - managing contractors, industry awards, and employee entitlements
    - understanding government and business relations
    - employee associations
    - industry associations
    - awards and agreements
    - collective bargaining and individual agreements
    - conciliation, arbitration, mediation and negotiation
    - coordinate the work of others
- adhere to OHS legislation and regulations
  - understanding government and the development of statute and common law
  - principles of Occupational Health and Safety and risk

© Commonwealth of Australia, 2025 Powering Skills Organisation

management
    - Occupational Health and Safety legislation and regulations
- observe environmental and legislative requirements
    - understanding government and the development of statute and common law
    - principles of Occupational Health and Safety
    - environmental and other legislative requirements
- apply applicable permit to work system including types of permit limitations
    - understanding the permit to work system
    - identifying the limitations in a permit to work system
- develop and review standard operating procedures
- review and report on completed work
- employ correct waste management procedures
    - appropriate waste management procedures
    - organisational requirements for waste management
    - consequences of not managing waste effectively
- knowledge of native title issues and legislation
- analyse relevant workplace data eg incident and environmental monitoring to evaluate the effectiveness of the OHS management system.

G 6.1.4 Communicate effectively

Evidence shall show an understanding and utilisation of technology for communication in a Gas Industry environment, indicated by the following:

- effective communication for Gas Industry managers and supervisors
    - motives for communication
    - communication networks: who communicates with whom
    - verbal and non-verbal communication
    - choosing the medium and the flow of a message
    - blocks to effective communication
- analyse and interpret recorded data, review and report
- use information technology for communication
    - understanding how to use information technology
    - effective use of email, internet and other communication mediums.

G 6.1.6 Plan and carry out project management

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an understanding and application of the requirements to undertake project management in a Gas Industry environment, indicated by the following:

- project management and costing
  - project planning processes
  - determining project costing
  - planning for events and milestones
  - determining inputs
  - producing outputs to a plan
- planning theory and its processes
  - the importance of planning
  - the planning process
  - organisational goals and objectives
  - strategic planning
  - operational planning
  - forecasting
- prioritise techniques
  - organising/prioritise work flows
  - time management
  - stress management
- managing persons and resources including consultants
  - understanding people
  - understanding behaviour
  - perceiving the causes of behaviour
  - defining leadership
- manage meetings
  - understanding organisational communication
  - formal and informal organisational communication
  - managing meetings and recording minutes
  - drafting minutes
- prepare reports
  - planning the writing process
  - developing the scope and outline of a document/report
  - drafting documents/reports utilising a plan and outline
  - finalising documents/reports
- facilitate contracts and employment
  - parliament, government and the law
  - statute law

© Commonwealth of Australia, 2025 Powering Skills Organisation

- common law
- contracts and contract law
- employment law

- understanding of sound business principles and performance measures
  - understanding organisational behaviour
  - business fundamentals
  - establishing the principles of performance management
  - establishing performance measures
- understanding of competition policy, budgets and product pricing and tariffs
  - understanding of government business relations in the Gas Industry
  - how tariffs are determined
  - working within legislative guidelines in tariffs and pricing.

G 6.1.8 Manage environmental and culturally sensitive issues

Evidence shall show an understanding and implementation of the effective management of environmental and culturally sensitive issues in a Gas Industry environment, indicated by the following:

- understanding applicable environmental legislative compliance and regulation
  - understanding government and laws
  - penalties
  - acting in compliance with laws
- understanding of cultural and community standards and their sensitivities
  - communities and their interaction with government and business in Australia
  - cultural issues in Australia
  - using ethical behaviour in approaching cultural issues
  - anti discrimination legislation in Australia
  - native title issues in Australia
- understanding the impacts of gas installations and infrastructure on the environment and its impacts to native title
  - government and business environmental obligations
  - Australian environmental legislation and its affect on industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

- the impact of construction of assets to the Australian environment
- native title considerations for Gas Industry asset owners

- managing sensitive negotiations and communicating with a wide variety of stakeholders
  - understanding stakeholder politics in Australia
  - negotiation and bargaining
  - conciliation and arbitration
  - understanding of sensitive issues and the implications for negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment. Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised.

These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions. Evidence shall comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 3	Resources: Appropriate/relevant persons Materials, tools and equipment Personal protective equipment Company standard operating procedures Equipment manuals Training resources
B	At least 2	Appropriate persons: Organisation employees Contractors Maintenance persons Appropriately experienced and qualified persons Site security persons
C	At least 5	Relevant persons: Other supervisors Managers Inter-company departments Other utilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Consultants Council representatives Government bodies/agencies Producers Transporters Shippers Customers Landowners/Traditional landowners
D	All	Legislative requirements: Occupational Health and Safety legislation Relevant Government Acts, regulations and codes of practice Australian Standards and Codes of Practice Environmental legislative requirements
E	All	Effective communication: Verbal directions Relevant documentation Projects records/reports Presentations and meetings
F	At least 4	Relevant documentation: Company business plans and marketing plans Business projections Budgets and forecasts Profit and loss statements Company standard operation and safety procedures/management plans and policies Company forms and files

© Commonwealth of Australia, 2025 Powering Skills Organisation

		OHS, legislation and codes of practice Relevant Government Acts, regulations and codes of practice Environmental legislative requirements Quality assurance Commercial agreements
G	At least 2	Records and reports: Business plans and marketing plans KPI's reports Financial reports and forecasts Monthly statements/invoices Persons reports Lost time Injury reports Debtor/creditor reports
H	All	Understanding of concepts and skills for Gas Industry supervisors Communication for Gas Industry supervisors Understanding of project management techniques Managing environmental and cultural sensitive issues
I	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in, Context of and specific resources for assessment, evidence should show demonstrated competency in Manage a customer service gas business unit

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and **9.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

relationship with other units

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG117B	Plan and implement the data acquisition and metering requirements of a gas system
UEGNSG118B	Select and commission equipment to meet pressure and temperature control specifications
UEGNSG119B	Manage workplace risk
UEGNSG120B	Manage gas system environmental compliance
UEGNSG121B	Prepare and design specifications for a gas system
UEGNSG115B	Manage gas system projects
UEGNSG123B	Manage financial resources
UEGNSG116B	Manage physical resources

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to managing a customer service gas business unit.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Resources

Appropriate persons (6)

Relevant persons

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Unit covers the requirements to manage financial resources to achieve organisational and operational objectives. This competency standard refers to Budget formats; Operating budget; Policy; Financial reports; Management information systems.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection,

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 5 Writing 5 Numeracy 5

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Develop a budget	1.1	Budget format is determined and consistent with organisational guidelines and procedures, cost elements are identified and quantified and cost benefit analyses are prepared for major cost items in accordance with the organisations policy and procedures
	1.2	Sub-budgets prepared by other staff are coordinated in order that desired objectives are achieved
	1.3	Organisational established procedures on policies and specifications are obtained or established with the appropriate persons
	1.4	Testing parameters are established from organisational established procedures on policies and specifications
	1.5	Testing procedures are discussed with appropriate persons in order to ascertain the project brief
	1.6	Cost benefit analysis are prepared for major cost items in accordance with the organisation's policy and procedures
	1.7	Work roles and tasks are allocated according to requirements and individual's competencies
	1.8	Work is prioritised and sequenced for the most effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Sub-budgets prepared by other staff are coordinated in order that desired objectives are achieved
	1.10	Liaison and communication issues with authorised persons, authorities and resolved and activities coordinated to carry out work
	1.11	Risk control measures are identified, prioritised and evaluated against the work schedule
2 Allocate, authorise and monitor expenditure	2.1	Financial resources are allocated as agreed in the operational plan and is monitored to ensure that expenditure management meets the financial accountability requirements of the organisation
	2.2	Supply and expenditure processes are performed in accordance with corporate governance and organisational protocols and procedures
	2.3	Mathematical models are used to analyse the financial reports as per requirements and established procedures
	2.4	Sub-budgets and financial allocation is continually monitored against organisational objectives and priorities ensuring optimum service delivery
	2.5	Essential Knowledge and Associated Skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.6	Re-allocation of resources is undertaken taking into account of enterprises needs and priorities
	2.7	Work teams are arranged to ensure planned goals are met according to established procedures
	2.8	Solutions to non-routine problems are identified and actioned, according to requirements, using acquired Essential Knowledge and Associated Skills,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.9	Quality of work is monitored against personal performance agreement and established organisational and professional standards
		2.10	Strategic plans are developed incorporating organisation initiatives as per established procedures
3	Utilise relevant financial management information systems and review budget management	3.1	Management information systems are used for planning, implementing and monitoring the use of financial resources in accordance with company policies and established procedures
		3.2	Management information system reports are produced, verified and interpreted
		3.3	Management of budget is reviewed in accordance with company policies and established procedures
		3.4	Management of budget is reported in accordance with company policies and established procedures
		3.5	Appropriate persons are notified of completion and reports and completion documents are finalised.
		3.6	Reports and completion documents are submitted to relevant persons for approval and where applicable, statutory or regulatory approval
		3.7	Approved copies of documents are issued and records are updated in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of working practices for managing financial resources in a Gas Industry facility.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G123B Gas industry financial management

G 6.1.9 Understand and implement financial management

Evidence shall show an understanding of the requirements to perform applicable Gas Industry financial management activities, indicated by the following:

- Understanding financial management with the ability to reporton project and company budgets utilising financial statements as required by organisational policies and procedures. These include but are not limited to:understanding financial management fundamentals and the how the following are tracked through in an accounting system:
  - assets and liabilities
  - revenue
  - expenses
  - equity
  - source documents
  - journals
  - ledgers
  - trial balance
- reading, interpreting and reporting on project/company progress using accounting reports such as budget and cash flow reports
- understanding of resource management systems to monitor inventory, stock, consumables and physical resources and other assets
  - managing resources
  - maintaining assets/assets management
  - stock/consumables control
  - maintaining assets register
- understanding of computer accounting/bookkeeping software effectively

© Commonwealth of Australia, 2025 Powering Skills Organisation

- accounting software systems
- invoicing
- reconciling accounts
- purchasing
- stock control
- general ledger
- payroll
- reporting.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

© Commonwealth of Australia, 2025 Powering Skills Organisation

need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines — UEG11’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 1	Budget formats: Zero based budgeting Program budgeting Line item budgeting
B	All	Operating budget: Staffing costs Capital expenditure/income Recurrent expenditure/income Forward estimates Cash flow
C	All	Policy: Supply Procurement Expenditure Audit Reporting and recording policies
D	At least 1	Financial reports: Annual reports Program financial statements Accrual reports Monthly/quarterly financial reports

© Commonwealth of Australia, 2025 Powering Skills Organisation

E	At least 6	Management information systems: Computers Communication channels Records management data Procedures Protocol Legislation Guidelines and awards Organisation, legal and policy materials Client information Market trends Registry and file records Financial records Basic statistical information
F	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency of managing financial resources in a Gas Industry facility.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to develop a technical report	1.1	OHS procedures for a given work area are obtained and understood.
		1.2	Established techniques for report writing are reviewed and adopted in accordance with organisational requirements
		1.3	The scope of the report is evaluated and report parameters established using a formal evaluation/survey process
		1.4	Criteria from other related works impacting on the report are determined
		1.5	Source and availability of information is identified
2	Develop a technical report	2.1	Report is developed to include scenarios/requirements established in consultation with appropriate persons and to regulatory and company requirements
		2.2	Report is developed in collaboration with all relevant personnel
		2.3	Competent persons are identified to assist in the compilation of the report
		2.4	Report is reviewed against all inputs and adjusted to rectify any anomalies
		2.5	Report is compiled in accordance with organisation’s policies and procedures
3	Complete the final	3.1	Report is presented and discussed with senior

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
report		personnel for feedback and evaluation
	3.2	Alterations to the report resulting from presentation/discussion are negotiated with appropriate persons and to established procedures
	3.3	Final report is presented and approval for completion obtained from relevant personnel according to company procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8)This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and the compilation of a gas technical industry report.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G131A Gas industry technical report

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G2.2.2 Enterprise work activities records

Evidence shall show an ability to identify and recognise and understand the variety of symbols and abbreviations used in Gas Industry workplaces, specifically:

- Commonly used symbols and abbreviations
- Purpose of a scale/legend

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Read and interpret scales and legends.

G 2.2.20 Computer use basics

Evidence shall show an understanding of the knowledge required to install cast iron pipelines, fittings and accessories in a Gas Industry workplace, indicated by the following:

- Characteristics of cast iron pipeline, pipe sizes
- Situations in which a cast iron pipeline is used
- Range of fittings and accessories for cast iron
- Cast iron lead & hemp joints and how they are constructed
- Appropriate selection of transition fittings and adaptors to other materials
- Advantages/disadvantages in using cast iron pipe
- Read and interpret MSDS applying appropriate measures

G 2.2.21 Engineering analysis, decision making and reporting

Evidence shall show an understanding of the requirements to work with cast iron pipelines and fittings on a Gas Industry pipeline, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Equipment, tools and materials required for working with cast iron pipelines
- Purpose and function or equipment, tools and materials
- Requirements of Australian Standards and gas industry standards for working with cast iron pipe and fittings
- Safety requirements and procedures for using equipment, tools and materials
- Procedures for joining cast iron pipeline to other pipeline

G 2.2.25 Research concepts

Evidence shall show an understanding of the processes required for the cutting out and replacing of steel pipeline on a Gas Industry workplace (distribution) pipeline, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Purpose and function of equipment, tools and materials, including but not limited to, cutting and stopping equipment
- Demonstrate the correct use of stop off equipment and

© Commonwealth of Australia, 2025 Powering Skills Organisation

cutting equipment

- Requirements of Australian Standards and gas industry standards for working with steel pipe and fittings
- Safety requirements and procedures for using equipment, tools and materials
- Gas leak testing
- Pressure testing procedures
- Apply procedures for ensuring continuity of supply including checking of network maps, gauging, fitting of bypasses and purging.
- Replace marker tape
- Coating types and repair
- Use of cross-bonding leads and neon testers

G 2.2.33 Working in a team

Evidence shall show an understanding and an ability to locate services, indicated by the following:

- Identification of relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and stormwater)
- Read and interpret plans and drawings to identify the location of utilities and services
- Identification of utilities and services conduits and cables
- Correct use of electronic and manual service locators
- Apply hand excavation as required for the purposes of locating utilities and services

G 2.2.35 Data collection techniques

Evidence shall show an understanding of the knowledge to prepare the site for excavation on a Gas Industry workplace, indicated by the following:

- OHS and traffic control procedures for setting up a healthy and safe site
- Environmental control procedures for setting up a site
- Orally communicating with appropriate persons, team mates and customers regarding relevant aspects of site preparation.

G 2.2.36 Data analysis and presentation

- Evidence shall show an understanding of how to set out trenches on a Gas Industry workplace, indicated by the following:
- reading and interpreting job specifications and standard operating procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- grades and depth required for excavation of trenches for gas pipelines
- techniques for marking out trench location.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEG11'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
    - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
    - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
    - Demonstrate an appropriate level of employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Working knowledge of company policies and procedures especially related to report writing Understanding company briefs Analysing information to prepare a technical report Advanced literacy and report writing capability Research capability for technical report writing Effective use of a computer and software for technical report writing Negotiation skills for altering material with appropriate personnel
B	All	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for **9.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to the selection of electronic components.

Method of assessment **9.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

Nil

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Use computers and appropriate software

Dealing with general enquiries from the public

Relevant Acts, Standards and Codes for gas inspection

SOPs, Established Policies and procedures

Established procedures and requirements

Appropriate Persons (7)

Non-conformance notices and procedures for issuance

Incident reporting

Unit Sector(s)

Not applicable.

UEGNSG132A Carry out basic work activities in a gas industry work environment

Modification History

This unit is a revised version of the UEG11 unit UEGNSG102B Carry out work activities in a utilities industry work environment.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers basic work activities carried out on a gas industry work site in accordance with relevant legislation, standards, codes and established procedures.

It encompasses following procedures to correctly and safely carry out the work using appropriate materials, tools, and measuring devices.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe workplace where Gas Industry operations occur subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace

This unit is intended as an AQF 2 entry level competency for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the

© Commonwealth of Australia, 2025 Powering Skills Organisation

following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to carry out basic work activities	1.1	WHS/OHS, environmental and sustainable energy measures, policies and procedures relevant for the workplace are identified, accessed and understood.
	1.2	Relevant requirements and established procedures for the workplace are provided and discussed with relevant persons to establish and confirm the work schedule.
	1.3	Hazards are identified and reported to relevant persons to assess the risks and implement control

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		measures according to established procedures.
	1.4	Scope of work is received and confirmed with relevant persons according to requirements and established procedures
	1. 5	Appropriate persons are consulted to ensure the work is carried out effectively with others.
	1.6	Tools, equipment and personal protective equipment needed to carry out the work are identified, obtained and checked for correct operation and safety.
	1.7	Materials, plans, diagrams, drawing and resources required for the work are received in accordance with established routines and procedures.
	1.8	Workplace preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out basic work activities	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Machines/plants/equipment are confirmed as being safe where necessary in strict accordance WHS/OHS requirements and procedures.
	2.3	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.4	Work is carried out efficiently, to the required quality standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.5	Any WHS/OHS risks and incidents are reported to the immediate authorised persons at the workplace for directions according to established procedures
	2.6	Procedures for referring non-routine events to immediate supervisor for directions are

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		followed.
	2.7	Routine quality and safety checks are carried out in accordance with work instructions.
3 Check the results of the completed work	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Workplace is tidied, re-instated and made safe in accordance with established procedures.
	3.3	Tools, equipment and measuring devices are cleaned and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Relevant work documentation is completed accurately and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G132 Work in a gas industry environment A

Evidence shall show an understanding of the basic work activities carried out at a gas industry workplace in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Basic gas industry calculations relevant to the work activities which may include volumes, area, pressures and measurements.

T2. Basic graphs and tables interpretation

T3. Overview of basic problem solving processes

© Commonwealth of Australia, 2025 Powering Skills Organisation

T4. Gas industry equipment/tools/measurement devices

- identification, selection and use of appropriate equipment/tools measurement devices for the relevant work activities
- dangers and precautions required when using equipment/tools/measurement devices in a gas industry environment

T5. Industry Personal Protection Equipment (PPE)

- requirements
- types and applications
- checking,
- maintaining
- storing
- correct use

T6. Overview of job specifications and standard operating procedures (SOP)

- types and examples
- following instructions
- working within SOPS

Evidence Guide

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by

© Commonwealth of Australia, 2025 Powering Skills Organisation

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Carry out basic work activities in a gas industry work environment as described in 9.) Range Statement and including:

Range of Tools/Equipment/Procedures/Workplace		
Group No	**The Minimum number of items on which skill is to be demonstrated**	**Item List**
A – WHS/OHS Procedures	All	Participate in: • Hazard Identification • Risk Assessment • Implement Control Measures
B – Tools/ Equipment	At Least 5	• Measurement Devices • Digging Tools • Probes • Lighting Equipment • Service Locators • Pneumatic Tools • Hand Tools • Power Tools • Metallic Welding equipment • Polyethylene welding equipment • Mobile plant • Fixed plant • Plant controls • Pipeline controls

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Tanks • Cylinder filling scales • Dispenser guns • Load points • Compressors • Pumps, valves • Gas detectors • PPE • Barricades • Signage • Communication devices • Human machine interfaces
C – Workplace Procedures	At least 6	• Utilities industries calculations • Prestart checks, • Work in accordance with Permit to work, • Conduct basic risk assessment • Utilise and participate in JSA, • Work in accordance with work authorisation, • Complete task documentation. • Obtain and follow organisational procedures, • Follow manufacturer's instructions.
D – Unplanned events	On at least one occasion	Respond to an unplanned event by drawing on required skills and knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for **8.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Skills and Knowledge described in this unit.

Concurrent assessment and **8.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

relationship with other units

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

And/or with the following units of competency if delivered in a Certificate II qualification:

UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134B	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to carrying out basic work in a gas industry environment, which includes:

- Interpreting drawings, diagrams, schedules, procedures and manuals.
- Assembly and disassembly of mechanical components
- Monitoring pressures and flows
- Safe guarding an asset
- Sourcing and checking materials, equipment and tools on the job
- Selection and use of materials, tools, measurement devices and personal protection equipment.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- OHS policies and procedures
- Tools and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate persons
- Established procedures and requirements
- Legislation
- Safety Equipment
- Personal Protective Equipment
- Emergency and Hazardous Work Situations

Unit Sector(s)

Not applicable.

UEGNSG133A Comply with environmental policies and procedures in the utilities industry

Modification History

This unit is a revised version of the UEG11 unit UEGNSG104B Comply with environmental policies and procedures

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the compliance of environmental policies and procedures whilst undertaking tasks in a utilities industry workplace.

It encompasses the requirements for compliance with relevant sections of Commonwealth and State Environmental Protection, and Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) Acts and Regulations, and their application to relevant work site procedures.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where utility industry operations occur which includes the gas industry, electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Environmental Legislative requirements, Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and Duty of Care requirements being met for the environment and the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the utilities industry. It is suitable for pre-employment and employment-based programs under an

© Commonwealth of Australia, 2025 Powering Skills Organisation

approved contract of training

Licensing/Regulatory Information

Licence to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Environmental Legislation, Chemical Management, Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to comply with environmental	1.1	Work instructions and WHS/OHS measures for the site are identified, obtained and understood.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
policies and procedures		
	1.2	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule.
	1.3	Environmental aspects are identified and associated potential or actual environmental impacts are evaluated. Significant impacts are prioritised. Note: Environmental aspects include: Air, Land, Water, Waste, Flora (Vegetation), Fauna, Heritage, Resource Use, Community.
	1.4	Environmental sustainability principles are considered before works commence including purchasing/using environmentally beneficial equipment and materials, waste disposal considerations, precautionary approach.
	1.5	Environmental legislation, environmental policies and procedures and WHS/OHS requirements to be followed for the work to be performed are received and confirmed
	1.6	Suggestions to assist with complying with environmental policies and procedures are made to others involved in the work.
	1.7	Environmental and WHS hazards are identified, risks assessed and control measures are prioritised, implemented and monitored per environmental policies and procedures.
	1.8	Resources including environmental compliance equipment required for the job are identified, obtained and checked for correct operation and safety.
	1.9	Schedule of work including practices for working safely is confirmed in accordance with established procedures
	1.10	Client issues are referred to appropriate persons in accordance with industry and community

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		standards
2 Comply with environmental policies and procedures	2.1	WHS/OHS risk control measures, policies and procedures for carrying out the work are followed
	2.2	Environmental requirements for the work are implemented, reviewed and control measures recommended for inclusion in the work process
	2.3	Appropriate materials, tools and equipment are selected and used correctly and safely.
	2.4	Any environmental incidents and potential problems are immediately reported to appropriate persons and dealt with in accordance with established procedures and legislative requirements.
	2.5	Operational knowledge for compliance with environmental policies and procedures is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.6	Compliance with environmental policies and procedures is carried out in an agreed timeframe, to a quality standard and with a minimum of waste in accordance with given instructions and established procedures
	2.7	Procedures for referring non-routine (accidents and incidents) events to the immediate authorised persons for directions are followed.
	2.9	Routine quality checks of the work are carried out in accordance with work instructions
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe.
	3.3	Tools, equipment, vehicles and plant and any

ELEMENT	PERFORMANCE CRITERIA	
		surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of the completion of the work in accordance with established procedures
	3.5	All waste is disposed of in accordance with procedures and reports completed as required
	3.6	Relevant environmental completion records, report forms/data sheets are completed accurately in accordance with established procedures

Required Skills and Knowledge

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for complying with environmental policies and procedures in the utilities industry.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G133B Environmental compliance in a utilities industry work environment

Evidence shall show an understanding and ability to perform work in the utilities industry in compliance with environmental policies and procedures to an extent indicated by the following aspects:

T1. Relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice.

T2. Role of regulatory bodies in monitoring environmental activities, risk and incident compliance

T3. Employee's and employer's responsibilities to comply with relevant environmental legislation, regulations, codes and enterprise procedures for:

- flora control
- erosion control

© Commonwealth of Australia, 2025 Powering Skills Organisation

- fauna control
- the protection of indigenous and cultural heritage sites

T4. Environment protection procedures, records, inspections/audit and incident reporting

T5. Environmental hazards

T6. Environmental risk assessment

T7. Environmental control measures implementation

T8. Response to workplace environmental incidents

T9. Application to relevant work site procedures

- the use of plant/machinery/equipment
- cleaning materials and aids
- spill response equipment;
- sediment erosion control equipment;
- emission control and sampling equipment

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, waste contamination and noise

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate consistent performance across a representative range of contexts from the prescribed items below.
  - Comply with environmental policies and procedures in the utilities industry as described in 9) Range and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Identifying, locating and interpreting relevant information procedures	At least 3	• Interpret alignment sheets, maps, technical drawings and symbols • Identify environmental aspects and potential or actual impacts • Identify potential environmental hazards • Carry out risk assessment, JHA or JSA that includes environmental risks • Ensure practical application of Environmental legislation, Environmental Management Plans and Environmental Procedures and relevant codes of practise (such as EPA)

© Commonwealth of Australia, 2025 Powering Skills Organisation

B. Environmental control measure procedures	At least 5	• Installation of sediment & erosion control measures as per Legislative or Best Practice requirements. • Weed spread mitigation • Chemical management controls (MSDS, storage, labelling, bunding) • Noise control techniques & work hour limitations • Air emission control & reduction practices • Waste Management principles (recycling). • Hazardous waste management • Water management requirements (works near waterways) • Vegetation Management requirements • Fauna protection • Heritage Management techniques. • Community consultation requirements • Rehabilitation requirements
C. Procedures to control and minimise the impact of an environmental incident	At least 3	• Control environment incident· • Incident reporting • Apply incident reporting and notification procedures
D. Environmental incident review procedure	At least 2	• Review environmental incident • Make recommendations to prevent reoccurrence • Implement recommendations

© Commonwealth of Australia, 2025 Powering Skills Organisation

s		
E. Safety procedures	All	• Work utilising the relevant WHS legislation, policies and procedures effectively • Maintain a safe and clean workplace environment • Communicate effectively with others • Apply basic planning techniques
F. Unplanned event procedures	At least one occasion	• Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

9) **This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.**

This Unit shall be demonstrated in relation to compliance with environmental policies and procedures in at least one of the following utilities industry work sites including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Above ground level sites
- Below ground level sites
- Easements
- Public sites, requiring pedestrian and traffic control
- Private sites.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Legislation
- Inspection
- Safety equipment
- Personal Protective Equipment
- Relevant regulation and procedures
- Emergency and hazardous work situations
- Relevant sections of standard operating procedures

Unit Sector(s)

Utilities industry

Competency Field

Competency Field **11)**

UEGNSG134A Establish a utilities infrastructure work site

Modification History

This unit is a revised version of the UEG11 unit UEGNSG105B Establish the work site.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers establishing utilities infrastructure work sites in accordance with relevant legislation, standards, codes and established procedures.

It encompasses planning and scheduling work, organising resources, materials, procedures and the site for the required work.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to when establishing a utilities infrastructure work site. These include workplaces in the gas industry (transmission and distribution construction), electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry.

It is subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the utilities industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, Workplace Health and Safety/Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to establish a utilities work site	1.1 WHS/OHS, environmental and sustainable energy measures, policies and procedures relevant for the site are identified, accessed and understood.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.2	Relevant requirements and established procedures for the site are provided and discussed with relevant persons to establish and confirm the work schedule.
	1.3	Hazards are identified and reported to relevant persons to assess the risks implement control measures according to established procedures.
	1.4	Scope of work is received and confirmed with relevant persons according to requirements and established procedures
	1. 5	Appropriate persons are consulted to ensure the work is carried out effectively with others.
	1.6	Resources including equipment, tools, materials, drawings, notices and personal protective equipment required for the job are identified, obtained and checked for correct operation and safety.
	1.7	Relevant responsibilities associated with related work safety and emergency procedures for an incident at the work site are checked and confirmed.
	1.8	Client issues are referred to appropriate persons in accordance with industry standards.
	1.9	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Establish a utilities work site	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Machines/plant/equipment is confirmed as being safe where necessary in strict accordance WHS/OHS requirements and procedures.
	2.3	Appropriate tools and equipment are selected and used correctly and safely.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.4	Establishing the work site is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.5	Any WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.6	Procedures for referring non-routine events to the immediate authorised persons for directions are followed
	2.8	Routine quality and safety checks of the work are carried out in accordance established procedures.
3 Complete work and relevant documentation.	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe in accordance with established procedures.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of the completion of the work according to established procedures.
	3.5	Relevant work completion documentation is completed accurately and provided to the appropriate persons in accordance with established procedures.

Required Skills and Knowledge

7) **This describes the required skills and knowledge and their level, required for this unit.**

Evidence shall show that knowledge has been acquired of safe working practices for establishing the work site.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge

© Commonwealth of Australia, 2025 Powering Skills Organisation

required is provided below. It forms an integral part of this unit.

KS01-G134A Establish a worksite in a utilities industry environment

Evidence shall show an understanding of establishing utilities industry work sites to an extent indicated by the following aspects:

T1. High risk utility industry work activities – awareness

T2. Site inspection

T3. Prestart checks

T4. Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements

T5. Risk Assessment, controls, precautions and conditions;

- hazard identification, including confined spaces, trenching and shoring
- field risk assessment
- hierarchy of controls

T6. Protocols for dealing with accidents and emergencies

T7. Basic drawings and diagrams

T8. Relevant equipment, tools and machinery

T9. Stakeholder communication

T10. Security requirements

T11. Storage

T12. Council and Community requirements / restrictions

T13. Short and Long term site requirements

Evidence Guide

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety/Occupational Health and Safety, workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Establish a utilities infrastructure work site as described in 9) Range and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Identifying, locating and interpreting relevant	At least 4	• Access and use plans, drawings and maps • Utilise Dial Before You Dig information or its equivalent application • Obtain procedures and

© Commonwealth of Australia, 2025 Powering Skills Organisation

information procedures		work instructions • Correctly interpret and follow instructions • Advise stakeholders of upcoming work • Utilise and participate in the preparation of a safe work method statement or JSA • Work in accordance with all work permits/precautions as necessary
B. Procedures to control and minimise the impact of an environmental incident	At least 6	• Locate all assets in area • Check all materials and equipment • Access all relevant MSDS sheets • Identify and monitor all possible environmental hazards • Utilise control measures for identified hazards • Correctly use PPE appropriate to the Industry • Perform machinery daily log checks and verify operator qualifications
C. Risk control procedures	At least 3	• Inspect site • Isolated work site • Erect barricades • Layout warning and safety signs • Establish a muster point where appropriate • Log all steps onto permit or work sheet • Control traffic • Isolate gas supply and detect gas • Follow emergency response plans, • Follow safe lift plans,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Follow JSA, • Work with contractors
D. WHS/OHS procedures	All	• Work utilising relevant OHS legislation, regulations, policies and procedures • Maintain a safe and clean workplace • Work safely with hazardous materials and equipment • Apply safe manual handling techniques • Communicate effectively in the workplace • Apply basic planning skills
E. Unplanned events	At least one occasion	• Respond to an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment

UEGNSG135A Monitor and control gas odourisation

Modification History

This unit is a revised version of the UEG11 unit UEGNSG107B Control gas odourisation.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers monitoring and controlling the odourisation of gas in accordance with relevant legislation, standards, codes and established procedures.

It encompasses the use of the appropriate tools, equipment and chemicals; the response procedures for uncontrolled release and completion of the relevant documentation.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe work site where monitoring and control of gas odourisation occurs. It is subject to all Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry

Elements and Performance Criteria Pre-Content

6) **Elements describe the essential outcomes of a competency standard unit**

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to monitor and control odourisation of gas	1.1 WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2 Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed
	1.4	Hazards are identified, WHS/OHS risks are assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of work under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures.
	1.6	Resources including personnel, equipment, tools, materials and personal protective equipment needed to do the work are identified, scheduled and obtained and check for correct operation and safety.
	1.7	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.8	Relevant responsibilities associated with First Aid and other related work procedures for an incident at the worksite and checked and confirmed
	1.9	Appropriate persons are consulted to ensure the work is coordinated effectively with others.
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed in accordance with established procedures
	1.11	Site preparation, safety plan, schedule of work and standard operation procedures are confirmed in accordance with established procedures
2 Monitor and control odourisation of gas	2.1	WHS/OHS risk control measures, schedule of work and standard operation procedures for carrying out the work are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.2	Hazardous activities such as lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are conducted in accordance with given instructions and requirements
	2.3	The monitoring and control of gas odourisation is carried out efficiently, to the required standard without waste of materials or damage to the apparatus, circuits, the surrounding environment or services and using sustainable energy principles
	2.4	Odourant is handled and transported and potential hazards, safety risks and control measures are monitored and preventative action taken in accordance with requirements and established procedures
	2.5	Procedures for referring non-routine events to the immediate authorised persons for directions are followed
	2.6	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.7	Emergency shutdown is carried out effectively in the event of a spill according to established procedures
	2.8	Routine quality checks are carried out in accordance with established procedures
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work site is cleaned up and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.4	Relevant work permit(s) are signed off and equipment is returned to service in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		with requirements
	3.5	Appropriate persons are notified of the completion of the work in accordance with established procedures
	3.6	Work completion documentation is completed accurately and provided to the appropriate persons in accordance with established procedures

Required Skills and Knowledge

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for monitoring and controlling gas odourisation in accordance with relevant legislation, standards, codes and established procedures.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G135A Gas odourisation

Evidence shall show an understanding of the monitoring and controlling gas odourisation in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas odourisation

- purpose
- requirements
- correct odourant and dosing levels

T2. Odourising chemicals

- MSDS
- Storage, transporting and handling
- WHS/OHS and environmental requirements
- job safety analysis
- spills/leaks
- gas detection equipment
- disposing of waste

T3. Legislation, standards, codes requirements

- approvals
- permits/authorisations

T4. Monitor and adjust odourant levels

- equipment
- tools and measuring devices
- odourmeter
- lance, hoses, regulators
- level indicators
- established procedures and schedules for measuring, filling and adjusting odourant levels

T5. Emergency/spill response

- types of emergencies/spills
- emergency response plans/procedures
- required emergency equipment/kit
- absorption material neutralisers
- fire control systems
- emergency containers
- transfer pump
- molecular sieve for venting

T6. Odourisation shutdown

- requirements
- procedures

T7. Documentation relevant to odourisation

- MSDS
- approval, records and reporting requirements
- reports, forms, etc.

Evidence Guide

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

© Commonwealth of Australia, 2025 Powering Skills Organisation

need to be ‘rich’ in nature so as to minimise error in judgment

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines — UEG11’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Monitoring and controlling gas odourisation as described in the 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Odourant storage and handling procedures	All	• Applying environmental and WHS/OHS legislation • Interpret MSDS • Transport and handling requirements • Spill and waste management procedures

B. Odourant monitoring and control procedures	All	• Interpret relevant technical drawings and symbols
		• Obtain work authorisation
		• Communicate with other authorities and stakeholders
		• Carry out pre- start checks
		  • check odourant levels
		  • ensure spill response procedures are in place
		• Use of gas detection equipment
		• Correct and monitor odourant levels

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Adding odourant
C. Tools/equipment	At least 6	• Odourmeter • Lance, hoses, regulators • Emergency response kit • Neutralisers • Masking agent • Level indicators • Fire control systems • Emergency containers • Transfer pumps • Molecular sieve for venting
D. Unplanned Event	At least one occasion	Dealing with unplanned events by drawing on required skills and knowledge, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG133A	Comply with environmental policies and procedures in the utilities industry

BSBFLM303C Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

10) **This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.**

This unit shall be demonstrated in relation to monitoring and controlling gas odourisation in accordance with relevant legislation, standards, codes and established procedures. This includes ensuring relevant permits/authorisations are in place, safely storing and handling required chemicals, monitoring and adjusting odourisation levels, responding to chemical spills and completing relevant documentation.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Tools and Equipment
- Spill and contamination response
- Documentation

Unit Sector(s)

UEGNSG136A Carry out transmission pipeline construction work activities

Modification History

This unit is a revised version of the UEG11 unit UEGNSG125A Carry out transmission pipeline construction work activities

.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the basic gas transmission pipeline construction work activities in accordance with relevant legislation, standards, codes and established procedures.

This encompasses the phases of work in a gas transmission construction environment, the safety and environmental hazards and the tools necessary to conduct the activities. This may include slinging, welding, trenching, shoring, hydro testing, pipeline coating and coating testing, cathodic protection components, directional drilling

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract

© Commonwealth of Australia, 2025 Powering Skills Organisation

of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s)

4) Prerequisites:

4.1)CSU(s): Competencies

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

4.2) Literacy and numeracy skills

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 "Literacy and Numeracy"

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged

Employability Skills **5)**

will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) **Elements describe the essential outcomes of a competency standard unit**

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to carry out transmission pipeline construction work activities	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to do the work are identified, scheduled, obtained and checked for correct operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		involved
	1.8	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.9	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out transmission pipeline construction work activities	2.1	WHS/OHS risk control measures, schedule of work and standard operation procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches and/or aloft, use of power tools equipment, techniques and practices are conducted in accordance with given instructions and requirements
	2.4	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.5	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.6	Procedures for referring non-routine events to the immediate authorised persons for directions are followed
	2.7	Routine quality checks are carried out in accordance with work instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete basic work activities and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work area is tidied and made safe according to established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to the appropriate persons in accordance with established procedures.

Required Skills and Knowledge

7) **This describes the required skills and knowledge and their level, required for this unit.**

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work activities in a transmission pipeline construction industry work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the Required Skills and Knowledge required is provided below. It forms an integral part of this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

KS01-G136A Transmission pipeline construction

Evidence shall show an understanding of the transmission pipeline construction work activities in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Transmission Pipeline construction activity lifecycle

- alignment
- clearing
- excavation
- construction
- testing
- back filling
- reinstatement
- commissioning
- re-vegetation

T2. Transmission pipeline construction activities

- slinging
- welding
- trenching
- shoring
- hydro testing
- pipeline coating and coating testing
- cathodic protection components
- directional drilling

T3. Relevant legislation, regulations, codes

- awareness and knowledge of approvals

T4. Equipment, tools and PPE for transmission construction work

T5. Communication protocols and equipment

T6. Relevant Safety and Environmental hazards and mitigation measures

- signage and marking
- traffic control requirements
- construction risks
- remote area hazards
- drug and alcohol awareness
- treatment of disturbed materials

Evidence Guide

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1) Overview:

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines - UEG11". Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
  - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills; and
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out transmission pipeline construction work activities as described in 9.) Range Statement and including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A WHS/OHS	All	Workplace/Occupational Health and Safety policies and procedures followed
B Tools and equipment:	At least 6	• General concrete mixer • General vacuum cleaner • General trolley • Non pressurised pumps and hoses • Wheelbarrows • Traffic barriers • Extra low voltage lighting equipment • Hand held tools • Holiday detection equipment • Power tools • Pressurised pumps and hoses • Tru bend • Hand wrapping machines • Follow standard operating procedures
C Calculations	All	Utilities industries calculations
D Information	All	• Read and interpret workplace documents • Communicate in a team environment
E Unplanned event	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		associated skills to provide appropriate solutions

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Competency Standard Unit shall be assessed by methods

© Commonwealth of Australia, 2025 Powering Skills Organisation

given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG002A	Prepare to work in the Australian gas industry
UEGNSG102C	Carry out work activities in a gas utilities industry work environment
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

9) **This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.**

This Competency Standard Unit shall be demonstrated in relation to carrying out work activities in a transmission pipeline construction industry work environment in accordance with relevant legislation, standards, codes and established procedures.

This may include slinging, welding, trenching, shoring, hydro testing, pipeline coating and coating testing, cathodic protection components, directional drilling.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an

UEGNSG137A Operate and Maintain Gas Station Water Bath Heaters

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the monitoring, operating and maintenance of gas station Water Bath Heaters and associated equipment in accordance with relevant legislation, codes, regulations and procedures.

It encompasses gas fired and electric Water Bath Heaters.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to the following the types of gas facilities, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace:

- Trunk Receiving Stations (TRS)
- Pressure Reduction Stations

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, Workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

A 'high risk work licence' may be required for performing maintenance on Turbine engines, heaters and boilers. Check with your state regulator such as 'WorkSafe' or 'WorkCover' for more information. Pressure equipment such as Water Bath heaters used in Australia are subject to periodic external and internal inspection as determined by AS3788 as well as the typical commissioning or re-commissioning inspection. Persons performing these inspections must be suitably qualified and licensed.

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age at which persons can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to operate & maintain gas station water bath heaters	1.1 WHS/OHS and environmental measures for the site are identified, obtained and understood. 1.2 Work requirements for the work are interpreted from plans, specifications and instructions 1.3 Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule and respective responsibilities. 1.4 WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed. 1.5 Hazards are identified, WHS/OHS risks are assessed and control measures are prioritised, implemented and monitored according to established procedures. 1.6 Scope of the responsibility under the relevant work permit and/or relevant notification is received and confirmed to access, isolate/de-energise systems and perform work according to requirements and established procedures 1.7 Equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for correct operation and safety. 1.8 Appropriate persons are consulted to ensure the work is coordinated effectively with others involved 1.9 Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures 1.10 Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
2 Operate & maintain gas station water bath heaters	1.11 Third party issues are referred to appropriate persons in accordance with established procedures. 1.12 Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures. 2.1 WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed. 2.2 Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely. 2.3 Hazardous activities such as lifting, climbing, working in confined spaces, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements 2.4 Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. 2.5 Hazard warnings and safety signs are recognised and WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures 2.6 Information on gas temperature, water levels and utility supply gas is collected and reported in accordance with established procedures. 2.7 Scheduled maintenance of components conducted in accordance with the work schedule and established procedures 2.8 Water bath heater components are maintained and operated in accordance with established procedures 2.9 Faults and operational conditions of the components are identified, repaired or replaced and reported in accordance with organisational requirements 2.10 Procedures for referring non-routine events to the immediate authorised persons for directions are followed. 2.11 Routine quality checks are carried out in accordance with work instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
3 Complete work and relevant documentation	3.1 WHS/OHS risk control work completion measures and procedures are followed. 3.2 Work site is tidied and made safe in accordance with established procedures 3.3 Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored. 3.4 Appropriate persons are notified of work completion according to established procedures 3.5 Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G137A Water Bath Heater Maintenance and operation

Evidence shall show an understanding of operating and maintaining gas fired and electric water bath heaters in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Fundamentals of dew point control and gas heating

- Joule Thompson effect
- Relationship of Pressure, Temperature and Volume

T2. Water bath heaters

- Types and applications: gas fired and electric
- Operation
- Components
- Skid layouts

T3. Operating modes

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Dual heater skid operation
- Automatic
- Manual
- Set point Control

T4. Temperature control systems

T5. Fuel gas supply systems

T6. Component venting and purging operations

T7. Start-up and shut-down operation

T8. Heater run changes

T9. Routine inspection requirements

T10. Maintenance requirements including:

- Gas burner maintenance including pilot and main burner control both ‘natural’ and ‘forced draft’
- Temperature monitoring and control
- Water condition monitoring and corrosion inhibitors

T11. Manufactures specifications, manuals and procedures.

T12. Organisations manuals and procedures

T13. Relevant Legislation, Standards, Codes and Regulations including:

- Regulator (Workcover) pressure vessels inspection requirements
- AS1210 - 1997 Pressure vessels
- AS3788 Pressure Vessel in-service inspections
- AS4343 Pressure equipment - Hazard levels
- AS 2971 - 2002, Serially produced pressure vessels
- AS5601 Gas installations

T14. Reporting and documentation requirements

T15. Fault-finding and trouble-shooting water bath heaters

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2**

Before the critical aspects of evidence are considered all

© Commonwealth of Australia, 2025 Powering Skills Organisation

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines — UEG11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carry out work on water bath heaters in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Ideas described asntifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.
    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices
    C. Operating and maintaining water bath heaters and associated equipment including utility supply gas and temperature control systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

D. Operating, adjusting/testing, fault finding and maintaining pressure measurement, controls and relief devices

E. Purging and venting components

F. Completing required documentation and reporting.

G. Dealing with unplanned events by drawing on required skills and knowledge , procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with

© Commonwealth of Australia, 2025 Powering Skills Organisation

the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG132A	Carry out work activities in a utilities industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to operating, fault finding, repair, replacement and maintenance of gas fired and electric water bath heaters typically located at:

- Trunk Receiving Stations (TRS)
- Pressure Reduction Stations

Note:

Fault finding is limited to the component level.

This does not include electrical work that requires either a full or restricted electrical licence.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Local and remote monitoring, adjusting and controlling
- Regulation of gas temperature
- Water bath condition monitoring
- Recording and reporting
- Regulation of the system
- Equipment
- Organisational and statutory requirements

UEGNSG138A Install and commission stationary gas fuelled turbine engines

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope

1.1) Descriptor

This unit covers the installation and commissioning of stationary gas fuelled turbine engines, up to a capacity of 5GJ/hr (1300kw), for approval where required.

It encompasses working safely and to installation standards matching the plant/equipment, location, components and fuel train pipe-work to given specifications. Commissioning the plant and equipment including: pre commissioning tests, start up, adjusting components and controls to safe and efficient operation. Completing all necessary installation and commissioning documentation.

Note: 500kw equates to a gas input of approximately 6Gj/hr.

Application of the Unit

Application of the Unit

2)

2.1) General Application

This competency standard unit is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set.

© Commonwealth of Australia, 2025 Powering Skills Organisation

2.2) Importation

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC/NSSC Training Package Policy should ensure all pre-requisite units are also imported into the relevant Training Package and qualification.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit in some States/Territories requires an authority to practice in the workplace. Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

4.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Common Unit Group

UEGNSG005A	Prepare to work in the Australian gas industry

WHS/OHS Unit Group

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Or

CPCCOHS1001A	Work safely in the construction industry

And

HLTAID001	Perform cardiopulmonary resuscitation

4.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

5)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a unit of competency*	*Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install and commission stationary gas fuelled turbine engine	1.1 WHS/OHS procedures for a given work area are identified, obtained and understood. 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed. 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented. 1.4 Design specification for gas fuelled turbine engines to be installed and commissioned is accessed, analysed, interpreted and confirmed through a detailed site inspection. 1.5 Design specification matters requiring clarification are resolved through liaison with designer and gas authorities. 1.6 Formal authority to proceed with installation and commissioning is obtained before commencing work, in accordance with regulatory and code of practice requirements. 1.7 Installation is prepared in consultation with others affected by the work and sequenced appropriately in line with quality assurance requirements. 1.8 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken. 1.9 Plant, equipment and component specifications and manufacturer manuals are obtained for planned work activity. 1.10 Locations of plant, equipment, fuel train pipe-work and components are planned within the constraints of work site, significants and requirements. 1.11 Materials needed for the installation work are obtained in accordance with design specification and established procedures 1.12 Tools, equipment, including personal protective equipment, and testing devices needed to for the installation and commissioning work are obtained in accordance with established procedures and checked for correct operation and safety. 1.13 Work area is prepared to support efficient installation and commissioning of the plant and equipment. 1.14 Preparatory work is checked to ensure no damage has occurred and complies with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		requirements.
2 Install stationary gas fuelled turbine engine	2.1	WHS/OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.
	2.3	Gas and electrical circuits/machines/plant are checked as being isolated where necessary in strict accordance WHS/OHS requirements and procedures.
	2.4	Stationary gas fuelled turbine engine components, including fuel train and associated pipe-work and flue/exhaust systems are installed in accordance with approved design specification and comply with technical standards and regulatory requirements, with sufficient access to affect terminations, adjustment and maintenance.
	2.5	Ventilation systems are installed in accordance with approved design specifications
	2.6	Electrical components, wiring enclosures and wiring, including terminations are installed in accordance with design and manufacturer's specifications, and functional and regulatory requirements.
	2.7	Ongoing compliance and safety inspections of the installed turbine engine , equipment, pipe-work, components and accessories are undertaken and defects are rectified
	2.8	Installation is carried out efficiently without unnecessary waste of materials or damage to plant, equipment, pipe-work, components, accessories, the surrounding environment or services and using sustainable energy principles.
	2.9	Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Commission stationary gas fuelled turbine engine	3.1	WHS/OHS risk control measures and procedures for carrying out the work are followed.
	3.2	Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.
	3.3	Gas and electrical safety checks and isolation procedures, including purging are completed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and recorded to manufacturer and other authority requirements before testing and commissioning are commenced.
	3.4	Operational parameters of individual components are tested and adjusted to conform to specifications
	3.5	The turbine engine operations are tested first without and then with fuel, adjustments are completed as necessary and results recorded in accordance with approving authority requirements.
	3.6	Exhaust gases are analysed in accordance with recognised industry practice and other authority requirements.
	3.7	Unexpected situations are dealt with safely and with the approval of an authorised person
	3.8	Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
4 Completion and report installation and commissioning activities.	4.1	WHS/OHS work completion risk control measures and procedures are followed.
	4.2	Final check of the installed turbine engine is made to verify that it complies with all requirements, including any certification required by local authorities.
	4.3	Work area is cleared and materials disposed of or recycled in accordance with federal, state and territory legislation and workplace procedures.
	4.4	Tools and equipment are cleaned, checked, serviced and stored in accordance with manufacturer recommendations and workplace procedures
	4.5	Work site is cleaned and made safe in accordance with established procedures.
	4.6	'As-installed' turbine engine equipment components, pipe-work, flue/exhaust systems and accessories are documented, accessed and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices and installing and commissioning of gas fuelled turbine engines up to a capacity of

© Commonwealth of Australia, 2025 Powering Skills Organisation

500kW or speeds of 3600RPM.

All knowledge and skills detailed in this unit should be contextualised to current industry standards, technologies and practices The extent of the required skills and knowledge is given below. It forms an integral part of this unit.

KS01-G138A Installation and commissioning of gas fuelled turbine engines

Evidence shall show an understanding of installation and commissioning techniques for stationary gas fuelled turbine engines, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Gas fuel

- Types, properties and applications
- Safety
- Hazards
- Combustion
- Ignition types

T2. Gas fuelled turbine engine overview

- Types
- Major components
- Operating principles
- Manufacturer’s specifications and diagrams

T3. Fuel train requirements

- Pipe-work and connections
- Valves
- Metering devices
- Regulating valves
- Electrical controls

T4. Exhaust/flue requirements

- Materials
- Terminations
- Sizing

T5. Location ventilation requirements

- Materials
- Calculations
- Interlocks
- Locations

T6. Hazardous area requirements

- Locations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Housing requirements
- Distances

T7. Codes, regulations and standards

- AS 3814
- AS 5601

T8. Design specifications

- Accessing
- Analysis and interpretation
- Calculations

T9. Required authority to proceed

- Regulatory requirements (Scope and restrictions)
- Standards and code of practice requirements.
- Required documentation and submissions

T10. Site Arrangements

- Location and environment
- Piping requirements for gas fuel train pipe-work
- Suitable equipment/equipment plant locations

T11. Site Safety

- Hazards
- Checklists
- Reports

T12. Plant/equipment diagrams

- Mechanical layouts
- Gas pipe-work drawings
- Electrical circuits

T13. Installation

- Turbine engines plant and equipment
- Gas train pipe-work and components
- Exhaust/flue system
- Ventilation system
- Pressure testing and purging
- Authorisations and certification requirements and procedures

T14. Commissioning

- Inspection of the installed turbine engine s, pipe-work, components and accessories
- Testing turbine engine operation first without and then with fuel
- Testing and adjusting regulator, operation and safety controls

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Exhaust gases analysis throughout operating parameters including bifuel applications
- Compliance with design specification, regulations, codes, standards and manufacturers specifications
- Documentation and reports
  - As-installed' turbine engine components, pipe-work, flue/exhaust systems and accessories are documented and reported

Evidence Guide

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data

© Commonwealth of Australia, 2025 Powering Skills Organisation

gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Before the critical aspects of evidence are considered all prerequisites shall be met.

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the required skills and knowledge as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Install and commission gas turbine engines as described in 9) Range Statement and including:

  A Obtaining formal authority to proceed with installation and commissioning before commencing work, in accordance with regulatory and code of practice requirements.

  B Reading and interpreting drawings related to plant/equipment locations and pipe-work connections

  C Installing, securing, aligning and connecting plant, equipment, pipe-work, components and accessories accurately in their planned location and in compliance with codes and standards.

  D Undertaking on-going compliance and safety inspections

  E Rectifying any defects revealed through on-going inspections

  F Pressure testing, repairing leaks and purging the fuel train system entire system to the appropriate design test pressures.

  G Commissioning plant and equipment operation as necessary and results recorded in accordance with approving authority requirements

  H Correctly documenting ‘as-installed’ plant, equipment, pipe-work, components and accessories

  I Dealing with unplanned events

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

WHS/OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing low voltage electrical apparatus and associated equipment.

Method of assessment

8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent Assessment

8.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in either UEGNSG141A or CPCCOHS1001A and HLTCPR201A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit

Range Statement

9) *This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments*

© Commonwealth of Australia, 2025 Powering Skills Organisation

and situations that will affect performance.

This unit shall be demonstrated in relation to installation and commissioning of stationary gas fuelled turbine engines up to a capacity of 5GJ/hr (1300kw), which includes each of the following:

- Installing and connecting gas fuel train pipe-work, regulators, valves, metering and protective devices from gas pipeline to the turbine engine.
- Installing and connecting flue/exhaust system
- Pressure testing and purging gas fuel train
- Commissioning gas fuelled turbine engine, adjusting components and controls to safe and efficient operation.

The gas fuel can be from gas gathering lines, gas transmission pipelines, distribution pipeline, and consumer gas installations. Gas Fuels can be natural gas, LPG, SNG, bio-gas, waste gas or sewage gas, used as a single gas fuel or part of a dual fuel system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	**Prepare to repair and maintain gas fuelled turbine engines**	1.1	WHS/OHS procedures for a given work area are identified, obtained and understood.
		1.2	Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
		1.3	Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
		1.4	Formal authority to proceed with repair and maintenance is obtained before commencing work, in accordance with regulatory and code of practice requirements
		1.5	Repair and maintenance is prepared in consultation with others affected by the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			and sequenced appropriately.
		1.6	The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
		1.7	Plant, equipment and component specifications and manufacturer manuals are obtained for planned work activity
		1.8	Material needed for the repair and maintenance work is obtained in accordance with established procedures and checked against job requirements.
		1.9	Tools, equipment, including personal protective equipment, and testing devices needed to for the repair and maintenance work are obtained in accordance with established procedures and checked for correct operation and safety.
		1.10	Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2	**Repair and maintain gas fuelled turbine engines**	2.1	WHS/OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.
		2.3	Gas and electrical circuits/machines/plant are checked and recorded as being isolated and safe where necessary in strict accordance authority and WHS/OHS requirements and procedures before work is commenced.
		2.4	Nature and possible cause of faults or out of specification performance are identified from defect reports or operational records.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.5	Fault finding is approached methodically drawing on knowledge of gas fuelled turbine engines using observation, measurement, calculations and comparison with normal system and component parameters/values.
	2.6	Faults beyond the scope of gas fuel train, ignition or fume exhaust work are identified and arrangements are made for appropriately competent and authorised person to rectify faults
	2.7	Engine is disconnected where necessary to carry out maintenance and repairs in strict accordance authority and WHS/OHS requirements and procedures. Note: No modifications are permitted.
	2.8	Components are removed/dismantled where necessary and parts stored to protect them against loss or damage
	2.9	Faulty components are rechecked and their fault status confirmed.
	2.10	Materials required to rectify faults are sourced and obtained in accordance with established procedures
	2.11	Repair and maintenance work is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.12	Effectiveness of the repair is tested in accordance with established procedures.
	2.13	System is reassembled, reconnected and finally tested to ensure it is operating safely, effectively and complies with relevant requirements.
	2.14	Unexpected situations are dealt with safely and with the approval of an authorised person.
3 Completion and	3.1	WHS/OHS work completion risk control

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
report repair and maintenance		measures and procedures are followed.
	3.2	Final check of the engine is made to verify that it complies to all requirements, including any certification requirements by local authorities.
	3.3	Work area is cleared and materials disposed of or recycled in accordance with federal, state and territory legislation and workplace procedures.
	3.4	Tools and equipment are cleaned, checked, serviced and stored in accordance with manufacturer recommendations and workplace procedures
	3.5	Work site is cleaned and made safe in accordance with established procedures.
	3.6	Maintenance and repair work is documented and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices and repairing and maintaining gas fuelled turbine engines up to a capacity of 500kW or speeds of 3600RPM.

All knowledge and skills detailed in this unit should be contextualised to current industry standards, technologies and practices. The extent of the required skills and knowledge required is given below. It forms an integral part of this unit.

KS01-G139A Repairing and maintaining gas fuelled turbine engines

Evidence shall show an understanding of repairing and maintaining stationary gas fuelled turbine engines, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Gas fuel

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing low voltage electrical apparatus and associated equipment.

Method of assessment

8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in either UEGNSG141A or CPCCOHS1001A and HLTCPR201A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

9) *This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments*

© Commonwealth of Australia, 2025 Powering Skills Organisation

and situations that will affect performance.

This unit shall be demonstrated in relation to repairing and maintaining stationary gas fuelled turbine engines up to a capacity of 5GJ/hr (1300kw), which includes each of the following:

- Gas fuel train pipe-work, regulators, valves, metering and protective devices from gas pipeline to the engine.
- Flue/exhaust system
- Pressure testing and purging gas fuel train
- Disconnecting and reconnecting gas fuelled turbine engines, adjusting components and controls to safe and efficient operation.

It does not include the following:

- Repairs the internal mechanical components of the engine

The gas fuel can be from gas gathering lines, gas transmission pipelines, distribution pipeline, and consumer gas installations. Gas Fuels can be natural gas, LPG, SNG, bio-gas, waste gas or sewage gas, used as a single gas fuel or part of a dual fuel system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Gas Industry

Competency Field

Competency Field **11)**

Maintenance

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG140A Apply environmental policies and procedures in the utilities industry

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the application of environmental policies and procedures whilst undertaking tasks in a utilities industry workplace.

It encompasses the requirements for applying with relevant sections of Commonwealth and State Environmental Protection, and Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) Acts and Regulations, and their application to relevant workplace procedures.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe workplace where utility industry operations occur which includes the gas industry, electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Environmental Legislative requirements, Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and Duty of Care requirements being met for the environment and the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the utilities industry. It is suitable for pre-employment and employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

Licence to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Environmental Legislation, Chemical Management, Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry

Literacy and numeracy **4.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s)	**4)**
skills	Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy' Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills	**5)**
	The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to apply environmental policies and procedures	1.1	Work instructions and WHS/OHS measures for the workplace are obtained, accessed and understood.
	1.2	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		work schedule.
	1.3	Environmental and WHS/OHS policies, procedures and requirements for the work to be performed are received and confirmed
	1.4	Environmental and WHS/OHS hazards are identified and reported to relevant persons to assess the risks and implement control measures according to established procedures.
	1.5	Resources including environmental protection equipment required for the work are obtained, received and checked for correct operation and safety.
	1.6	Workplace preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Apply environmental policies and procedures	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Environmental policies and procedures requirements are applied and control measures are included in the work processes
	2.3	Appropriate materials, tools and equipment are selected and used correctly and safely.
	2.4	Any environmental incidents, accidents and potential problems are immediately reported to appropriate persons and dealt with in accordance with established procedures and legislative requirements.
	2.5	Routine quality checks of the work are carried out in accordance with work instructions
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Workplace is tidied and made safe.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.3	Tools, equipment, vehicles and plant and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of the completion of the work in accordance with established procedures
	3.5	All waste is disposed of in accordance with procedures as required
	3.6	Relevant environmental records, report forms/data sheets are completed accurately in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level, required for this unit..*

Evidence shall show that knowledge has been acquired of safe working practices for applying environmental policies and procedures in the utilities industry.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G140A Environmental policies and procedures in a utilities industry work environment

Evidence shall show an understanding and ability to apply environmental policies and procedures whilst undertaking tasks in a utilities industry workplace to an extent indicated by the following aspects:

T1. Relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice.

T2. Role of regulatory bodies in monitoring environmental activities, risk and incident compliance

T3. Employee's and employer's responsibilities under the relevant environmental legislation, regulations, codes and enterprise procedures for:

- flora control

© Commonwealth of Australia, 2025 Powering Skills Organisation

- erosion control
- fauna control
- the protection of indigenous and cultural heritage sites

T4. Overview of environment protection procedures, records, inspections/audit and incident reporting

T5. Overview of environmental hazards, risk assessment, control measures and incident responses

T6. Application to relevant work site procedures

- use of plant/machinery/equipment
- cleaning materials and aids
- spill response equipment
- sediment erosion control equipment
- emission control and sampling equipment.

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, vehicles, plant, equipment, waste contamination and noise, poor planning and work practices and procedures.

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge

© Commonwealth of Australia, 2025 Powering Skills Organisation

and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate consistent performance across a representative range of contexts from the prescribed items below.
  - Apply environmental policies and procedures in the utilities industry as described in 9) Range and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Accessing and interpreting relevant information	At least 3	• Access alignment sheets, maps, technical drawings and symbols • Identify environmental aspects and potential or actual impacts • Identify potential environmental hazards • Participate in risk assessment, JHA or JSA that includes environmental risks
B. Environmental control measure procedures	At least 5	• Installation of sediment & erosion control measures as per Legislative or Best Practice requirements. • Weed spread mitigation • Chemical management controls (MSDS, storage, labelling, bunding) • Noise control techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

		& work hour limitations • Air emission control measures • Waste management principles (recycling) • Hazardous waste management • Water management requirements (works near waterways) • Vegetation management requirements • Fauna protection • Heritage management techniques. • Community consultation requirements • Rehabilitation requirements
C Awareness of Environmental incident review procedures	At least 2	• Environmental incident review • Incident reporting and notification • Incident Investigation • Recommendations to prevent reoccurrence
D Unplanned event procedures	At least one occasion	Respond to an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

© Commonwealth of Australia, 2025 Powering Skills Organisation

workplace. This should include:

WHS/OHS policy and work procedures and instructions.

Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with

© Commonwealth of Australia, 2025 Powering Skills Organisation

allied Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to applying environmental policies and procedures in at least one of the following utilities industry work sites including:

- Above ground level sites
- Below ground level sites
- Easements
- Public sites, requiring pedestrian and traffic control
- Private sites.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Legislation
- Inspection
- Safety equipment
- Personal Protective Equipment
- Relevant regulation and procedures
- Emergency and hazardous work situations
- Relevant sections of standard operating procedures

UEGNSG141A Apply Workplace Health and Safety regulations, codes and practices in the gas supply industry

Modification History

This unit is a replacement in the gas supply industry for unit UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace.

Unit Descriptor

Unit Descriptor **1)**

1.1) Descriptor

This unit specifies the mandatory requirements of Workplace Health and Safety (WHS)/Occupational Health and Safety (OH&S) and how they apply to the various gas supply industry work functions.

It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Application of the Unit

Application of the Unit **2)**

This unit addresses information, processes and techniques for the application of general workplace/occupational health and safety requirements in gas supply industry workplaces and is essential for employees without managerial or supervisory responsibilities.

It is subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OH&S) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas supply industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licencing, Workplace Health and Safety/Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit are not subject to license regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OH&S), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

4.1) Competencies

There are no prerequisite competencies for this unit.

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a unit of competency*

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to enter a work area	1.1	Work area access permits are obtained from appropriate personnel according to established procedures
	1.2	Safe work methods for controlling risk are obtained, read and understood prior to undertaking a work activity.
	1.3.	Preparations for the isolation of the plant/machine/equipment are carried out where required to prevent creation of hazards from loss of machine/system/process control according to established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.4	Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
2 Apply safe working practices.	2.1	Safe work methods for controlling risk are followed accurately.
	2.2	Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
3. Follow workplace procedures for hazard identification and risk control	3.1	Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.
	3.2	Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
	3.3	WHS/OH&S records of incidents are completed in accordance with regulatory requirements and established procedures.
	3.4	Workplace instructions and training are followed accurately within established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices and applying WHS/OH&S practices in the workplace.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices. The extent of the required skills and knowledge is provided below. It forms an integral part of the unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

KS01-G141A Workplace/Occupational Health and Safety principles in the gas supply industry

Evidence shall show an understanding of Workplace Health and Safety (WHS)/Occupational Health and Safety (OH&S) to an extent indicated by the following aspects

T1. The basic legal requirements covering workplace/occupational health and safety in the workplace encompassing:

- underlying principles of WHS/OH&S
- general aims and objectives of the relevant state or territory legislation relating to WHS/OH&S.
- enterprise policies and procedures
- employer and employee responsibilities, rights and obligations.
- major functions of safety committees and representatives.
- powers given to Workplace/Occupational Health and Safety Inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations

T2. The work environment encompassing:

- typical hazards associated with a range of work environments
- procedures used to control the risks associated with these hazards
- principles of risk assessment / management and state the purpose of each.
- hierarchy of WHS/OH&S hazard control measures.
- required documentation for risk assessment.
- commonly used workplace safety signs.
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation.
- appropriate fire extinguisher for a given type of fire.
- requirements for the location, mounting and maintenance of portable fire extinguishers.
- basic process of fighting a fire.
- Importance of safe premises, buildings and security in an industrial setting and the consequences of non- compliance.
- standard work procedure.

T3. Manual Handling encompassing:

- typical manual handling injuries and the effect they can have on lifestyle
- situations that may cause manual handling injuries
- correct procedures for lifting and carrying to prevent manual handling injuries

T4. Chemicals in the workplace encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- hazardous substances and dangerous goods.
- classification of chemicals as hazardous substances and/or dangerous goods
- requirements for labelling of chemicals in the workplace
- safe storage procedures for chemicals
- purpose and interpretation of material safety data sheet (MSDS)

T5. Working at heights encompassing:

- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms.

T6. Confined spaces encompassing:

- hazards associated with working in a confined space
- identifying workplace situations that could be classified as a confined space
- requirements for working in a designated confined space

T7. Hazardous areas encompassing:

- hazards associated with working in a hazardous area
- identifying workplace situations that could be classified as a hazardous area
- requirements for working in a designated hazardous area

T8. Physical and psychological hazards encompassing:

- short and long term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
- effects of vibration on the human body and work practices to protect against vibration
- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation.
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger.
- occupational overuse syndrome, how it occurs and means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace

T9. Working safely with gases encompassing:

- types and classes: fuelled, flammable and other relevant gases

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- effects of gases on the human body
- common causes of gas accidents and ignition
- products of (complete and incomplete) combustion
- precautions that can minimise the chance of gas accidents and ignition
- requirements for working with gases
- fire protection and control/extinguishing

T10. Working safely with electricity encompassing:

- effects of electric shock on the human body
- common causes of electrical accidents
- static electricity
- precautions that can minimise the chance of electric shock
- precautions when of removing an electric shock victim from a live electrical situation

T11. First Aid in the workplace encompassing:

- First Aid response procedures
  - DRS
  - Overview of ABCD
- responsibilities of the First Aider.
- priorities of first aid management for any accident or injury.
- procedures required at an accident scene.
- legal and ethical issues, which may impact on the management of care.
- 'Duty of Care'.
- examination of a casualty for injuries.

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**8.1)** Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the

EVIDENCE GUIDE

of risk control measures as specified in the performance criteria and range statement encompassing:

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the required knowledge and skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Applying WHS/OH&S practices in the workplace as described in 9) Range and including:

    A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.

    B Understanding and following risk control safe work methods.

    C Applying work procedures and instructions as they apply to risk control measures.

    D Dealing with accidents and emergencies within the scope of responsibility.

    E Participation in consultation processes, identifying hazards and implementing and monitoring control measures.

    F Dealing with unplanned events

Note:
Ability to implement these Workplace/Occupational Health and Safety measures shall be demonstrated on all occasions safety issues arise.

EVIDENCE GUIDE

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OH&S policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying WHS/OH&S practices in the workplace.

Method of assessment

8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified required knowledge and skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

9) *This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to each of the following:

- Relevant Workplace/Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Accepted industry work procedures and the specific safety procedures and work instructions for particular workplaces in the gas supply industry

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UEGNSG142A Conduct isolations under the permit to work system for gas industry work sites

Modification History

This unit replaces UEG11 unit UEGNSG112B Conduct isolation procedures for permit to work system for a gas industry work site

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the planning and carrying out of isolations under the permit to work system for a gas industry work site, in accordance with relevant legislation, standards, codes and established procedures.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti- discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
MSAPMOHS217A	Gas test atmospheres
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills	**5)** Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan and prepare for isolation,	1.1	WHS and environmental measures for the site are identified, obtained and understood.
	1.2	Work requirements for the work are interpreted from plans, specifications and instructions
	1.3	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule and respective responsibilities.
	1.4	WHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.5	Hazards are identified, WHS risks are assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of the responsibility under the relevant work permit and/or relevant notification is received and confirmed to access, isolate/de-energise systems and perform work according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.7	Isolation points are identified and communicated to the work party.
	1.8	Resources including persons and equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for correct operation and safety
	1.9	Resources including persons and equipment required are identified, scheduled, coordinated and confirmed
	1.10	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.9	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work"
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised by permits to work where applicable in accordance with established procedures
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Conduct isolation	2.1	WHS/OHS, environmental and sustainable energy policies and schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment PPE and measuring devices are selected and used correctly and safely
	2.3	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.4	Hazard warnings and safety signs are recognised and WHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.5	Isolations are completed, tagged, (locked out) and documented on work permit in accordance with established procedures and requirements.
	2.6	Solutions to non-routine problems are identified and actioned, according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with established procedures
3 Conduct de-isolation and restoration	3.1	WHS risk control work completion measures and procedures are followed.
	3.2	De-isolations and restoration are performed, tags removed and results recorded in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	De-isolations are confirmed with others involved in, or affected by the work in accordance with enterprise procedures
	3.3	Work completion documentation including relevant permits are completed accurately and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices in conducting isolations under the permit to work system for a gas industry work sites.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G142A Gas industry worksite isolations

Evidence shall show an understanding of planning and carrying out of isolations under the permit to work system for a gas industry work site in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedures

requirements for and use of qualified specialists

- establishing the appropriate worksite

T2. Safety requirements

- hazards
- risk assessment
- control measures

T3. Gas industry drawings

T4. Permit to Work requirements and procedures

T5. Isolation requirements and procedures including:

- points of isolations to ensure a safe work area
- isolation methods including valves, circuit breakers, pneumatics, utility gas
- communication with the work party
- document, tag and lock-out identified isolation points

T6. De-isolation at the end of each job

- requirements
- procedures
- document any remaining points of isolation

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Plan and carry out of isolations under the permit to work system for a gas industry work site in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• OHS legislation • Enterprise safety procedures, site safety and emergency procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

B	All	• Risk management • Planning skills • Communication skills • Problem solving skills
C	All	Isolate a range of energy sources including: • Gas • Electricity • Pneumatics • Mechanical energy.
D	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency of conducting isolations procedures for permit to work system for a Gas Industry work site

Assessment of this competency must also be undertaken in either

© Commonwealth of Australia, 2025 Powering Skills Organisation

an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills in section 3.1 of this competency standard.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Unit shall be demonstrated in relation to conducting isolations under the permit to work system for a Gas Industry work site.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Strategies
- Reference information
- Communication
- Documentation (5)
- Preparation and implementation strategies

UEGNSG204B Coordinate and conduct gas distribution pipeline repair and modifications

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the coordination of gas distribution pipeline repair and modifications. Inspection and testing techniques are included for this competency standard. It encompasses identifying and attending to leaks as classified in AS4645.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection,

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare and plan for coordination of repairs and modifications of a gas distribution pipeline	1.1 Information concerning the identified repair/modification is conveyed to all parties and work schedule(s), including drawings, plans, requirements, established procedures; and material lists are received, analysed and confirmed if necessary by site inspection
	1.2 Necessary plans, specifications and other relevant information and established procedures for the work are communicated to all persons and identified for all work sites
	1.3 OHS, environmental and sustainable energy policies and procedures related to the coordinating of gas distribution pipeline repairs and modifications are obtained and confirmed for the purposes of the work performed and communicated
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.6 Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7 Resources including persons, equipment, tools

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and personal protective equipment required for the job are identified, scheduled, obtained and confirmed in working order
	1.8	Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures according to requirements
	1.9	Liaison and communication issues with other authorised persons, authorities, clients and land-owners is completed so work can be carried out where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2 Coordinate pipeline repairs or modifications for gas distribution pipelines and notify completion of work	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Essential Knowledge and Associated Skills are applied to the coordinating of gas distribution pipeline repairs and modifications to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.4	Coordination of gas distribution pipeline repairs and modifications is carried out in accordance with the work schedule and to established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the authorised persons for directions according to established procedures
	2.6	Repair work is monitored and unplanned events and amendments and modifications in the coordinating pipeline repair and modifications are undertaken within the scope of established procedures
	2.7	Known solutions to a variety of problems are applied using acquired Essential Knowledge and Associated Skills
	2.8	All required testing procedures are followed and ongoing checks of work quality are undertaken in accordance with given instructions and established procedures
3 Re-establish distribution pipeline to operational conditions and notify completion of work	3.1	System is re-established in order to meet distribution pipeline requirements and the work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	with requirements
	3.6 Records and drawings are updated to reflect repair, modifications and work completion records, reports as installed and documentation finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for the coordination of gas distribution pipeline repair and modifications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G204 Distribution pipeline repair and modification B

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.2.14 Cut out, repair and replace damaged nylon or PVC pipe

Evidence shall show an understanding of requirements to repair a damaged nylon pipe in a Gas Industry workplace, indicated by the following:

- Undertake procedures for disconnecting and terminating nylon or PVC Pipe
- Selection and application of various squeeze off equipment for Nylon including Hydraulic squeezers
- Undertake repair methods for nylon or PVC pipeline, trace wire and marker tape
- Demonstrate procedures for cutting out and replacing nylon or PVC pipe of various diameters and in various locations including fixed connection points.
- Demonstrate procedures for accessing inserted nylon or PVC pipe including breaking out Cast Iron conduits and cutting out Steel conduit
- Apply procedures for ensuring continuity of supply including checking of network maps, gauging, fitting of bypasses and purging.
- Undertake joining and testing of trace wire and marker tape
- Static Electricity in gas pipes

G 2.2.19 Repair damaged PE pipeline

Evidence shall show an understanding of the requirements to repair damaged PE pipe on a Gas Industry pipeline, indicated by the following:

- Identify Environmental and Safety Hazards, assess risks and implement control measures
- Dangers of working with live gas
- Undertake procedures for disconnecting and terminating PE pipe
- Selection and application of various squeeze off and stop off equipment including Hydraulic squeezers
- Undertake repair methods for PE pipeline, saddles, trace wire and marker tape
- Demonstrate procedures for cutting out and replacing PE pipe of various diameters and in various locations including fixed connection points
- Gas leak testing
- Pressure testing procedures
- Apply procedures for ensuring continuity of supply including checking of network maps, Gauging, fitting of bypasses and purging

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Jointing methods for repair work
- Undertake joining and testing of trace wire and marker tape

G 2.2.22 Cut out, repair and replace cast iron pipeline

Evidence shall show an understanding of how to repair or replace a cast iron pipeline on a Gas Industry workplace, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Stop off equipment for cast iron
- Cutting methods for cast iron
- Undertake procedures for disconnecting and terminating cast iron pipe
- Undertake repair methods for cast iron pipeline, saddles, trace wire and marker tape
- Demonstrate procedures for cutting out and replacing cast iron pipe of various diameters and in various locations including fixed connection points
- External injection of Anaerobic sealants
- Gas leak testing
- Pressure testing procedures
- Apply procedures for ensuring continuity of supply including checking of network maps, Gauging, fitting of bypasses and purging.
- Undertake joining and testing of trace wire and marker tape
- Use of cross-bonding leads and neon testers

G 2.2.25 Cut out, repair and replace steel pipeline

Evidence shall show an understanding of the processes required for the cutting out and replacing of steel pipeline on a Gas Industry workplace (distribution) pipeline, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Purpose and function of equipment, tools and materials, including but not limited to, cutting and stopping equipment
- Demonstrate the correct use of stop off equipment and cutting equipment
- Requirements of Australian Standards and gas industry standards for working with steel pipe and fittings

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Safety requirements and procedures for using equipment, tools and materials
- Gas leak testing
- Pressure testing procedures
- Apply procedures for ensuring continuity of supply including checking of network maps, gauging, fitting of bypasses and purging.
- Replace marker tape
- Coating types and repair
- Use of cross-bonding leads and neon testers

G 2.2.29 Cut out, repair and replace damaged copper pipe

Evidence shall show an understanding of how to repair a damaged copper pipe on a Gas Industry pipeline, indicated by the following:

- Equipment, tools and materials required for joining copper pipeline and fittings
- Purpose and function of equipment, tools and materials
- Safety requirements and procedures for cutting and joining copper pipeline including mechanical and soldered or welded joints
- Procedures for cutting and tapping copper pipeline
- Procedures for pressure testing a pipeline
- Procedures and safety requirements for joining copper pipeline to other pipeline
- Procedures for joining copper pipeline
- Use of cross-bonding leads and neon testers

G 3.2.11 Prepare for testing and inspection of pipeline system

Evidence shall show an understanding of the requirements to test and inspect Gas Industry pipeline (Distribution) systems, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Interpret and apply enterprise policies and procedures
- Interpret and apply environmental and safety regulations
- Knowledge of the properties and characteristics of gas relevant to the pipeline systems to be tested
- Knowledge of the different classification of leaks and relevant procedures associated with each class of leak

G 3.2.12 Select and use appropriate tools and equipment to inspect and test the pipeline system in accordance with procedures and legislative requirements

Evidence shall show an understanding of the requirement to

© Commonwealth of Australia, 2025 Powering Skills Organisation

select the appropriate tools and equipment required to undertake the testing of Gas Industry pipeline (Distribution), systems, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Interpret and apply enterprise policies and procedures
- Range of testing and inspection methods appropriate to the system under test
- Correct and appropriate use of test and inspection equipment such as:
  - Gas detectors
  - Pressure measuring and monitoring equipment
  - Snoop for leaks on flanges and fittings
  - Measuring devices
- Interpret SI units such for pressure, temperature etc.
- Procedures to ensure that supply pressure is maintained
- Procedures required to monitor gaseous atmosphere

G 3.2.13 Record and interpret test data

Evidence shall show an understanding of the requirements to record and interpret test data for Gas Industry pipeline (Distribution) systems, indicated by the following:

- Interpret SI units such for pressure, temperature etc
- Record information and test data on completion of testing/inspection procedures
- Analyse test data to identify system defects and faults
- Use test data to correctly classify leaks for prioritising repairs
- Report results to relevant third parties using a range of reporting methods (forms, reports etc)

G 3.2.14 Monitor pipeline system during repair work

Evidence shall show an understanding of the requirements to monitor pipeline system during repair work on a Gas Industry pipeline (Distribution), indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Interpret and apply enterprise policies and procedures
- Procedures to conduct gas pressure and flow monitoring
- Interpret and apply manufacturer's maintenance specifications
- Coordinate resources to prevent outages during repair work
- Monitor impact of the work on environment, people and

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment

G 3.2.15 Conduct repairs and make amendments or modifications as required

Evidence shall show an understanding of the requirements to conduct repairs and make amendments or modifications as necessary on a Gas Industry pipeline (Distribution) systems, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Interpret and apply enterprise policies and procedures
- Conduct repairs with appropriate tools and equipment according to established work procedures
- Comply with procedures when evaluating and implementing amendments or modifications
- Comply with procedures to assess the quality of work and ensure compliance with procedures, legislative and environmental requirements

G 3.2.16 Re-establish system and restore site

Evidence shall show an understanding of the re-establishment of the system and the restoration of the site on Gas Industry pipeline (Distribution) systems, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Interpret and apply enterprise policies and procedures
- Confirmation that repairs and modifications are complete
- Identify relevant third parties for notification purposes
- Complete work permits
- Effectively communicate results to relevant third parties

G 3.2.17 Maintain records

Evidence shall show an ability to maintain of records for the repair and modification of Gas Industry pipelines (Distribution) systems, indicated by the following:

- Interpret and apply enterprise policies and procedures
- Collate all relevant data
- Identify and complete the relevant records, drawings, documents and forms
- Store records in a secure manner consistent with enterprise policies and procedures

G 3.2.18 Obtain information relevant to pipeline repair and modification

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an ability to obtain information and procedures for repairing or modifying Gas Industry pipelines (Distribution) systems, indicated by the following:

- Source relevant documentation including plans, drawings, maps and specifications
- Identify any potential issues associated with the relevant documentation like missing or incorrect information
- Assess the scope of the repair or modifications required
- Determine affects on customer supply and extent of the repair or modification
- Determine materials and equipment required

G 3.2.19 Liaise and communicate with relevant parties

Evidence shall show an understanding of liaising and communicating with relevant parties involved in repair or modification of Gas Industry pipelines (Distribution), specifically:

- Interpret and apply enterprise policies and procedures
- Identify key stakeholders
- Identify specialists that can assist in repair/modification work
- Identify responsibilities and reporting requirements of third parties
- Establish communication lines with parties that require notification of repairs/modifications

G 3.2.20 Prepare work site for repairs/modifications work

Evidence shall show an understanding of the preparation of Gas Industry (Distribution) workplaces for repairs/modifications work, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Interpret and apply enterprise policies and procedures
- Determine strategies for maintaining supply
- Comply with procedures for locating services on the worksite
- Identify and control possible sources of ignition
- Identify communications protocols and requirements
- Prepare procedures for the coordination of site activities
- Maintain records of communications with relevant third parties

G 3.2.21 Organise required equipment, materials and persons

Evidence shall show an understanding of the requirements to organise required equipment, materials and persons for Gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

Industry pipeline (Distribution) work activities, indicated by the following:

- Identify Environmental and Safety Hazards, assess risks and implement control measures associated with obtaining equipment and materials
- Interpret and apply enterprise policies and procedures relevant to obtaining equipment and materials
- Identify and comply with legislative requirements relevant to obtaining equipment and materials
- Locate and comply with all relevant MSDS' associated with obtaining equipment and materials
- Interpret documentation to ensure correct equipment and materials are sourced
- Coordinate the deployment of required equipment, materials and persons to a worksite

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the

© Commonwealth of Australia, 2025 Powering Skills Organisation

most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
- Competency is demonstrated across the range of variables highlighted in the range of variables guideline A, B, C, D, E, F, G, H, I for the coordination of gas distribution pipeline repair and modifications.
- Group A and B must be done
- At least 3 groups must be completed from C, D, E, F, G, H
- Group I must be completed

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working:

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B	Carry out work activities in a utilities industry work environment
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the coordination of the construction, laying and testing of gas distribution pipelines and associated equipment. The competency standard also requires that other services are notified; communication with appropriate persons; the relevant materials, tools and equipment are used; work is undertaken observing the relevant standard operating procedures and safe working practices.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare to coordinate pipeline installation	1.1 Alignment of gas main and associated equipment is confirmed and location of other services verified against work schedule(s) and established procedures and confirmed if necessary by site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3 OHS, environmental and sustainable energy policies and procedures related to the coordination of construction, laying and testing of gas distribution pipelines are obtained and confirmed for the purposes of the work performed and communicated
	1.4 Appropriate persons are consulted to ensure the work plan is coordinated and that work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Risk control measures for identified hazards are implemented, prioritised and monitored against the work schedule
	1.6 Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
		1.8	Relevant persons at worksite are confirmed to be current in in First Aid and other related work procedures according to requirements
		1.9	Liaison and communication with authorised persons, authorities, clients and land-owners is completed so work can be carried out where necessary
		1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
		1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
		1.12	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2	Coordinate construction, laying and insertion of pipelines and associated	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	equipment and test pipeline for conformance to specifications	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
		2.3	Essential Knowledge and Associated Skills for the coordination of construction, laying and testing of gas distribution pipelines are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			according to requirements
		2.4	Performing the coordination of construction, laying and testing of gas distribution pipelines is carried out in accordance with the work schedule and to established procedures
		2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the authorised persons for directions according to established procedures
		2.6	Unplanned events in the coordination of construction, laying and testing of gas distribution pipelines is undertaken within the scope of established procedures
		2.7	Known solutions to a variety of problems are applied using acquired Essential Knowledge and Associated Skills
		2.8	Ongoing checks of work quality are undertaken in accordance with given instructions and established procedures
3	Complete the coordination of construction, laying and testing of gas distribution	3.1	Final inspection are undertaken to ensure the construction, laying and testing conforms to requirements and anomalies reported in accordance with established procedures
	pipelines	3.2	Accidents and injuries are reported in accordance with established procedures where applicable
		3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
		3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
		3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.6 Work completion records, reports and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for coordinating construction, laying and testing of gas distribution pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G207B **Distribution pipeline testing**

G3.2.45 Plan and prepare coordination of pipeline installation

Evidence shall show an understanding of the requirements to plan and prepare coordination of repairs to pipelines, facilities and equipment on a Gas Industry pipeline (Distribution), indicated by the following:

- identification of the types of problems and faults that may require repair
- obtaining, interpreting and using relevant technical drawings, plans or specifications during preparation and planning of repair work
- identification of hazards (including confined spaces) and explanation of OHS, procedures and environmental requirements that require implementation prior to and during repair work
- identification of procedures, persons, equipment and processes required for the repair work and plan the coordination of resources
- required work permits
- locating and securing of emergency equipment and ensuring all personnel are familiar with emergency plans.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G3.2.46 Secure work area and equipment prior to installation

Evidence shall show an understanding of the requirements to secure work area and equipment prior to repair on a Gas Industry pipeline (Distribution), indicated by the following:

- discuss the requirements for and use of work permits, safety plans, non-routine procedures and safety checks
- implementation and adherence to procedures, OHS and environmental requirements to ensure a safe worksite is established and maintained
- equipment for repair work is depressurised, tagged and locked out
- routine checks and documentation of facilities/equipment and overall repair process
- verification that facilities/equipment are safe for repair work to commence by ensuring that all procedures have been followed and requirements met.

G3.2.47 Coordinate construction, laying and insertion of pipelines and associated equipment

Evidence shall show an understanding of the requirements to coordinate the construction, laying and insertion of pipelines and associated equipment on a Gas Industry pipeline (Distribution), indicated by the following:

- management plans and construction and installation procedures are understood for communication to all persons affected
- procedures to monitor persons, systems, equipment and environmental conditions to ensure procedure, OHS and environmental requirements are maintained during the construction, laying and insertion of pipeline process
- coordination techniques for construction of pipeline ensuring that all procedures, OHS and environmental requirements are met
- assessment of the identification and location of pipelines requiring renewal
- verification that the required pipe laying and pipe joining techniques and supervision of procedures for compliance is met and understood
- coordination for the monitoring and installation and/or insertion of pipeline and validation of the standard to ensure it meets OHS, environmental and legislative requirements
- assessment of progress of installation/insertion to evaluate and implement required amendments or modifications and communication of changes to

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate persons
- dangerous and/or emergency situations in accordance with procedures, OHS and environmental requirements.

G3.2.48 Test pipeline for conformance

Evidence shall show an understanding of the testing procedures for a Gas Industry pipeline (Distribution), for conformance, indicated by the following:

- identification of the most appropriate techniques for testing and inspecting gas pipelines
- types of faults and their associated characteristics which could be encountered during inspection and testing procedures
- selection of pipeline testing equipment and substances
- pipeline inspection and testing procedures and compliance with procedures, OHS and environmental requirements
- documentation and confirmation to test results and implement procedures to determine appropriate action
- communication of required results, findings and actions using appropriate reporting and recording systems.

G3.2.49 Conduct final inspection

Evidence shall show an understanding of the requirements to conduct final inspection procedures, indicated by the following:

- new pipeline locations are correctly recorded in accordance with procedures and legislative requirements
- site reinstatement and notification of authorities is performed correctly in relation to completion of work procedures
- all documentation is inspected in relation to pipeline construction, laying and testing to ensure correct and accurate completion for processing
- coordination of the clearing of work area of equipment, tools, materials is understood and applied in accordance with OHS and environmental requirements.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to **9.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace

I	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in coordinating construction, laying and testing of gas distribution pipelines.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B	Carry out work activities in a utilities industry work environment
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the supervision and monitoring of contractors working in the field. It requires the application of skills and knowledge to provide information, guidance and direction to contractors in the conduct of their duties. It does not cover the high levels of technical expertise required to actually perform the services but focuses on the key knowledge and skills required to supervise and monitor the process from a contractor management perspective. The competency standard is applied against the procedures found under the latest version of AS 1697 Australian and New Zealand Standard.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for supervising and monitoring contract staff	1.1 Works schedule(s), including drawings, plans, requirement, established procedures and material lists are detailed, analysed if necessary by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5 OHS, environmental and sustainable energy policies and procedures are obtained and confirmed for the purposes of the work performed and communicated
	1.6 Relevant work permits are obtained to access and perform work according to requirements and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8	Contractual requirements, such as qualifications of personnel to perform the work, competency of the contractor, site induction and condition of equipment are confirmed
	1.9	Relevant persons at work site are confirmed to be current in First Aid and other related work procedures according to requirements
	1.10	Liaison and communication with authorised persons, authorities, clients and land-owners is completed so work can be carried out where necessary
	1.11	Persons participating in the work are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.12	Site is prepared according to work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.13	Road signs, barriers and warning devices are positioned in accordance with requirements
2 Monitor and supervise contractor activities.	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a

ELEMENT	PERFORMANCE CRITERIA	
		minimum of waste according to requirements
	2.4	Contractor activity is carried out in accordance with the work schedule and to established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the authorised persons for directions according to established procedures
	2.6	Solutions to non-routine problems are identified and actioned using acquired Essential Knowledge and Associated Skills according to requirements.
	2.7	Known solutions to a variety of problems are applied using acquired Essential Knowledge and Associated Skills
	2.8	First Aid and other related work procedures are performed according to requirements and established procedures
	2.9	Ongoing checks of work quality are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved
3 Complete monitoring and supervision records.	3.1	Inspection of the contract job is checked against works schedule to determine conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Waste materials are safely disposed of and the work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	checked and returned to storage in accordance with established procedures
	3.5 Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6 Data is accurately recorded and work completion records, reports as modified drawings and documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for supervising and monitoring contract staff for work on distribution pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G210B Distribution pipeline contract staff

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc
- Report workplace hazards

G 2.1.6 Work safely with hazardous materials and equipment

Evidence shall show an understanding of what constitutes hazardous materials and the equipment and processes used to safely work with these indicated by the following:

- Identify hazardous materials and equipment
- Location and purpose of Material Safety Data Sheets (MSDS)
- Read, interpret and discuss MSDS
- Knowledge of methods for safe disposal of hazardous waste materials
- Read, interpret and discuss relevant manufacturer's specifications
- Use and dispose of hazardous materials and equipment safely
- Use of spill kits and PPE

G 2.1.7 Apply safe manual handling techniques in the workplace

Evidence shall show an understanding of manual handling and how to apply this knowledge to handling heavy and awkward objects in a Gas Industry workplace, specifically:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Principles for managing manual handling
- Characteristics and types of safe manual handling
- Safe manual handling techniques
- Manual handling and risk management

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

G 2.1.15 Complete workplace forms, and reports

Evidence shall show an ability to complete routine Gas Industry forms, memos and reports either written or electronic, indicated by the following:

- Identify, locate, interpret and use workplace forms, and reports
- Enter the required information accurately on gas industry forms and reports

G 2.1.16 Identify requirements of work activity

Evidence shall show ability to:

- Clarify expected outcomes of a work activity in a Gas Industry workplace
- Receive, clarify and respond to verbal work instructions for work activity

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Interpret and discuss an organisation's policies, quality requirements and specifications for work activity

G 2.1.17 Apply basic planning skills

Evidence shall show a demonstrated ability to apply basic planning skills in a Gas Industry workplace, indicated by the following:

- Develop checklists of tasks
- Prioritise tasks
- Identify resources required to complete tasks safely and efficiently
- Identify resource or scheduling conflicts and apply solutions
- Develop time lines to complete tasks

G 2.1.19 Review work activities

Evidence shall show an ability to review work activities undertaken in a Gas Industry workplace, indicated by the following:

- Check work activities against a work plan
- Seek feedback on the outcome of work activities with appropriate persons
- Report outcomes of work activities in writing or orally according to enterprise procedures

G 2.1.21 Problem solving

Evidence shall show an understanding of the requirements to undertake basic problem solving in a Gas Industry workplace, indicated by the following:

- Demonstrate problem solving and diagnostics methodology
- Identify possible solutions
- Recommend probable solutions and
- Apply basic problem solving techniques

G 2.1.22 Operate in confined spaces

Evidence shall show an understanding of the requirements to recognise and operate in confined spaces in a Gas Industry workplace, indicated by the following:

- Knowledge of the requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- Ability to recognise what a confined space is and the entry safety requirements
- Ability to understand and comply with manufacturers’

© Commonwealth of Australia, 2025 Powering Skills Organisation

guidelines for the safe use of PPE used in confined spaces
- Understand how and when to use gas detectors for confined spaces entry
- Understand how and when to use breathing apparatus and rescue and recovery equipment

Note: A confined spaces entry ticket would satisfy and exceed the requirements of this EKAS clause

G 2.1.25 Protect the environment

Evidence shall show an understanding and ability to perform work in the gas industry in a manner that protects the environment indicated by the following:

- Understanding of the relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice
- Understanding of employee's and employer's responsibilities to relevant environmental legislation, regulations and codes
  - Understanding and compliance with enterprise procedures for flora control
  - erosion control
  - fauna control
  - the protection of indigenous and cultural heritage sites
- Understanding the role of regulatory bodies in monitoring environmental activities, risk and incident compliance
- Understanding community expectations for protecting the environment
- Correct use of environment protection procedures, records, inspections and incident reporting
- Identifying environmental hazards
- Assessing environmental risks
- Implementing environmental control measures
- Ability to respond to workplace environmental incidents

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, waste contamination and noise

G 2.1.26 Communicate in the workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally appropriate manner

G 2.2.32 Comply with requirements for excavating and reinstating site

Evidence shall show an understanding of the requirements for preparing, conducting and completing an excavation indicated by the following:

- Identifying plans, codes, standards and drawings relevant to specific worksites
- Reading and interpreting relevant plans, codes, standards and drawings
- Regulatory requirements and procedures for excavating trenches and reinstating sites
- Apply shoring or benching requirements
- Notification of appropriate authorities and requirements for temporary or permanent restorations

G 2.2.33 Locate utilities and services

Evidence shall show an understanding and an ability to locate services, indicated by the following:

- Identification of relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and stormwater)
- Read and interpret plans and drawings to identify the location of utilities and services
- Identification of utilities and services conduits and cables
- Correct use of electronic and manual service locators
- Apply hand excavation as required for the purposes of locating utilities and services

G 2.2.46 Use tools, plant and equipment relevant to the gas industry

Evidence shall show an ability to safely use tools, plant and equipment relevant to the Gas Industry, indicated by the following:

- Identify the various types, uses and application of tools,

© Commonwealth of Australia, 2025 Powering Skills Organisation

plant and equipment used in the Gas Industry
- Understand and comply with manufacturer's guidelines for the correct use of tools, plant and equipment used in the Gas Industry
- Understand and comply with the enterprises procedures for the correct use of tools, plant and equipment used in the Gas Industry
- Understand and comply with all OHS requirements for the correct use of tools, plant and equipment used in the Gas Industry
- Comply with power safety rules when using electrically operated tools, plant and equipment
- Identify site hazards, assess risks and implement control measures when using tools, plant and equipment used in the Gas Industry
- Comply with good manual handling techniques when lifting, moving or storing tools, plant and equipment

Tools and equipment may include but not limited to drills, shovels, hammers, knives, saws, hand tools, small generator sets, air compressors and hoses, pneumatic and/or electric hammers, rollers and compactors, concrete and ceramic cutters, boring equipment, trenching equipment, etc.

G 2.2.48 Prepare an excavation site

Evidence shall show an understanding and ability to prepare the site for excavation on a gas industry workplace, indicated by the following:

- Use of Dial Before you dig services
- Preparation of traffic management plans
- Identify Environmental and Safety Hazards, assess risks and implement control measures
- Communicating with third parties, colleagues and customers regarding the excavation site
- Reading and interpreting job specifications and standard operating procedures
- Grades and depth required for excavation of trenches for gas pipelines
- Techniques for marking out trench location

G 3.1.2 Work independently in a Gas Industry environment

Evidence shall show an understanding of working independently in a Gas Industry environment, indicated by the following:

- understanding of how to work autonomously or under limited/remote supervision.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 3.2.7 Prepare reports

Evidence shall show an understanding of the preparation of reports applicable to the commissioning and decommissioning of Gas Industry pipelines (Distribution), indicated by the following:

- Apply procedures and legislative requirements for maintaining appropriate reporting and recording systems
- Complete job records and process information to appropriate/relevant department
- Recorded non-conformances and incidents including customer outages in accordance with procedures and legislative requirements.

G 4.1.1 Operate and supervise in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies

© Commonwealth of Australia, 2025 Powering Skills Organisation

- property/land owners (including traditional land owners) and tenants
- emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**

© Commonwealth of Australia, 2025 Powering Skills Organisation

A	All	Have a working knowledge of the relevant sections of AS1697 Interpret technical drawings and symbols Ensure emergency response procedures in place Communicate schedules/coordinate to persons Carry out job safety analysis and inductions Obtain work permit Apply basic planning skills Work utilising relevant OHS and environmental legislation, regulations, codes of practice, policies and procedures. Maintain a safe clean workplace Contractor management Communicate effectively in the workplace Problem solving skills Maintain documentation Planning and organising
B	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific **9.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

resources for assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in, Context of and specific resources for assessment, evidence should show demonstrated competency of supervising and monitoring contract staff for work on distribution pipelines.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with **9.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

other units

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B	Carry out work activities in a utilities industry work environment
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEGNSG104B	Comply with environmental policies and procedures
UEGNSG105B	Establish the work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to supervising and monitoring contract staff. The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Tools and equipment (4)

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers excavated bed preparation and the construction, laying and connection of a gas service to a plastic main. This includes the installation of the meter to service riser, subject to local regulatory requirements

It encompasses the use of relevant tools and equipment, working safely using standard operating procedures, complying with relevant legislative, standard and code requirements, and completing necessary documentation.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe work site where the construction and laying of a gas service and connection to a plastic main occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to construct and lay a service to a plastic main	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to construct and lay gas services are identified, obtained and checked for operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.8	Materials, plans, diagrams, drawings and resources required to construct and lay gas services are confirmed, scheduled and obtained in accordance with established procedures
	1.9	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out construction and laying of a service to a plastic main	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements.
	2.4	Excavation is prepared for laying of pipe according to appropriate standards and procedures
	2.5	Construction and laying of gas services are conducted according to appropriate standards and procedures
	2.6	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.7	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.9	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete the work and relevant	3.1	WHS/OHS risk control work completion measures and procedures are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
documentation		
	3.2	Appropriate persons are notified of completion of the work according to established procedures.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.4	Work site is tidied and made safe in accordance with established procedures
	3.5	Work completion documentation is completed and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work activities in a utilities industry work environment. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G212B Gas distribution service to a plastic main

Evidence shall show an understanding of constructing, laying and connecting a gas distribution service to a plastic main in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas service pipelines

- types and characteristics
- pipe sizes
- fittings
- accessories
- material specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applications
- handling and storage
- advantages and disadvantages
- MSDS/SDS

T2. Plastic gas main pipelines

- Types and characteristics
- pipe sizes
- fittings
- accessories
- material specifications
- applications

T3. Relevant Australian Standards

T4. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas
- MSDS/SDS and handling of Solvents and jointing materials

T5. Cutting, tapping and joining plastic mains pipelines and fittings

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T6. Transition fittings and adaptors to other piping materials

- types
- selection
- Adapting risers to installation requirements, bending and cutting to fit above ground requirements

T7. Bedding requirements for service pipelines

- trench width and depth
- required coverage depth in various locations
- obstacles affecting minimum depth of cover for pipeline
- solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection.
- pipeline support
- backfilling requirements

T8. Installation of service pipelines

- requirements
- procedures
- trace wire
- marker tape

© Commonwealth of Australia, 2025 Powering Skills Organisation

T9. Termination and testing of service pipeline

- requirements
- procedures

T10. Static Electricity in plastic gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

© Commonwealth of Australia, 2025 Powering Skills Organisation

risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

© Commonwealth of Australia, 2025 Powering Skills Organisation

employment

- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Construct and lay single point gas services and connection to a plastic main in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

    A Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

    B Identifying the plant and equipment and their safe operating parameters/requirements

    C Cutting, joining, laying, covering and connecting gas distribution services pipelines in accordance with requirements

    D Isolating, venting, purging and testing for soundness and leaks, commissioning and making safe gas services

    E Completing required documentation and reporting.

    F Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

to undertake actual work as prescribed by this Unit.

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Knowledge and Associated Skills described in this unit.

Concurrent assessment and **9.5)**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to construct and lay a service to a steel main	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to construct and lay gas services are identified, obtained and checked for operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.8	Materials, plans, diagrams, drawings and resources required to construct and lay gas services are confirmed, scheduled and obtained in accordance with established procedures
	1.9	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out construction and laying of a service to a steel main	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements.
	2.4	Excavation is prepared for laying of pipe according to appropriate standards and procedures
	2.5	Construction and laying of gas services are conducted according to appropriate standards and procedures
	2.6	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.7	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.9	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete the work and relevant	3.1	WHS/OHS risk control work completion measures and procedures are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
documentation		
	3.2	Appropriate persons are notified of completion of the work according to established procedures.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.4	Work site is tidied and made safe in accordance with established procedures
	3.5	Work completion documentation is completed and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work activities in a utilities industry work environment. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G212B Gas distribution service to a steel main

Evidence shall show an understanding of constructing, laying and connecting a gas distribution service to a steel main in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas service pipelines

- types and characteristics
- pipe sizes
- fittings
- accessories
- material specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applications
- handling and storage
- advantages and disadvantages
- MSDS/SDS

T2. Steel gas main pipelines

- Types and characteristics
- pipe sizes
- fittings
- accessories
- material specifications
- applications

T3. Relevant Australian Standards

T4. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas
- MSDS/SDS and handling of Solvents and jointing materials

T5. Cutting, tapping and joining steel mains pipelines and fittings

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T6. Transition fittings and adaptors to other piping materials

- types
- selection
- Adapting risers to installation requirements, bending and cutting to fit above ground requirements

T7. Bedding requirements for service pipelines

- trench width and depth
- required coverage depth in various locations
- obstacles affecting minimum depth of cover for pipeline
- solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection.
- pipeline support
- backfilling requirements

T8. Installation and testing of service pipelines

- requirements
- procedures
- trace wire
- marker tape

© Commonwealth of Australia, 2025 Powering Skills Organisation

T9. Termination of service pipeline

- requirements
- procedures

T10. Static Electricity in steel gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

© Commonwealth of Australia, 2025 Powering Skills Organisation

risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Construct and lay gas services and connection to a steel main in accordance with relevant legislation, code, regulations and procedures as described as described in 9.) Range Statement and including:
    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.
    B. Identifying the plant and equipment and their safe operating parameters/requirements
    C. Cutting, joining, laying, covering and connecting gas distribution services pipelines in accordance with requirements
    D. Isolating, venting, purging and testing for soundness and leaks, commissioning and making safe gas services
    E. Completing required documentation and reporting.
    F. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

steel

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Knowledge and Associated Skills described in this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG219A	Conduct excavations in the utilities industry

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Unit shall/may be demonstrated in relation to preparing an excavation bed, constructing and laying of a gas service and connection to a steel main. This includes the installation of the meter to service riser.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Services
- Appropriate persons
- Materials
- Tools and equipment
- Safe working procedures
- Legislative requirements
- Standards

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the commissioning, decommissioning and re-commissioning of gas distribution pipelines in accordance with relevant legislation, standards, codes and established procedures.

It encompasses the use of relevant tools, equipment and procedures; pipeline systems; pipeline control systems; testing; and liaison with appropriate authorities

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe work site where Gas Industry operations occur subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate

Elements and Performance Criteria Pre-Content

6) ***Elements describe the essential outcomes of a competency standard unit***

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to commission/decommission gas distribution pipelines	1.1 WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2 Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule.
	1.3 WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes in accordance with established procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented, and monitored according to established procedures.
	1.6 Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.7 Resources including personnel, equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled and obtained and checked for operation and safety
	1.8 Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.
	1.11	Pipeline in check for readiness (cleaned, pigged, bypassed, etc.) for commissioning/ decommissioning
	1.12	Site preparations, safety plan and the work schedule are confirmed in accordance with established procedures
	1.13	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed in accordance with established procedures
	1.14	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2 Commission/decommission gas distribution pipelines	2.1	WHS/OHS and risk control measures and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and requirements.
	2.4	Pipeline purging/flaring is undertaken according to procedures
	2.5	Commissioning/decommissioning of gas distribution pipelines is carried out efficiently, to the required standard without waste of materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.6	Gas is tested for compliance with pressure, concentration and odourant level requirements
	2.7	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed
	2.9	Routine quality Reports and ongoing checks of work quality are carried out undertaken in accordance with work given instructions and established procedures
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed Tools and equipment appropriate to the testing requirements are selected and work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and securely stored. returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and equipment is returned to service in accordance with requirements
	3.6	Appropriate persons are notified of work

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		completion according to established procedures
	3.7	Final inspections are undertaken and work completion documentation records, reports and information are finalised and processed and is completed accurately and provided to appropriate persons notified in accordance with established procedures

Required Skills and Knowledge

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the commissioning/decommissioning of gas distribution pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the Required Skills and Knowledge required is provided below. It forms an integral part of this unit.

KS01-G216A Distribution pipeline commissioning and decommissioning

T1. Relevant legislation, standards, codes and established procedures.

T2. Site preparation

- identify equipment, pipes, fittings, purge substances
- apply purge volume and time tables and charts

T3. Environmental and safety hazards

- risks and control measures
- site emergency procedures

T4. Required documentation and communication

- notify affected customers
- decommissioning
- commissioning/recommissioning
- non-conformances and incidents reports including customer outages

T5. Decommissioning requirements, equipment, tools and procedures

- bringing/taking pipeline system on/off line
- effect on distribution system
- fitting bypass apparatus ensuring continuity of supply
- stopping off and isolation of pipelines using internal and external stop off

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment

- monitoring of system pressure at appropriate locations depending on network design and operating conditions
- regulating and maintaining system pressures
- test and verify

T6. Commissioning/Recommissioning requirements, equipment, tools and procedures

- checking pipework is ready (tested, pigged, etc.)
- purging the pipe system using a variety of media and testing procedures
- testing and sealing of pipelines,
- odour level requirements
- effect on distribution system
- monitoring of system pressure at appropriate locations depending on network design and operating conditions
- regulating and maintaining system pressures
- equipment faults
- test and verify

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control

measures as specified in the Performance Criteria and range

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - De-commission, commission and recommission gas distribution pipelines as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. WHS/OWS procedures	All	• Interpret technical drawings and symbols • Ensure emergency response procedures in place • Communicate with other authorities and stakeholders • Communicate schedules/coordinate to persons • Carry out job safety analysis • Obtain work permit if required

© Commonwealth of Australia, 2025 Powering Skills Organisation

B. Work Procedures	All	• Isolate, vent and purge gas pipeline systems • AS2865/relevant confined spaces code of practice • Operation of gas detector • Operate service locator • Calculate nitrogen volume needed
C. Isolation Methods	At least 2	• High pressure stop off • 312 • Bagtube • Squash off jacks/pliers • Hot tap and stopple
D. Unplanned event	At least one occasion	• Deal with an unplanned event by drawing on required knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

These should be part of the formal learning/assessment environment.

Assessment of this competency must be undertaken in an actual workplace. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare and plan for pigging gas distribution pipelines	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS, environmental and sustainable energy policies and procedures are obtained and confirmed
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritized, implemented, and monitored according to established procedures.
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is obtained and confirmed with relevant persons to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.6	Resources including personnel, equipment, tools and personal protective equipment required for the work are identified, scheduled and obtained and checked for operation and safety
	1.7	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.8	Relevant responsibilities associated with First Aid and other related work procedures for an incident are checked and confirmed
	1.9	Liaison and communication with authorised persons, authorities, clients and land-owners is completed where necessary,
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures.
	1.11	Site PIG and pipeline is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures Note: This includes setting up of PIG launcher and receiver for new or decommissioned pipelines
	1.12	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed in accordance with established procedures
	1.13	Road signs, barriers and warning devices are positioned in accordance with requirements
2 Launch, and recover distribution pipeline PIG	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are conducted safely according to given instructions and requirements
	2.4	The launch and recovery of gas distribution pipeline PIG is carried out in accordance with the work schedule and to established procedures
	2.5	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.6	Data/results from distribution pipeline pigging operations is gathered/retrieved and analysed to determine internal pipeline conditions in

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		accordance with established procedures
	2.7	Testing and inspecting of the pipeline and pigging equipment is conducted in accordance with requirements and established procedures
	2.8	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.9	Procedures for referring non-routine events to the immediate authorized persons for direction are followed.
	2.10	Routine quality checks are carried out in accordance with work instructions
3 Re-establish distribution pipeline to operational conditions and notify of completion of work	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Inspection of the received PIG is undertaken to determine the wear sustained to the PIG, material is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.3	Waste materials are safely disposed of and the work site is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.7	Data is accurately recorded and work completion documentation is completed accurately and provided to the appropriate persons in

ELEMENT	PERFORMANCE CRITERIA
	accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the launching and recovering of a pig in a gas distribution pipeline.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the Required Skills and Knowledge required is provided below. It forms an integral part of this unit.

KS01-G217A PIG launch and recovery

Evidence shall show an understanding of the assembly, launch and recovery of PIGs in gas distribution pipelines to ensure the pipeline is clean and dry with no obstructions prior to commissioning.in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Pipeline preparation

- Types of pipeline materials including steel, plastic, etc.
- New pipelines
- Traps launchers and receivers installed
- Water and waste disposal requirements
- Directional gates/bars installation
- PIG pushing agent (water or air) requirements
- Pipeline Pigging sequence
- Additional preparation for de-commissioned pipelines
- Purging
- De-scaling

T2. Documentation and communication for Pigging

T3. Types of PIGs and applications

T4. OH & S and environmental requirements for using PIGs

- Risk assessment
- Hazards including high water and air pressure/velocity
- Hazardous and flammable materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Noise

T5. Pigging a main pipeline

- Insertion
- Monitoring and communication
- Checking the cleanliness/dryness of the pipe
- Capture
- Traps
- Dangers
- Waste disposal

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

© Commonwealth of Australia, 2025 Powering Skills Organisation

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Launch and recover PIGs in a gas distribution pipeline as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Preparation procedures	All	• Interpret technical drawings and symbols • Ensure emergency response procedures in place • Communicate with other authorities and stakeholders • Carry out job safety analysis • Obtain work permit if required
B. Pigging procedures	All	• Prepare pig trap for launch • Connections to compressors • Prepare trap for receiving

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Determine volume of water /compressor requirements from chart/table • Install disc pig • Install foam pig • Carry out pigging operation • Recover pig
C. Unplanned event	At least one occasion	Apply procedures/ protocols to deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items For example: identifying stuck or lost pigs, procedures for location/clearing

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

These should be part of the formal learning/assessment environment

Assessment of this competency must be undertaken in an actual workplace. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

9) ***This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.***

This unit shall be demonstrated in relation to the launch and recovery of PIGs in new or decommissioned gas distribution main pipelines. This includes the following activities:

- Prepare pig trap for launch
- Connections to compressors
- Prepare trap for receiving
- Determine volume of water /compressor requirements from chart/table needed
- Install disc pig
- Carry out pigging operation
- Install foam pig
- Carry out pigging operation
- Recover pig
- Pressure test pipeline

Note: The de-commissioning is covered by UEGNSG203B.

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Equipment

Unit Sector(s)

UEGNSG218A Carry out surveillance on gas distribution assets

Modification History

This unit is a revised version of the UEG11 unit UEGNSG208B Gas distribution pipeline surveillance

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers carrying out surveillance on gas distribution assets in accordance with relevant legislation, standards, codes and established procedures.

It encompasses the areas to be monitored for security and condition; third party areas; system's pipe work; structures; fittings; equipment; organisational and statutory requirements and recording and reporting.

Note: Aerial surveillance is not covered by this unit, but UEGNSG315B

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas distribution assets. It is subject to all Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to carry out surveillance on gas distribution assets	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are obtained and confirmed.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures and surveillance KPIs
	1.5	Hazards are identified, WHS/OHS risks are assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of responsibility under the relevant work authorisation, permit and/or relevant notification is received and confirmed with relevant persons according to established procedures.
	1.7	Resources including plant, equipment, tools and personal protective equipment required for gas distribution pipeline surveillance work are identified, obtained and checked for correct operation and safety.
	1.8	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.8	Liaison and communication issues with authorised persons, authorities and clients are resolved where necessary
	1.9	Persons participating in the work are fully briefed and respective responsibilities confirmed in accordance with established procedures
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out surveillance on gas distribution assets	2.1	WHS/OHS risk control measures, schedule of work and standard operation procedures for carrying out the work are followed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Dealings with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.4	The work carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles
	2.5	Leakages and damaged assets and fittings are recorded in accordance with the work schedule and established procedures
	2.6	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.7	System breaches, faults, non-routine events and the operational condition of the network are identified and reported according to established procedures.
	2.8	The key issues are identified and required solutions/options are developed, communicated and implemented according to established procedures.
	2.9	Routine quality checks are carried out in accordance with work instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work area is tidied and made safe according to established procedures
	3.3	Tools and equipment are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of the work completion, non-conformances and proposed solutions/options in accordance with r established procedures
	3.5	Surveillance completion documentation is completed accurately and provided to the appropriate personnel in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the gas distribution pipeline surveillance investigation of billing exceptions/conditions.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G218A Gas assets surveillance

Evidence shall show an understanding of carrying out surveillance on gas distribution assets in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. WHS/OHS and emergency procedures and environmental, cultural and heritage requirements in relation to pipeline surveillance

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- flora, fauna, working outside

T2. Documentation and communication relevant to pipeline surveillance

T3. Land holder engagement

T4. Information gathering techniques

T5. Pipeline risks managed through surveillance

T6. Signage

T7. Third party activities

- Authorities to stop 3rd party activities.

T8. Easements and access rights

T9. Types of assets

- Pipes and other fittings that need monitoring, i.e. valves, CPS equipment etc.

T10. Variation in surface condition, vegetation or fencing etc.

T11. Impediments to access along easements'

T12. Development encroachment (clearances)

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carry out surveillance on gas distribution assets as described in 9.) Range Statement and including:

Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A Preparation procedures	All	• Operation of Dial Before You Dig services and how it applies to working or its equivalent near gas assets • Liaison with affected landowners and relevance of property visits • Deteriorating conditions, i.e. visibility, warning signage
B	All	• Different types of

© Commonwealth of Australia, 2025 Powering Skills Organisation

Surveillance procedures		surveillance, i.e. vehicle, foot • Surveillance techniques • Identification of leaks, damaged assets, pipes and fittings and the recording of these in accordance with established procedures • Identifying non-conformances per company surveillance schedules • Recording information
C Unplanned events	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG132A	Carry out work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to carrying out surveillance on gas distribution assets in accordance with relevant legislation, standards, codes and established procedures. This will include:

- Different types of surveillance, i.e. vehicle, foot etc.
- Liaison with affected landowners and relevance of properties
- Identification and recording non-conformances per company surveillance schedules for example leaks, pressure/flow, damaged assets, pipes and fittings

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section.

- Areas to be monitored
- Inspection of areas
- System's pipe work
- Structures
- Fittings

Elements and Performance Criteria Pre-Content

6) **Elements describe the essential outcomes of a competency standard unit**	**Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.**

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to conduct excavation work	1.1	WHS/OHS and environmental measures for the site are identified received and confirmed
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures for the work are received and confirmed
	1.4	Hazards are identified and reported to the supervisor to assess the risks and implement control measures according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, tools and personal protective equipment required for the work are identified, obtained and checked for correct operation and safety.
	1.7	Materials, plans, diagrams, drawings and resources required for work are confirmed and obtained in accordance with established procedures
	1.8	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed.
	1.9	Client issues are referred to appropriate persons in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.10	Location of other services, site preparation and the work schedule are confirmed in accordance with established procedures.
	1.11	Traffic management signs, barriers and warning devices are confirmed as positioned in accordance with requirements and traffic management plans
2 Conduct excavation work	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, plant and equipment are selected and used safely
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, use of power tools equipment, techniques and practices are conducted in accordance with given instructions and requirements
	2.4	Excavation work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.5	WHS/OHS risks incidents and non-routine events are reported to the immediate authorised persons for directions according to established procedures
	2.6	Routine quality and safety checks are carried out in accordance with established procedures
3 Complete excavation work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Backfilling is performed, the work site is rehabilitated, tidied made safe and markers are installed or re-instated in accordance with the work schedule and established procedures
	3.3	Tools, plant, equipment and any surplus

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		resources and materials are cleaned, checked and securely stored. .
	3.4	Appropriate persons are notified of the completion of the work in accordance with established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for used for underground utilities services and to carry out excavation work.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the Required Skills and Knowledge required is provided below. It forms an integral part of this unit.

KS01-G219A Excavation of trenches and manholes

Evidence shall show an understanding of conducting excavations in the utilities gas industry in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, regulations, codes, policies and forms

T2. Enterprise procedures, plans and drawings

T3. Overview of relevant Safety and Environmental hazards and mitigation measures

- Hazards and Field Risk Assessments
- Electrical, gases, toxins and fumes
- Security and fall prevention
- Prevention of trench collapse
- Confined spaces awareness
- Traffic hazards
- Emergency control measures

T4. Excavation process activities and work designs

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Excavation types, steps, approval, documentation and maps
- Tools, materials and equipment for preparing the site, excavating trenches and reinstating the site
- Working in proximity to other assets
- Clearances and separations
- Spotter/competent observer requirements

T5. Excavation and shoring techniques to suit varying conditions (surface types, soil types, weather, traffic, time of day, location)

- manual excavation
- mechanical excavation
- shared trenching

T6. Basic overview of boring, drilling and non-invasive excavation machines

T7. Pipe padding/bedding, compaction, backfilling and consolidations

T8. Trench and site restoration and reinstatement techniques

- Ground surface level finishes
- Asset markers and signs

T9. Temporary or permanent restorations

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is

© Commonwealth of Australia, 2025 Powering Skills Organisation

recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Conducting excavations in the utilities gas industry as described in the 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Safety resources	At least 4	• Alignment sheets, maps, technical drawings and symbols • Service locators • Gas detectors • Safety lighting • Fire fighting equipment
B. Excavation equipment/ tools	At least 4	• Small generator sets • Air Compressors and hoses • Pneumatic hammers • Rollers and compactors • Hand held concrete and ceramic cutters

© Commonwealth of Australia, 2025 Powering Skills Organisation

C. Preparatory procedures	At least 4	• Utilise plans, drawings and maps • Utilise Dial Before You Dig information • Obtain procedures and/or work instructions • Correctly interpret and follow instructions • Conduct basic risk assessment • Utilise and participate in preparation of safe work method statement or JSA • Work in accordance with work permits/authorisations as necessary
D. Excavation procedures	At least 5	• Perform service location in the area • Check all materials and equipment • Identify and monitor all possible environmental hazards • Utilise control measures for identified hazards • Correct use of PPE appropriate to the Gas Industry • Carry out excavation • Perform machinery daily log checks and verify operator qualifications
E. Traffic control procedures	At least 3	• Traffic control management • Erect barricades • Layout warning and safety signs • Identify muster point where appropriate • Complete permit, if required

© Commonwealth of Australia, 2025 Powering Skills Organisation

F Unplanned events	At least one occasion	Respond to an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) **This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.**

This unit must be demonstrated in relation to excavations in the utilities industry in accordance with relevant legislation, standards, codes and established procedures autonomously on at least two occasions. This includes the preparation, planning,

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

excavation and back filling.

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Legislation
- Inspection
- Hand tools
- Power tools
- Plant and equipment
- Personal Protective Equipment
- WHS/OHS requirements
- Types of drawings
- Key features of site plans
- Key features of plans and elevations
- Types of structures
- Services
- Types of details
- Environmental features
- Orientation of the site
- Excavation tools
- Excavation
- Surface reinstatements
- Backfill

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers excavated bed preparation and the construction and laying of Polyethylene gas distribution mains, including the installation of the meter connections to the service riser.

It encompasses the use of relevant tools and equipment, working safely using standard operating procedures, complying with relevant legislative, standard and code requirements and completing necessary documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where gas distribution pipeline operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/

water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to construct and lay Polyethylene gas distribution mains	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements, including alignment of main and services and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures including keeping emergency exits clear.
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed according to requirements and established procedures
	1.6	Equipment, tools and personal protective equipment needed to carry out the work are identified, obtained and checked for correct operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.8	Materials, plans, diagrams, drawings and resources required to construct and lay PE gas distribution mains are confirmed, scheduled and obtained in accordance with established procedures
	1.9	Relevant responsibilities associated with safety and emergency procedures for an incident are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures
	1.12	Road signs, barriers and warning devices are positioned in accordance with given instructions and requirements including traffic management plans
2 Construct and lay Polyethylene gas distribution mains	2.1	WHS/OHS and control measures schedule of work and standard operation procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches and use of power tools, techniques and practices are conducted safely in accordance with given instructions and requirements
	2.4	Excavation is prepared for laying of pipe according to appropriate standards and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		procedures
	2.5	Construction and laying of PE gas distribution main are conducted according to appropriate standards and procedures
	2.6	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.7	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed
	2.9	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed
	3.2	Work site is rehabilitated, cleaned up and made safe in accordance with and established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.5 Work completion documentation is completed accurately and provided to the appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for constructing and laying Polyethylene distribution mains.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required knowledge and associated skills (EKAS) is provided below. It forms an integral part of this unit.

KS01-G220A Construct and lay Polyethylene gas distribution mains

Evidence shall show an understanding of constructing and laying Polyethylene gas distribution mains in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Polyethylene gas pipelines

- characteristics and specifications
- differences to other pipe materials
- applications in which a PE pipeline is used/not used
- handling and storage
- advantages and disadvantages
- pipe sizes and range of fitting and accessories
- dimensions for series 2 pipe - Gas (SDR) from AS/NZS 4130
- allowable pipe damage
- static electricity in gas PE pipes

T2. Relevant legislation, Australian Standards, codes, regulations and procedures requirements

T3. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas
- MSDS and handling of Solvents and jointing materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T4. Cutting and tapping PE pipe

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T5. Joining PE pipe, pipelines and fittings

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials
- Compression fitting joints
  - procedures, equipment, tools and materials
- Fusion joints
  - procedures, equipment, tools and materials for:
    - Butt fusion; manual and hydraulic
    - Saddle fusion
    - Electro fusion
    - Socket Fusion
    - fusion times
  - difference between a quality and bad joint

T6. Transition fittings and adaptors to other piping materials

- types
- selection
- Adapting metal risers to installation requirements, bending and cutting to fit above ground requirements

T7. Bedding requirements for PE pipeline

- trench width and depth
- required coverage depth in various locations
- obstacles affecting minimum depth of cover for pipeline
- solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection.
- pipeline support
- backfilling requirements

T8. Conditions for direct installation or insertion of PE pipeline

T9. Installation of PE pipeline

- requirements
- procedures
- trace wire
- marker tape

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T10. Termination and testing of PE pipeline

- requirements
- procedures

T11. Static Electricity in PE gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carry out Polyethylene distribution pipeline construction work activities as described in 9.) Range Statement and including:

    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices

    C. Cutting, joining, laying, covering and connecting Nylon/PVC gas distribution pipelines in accordance with requirements

    D. Isolating, venting, purging and testing for soundness and leaks, commissioning and making safe on gas services

    E. Completing required documentation and reporting.

    F. Dealing with unplanned events by drawing on required skills and knowledge, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry

UEGNSG221A First on site response to gas pipeline emergencies

Modification History

This is a new unit which replaces the UEG11 unit UEGNSG209B First on site emergency response on a distribution pipeline, and UEGNSG309B First on site emergency response on a transmission pipeline.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the first on site response requirements to a gas distribution or transmission pipeline emergency incident in accordance with relevant legislation, code, regulations and procedures. These incidents may include but is not limited to, gas escapes, gas outages, security breaches, fires, injury and damage

This encompasses assessing the situation extent and type of incident; making the area safe, identifying source of gas leaks, reporting back to the response/control centre, identifying and controlling potential ignition sources, ventilation/ evacuation from property, liaising with other authorities and emergency services, remaining on site and maintaining site safety until support arrives, should it be required. This includes using approved Standard Operating Procedures and appropriate PPE.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to Gas Industry work sites, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 competency for new and

© Commonwealth of Australia, 2025 Powering Skills Organisation

existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety, and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to WHS /Occupational Health and Safety (OHS), gas industry codes/guidelines, industrial relations, environmental protection, anti-discrimination and training laws.

Commonwealth, State/Territory or Local Government legislation and regulations may limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG00 Prepare to work in the gas industry 5A

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
HLTAID003	Perform first aid
CPPFES2005A	Demonstrate first attack fire fighting equipment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan first on site emergency response	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Details of incident are confirmed with supervisor, control centre or radio room.
	1.3	Relevant requirements and established procedures for the incident response are discussed with relevant persons to establish and confirm the work schedule.
	1.4	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are reported, prioritised, implemented and monitored according to established procedures
	1.6	Relevant work permits and/or relevant notifications if required are secured to ensure the work is approved, recorded, coordinated and performed safely.
	1.7	Resources including persons, equipment, tools and personal protective equipment required to carry out the work are identified, scheduled, obtained and checked to correct operation and safety
	1.8	Effective liaison and communication is established with the supervisor, coordination centre, emergency authorities and land owners.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised in accordance with establish procedures
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out first on site emergency response	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	A safe work zone is created in accordance with Standard Operating Procedures and reported back to relevant stakeholders
	2.3	First Aid and other related work procedures are performed according to requirements and established procedures
	2.4	Hazardous activities such as lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.6	General operating conditions of equipment are monitored in order to determine performance of equipment and system
	2.7	Liaising with third parties concerning the threat to the pipeline occurs to ensure the pipeline can be monitored.
	2.8	Communication with immediate supervisor, coordination centre, emergency authorities and property owners is undertaken in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.9	Preliminary evidence is collected from the scene as per established procedures
	2.10	Basic fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that is required according to requirements and established procedures
	2.11	Stands by and maintains site safety until support arrives.
	2.12	Procedures for referring non-routine events to the immediate authorised persons for directions are followed, for example the emergency level being escalated.
	2.13	Routine quality checks are carried out in accordance with work instructions.
3 Complete response and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Incidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	The incident site is correctly handed over to the repair coordinator or relief response person, including all reports, risk control measures and permit conditions.
	3.4	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.5	Relevant work permit(s) are completed and signed off in accordance with requirements
	3.6	Works completion documentation including records, reports as installed/modified drawing(s) and information is completed accurately and provided to appropriate persons in accordance with established procedures.
	3.7	Participates in debriefing to discuss strengths and weaknesses of incident response.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired for first on site emergency response on a distribution and transmission pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G221A Gas pipeline first on site emergency response

Evidence shall show an understanding of first on site emergency response requirements for a gas distribution or transmission incident in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Security breaches and required action

- types of security incidents including but not limited to physical security breaches at gas infrastructure
- threat assessment and management
- confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T2. Emergency/incident control procedures compliance with applicable enterprise

- policies and procedures
- communication with relevant stakeholders
- application of relevant procedures
  - isolate emergency site
  - initial traffic control measures in a gas emergency situation – vehicle and pedestrian
  - safe approach of a gas emergency site

T3. Emergency site assessment

- physical security breaches of gas infrastructure
- threat assessment and management

T4. Site investigation and evidence gathering techniques

- investigating events
- maintaining integrity of site

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- gathering evidence from site
- preserving evidence and site for further investigation

T5. Problem solving in a first response role

- likely problems /assets involved and possible solutions
- recommending probable solutions
- problem solving techniques
- understanding and interpreting relevant technical drawings including, but not limited to:
  - District plans
  - Mains detail plans
  - Easement Plans
  - Industrial Service Plans
- Pipeline route maps and alignment sheets

T6. Communications

- identify nature of situation and preliminary assessment
- internal
  - workplace colleagues and managers
- external
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

T7. Reports

- procedures and legislative requirements for maintaining appropriate reporting and recording systems
- job records and process information to appropriate/relevant department
- non-conformance and incident reports including customer outages/ security breaches

Evidence Guide

EVIDENCE GUIDE

8) *The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all

© Commonwealth of Australia, 2025 Powering Skills Organisation

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carrying out first on site emergency response for a gas distribution or transmission incident in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Identifying and evaluating threats to the integrity of gas pipelines
    B. Assessing the incident and establishing a safe working site
    C. Monitoring gas concentrations and control ignition sources
    D. Initially investigating the incident and collecting evidence

© Commonwealth of Australia, 2025 Powering Skills Organisation

E. Completing required documentation and reporting.

F. Dealing with unplanned events by drawing on required skills and knowledge, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the required Skills and Knowledge s are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to first on site response to an emergency on a gas pipeline which may include but is not limited to,

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

escapes, outages, security breaches, fires, injury and damages.

This includes assessing the extent and type of incident; making the area safe, identifying source of gas leaks, reporting back to the response/control centre, identifying and controlling potential ignition sources, ventilation/ evacuation from property, liaising with other authorities and emergency services .

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Tools and equipment
- Maps and drawings
- Established procedures
- PPE and First Aid equipment
- Traffic control
- Emergency response manuals
- Security breach investigation practices

UEGNSG222A Construct and lay Nylon or PVC gas distribution mains

Modification History

This is the revised unit for UEGNSG212A Construct, lay and connect a residential single point gas distribution service to a plastic main completed as part of UEG13

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers excavated bed preparation and the construction and laying of either Nylon or PVC gas distribution mains including the installation of the meter connections to the service riser.

It encompasses the use of relevant tools and equipment, working safely using standard operating procedures, complying with relevant legislative, standard and code requirements and completing necessary documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where gas distribution pipeline operations occur, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, Workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Elements and Performance Criteria Pre-Content

competency standard unit *Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to construct and lay Nylon or PVC gas distribution mains	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to construct and lay Nylon/PVC gas distribution pipelines and services are identified, obtained and checked for operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		involved
	1.8	Materials, plans, diagrams, drawings and resources required to construct and lay Nylon/PVC gas distribution mains are confirmed, scheduled and obtained in accordance with established procedures.
	1.9	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
	1.12	Road signs, barriers and warning devices are positioned in accordance with given instructions and requirements including traffic management plans
2 Construct and lay Nylon or PVC gas distribution mains	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, and use of power tools, techniques and practices are conducted safely in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		with given instructions and to requirements.
	2.4	Excavation is prepared for laying of pipe according to appropriate standards and procedures
	2.5	Construction and laying of Nylon/PVC gas distribution main are conducted according to appropriate standards and procedures
	2.6	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.7	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.9	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Appropriate persons are notified of completion of the work according to established procedures.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Work site is tidied and made safe in accordance with established procedures.
	3.5	Work completion documentation in completed and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for constructing and laying nylon and PVC gas distribution mains.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G222A Construct and lay distribution nylon and PVC mains

Evidence shall show an understanding of constructing and laying Nylon or/PVC gas distribution mains in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Nylon/PVC gas pipelines

- characteristics and specifications
- differences to other pipe materials
- pipe sizes and range of fittings and accessories
- applications in which a Nylon/PVC pipeline is used/not used
- handling and storage
- advantages and disadvantages
- allowable pipe damage
- static electricity in gas Nylon/PVC pipes

T2. Relevant legislation, Australian Standards, codes, regulations and procedures requirements

T3. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas
- MSDS and handling of Solvents and jointing materials

T4. Cutting and tapping Nylon/PVC pipe

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T5. Joining Nylon/PVC pipe, pipelines and fittings

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- selection and use of equipment, tools and materials

T6. Transition fittings and adaptors to other piping materials

- types
- selection
- Adapting metal risers to installation requirements, bending and cutting to fit above ground requirements

T7. Bedding requirements for Nylon/PVC pipeline

- trench width and depth
- required coverage depth in various locations
- obstacles affecting minimum depth of cover for pipeline
- solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection.
- pipeline support
- backfilling requirements

T8. Conditions for direct installation or insertion of Nylon/PVC pipeline

T9. Installation of Nylon/PVC pipeline

- requirements
- procedures
- trace wire
- marker tape

T10. Termination and testing of Nylon/PVC pipeline

- requirements
- procedures

T11. Static Electricity in Nylon/PVC gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Construct and lay Nylon or PVC gas distribution mains in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices

    C. Cutting, joining, laying, covering and connecting Nylon/PVC gas distribution pipelines in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

D. Isolating, venting, purging and testing for soundness and leaks, commissioning and making safe on gas services

E. Completing required documentation and reporting.

F. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment,

© Commonwealth of Australia, 2025 Powering Skills Organisation

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Construct and lay steel gas distribution mains in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.
    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices
    C. Cutting, joining, laying, covering and connecting Steel gas distribution pipelines in accordance with requirements
    D. Isolating, venting, purging and testing for soundness and leaks, commissioning and making safe gas services
    E. Completing required documentation and reporting.

© Commonwealth of Australia, 2025 Powering Skills Organisation

F. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in constructing and laying a distribution gas service to a metal main.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

and facilities for learners to develop and demonstrate the required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG133A	Comply with environmental policies and
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG219A	Conduct excavations in the gas industry

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation constructing and laying steel gas distribution mains, in accordance with relevant legislation, code, regulations and procedures. This includes This includes laying and cutting pipes, joining pipes and fittings and the installation of the meter connection to the service riser.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Services
- Appropriate persons

UEGNSG224A Construct and lay copper and stainless steel gas distribution pipelines

Modification History

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers excavated bed preparation and the construction of copper and stainless steel gas distribution pipelines and services up to 20mm diameter including the installation of the meter connection to the service riser.

This encompasses includes the use of relevant tools and equipment, working safely using standard operating procedures, complying with relevant legislative, standard and code requirements and completing necessary documentation. It excludes any welding of stainless steel pipe work.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS) / Occupational Health and Safety OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, Workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to construct copper and stainless steel gas distribution pipelines	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to construct copper and stainless steel gas pipelines and services are identified, obtained and checked for operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.8	Materials, plans, diagrams, drawings and resources required to construct gas pipelines are confirmed, scheduled and obtained in accordance with established procedures.
	1.9	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		procedures.
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Construct copper and stainless steel gas distribution pipelines	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements.
	2.4	Construction of copper and stainless steel gas pipelines and services are conducted according to appropriate standards and procedures
	2.5	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.6	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.7	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.8	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.2 Appropriate persons are notified of completion of the work according to established procedures.
	3.3 Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4 Work site is tidied and made safe in accordance with established procedures
	3.5 Work completion documentation is completed and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for constructing copper and stainless steel gas distribution pipelines. All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G224AB Construct distribution copper and stainless steel pipelines

Evidence shall show an understanding of constructing copper and stainless steel gas distribution pipelines in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Copper and Stainless Steel gas pipelines

- characteristics
- pipe sizes
- fittings
- accessories
- material specifications
- applications
- handling and storage
- advantages and disadvantages
- MSDS

© Commonwealth of Australia, 2025 Powering Skills Organisation

T2. Relevant Australian Standards

T3. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas

T4. Copper and Stainless Steel and other piping materials

- types and identification

T5. Cutting and tapping Copper and Stainless Steel pipe

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T6. Joining Copper and Stainless Steel pipe, pipelines and fittings

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T7. Transition fittings and adaptors to other piping materials

- types
- selection

T8. Conditions for direct installation or insertion of Copper and Stainless Steel pipeline

T9. Installation of Copper and Stainless Steel pipeline

- requirements
- procedures
- trace wire
- marker tape

T10. Termination and testing of Copper and Stainless Steel pipeline

- requirements
- procedures

T11. Static Electricity in Copper and Stainless Steel gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Construct copper and stainless steel gas distribution pipelines in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant

© Commonwealth of Australia, 2025 Powering Skills Organisation

to the work to be undertaken.

B. Identifying the plant and equipment and their safe operating parameters/requirements

C. Cutting, joining and connecting copper and stainless steel gas distribution pipelines and services in accordance with requirements

D. Isolating, venting, purging and testing for soundness and leaks and making safe gas services

E. Completing required documentation and reporting.

F. Responding to unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

© Commonwealth of Australia, 2025 Powering Skills Organisation

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG219A	Conduct excavations in the utilities industry

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to constructing copper and stainless steel gas distribution pipelines and services up to 20mm diameter, in accordance with relevant legislation, code, regulations and procedures. This includes cutting pipes, joining pipes and fittings and the installation of the meter connection to the service riser, upstands, above ground services and response lines.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Services
- Appropriate persons

UEGNSG225A Perform routine maintenance on distribution pipeline facilities and equipment

Modification History

This unit replaces UEGNSG206B Perform routine maintenance on distribution pipeline facilities and equipment in UEG11.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the routine maintenance of distribution pipeline facilities and equipment.

It encompasses using equipment, tools and testing devices; performing routine maintenance; identifying faults; and completing the appropriate documentation and reports.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas distribution pipelines, facilities and equipment, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare and plan for routine maintenance on distribution pipeline facilities and equipment	1.1	Work schedule(s), including drawings, plans, requirements, established procedures and material lists are received, analysed and confirmed if necessary by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to the performing of routine maintenance of pipeline, facilities and equipment are identified, obtained, understood and confirmed for the purposes of the work performed and communicated

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, WHS/OHS risks are assessed and control measures for identified hazards are implemented, prioritised and monitored against the work schedule.
	1.6	The facilities/equipment is made safe by ensuring it is safely isolated, depressurised, tagged and locked out and a permit to work is obtained to access and perform work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and checked for operation and safety.
	1.8	Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures such as licensed to operate equipment according to requirements
	1.9	Liaison and communication with authorised persons, authorities, clients and land-owners is completed so work can be carried out where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2 Perform routine	2.1	WHS/OHS policies and procedures and safe

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
maintenance on distribution pipeline facilities and equipment		work practices are followed to eliminate or minimise incidents and hazards
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.4	Routine maintenance of distribution facilities and equipment is carried out in accordance with the work schedule and to established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks are reported to the authorised persons for directions according to established procedures
	2.6	Unplanned events in the performing of routine maintenance of distribution pipeline, facilities and equipment is undertaken within the scope of established procedures
	2.7	Known solutions to a variety of problems are applied using acquired required Knowledge and Skills
	2.8	Ongoing checks of work quality are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.3 Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5 Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6 Work completion records, reports as installed, modified drawings, documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for performing routine maintenance on distribution pipeline facilities and equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G225A Distribution pipeline maintenance

Evidence shall show an understanding of the performing routine maintenance on distribution pipeline facilities and equipment in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant WHS/OHS, emergency and environmental requirements and procedures

T2. Relevant Australian Standards, codes and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T3. Types of pipeline, facilities and equipment to be inspected and tested

T4. Tools, equipment, instruments, PPE and emergency equipment required

T5. Manufacturers specifications, manuals, part lists, calibration forms, checklists

T6. On site risk assessment

T7. Leakage surveys and pin pointing gas leaks

T8. Isolation, depressurisation, tagging and lockout of pipeline facilities and equipment requirements and procedures, this includes valves, flanges, fittings, markers and signs

T9. Routine inspection and testing of pipeline facilities and equipment requirements and procedures.

T10. Maintenance activities requirements and procedures

T11. Faults managed during routine maintenance

T12. De-isolation all sources of energy, removal of tags and locks and return to normal operation requirements and procedures

T13. Communication and recording/reporting documentation requirements and Procedures

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Perform routine maintenance on distribution pipeline facilities and equipment in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A WHS/OHS	All	• Perform risk assessments • Interpret technical drawings and symbols • Ensure emergency response procedures in place • Communicate with authorities and stakeholders • Obtain work permits • Use and interpret Dial Before You Dig reports

© Commonwealth of Australia, 2025 Powering Skills Organisation

B Piping Access Procedures	At least 3	• Excavation • Trenching • Shoring • Stitch bore • Horizontal drilling • Directional drilling
C Piping Materials	At least 2	• Nylon (polyamide) pipeline laying, joining and stop off techniques • UPVC pipeline laying , joining stop off techniques • PE pipeline laying, joining and stop off techniques • Steel pipeline laying, joining and stop off techniques
D Procedures	All	• Isolate, vent and purge gas pipeline systems • Operation of gas detector • Operate service locator • Where relevant, calculate nitrogen volume needed • Practical application of AS3723 Installation and maintenance of plastic pipe systems
E Isolation Procedures	At least 2	• High pressure stop off • 312 • Bagtube • Squash off jacks • Squash off pliers
F Unplanned Events	At least one occasion	• Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific 8.3)

© Commonwealth of Australia, 2025 Powering Skills Organisation

resources for assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in performing routine maintenance on distribution pipeline facilities and equipment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship **8.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

with other units

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to performing routine maintenance on distribution pipeline facilities and equipment which may include valves, actuators and flanges; heaters and heat exchangers; metering equipment; process control equipment; gas analysis equipment; piping systems; sumps and drains; pressure vessels/filtration equipment; pumping systems and equipment; compression systems and equipment.

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Equipment
- Tools, equipment and testing devices
- Types of faults

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers assisting with excavated bed preparation, the construction, laying and connection of a gas service to a main under supervision.

It encompasses while working under supervision, the use of relevant tools and equipment, working safely using standard operating procedures and completing necessary documentation.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe work site where the construction and laying of a service and connection to a main occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills	**4.2)** Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy' Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills	**5)** This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to assist construct and lay a service to a main	1.1 WHS/OHS and environmental measures and procedures for the site are identified, accessed and understood.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.2	Relevant requirements and established procedures for the site are provided and discussed with supervisor to establish and confirm the work schedule.
	1.3	Hazards are identified and reported to the supervisor to assess the risks and implement control measures according to established procedures
	1.4	Scope of work and responsibility under the relevant work permit and/or relevant notification is received and confirmed with supervisor according to requirements and established procedures
	1.5	Equipment, plant, tools and personal protective equipment needed to construct and lay gas services are identified, obtained and checked for operation and safety.
	1.6	Supervisor is consulted to ensure the work is carried out effectively with others involved
	1.7	Materials, plans, diagrams, drawings and resources required to construct and lay gas services are received in accordance with established procedures
	1.8	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed with supervisor.
	1.9	Third party issues are referred to the supervisor in accordance with established procedures.
	1.10	Site preparation, safety plan and the work schedule are confirmed with supervisor in accordance with established procedures.
2 Assist in the construction and laying of a service to a main	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in excavations, trenches and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements.
	2.4	Assistance in preparing the excavation for laying of pipe is provided according to appropriate standards and procedures
	2.5	Assistance in constructing and laying of gas services is provided according to appropriate standards and procedures
	2.6	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.7	WHS/OHS risks, incidents, accidents and non-routine events are reported to the supervisor according to established procedures
	2.8	Routine quality and safety checks are carried out in accordance with work instructions
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Supervisor is notified of completion of the work according to established procedures.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.4	Work site is tidied and made safe in accordance with established procedures
	3.5	Relevant work documentation is completed and provided to the supervisor in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work activities in a utilities industry work environment. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G226A Gas distribution service construction and laying assistance

Evidence shall show an understanding of assisting in the construction, laying and connection of a gas distribution service to a \main under supervision in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas service pipelines

- types and characteristics
- pipe sizes
- fittings
- accessories
- handling and storage
- MSDS/SDS

T2. Gas main pipelines

- Types and characteristics
- pipe sizes
- fittings
- accessories

T3. Overview of relevant legislation, Australian Standards, codes, regulations and procedures requirements

T4. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas
- dangers of working near plant
- MSDS/SDS and handling of Solvents and jointing materials

T5. Cutting, tapping and joining pipelines and fittings

© Commonwealth of Australia, 2025 Powering Skills Organisation

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T6. Transition fittings and adaptors to other piping materials

- types
- bending and cutting to fit requirements

T7. Trenching requirements for service pipelines

- bedding materials
- trench width and depth
- required coverage depth in various locations
- pipeline support
- backfilling/compacting requirements
- surface reinstatement

T8. Installation of service pipelines

- requirements
- procedures
- trace wire
- marker tape

T9. Static Electricity in plastic gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Assist construct and lay services and connection to a main in accordance with relevant legislation, code, regulations and procedures as described as described in 9 Range Statement and including:

    A. Identifying and reading correctly drawings, diagrams, procedures and manuals relevant to the work to be undertaken.

    B. Identifying the plant and equipment and their safe operating parameters/requirements

    C. Assist in cutting, joining, laying, covering and connecting gas distribution services pipelines in accordance with procedures and requirements

    D. Assist in isolating, venting, purging and testing for soundness and leaks, commissioning and making safe gas services

    E. Completing required documentation and reporting.

    F. Responding to unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the

© Commonwealth of Australia, 2025 Powering Skills Organisation

above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Unit shall be assessed by methods given in Volume 1 Part 3

© Commonwealth of Australia, 2025 Powering Skills Organisation

'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment,

© Commonwealth of Australia, 2025 Powering Skills Organisation

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

the ‘Assessment Guidelines — UEG11’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Assist construct and lay gas distribution mains in accordance with relevant legislation, code, regulations and procedures as described as described in 9 Range Statement and including:
    A. Identifying and reading correctly drawings, diagrams, procedures and manuals relevant to the work to be undertaken.
    B. Identifying the plant and equipment and their safe operating parameters/requirements
    C. Assist in cutting, joining, laying, covering and connecting gas distribution main pipelines in accordance with requirements
    D. Assist in isolating, venting, purging and testing for soundness and leaks, commissioning and making safe on gas services
    E. Completing required documentation and reporting.

© Commonwealth of Australia, 2025 Powering Skills Organisation

F. Responding to unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3

UEGNSG228A Construct and lay large copper gas distribution pipelines

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers excavated bed preparation and the construction and laying of copper gas distribution pipelines and services above 20mm diameter.

This encompasses includes the use of relevant tools and equipment, working safely using standard operating procedures, complying with relevant legislative, standard and code requirements and completing necessary documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS) / Occupational Health and Safety OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, Workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to construct and lay large copper gas distribution pipelines	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood
	1.2	Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to construct and lay copper gas pipelines and services are identified, obtained and checked for operation and safety.
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.8	Materials, plans, diagrams, drawings and resources required to construct and lay gas distribution pipelines are confirmed, scheduled and obtained in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Relevant responsibilities associated with safety and emergency procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Construct and lay large copper gas distribution pipelines	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements.
	2.4	Trench is prepared for laying of pipe according to appropriate standards and procedures
	2.5	Construction and laying of copper gas pipelines and services are conducted according to appropriate standards and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.6	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.7	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.9	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Appropriate persons are notified of completion of the work according to established procedures.
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Work site is tidied and made safe in accordance with established procedures
	3.5	Work completion documentation is completed and provided to appropriate persons in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for constructing and laying copper gas distribution pipelines. All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G228A Construct and lay distribution copper pipelines

Evidence shall show an understanding of constructing and laying copper gas distribution pipelines in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Copper gas pipelines above 20mm diameter

- characteristics
- pipe sizes
- fittings
- accessories
- material specifications
- applications
- handling and storage
- advantages and disadvantages
- MSDS

T2. Relevant Australian Standards

T3. Safety requirements

- hazards, risk assessment and control measures
- dangers of working with live gas

T4. Copper and other piping materials

- types and identification

T5. Cutting and tapping Copper pipe

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

T6. Joining Copper pipe, pipelines and fittings

- requirements under various conditions, inclement weather etc.
- methods, procedures and safety requirements
- selection and use of equipment, tools and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

T7. Transition fittings and adaptors to other piping materials

- types
- selection

T8. Bedding requirements for Copper pipeline

- trench width and depth
- required coverage depth in various locations
- obstacles affecting minimum depth of cover for pipeline
- solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection.
- pipeline support
- backfilling requirements

T9. Conditions for direct installation or insertion of Copper pipeline

T10. Installation of Copper pipeline

- requirements
- procedures
- trace wire
- marker tape

T11. Termination and testing of Copper pipeline

- requirements
- procedures

T12. Static Electricity in Copper gas pipes

- causes
- dangers
- prevention

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**8.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria

© Commonwealth of Australia, 2025 Powering Skills Organisation

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Construct and lay copper gas distribution pipelines in accordance with relevant legislation, code, regulations and procedures as described as described in 9.) Range Statement and including:
    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.
    B. Identifying the plant and equipment and their safe operating parameters/requirements
    C. Cutting, joining, laying, covering and connecting copper gas distribution pipelines and services in accordance with requirements
    D. Isolating, venting, purging and testing for soundness and leaks, commissioning and making safe gas services

© Commonwealth of Australia, 2025 Powering Skills Organisation

E. Completing required documentation and reporting.

F. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and

© Commonwealth of Australia, 2025 Powering Skills Organisation

replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG219A	Conduct excavations in the utilities industry

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to constructing and laying copper gas distribution pipelines and services above 20mm diameter, in accordance with relevant legislation, code, regulations and procedures. This includes laying and cutting pipes, joining pipes and fittings and the installation of the meter connection to the service riser

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Services
- Appropriate persons
- Materials
- Tools and equipment
- Safe working procedures
- Legislative requirements
- Standards

UEGNSG229A Prepare simple drawings of as laid gas mains and services

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers producing simple drawings for as laid new and altered gas installations, mains and services in accordance with relevant standards, abbreviations and symbols.

This unit does not include complex drafting skills.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to Gas Industry work sites where drawings of newly constructed or altered pipework need to be recorded for future locating, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan to prepare simple drawings of as laid gas mains and services	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Types of drawings required and key features, symbols and abbreviations for each type of plan and drawing used in the gas industry are identified in accordance with the scope and standard of the work being undertaken
	1.3	The need and requirements for the drawing are determined from the work instructions and confirmed with relevant persons.
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures including keeping emergency exits clear.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.5	Client issues are clarified and resolved in relation to the drawing requirements in in accordance with established procedures.
	1.6	Equipment, tools, materials, drawings and personal protective equipment needed for the inspection and measurement and for producing drawings are identified, obtained and checked for correct operation and safety.
	1.7	Workplace preparation, safety plan and the work schedule are confirmed in accordance with established procedures
2 Prepare simple drawings of as laid gas mains and services	2.1	WHS/OHS and control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Inspection of relevant site is carried out as required and factors are identified that may impact on technical drawing, such as orientation, altering landscapes, building structures or temporary land marks
	2.4	Starting point and determine cross reference points are established and measurements from the starting point, distances and off sets are taken, and recorded.
	2.5	The as laid pipework is drawn to scale on graph paper using standard drawing conventions and incorporating relevant codes and standards.
	2.6	All fittings that effect the off – set or depth of the pipework such as elbows, tees are indicated on the drawing
	2.7	Additional fittings that need to be recorded in line with drawing specifications such as in – line valves, tapping tees are indicated on the drawing
	2.8	All dimensions (off –sets, distances &

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		directions), pipe diameter, symbols and abbreviations are provided on the drawing in accordance in the specifications
	2.9	Standard drawing conventions are used to neatly correct original job drawing to show final 'as-laid' arrangement.
	2.10	Routine quality checks are carried out in accordance with work instructions including testing of pipework.
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed
	3.2	Additional documentation is completed; district plan number, Network area, Street name, pressure ratings, type of pipe, size of pipe, date laid and additional comments
	3.3	Drawings are signed off/closed according to established procedures
	3.4	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	All drawings and forms are completed and submitted to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for preparing simple drawings for as laid gas mains and services.

practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G229A Gas Mains & Services as Laid Drawings

Evidence shall show an understanding of preparing simple drawings for as laid gas mains and services in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Different gas related drawings:

- District Plans
- Industrial drawings
- Easement drawings
- Gas mains detail plans
- Gas Pipeline route maps and alignment sheets

T3. Drawing conventions and features:

- Types of gas pipe work, fittings and gas pressure ranges
- Relevant symbols and abbreviations,
- Direction
- Scale
- Key
- Contours
- Notations

T4. Key information on site plans:

- Gas pressure colour coding
- Plans overlays
- Tie in points
- End of mains
- Change of direction
- Pipe sizing
- Distances
- Method used to lay pipe (Open cut / boring / insertion etc.)

T5. Measuring devises:

- Measuring devise to actually record off sets:
  - Measuring Wheel
  - Measuring tapes

T6. As laid technical drawings for gas pipework:

- Direction

specific resources for assessment

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in checking and reporting on station conditions.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the coordination of gas transmission pipeline repair and modifications. Inspection and testing techniques are included for this competency standard. It encompasses identifying and attending to leaks which may be classified into Class 1 — repair until completed; Class 2 — repair within 8 days; Class 3 monitor, repair not economic; Class 4 — no leak found and includes coordinating and where appropriate undertaking the repair, modification and minor maintenance of equipment.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills	**5)** qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare and plan for coordination of repairs and modifications of a gas transmission pipeline	1.1 Information concerning the identified repair/modification is conveyed to all parties and work schedule(s), including drawings, plans, requirements, established procedures and material lists are received, analysed and confirmed if necessary by site inspection
	1.2 Necessary plans, specifications and other relevant information and established procedures for the work are communicated to all persons and identified for all work sites
	1.3 OHS, environmental and sustainable energy policies and procedures related to the coordinating of gas transmission pipeline repairs and modifications are obtained and confirmed for the purposes of the work performed and communicated
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			clear according to established procedures
		1.6	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
		1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
		1.8	Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures according to requirements
		1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
		1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
		1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
		1.12	Road signs, barriers and warning devices are positioned in accordance with requirements
2	Coordinate pipeline repairs or modifications for gas transmission pipelines	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	and notify completion of work	2.2	Lifting, climbing, working in confined spaces, excavations, trenches. or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
		2.3	Essential Knowledge and Associated Skills is applied to the coordinating of gas transmission

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		pipeline repairs and modifications to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Coordination of gas transmission pipeline repairs and modifications is carried out in accordance with the work schedule and to established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Repair work is monitored and unplanned events and amendments and modifications in the coordinating pipeline repair and modifications are undertaken with the scope of established procedures
	2.7	Known solutions to a variety of problems are applied using Essential Knowledge and Associated Skills
	2.8	All required testing procedures are followed and ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Re-establish transmission pipeline to operational conditions and notify completion of work	3.1	System is re-established in order to meet transmission pipeline requirements and the work undertaken is checked against works schedule for conformance with requirements, anomalies are reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	checked and returned to storage in accordance with established procedures
	3.5 Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6 Records and drawings are updated to reflect repair/modifications and work completion records, reports as installed and documentation finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for the coordination of gas transmission pipeline repair and modifications.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G305B Transmission pipeline repair and modification

G 3.3.11 Prepare for testing and inspection of pipeline system

Evidence shall show an understanding of the requirements to test and inspect a Gas Industry pipeline (Transmission) system, indicated by the following:

- procedures and the OHS and environmental requirements to be applied when carrying out testing and inspection on pipeline systems
- properties and characteristics of gas relevant to testing and inspection procedures
- classification of leaks and the relevant procedures associated with each class of leak.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 3.3.12 Select and use appropriate tools and equipment to inspect and test the pipeline system in accordance with procedures and legislative requirements

Evidence shall show an understanding of the selection and use of appropriate tools and equipment required to undertake the testing of a Gas Industry pipeline (Transmission) system, indicated by the following:

- various testing and inspection methods and their appropriate applications
- appropriate use of test and inspection equipment
- procedures to ensure that supply pressure is maintained
- procedures required to monitor gaseous atmosphere.

G 3.3.13 Record and interpret test data

Evidence shall show an understanding of the requirements to record and interpret test data for a Gas Industry pipeline (Transmission), indicated by the following:

- information that must be documented on completion of testing/inspection procedures
- diagnose and assess pipeline faults using test data
- analyse and interpret test data to initiate appropriate action
- use test data to correctly classify leaks for prioritising repairs
- requirements and procedures for advising relevant persons about test/inspection outcomes.

G 3.3.14 Monitor pipeline system during repair work

Evidence shall show an understanding of the requirements to monitor pipeline system during repair work on a Gas Industry pipeline (Transmission), indicated by the following:

- identification of the requirements to establish and maintain safe site conditions in accordance with procedures, environmental and OHS requirements
- procedures to conduct pressure monitoring
- manufacturer's maintenance specifications
- procedures to coordinate resources and prevent stoppages during repair work
- monitor impact of the work on environment, people and surrounds.

G 3.3.15 Carry out repair work and make amendments or modifications as required

Evidence shall show an understanding of the requirements to

© Commonwealth of Australia, 2025 Powering Skills Organisation

carry out repair work and to make amendments or modifications as necessary on a Gas Industry pipeline (Transmission), indicated by the following:

- procedures, OHS and environmental requirements in relation to carrying out repair work
- conduct repair work with required tools and equipment following appropriate work procedures
- procedures to follow when evaluating and implementing amendments or modifications
- job progress in relation to repair work and/or amendments or modifications
- procedures to assess quality of work and compliance with procedures, legislative and environmental requirements.

G 3.3.16 Re-establish system and restore site

Evidence shall show an understanding of the reestablishment of the system and the restoration of the site on a Gas Industry pipeline (Transmission), specifically:

- confirm that repairs and modifications are completed
- demonstrate that procedures to re-establish the pipeline conditions are to full operational capabilities
- discuss the persons that need to be notified in relation to system reestablishment
- issue permits where required
- restore site in compliance with environmental, legislative and operational requirements.

G 3.3.17 Maintain records

Evidence shall show an understanding of the maintaining of records for the repair and modification of Gas Industry pipelines (Transmission), indicated by the following:

- identification of the documentation and information that is to be recorded
- completion and processing of job records and drawings accurately and in accordance with procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 3.3.18 Obtain information relevant to pipeline repair and modification

Evidence shall show an understanding of the need to obtain information relevant for the processes involved in the repairing or modification of Gas Industry pipelines (Transmission), indicated by the following:

- identification of problems from relevant information sources
- relevant documentation which includes plans, drawings, maps and specifications
- documentation to determine repair/modification information, including affect on customer supply, extent of repair and quantities of items required.

G 3.3.19 Liaise and communicate with relevant parties

Evidence shall show an understanding of how to liaise and communicate with relevant parties involved in the repairing or modification of Gas Industry pipelines (Transmission), indicated by the following:

- discussion of the parties that require notification of repairs/modifications
- identification of specialists required for repair/modification work
- procedures to determine relevant areas of responsibilities
- issues that impact on communication with affected parties and appropriate persons.

G 3.3.20 Prepare work site for repairs/modifications work

Evidence shall show an understanding of the preparation of Gas Industry workplaces for repairs/modifications work, indicated by the following:

- legislative, OHS and environmental requirements relevant to establishing and maintaining a safe workplace
- options for maintaining supply
- procedures for locating other services on the worksite
- identification of possible ignition sources and the taking of appropriate action
- risk assessments of the worksite including OHS risks
- requirements for consulting relevant authorities and obtaining required approvals
- procedures for the coordination of all activities and persons
- maintenance of accurate and complete records of all communications with relevant authorities and persons.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 3.3.21 Organise required equipment, materials and persons

Evidence shall show an understanding of the requirements to organise equipment, materials and persons as required for a Gas Industry pipeline (Transmission), indicated by the following:

- procedures and legislative requirements relevant to obtaining equipment and materials
- interpretation of documentation to ensure correct equipment and materials are specified
- coordination of the deployment of required equipment, materials and persons on a worksite.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Relevant knowledge of AS 1697 Relevant knowledge of AS 2885 Relevant knowledge of AS 2865 Interpret technical drawings and symbols Documentation (permits, schedules) Risk assessment implemented Implementation of Safety Procedures Able to communicate instructions/schedules Approvals from authorities Emergency Response procedures Environmental Code of Practice applied Communicate with other authorities and Stakeholders

© Commonwealth of Australia, 2025 Powering Skills Organisation

B	At Least 2	Basic knowledge of: Steel pipeline coating repair Steel pipeline coating testing Steel field joint coating
C	All	Purging a pipeline: Purging Procedures Relevant compliance with AS 2885 Operation of Gas Detector Isolating, venting and purging gas pipeline systems Communication with authorities Related environmental issues
D	At Least 2	Basic knowledge only: City Gate operation. Line Valve operation Pressure control procedure
E	All	Basic understanding only: Trenching Shoring
F	All	Basic understanding only: Pipeline Cathodic Protection. Relevant electrical safety
G	All	Re-commission pipeline. Pressure control procedure All testing of repairs checked/completed Pressure is according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		specifications
H	All	Final Inspections are carried out Site rehabilitation/reinstatement carried out Drawings/plans updated Reports completed Sign Off Procedures carried out
I	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency in coordinating gas transmission pipeline repair and modifications.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B	Carry out work activities in a utilities industry work environment
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEGNSG104B	Comply with environmental policies and procedures
UEGNSG105B	Establish the work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to coordinating gas transmission pipeline repair and modifications.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Inspection and testing techniques (3)

Leaks (3)

Repair and maintenance equipment(3)

Repair/modification techniques (3)

Documentation/records (3)

Tools, materials and equipment

Pipeline systems

Pipeline control systems

Appropriate authorities

Appropriate person

Unit Sector(s)

UEGNSG308B Identify, evaluate and control threats to transmission pipelines

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This competency standard covers the identification, evaluation and initial control of threats to the integrity of transmission pipelines. The competency standard is applied against the requirements found under the latest version of AS 2885.1 Australian and New Zealand Standard. The competency standard includes the use of tools and equipment; maps and drawings; established procedures; PPE and First Aid; traffic control.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where gas industry operations occur.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/ liquid /electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the Performance Criteria describe the required performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

essential outcomes of a competency standard unit	needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan to identify and evaluate control threats to a transmission pipeline	1.1	Works schedules, specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined. The extent of preparation for the work is assessed
	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe and technical working order
	1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Persons participating in the work are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
2 Carry out the identification, evaluation and control of threats to a transmission pipeline	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Analysis of information to identify key issues is undertaken as required and information is evaluated for relevance and validity to the requirements
	2.3	First Aid and other related work procedures are performed according to requirements and established procedures
	2.4	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
	2.5	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.6	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.7	Negotiation processes with third parties concerning the threat to the pipeline are carried out to ensure the pipeline can be monitored
	2.8	Fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that are required according to requirements and established procedures
	2.9	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		minimum of waste according to requirements
	2.10	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
	2.11	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client to a community and industry standard
3 Review, record and report on identification, evaluation and control of threats to a transmission pipeline	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off in accordance with requirements
	3.6	Work completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

unit.

Evidence shall show that knowledge has been acquired of safe working practices for operating and monitoring pipeline control systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G308B Transmission pipeline threat control

G 2.1.8 Control traffic at the work site

Evidence shall show knowledge and skills in coordinating traffic flow at a workplace where traffic control is required, that is, where work is conducted on or near a road, indicated by the following:

- Read and interpret relevant traffic authority regulations for traffic control at a worksite
- Identify signs and devices required to control pedestrians and traffic at a worksite depending on traffic flow volumes
- Apply techniques for controlling pedestrians and traffic at various worksites
- Use procedures for monitoring traffic controls
- Set up and monitor pedestrian and traffic controls

G 2.2.32 Comply with requirements for excavating and reinstating site

Evidence shall show an understanding of the requirements for preparing, conducting and completing an excavation indicated by the following:

- Identifying plans, codes, standards and drawings relevant to specific worksites
- Reading and interpreting relevant plans, codes, standards and drawings
- Regulatory requirements and procedures for excavating trenches and reinstating sites
- Apply shoring or benching requirements
- Notification of appropriate authorities and requirements for temporary or permanent restorations

G 2.2.33 Locate utilities and services

Evidence shall show an understanding and an ability to

© Commonwealth of Australia, 2025 Powering Skills Organisation

locate services, indicated by the following:

- Identification of relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and stormwater)
- Read and interpret plans and drawings to identify the location of utilities and services
- Identification of utilities and services conduits and cables
- Correct use of electronic and manual service locators
- Apply hand excavation as required for the purposes of locating utilities and services

G 2.2.34 The selection, the use and application of materials

Evidence shall show an understanding and ability to use correct tools, materials and equipment to undertake work on a gas industry workplace, indicated by the following:

- Appropriate tools, materials and equipment are identified for preparing the site, excavating trenches and reinstating the site
- Safety requirements for using tools, materials and equipment
- Correct use of appropriate PPE
- Procedures for using, cleaning and storing tools, materials and equipment
- Procedures for checking tools, materials and equipment
- Reporting faulty tools, materials and equipment

G 3.4.5 Interpreting topographical maps and information

Evidence shall show an understanding of the requirements to interpret topographical and geographical information and maps for cathodic protection, indicated by the following:

- interpreting topographical and geographical maps and information.

G 4.1.1 Operating and supervising in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and

© Commonwealth of Australia, 2025 Powering Skills Organisation

environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant customers and suppliers
- regulatory bodies
- property/land owners (including traditional land owners) and tenants
- emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 4.1.6 Understand OHS and First Aid requirements for Gas Industry supervisors

Evidence shall show an understanding of OHS and First Aid

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements for gas industry supervisors and autonomous working staff, indicated by the following:

- understanding of applicable enterprise Occupational Health and Safety systems and procedures
- understanding of requirements and reasons for providing First Aid equipment and training for employees in the gas industry

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.15 Drive Gas Industry vehicles

Evidence shall show an understanding of requirements and capability of driving applicable Gas Industry vehicles including but not limited to:

- Driving vehicles appropriate to the organisation. Vehicles may include any of the following (dependent on the needs of the organisation):
  - sedan
  - four wheel drive vehicles
  - trucks
  - buses
  - excavation and construction equipment such as backhoes and excavators.

Note: All vehicles included in this clause have licence or ticket requirements. The licence or ticket will need to be

© Commonwealth of Australia, 2025 Powering Skills Organisation

issued to the learner for completion of relevant sections of the EKAS Clause.

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation
  - strategy and tactics of bargaining
  - pre-negotiation essentials
  - communication in negotiation
- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Identify threats to the integrity of transmission pipelines Evaluate threats to the integrity of transmission pipelines Initial control of threats to the integrity of transmission pipelines Working knowledge of coatings for corrosion protection Working knowledge of relevant sections the latest

		assessment with the above listed items

Context of and specific resources for assessment **9.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in identifying, evaluating and controlling threats to transmission pipelines.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners

© Commonwealth of Australia, 2025 Powering Skills Organisation

to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG302B	Maintain pipeline easements
UEGNSG329 A	Gas transmission pipeline surveillance
UEGNSG309B	First on site emergency response on a transmission pipeline
UEGNSG310B	Supervise and monitor contract work
UEGNSG311B	Site control of third party works in the vicinity of a transmission pipeline

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to identifying, evaluating and controlling threats to transmission pipelines.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the supervision and monitoring of contractors working on a transmission pipeline site. It requires the application of skills and knowledge to provide information, guidance and direction to contractors in the conduct of their duties. It does not cover the high levels of technical expertise required to actually perform the services but focuses on the key knowledge and skills required to supervise and monitor the process from a contractor management perspective. The competency standard is applied against the procedures found under the latest version of AS 2885.3 Australian and New Zealand Standard.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where gas/petrochemical liquid industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the

Employability Skills	**5)** qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for supervising and monitoring contract staff	1.1 Work schedule(s), including drawings, plans, requirements, established procedures and material lists are detailed, analysed if necessary by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5 OHS, environmental and sustainable energy policies and procedures are obtained and confirmed for the purposes of the work performed and communicated
	1.6 Relevant work permits are obtained to access and perform work according to requirements and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8	Contractual requirements, such as qualifications of personnel to perform the work, competency of the contractor, site induction and condition of equipment are confirmed
	1.9	Relevant persons at work site are confirmed to be current in First Aid and other related work procedures according to requirements
	1.10	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.11	Persons participating in the work are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.12	Site is prepared according to work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.13	Road signs, barriers and warning devices are positioned in accordance with requirements
2 Monitor and supervise contractor activities.	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Essential Knowledge and Associated Skills is applied to ensure completion in an agreed timeframe and to quality standards with a

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		minimum of waste according to requirements
	2.4	Contractor activity is carried out in accordance with the work schedule and to established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
	2.7	Known solutions to a variety of problems are applied using Essential Knowledge and Associated Skills
	2.8	First Aid and other related work procedures are performed according to requirements and established procedures.
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved.
3 Complete monitoring and supervision records.	3.1	Inspection of the contract job is checked against works schedule to determine conformance with requirements, anomalies are reported in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Waste materials are safely disposed of and the work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.5 Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6 Data is accurately recorded and work completion records, reports as modified drawings and documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for supervising and monitoring contract staff.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G310B Transmission pipeline contract staff

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and

© Commonwealth of Australia, 2025 Powering Skills Organisation

organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc
- Report workplace hazards

G 2.1.6 Work safely with hazardous materials and equipment

Evidence shall show an understanding of what constitutes hazardous materials and the equipment and processes used to safely work with these indicated by the following:

- Identify hazardous materials and equipment
- Location and purpose of Material Safety Data Sheets (MSDS)
- Read, interpret and discuss MSDS
- Knowledge of methods for safe disposal of hazardous waste materials
- Read, interpret and discuss relevant manufacturer's specifications
- Use and dispose of hazardous materials and equipment safely
- Use of spill kits and PPE

G 2.1.7 Apply safe manual handling techniques in the workplace

Evidence shall show an understanding of manual handling and how to apply this knowledge to handling heavy and awkward objects in a Gas Industry workplace, specifically:

- Principles for managing manual handling
- Characteristics and types of safe manual handling

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Safe manual handling techniques
- Manual handling and risk management

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

G 2.1.15 Complete workplace forms, and reports

Evidence shall show an ability to complete routine Gas Industry forms, memos and reports either written or electronic, indicated by the following:

- Identify, locate, interpret and use workplace forms, and reports
- Enter the required information accurately on gas industry forms and reports

G 2.1.16 Identify requirements of work activity

Evidence shall show ability to:

- Clarify expected outcomes of a work activity in a Gas Industry workplace
- Receive, clarify and respond to verbal work instructions for work activity
- Interpret and discuss an organisation's policies, quality requirements and specifications for work activity

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.1.17 Apply basic planning skills

Evidence shall show a demonstrated ability to apply basic planning skills in a Gas Industry workplace, indicated by the following:

- Develop checklists of tasks
- Prioritise tasks
- Identify resources required to complete tasks safely and efficiently
- Identify resource or scheduling conflicts and apply solutions
- Develop time lines to complete tasks

G 2.1.19 Review work activities

Evidence shall show an ability to review work activities undertaken in a Gas Industry workplace, indicated by the following:

- Check work activities against a work plan
- Seek feedback on the outcome of work activities with appropriate persons
- Report outcomes of work activities in writing or orally according to enterprise procedures

G 2.1.21 Undertake problem solving

Evidence shall show an understanding of the requirements to undertake basic problem solving in a Gas Industry workplace, indicated by the following:

- Demonstrate problem solving and diagnostics methodology
- Identify possible solutions
- Recommend probable solutions and
- Apply basic problem solving techniques

G 2.1.22 Operate in confined spaces

Evidence shall show an understanding of the requirements to recognise and operate in confined spaces in a Gas Industry workplace, indicated by the following:

- Knowledge of the requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- Ability to recognise what a confined space is and the entry safety requirements
- Ability to understand and comply with manufacturers' guidelines for the safe use of PPE used in confined spaces

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Understand how and when to use gas detectors for confined spaces entry
- Understand how and when to use breathing apparatus and rescue and recovery equipment

Note: A confined spaces entry ticket would satisfy and exceed the requirements of this EKAS clause

G 2.1.25 Protect the environment

Evidence shall show an understanding and ability to perform work in the gas industry in a manner that protects the environment indicated by the following:

- Understanding of the relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice
- Understanding of employee's and employer's responsibilities to relevant environmental legislation, regulations and codes
  - Understanding and compliance with enterprise procedures for flora control
  - erosion control
  - fauna control
  - the protection of indigenous and cultural heritage sites
- Understanding the role of regulatory bodies in monitoring environmental activities, risk and incident compliance
- Understanding community expectations for protecting the environment
- Correct use of environment protection procedures, records, inspections and incident reporting
- Identifying environmental hazards
- Assessing environmental risks
- Implementing environmental control measures
- Ability to respond to workplace environmental incidents

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, waste contamination and noise

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team

© Commonwealth of Australia, 2025 Powering Skills Organisation

indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally appropriate manner

G 2.2.32 Comply with requirements for excavating and reinstating site

Evidence shall show an understanding of the requirements for preparing, conducting and completing an excavation indicated by the following:

- Identifying plans, codes, standards and drawings relevant to specific worksites
- Reading and interpreting relevant plans, codes, standards and drawings
- Regulatory requirements and procedures for excavating trenches and reinstating sites
- Apply shoring or benching requirements
- Notification of appropriate authorities and requirements for temporary or permanent restorations

G 2.2.33 Locate utilities and services

Evidence shall show an understanding and an ability to locate services, indicated by the following:

- Identification of relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and stormwater)
- Read and interpret plans and drawings to identify the location of utilities and services
- Identification of utilities and services conduits and cables
- Correct use of electronic and manual service locators
- Apply hand excavation as required for the purposes of locating utilities and services

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.2.48 Prepare an excavation site

Evidence shall show an understanding and ability to prepare the site for excavation on a gas industry workplace, indicated by the following:

- Use of Dial Before you dig services
- Preparation of traffic management plans
- Identify Environmental and Safety Hazards, assess risks and implement control measures
- Communicating with third parties, colleagues and customers regarding the excavation site
- Reading and interpreting job specifications and standard operating procedures
- Grades and depth required for excavation of trenches for gas pipelines
- Techniques for marking out trench location

G 3.1.2 Work independently in a Gas Industry environment

Evidence shall show an understanding of working independently in a Gas Industry environment, indicated by the following:

- understanding of how to work autonomously or under limited/remote supervision.

G 3.4.5 Interpreting topographical maps and information

Evidence shall show an understanding of the requirements to interpret topographical and geographical information and maps for cathodic protection, indicated by the following:

- interpreting topographical and geographical maps and information.

G 4.1.1 Operate and supervise in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of

© Commonwealth of Australia, 2025 Powering Skills Organisation

planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land

© Commonwealth of Australia, 2025 Powering Skills Organisation

owners) and tenants
- emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 4.1.6 Understand OHS and First Aid requirements for Gas Industry supervisors

Evidence shall show an understanding of OHS and First Aid requirements for gas industry supervisors and autonomous working staff, indicated by the following:

- understanding of applicable enterprise Occupational

© Commonwealth of Australia, 2025 Powering Skills Organisation

Health and Safety systems and procedures

- understanding of requirements and reasons for providing First Aid equipment and training for employees in the gas industry

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.15 Drive Gas Industry vehicles

Evidence shall show an understanding of requirements and capability of driving applicable Gas Industry vehicles including but not limited to:

- Driving vehicles appropriate to the organisation. Vehicles may include any of the following (dependent on the needs of the organisation):
  - sedan
  - four wheel drive vehicles
  - trucks
  - buses
  - excavation and construction equipment such as backhoes and excavators.

Note: All vehicles included in this clause have licence or ticket requirements. The licence or ticket will need to be issued to the learner for completion of relevant sections of the EKAS Clause.

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

- negotiation with internal and external stakeholders
- the nature of negotiation
- strategy and tactics of bargaining
- pre-negotiation essentials
- communication in negotiation

- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Have a working knowledge of the relevant sections of AS2885 Interpret technical drawings and symbols Have emergency response procedures in place Communicate schedules/coordinate to persons Carry out job safety analysis and inductions Obtain work permit Relevant knowledge of the latest version of AS 2885.3 Australian and New Zealand Standard Apply basic planning skills Work utilising relevant OHS and environmental legislation, regulations, codes of practice, policies and procedures Maintain a safe clean workplace Contractor management Communicate effectively

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in the workplace Problem solving skills Maintain documentation Planning and organising
B	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in supervising and monitoring contract staff.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG302B	Maintain pipeline easements
UEGNSG329A	Gas transmission pipeline surveillance
UEGNSG308B	Identify, evaluate and control threats to transmission pipelines
UEGNSG309B	First on site emergency response on a transmission pipeline
UEGNSG311B	Site control of third party works in the vicinity of a transmission pipeline

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the control of all third party works in the vicinity of a transmission pipeline to ensure the integrity of the pipeline is not compromised. The competency standard is applied against the procedures found under the latest version of AS 2885.3 Australian and New Zealand Standard. Third party works would include excavation, seismic activities and the use of explosives, vibrating rollers and the effect of additional loads on the pipeline.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where gas and petrochemical liquids industry operations occur.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Plan to undertake site control of third party works in the vicinity of a transmission gas/ petrochemical liquids pipeline	1.1	Site is checked for specific hazards. Work schedule(s), specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined. The extent of preparation for the work is assessed
		1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
		1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
		1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
		1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
		1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
		1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe and technical working order
		1.8	Clients are provided with possible solutions and options within the scope, acceptable cost and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		requirements
	1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed, inducted and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
2 Carry out site control of third party works in the vicinity of a transmission gas pipeline	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	First Aid and other related work procedures are performed according to requirements and established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, techniques and practices are safely exercised according to requirements
	2.4	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Operating conditions of equipment are monitored
	2.7	Negotiation processes occur with third parties to control the threat to the pipeline
	2.8	Fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that are required according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.9	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
		2.10	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
		2.11	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client to a community and industry standard
3	Complete site control of third party works in the vicinity of a transmission gas/ petrochemical liquids pipeline	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
		3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
		3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
		3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
		3.5	Relevant work permit(s) are signed off accordance with requirements
		3.6	Work completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for site control of third party works in the vicinity of a transmission pipeline.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G311B Transmission pipeline third party

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

Industry

- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA's, JSA's, JSEA's, SWM's etc
- Report workplace hazards

G 2.1.6 Work safely with hazardous materials and equipment

Evidence shall show an understanding of what constitutes hazardous materials and the equipment and processes used to safely work with these indicated by the following:

- Identify hazardous materials and equipment
- Location and purpose of Material Safety Data Sheets (MSDS)
- Read, interpret and discuss MSDS
- Knowledge of methods for safe disposal of hazardous waste materials
- Read, interpret and discuss relevant manufacturer's specifications
- Use and dispose of hazardous materials and equipment safely
- Use of spill kits and PPE

G 2.1.7 Apply safe manual handling techniques in the workplace

Evidence shall show an understanding of manual handling and how to apply this knowledge to handling heavy and awkward objects in a Gas Industry workplace, specifically:

- Principles for managing manual handling
- Characteristics and types of safe manual handling
- Safe manual handling techniques
- Manual handling and risk management

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

G 2.1.15 Complete workplace forms, and reports

Evidence shall show an ability to complete routine Gas Industry forms, memos and reports either written or electronic, indicated by the following:

- Identify, locate, interpret and use workplace forms, and reports
- Enter the required information accurately on gas industry forms and reports

G 2.1.16 Identify requirements of work activity

Evidence shall show ability to:

- Clarify expected outcomes of a work activity in a Gas Industry workplace
- Receive, clarify and respond to verbal work instructions for work activity
- Interpret and discuss an organisation's policies, quality requirements and specifications for work activity

G 2.1.17 Apply basic planning skills

Evidence shall show a demonstrated ability to apply basic planning skills in a Gas Industry workplace, indicated by the following:

- Develop checklists of tasks
- Prioritise tasks
- Identify resources required to complete tasks safely and efficiently
- Identify resource or scheduling conflicts and apply solutions
- Develop time lines to complete tasks

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.1.18 Conduct tasks to complete work activities

Evidence shall show ability to organise the activities to complete a job in a Gas Industry workplace, indicated by the following:

- Locate and organise equipment, tools and machinery required to complete tasks safely and efficiently
- Complete tasks according to planned sequences and within appropriate timeframes
- Understand quality assurance and work according to established and standard operating procedures

G 2.1.21 Undertake problem solving

Evidence shall show an understanding of the requirements to undertake basic problem solving in a Gas Industry workplace, indicated by the following:

- Demonstrate problem solving and diagnostics methodology
- Identify possible solutions
- Recommend probable solutions and
- Apply basic problem solving techniques

G 2.1.22 Operate in confined spaces

Evidence shall show an understanding of the requirements to recognise and operate in confined spaces in a Gas Industry workplace, indicated by the following:

- Knowledge of the requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- Ability to recognise what a confined space is and the entry safety requirements
- Ability to understand and comply with manufacturers' guidelines for the safe use of PPE used in confined spaces
- Understand how and when to use gas detectors for confined spaces entry
- Understand how and when to use breathing apparatus and rescue and recovery equipment

Note: A confined spaces entry ticket would satisfy and exceed the requirements of this EKAS clause

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.1.25 Protect the environment

Evidence shall show an understanding and ability to perform work in the gas industry in a manner that protects the environment indicated by the following:

- Understanding of the relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice
- Understanding of employee's and employer's responsibilities to relevant environmental legislation, regulations and codes
  - Understanding and compliance with enterprise procedures for flora control
  - erosion control
  - fauna control
  - the protection of indigenous and cultural heritage sites
- Understanding the role of regulatory bodies in monitoring environmental activities, risk and incident compliance
- Understanding community expectations for protecting the environment
- Correct use of environment protection procedures, records, inspections and incident reporting
- Identifying environmental hazards
- Assessing environmental risks
- Implementing environmental control measures
- Ability to respond to workplace environmental incidents

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, waste contamination and noise

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate manner

G 2.2.34 The selection, the use and application of materials

Evidence shall show an understanding and ability to use correct tools, materials and equipment to undertake work on a gas industry workplace, indicated by the following:

- Appropriate tools, materials and equipment are identified for preparing the site, excavating trenches and reinstating the site
- Safety requirements for using tools, materials and equipment
- Correct use of appropriate PPE
- Procedures for using, cleaning and storing tools, materials and equipment
- Procedures for checking tools, materials and equipment
- Reporting faulty tools, materials and equipment

G 3.1.2 Work independently in a Gas Industry environment

Evidence shall show an understanding of working independently in a Gas Industry environment, indicated by the following:

- understanding of how to work autonomously or under limited/remote supervision.

G 3.4.5 Interpreting topographical maps and information

Evidence shall show an understanding of the requirements to interpret topographical and geographical information and maps for cathodic protection, indicated by the following:

- interpreting topographical and geographical maps and information.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 4.1.6 Understand OHS and First Aid requirements for Gas Industry supervisors

Evidence shall show an understanding of OHS and First Aid requirements for gas industry supervisors and autonomous working staff, indicated by the following:

- understanding of applicable enterprise Occupational Health and Safety systems and procedures
- understanding of requirements and reasons for providing

© Commonwealth of Australia, 2025 Powering Skills Organisation

First Aid equipment and training for employees in the gas industry

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.15 Drive Gas Industry vehicles

Evidence shall show an understanding of requirements and capability of driving applicable Gas Industry vehicles including but not limited to:

- Driving vehicles appropriate to the organisation. Vehicles may include any of the following (dependent on the needs of the organisation):
  - sedan
  - four wheel drive vehicles
  - trucks
  - buses
  - excavation and construction equipment such as backhoes and excavators.

Note: All vehicles included in this clause have licence or ticket requirements. The licence or ticket will need to be issued to the learner for completion of relevant sections of the EKAS Clause.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**

© Commonwealth of Australia, 2025 Powering Skills Organisation

A	All	Identify threats to the integrity of transmission pipelines Evaluate threats to the integrity of transmission pipelines Initiate control of threats to the integrity of transmission pipelines Working knowledge of coatings for corrosion protection Working knowledge of relevant sections of the latest version of AS2885.3 Working knowledge of requirements and techniques for safe excavations Working knowledge of construction machinery Working knowledge of requirements for safe use of explosives near a pipeline Working knowledge of requirements for safe use vibrating rollers in the vicinity of a pipeline Working knowledge of requirements for safe loading on a pipeline Working knowledge of external interference physical and procedural protection measures
B	All	Interpret technical drawings and symbols Operation of gas detector Emergency response procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Operate pipe locater Use of and interpret Dial Before You Dig report or its equivalent Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures Maintain a safe and clean workplace Work safely with hazardous materials and equipment Apply safe manual handling techniques Communicate effectively in the workplace Negotiation skills Apply basic planning skills First Aid certificate level 1
C	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency of site control of third party works in the vicinity of a transmission pipeline.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG302B	Maintain pipeline easements
UEGNSG329 A	Gas transmission pipeline surveillance
UEGNSG308B	Identify, evaluate and control threats to transmission pipelines
UEGNSG309B	First on site emergency response on a transmission pipeline
UEGNSG310B	Supervise and monitor contract work

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to site control of third party works in the vicinity of a transmission pipeline.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

essential outcomes of a competency standard unit	needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Plan to liaise with third party and the community to maintain pipeline integrity and community safety	1.1	Work schedules, specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined. The extent of preparation for the work is assessed
		1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
		1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
		1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
		1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
		1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
		1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe and technical working order
		1.8	Clients are provided with possible solutions and options within the scope, acceptable cost and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
		1.10	Persons participating in the work are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
		1.11	Status of the system is sought through communication with pipeline control centre in accordance with established procedures
2	Carry out liaison with third party and the community to maintain pipeline integrity and community safety	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
		2.2	Analysis of information to identify key issues is undertaken as required and information is evaluated for relevance and validity to the requirements
		2.3	First Aid and other related work procedures are performed according to requirements and established procedures
		2.4	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
		2.5	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
		2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.7	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client to a community and industry standard
3 Complete the liaison with third party and the community to maintain pipeline integrity and community safety	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.4	Relevant work permit(s) are signed off accordance with requirements
	3.5	Work completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this

REQUIRED SKILLS AND KNOWLEDGE

unit.

Evidence shall show that knowledge has been acquired of safe working practices for liaising with third party and the community to maintain pipeline integrity and community safety.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G314B Transmission pipeline integrity and safety

G 3.1.2 Work independently in a Gas Industry environment

Evidence shall show an understanding of working independently in a Gas Industry environment, indicated by the following:

- understanding of how to work autonomously or under limited/remote supervision.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand

© Commonwealth of Australia, 2025 Powering Skills Organisation

Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 4.1.6 Understand OHS and First Aid requirements for Gas Industry supervisors

Evidence shall show an understanding of OHS and First Aid requirements for gas industry supervisors and autonomous working staff, indicated by the following:

- understanding of applicable enterprise Occupational Health and Safety systems and procedures
- understanding of requirements and reasons for providing First Aid equipment and training for employees in the gas industry

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.10 Understanding security breach procedures

Evidence shall show an understanding required to identify

© Commonwealth of Australia, 2025 Powering Skills Organisation

security breaches and the required action in dealing with such breaches, indicated by the following as applicable:

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

G 4.1.15 Drive Gas Industry vehicles

Evidence shall show an understanding of requirements and capability of driving applicable Gas Industry vehicles including but not limited to:

- Driving vehicles appropriate to the organisation. Vehicles may include any of the following (dependent on the needs of the organisation):
  - sedan
  - four wheel drive vehicles
  - trucks
  - buses
  - excavation and construction equipment such as backhoes and excavators.

Note: All vehicles included in this clause have licence or ticket requirements. The licence or ticket will need to be issued to the learner for completion of relevant sections of the EKAS Clause.

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

- negotiation with internal and external stakeholders
- the nature of negotiation
- strategy and tactics of bargaining
- pre-negotiation essentials
- communication in negotiation

- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Identify threats to the integrity of transmission pipelines Evaluate threats that impact level of secondary response Control of the escalation of threats to the public, environment, transmission pipelines and facilities Working knowledge of relevant sections the latest version of AS2885 Working knowledge of security breach procedures Demonstration of the practical use of communications equipment
B	All	Interpret technical drawings and symbols Use of and interpret Dial Before You Dig report or its equivalent Work utilising relevant OHS and E legislation,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		regulations, codes of practice, policies and procedures Practical knowledge of the properties of product being transported Work safely with hazardous materials and equipment Apply safe manual handling techniques Effective communication to the public and community groups Negotiation skills Apply basic planning skills First Aid certificate level 1
C	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in liaising with third parties and the community to maintain pipeline integrity and community safety.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the calibration of volumetric measuring devices and gas analysers used in the measurement of gas quality.

The competency standard refers to the inspection, validation, calibration and recommissioning of custody transfer devices and gas quality measuring equipment in accordance with reference standards to meet contractual, organisational or statutory requirements.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not

Employability Skills	**5)** will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan and prepare for the calibration of CTM or gas quality measuring equipment.	1.1	Work requirements for calibration of measuring devices are interpreted from plans, specifications and instructions
	1.2	Relevant requirements and established procedures for the work are communicated to appropriate persons
	1.3	OHS, environmental and sustainable energy policies and procedures related to the work to be performed are obtained and confirmed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.7	Resources including equipment, tools, calibration gases and personal protective equipment required to conduct the work are suitable, fit for purpose are obtained and confirmed in working order and any test measurement equipment is NATA calibrated and within calibration tolerances
		1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
		1.9	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2	Inspect/Validate/Calibrate CTM or Gas Quality measuring equipment.	2.1	Information on device and equipment performance is collected and reported in accordance with organisational requirements
		2.2	Dealing with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
		2.3	Essential Knowledge and Associated Skills for the Inspection, Validation, Calibration of CTM's or Gas Quality measuring equipment is applied to ensure completion in an agreed timeframes and to quality standards with a minimum of waste according to requirements
		2.4	Routine inspections of system are scheduled and monitored in accordance with the work schedule and established procedures
		2.5	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures
		2.6	Equipment is calibrated against appropriate standards using correct calibration devices,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		equipment, techniques are undertaken within the scope of established procedures
	2.7	Deviations of results are resolved in accordance with established procedures and known solutions to a variety of problems are applied using Essential Knowledge and Associated Skills
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Return to operational service of CTM or Gas Quality measuring equipment.	3.1	Equipment is returned to operational service in accordance with established procedures
	3.2	Anti tamper seals are replaced and tagging removed in accordance with established procedures where applicable
	3.3	Work completion records, reports and documentation are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices in custody transfer metering and gas quality analysis.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G319B Custody transfer metering

G 3.1.2 Work independently in a Gas Industry environment

Evidence shall show an understanding of working

© Commonwealth of Australia, 2025 Powering Skills Organisation

independently in a Gas Industry environment, indicated by the following:

- understanding of how to work autonomously or under limited/remote supervision.

G 3.2.7 Prepare reports

Evidence shall show an understanding of the preparation of reports applicable to the commissioning and decommissioning of Gas Industry pipelines (Distribution), indicated by the following:

- Apply procedures and legislative requirements for maintaining appropriate reporting and recording systems
- Complete job records and process information to appropriate/relevant department
- Recorded non-conformances and incidents including customer outages in accordance with procedures and legislative requirements.

G 3.2.17 Maintain records

Evidence shall show an ability to maintain of records for the repair and modification of Gas Industry pipelines (Distribution) systems, indicated by the following:

- Interpret and apply enterprise policies and procedures
- Collate all relevant data
- Identify and complete the relevant records, drawings, documents and forms
- Store records in a secure manner consistent with enterprise policies and procedures

G 3.2.19 Liaise and communicate with relevant parties

Evidence shall show an understanding of liaising and communicating with relevant parties involved in repair or modification of Gas Industry pipelines (Distribution), specifically:

- Interpret and apply enterprise policies and procedures
- Identify key stakeholders
- Identify specialists that can assist in repair/modification work
- Identify responsibilities and reporting requirements of third parties
- Establish communication lines with parties that require notification of repairs/modifications

G 3.8.1 Systems operations flow control

Evidence shall show an understanding of the workings of gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

flow and the devices used to control flow control, indicated by the following:

- understanding gas flow control devices.

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 3	Interpret technical drawings and symbols Selection of appropriate tools and equipment System knowledge of TP, HP, MP, LP Relevant knowledge of AS3885 Part 3
B	All	Auxiliary control systems knowledge and understanding Wide open monitor operation Two stage pressure reduction with monitor override
C	All	RTU control of regulators
D	At least 2	Pressure Controllers, operation, maintenance and

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare for the monitoring and control of drug and alcohol related incidences	1.1	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
		1.2	Risk control measures for identified hazards are prioritised, implemented and evaluated
		1.3	Relevant stakeholders are provided with possible solutions and options within the scope of established procedures
		1.4	Scope of responsibility in relation to monitoring and controlling drug and alcohol abuse is received and confirmed according to requirements and established procedures with the relevant persons
		1.5	Relevant responsibilities associated with first aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures and followed in the instance of an incident
		1.6	Issues related to drug and alcohol abuse are referred to appropriate persons in accordance with established procedures
2	Monitor and control drug and alcohol related incidences	2.1	OHS policies and procedures and safe work practices are followed in relation to monitoring and controlling drug and alcohol abuse to eliminate or minimise incidents and hazards

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.2	Operational knowledge as applied to potential hazards and safety risks are reported to the immediate authorised persons for directions according to established procedures
	2.3	Non-routine events in relation to monitoring and controlling drug and alcohol abuse are referred to authorised persons for directions according to established procedures
	2.4	Remedial action associated with monitoring and controlling drug and alcohol abuse are dealt with using acquired known solutions and skills related to company polices and procedures
	2.5	OHS policies and procedures and safe work practices are followed in relation to monitoring and controlling drug and alcohol abuse to eliminate or minimise incidents and hazards
3 Complete procedures for the monitoring and control of drug and alcohol incidents.	3.1	Reports on incidents of drug and alcohol abuse are completed and sent to the authorised persons as per the requirements found in established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for using of equipment and tools to perform work in a work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G324A Company procedures related to the abuse of drugs and alcohol

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory

© Commonwealth of Australia, 2025 Powering Skills Organisation

level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.21 Drug and alcohol awareness and effects on the workforce

Evidence shall show an understanding of dealing with drug and alcohol abuse in a transmission construction worksite and other applicable gas industry workplaces. It includes:

- Knowledge and capability of identifying a worker who is affected by abuse of drugs or alcohol.
- Knowledge and understanding of relevant enterprise procedures for safely removing drug and alcohol affected workers from the worksite.
- Application of relevant policies and procedures

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation
  - strategy and tactics of bargaining
  - pre-negotiation essentials

© Commonwealth of Australia, 2025 Powering Skills Organisation

- communication in negotiation
- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Managing conflict in a sensitive environment. Carrying out Company Safety procedures for dealing with persons under the influence of drugs or alcohol.
B	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in maintaining pipeline easements.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to follow company procedures to deal with incidents related to the abuse of drugs and alcohol.

The following constants and variables included in the element/Performance Criteria in

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Drug and alcohol policies and procedures

OHS policies and procedures related to alcohol abuse

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Transmission discipline

UEGNSG325A Coordinate the operation of relevant plant and equipment for transmission pipeline construction

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

Coordination of the operation of relevant plant and equipment necessary for the construction of transmission pipelines. This competency refers to: Excavator and vacuum lift; Bending machine and mandrels; Internal line up clamp; Tack Rig; Side Boom; Roller Cradles; Rock Saw; Bucket Wheel trencher; Sand Blasting Unit; Thermal Coil; Over ditch wrapping machine; Padding machines; Mitsu Bucket

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG328A	Supervise the operation of plant and equipment for the construction of transmission pipelines

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills	**5)** will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare plant and equipment for transmission pipeline construction	1.1	Work instructions are received and confirmed
	1.2	OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.3	Easement is inspected and assessed using appropriate mediums and civil activities to determine in accordance with standard operating procedures relevant requirements
	1.4	Discussion occurs with all persons to establish and confirm work schedule
	1.5	Suggestions to assist with constructing pipeline easements are made to others involved in the work
	1.6	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.7	Scope of responsibility under the relevant work permit isreceived and confirmed according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		requirements and established procedures with relevant persons
	1.8	Resources including equipment such as tools and personal protective equipment required for the job are obtained and in working order according to established procedures
	1.9	Relevant responsibilities associated with first aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures and followed in the instance of an incident
	1.10	Third party issues are referred to appropriate persons in accordance with industry and community standards
2 Maintain relevant plant and equipment for transmission pipeline construction	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents
	2.3	Work area is isolated and made safe and civil activities and construction of pipeline easements is carried out in accordance with given instructions and established procedures
	2.4	Easement is constructed and confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.5	Operational knowledge as applied to potential hazards and safety risks are reported to the immediate authorised persons for directions according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Remedial action associated with constructing pipeline easements are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete procedures for operation of relevant plant and equipment for the construction of transmission pipelines	3.1	Pipeline easement work undertaken is checked against work schedule and anomalies reported to authorised persons in accordance with established procedures
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for using of equipment and tools to perform work in a transmission pipeline construction industry work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G325 A (Coordinate)	**Plant and equipment for transmission pipeline construction**

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.3.16 Transmission pipeline construction OHS, environmental and cultural legislative and regulatory requirements

Evidence shall show an understanding of the practical work requirements embedded in the OHS, Environmental and Cultural Legislation and Regulations.

For OHS:

- Complete Risk Assessment forms such as Work Permits and JHA's, JSA's, JSEA's, SWM's etc Hazard Identification
- Manual handling
- Basic First Aid
- MSDS
- Understanding how to apply control measures
- Emergency Response
- Signage
- Licenses and tickets
- Working at heights
- Awareness of confined spaces

For Environmental:

- Weed mitigation
- Erosion control
- Emission laws
- Quarantine laws
- Licenses
- Permits

For Cultural and Heritage Awareness:

- Cultural and heritage awareness tagging
- Understanding the role of the cultural monitor
- Uncovering of cultural/heritage artefacts
- Understanding heritage and cultural issues
- Understanding legislative and regulatory requirement applicable in working situations

G 2.3.22 Effective communication on a gas transmission pipeline construction site (between operators and ground crew)

Evidence shall show an Knowledge of on-site pipeline construction communication strategies including:

- hand signals,
- satellite phones
- radios

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.3.24 Operation of transmission pipeline construction plant and equipment

Evidence shall show an understanding the general operating parameters of the following gas industry transmission pipeline plant and equipment:

- Compressors
- Grader
- Dozer
- Excavator
- Vacuum lift
- Bending machine
- Bending machine & mandrel
- Internal line up clamp
- Tack Rig
- Side Boom
- Roller Cradles
- Trenching Equipment
- Bucket Wheel trencher
- Grit Blasting Unit
- Thermal Coil
- Padding machines
- Mitsu Bucket
- Crane (Rough Terrain)
- Crane Truck
- Flood pump
- Squeeze pump
- Drying Plant

G 4.1.22 Knowledge of the capability and capacity of gas industry transmission pipeline construction plant and equipment across variable terrain and environment

Evidence shall show an understanding of how plant and equipment reacts in a variety of terrain and climates including:

- dry weather versus humid weather, and in different geographical environment eg sand versus mixture of sand and rock and purely rock.
- Application of engineering requirements for use of construction plant and equipment across variable terrain and environment

G 4.1.23 Dealing with contingencies in a remote area

Evidence shall show an understanding of survival techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

in remote areas including:

- survival techniques in remote areas eg running out of fuel/communications equipment, minor maintenance requirements.
- Planning for contingencies in remote areas

G 4.1.24 Loading capacity and scheduling requirements for the delivery of plant and equipment on vehicles across state roads and tracks

Evidence shall show an understanding of loading capacity including:

- Understanding of loading capacity and scheduling requirements for the delivery of plant & equipment on vehicles across state roads and tracks.
- Planning for contingencies eg rain, floods, breakdowns etc

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by

© Commonwealth of Australia, 2025 Powering Skills Organisation

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as

© Commonwealth of Australia, 2025 Powering Skills Organisation

specified in the Performance Criteria and range

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Monitor the effective use of plant and equipment. Ability to deal with conflict. Ability to supervise staff. Organise equipment according the needs of the project incorporating environmental/geological constraints (logistical organisation). Dealing with and reacting to a variety of contingencies eg rain and transport of plant and equipment.
B	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in maintaining pipeline easements.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and **9.5)**

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the coordination and monitoring of staff and contractors working on a transmission pipeline construction worksite. It requires the application of skills and knowledge to provide information, guidance and direction to staff and contractors in the conduct of their duties. It does not cover the high levels of technical expertise required to actually perform the services but focuses on the key knowledge and skills required to supervise, coordinate and monitor the process from a work supervision and contractor management perspective. The competency standard is applied against the procedures found under the latest version of AS 2885.1 and AS 2885.4 in a Gas Transmission Pipeline Construction context.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills	**5)** Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare for supervising and monitoring staff and contractors	1.1 Work schedule(s), including drawings, plans, requirements, established procedures and material lists are detailed, analysed if necessary by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Contractor obligations such as relevant insurance requirements and OHS/plant requirements are identified and managed in accordance with established company procedures
	1.3 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.4 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.5 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.6 OHS, environmental, cultural and sustainable energy policies and procedures are obtained and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		confirmed for the purposes of the work performed and communicated
	1.7	Relevant work permits are checked to ensure that work performed is done according to requirements and established procedures
	1.8	Resources including persons, equipment, tools and personal protective equipment required for the job are identified and scheduled in accordance with project management plans
	1.9	Contractual requirements, such as qualifications of personnel to perform the work, competency of the contractor, site induction and condition of equipment are confirmed
	1.10	Confirmation of adequate access for work crews to first aid personnel and amenities according to requirements
	1.11	Liaison and communication issues with authorised persons, authorities, clients and land-owners are resolved
	1.12	Persons participating in the work are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.13	Site is prepared according to work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.14	Road signs, barriers and warning devices are positioned in accordance with requirements
2 Monitor and supervise staff and contractors	2.1	OHS policies and procedures and safe work practices are followed by all personnel to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.3	Essential Knowledge and Associated Skills is applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
		2.4	Staff and contractor activity is carried out in accordance with the work schedule and to established procedures
		2.5	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported according to established procedures
		2.6	Solutions to non-routine problems are identified and actioned using acquired Essential Knowledge and Associated Skills according to requirements
		2.7	Known solutions to a variety of problems are applied using acquired Essential Knowledge and Associated Skills
		2.8	First Aid and other related work procedures are performed according to requirements and established procedures.
		2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved.
2	Complete monitoring and supervision records	3.1	Inspection of the job is checked against works schedule to determine conformance with requirements, anomalies are reported in accordance with established procedures
		3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
		3.3	Waste materials are safely disposed of and the work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
		3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	checked and returned to storage in accordance with established procedures
	3.5 Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6 Data is accurately recorded and work completion records, reports, drawings, documentation and any other relevant information is finalised and processed according to established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for using of equipment and tools to perform work in a transmission pipeline construction industry work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G326A Transmission pipeline staff and contractor

G 2.3.16 Transmission pipeline construction OHS, environmental and cultural legislative and regulatory requirements

Evidence shall show an understanding of the practical work requirements embedded in the OHS, Environmental and Cultural Legislation and Regulations.

For OHS:

- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc Hazard Identification
- Manual handling
- Basic First Aid
- MSDS

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Understanding how to apply control measures
- Emergency Response
- Signage
- Licenses and tickets
- Working at heights
- Awareness of confined spaces
- For Environmental:
- Weed mitigation
- Erosion control
- Emission laws
- Quarantine laws
- Licenses
- Permits
- For Cultural and Heritage Awareness:
- Cultural and heritage awareness tagging
- Understanding the role of the cultural monitor
- Uncovering of cultural/heritage artefacts
- Understanding heritage and cultural issues
- Understanding legislative and regulatory requirement applicable in working situations

G 2.3.18 Effective communication with third party asset owners in exposing, surveying and reinstating their assets safely

Evidence shall show an understanding of how to effectively communicate with third party asset owners about:

- exposing, surveying and re-instating their assets safely and effectively

G 2.3.21 Knowledge of ASNZ 2885 for transmission pipeline construction crews

Evidence shall show an understanding of the relevant sections of:

- ASNZ 2885 dependent on the endorsement area. eg Hydro test only needs 2885.5.

G 2.3.22 Effective communication on a gas transmission pipeline construction site (between operators and ground crew)

Evidence shall show an Knowledge of on-site pipeline construction communication strategies including:

- hand signals,
- satellite phones
- radios

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory

© Commonwealth of Australia, 2025 Powering Skills Organisation

level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.21 Drug and alcohol awareness and effects on the workforce

Evidence shall show an understanding of dealing with drug and alcohol abuse in a transmission construction worksite and other applicable gas industry workplaces. It includes:

- Knowledge and capability of identifying a worker who is affected by abuse of drugs or alcohol.
- Knowledge and understanding of relevant enterprise procedures for safely removing drug and alcohol affected workers from the worksite.
- Application of relevant policies and procedures

G 4.1.22 Knowledge of the capability and capacity of gas industry transmission pipeline construction plant and equipment across variable terrain and environment

Evidence shall show an understanding of how plant and equipment reacts in a variety of terrain and climates including:

- dry weather versus humid weather, and in different geographical environment eg sand versus mixture of sand and rock and purely rock.
- Application of engineering requirements for use of construction plant and equipment across variable terrain and environment

G 4.1.23 Dealing with contingencies in a remote area

Evidence shall show an understanding of survival techniques in remote areas including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- survival techniques in remote areas eg running out of fuel/communications equipment, minor maintenance requirements.
- Planning for contingencies in remote areas

G 4.1.24 Loading capacity and scheduling requirements for the delivery of plant and equipment on vehicles across state roads and tracks

Evidence shall show an understanding of loading capacity including:

- Understanding of loading capacity and scheduling requirements for the delivery of plant & equipment on vehicles across state roads and tracks.
- Planning for contingencies eg rain, floods, breakdowns etc

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

- problem solving and decision making techniques
  - the decision making environment
  - group decision making
  - guidelines for making decisions
  - decision making aids and support systems
  - negotiation with internal and external stakeholders
  - the nature of negotiation
  - strategy and tactics of bargaining
  - pre-negotiation essentials
  - communication in negotiation
- resolve conflict with internal or external stakeholders
  - dealing with negotiation breakdowns
  - social context of negotiation
  - power in negotiation
  - ethics in negotiation.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/procedures/workplace

assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in supervising and monitoring contract staff.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Associated Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation supervision and monitoring contract staff

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Access preparation

Permit to Work

Permit to Access Land

Approval for construction

Stake holder approvals

Verification and identification of third party assets

Environmental and cultural heritage controls

Maps and Drawings

Established Procedures

PPE and First Aid equipment

Resources

Records/documentation

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This competency standard unit covers the coordination of transmission pipeline construction activities. This competency refers to the following pipeline construction activities:

Backfill; Clear and Grade; Ditching; Hydro Testing; Joint Coating; Lower and Lay; Mechanical (minor maintenance); String and bend; Welding.

Note: This unit has 9 (nine) endorsement areas which are outlined in detail in the Range Statement (section 7 of this competency standard unit).

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG320A	Establish right of way access for transmission pipeline construction
UEGNSG328A	Supervise the operation of relevant plant and equipment for transmission pipeline construction

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 "Literacy and Numeracy"

Reading 4 Writing 4 Numeracy 4

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan for transmission pipeline construction activities	1.1 Work instructions are received and confirmed
	1.2 OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed.
	1.3 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.4 Alignment sheets are used to determine correct construction operations against the work schedule and is checked for a quality outcome to minimise risk and damage to property, commerce and stakeholders in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.5	Worksite is inspected and assessed using appropriate resources to determine requirements in accordance with standard operating procedures and relevant requirements
		1.6	Discussion occurs and suggestions made and received with all persons to establish and confirm work schedule
		1.7	Scope of responsibility under the relevant work permit where applicable is received and confirmed according to requirements and established procedures with relevant persons
		1.8	Resources including qualified procedures, personnel, plant, equipment, tools and personal protective equipment required for the job are obtained and in working order according to established procedures
		1.9	Relevant responsibilities associated with first aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident
		1.10	Client issues where applicable are referred to appropriate persons in accordance with industry and community standards
2	Carry out transmission pipeline construction operations	2.1	OHS policies, procedures and safe work practices are followed to eliminate or minimise incidents and hazards
		2.2	Lifting, climbing, working aloft, and use of tools and equipment, techniques and practices are safely followed in accordance with requirements to eliminate the prospects of incidents
		2.3	Work area is made safe and pipeline construction activities are carried out in accordance with given instructions and established procedures
		2.4	Pipeline construction activities are carried out in

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		an agreed timeframe and to quality standards and the approved procedures with a minimum of waste according to requirements and established procedures
	2.5	Operational knowledge as applied to potential hazards and safety risks is reported to the immediate authorised persons for directions according to established procedures
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Remedial action associated with pipeline construction operations isdealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks and data collection relating to the quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete transmission pipeline construction operations	3.1	Pipeline construction operations are monitored to ensure integrity of the pipe and the coating is maintained
	3.2	Compliance against the work schedule is maintained and any anomalies are reported to authorised persons in accordance with established procedures
	3.3	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and waste materials are where appropriate, removed, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate persons are notified of work completion according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.6 Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for maintaining pipeline easements to perform work in a transmission pipeline construction industry work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G327A Transmission pipeline construction operations

G 2.3.16 Transmission pipeline construction OHS, environmental and cultural legislative and regulatory requirements

Evidence shall show an understanding of the practical work requirements embedded in the OHS, Environmental and Cultural Legislation and Regulations.

For OHS:

- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc Hazard Identification
- Manual handling
- Basic First Aid
- MSDS
- Understanding how to apply control measures
- Emergency Response
- Signage
- Licenses and tickets
- Working at heights

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Awareness of confined spaces
- For Environmental:
- Weed mitigation
- Erosion control
- Emission laws
- Quarantine laws
- Licenses
- Permits
- For Cultural and Heritage Awareness:
- Cultural and heritage awareness tagging
- Understanding the role of the cultural monitor
- Uncovering of cultural/heritage artefacts
- Understanding heritage and cultural issues
- Understanding legislative and regulatory requirement applicable in working situations

G 2.3.17 Knowledge of right of way set out and ditch line

Evidence shall show an understanding of translation of survey techniques into the right of way environment such as:

- Survey markers and off set markers, their meaning and relevant work applications.

G 2.3.19 Knowledge of pipeline protective systems including bedding and padding materials

Evidence shall show an understanding of the methods of protecting the pipeline from third party interaction:

- use of marker tape, bedding materials, marker post signage.

G 2.3.20 Operation of portable high pressure equipment

Evidence shall show an understanding of safe operation of the following:

- high pressure equipment hoses and whip checks
- Exclusion zone awareness
- Specific signage requirements for using high pressure equipment

G 2.3.21 Knowledge of ASNZ2885 for transmission pipeline construction crews

Evidence shall show an understanding of the relevant sections of:

- ASNZ 2885 dependent on the endorsement area. eg Hydro test only needs 2885.5.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.3.22 Effective communication on a gas transmission pipeline construction site (between operators and ground crew)

Evidence shall show an Knowledge of on-site pipeline construction communication strategies including:

- hand signals,
- satellite phones
- radios

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.21 Drug and alcohol awareness and effects on the workforce

Evidence shall show an understanding of dealing with drug and alcohol abuse in a transmission construction worksite and other applicable gas industry workplaces. It includes:

- Knowledge and capability of identifying a worker who is affected by abuse of drugs or alcohol.
- Knowledge and understanding of relevant enterprise procedures for safely removing drug and alcohol affected workers from the worksite.
- Application of relevant policies and procedures

G 5.1.2 Apply problem solving, decision making and conflict resolution techniques

Evidence shall show an understanding and application of problem solving, decision making and conflict resolution techniques in a Gas Industry environment, indicated by the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- problem solving and decision making techniques
- the decision making environment
- group decision making
- guidelines for making decisions
- decision making aids and support systems
- negotiation with internal and external stakeholders
- the nature of negotiation
- strategy and tactics of bargaining
- pre-negotiation essentials
- communication in negotiation
- resolve conflict with internal or external stakeholders
- dealing with negotiation breakdowns
- social context of negotiation
- power in negotiation
- ethics in negotiation.

EKAS Clause below to be completed for the welding endorsement only:

G 4.1.25 Metallurgy

Evidence shall show an understanding of metallurgy including:

- Understanding of the welding procedures and the limits of essential variables in accordance with ASNZ 2885.
- Effects of operating conditions on pipelines e.g. changes in operating pressures and temperatures
- Effects of geological and environmental conditions on pipeline

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all

© Commonwealth of Australia, 2025 Powering Skills Organisation

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEG11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
  - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in 'Essential Knowledge and Associated Skills' of this unit; and
  - Demonstrate an appropriate level of employability skills; and
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures; and
- Demonstrated performance across a representative range of contexts from the prescribed items below: Must complete A, and one of the following groups B, C, D, E, F, G, H, I, J depending on the endorsement.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	OHS Communication Environment Conflict resolution Effective Supervision

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Effective Planning Manage pipeline construction records Manage pipeline construction procedures Draw at least once on the relevant essential knowledge and skills related to the endorsement area
B	All	Backfill: Ensuring that bedding material meets specified requirements Ensuring the soil compaction meets specified requirements Correct placement of marker tape
C	All	Clear and Grade: Manage survey marker placement procedures Ensuring environmental and cultural compliance
D	All	Ditching: Ensuring compliance with regulator standards related to excavation Selection and ensuring correct operation of required plant, tools and equipment for various ground conditions
E	All	Hydro Testing: Ensuring the suitability and/or availability of water source for testing and practicable disposal Ensure effective safety

		incidents Appropriate motor vehicle license and skills training for ROW driving Accurate calculations for determining sequence of delivery of pipes Bending Procedures. Understand capabilities of bending plant, equipment and tools Understanding the consequence of shifting centres of gravity Trigonometric calculations for bending procedures
J	All	Welding: Ensuring welding joints are performed in accordance with welding procedures Ensuring welding plant, equipment and tools are suitable to produce welded joints that meet specified requirements Ensuring relevant OHS procedures are applied, particularly in relation to working with potentially dangerous tools and equipment in a high temperature environment

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in maintaining pipeline easements.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4) Assessment Method(s):

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the maintaining of pipeline easements.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Legislative and regulatory requirements for rigging

Rigging equipment, tools and materials

Crane Truck

Data Collectors

Generator

Permit to Work

Specific unit endorsement outcomes

This competency standard unit is presented as a composite unit that has nine (9) specific outcomes. There are nine (9) distinct endorsable outcomes in which competence can be achieved and which is to be reported. This is done because of the high degree of commonality in knowledge, process or function. Reporting the unit with the inclusion of an endorsement allows for the formal identification of the necessary applied skills related to workplace outcomes and at the same time reflects the work classification(s) generally understood by industry. The specific unit outcomes are:

1. Backfill
2. Clear and Grade
3. Ditching
4. Hydro Testing
5. Joint Coating
6. Lower and Lay

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

7. Mechanical (minor maintenance)

8. String and bend

9. Welding

This unit shall be demonstrated against the coordination of construction activities which are directly aligned to the 9 endorsements. These endorsements specify designated plant and equipment. The endorsements and related plant, equipment and other variables are as follows:

Backfill	All	Padding Machine Excavator Grader Dozer Front End Loader Mitsu Bucket
Clear and Grade	All	Dozer Excavator Grader Backhoe Front End Loader
Ditching	All	Excavator Rock Saw Bucket Wheel Trencher General Digging Conditions Hard Digging Conditions

UEGNSG330A Coat Metallic Pipelines

Modification History

This unit is a revised version of the UEG11 unit UEGNSG301A Coat gas pipelines

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the inspection, testing and coating of steel pipelines in a utilities industry workplace in accordance with relevant legislation, code, regulations and procedures.

It encompasses the use of testing and application equipment; coatings used; coating defect assessment surveys; MSDS information and safe handling of chemicals/flammable liquids.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe work site where steel pipelines are located, subject to all Workplace Health and Safety (WHS) / Occupational Health and safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety / Occupational Health and safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) **Elements describe the essential outcomes of a competency standard unit**

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to coat metallic pipelines	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Relevant requirements and established procedures for the work are provided and discussed with relevant persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		confirmed
	1.4	Hazards are identified and reported to relevant persons to assess the risks and implement control measures according to established procedures
	1.5	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, plant, tools and personal protective equipment needed to coat metallic pipelines are identified, obtained and checked for operation and safety
	1.7	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved.
	1.8	Materials, plans, diagrams, drawings and resources required for the job are confirmed and obtained in accordance with established procedures
	1.9	Relevant responsibilities associated with First Aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.
	1.11	Site preparation , safety plan and the work schedule are confirmed in accordance with established procedures
2 Coat metallic pipelines	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		trenches, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements.
	2.3	Existing pipeline coatings are visually inspected to determine condition in accordance with established procedures
	2.4	Pipeline coating is tested to determine its condition in accordance with requirements and established procedures
	2.5	Pipeline is prepared for coating in accordance with established procedures
	2.6	Pipeline is coated where required in accordance with established procedures
	2.7	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.8	Hazard warnings and safety signs are recognised and hazards are assessed and OHS/WHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.9	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.10	Routine quality checks of the work are carried out undertaken in accordance with work instructions.
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Appropriate persons are notified of completion of the work according to established procedures.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.4	Waste materials are disposed of safely and environmentally in accordance with procedures/policies.
	3.5	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.6	Work completion documentation is completed and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the coating metallic pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G330A Metallic pipeline coatings

Evidence shall show an understanding of inspecting, testing and coating of steel pipelines in a utilities industry workplace in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Pipeline coatings

- purpose,
- types,
  - petroleum based wraps
  - epoxy
  - paints
  - PE jackets and sleeves
  - coal tar enamel, include issues with old types that used asbestos
  - rock (protection) jacket
- applications
- properties and characteristics

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- MSDS
  - Specific environmental and OHS requirements of coating substance
  - Safety issues of working in trenches and confined spaces

T2. Cathodic Protection

- overview
- faults and effects
  - stray electrical currents
  - damage to coatings

T3. Pipeline preparation/stripping

- techniques
- tools
- Pipeline coating
- techniques
- tools
- application

T4. Testing pipeline coatings

- requirements
- procedures
- tools and equipment

T5. Pipeline coating defect assessment methods:

- Pipe to soil Off potential measurement
- Data logging
- CP surveys and audits
- Interference testing
- Interference from DC rail traction
- Drainage Bonds (DB)
- TRAD units
- Bond checks

T6. Pipeline coating irregularities, deviations or problems

Evidence Guide

conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency in this unit

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Coat metallic pipelines in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/materials/procedures/ workplaces/other variables		
Group	**The minimum number of items on which skill is to be demonstrate**	**Item List**

Context of and specific resources for assessment

8.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in coating gas pipelines.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the Key Competencies.

Method of assessment

8.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) **This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.**

This Competency Standard Unit shall be demonstrated in relation to the coating of metallic pipelines in accordance with relevant legislation, code, regulations and procedures.

This will include the use of appropriate tools, equipment and materials to test the existing coating, assess the defects, and prepare and coat the pipework.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Testing and application equipment
- Coatings
- Coating defect assessment
- MSDS

UEGNSG331A Establish right of way access for transmission pipeline construction

Modification History

This unit is a revised version of the UEG11 unit UEGNSG320A Establish right of way access for transmission pipeline construction

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the establishing right of way access for gas transmission industry in accordance with relevant legislation, standards, codes and established procedures.

It encompasses the provision of access for operators to survey, clear, ditch, lower in, backfill and reinstate the pipeline easement and covers; Access preparation; Permits; Verification and identification of 3rd party assets; Environmental and cultural heritage controls.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any basic and safe work site where Gas transmission pipeline construction operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract

© Commonwealth of Australia, 2025 Powering Skills Organisation

of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) **Elements describe the essential outcomes of a competency standard unit**

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to establish right of way access for transmission pipeline construction	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Topographical and geographical maps are confirmed and relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.4	Suggestions to assist with construction of Right Of Way for easements are made to others involved in the work.
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.7	Tools, equipment and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for operation and safety.
	1.8	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.9	Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures.
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Establish right of way access for transmission pipeline construction	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and requirements
	2.4	Work area is cordoned off and made safe for the construction of pipeline easements in accordance with established procedures.
	2.5	Construction of a pipeline easement is carried out efficiently, in an agreed timeframe and to required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.6	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.7	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.8	Remedial action associated with the access for pipeline construction is dealt with in accordance with established procedures.
	2.9	Routine quality checks are carried out in

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		accordance with work instructions
3 Complete work activities and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work site is rehabilitated, cleaned up and made safe in accordance established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) **This describes the required skills and knowledge and their level, required for this unit.**

Evidence shall show that knowledge has been acquired of safe working practices for using of equipment and tools to perform work in a transmission pipeline construction industry work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

KS01-G331A Right of way access for transmission pipeline construction

Evidence shall show an understanding of establishing right of way access for transmission pipeline construction in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, regulations, codes

T2. Enterprise procedures, plans and drawings

T3. Relevant safety hazards and mitigation measures

- Vehicles in rough terrain
- Natural emergencies – e.g. bushfire
- Fauna control – e.g. snakes and ticks

T4. Surveying right of way

T5. Survey markers and off set markers, their meaning and relevant work applications.

T6. Exposing, surveying and re-instating ((third party) assets safely and effectively

- use of marker tape, bedding materials, marker post signage

T7. Clear and grade

T8. Environmental and cultural hazard and mitigation measure for right of way

T9. Vegetation clearing

T10. Top soil management

T11. Weed mitigation

T12. Erosion and sediment control

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria

© Commonwealth of Australia, 2025 Powering Skills Organisation

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Establishing right of way access for transmission pipeline construction as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A Procedures	All	OHS, environmental and cultural legislative and regulatory requirements. Interpret survey set out. Follow third party procedures for verification and identification of assets

© Commonwealth of Australia, 2025 Powering Skills Organisation

		to ensure their preservation. Abiding by restrictions of the Right of Way and access. Erosion control processes. Choose and operate appropriate plant for ground conditions (separation of top soil, sub soils etc.).
B Unplanned events	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG136A	Carry out transmission pipeline construction work activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

9) **This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.**

This unit shall be demonstrated in relation to establishing pipeline easements in accordance with relevant legislation, standards, codes and established procedures.

This includes the application of relevant WHS/OHS, environmental and cultural legislative and regulatory requirements, interpretation of survey set out, following third party procedures for verification and identification of assets, abiding by restrictions of the Right of Way and access, erosion control processes, and selecting and operating appropriate plant autonomously on at least two occasions.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Access preparation
- Permit to Work
- Permit to Access Land
- Approval for construction
- Stake holder approvals
- Verification and identification of third party assets
- Environmental and cultural heritage controls

UEGNSG332A Undertake hydro-testing for transmission pipeline construction

Modification History

This unit is a revised version of the UEG11 unit UEGNSG321A Undertake hydro-testing for transmission pipeline construction.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers undertaking the basic tasks required for hydro-testing on gas transmission pipelines construction worksites in accordance with relevant legislation, regulation, codes and procedures.

It encompasses the fundamentals of hydro-testing, equipment and plant used, safety and environmental hazards and specific risks associated with hydro-testing and exclusion zones.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, antidiscrimination and training.

Commonwealth, State/Territory or Local government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	industry
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full

© Commonwealth of Australia, 2025 Powering Skills Organisation

can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Workplace Health and Safety/Occupational Health and Safety workplace procedures and practices

© Commonwealth of Australia, 2025 Powering Skills Organisation

including the use of risk control measures as specified in the Performance Criteria and range

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Carry out hydro-testing of transmission pipeline construction work activities as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Operate in a safe manner • Practical working knowledge of ASNZ2885.5 • Understand and respond to instructions relayed by Hydro Test Engineers (NATA Accredited Auditor)
B	All	• Competent Operation of Fill and Squeeze Pumps • Competent Operation of Pressure Pumps • Competent Operation of Break Tanks • Competent Operation of Victullic Piping • Competent Operation of Dead Weight Tester

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Competent Operation of Temperature Probes • Competent Operation of Test Shack • Competent Operation of Gauges • Competent Operation of Compressors • Competent Operation of Data Collectors • Competent Operation of Test Headers • Competent Operation of Cleaning Headers • Competent Operation of Gauging Plate • Competent Operation of Drying Plant • Competent Operation of After Cooler • Competent Operation of Pig • Competent Operation of Chart Recorder • Competent Operation of Generator • Competent Operation of Lighting Towers
C	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in maintaining pipeline easements.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG136A	Carry out transmission pipeline construction work activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation hydro-testing on gas transmission pipelines construction worksites in accordance with relevant legislation, regulation, codes and procedures autonomously on at least two occasions. This includes the use of includes Fill and Squeeze Pumps, Pressure Pumps, Break Tanks, Victullic Piping, Dead Weight Tester, Temperature Probes, Test Shack, Gauges, Compressors, Data Collectors, Test Headers, Cleaning Headers, Gauging Plate, Drying Plant, After Cooler, Pig, Chart Recorder, Generator, Lighting Towers

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

- Crane Truck
- Side Boom
- Rough Terrain Crane
- Fill and Squeeze Pumps
- Break Tanks
- Victullic Piping
- Dead Weight Tester
- Temperature Probes
- Test Shack
- Gauges
- Compressor
- Data Collectors
- Test Header
- Cleaning Headers
- Gauging Plate
- Drying Plant
- After Cooler
- Pig
- Chart Recorder
- Generator
- Lighting Towers

UEGNSG333A Work in proximity of transmission pipeline construction plant and equipment

Modification History

This is a new unit which replaces the UEG11 unit UEGNSG323A Operate transmission pipeline construction plant and equipment

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers working in proximity of gas transmission construction plant and equipment in accordance with relevant legislation, code, regulations and procedures.

It encompasses the operating parameters and safety issues of a range of specific plant and equipment dedicated to the construction of transmission pipelines.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any safe transmission pipeline construction work site, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work in proximity of plant and equipment for transmission pipeline construction	1.1 WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2 Relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.3 WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed
	1.4 Easement is inspected and assessed to determine relevant requirements in accordance with standard operating procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.6 Scope of responsibility under the relevant work permit and/or relevant notification is received and confirmed with relevant persons according to requirements and established procedures
	1.7 Equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for operation and safety
	1.8 Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.9 Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.10 Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.11 Third party issues are referred to appropriate persons in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.12 Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Work in proximity of plant and equipment for transmission pipeline construction	2.1 WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2 Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3 Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements
	2.4 Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.5 WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.6 Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.7 Remedial action associated with constructing pipeline easements is dealt with in accordance with established procedures
	2.8 Routine quality checks are carried out in accordance with work instructions
3 Complete work and relevant documentation	3.1 WHS/OHS risk control work completion measures and procedures are followed.
	3.3 Work site is tidied and made safe in accordance with established procedures
	3.4 Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.5 Appropriate persons are notified of work completion according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	established procedures
	3.6 Work completion documentation is completed accurately and provided to appropriate persons in accordance with and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G333A Application of Plant Equipment in the Construction of Transmission Pipeline

Evidence shall show an understanding of working in proximity of transmission pipeline construction plant and equipment in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Plant and equipment types, purpose and basic operation

- Compressors
- Grader
- Dozer
- Excavator
- Vacuum lift
- Bending machine
- Bending machine & mandrel
- Internal line up clamp
- Tack Rig
- Side Boom
- Roller Cradles
- Trenching Equipment
- Bucket Wheel trencher
- Grit Blasting Unit
- Thermal Coil

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Padding machines
- Mitsu Bucket
- Crane (Rough Terrain)
- Crane Truck
- Flood pump
- Squeeze pump
- Drying Plant
- Heavy duty mulching machines

T2. Safe operating parameters

- hand signals
- safety hazards

T3. Relevant legislation, regulations and codes

- Licencing requirements

T4. Enterprise procedures

T5. Construction sequence

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Working in proximity of transmission construction plant and equipment in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

    B. Identifying the plant and equipment and their safe operating parameters/requirements

    C. Working in proximity of transmission construction plant and equipment in accordance with requirements

    D. Completing required documentation and reporting.

    E Dealing with unplanned events by drawing on required skills and knowledge, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required Skills and Knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to working in proximity of transmission construction plant and equipment in accordance with relevant legislation, code, regulations and procedures. This will include the following range of plant and equipment:

Backfill	At least 1 of the listed items of plant and equipment	Padding Machine Excavator Grader Dozer Front End Loader
Clear and Grade	At least 1 of the listed items of plant and equipment	Dozer Excavator Grader Backhoe Front End Loader
Ditching	At least 1 of the listed items of plant and equipment	Excavator Rock Saw Bucket Wheel Trencher
Hydro Testing	At least 1 of the listed items of plant and equipment	Crane Truck Side Boom Rough Terrain Crane
Joint Coating	At least 1 of the listed items of plant and equipment	Sand Blasting Rig (Skid Steer) Over Ditch Wrapping Machine Thermal Coil
Lower and Lay	At least 1 of the listed items of plant and equipment	Side Boom with Roller Cradles Excavator

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

Mechanical (minor maintenance)	At least 4 of the listed items of plant and equipment	Excavator and Vacuum Lift Bending Machine and Mandrels Internal Line up Clamp Tack Rig Side Boom Roller Cradles Rock Saw Bucket Wheel Trencher Thermal Coil Over Ditch Wrapping Machine Padding Machines Mitsu Bucket
String and bend	At least 1 of the listed items of plant and equipment	Excavator Bending Machine with Mandrels Side Boom
Welding	At least 1 of the listed items of plant and equipment	Side Boom Internal Line up Clamp Tack Rig

UEGNSG342A Maintain pipeline easements

Modification History

This unit replaces UEGNSG302B Maintain pipeline easements

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers maintaining gas pipeline easements to ensure the easement is secure and effective in accordance with relevant legislation, standards, codes and established procedures.

It encompasses inspecting and maintaining the physical condition of the easement and associated infrastructure (signage, fencing and gates) through vegetation, erosion and encroachment management.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where utility industry pipeline easements exist, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Inspect and prepare to maintain pipeline easement	1.1	Work instructions are received and confirmed
	1.2	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.3	Topographical and geographical maps are confirmed and relevant requirements and established procedures for the site are discussed with relevant persons to establish and confirm the work schedule.
	1.4	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed
	1.5	Easement is inspected and assessed using appropriate mediums and civil activities to determine the maintenance required in accordance with standard operating procedures relevant requirements
	1.6	Suggestions to assist with maintaining pipeline easements are made to others involved in the work
	1.7	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored clear according to established procedures
	1.8	Scope of responsibility under the relevant work permit/authorization is received and confirmed with relevant persons according to requirements and established procedures
	1.9	Tools, equipment and personal protective equipment required to carry out the work are identified, obtained and checked for operation and safety
	1.10	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures
	1.11	Relevant responsibilities associated with related work safety and emergency procedures for an incident at the worksite are checked confirmed
	1.12	Client issues are referred to appropriate persons in accordance with industry and community standards
	1.13	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Maintain pipeline easement and surrounding environment	2.1	WHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.2	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and requirements
	2.3	Work area is isolated and made safe and civil activities and maintenance of pipeline easements is carried out in accordance with given instructions and established procedures
	2.4	Easement maintenance is carried out efficiently in an agreed timeframe and to required standards with a minimum of waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles
	2.5	WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.6	Procedures for referring non-routine events to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		the immediate authorised persons for directions are followed
	2.7	Remedial action associated with maintaining pipeline easements are dealt with in accordance with established procedures
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	WHS risk control work completion measures and procedures are followed.
	3.2	Pipeline easement is monitored to ensure pipeline integrity and the work undertaken is checked against work schedule and anomalies reported to authorised persons in accordance with established procedures
	3.2	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for maintaining pipeline easements to perform work in a utilities industry work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the essential knowledge and associated skills (EKAS) required is provided below. It forms an integral part of this unit.

KS01-G342A Pipeline easement maintenance

Evidence shall show an understanding of inspecting and maintaining pipeline easements in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, regulations, standards and codes

T2. Easement maintenance requirements under AS2885

T3. Easement access

- topographical and geographical maps
- pipeline route and appropriate method for accessing pipeline
- enterprise procedures, plans and drawings

T4. Relevant safety hazards and mitigation measures

- Vehicles in rough terrain
- Natural emergencies – e.g. bushfire
- Fauna control – e.g. snakes and ticks
- Environmental and cultural hazards
- PPE and MSDS/SDS

T5. Inspect pipeline easement

- procedures
- tools and equipment
- gathering evidence of required maintenance

T6. Maintenance of signage, access points and fencing

T7. Vegetation control and weed mitigation

- regulations
- monitoring
- maintenance procedures
- tools and equipment

T8. Erosion control

- regulations
- causes
- monitoring
- prevention and maintenance procedures
- tools and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T9. Civil works activities which may affect pipeline easement (laying geo-textile, gabion baskets, concreting, reseeding of environment, cased crossings)

T10. Reporting and documentation

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing

© Commonwealth of Australia, 2025 Powering Skills Organisation

on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
  - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Inspecting and maintaining pipeline easements as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Requirements	All	• OHS and environmental legislative requirements • Erosion control documentation • Vegetation control documentation • Pipeline alignment drawings • Topographical maps • Geographical maps • Pipeline access route manuals • MSDS information
B. Maintenance procedures	All	• Laying of geo-textile • Gabion baskets • Concreting • Reseeding the environment • Cased crossings • Fauna and flora control • Communicating with third parties
C. Unplanned events	At least one occasion	Respond to an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above

UEGNSG344A Commission or decommission gas transmission pipelines

Modification History

This unit replaces the UEGNSG304B Commission or decommission gas transmission pipelines

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the commissioning and decommissioning of gas transmission pipelines in accordance with relevant legislation, standards, codes and established procedures.

It encompasses fundamentals of commissioning/ decommissioning in accordance with Australian Standard AS2885; relevant legislation controls; planning, undertaking and completing an activity; enterprise procedures; and stakeholder and record management.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where gas transmission operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare and plan to commission/decommission gas transmission pipelines	1.1	Work schedule(s), including drawings, plans, requirements, established procedures and material lists are received, analysed and confirmed if necessary by site inspection
	1.2	WHS/OHS and environmental measures for the sites are identified, obtained and understood.
	1.3	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.4	WHS/OHS, environmental and sustainable energy policies and procedures are obtained and confirmed and communicated
	1.5	Work is prioritised and sequenced by management following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.6	Hazards are identified, WHS/OHS risks are assessed and control measures are prioritised, implemented and monitored against the work schedule and established procedures.
	1.7	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.8	Scope of responsibility under the relevant work permit/authorization is received and confirmed with relevant persons according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and established procedures
	1.9	Resources including persons, equipment, tools, materials, plans, specifications and personal protective equipment required to carry out the work are identified, scheduled and obtained and checked for operation and safety
	1.10	Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures according to requirements
	1.11	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work by management
	1.12	Pipeline in check for readiness (cleaned, pigged, bypassed, etc.) for commissioning/ decommissioning
	1.13	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.14	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed in accordance with established procedures
	1.15	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2 Commission/decommission gas transmission pipelines	2.1	WHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		techniques and practices are conducted safely accordance with given instructions and requirements
	2.4	Commissioning/ decommissioning of gas transmission pipelines is carried out efficiently in an agreed timeframe and to required standards with a minimum of waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles
	2.5	Commissioning/decommissioning of gas transmission pipelines is carried out in accordance with the work schedule and to requirements/established procedures
	2.6	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.7	Adjustments are made for unplanned events in commissioning/decommissioning of gas transmission pipelines are undertaken within the scope of established procedures
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed
	2.9	Reports and ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed
	3.2	Tools and equipment appropriate to the testing requirements are selected and work undertaken is checked against works schedule for conformance with requirements, anomalies are reported in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.3	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.4	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.5	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and stored securely in accordance with established procedures
	3.6	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.7	Final inspections are undertaken and work completion documentation is finalised and processed accurately and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the commissioning/decommissioning of gas transmission pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the Required Skills and Knowledge required is provided below. It forms an integral part of this unit.

KS01-G344A Transmission pipeline commissioning and decommissioning

Evidence shall show an understanding of commissioning and de-commissioning gas transmission pipelines in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Legislative, standards, codes and OHS and environmental requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- requirements for and use of qualified specialists
- establishing the appropriate worksite

T2. Site preparation

- identify equipment, pipes, fittings, purge substances
- pipeline and component specifications
- apply purge volume and time tables and charts

T3. Environmental and safety hazards

- risks and control measures
- site emergency procedures

T4. Fundamentals of pipeline commissioning/decommissioning

- Purpose
- Bring pipeline systems online, taking systems offline
- Purging the pipe system
- Ensuring security of supply
- Testing and sealing of pipes
- Fit bypass apparatus
- Regulating and monitoring system pressure
- Hazards and risks

T5. Tools and test equipment for commissioning and decommissioning

- Types, applications, use, handling, maintenance and storage

T6. Testing, adjusting, calibrating and repairing systems

- requirements procedures, precautions

T7. Enterprise procedures for de-commissioning

- bringing/taking pipeline system on/off line
- effect on distribution system
- fitting bypass apparatus ensuring continuity of supply
- stopping off and isolation of pipelines using internal and external stop off equipment
- monitoring of system pressure at appropriate locations depending on network design and operating conditions
- regulating and maintaining system pressures
- test and verify

T8. Enterprise procedures for commissioning

- checking pipework is ready (tested, pigged, etc.)
- purging the pipe system using a variety of media and testing procedures
- testing and sealing of pipelines,
- odour level requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- effect on distribution system
- monitoring of system pressure at appropriate locations depending on network design and operating conditions
- regulating and maintaining system pressures
- equipment faults
- test and verify

T9. Stakeholder and record management

- Communications and approvals
- Recording and reporting

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Commission and de-commission gas transmission pipelines as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Relevant knowledge of AS 1697 • Relevant knowledge of AS 2885 • Relevant knowledge of AS 2865 • Interpret technical drawings and symbols. • Documentation complete/correct • Approvals from authorities complete/correct. • Emergency Response procedures • Environmental Code of Practice applied. • Communicate with other authorities and Stakeholders.
B	At Least 2	• Steel pipeline coating repair • Steel pipeline coating testing • Steel field joint coating
C	All	• Purging Procedures • Compliance with AS 2885 • Operation of Gas Detector • Isolate, vent and purge gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

		pipeline systems • Communication with authorities • Environmental issues.
D	At Least 2	• City Gate operation (Pressure Regulator knowledge) • Line Valve operation • Pressure control procedure
E	All	• Basic understanding only: • Trenching • Shoring
F	All	• Basic understanding only: • Pipeline Cathodic Protection. • Relevant electrical safety.
G	All	• Pressure is according to specifications • Final Inspections are carried out • Site rehabilitation carried out • Sign Off Procedures carried out
H	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG140A	Apply environmental policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to commissioning/ decommissioning gas transmission pipelines.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate Persons
- Tools, Materials and Equipment
- Appropriate Authorities
- Pipeline Systems
- Documentation
- Tools, materials and equipment

UEGNSG346A Launch and recover PIGs in gas transmission pipelines

Modification History

This unit replaces UEGNSG306B Pipeline pigging in gas transmission pipeline

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the preparation, launch and recovery of PIGs (Pipeline Inspection Gauge) in gas transmission pipelines to inspect and ensure the pipeline is clean and dry with no obstructions, in accordance with relevant legislation, standards, codes and established procedures.

It also encompasses liaising with stake holders; analysing and interpreting the pigging data: testing and inspecting; using manufacturer's and company procedures.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas transmission pipelines, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare and plan for pigging gas transmission pipeline	1.1 WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2 Relevant requirements and established procedures for the work are communicated to all

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		relevant to establish and confirm the work schedule, including drawings, plans, requirements and established procedures
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are obtained, confirmed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritized, implemented, and monitored according to established procedures
	1.6	Scope of responsibility under the relevant work permit and/or relevant notification is obtained and confirmed with relevant persons to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in a safe working order
	1.8	Relevant responsibilities associated with First Aid and other related work procedures for an incident are checked and confirmed
	1.9	Liaison and communication issues with stakeholders are carried out effectively.
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
	1.11	Site PIG, station and pipeline are prepared according to procedures to minimise risk and damage in accordance with established procedures
	1.12	Persons participating in the work, including plant operators and contractors are fully briefed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and respective responsibilities confirmed where applicable in accordance with established procedures
	1.13	Signage, barriers and warning devices are positioned in accordance with requirements
2 Launch and recover transmission pipeline PIG	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools are performed safely according to procedures, codes and legislation
	2.4	The launch, tracking and recovery of a gas transmission pipeline PIG is carried out in accordance with the work schedule and to established procedures
	2.5	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.6	Hazards are assessed and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.7	Data/results from transmission pipeline pigging operations is gathered/retrieved and analysed to determine internal pipeline conditions in accordance with requirements and established procedures
	2.8	Tests and inspecting of the pipeline and pigging equipment is conducted in accordance with requirements and established procedures
	2.9	Procedures for referring non-routine events to the immediate authorized persons for direction

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		are followed.
	2.10	Known solutions to a variety of problems are applied
	2.11	Ongoing checks of quality of the work are undertaken in accordance with given instructions and procedures
3 Re-establish transmission pipeline to operational conditions and notify of completion of work	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Inspection of the received PIG is undertaken to determine the wear sustained to the PIG material and anomalies are reported in accordance with established procedures
	3.3	Accidents and injuries are reported in accordance with established procedures where applicable
	3.4	Waste materials are safely disposed of and the work site is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.5	Tools, equipment and any surplus resources and materials are, cleaned, checked and securely stored.
	3.6	Appropriate persons are notified of work completion according to established procedures
	3.7	Relevant work permit(s) are signed off and equipment is returned to service in accordance with procedures
	3.8	Data is accurately recorded and work completion records, reports as modified drawings and documentation and information are finalised and processed and appropriate persons notified

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the launching and recovering of a pig.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G346A PIG launch and recovery

Evidence shall show an understanding of the assembly, launch and recovery of PIGs in gas transmission pipelines to ensure the pipeline is clean and dry with no obstructions in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Types of PIGs and applications

T2. WHS/OHS and environmental requirements for using PIGs

- Risk assessment
- Hazards including high water and air pressure/velocity
- Hazardous and flammable materials
- Noise

T3. Pipeline preparation

- Relevant authorities and persons to be notified and approval requirements
- Types of pipeline materials including steel, plastic, etc.
- New and existing pipelines and stations
- Safety requirements and procedures
- Manufacturers operating instructions and established procedures
- Relevant legislation, standards and codes
- Traps launchers and receivers installed
- Water and waste disposal requirements
- Directional gates/bars installation
- PIG pushing agent (water or air) requirements
- Pipeline Pigging sequence
- Additional preparation for de-commissioned pipelines
- Purging
- De-scaling

T4. Relevant documentation, reporting and communication for Pigging

T5. Pigging a pipeline

- Required set up
- Insertion/launching

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Monitoring and communication
- Checking the cleanliness/dryness of the pipe
- Capture/recovery
- Restoring receiver to normal operation
- Analysis and interpretation of data captured through the pigging process
- Traps
- Anomalies such as ‘stuck pig’
- Dangers
- Waste disposal

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded

result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Pigging gas transmission pipelines in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Interpret technical drawings and symbols • Emergency response procedures in place • Communication with stakeholders • Coordinate work party • Carry out job safety analysis • Obtain work permit • Relevant knowledge of AS 2865
B	At least 3	• Demonstrate knowledge of: • Cleaning pigs • Gauging pigs • Drying pigs • Intelligent pigs • Pig travel time calculations
C	All	• Isolate, vent and purge gas pipeline systems • Operation of gas detector • Operate service locator

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Monitor Hot work Permits
D	`All	• Prepare station and pig trap for launch • Prepare trap for receiving • Launch pig • Receive and recover pig • Return station to normal operation
E	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in, Context of and specific resources for assessment, evidence should show demonstrated competency of Pipeline pigging in gas transmission pipeline.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

License to practice **3)**

During Training:

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the

Employability Skills **5)**

qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare and plan for routine maintenance on transmission pipeline facilities and equipment	1.1	Work schedule including drawings, plans, requirements, established procedures and material lists are received and checked
	1.2	Relevant technical, WHS/OHS and environmental requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	Work is prioritised and sequenced following consultation with stake holders in accordance with established procedures
	1.4	Hazards are identified, WHS/OHS risks control measures for identified hazards are prioritised, implemented and monitored to achieve as low as reasonably practicable (ALARP) risk level.
	1.5	The facilities/equipment are made safe by ensuring it is safely isolated, depressurised, tagged and locked out and a permit to work is obtained to access and perform work according to established procedures.
	1.6	Resources including appropriately licensed persons, equipment, tools and personal

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		protective equipment required for the job are identified, obtained and checked for safety and operation.
	1.7	All members of the work party are suitably qualified and experienced to perform the required work activities.
	1.8	Liaison and communication issues with stakeholders are performed effectively.
	1.9	Site is prepared according to the work schedule to minimise risk and damage in accordance with established procedures.
	1.11	Members of the work party are fully briefed about the permit conditions and respective responsibilities confirmed
	1.12	Signs, barriers and warning devices are positioned in accordance with requirements
2 Perform routine maintenance on transmission pipeline facilities and equipment	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools are performed safely according to procedures, codes and legislation
	2.4	Routine maintenance of transmission pipeline facilities and equipment is performed in accordance with procedures in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Hazard warnings and safety signs are complied with and WHS/OHS risks are reported to the immediate authorised persons for directions

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		according to established procedures
	2.6	Unplanned events are safely resolved in accordance with established procedures.
	2.7	Known solutions to a variety of problems are applied using required Knowledge and Skills
	2.8	Ongoing checks of quality of the work are undertaken in accordance with established procedures.
3 Complete work and relevant documentation	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported in accordance with established procedures.
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Work completion records, reports as installed, modified, drawings, documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

performing routine maintenance on transmission pipeline facilities and equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G347A Transmission pipeline maintenance

Evidence shall show an understanding of the performing routine maintenance on transmission pipeline facilities and equipment in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant WHS/OHS, emergency and environmental requirements and procedures

T2. Relevant Australian Standards, codes and regulations requirements

T3. Types of pipeline facilities and equipment to be inspected and tested

T4. Tools, equipment, instruments, PPE and emergency equipment required

T5. Manufacturers specifications, manuals, part lists, calibration forms, checklists

T6. On site risk assessment

T7. Leakage surveys and pin pointing gas leaks

T8. Isolation, depressurisation, tagging and lockout of pipeline facilities and equipment requirements and procedures, this includes valves, flanges, fittings, markers and signs

T9. Routine inspection and testing of pipeline facilities and equipment requirements and procedures.

T10. Maintenance activities requirements and procedures

T11. Faults managed during routine maintenance

T12. De-isolation all sources of energy, removal of tags and locks and return to normal operation requirements and procedures

T13. Communication and recording/reporting documentation requirements and procedures

Evidence Guide

EVIDENCE GUIDE

8) *The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Perform routine maintenance on transmission pipeline facilities and equipment in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**

© Commonwealth of Australia, 2025 Powering Skills Organisation

A.	All	• Relevant knowledge of AS 2885 • Relevant knowledge of AS 2865 • Interpret technical drawings and symbols. • Documentation (permits, schedules) • Perform effective Risk assessments • Communicate effectively with stakeholders • Response effectively to Emergencies • Comply with Environmental Codes of Practice
B.	All	• Approved isolation, venting, purging and re-pressurisation procedures • AS 2885 requirements • Correctly operate gas detectors • Communication effectively with stakeholders • Protect the environment
C.	At Least 2	Basic knowledge of: • City Gate operation. • Line Valve operation • Pressure control stations
D.	All	Basic understanding of: • Cathodic Protection. • Electrical safety. • Electrical bonding requirements
E.	All	• Restore all site isolations • Perform site inspections • Update Drawings/plans • Complete forms and Reports

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Close work permits
F.	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in performing routine maintenance on transmission pipeline facilities and equipment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods

© Commonwealth of Australia, 2025 Powering Skills Organisation

given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for*

UEGNSG348A Supervise the operation of plant and equipment for the construction of gas transmission pipelines

Modification History

This unit replaces UEGNSG328A Supervise the operation of plant and equipment for the construction of transmission pipelines

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the supervision of personnel who operate plant and equipment used in the construction of transmission pipelines.

This unit encompasses the functions undertaken for transmission pipeline construction; interpreting instructions; the capabilities and the limits of plant, equipment and tools; and communication and supervision.

It also includes supervising the operations to ensure workplace/occupational health and safety, environmental and cultural heritage issues are effectively addressed in the transmission pipeline construction process.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any gas transmission pipeline construction site, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG004A	Locate, prove and protect utility assets
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a utilities industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare work schedule for the use of plant and equipment	1.1	Work instructions are received and confirmed
	1.2	Relevant WHS/OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.3	Work schedule is checked to ensure the resources and skills required have been checked for compliance in accordance with standard operating procedures and manufacturers specifications
	1.4	Discussion occurs with all persons to establish and confirm work schedule, responsibilities and capabilities
	1.5	Information regarding previous work activities is sought and appropriate actions taken with regard to current work schedule and use of plant and equipment
	1.6	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures
	1.7	Scope of responsibility under the relevant work permit are received and confirmed according to requirements and established procedures with relevant persons
	1.8	Relevant responsibilities associated with first aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures
2 Supervise operations as per the work schedule	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Instructions are provided for any remedial action associated with plant and equipment operation according to established procedures
	2.3	Instructions are provided to operators to ensure the work area is made safe in accordance with established procedures
	2.4	Hazards and risks related to safety and plant operation are identified through the application of operational knowledge and action is taken in accordance with established procedures
	2.5	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.6	Remedial action is taken using known solutions to ensure work schedule is met
	2.7	Supervision of plant and equipment operation is undertaken and ongoing checks are undertaken in accordance established procedures
3 Complete work and relevant documentations	3.1	Plant and equipment usage is checked against the work schedule and anomalies are reported to authorised persons in accordance with established procedures
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		with established procedures
	3.3	Supervision of shutdown procedures is performed in accordance with established procedures to ensure environmental compliance and condition of plant and equipment is maintained
	3.4	Tools, plant and equipment and any surplus resources and materials are, where appropriate, cleaned, checked and securely stored
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for using of equipment and tools to perform work in a utilities industry work environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G348A Transmission pipeline construction plant and equipment supervision

Evidence shall show an understanding of supervising the operation of plant and equipment for the construction of gas transmission pipelines in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant state or territory legislation, regulations and codes

- requirements
- procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T2. Supervisory and leadership

- techniques
- work and equipment plans and schedules
- workforce supervision
- contingency planning and management
- project and time management
- diagnostic techniques

T3. Information and communication

- interpreting, applying and communicating information:
  - manufacturers manuals
  - requirements and procedures
  - technical information and drawings
  - site plans
  - basic geological and technical data
- site communication techniques
  - hand signals
  - satellite phones
  - radios
- stakeholders

T4. Transmission pipe construction techniques and equipment

- equipment and tools
  - characteristics and operation
  - technical capabilities
  - applications and limitations
- construction activity procedures
- manual handling techniques used in accordance with WorkSafe standards
- site and equipment safety requirements and procedures
  - Risk assessment
  - PPE
  - Hazardous materials
  - Confined spaces
  - Gas detection
  - MSDS
  - Spill kits
  - Emergency and incident response
- quality assurance procedures

T5. Environmental requirements and procedures

T6. Cultural and Heritage awareness requirements and procedures

T7. Construction materials: properties, characteristics and applications

T8. Relevant documentation, forms and reports

Evidence Guide

EVIDENCE GUIDE

8) *The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.*

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered

© Commonwealth of Australia, 2025 Powering Skills Organisation

will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of

© Commonwealth of Australia, 2025 Powering Skills Organisation

contexts from the prescribed items below:

- Supervise the operation of plant and equipment for the construction of gas transmission pipelines in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	Application of organisational management systems and procedures for occupational health and safety which includes: • identifying hazards, • managing risk through the incorporation of effective control measures.
B	All	Working Knowledge of the standard operating procedures and the effective and safe use of Transmission Pipeline Construction small plant and equipment including the following: • General concrete mixer • General trolley • Non pressurised pumps and hoses • Wheelbarrows • Traffic barriers • Extra low voltage lighting equipment • Hand held tools • Gas detectors • Holiday detection equipment • Power tools • Pressurised pumps and hoses • Hand wrapping machines

© Commonwealth of Australia, 2025 Powering Skills Organisation

C	All	Ability to communicate instructions to transmission pipeline construction workforce, contractors and stakeholders, including communication with ground crew during operations.
D	All	Working Knowledge of relevant legislation, regulations, codes of practice, standards, policies, procedures and permits pertaining to transmission pipeline construction operations.
E	All	Working knowledge of the relevant cultural heritage requirements for transmission pipeline construction operations.
F	All	Working Knowledge of relevant occupational health and safety requirements for Transmission Pipeline Construction Operations including the following: • Procedures for using dial before you dig service or its equivalent. • Location of other services such as utilities and rail and other transport infrastructure. • Effectively use MSDS sheets • Prepare Job Hazard Analyses • Implement control measures for identified Hazards • Hazardous area requirements adhered to • Correct use of PPE appropriate to Gas Industry • Hazard identification in pipeline construction • Safe manual handling techniques
G	All	Read and interpret transmission construction maps and drawings including the identification of

© Commonwealth of Australia, 2025 Powering Skills Organisation

		key information such as symbols.
H	All	Ability to read, interpret and instruct subordinate staff on transmission construction procedures and other documentation.
I	All	Demonstrate a strategy for the coordination of an effective response to a transmission pipeline construction emergency.
J	All	Demonstrate a strategy for protecting the environment whilst constructing a transmission pipeline that incorporates the following items: • Installation of siltation control methods such as straw and synthetic bails • Curb side filter rolls • Erosion prevention • Weed spread mitigation • Application of MSDS information • Noise control techniques • Odourant handling and testing processes • Excavation restoration, compaction and seeding • Applying green tagging for flora and fauna habitat • Application of cultural heritage awareness and protection requirements for a pipeline construction site
K	All	Demonstrate a strategy for dealing with an environmental incident that includes the following items: • Control and minimise the impact of an environmental incident • Control environment incident

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Incident Investigation • Applying incident reporting and notification procedures • Review environmental incident • Make recommendations to prevent reoccurrence • Implement recommendations
L	All	Working knowledge of transmission pipeline construction functions which include the following: • Backfill • Clear and Grade • Ditching • Hydro Testing • Joint Coating • Lower and Lay • Mechanical (Minor Maintenance) • String and Bend • Welding
M	All	Working Knowledge of the safe and efficient operation, including regulatory requirements, and maintenance schedule for large plant and equipment including the following: • Dozer • Excavator • Grader • Backhoe • Front End Loader • Side Boom • Internal Line Up Clamp • Tack Rig: Dozer or Skid Steer • Grit Blasting Rig: • Side Booms with Roller Cradles • Crane Truck: Heavy Rigid Truck

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Rough Terrain Crane Note: the candidate will be expected to ensure that the equipment is operated by appropriately authorised/licensed personnel.
N	At Least 2 of the items in the list	Working Knowledge of the safe and efficient operation, including regulatory requirements, and maintenance schedule for large plant and equipment including the following: • Excavator with vacuum lift • Bending Machine with Mandrel • Rock Saw • Bucket Wheel Trencher • Over ditch Wrapping Machine • Thermal Coil • Padding Machines • Traffic Control Note: the candidate will be expected to ensure that the equipment is operated by appropriately authorised/licensed personnel.
O	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in maintaining pipeline easements.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit.

Range Statement

UEGNSG349A Carry out surveillance of gas transmission pipelines

Modification History

This unit replaces UEGNSG329A Gas transmission pipeline surveillance.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the ground surveillance of gas transmission pipelines in accordance with relevant legislation, standards, codes and established procedures including the procedures found under Australian and New Zealand Standard AS 2885.3.

It encompasses threat mitigation through identification of system non-conformance; areas to be monitored; inspection of areas; system's pipe work; structures; fittings; equipment; organisational and statutory requirements; and recording and reporting.

Note: Aerial surveillance is not covered by this unit, it is covered by UEGNSG353A Carry out aerial surveillance of gas transmission pipelines

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas transmission pipelines, subject to all Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to carry out surveillance of gas transmission pipelines	1.1 WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2 Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are obtained, confirmed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures and surveillance KPIs
	1.5	Hazards are identified, WHS/OHS risks are assesses and control measures are prioritised, implemented and monitored against the work schedule and established procedures.
	1.6	Scope of responsibility under the relevant work authorization, permit and/or relevant notification are received and confirmed with relevant persons according to established procedures.
	1.7	Resources including plant, equipment, tools and personal protective equipment required for gas pipeline surveillance work are identified, obtained checked for correct operation and safety r
	1.8	Liaison and communication issues with authorised persons, authorities and clients are resolved and activities coordinated
	1.9	Persons participating in the work are fully briefed and respective responsibilities confirmed in accordance with established procedures
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out surveillance of gas transmission pipelines	2.1	WHS/OHS risk control measures, schedule of work and standard operation procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.3	Dealings with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.4	The work carried out efficiently, to the required standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles
	2.5	Leakages and damaged pipes and fittings are recorded in accordance with the work schedule and established procedures
	2.6	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.7	Unplanned events in pipeline surveillance are undertaken within the scope of established procedures
	2.8	System breaches, faults and the operational condition of the network are identified and reported and known solutions are applied in accordance with established procedures
	2.9	Pressure and flow fluctuations outside acceptable limits are investigated and ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
	2.10	The key issues are identified and required solutions/options are developed, communicated and implemented in accordance with established procedures
	2.11	Routine quality checks are carried out in accordance with work instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete work and relevant documentation	3.1	WHS risk control work completion measures and procedures are followed.
	3.2	Work area is tidied and made safe according to established procedures
	3.3	Tools and equipment are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of the work completion, non-conformances and proposed solutions/options are reported in accordance with established procedures
	3.5	Work completion records, reports and documentation are finalized, processed and provided to appropriate persons in accordance with established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the essential knowledge and associated skills (EKAS) required is provided below. It forms an integral part of this unit.

KS01-G349A Transmission pipeline surveillance

Evidence shall show an understanding of carrying out surveillance on gas transmission pipelines in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. OHS and emergency procedures and environmental, cultural and heritage requirements in relation to pipeline surveillance

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Duty of care, risk assessment
- flora, fauna, working outside

T2. Documentation and communication relevant to pipeline surveillance including:

- Topographical and geographical maps (including GPS/GIS information)

T3. Stakeholder rights and responsibilities

T4. Third parties

- land holder engagement
- third party activities
- authorities to stop 3rd party activities
- monitoring of third party civil works including:
  - excavation shoring requirements
  - separation distances
  - flora and fauna control
- third party protection methods

T5. Easements and access rights

- protocols to access to pipeline/easement (including gates)
- impediments to access along easements

T6. Procedures and methods of surveillance

- Information gathering techniques
- Route plans
- Foot patrol OH&S and procedures
- Vehicle patrol OH&S and procedures

T7. Overview of pipeline components and their respective functions

- materials
- siphon points
- filtering and separation
- compressor stations
- Signage and gas markers

T8. Field monitoring of pipeline components.

- variation in surface condition, vegetation or fencing etc.
- development encroachment (clearances)
- pipeline fugitive emissions
- identification
- risk assessment.
- first on site remediation

T9. Identification and documentation of potential encroachment

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T10. Pipeline risks managed through surveillance

T11. Escalation processes

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to

© Commonwealth of Australia, 2025 Powering Skills Organisation

safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Carry out surveillance on gas transmission pipelines as described in 9.) Range Statement and including:

  A Identifying and interpreting correctly standards, codes, regulations, drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

  B Selecting correct materials, equipment, tools, personal protection equipment and measurement devices

  C Carry out surveillance on gas transmission pipelines, identifying encroachments and risks and taking appropriate action in accordance with requirements

  D Completing required documentation and reporting.

  E Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency of ground transmission pipeline surveillance.

Assessment of this competency must also be undertaken in either

© Commonwealth of Australia, 2025 Powering Skills Organisation

an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out work basic activities in a gas industry work environment

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to gas transmission pipeline surveillance.

The following constants and variables included in the element/Performance Criteria

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

in this unit are fully described in the Definitions Section.

- Areas to be monitored
- Inspection of areas
- System's pipe work
- Structures
- Fittings
- Organisational and statutory requirements (3)
- Recording and reporting

UEGNSG350A First response to a gas facility event

Modification History

This unit replaces UEG11 unit UEGNSG312B First response to a facility event

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the first response to an unplanned gas facility event, assessing the situation and taking appropriate action as directed in accordance with relevant legislation, code, regulations and established procedures.

It encompasses r managing the site response with the following priorities: protect human life, reduce trauma, maintain systems safety, ensure system supply, protect the environment and protect property.

The unit is applied against the procedures found under the latest edition of Australian and New Zealand Standard AS 2885.3. Facilities could include metering, compressors, valves, regulators, heaters, scraper, telemetry and odourisation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas facilities, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are subject to licence regulation directly related to Workplace/Occupational Health and Safety, gas/ industry safety and compliance, industrial relations, environmental protection, telecommunications, anti- discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG140A	Apply with environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
HLTFA003	Perform first aid
CPPFES2005A	Demonstrate first attack fire fighting equipment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan to conduct first response to a gas facility event	1.1	Details of incident are confirmed with supervisor, control centre or radio room
	1.2	Specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined and the extent of preparation for the work is assessed.
	1.3	WHS/OHS and environmental risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	WHS/OHS, environmental and sustainable

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		energy policies and procedures related to the work are received and confirmed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe working order
	1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
	1.10	Status of the system is sought through communication with pipeline control centre in accordance with established procedures
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Conduct a first response to a gas facility event	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	First Aid and other related work procedures are performed according to requirements and established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
	2.4	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		requirements
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and WHS//OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Operating conditions of equipment are monitored through gauge levels, temperatures, flow indicators in order to determine performance of equipment and system
	2.7	Liaison, where appropriate is performed with emergency authorities to ensure the safety of the public and property
	2.8	Fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that is required according to requirements and established procedures
	2.9	Basic solutions to non-routine problems are identified and actioned according to requirements
	2.10	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures
3 Complete response to a gas facility event and relevant documentation.	3.1	Work undertaken is checked against work schedules for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Incidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.5	Relevant work permit(s) are signed off accordance with requirements
	3.6	Works completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for first response to a facility event.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G350A	**Gas facility event response**

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show an understanding of first response to a gas facility event in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials
- MSDS
- PPE

T3. Gas Industry facilities and infrastructure

- regulation and metering facilities
- compression facilities
- gas processing facilities such as coal seam methane plants
- LPG processing facilities
- scraper stations and pigging facilities
- odourisation facilities
- relevant operating policies and procedures

T4. Operation of Gas Industry plant, equipment and materials

- relevant industry engineering terminology and units
- gas pipeline system operating parameters
- gas pipeline systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- relevant inspection and testing procedures for applicable plant and equipment
- start up and shut down processes of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- characteristics of gas flows including compressed and non-compressed operations
- characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- operation of gas analysis and measuring equipment

T5. Gas Industry products, processes and characteristics

- products, characteristics and tolerances including:
  - principles of applicable gas laws
  - gas pressure
  - gas temperature
  - compressibility

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- relative density – specific gravity
- hydrocarbon and water dew points
- components of applicable natural gases including LPG
- standard gas conditions
- combustion
- venting and purging principles
- effects of temperature and pressure on infrastructure

T6. Gas industry documents

- signs, symbols terminology and legends as used in gas industry procedures and documents
- gas industry standards, policies and procedures
- basic drawings and diagrams
- Process and Instrumentation Diagrams (PID)
- Facility and pipeline construction and as-built drawings
- Geographical Information System (GIS) drawings and data
- Electrical drawings
- Survey maps
- Pipeline route maps and alignment sheets
- topographical and geographical maps and information.
- workplace forms and reports

T7. Problem solving

- methodology
- possible solutions and probable solutions
- basic problem solving techniques

T8. Confined spaces

- requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- what is a confined space is and the entry safety requirements
- manufacturers' guidelines for the safe use of PPE used in confined spaces
- gas detectors for confined spaces entry
- breathing apparatus and rescue and recovery equipment

T9. Electrical fundamentals for the Gas Industry

- extra low voltage operation
- electrical test equipment for cathodic protection on gas pipelines and facilities
- Electrical risks associated activities within the Gas Industry
- meters and other relevant electrical equipment.

T10. Security breach procedures

- identification of different types of security incidents including but not limited to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- physical security breaches at gas infrastructure
- threat assessment and management
- confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T11. Emergency/incident control procedures

- enterprise emergency/incident control policies and procedures
- communication with relevant stakeholders
- application of relevant procedures

T12. Emergency, accident and incident situations

- procedures
- emergency equipment and procedures for a fire
- breathing apparatus
- gas detectors/oxygen monitoring devices
- emergency equipment and procedures for a gas leak or vapour emission reports

Evidence Guide

EVIDENCE GUIDE

	skill is to be demonstrated	
A	All	• Identify threats to the integrity of transmission pipeline facility • Evaluate threats to the integrity of transmission pipeline facility • Initial control of threats to the integrity of transmission pipeline facility • Working knowledge of relevant sections the latest edition of AS2885 • Working knowledge of the station function including identification of abnormal conditions of stations and reporting • Working knowledge of MSDS • Operation of multi meters • Working knowledge of pipeline licence conditions
B	All	• Interpret technical drawings and symbols • Operation of gas detector • Emergency response procedures • Operate pipe locater • Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Practical knowledge of the properties of product being transported • Maintain a safe and clean workplace • Work safely with hazardous materials and equipment • Apply safe manual

© Commonwealth of Australia, 2025 Powering Skills Organisation

		handling techniques • Communicate effectively in the workplace • Negotiation skills • Apply basic planning skills • First Aid certificate level 1
C	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above in, Context of and specific resources for assessment, evidence should show demonstrated competency of first response to a facility event.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG342A	Maintain pipeline easements
UEGNSG353A	Carry out surveillance of gas transmission pipelines
UEGNSG221A	First on site response to a gas pipeline emergency

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to performing first response to a gas facility event

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Tools and equipment
- Maps and drawings
- Established procedures
- PPE and First Aid equipment
- Traffic control
- Facility
- Event

UEGNSG352A Check and report on gas station conditions

Modification History

This unit replaces UEG11 unit UEGNSG313B Check and report on station conditions

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers checking gas station conditions, performing minor maintenance and reporting the status in accordance with relevant legislation, code, regulations and established procedures.

Gas stations could include metering, compressors, valves, regulators, heaters, scraper, telemetry and odourisation facilities.

The competency standard is applied against the procedures found under the latest edition of Australian and New Zealand Standard AS 2885.3.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas stations, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Occupational Health and Safety, Gas Industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training. Commonwealth, State/Territory or Local

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan to check and report on gas station conditions	1.1	Work schedules, specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined and the extent of preparation for the work is assessed
	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3	WHS/OHS and environmental risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	WHS/OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		confirmed in a safe working order
	1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Check and report on gas station conditions	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
	2.3	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.5	Operating conditions of equipment are monitored through gauge levels, temperatures, flow indicators in order to determine performance of equipment and system
	2.6	Fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that are required according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.7	Solutions to non-routine problems are identified and actioned according to requirements
	2.8	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures
3 Complete work and relevant documentation	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Incidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
	3.4	Tools and equipment are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant entry/work permit(s) are signed off accordance with requirements
	3.6	Work completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for checking and reporting on station conditions.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

KS01-G352A Gas station conditions and reporting

Evidence shall show an understanding of checking and report gas station conditions in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials
- MSDS
- PPE

T3. Gas Industry facilities and infrastructure

- regulation and metering facilities
- compression facilities
- gas processing facilities such as coal seam methane plants
- LPG processing facilities
- scraper stations and pigging facilities
- odourisation facilities
- relevant operating policies and procedures

T4. Operation of Gas Industry plant, equipment and materials

- relevant industry engineering terminology and units
- gas pipeline system operating parameters
- gas pipeline systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- relevant inspection and testing procedures for applicable plant and equipment
- commissioning and decommissioning processes of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- characteristics of gas flows including compressed and non-compressed operations
- characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- operation of gas analysis and measuring equipment

T5. Gas Industry products, processes and characteristics

© Commonwealth of Australia, 2025 Powering Skills Organisation

- products, characteristics and tolerances including:
  - principles of applicable gas laws
  - gas pressure
  - gas temperature
  - compressibility
- relative density – specific gravity
- hydrocarbon and water dew points
- components of applicable natural gases including LPG
- standard gas conditions
- combustion
- venting and purging principles
- effects of temperature and pressure on infrastructure

T6. Security breach procedures

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T7. Gas industry documents

- signs, symbols terminology and legends as used in gas industry procedures and documents
- gas industry standards, policies and procedures
- basic drawings and diagrams
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets
- topographical and geographical maps and information.
- workplace forms and reports

T8. Confined spaces

- requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- what is a confined space is and the entry safety requirements
- manufacturers' guidelines for the safe use of PPE used in confined spaces
- gas detectors for confined spaces entry

© Commonwealth of Australia, 2025 Powering Skills Organisation

- breathing apparatus and rescue and recovery equipment

T9. Corrosion

- corrosion processes.
- cathodic protection on a Gas Industry pipeline

T10. Electrical fundamentals for the Gas Industry

- extra low voltage operation
- electrical test equipment for cathodic protection on gas pipelines and facilities
- Electrical risks associated activities within the Gas Industry
- meters and other relevant electrical equipment.

T11. Problem solving and fault finding

- methodology
- possible solutions and probable solutions
- basic problem solving and fault finding techniques

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required l knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Check and report gas station conditions in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Working knowledge of relevant sections of the latest edition of AS2885 Part 3 • Working knowledge of security breach procedures • Demonstrated knowledge of station function • Demonstrated knowledge of identifying abnormal conditions of a station
B	All	• Interpret technical drawings and symbols • Operation of gas detector • Work utilising relevant OHS legislation,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		regulations, codes of practice, policies and procedures • Practical knowledge of the properties of product being transported • Work safely with hazardous materials and equipment • Apply safe manual handling techniques • Communicate effectively in the workplace • Apply basic planning skills • First Aid certificate level 1
C	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in checking and reporting on station conditions.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG342A	Maintain pipeline easements
UEGNSG349A	Carry out surveillance on gas transmission pipelines
UEGNSG221A	First on site response to gas pipeline emergencies

UEGNSG353A Carry out aerial surveillance of gas transmission pipelines

Modification History

This unit replaces UEG11 unit UEGNSG315B Aerial transmission pipeline surveillance.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the aerial surveillance of gas transmission pipelines, easements and/or surrounding environs in accordance with relevant legislation, code, regulations and established procedures.

The competency standard is applied against the procedures found under latest edition of Australian and New Zealand Standard AS 2885.3.

This is unit encompasses to threat mitigation through identification of system non-conformance; the areas to be monitored; inspection of areas; system's pipe work; structures; fittings; equipment; organisational and statutory requirements and recording and reporting.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas transmission pipelines, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace/Occupational Health and Safety, gas/petrochemical liquid/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to carry out aerial surveillance of gas transmission pipelines	1.1 Specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined and the extent of preparation for the work is assessed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.2	Relevant requirements and established procedures for the work are communicated to all persons
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to requirements and established procedures for gas pipeline surveillance are obtained and confirmed
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	WHS/OHS and environmental risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work permits are obtained to access and perform work according to requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for pipeline surveillance are identified, scheduled and obtained and confirmed in a safe working order
	1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9	Persons participating in the work are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.10	Work preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Carry out aerial surveillance of gas transmission pipelines and identify	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
non-conformance		
	2.2	Routine surveillance of pipeline is conducted and faults reported in a timely manner against work schedule(s) and established procedures and confirmed if necessary by site inspection
	2.3	Analysis of information to identify key issues is undertaken as required and information is evaluated for relevance and validity to the requirements
	2.4	Dealings with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.5	Leakages and damaged pipes, fittings and appurtenances are recorded in accordance with the work schedule and established procedures
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.7	Unplanned events in pipeline surveillance are undertaken with the scope of established procedures
	2.8	System faults and the operational condition of the pipelines are identified and reported and known solutions are applied
	2.8	Works in the vicinity of the pipeline are identified and reported
3 Complete work and relevant documentation	3.1	Solutions are developed based on consideration of relevant information and options and proposed solutions are communicated and implemented as required against works schedule, anomalies are reported in accordance with established procedures
	3.2	Incidents and injuries are reported in accordance with requirements and established procedures where applicable

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.3 Solution is implemented in accordance with standard operating procedures ensuring that action is correctly documented, the transaction is accurately processed and the customer is advised
	3.4 Work completion records, reports and documentation are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for aerial surveillance of gas transmission pipelines

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G353A Gas transmission pipeline aerial surveillance

Evidence shall show an understanding of carrying out aerial surveillance of gas transmission pipelines in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials
- MSDS
- PPE

© Commonwealth of Australia, 2025 Powering Skills Organisation

T3. Gas Industry facilities and infrastructure

- regulation and metering facilities
- compression facilities
- gas processing facilities such as coal seam methane plants
- odourisation facilities
- relevant operating policies and procedures

T5. Gas Industry products, processes and characteristics

- products, characteristics and tolerances including:
  - principles of applicable gas laws
  - gas pressure
  - gas temperature
  - compressibility
- relative density – specific gravity
- hydrocarbon and water dew points
- components of applicable natural gases including LPG
- standard gas conditions

- basic problem solving techniques

T8. Security breach procedures

- identification of different types of security incidents including but not limited to:
- physical security breaches at gas infrastructure
- threat assessment and management
- confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T9. Gas transmission pipeline environmental protection processes

- relevant environmental legislation and environmental regulations
- effects a pipeline can have on:
  - flora and fauna
  - agriculture
  - erosion to soil.
  - air quality
  - waterways
- application of relevant policies and procedures

T10. Gas transmission pipeline surveillance

- relevant legislation and requirements
- safety requirements
- reporting requirements
- established procedures

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, all summative (or final) assessment is to include the application of the competency in the normal work environment or, at a minimum, its application in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carrying out aerial surveillance of gas transmission pipelines in accordance with relevant legislation, code, regulations and procedures as described as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Identify threats to the integrity of transmission pipelines • Evaluate threats to the integrity of transmission pipelines • Control of the

	occasion	event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in aerial transmission pipeline surveillance.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency

© Commonwealth of Australia, 2025 Powering Skills Organisation

Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG342A	Maintain pipeline easements
UEGNSG349A	Carry out surveillance of gas transmission pipelines
UEGNSG221A	First on site response to gas pipeline emergencies

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to aerial surveillance transmission pipelines.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Areas to be monitored
- Inspection of areas
- Systems pipe work
- Structures

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

- Fittings and appurtenances
- Organisational and statutory requirements
- Recording and reporting
- Tools and equipment
- Maps and drawings
- Established procedures
- PPE and First Aid equipment
- External interference
- Aerial
- Aerial hazards
- Transmission pipeline standards
- Maps and drawings

UEGNSG354A Control excavations in the vicinity of gas transmission pipelines

Modification History

This unit replaces UEG11 unit UEGNSG316B Site control of excavations in the vicinity of a transmission pipeline

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the control of all excavations in the vicinity of gas transmission pipelines to ensure the integrity of the pipeline is not compromised.

It encompasses relevant legislation, code, regulations and established procedures in particular the procedures found under the latest version of Australian and New Zealand Standard.AS 2885.3.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas transmission facilities, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG004A	Locate, prove and protect utility assets
UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the

Prerequisite Unit(s) **4)**

gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA
1 Plan to control excavations in the vicinity of gas transmission	1.1	WHS/OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA
pipelines	1.2	work are followed Works schedule(s), specific requirements, drawings, plans, requirements, established procedures and material and equipment are examined and the extent of preparation for the work is assessed
	1.3	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard in accordance with established procedures
	1.4	Other utility assets are identified by Dial Before You Dig or other means
	1.5	WHS/OHS and environmental risk control measures are identified, prioritised and evaluated against the work schedule
	1.6	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.7	Relevant work permits/authorisations are secured to coordinate the performance of work according to requirements and established procedures
	1.8	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe working order
	1.9	Clients are provided with possible solutions and options within the scope, acceptable cost and requirements
	1.10	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.11	Persons participating in the work are fully briefed, inducted and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA
	1.12	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Control of excavations in the vicinity of transmission gas transmission pipelines	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Analysis of information to identify key issues is undertaken as required and information is evaluated for relevance and validity to the requirements
	2.3	First Aid and other related work procedures are performed according to requirements and established procedures
	2.4	Lifting, climbing, working in confined spaces and aloft, techniques and practices are safely exercised according to requirements
	2.5	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.6	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.7	Operating conditions of equipment are monitored.
	2.8	Excavation is benched or shoring is used in accordance with relevant legislation
	2.9	Other utility assets are located and confirmed
	2.10	Fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that are required according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA
	2.11	Solutions to non-routine problems are identified and actioned according to requirements
	2.12	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved to a community and industry standard
3 Complete the work and relevant documentation	3.1	Work undertaken is checked against work schedules for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off accordance with requirements
	3.6	Work completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for site control of third party works in the vicinity of a transmission pipeline.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G354A Gas transmission pipeline proximity excavation

Evidence shall show an understanding of controlling excavations in the vicinity of a transmission pipelines in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Requirements for preparing, conducting and completing an excavation including WHS/OHS and environmental.

- plans, codes, standards and drawings relevant to specific worksites
- regulatory requirements and procedures for excavating trenches and reinstating sites
- shoring or benching requirements
- notification of appropriate authorities and requirements for temporary or permanent restorations
- hazardous materials, MSDS/SDS and spill kits
- PPE
- environmental and safety hazards, assess risks and implement control measures

T2. Locating utilities and services

- relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and stormwater) including Dial Before You Dig services
- relevant plans and drawings to identify the location of utilities and services
- utilities and services conduits and cables
- electronic and manual service locators
- hand and mechanical excavation for locating utilities and services
- gas markers

T3. Preparing an excavation site

- work permits and authorisations
- traffic management plans
- spotter/competent observer requirements
- environmental and safety hazards, assess risks and implement control measure
- communication with third parties, colleagues and customers regarding the excavation site
- job specifications and standard operating procedures
- grades and depth required for excavation of trenches for gas pipelines

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- techniques for marking out trench location

T4. Excavating of gas industry workplace trenches

- safety requirements and procedures for excavating and shoring trenches in a variety of conditions surface types, soil types, weather, traffic, time of day, location
- regulations and requirements for working in confined spaces and shoring
- purpose and techniques of excavating trenches, shoring, battering and exposing other services
- variety of excavation and shoring techniques to suit varying conditions (surface types, soil types, weather, traffic, time of day, location)
- manually excavation and mechanical excavation applications
- appropriate tools, materials and equipment
- safe manual handling techniques and risk management
- problem solving methods, techniques and solutions
- workplace forms and reports

T5. Security breach procedures

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T6. Emergency/incident control procedures

- enterprise emergency/incident control policies and procedures
- communication with relevant stakeholders
- application of relevant procedures

T7. Emergency, accident and incident situations

- procedures
- emergency equipment and procedures for a fire
- breathing apparatus
- gas detectors/oxygen monitoring devices\emergency equipment and procedures for a gas leak or vapour emission
- reports

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Control excavations in the vicinity of gas transmission pipelines in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Identify threats to the integrity of transmission pipelines • Evaluate threats to the integrity of transmission pipelines • Initiate control of threats to the integrity of transmission pipelines • Working knowledge of relevant sections of the latest version of AS2885 • Working knowledge of requirements and techniques for safe excavations • Working knowledge of construction machinery • Working knowledge of external interference physical and procedural protection measures • Perform effective on site induction • Perform effective risk assessment and hazard analysis
B	All	• Interpret technical drawings and symbols • Operation of gas detector • Emergency response procedures • Operate pipe locater • Use of and interpret Dial Before You Dig report or its equivalent • Locate other assets in a safe

© Commonwealth of Australia, 2025 Powering Skills Organisation

		manner • Work utilising relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures • Maintain a safe and clean workplace • Work safely with hazardous materials and equipment • Contractor supervision • Traffic management • Use of safety signage/barricades and materials • Issue, monitor and control work permits • Apply safe manual handling techniques • Communicate effectively in the workplace • Negotiation skills • Apply basic planning skills
C	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in site control of excavations in the vicinity of a transmission pipeline.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG355A Monitor and report on cathodic protection systems

Modification History

This unit replaces UEG11 unit UEGNSG317B Monitor and report on cathodic protection systems

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the testing, basic fault recognition, minor maintenance and reporting of findings and cathodic protection systems faults, but does not include specialist cathodic protection activities.

It encompasses relevant legislation, code, regulations and established procedures in particular the requirements found under the latest version of Australian and New Zealand Standard AS 2885 and AS2832.

The work may be performed autonomously in remote locations for long periods of time and covers tools and equipment, maps and drawings, established procedures, PPE, first aid equipment and traffic control.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas transmission facilities, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Occupational Health and Safety, Gas Industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training. Commonwealth, State/Territory or Local

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

ELEMENT	PERFORMANCE CRITERIA	
		requirements and established procedures
	1.7	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe working order
	1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9	Persons participating in the work are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
	1.10	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Monitor and report on cathodic protection systems	2.1	WHS/OHS and Environmental policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	First Aid and other related work procedures are performed according to requirements and established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, use of power tools, techniques and practices are safely exercised according to requirements
	2.4	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.6	Fault finding and troubleshooting techniques are applied to identify any repairs or maintenance that are required according to requirements and established procedures
	2.7	Solutions to non-routine problems are identified and actioned according to requirements
	2.8	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures
3 Review, record and report on monitoring cathodic protection systems	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Incidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off accordance with requirements
	3.6	Work completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for monitoring and reporting on cathodic protection systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G355A Cathodic protection systems

Evidence shall show an understanding of monitoring and report cathodic protection systems in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials
- MSDS
- PPE

T3. Operation of Gas Transmission pipelines

- relevant industry engineering terminology and units
- gas pipeline system operating parameters
- gas pipeline systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- relevant inspection and testing procedures for applicable plant and equipment
- characteristics of gas flows including compressed and non-compressed operations
- characteristics, operation, capabilities and limitations of applicable tools and equipment

T4. Gas Industry products, processes and characteristics

- products, characteristics and tolerances including:
  - principles of applicable gas laws
  - gas pressure
  - gas temperature
  - compressibility
- relative density – specific gravity
- hydrocarbon and water dew points
- components of applicable natural gases including LPG

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- standard gas conditions
- combustion
- venting and purging principles
- effects of temperature and pressure on infrastructure

T5. Gas industry documents

- signs, symbols terminology and legends as used in gas industry procedures and documents
- gas industry standards, policies and procedures
- basic drawings and diagrams
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets
- topographical and geographical maps and information.
- workplace forms and reports

T6. Confined spaces

- requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- what is a confined space is and the entry safety requirements
- manufacturers' guidelines for the safe use of PPE used in confined spaces
- gas detectors for confined spaces entry
- breathing apparatus and rescue and recovery equipment

T7. Electrical fundamentals for the Gas Industry

- extra low voltage operation
- electrical risks associated activities within the Gas Industry
- meters and other relevant electrical equipment
- Licensed low voltage electrical work requirements

T8. Corrosion

- corrosion processes.

T9. Cathodic protection on a Gas Industry pipeline

- types and applications
- equipment and components
- operating principles and circuits diagrams
- electrical test equipment
- safety requirements, procedures and PPE
- monitoring requirements, procedures and reporting

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- testing requirements, procedures and reporting
- fault finding and minor repair requirements, procedures and reporting
- requirements and procedures for referring low voltage electrical work to relevant licensed persons
- requirements and procedures referring major repairs to immediate supervisor
- Relevant documentation, records and reports

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Monitor and report cathodic protection system in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Working knowledge of relevant sections AS2885 and AS2832 • Demonstrate the practical use of communications equipment • Demonstrate use and maintenance of CP equipment • Demonstrate use and maintenance of measuring equipment • Complete written and verbal reports • Demonstrated knowledge of cathodic protection principles and equipment • Identify and recognise cathodic protection faults • Diagnose and perform minor maintenance of faults on cathodic protection equipment
B	All	• Interpret technical drawings and symbols

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Operate gas detector • Operate pipe locater • Work using relevant OHS and environmental, cultural and heritage regulations, codes of practice, policies and procedures • Practical knowledge of the properties of product being transported • Work safely with hazardous materials and equipment • Apply safe manual handling techniques • Communicate effectively in the workplace • Negotiation skills • Apply basic planning skills • First Aid certificate level 1
C	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a

© Commonwealth of Australia, 2025 Powering Skills Organisation

workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in monitoring and reporting on cathodic protection systems.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

8.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with

© Commonwealth of Australia, 2025 Powering Skills Organisation

allied Competency Standard Units where listed.

UEGNSG342A	Maintain pipeline easements
UEGNSG349A	Carry out surveillance on gas transmission pipelines
UEGNSG309B	First on-site response to gas pipeline emergencies

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation monitoring and reporting on cathodic protection systems.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Tools and equipment
- Maps and drawings
- Established procedures and requirements
- PPE and First Aid equipment
- Traffic control

Unit Sector(s)

UEGNSG356A Monitor and operate flow control, pressure measuring and regulating devices for gas transmission

Modification History

This unit replaces UEG11 unit UEGNSG318B Monitor and operate flow control, pressure, measuring and regulating devices for gas transmission

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers monitoring and operating of complex flow control, measuring and regulating devices to monitor and control gas supply in gas transmission systems in accordance with relevant legislation, code, regulations and procedures.

It encompasses inspecting, testing and controlling; regulation of flow and pressure; measuring; recording and reporting; regulation of flow and regulation devices; regulation of the system; equipment; organisational and statutory requirements.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply gas transmission systems, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

UEGNSG005A	Prepare to work in the gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability

Employability Skills **5)**

Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to monitor and operate complex flow control devices and equipment	1.1	Work requirements for monitoring and operating complex flow control, measuring and regulating devices are interpreted from plans, specifications and instructions
	1.2	Relevant requirements and established procedures for the work are communicated to all persons
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to the monitoring and operating of complex flow controls are obtained and confirmed
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	WHS/OHS and environmental risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.6	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for the work are identified, scheduled and obtained and confirmed in a safe working order
	1.8	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.10	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work".
	1.11	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Repair and replace complex flow control devices and equipment and monitor system performance	2.1	WHS/OHS and Environmental policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Information on device and equipment performance is collected and reported in accordance with organisational requirements
	2.3	Dealing with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.4	Routine inspections of system are scheduled and monitored in accordance with the work schedule and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Data on system performance and usage is collected, analysed and reported and unplanned events in the monitoring and operation of complex flow control are undertaken with the scope of established procedures
	2.7	Samples are taken in accordance with established procedures and known solutions to a variety of problems are applied
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Control and adjust flows and complete records and reports	3.1	Flow and overflow regulating systems are inspected and adjustments made to meet demand and customer requirements
	3.2	Incidents and injuries are reported in accordance with established procedures where applicable
	3.3	Flows and diversions are determined to facilitate repair or emergency activities in accordance with organisational requirements
	3.4	Process faults and operational conditions of the system are identified, addressed and reported in accordance with organisational requirements
	3.5	Work site is cleaned up and confirmed safe and in accordance with established procedures
	3.6	Tools, equipment and any surplus resources and materials are where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.7	Relevant work permit(s) are signed off accordance with requirements
	3.8	Work completion records, reports and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	documentation are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices monitoring and operating complex flow control, measuring and regulating devices on gas transmission systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G356A Transmission pipeline flow control, pressure, measuring and regulating devices

Evidence shall show an understanding of monitoring and operating complex flow control, measuring and regulating devices on gas transmission systems in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Principles of control systems used in monitoring and control of applicable organisational gas infrastructure

T2. Component types, function and operation including:

- data collection and equipment control functions including:
  - Remote Terminal Unit (RTU)
  - Plant Control System (PCS) what’s this mean?
  - PLC’s Programmable Logic Controllers
  - DCS’s Distributive Control Systems
- system controller interface such as Human Machine Interface (HMI) data and voice communication including:
  - Satellite Link
  - Internet Protocol (IP)
  - Modem/ISDN

© Commonwealth of Australia, 2025 Powering Skills Organisation

- UHF/VHF Radio
- Microwave
- Local Area Network (LAN)
- Wide Area Network (WAN)

T3. Remote Telemetry Units (RTU's) and associated controller operation including:

- start up and shut down of process controllers and RTU equipment
- adjustment of process set point control and status e.g. local/remote and auto/manual
- alarm monitoring, acknowledgement, prioritisation and escalation
- alarm inhibit/enablement/disablement.

T4. Gas conditioning and monitoring equipment

- principles of operation
- components
- fault finding, adjustments, replacement and minor repairs

T5. Pressure control equipment

- types
- principles of operation
- fault finding, adjustments, replacement and minor repairs

T6. Gas flow measurement equipment

- types
- operation
- fault finding, adjustments, replacement and minor repairs

T7. Gas station alarms and safety devices

- types
- operation
- fault finding, adjustments, replacement and minor repairs

T8. Gas station valves

- types
- operation
- maintenance
- fault finding, adjustments, replacement and minor repairs

T9. Monitoring, control and trending functions including, but not limited to:

- Start up and shut down of system interfaces
- Adjustment of applicable security status functions to suit requirements
- Alarm monitoring, acknowledgement, prioritisation and escalation
- Alarm inhibit/enablement/disablement
- Changing of applicable alarm parameters as required
- Analysis of trends and abnormal operating conditions

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Creation of trends as applicable
- Filtering of alarm and event logs
- Maintenance and adjustment including:
  - Scanning ranges and properties
  - Control limitations
  - Detailed history retrieval options
  - Auxiliary control functions
  - Dead band adjustment

T10. Basic troubleshooting including, as applicable:

- Server synchronisation and switch to backup
- Shutdown and re-start of system

T11. System data recording and data communication capabilities with third-party software applications such as external databases and spreadsheet programs etc.

T12. Gas station venting, purging and pressurisation operations

T13. Gas station operation requirements and procedures

- change over regulator and meter runs
- change over filters/separators
- purge and pressurise station
- adjust set points

T14. Manufactures specifications, manuals and procedures.

T15. Organisations gas facility manuals, drawings, schematics, displays, switches, P+ID’s and procedures

T16. Relevant Legislation, Standards, Codes and Regulations

T17. Consultations appropriate persons to coordinate work and persons

T18. Required documentation, records and reports

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria

© Commonwealth of Australia, 2025 Powering Skills Organisation

shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Monitoring and operating of complex flow control, measuring and regulating devices for gas pressure and flow control in transmission systems in accordance with relevant legislation, code, regulations and procedures as described as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 3	• Interpret technical drawings and symbols • Selection of appropriate tools and equipment • System knowledge of Transmission pipelines

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and stations • Relevant knowledge of AS3885 Part 3
B	All	• Auxiliary control systems knowledge and understanding • Wide open monitor operation • Monitor Active Regulation • Two stage pressure reduction with monitor override
C	All	• RTU control of regulators
D	At least 2	• Pressure Controllers, operation, maintenance and understanding • Commissioning/Setting • Troubleshooting • Pressure Boosters minor repairs • Knowledge of types/models
E	At least 2	• Regulator knowledge and understanding • Sleeve types • Control valves • Pressure reliefs • Diaphragm types • Hydraulic Plug types
F	All	• Valve maintenance and operation. • Automatic Line Break Valves operation and maintenance • Configuration of Ball, Plug, Gate, Instrument and Butterfly valves
G	At least 3	• Working knowledge of: • Diaphragm meters • Rotary meters • Turbine meters

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Ultrasonic meters • Orifice plates • Coriolis meters • Oil changing
H	At least 3	• Operational checks • Single run units • Dual run units • City gates or Trunk Receiving Stations (TRS) • District regulators • Pressure Reliefs
I	At least 3	• Maintenance Activities • Single run units • Dual run units • City gates • District Regulators • Pressure Reliefs
J	At least 3	• Pressure alterations • Industrial units • City gates • Regulator Stations • Distribution mains
K	At least 3	• Flaring and Purging • Industrial units • City gates • Regulator Stations • Distribution mains
L	At least 3	• Overpressure Protection Systems function and operation. • OPSO • Internal pressure relief systems • Pressure relief valves • Slam Shut systems • Valve Actuator and control systems
M	All	• Paperwork: • Risk assessments • Time sheets • Completing work

© Commonwealth of Australia, 2025 Powering Skills Organisation

		records • Notifications and work permits • Equipment check lists • Meter bypass forms • Service orders • Pressure recording charts
N	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in monitoring and operating flow control, pressure, measuring and regulating devices for gas transmission.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required l Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for*

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to the monitoring and operating of complex flow control, measuring and regulating devices for gas pressure and flow control in transmission systems.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Inspecting and controlling
- Regulation of flow and pressure
- Measuring
- Recording and reporting
- Regulation of flow and regulation devices
- Regulation of the system
- Equipment
- Organisational and statutory requirements

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare and plan to maintain cathodic protection systems	1.1	Cathodic protection system maintenance activity is identified and confirmed according to the work schedule(s), drawings, plans, requirements, established procedures and Australian Standards.
	1.2	Readings from cathodic protection monitoring equipment and anode beds are taken at regular intervals and data collected in accordance with approved procedures a and Australian Standards
	1.3	Relevant work schedules and requirements are communicated to all persons and identified for all work sites
	1.4	WHS/OHS, environmental and sustainable energy policies and procedures related to the maintaining of cathodic protection systems are obtained and confirmed and communicated

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.5	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.6	WHS/OHS risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.7	Relevant work permits are obtained to access and perform work according to requirements and established procedures
	1.8	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in a safe working order
	1.9	Relevant persons at worksite are suitably trained and qualified for the work to be performed.
	1.10	Liaison and communication issues with authorised persons, authorities, clients and land-owners are resolved to carry out work where necessary
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.12	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work"
	1.13	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.14	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2 Maintain and adjust	2.1	WHS policies and procedures and safe work

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
cathodic protection system equipment		practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely exercised according to requirements.
	2.3	Cathodic protection system is maintained correctly according to established procedures and Australian Standards.
	2.4	Hazard warnings and safety signs are correctly interpreted and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.5	Unplanned events in the maintaining of cathodic protection systems is undertaken with the scope of established procedures
	2.6	Known solutions to a variety of problems are applied
	2.7	Data is collected and interpreted and ongoing checks of quality of the work are undertaken in accordance with given instructions, established procedures and Australian Standards.
3 Re-establish system and complete relevant documentation	3.1	Cathodic protection system is re-established in order to meet pipeline system operational requirements and the work undertaken is checked against work schedules for conformance with requirements, anomalies are reported in accordance with established procedures and Australian Standards.
	3.2	Accidents, injuries and non-conformances are reported in accordance with established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		checked and returned to storage in accordance with established procedures
	3.5	Work permits are signed off and equipment is returned to service in accordance with requirements
	3.6	Work completion records, reports as installed/modified drawings and documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for maintaining cathodic protection systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G411A Cathodic protection system maintenance

Evidence shall show an understanding of maintaining cathodic protection systems in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Relevant WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials and MSDS
- PPE

T3. Corrosion processes on a Gas Industry pipeline

© Commonwealth of Australia, 2025 Powering Skills Organisation

- corrosion processes, causes and prevention.
- how Cathodic Protection systems prevent corrosion

T4. Electrical fundamentals for the Gas Industry

- extra low voltage operation
- electrical risks associated activities within the Gas Industry
- meters and other relevant electrical equipment
- Licensed low voltage electrical work requirements

T5. Gas system design, planning and operation

- applicable to cathodic protection on a Gas Industry pipeline, including safe design principles.
- cathodic protection electrical and civil drawings

T6. Relevant gas industry documents

- signs, symbols terminology and legends as used in gas industry procedures and documents
- gas industry standards, policies and procedures
- basic drawings and diagrams
- Process and Instrumentation Diagrams (PID)
- Facility and pipeline construction and as-built drawings
- Geographical Information System (GIS) drawings and data
- Electrical drawings
- Survey maps
- Pipeline route maps and alignment sheets
- topographical and geographical maps and information.
- workplace forms and reports

T7. Cathodic protection systems operation on a Gas Industry pipeline

- cathodic protection system design, planning and operation
- types and applications
  - impressed current
  - sacrificial
- equipment and components
- operating principles and circuits diagrams

- fault finding and repair/replacement requirements and procedures
- requirements and procedures for referring low voltage electrical work to relevant licensed persons
- requirements and procedures referring major repairs to immediate supervisor
- relevant documentation, records and reports

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this will incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below:
  - Maintain cathodic protection system in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A Types of faults:	At least 8	• Coating damage/deterioration • Interference from other systems • Anode not working • Equipment fault/failure • Earth faults • Transformer failure • Anode bed deterioration • Anode cable failure • Telluric effects on CP systems • IJ failure and testing • FIK failure and testing
B. Checks and tests on CP systems	At least 4	• CP Potential surveys • On/off potential surveys • Coating defect assessment surveys (DCVG method, Pearson

© Commonwealth of Australia, 2025 Powering Skills Organisation

		technique/method, over pipeline potential method) • Loop impedance testing • Anode bed testing • Soil resistivity testing • Interference testing • TRAD unit commissioning and testing
C. Australian Standards or their equivalents:	All	• AS 2885 • AS 2430 • AS 1768 • AS 1596 • AS 2832.1 • AS 3000 • AS 2239 • AG 603 • AS 2865
D. Procedures	All	• Interpreting cathodic protection data system surveys and readings • Locating and repairing faults • Procedures for coating surveys • Checking and maintaining potentials
E	At least one occasion	Dealing with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Units.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in maintaining cathodic protection systems.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Units applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of

© Commonwealth of Australia, 2025 Powering Skills Organisation

learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Comply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to maintaining cathodic protection systems on Gas Industry pipelines.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Types of CP faults
- Applicable Australian standards/legislation
- Location
- Electrical equipment
- Types of checks and tests
- Test equipment
- Components and systems
- Relevant documentation
- Relevant authorities and other stakeholders/authorities
- Location for maintaining CP systems
- Drawings and specifications

UEGNSG412A Install cathodic protection systems

Modification History

This unit replaces UEGNSG402B Install cathodic protection systems

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers installing cathodic protection (CP) systems to prevent corrosion of steel pipelines in accordance with relevant legislation, code, regulations and established procedures.

It encompasses appropriate installation locations for maintaining cathodic protection system; components of the system; representation of other utilities; types of drawings and specifications; test equipment; types of cathodic protection faults.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas transmission and distribution pipelines, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan installation of cathodic protection system	1.1	Cathodic protection system installation procedures are planned in accordance with work schedule(s), including drawings, plans, requirements, established procedures and Australian Standards
	1.2	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to the installation of cathodic protection systems are obtained and confirmed and communicated
	1.4	Data from completed CP surveys is analysed and work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures and Australian Standards
	1.5	WHS/OHS risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule.
	1.6	Relevant work permits are obtained to access and perform the installation work, including excavation permits if required, according to requirements, established procedures and Australian Standards
	1.7	Technical specifications and drawings are prepared and approved from the analysed CP survey data
	1.8	Resources including persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in a safe working order
	1.9	Relevant persons at worksite are suitably trained and qualified for the work to be performed.
	1.10	Liaison and communication established with authorised persons, authorities, clients and land-owners to carry out work where necessary
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.12	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work"
	1.13	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.14	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
2 Install cathodic protection system	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are safely exercised according to requirements.
	2.3	Approved specifications and drawings are reviewed and approved. The installation of cathodic protection systems is carried out in accordance with the work schedule, established procedures and Australian Standards
	2.4	Hazard warnings and safety signs are correctly interpreted and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.5	Unplanned events in the installation of cathodic protection systems are undertaken with the scope of established procedures
	2.6	Known solutions to a variety of problems are applied
	2.7	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Test and commission CP System and completed relevant documentation	3.1	Commissioning of the installed CP system and components is conducted against works schedule for conformance with requirements, anomalies are reported in accordance with established procedures
	3.2	Accidents, injuries and non-conformances are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		materials are, where appropriate, cleaned, checked and stored in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Cathodic protection system is tested, adjusted and further survey data collected and work completion records and documentation is finalised and processed and appropriate persons notified
	3.7	As built drawings are checked, updated and returned to the relevant CP engineering person/s.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for installing cathodic protection systems. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G412A Cathodic protection system installation

Evidence shall show an understanding of installing cathodic protection systems in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Relevant WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials and MSDS

- operating principles and circuits diagrams
- cathodic protection system in relation to other services
- coating requirements and their purpose

T8. Cathodic protection systems installation

- electrical test equipment
- safety requirements, procedures and PPE
- adherence of electrical principles and regulatory requirements
- manufacturers specifications and requirements
- installation requirements and procedures
- testing and commissioning requirements and procedures
- calibration and adjustment requirements and procedures
- fault finding and repair/replacement requirements and procedures
- requirements and procedures for referring low voltage electrical work to relevant licensed persons
- requirements and procedures referring major repairs to immediate supervisor
- relevant documentation, records and reports

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Units and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord

© Commonwealth of Australia, 2025 Powering Skills Organisation

with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and

© Commonwealth of Australia, 2025 Powering Skills Organisation

range

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Install cathodic protection system in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Components and system:	At least 5	• Solar powered supply systems • 240 volt power supply systems • Insulation, FIK's and monolithic joints • Sacrificial and Impressed current anode beds • Battery banks — acid and lead acid battery maintenance including SG measurement • Transformer rectifiers and CPUs • Lighting protection

© Commonwealth of Australia, 2025 Powering Skills Organisation

		equipment • CP test points • Installation of Insulated Joint Protectors and testing
B. Checks and tests on CP systems:	At least 4	• Potential surveys • TRAD unit commissioning and testing • Interference testing • On/off potential surveys • Coating defect assessment surveys (DCVG method, Pearson technique/method, over pipeline potential method) • Loop impedance testing • Anode bed testing • Soil resistivity testing • Interference testing
C. Australian Standards or their equivalents	All	• AS 2885 • AS 2430 • AS 1768 • AS 1596 • AS 2832.1 • AS 3000 • AS 2239 • AS 2865 • AG 603
D. Procedures	All	• Interpret cathodic protection data system surveys and readings • Implement cathodic protection tests and surveys • Locate and repair faults • Procedures for coating surveys • Check and maintain potentials • Install cathodic protection sites and systems
E	At least one occasion	Deal with an unplanned event by drawing on required

© Commonwealth of Australia, 2025 Powering Skills Organisation

		knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Units.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in installing cathodic protection systems.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Units applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all

UEGNSG506A Respond to gas infrastructure emergencies

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the first response requirements of a pipeline controller to a gas distribution or transmission emergency incident in accordance with relevant legislation, code, regulations and procedures. These incidents may include but are not limited to, gas escapes, gas outages, security breaches, fires, injury and damage.

This encompasses assessing the situation extent and type of incident from the control centre; dispatching staff to assess the site and where required, they will make the area safe and report back to the control centre.

Staff on site are responsible for identifying sources of gas leaks, reporting back to the response/control centre, identifying and controlling potential ignition sources, ventilation/ evacuation from property, liaising with other authorities and emergency services, remaining on site and maintaining site safety until support arrives, should it be required.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas distribution and transmission pipelines and facilities, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract

© Commonwealth of Australia, 2025 Powering Skills Organisation

of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety, and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to WHS /Occupational Health and Safety (OHS), gas industry codes/guidelines, industrial relations, environmental protection, anti-discrimination and training laws.

Commonwealth, State/Territory or Local Government legislation and regulations may limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas supply industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
HLTAID003	Perform first aid

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to respond to an emergency	1.1	Relevant WHS/OHS, environmental and sustainable energy policies, procedures and measures are identified, obtained and understood.
	1.2	Emergency/incident is recognised and confirmed with supervisory systems, supervisor/leader, other control centres and according to organisational procedures.
	1.3	Relevant requirements and established procedures for the incident response are discussed with relevant persons to establish and confirm the emergency response plan.
	1.4	Relevant personnel are despatched to site to assess and report on details of the emergency or incident where required.
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Relevant work permits and/or relevant notifications if required are secured to ensure the work is approved, recorded, coordinated and performed safely.
	1.7	Effective liaison and communication is established with the supervisor, coordination centre, emergency authorities and land owners.
2 Respond to an emergency	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise emergencies/incidents and hazards.
	2.2	Relevant emergency/incident information and actions are recorded and reported using established procedures.
	2.3	Operating conditions of equipment are monitored such as, temperatures, flow and pressures in order to determine performance of equipment/pipeline and are adjusted according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		emergency response procedures.
	2.4	Negotiation processes with third parties concerning the threat to the pipeline occurs to ensure the pipeline can be monitored.
	2.5	Communication with immediate supervisor, coordination centre, emergency authorities and relevant stakeholders is undertaken and maintained in accordance with established procedures.
	2.6	Actions from the coordination centre are applied in order to minimise threats to the public, pipeline or facilities and environment as well as expedite control/reparation.
	2.7	Procedures for referring non-routine events to the immediate authorised persons for directions are followed, for example the emergency level being escalated.
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Incidents and injuries are reported and followed up in accordance with requirements and established procedures.
	3.3	The emergency or incident is correctly handed over to the emergency/incident coordinator or relief response person, including all reports, risk control measures and permit conditions.
	3.4	Relevant work permit(s) are completed and signed off in accordance with requirements.
	3.5	Works completion documentation including records, reports as installed/modified drawing(s) and information is completed accurately and provided to appropriate persons in accordance with established procedures.
	3.6	Participation in debriefing occurs to discuss strengths and weaknesses of emergency/incident response.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired for first on site emergency response on a distribution pipeline.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G506A First response to a gas infrastructure emergency

Evidence shall show an understanding of first response to gas infrastructure emergency requirements for a gas distribution or transmission incident in accordance with relevant legislation, code, regulations and procedures to an extent indicated by the following aspects:

T1. Security breaches and required action

- types of security incidents including but not limited to physical security breaches at gas infrastructure
- threat assessment and management
- confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T2. Emergency/incident control procedures compliance with applicable enterprise

- policies and procedures
- communication with relevant stakeholders
- application of relevant procedures
  - reporting protocols on an emergency
  - initial control measures in a gas emergency situation
  - safe approach of a gas emergency site

T3. Emergency assessment

- physical security breaches of gas infrastructure
- threat assessment and management

T4. Incident investigation and evidence gathering techniques

- investigating events
- maintaining integrity of infrastructure – from the control room
- gathering evidence from site – despatching staff to site

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- preserving evidence for further investigation

T5. Problem solving in a first response role

- likely problems /assets involved and possible solutions
- recommending probable solutions
- problem solving techniques
- understanding and interpreting relevant technical drawings including, but not limited to:
  - District plans
  - Mains detail plans
  - Easement Plans
  - Industrial Service Plans
  - Pipeline route maps and alignment sheets

T6. Communications

- identify nature of situation and preliminary assessment
- internal
  - workplace colleagues and managers
  - other relevant departments
- external
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

T7. Reports

- procedures and legislative requirements for maintaining appropriate reporting and recording systems
- job records and process information to appropriate/relevant department
- non-conformance and incident reports including customer outages/ security breaches

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all

© Commonwealth of Australia, 2025 Powering Skills Organisation

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise.

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carrying out first response to a gas infrastructure emergency for a gas distribution or transmission incident in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Identifying and evaluating threats to the integrity of gas pipelines
    B. Assessing the incident
    C. Monitoring gas infrastructure performance
    D. Investigating the incident and collecting evidence
    E. Completing required documentation and reporting.

© Commonwealth of Australia, 2025 Powering Skills Organisation

F. Dealing with unplanned events by drawing on required skills and knowledge, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the required Skills and Knowledge s are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

(9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to first response to

RANGE STATEMENT

an emergency on a gas pipeline which may include but is not limited to, escapes, outages, security breaches, fires, injury and damages.

This includes assessing the situation extent & type of incident; despatching staff to site and to make the area safe and report back to the response/control centre. The staff on site are responsible for identifying and controlling potential ignition sources, ventilation/ evacuation from property, liaising with other authorities and emergency services as required and instructed.

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Tools and equipment
- Maps and drawings
- Established procedures
- PPE and First Aid equipment
- Emergency response manuals
- Security breach investigation practices

UEGNSG507A Remotely monitor and operate gas transmission flow and pressure measuring and regulating devices

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers remotely monitoring and operating of complex flow control and pressure measuring and regulating devices to monitor and control gas supply in gas transmission systems in accordance with relevant legislation, code, regulations and procedures.

It encompasses remotely checking and controlling; regulation of flow and pressure; measuring; recording and reporting; regulation of flow and regulation devices; regulation of the system; equipment; organisational and statutory requirements.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply gas transmission systems, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of persons who can operate certain equipment.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to monitor and operate flow control and pressure measuring and regulating devices	1.1	Work requirements for monitoring and operating complex flow control, measuring and regulating devices are interpreted from schedules, plans, specifications and instructions
	1.2	Relevant requirements and established procedures for the work are communicated to all persons
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to the monitoring and operating of complex flow controls are obtained and confirmed
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	WHS/OHS and environmental risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work permits are obtained to access, isolate/de-energise systems as required and perform work according to requirements and established procedures
	1.7	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.8	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.9	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work"
2 Monitor flow control and pressure measuring and regulating devices and system performance	2.1	WHS/OHS and Environmental policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Information on device and equipment performance is collected and reported in accordance with organisational requirements
	2.3	Dealing with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.4	Routine checks of system are scheduled and monitored in accordance with the work schedule and established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards are assessed and WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Data on system performance and usage is collected, analysed and reported and unplanned events in the monitoring and operation of complex flow control are undertaken with the scope of established procedures
	2.7	Samples are taken in accordance with established procedures and known solutions to a variety of problems are applied
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Control and adjust flows and complete records and reports	3.1	Flow and overflow regulating systems are checked and adjustments made to meet demand and customer requirements
	3.2	Incidents and injuries are reported in accordance with established procedures where applicable
	3.3	Flows and diversions are determined to facilitate repair or emergency activities in accordance with organisational requirements
	3.4	Process faults and operational conditions of the system are identified, addressed and reported in accordance with organisational requirements
	3.5	Relevant work permit(s) are signed off accordance with requirements
	3.6	Work completion records, reports and documentation are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices monitoring and operating complex flow control, measuring and regulating devices on gas transmission systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G356A Transmission pipeline flow control and pressure measuring and regulating devices

Evidence shall show an understanding of monitoring and operating flow control and pressure measuring and regulating devices on gas transmission systems in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by

© Commonwealth of Australia, 2025 Powering Skills Organisation

the following aspects:

T1. Principles of control systems used in monitoring and control of applicable organisational gas infrastructure

T2. Component types, function and operation including:

- data collection and equipment control functions including:
  - Remote Terminal Unit (RTU)
  - Plant Control System (PCS)
  - PLC's Programmable Logic Controllers
  - DCS's Distributive Control Systems
  - SCADA Supervisory Control and Data Acquisition systems
- system controller interface such as Human Machine Interface (HMI) data and voice communication including:
  - Satellite Link
  - Internet Protocol (IP)
  - Modem/ISDN
  - UHF/VHF Radio
  - Microwave
  - Local Area Network (LAN)
  - Wide Area Network (WAN)

T3. Remote Telemetry Units (RTU's) and associated controller operation including:

- start up and shut down of process controllers and RTU equipment
- adjustment of process set point control and status e.g. local/remote and auto/manual
- alarm monitoring, acknowledgement, prioritisation and escalation
- alarm inhibit/enablement/disablement.

T4. Gas conditioning and monitoring equipment

- principles of operation
- components
- fault finding, adjustments

T5. Pressure control equipment

- types
- principles of operation
- fault finding, adjustments

T6. Gas flow measurement equipment

- types
- operation
- fault finding, adjustments

T7. Gas station alarms and safety devices

© Commonwealth of Australia, 2025 Powering Skills Organisation

- types
- operation
- fault finding, adjustments

T8. Gas station valves

- types
- operation
- maintenance
- fault finding, adjustments

T9. Monitoring, control and trending functions including, but not limited to:

- Start up and shut down of system interfaces
- Adjustment of applicable security status functions to suit requirements
- Alarm monitoring, acknowledgement, prioritisation and escalation
- Alarm inhibit/enablement/disablement
- Changing of applicable alarm parameters as required
- Analysis of trends and abnormal operating conditions
- Creation of trends as applicable
- Filtering of alarm and event logs
- Maintenance and adjustment including:
  - Scanning ranges and properties
  - Control limitations
  - Detailed history retrieval options
  - Auxiliary control functions
  - Dead band adjustment

T10. Basic troubleshooting including, as applicable:

- Server synchronisation and switch to backup
- Shutdown and re-start of system

T11. System data recording and data communication capabilities with third-party software applications such as external databases and spreadsheet programs etc.

T12. Gas station venting, purging and pressurisation operations

T13. Gas station operation requirements and procedures

- change over regulator and meter runs
- change over filters/separators
- purge and pressurise station
- adjust set points

T14. Manufactures specifications, manuals and procedures.

T15. Organisations gas facility manuals, drawings, schematics, displays, switches, P+ID’s and procedures

T16. Relevant Legislation, Standards, Codes and Regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

T17. Consultations appropriate persons to coordinate work and persons

T18. Required documentation, records and reports

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the

with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 3	• Interpret technical drawings and symbols • Selection of appropriate tools and equipment • System knowledge of Transmission pipelines and stations • Relevant knowledge of AS2885 Part 3
B	All	• Auxiliary control systems knowledge and understanding • Wide open monitor operation • Monitor Active Regulation • Two stage pressure reduction with monitor override
C	All	• RTU control of regulators
D	At least 2	• Pressure Controllers, operation, maintenance and understanding • Commissioning/Setting • Troubleshooting • Pressure Boosters adjustments • Knowledge of types/models
E	At least 2	• Regulator knowledge and understanding • Sleeve types • Control valves • Pressure reliefs • Diaphragm types • Hydraulic Plug types

© Commonwealth of Australia, 2025 Powering Skills Organisation

F	At least 2	• Valve maintenance and operation. • Automatic Line Break Valves operation and maintenance • Configuration of Ball, Plug, Gate, Instrument and Butterfly valves
G	At least 3	• Working knowledge of: • Diaphragm meters • Rotary meters • Turbine meters • Ultrasonic meters • Orifice plates • Coriolis meters • Oil changing
H	At least 3	• Operational checks • Single run units • Dual run units • City gates or Trunk Receiving Stations (TRS) • District regulators • Pressure Reliefs
I	At least 3	• Maintenance Activities • Single run units • Dual run units • City gates • District Regulators • Pressure Reliefs
J	At least 3	• Pressure alterations • Industrial units • City gates • Regulator Stations • Meter stations
K	At least 3	• Flaring and Purging • Industrial units • City gates • Regulator Stations • Meter stations
L	At least 3	• Overpressure Protection Systems function and operation. • OPSO

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Internal pressure relief systems • Pressure relief valves • Slam Shut systems • Valve Actuator and control systems
M	All	• Paperwork: • Risk assessments • Time sheets • Completed work records • Notifications and work permits • Log sheets • Service orders
N	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in the remote monitoring and operating of flow control, pressure, measuring and regulating devices for gas transmission.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
MSS402061A	Use SCADA systems in operations
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

UEGNSG508A Remotely check and report on gas station conditions

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers remotely checking gas station conditions, performing minor changes and reporting the status in accordance with relevant legislation, code, regulations and established procedures.

Gas stations could include metering, compressors, valves, regulators, heaters, scraper, telemetry and odourisation facilities.

The competency standard is applied against the procedures found under the latest edition of Australian and New Zealand Standard. AS 2885.3.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to gas stations, subject to all Workplace Health and Safety (WHS) /Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety, and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to WHS /Occupational Health and Safety (OHS), gas industry codes/guidelines, industrial relations, environmental protection, anti-discrimination and training laws.

Commonwealth, State/Territory or Local Government legislation and regulations may limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for checking and reporting on station conditions.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G508A Gas station conditions and reporting

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an understanding of remotely checking and reporting of gas station conditions in accordance with relevant legislation, code, regulations and procedures. to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. WHS/OHS safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures
- Hazardous materials
- MSDS
- PPE

T3. Gas Industry facilities and infrastructure

- regulation and metering facilities
- compression facilities
- gas processing facilities such as coal seam methane plants
- LPG processing facilities
- scraper stations and pigging facilities
- odourisation facilities
- relevant operating policies and procedures

T4. Operation of Gas Industry plant, equipment and materials

- relevant industry engineering terminology and units
- gas pipeline system operating parameters
- gas pipeline systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable
- relevant inspection and testing procedures for applicable plant and equipment
- commissioning and decommissioning processes of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable
- characteristics of gas flows including compressed and non-compressed operations
- characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- operation of gas analysis and measuring equipment

T5. Gas Industry products, processes and characteristics

- products, characteristics and tolerances including:
  - principles of applicable gas laws
  - gas pressure

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - gas temperature
  - compressibility
- relative density – specific gravity
- hydrocarbon and water dew points
- components of applicable natural gases and including LPG
- standard gas conditions
- combustion
- venting and purging principles
- effects of temperature and pressure on infrastructure

T6. Security breach procedures

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

T7. Gas industry documents

- signs, symbols terminology and legends as used in gas industry procedures and documents
- gas industry standards, policies and procedures
- basic drawings and diagrams
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets
- topographical and geographical maps and information
- workplace forms and reports

T8. Corrosion

- corrosion processes
- cathodic protection on a Gas Industry pipeline

T9. Problem solving and fault finding

- methodology
- possible solutions and probable solutions
- basic problem solving and fault finding techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required l knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Remotely check and report gas station conditions in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

Group No	The minimum number of items on which skill is to be demonstrated	Item List
A	All	• Working knowledge of relevant sections of the latest edition of AS2885 Part 3 • Working knowledge of security breach procedures • Demonstrated knowledge of station function • Demonstrated knowledge of identifying abnormal conditions of a station
B	All	• Interpret technical drawings and symbols • Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Practical knowledge of the properties of product being transported • Apply safe manual handling techniques • Communicate effectively in the workplace • Apply basic planning skills • First Aid certificate level 1
C	At least one occasion	Deal with an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

This unit contains Employability Skills

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in remotely checking and reporting on station conditions using appropriate systems.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG506A	Respond to emergencies for gas infrastructure
MSS402061A	Use SCADA systems in operations
UEGNSG507A	Remotely monitor and operate flow control and pressure measuring and regulating devices for gas transmission

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to remotely checking and reporting on gas station conditions.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Tools and equipment
- Maps and drawing
- Established procedures
- PPE and First Aid equipment
- Operating conditions

UEGNSG511A Operate gas infrastructure to meet nominated demand

Modification History

This unit replaces UEGNSG501B Operate gas infrastructure to meet nominated demand

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This competency standard covers the assessing and responding to anticipated demand. This competency standard also refers to Industry products and services; Authoritative sources; Product information; Stakeholders; Organisational requirements; Interpersonal skills; Nominated person(s); Product and service issues.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance,

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Distribution Pathway

Transmission Pathway

Controller Pathway

Common Group Units

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas supply industry

Distribution Pathway

UEGNSG216A	Commission or decommission gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	distribution pipelines
UEGNSG134A	Establish a utilities work site

Transmission Pathway

UEGNSG344A	Commission or decommission gas transmission pipelines
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG134A	Establish a utilities work site

Controller Pathway

UEGNSG507A	Remotely monitor and operate gas transmission flow control, pressure measuring and regulating devices
MSS402061A	Use SCADA systems in operations

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan to operate gas infrastructure to meet nominated demand	1.1 Information, requirements and established procedures are detailed, analysed and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3 Risk control measures for identified hazards are prioritised, implemented and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5 Communicate with Gas Industry stakeholders, produce gas schedule based on bid and or nomination information
	1.6 Operation is carried out in accordance with organisational procedures
	1.7 OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.8 Relevant stakeholders are provided with possible solutions and options within the scope, acceptable cost and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.9	Liaison and communication issues with relevant stakeholders are resolved and activities coordinated to carry out work
		1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with establish procedures
2	Operate gas infrastructure to meet nominated demand	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
		2.2	Work is performed and coordinated in accordance with a work schedule and to requirements
		2.3	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and established procedures
		2.4	Schedule is produced according to the information collected in accordance with established procedures
		2.5	Any abnormal conditions are recognised and responded to in accordance with organisational procedures
		2.6	Solutions to problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
		2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures
3	Complete and review operation of gas infrastructure to meet nominated demand	3.1	Work undertaken is checked against schedule for conformance with requirements, anomalies are reported in accordance with established procedures
		3.2	Works completion records, reports, documentation and information is confirmed, processed and the appropriate persons notified as

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT **PERFORMANCE CRITERIA**

per established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for assessing and responding to anticipated demand.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G501 Meeting nominated demand
B

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control

© Commonwealth of Australia, 2025 Powering Skills Organisation

systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.7 Complete Gas Industry reports and documentation

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.9 Supervise transmission pipeline operations

Evidence shall show an understanding, applicable at a supervisory level, of gas transmission pipelines, indicated by the following:

- pipeline threats, identification and control
- pinpointing pipeline locations
- excavation machinery and their effects used near pipelines
- pipeline specifications
- coatings for corrosion protection
- HB105 Guide to Pipeline Risk Assessment in accordance with AS2885 Part 1 and Part 3
- applicable pipeline legislation, regulatory and advisory standards and codes of practice.

G 4.1.16 Demonstrate operational understanding of Gas Industry facilities and infrastructure

Evidence shall show an operational understanding required at a supervisory level for applicable Gas Industry facilities and infrastructure, including, but not limited to:

- regulation and metering facilities
- compression facilities
- gas processing facilities such as coal seam methane plants
- LPG processing facilities
- scraper stations and pigging facilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

- odourisation facilities
- reference to relevant operating policies and procedures

G 4.1.17 Demonstrate knowledge of pipeline systems

Evidence shall show an understanding required at a Gas Industry supervisory level of general principles associated with pipelines and other gas infrastructure, indicated by the following:

- identification, control and management of relevant threats against pipeline infrastructure and facilities
- identification of pipeline locations
- application of guidelines for the use of excavation machinery near pipelines and infrastructure and damage
- operational specifications and safe working limitations of pipelines and infrastructure
- principles of cathodic protection and corrosion mitigation
- HB105 Guide to pipeline risk assessment in accordance with AS2885.1, AS2885 Part 3
- applicable pipeline legislation, regulations, advisory standards and codes of practice.

G 4.1.19 Understand and apply commercial agreements in a Gas Industry environment

Evidence shall show an understanding of the knowledge of gas industry commercial agreements, indicated by the following:

- understanding the application of applicable commercial agreements and contractual requirements including, but not limited to:
  - Gas Supply Agreements (GSA)
  - Gas Transportation Agreements (GTA)
  - Gas Processing Agreements (GPA)
  - Gas Imbalance Trading procedures
  - Spot market contracts

Evidence Guide

of evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
  - Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 1	Work site context:

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Gas Industry production, transmission and distribution areas • Location — control centres or other places where communication processes occur
B	All	• Use of relevant computer systems • Work requests from other parties • Relevant procedures for equipment use • Perform work under or without supervision • Work carried out in regular or specified timeframe • Written requests and reports
C	All	• Locate, interpret and apply relevant information • Analyse process functions and problems • Apply relevant customer service policies and procedures • Use appropriate workplace language and communication technologies and techniques • Maintain relevant workplace records • Demonstrate understanding of the essential knowledge and associated skills associated with this competency standard • Demonstration of each element on several occasions

© Commonwealth of Australia, 2025 Powering Skills Organisation

D	At least one occasion	Deal with unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in holistic assessment with above listed items

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in operating gas infrastructure to meet nominated demand.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan communication with Gas Industry stakeholders	1.1	Work schedules, including drawings, plans, requirements, established procedures and material lists are detailed and communicated to control centre, analysed as necessary and the extent of the preparation of the work determined for planning, coordination and follow-on communication purposes
	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established control centre procedures and guidelines
	1.3	Risk control measures for identified hazards are prioritised, implemented and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.5	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.7	Liaison and communication issues with authorised persons, authorities, clients, land-owners and other relevant parties are resolved and activities coordinated to carry out work
		1.8	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established CC procedures
2	Identify and carrying out Gas Industry stakeholders communication requirements	2.1	Relevant OHS, operational and commercial requirements and practices of individual stakeholders are referenced and actioned in accordance with control centre guidelines and established procedures
		2.2	Work is monitored, performed and/or coordinated in accordance with applicable work schedules and to applicable stakeholder requirements
		2.3	Hazard warnings and safety signs are recognised and hazards are assessed and OHS risks are reported to the immediate authorised persons for directions according to established procedures
		2.4	Remedial actions are identified and communicated to relevant stakeholders to overcome any shortfalls encountered in the work schedule according to requirements and established procedures
		2.5	Solutions to non-routine problems are identified and communicated using Essential Knowledge and Associated Skills according to requirements
		2.6	Ongoing monitoring of quality of the work are undertaken in accordance with requirements and established procedures to ensure that the stakeholder’s agreed communication requirements are adhered to.
		2.7	Communication with clients is conducted in a professional and courteous manner according to organisational requirements and to contractual

ELEMENT		PERFORMANCE CRITERIA	
			agreements and statutory requirements
		2.8	Appropriate language and interpersonal skills are used to facilitate accurate and relevant exchange of information
		2.9	Enquiries outside area of responsibility/knowledge are referred to the nominated person for resolution
3	Complete procedures for communication and liaison with Gas Industry stakeholders	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
		3.2	Accidents and injuries are reported and followed up in accordance with requirements/established procedures
		3.3	Work site is confirmed safe and operational accordance with established procedures and status communicated to relevant stakeholders
		3.4	Relevant work permit(s) are signed off and relevant equipment and processes are returned to service and advised to stakeholders as required
		3.5	Notification of completion of works and tasks is communicated to relevant stakeholders as per applicable procedures
		3.6	All stakeholders and internal staff are notified of actions required at the completion of any works or tasks
		3.7	Any agreed outcomes are monitored where relevant communication to stakeholders carried out.
		3.8	Communication completion processes are performed in accordance with organisational procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices control centre communication with Gas Industry stakeholders.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G502 Control centre communication
B

G 3.7.2 Apply communication, negotiation and problem solving techniques

Evidence shall show an understanding of communication, negotiation and problem solving skills required in a Gas Industry environment, indicated by the following:

- monitor/introduce practices designed to improve performance
- use effective consultative processes
- communicate routine and non-routine information clearly to senior managers, peers and subordinates
- ability to liaise effectively with a range of clients
- clear and accurate observation and analytical skills
- negotiation and dispute resolution and problem solving.

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies

© Commonwealth of Australia, 2025 Powering Skills Organisation

- property/land owners (including traditional land owners) and tenants
- emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program

© Commonwealth of Australia, 2025 Powering Skills Organisation

- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be

© Commonwealth of Australia, 2025 Powering Skills Organisation

more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
  - Demonstrate performance across a representative range of contexts from the prescribed items below.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 1	Workplace Environment Context: • Gas Industry production, transmission and distribution areas • Location — control centres or places where communication processes occur • Work including out-of-hours
B	All	• Use of computer hardware, software such as email • Work requests from other parties • Relevant procedures for equipment use • Perform work under or without supervision • Work carried out in regular or specified timeframe
C	All	Documentation: • Written requests and reports • Organisational formatting reports • Regulatory reporting formats
D	All	• Locate, interpret and apply relevant information • Analyse process functions and problems • Apply relevant

© Commonwealth of Australia, 2025 Powering Skills Organisation

		customer service policies and procedures • Use appropriate workplace language and communication technologies and techniques • Maintain relevant workplace records • Demonstrate understanding of the essential knowledge and associated skills associated with this competency standard • Demonstration of each element on several occasions
E	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in controlling centre communication with Gas Industry stakeholders.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

10) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to control centre

RANGE STATEMENT

communication with Gas Industry stakeholders.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Industry products and services
- Authoritative sources
- Product information
- Stakeholders
- Organisational requirements
- Interpersonal skills
- Nominated person(s)
- Product and service issues

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Control centre.

UEGNSG513A Manage emergencies and critical incidents for gas infrastructure

Modification History

This unit replaces UEGNSG503B Manage emergencies and critical incidents for gas infrastructure

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit deals with the skills and knowledge required to manage a critical incident for gas infrastructure. This unit refers to the management of incidents of a critical nature that may impact on the operational effectiveness of the plant or system, endanger human life or property, or have an adverse impact on the environment.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as New

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Apprenticeships and the like.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Distribution Pathway

Transmission Pathway

Controller Pathway

Common Group Units

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas supply industry

Distribution Pathway

UEGNSG216A	Commission or decommission gas distribution pipelines
UEGNSG134A	Establish a utilities work site

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

Transmission Pathway

UEGNSG344A	Commission or decommission gas transmission pipelines
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG134A	Establish a utilities work site

Controller Pathway

UEGNSG506A	Respond to gas infrastructure emergencies
HLTAID003	Perform first aid

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Plan to undertake the management of critical incidents	1.1	Established procedures and contingency plans are known, understood and determined for dealing with critical incidents
		1.2	Work is analysed, prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
		1.3	Risk control measures for identified hazards are prioritised, implemented and evaluated
		1.4	Relevant system constraints are communicated to relevant persons and identified for work sites as per established procedures
		1.5	Operational and commercial requirements are communicated to stakeholders as per established procedures
		1.6	OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
		1.7	Liaison and communication with authorised persons, authorities, clients and land-owners is performed and activities are coordinated to carry out work
2	Implement incident response strategies	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.2	Receive and record relevant incident information regarding the scope and severity of the incident according to established procedures
		2.3	Analyse, assess and take appropriate actions according to established procedures
		2.4	OHS risks and incidents are identified and action taken according to established procedures
		2.5	Establish appropriate communications with incident support services and relevant stakeholders according to established procedures
		2.6	Actions are taken to reduce the effect of the incident according to requirements and established procedures
		2.7	Continue to monitor and assess the incident for any changes and respond according as per established procedures
		2.8	Essential Knowledge and Associated Skills are applied in an agreed timeframe and to quality standards efficiently according to requirements and established procedures
3	Complete procedures for managing critical incidents	3.1	Work completion records, reports, de-briefings, documentation and information is confirmed, processed and the appropriate persons notified
		3.2	Review incident response procedures and develop recommendations for changes to established procedures as necessary

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for managing emergencies and critical incidents for gas infrastructure.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G503 Emergency management B

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Report workplace hazards

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally appropriate manner

G 4.1.1 Operate and supervise in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.10 Understanding security breach procedures

Evidence shall show an understanding required to identify security breaches and the required action in dealing with such breaches, indicated by the following as applicable:

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security

© Commonwealth of Australia, 2025 Powering Skills Organisation

- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

G 4.1.11 Follow emergency/incident control procedures

Evidence shall show an application of emergency/incident control procedures used for applicable gas infrastructure, indicated by the following:

- compliance with applicable enterprise emergency/incident control policies and procedures
- communication with relevant stakeholders
- application of relevant procedures

G 4.1.14 Understand and comply with environmental and cultural issues requirements

Evidence shall show an understanding of environmental and cultural issues required of Gas Industry supervisors and autonomous workers, indicated by the following:

- understanding relevant environmental legislation, regulations, advisory standards, codes of practice and their impact on gas industry pipelines and facilities
- demonstrate appropriate actions and behaviours when dealing with environmental and cultural issues
- understanding of the significance of cultural awareness and native title legislation, regulations, advisory standards, codes of practice and cultural customs and practices and their impact on Gas Industry pipelines and facilities.

G 4.1.17 Demonstrate knowledge of pipeline systems

Evidence shall show an understanding required at a Gas Industry supervisory level of general principles associated with pipelines and other gas infrastructure, indicated by the following:

- identification, control and management of relevant threats against pipeline infrastructure and facilities
- identification of pipeline locations
- application of guidelines for the use of excavation machinery near pipelines and infrastructure and damage
- operational specifications and safe working limitations of pipelines and infrastructure
- principles of cathodic protection and corrosion mitigation
- HB105 Guide to pipeline risk assessment in accordance with AS2885.1, AS2885 Part 3

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable pipeline legislation, regulations, advisory standards and codes of practice.

G 4.1.18 Apply problem solving techniques

Evidence shall show an understanding and application of problem solving techniques in a Gas Industry environment, indicated by the following:

- understanding and application of formal problem solving techniques
- understanding the nature of problems
- identifying, evaluating and selecting solutions
- evaluating the effectiveness of problem solving processes.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a

© Commonwealth of Australia, 2025 Powering Skills Organisation

percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills

- Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
  - Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Evaluate, respond and report threats to pipeline systems operation • Working knowledge of sections of the relevant Australian pipeline and associated standards and legislation • Working knowledge of the station function including identification of abnormal conditions of stations and reporting • Working knowledge of pipeline operational parameters • Use relevant field permit to work systems • Respond correctly to alarms • Working knowledge of monitoring field work • Communicate effectively in the workplace • Operating

© Commonwealth of Australia, 2025 Powering Skills Organisation

		communications equipment • Interpret technical drawings and symbols • Emergency Response procedures • Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Maintain a safe and clean workplace • Apply planning skills • Manage communication with the media
B	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in managing emergencies and critical incidents for gas infrastructure.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

10) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to compliance with the management of incidents of a critical nature that may impact on the operational

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

effectiveness of the plant or system, endanger human life or property, or have an adverse impact on the environment.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Gas infrastructure
- Records/reports (5)
- Information systems
- Maps and drawings
- Established procedures
- Areas of responsibility

Controller Pathway

UEPOPS203B Operate and Monitor Communications System

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan for the monitoring and controlling of field activities	1.1 Work schedules, plans, requirements, established procedures detailed and analysed and if necessary and the extent of the preparation of the work determined for planning and coordination
	1.2 Shift hand-over detail is received and understood and confirmed according to established procedures
	1.3 Work is analysed, prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.4 Risk control measures for identified hazards are prioritised, implemented and evaluated against the work schedule
	1.5 Salient system constraints are communicated to relevant persons and identified for work sites as per established procedures
	1.6 Operational and commercial requirements are communicated to stakeholders as per established procedures
	1.7 OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.8 Relevant work permits are secured to coordinate the performance of work according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			requirements and established procedures
		1.9	Liaison and communication with authorised persons, authorities, clients and land-owners is performed/actioned and activities are coordinated to carry out work
2	Undertake monitoring and controlling of field activities	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
		2.2	Work is performed and coordinated in accordance with a work schedule and established procedures
		2.3	OHS risks and incidents are identified and action taken according to established procedures
		2.4	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and established procedures
		2.5	Essential Knowledge and Associated Skills are applied in an agreed timeframe and to quality standards efficiently according to requirements and established procedures
		2.6	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
		2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer to community and industry standards
3	Complete procedures monitoring and controlling field activities	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies are reported and solutions identified in accordance with established procedures
		3.2	Relevant work permit(s) and field activities are signed off and the status of plant, equipment and personnel movements recorded and handover procedures are conducted as per established

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		procedures
	3.3	Shift handover detail is relayed and confirmed according to established procedures
	3.4	Work completion records, reports, documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of monitoring and controlling field activities.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G504 Field activities B

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA's, JSA's, JSEA's, SWM's etc
- Report workplace hazards

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally appropriate manner

G 4.1.1 Operate and supervise in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points

© Commonwealth of Australia, 2025 Powering Skills Organisation

- components of applicable natural gases including LPG
- standard gas conditions
- combustion
- venting and purging principles
- Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical drawings including, but not limited to:
  - Process and Instrumentation Diagrams (PID)
  - Facility and pipeline construction and as-built drawings
  - Geographical Information System (GIS) drawings and data
  - Electrical drawings
  - Survey maps
  - Pipeline route maps and alignment sheets

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.10 Understand security breach procedures

Evidence shall show an understanding required to identify security breaches and the required action in dealing with

© Commonwealth of Australia, 2025 Powering Skills Organisation

such breaches, indicated by the following as applicable:

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

G 4.1.11 Follow emergency/incident control procedures

Evidence shall show an application of emergency/incident control procedures used for applicable gas infrastructure, indicated by the following:

- compliance with applicable enterprise emergency/incident control policies and procedures
- communication with relevant stakeholders
- application of relevant procedures

G 4.1.14 Understand and comply with environmental and cultural issues requirements

Evidence shall show an understanding of environmental and cultural issues required of Gas Industry supervisors and autonomous workers, indicated by the following:

- understanding relevant environmental legislation, regulations, advisory standards, codes of practice and their impact on gas industry pipelines and facilities
- demonstrate appropriate actions and behaviours when dealing with environmental and cultural issues
- understanding of the significance of cultural awareness and native title legislation, regulations, advisory standards, codes of practice and cultural customs and practices and their impact on Gas Industry pipelines and facilities.

G 4.1.17 Demonstrate knowledge of pipeline systems

Evidence shall show an understanding required at a Gas Industry supervisory level of general principles associated with pipelines and other gas infrastructure, indicated by the following:

- identification, control and management of relevant threats against pipeline infrastructure and facilities
- identification of pipeline locations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- application of guidelines for the use of excavation machinery near pipelines and infrastructure and damage
- operational specifications and safe working limitations of pipelines and infrastructure
- principles of cathodic protection and corrosion mitigation
- HB105 Guide to pipeline risk assessment in accordance with AS2885.1, AS2885 Part 3
- applicable pipeline legislation, regulations, advisory standards and codes of practice.

G 4.1.18 Apply problem solving techniques

Evidence shall show an understanding and application of problem solving techniques in a Gas Industry environment, indicated by the following:

- understanding and application of formal problem solving techniques
- understanding the nature of problems
- identifying, evaluating and selecting solutions
- evaluating the effectiveness of problem solving processes.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full

© Commonwealth of Australia, 2025 Powering Skills Organisation

can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
- Apply sustainable energy principles and practices as specified in the performance criteria and range
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills

- Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
  - Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Evaluate, respond and report threats to pipeline systems operation • Working knowledge of sections of the relevant Australian pipeline and associated standards • Working knowledge of the station function including identification of abnormal conditions of stations and reporting • Working knowledge of pipeline operational parameters • Use relevant field permit to work systems • Respond correctly to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		alarms • Working knowledge of monitoring field work • Communicate effectively in the workplace • Operating communications equipment • Interpret technical drawings and symbols • Emergency Response procedures • Responding to a Dial Before You Dig enquiry • Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Maintain a safe and clean workplace • Apply planning skills
B	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed item

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in monitoring and controlling field activities.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to compliance with the monitoring of permit to work requests, dispatching personnel, responding to alarms, travel and activity monitoring of field personnel, monitoring work activities of field personnel against work schedule, contingency skills, response to third party enquiries, out of hours pipeline notification, response to man down alarm, tracking of field personnel (remote area), monitoring activities on pipeline, monitoring availability of assets (maintain a log), monitor equipment status, coordinating field activities, controlling and authorising field works, preparing incident reports, controlling gas flow and quality, controlling pressure and temperature of gas.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Areas to be monitored:
- Areas to control:
- Gas infrastructure:
  - Organisational requirements (4)
  - Records/reports (5)
  - Information systems
  - Maps and drawings
  - Established procedures

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

Control centre.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG515A Use control centre systems to monitor and control gas infrastructure

Modification History

This unit replaces UEGNSG505B Use control centre systems to monitor and control gas infrastructure

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This competency standard covers the use and operation of SCADA and other control centre information systems including outage management systems, alarm management systems, site security systems, communications systems, telemetry to effectively manage Gas Industry infrastructure.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a licence to practice in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as New Apprenticeships and the like.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Distribution Pathway

Transmission Pathway

Controller Pathway

Common Unit Group

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG133A	Comply with environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas supply industry

Distribution Pathway

UEGNSG216A	Commission or decommission gas distribution pipelines
UEGNSG134A	Establish a utilities work site

Transmission Pathway

UEGNSG344A	Commission or decommission gas transmission pipelines

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG134A	Establish a utilities work site

Controller Pathway

UEGNSG507A	Remotely monitor and operate gas transmission flow and pressure measuring and regulating devices
MSS402061A	Use SCADA systems in operations

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of using control centre systems to monitor and control gas infrastructure.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G505 B Control gas infrastructure using control centre systems

G 2.1.1 Work in the gas sector

Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:

- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.4 Apply relevant OHS regulations, policies and procedures

Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:

- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA's, JSA's, JSEA's, SWM's etc
- Report workplace hazards

G 2.1.9 Respond to emergency and accident situations

Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:

- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret workplace documents

Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:

- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate manner

G 4.1.1 Operate and supervise in the Gas Industry

Evidence shall show an understanding of supervising and operating in a Gas Industry environment, indicated by the following:

- understanding and application of enterprise applicable standard operating procedures
- understanding and application of relevant enterprise permit to work systems
- understanding and application of alarm and communication systems
- understanding and application of relevant OHS and environmental legislative requirements including applicable emergency procedures
- demonstrate an understanding and application of planning, prioritisation and working autonomously in the Gas Industry.

G 4.1.2 Understand the effective operation of Gas Industry plant, equipment and materials

Evidence shall show an understanding of the effective operation of Gas Industry plant, equipment and materials, indicated by the following:

- understand and apply of relevant industry engineering terminology and units
- understanding of pipeline system operating parameters
- demonstrate operational knowledge of systems such as pumps, compressors, regulation, shutdown equipment, measurement systems by on-site or remote operation as applicable.
- understanding of relevant inspection and testing procedures for applicable plant and equipment
- understanding the process of commissioning and decommissioning of relevant equipment such as pipework, vessels and compressors, including on-site and remote operation as applicable.
- Understanding the characteristics of gas flows including compressed and non-compressed operations
- Understanding the characteristics, operation, capabilities and limitations of applicable tools and equipment including prime movers, compression and control systems, pipeline facilities and associated equipment
- understanding the operation of gas analysis and measuring equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 4.1.3 Communicate effectively in the Gas Industry at a supervisory level

Evidence shall show an understanding of communication techniques required in supervisory roles in the Gas Industry, indicated by the following:

- communicate effectively with a variety of Gas Industry stakeholders, using strategies for dealing with difficult situations. The communication includes oral, written or electronic communications, : with various stakeholders including:
  - workplace colleagues
  - workplace managers
  - relevant customers and suppliers
  - regulatory bodies
  - property/land owners (including traditional land owners) and tenants
  - emergency response organisations

G 4.1.4 Understand Gas Industry products, processes and characteristics

Evidence shall show a comprehensive understanding of Gas Industry products and characteristics, indicated by the following:

- understand the Gas Industry products and the characteristics and tolerances of the product including:
  - principles of applicable gas laws
    - gas pressure
    - gas temperature
    - compressibility
  - relative density – specific gravity
  - hydrocarbon and water dew points
  - components of applicable natural gases including LPG
  - standard gas conditions
  - combustion
  - venting and purging principles
  - Effects of temperature and pressure on infrastructure

G 4.1.5 Interpret Gas Industry drawings

Evidence shall show an ability to interpret and understand Gas Industry technical drawings, indicated by the following:

- understanding and interpreting relevant technical

© Commonwealth of Australia, 2025 Powering Skills Organisation

drawings including, but not limited to:

- Process and Instrumentation Diagrams (PID)
- Facility and pipeline construction and as-built drawings
- Geographical Information System (GIS) drawings and data
- Electrical drawings
- Survey maps
- Pipeline route maps and alignment sheets

G 4.1.7 Create Gas Industry reports and documentation

Evidence shall show an understanding and application of completing and interpreting enterprise-specific supervisory level Gas Industry reports including ,but not limited to:

- periodic operational reports
- budget reports and summaries
- regulatory reporting requirements

G 4.1.8 Use a personal computer

Evidence shall demonstrate requirements to use personal computer and undertake fundamental tasks, indicated by the following:

- send, answer and manage emails
- access the Internet for research purposes
- write documents using a word processing program
- develop a basic spreadsheet using a spreadsheet program
- apply formatting including cutting and pasting across a variety of computer applications (eg from excel to word)

G 4.1.10 Understand security breach procedures

Evidence shall show an understanding required to identify security breaches and the required action in dealing with such breaches, indicated by the following as applicable:

- identification of different types of security incidents including but not limited to:
  - physical security breaches at gas infrastructure
  - threat assessment and management
  - confidential information security
- communication with applicable emergency service and regulatory organisations
- compliance with applicable enterprise security policies and procedures

G 4.1.11 Follow emergency/incident control procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an application of emergency/incident control procedures used for applicable gas infrastructure, indicated by the following:

- compliance with applicable enterprise emergency/incident control policies and procedures
- communication with relevant stakeholders
- application of relevant procedures

G 4.1.14 Understand and comply with environmental and cultural issues requirements

Evidence shall show an understanding of environmental and cultural issues required of Gas Industry supervisors and autonomous workers, indicated by the following:

- understanding relevant environmental legislation, regulations, advisory standards, codes of practice and their impact on gas industry pipelines and facilities
- demonstrate appropriate actions and behaviours when dealing with environmental and cultural issues
- understanding of the significance of cultural awareness and native title legislation, regulations, advisory standards, codes of practice and cultural customs and practices and their impact on Gas Industry pipelines and facilities.

G 4.1.17 Demonstrate knowledge of pipeline systems

Evidence shall show an understanding required at a Gas Industry supervisory level of general principles associated with pipelines and other gas infrastructure, indicated by the following:

- identification, control and management of relevant threats against pipeline infrastructure and facilities
- identification of pipeline locations
- application of guidelines for the use of excavation machinery near pipelines and infrastructure and damage
- operational specifications and safe working limitations of pipelines and infrastructure
- principles of cathodic protection and corrosion mitigation
- HB105 Guide to pipeline risk assessment in accordance with AS2885.1, AS2885 Part 3
- applicable pipeline legislation, regulations, advisory standards and codes of practice.

G 4.1.18 Apply problem solving techniques

Evidence shall show an understanding and application of problem solving techniques in a Gas Industry environment,

© Commonwealth of Australia, 2025 Powering Skills Organisation

indicated by the following:

- understanding and application of formal problem solving techniques
- understanding the nature of problems
- identifying, evaluating and selecting solutions
- evaluating the effectiveness of problem solving processes.

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

© Commonwealth of Australia, 2025 Powering Skills Organisation

need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines — UEG11’. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
    - Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All	• Evaluate, respond and report threats to pipeline systems operation • Working knowledge of sections of the relevant Australian pipeline and associated standards • Working knowledge of the station function including identification of abnormal conditions of stations and reporting • Working knowledge of pipeline operational parameters • Respond correctly to alarms • Operation of SCADA and other associated information systems • Communicate effectively in the workplace • Operating communications equipment • Interpret technical drawings and symbols • Emergency Response procedures • Work utilising relevant

© Commonwealth of Australia, 2025 Powering Skills Organisation

		OHS legislation, regulations, codes of practice, policies and procedures • Maintain a safe and clean workplace • Apply planning skills • Fault and incident reporting and follow up process

B	At least 3	• Operation and or monitoring of:
		  • compressor stations
		  • regulator stations
		  • power generation stations
		  • custody transfer stations
		  • odourant stations
		  • valves and actuators
		  • heaters
		  • meter stations
		  • gas quality equipment
		  • system fringe location
		  • complex analysis modelling systems
		  • corrosion protection systems
		  • filtration systems
		  • PIGs
		• Telemetry and data communications systems

C	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in using control centre systems to monitor and control gas infrastructure.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit.

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to compliance with the following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Areas to be monitored:
- Areas to control:
- Gas infrastructure:
  - Organisational requirements (4)
  - Records/reports (5)
  - Information systems
  - Maps and drawings
  - Established procedures
  - Established procedures

UEGNSG611B Control LPG storage/processing operations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the control of LPG storage/processing operations. The competency standard refers to utilisation of resources; operational; monitoring; referring to the appropriate persons; identifying types of equipment and faults and developing the required reports.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any work site where liquefied petroleum gas operations occur.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 4 Writing 4 Numeracy 4

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan control of operations	1.1 Work schedules, including drawings, plans, requirements, established procedures and material lists are detailed, analysed if necessary by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised, processing priorities are determined and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes to a quality standard and in accordance with established procedures
	1.3 Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.4 OHS, environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.5 Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.6 Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for the job are identified, scheduled, coordinated and confirmed in a safe and technical working order
	1.7 Clients are provided with possible solutions and options within the scope, acceptable cost and requirements
	1.8 Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9 Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		authorised where applicable in accordance with establish procedures
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Control operations	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	First Aid and other related work procedures such as systems isolation are performed according to requirements and established procedures
	2.3	Information concerning the operation of the storage or processing system is monitored and conveyed to relevant persons and other work areas to ensure safe and efficient system
	2.4	Work is performed and coordinated in accordance with a work schedule and to requirements
	2.5	Alarm codes are correctly interpreted and acknowledged and other hazards, OHS risks and control measures are monitored and preventative action taken and appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.7	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures to ensure a quality outcome is achieved for the client/customer to community and industry standards
3 Shut down operations	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Emergency shutdown procedures are applied in the event of serious equipment failure or operational parameters being exceeded
	3.4	Relevant work permit(s) are signed off and system is returned to service and advice is given to clients in accordance with requirements
	3.5	Works completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices, Controlling LPG Storage/Processing Operations.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G611B Gaseous fuel storage

G 3.6.1 Working safely in an LPG environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence shall show an understanding of the requirements to work safely in an LPG environment, indicated by the following:

- working safely in accordance with procedures, OHS, emergency and environmental requirements
- awareness of the properties of LPG
- identifying variations and irregularities.

G 3.6.2 understanding the correct use of plant and equipment in an LPG environment

Evidence shall show an understanding of the requirements to correctly use plant and equipment in an LPG environment, indicated by the following:

- operate transfer equipment including compressors or pumps
- transfer methods for pipes and hoses
- selection, testing and set up processes for transfer equipment
- making analytical judgements for appropriate adjustments to plant and equipment
- awareness of test equipment and its uses
- operation, testing and inspecting equipment that includes pressure vessels and associated fitting
- understanding manufacturer's specifications to make adjustments to parts where appropriate
- understanding of how to select appropriate equipment for tasks associated with LPG
- operating correctly gas analysis equipment
- operating correctly gas alarm and communication equipment.

G 3.6.3 Static electricity

Evidence shall show an understanding of the requirements to deal with situations where static electricity is present in an LPG environment, indicated by the following:

- understanding properties of static electricity and how to mange it in an LPG environment.

G 3.6.4 LPG communication including the recording of LPG information

Evidence shall show an understanding of the requirements to communicate and record information in an LPG environment, indicated by the following:

- accurately recording LPG information
- recording and reporting corrective actions in an LPG

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment
- identifying and reporting any problems associated with transfer processes and procedures
- communicating in an LPG environment
- understanding of permit to work systems for an LPG environment.

G 3.6.5 The LPG production process

Evidence shall show an understanding of the requirements to work in the LPG production process, indicated by the following:

- understanding of the appropriate processing, handling and storage operations for LPG
- understanding how to mix/blend the properties of LPG.

G 3.6.6 Technical drawings

Evidence shall show an understanding of the requirements to understand technical drawings for the LPG environment, indicated by the following:

- understanding and interpreting technical drawings.

Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full

ELEMENT	PERFORMANCE CRITERIA	
		requirements
	1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.11	Status of the system is sought through communication with pipeline control centre in accordance with established procedures
	1.12	Expenditure is forecast and managed to keep within operational budget constraints
2 Supervise operations	2.1	OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Appropriate persons are inducted according to company standard operating procedures
	2.3	First Aid and other related work procedures are performed according to requirements and established procedures
	2.4	Lifting, climbing, working in confined spaces, excavations, trenches, and aloft, use of power tools, techniques and practices are safely exercised according to requirements
	2.5	Equipment faults are identified through inspection and testing of operational equipment in accordance with a work schedule and to requirements
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.7	Operating conditions of equipment are monitored through gauge levels, temperatures,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		flow indicators in order to determine performance of equipment and system
	2.8	Information concerning the operation of the pipeline system is monitored and conveyed to relevant persons to ensure safe and efficient operation of the pipeline system
	2.9	Fault finding and troubleshooting techniques are applied to operational systems and equipment to identify any repairs or maintenance that is required according to requirements and established procedures
	2.10	Essential Knowledge and Associated Skills are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.11	Solutions to non-routine problems are identified and actioned using Essential Knowledge and Associated Skills according to requirements
	2.12	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer to a community and industry standards
3 Finalise completion details	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies which are reported and solutions identified in accordance with established procedures
	3.2	Accidents and injuries are reported and followed up in accordance with requirements and established procedures
	3.3	Work site is rehabilitated/cleaned up and confirmed safe and in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.5 Relevant work permit(s) are signed off in accordance with requirements
	3.6 Works completion records, reports as installed/modified drawing(s) and documentation and information is confirmed, processed and the appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for the supervising of technical operations for liquefied petroleum gas storage and processing.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G612B Gaseous fuel storage technical operations

G 3.6.1 Working safely in an LPG environment

Evidence shall show an understanding of the requirements to work safely in an LPG environment, indicated by the following:

- working safely in accordance with procedures, OHS, emergency and environmental requirements
- awareness of the properties of LPG
- identifying variations and irregularities.

G 3.6.6 Technical drawings

Evidence shall show an understanding of the requirements to understand technical drawings for the LPG environment, indicated by the following:

- understanding and interpreting technical drawings.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G 5.6.1 Supervision of LPG processes

Evidence shall show an understanding of the requirements to supervise LPG staff, activities and procedures, indicated by the following:

- effective communication including:
    - Demonstration of an understanding and skill in appropriate workplace colleague and third-party communication
    - Understanding relevant organisational and regulatory requirements in workplace communications
  - motives for communication
  - communication networks
  - communication types including:
    - Oral – directly spoken
    - Oral – telephone or radio
    - Written – reports, memos etc
    - Electronic – email, electronic files, video presentations etc
  - choosing the medium and the flow of a message
  - blocks to effective communication
- using emergency equipment including fire fighting equipment
  - dealing with emergencies
  - elements of an emergency plan
  - fire extinguishing system
- understanding industrial awards and employee entitlements
  - individual and collective bargaining agreements
  - awards and employee entitlements
- correct waste management procedures
  - organisational requirements for waste management
  - affects of not managing waste effectively
- coordinating the work of others
  - the importance of good management
  - what good managers do
  - the importance of leadership
  - effective leadership
  - the importance of control
  - control methods

© Commonwealth of Australia, 2025 Powering Skills Organisation

- principles of effective control
- control systems and techniques

- applying permit to work system including permits and limitations
  - understanding applicable organisational permit to work systems
  - demonstrated application of an organisational permit to work system
- providing technical leadership and accurate instruction
- understanding organisational procedures for the testing, diagnosing and rectification of faults.

G 5.6.2 Assess and control odourant levels for LPG processing

Evidence shall show an understanding of the requirements to assess the correct odourant levels for the processing of LPG, indicated by the following:

- assessing correct odourant levels for processing LPG.
- Implication of incorrect odourant levels
- Correct odorant injection levels

G 5.6.3 Operate LPG plant and equipment

Evidence shall show an understanding of the requirements to undertake the operation of plant and equipment used in the LPG environment, indicated by the following:

- correct vessel inspecting, testing techniques and coating procedures to protect against corrosion
- liquid product transfer (fiscal and operational)
- monitor, identify and rectify any problems associated with storage processing (transfer processes and procedures)
- metering and calibration procedures
- operation of storage/processing facilities and equipment
- operation of pumps, compressors, valving, shutdown and deluge systems.

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to **9.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least 5	Resources: Vessels

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Pumps Compressors Valves Product Control and monitoring equipment Mixing and sampling equipment Air equipment
B	At least 3	Activities: Product revival, processing and/or dispatch Rectification of gas system faults Scheduling of maintenance, repairs and/or modifications Commissioning of new plant and/or equipment Stock control
C	At least 5	Monitoring of storage/processing facilities: Pressure Temperature Volume Corrosion Liquid/vapour leaks Product levels Product levels Security
D	At least 3	Operational requirements: Product levels Product blending/mixing/odourising

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Manufacturers maintenance requirements Rectification of gas system faults
E	At least 4	Types of faults: Liquid/vapour leaks Electrical problems Mechanical failure Over filled vessel Out of current inspection status Gauge failure
F	All	Working safely in an LPG environment Interpreting technical drawings Determining odourant levels for LPG processing OHS and associated legislative requirements ADG Code
G	At least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in supervising technical operations for liquefied petroleum gas storage and processing.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to supervising technical operations for liquefied petroleum gas storage and processing.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Resources

Activities

Appropriate persons (5)

Relevant persons

Monitoring

Operational requirements (5)

Effective communication (5)

UEGNSG614A Load, unload, exchange and connect LPG cylinders

Modification History

This unit replaces UEGNSG603B Load, unload and exchanging gas cylinders

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the loading, unloading, transporting, exchanging and connecting liquefied petroleum gas (LPG) cylinders to an approved installation in accordance with relevant legislation, codes, regulations and established procedures.

This encompasses following procedures to correctly and safely carry out the work using appropriate materials, tools and equipment.

Application of the Unit

Application of the Unit **2)**

This unit shall apply to work sites where the distribution of liquefied petroleum gas cylinders occurs, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace. Typically it applies to cylinder delivery drivers and service/ installation gas fitters who exchange LPG gas cylinders connected to an approved gas installation.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract

© Commonwealth of Australia, 2025 Powering Skills Organisation

of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to load/unload truck, , exchange and connect LPG cylinders	1.1	Work instructions are received and confirmed with appropriate persons
	1.2	Relevant requirements and established procedures to be followed for the work to be performed are discussed with all persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.4	Suggestions to assist with the loading, unloading and exchanging of gas cylinders are made to others involved in the work
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.6	Scope of responsibility under the relevant work permit are received and confirmed according to requirements and established procedures with relevant persons where appropriate
	1.7	Resources including equipment, tools and personal protective equipment required for the job are obtained and in working order according to established procedures
	1.8	Relevant responsibilities associated with First Aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures and followed in the instance of an incident.
	1.9	Client issues are referred to appropriate persons in accordance with industry standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.10	Site is prepared according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Load/unload truck, exchanging and connect LPG cylinders	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents
	2.3	Operational knowledge for correct positioning of the truck, loading, unloading and exchanging of gas cylinders is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.4	The loading, unloading, exchanging and connection of gas cylinders is carried out in accordance with given instructions and established procedures
	2.5	Potential hazards and safety risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Problems associated with the loading, unloading and exchanging of gas cylinders are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete work and relevant documentation	3.1	Work undertaken is checked against work schedule and anomalies reported to authorised persons in accordance with established procedures
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	Delivery documentation and work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for loading, unloading and exchanging gas cylinders.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G614A LPG cylinder transportation, handling and connection

Evidence shall show an understanding of loading, unloading, transporting, exchanging and connecting liquefied petroleum gas (LPG) gas cylinders to an approved installation in accordance with as per relevant legislation, codes, regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

and established procedures to an extent indicated by the following aspects:

T1. Relevant Australian Standards, guidelines and codes of practice

T2. Relevant OHS policies and procedures.

- Safety signs including workplace hazards and warnings

T3. LPG cylinders

- Properties of LP Gas
- Types, construction, size, valves, labelling, Material Safety Data Sheets (MSDS)
- Transportation requirements
- Handling, loading, unloading,
- Disconnecting and connecting
- Out of gas procedures
- Leak testing

T4. Personal Protection Equipment

- Types, application, checking, maintenance and storage

T5. Hazard identification, risk assessment and control

- Work Permits, JHA’s, JSA’s, JSEA’s, SWM’s, etc.
- Use of spill kits and PPE

T6. Manual handling

- Characteristics, types, techniques

T7. Traffic control at a worksite

- relevant traffic authority regulations
- signs/devices and techniques to control pedestrians and traffic
- monitoring traffic controls

T8. Accidents and emergency

- Types: fire, gas leak Procedures
- Emergency equipment and procedures
  - breathing apparatus
  - gas detectors/oxygen monitoring devices
- Reporting

T9. Organisation's policies, quality requirements, specifications, forms and reports for work activity

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Loading, unloading, transporting, exchanging and connecting liquefied petroleum gas (LPG) gas cylinders to an approved installation in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment/tools	All	• Cylinder trolley • Hoses and fittings • Hand tools Leak detection devices • Truck tail gate loader • Tray gates and ropes
B. Procedures	All	• OHS • Cylinder transportation • Cylinder loading and unloading • Cylinder exchange and connecting • Hazard identification, risk assessment and control • Emergency procedures and response action • Organisations
C. Unplanned event	At least one occasion	Deal with an unplanned event by drawing on required knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent **8.5)**

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord

© Commonwealth of Australia, 2025 Powering Skills Organisation

with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and

range

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Inspecting and filling of liquefied petroleum gas (LPG) cylinders in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Tools/ equipment	At least 5	• LPG cylinders • Cylinder trolleys • Hose and fittings • Leak detection devices • Valves • Gauges • Spindles • Scales • Decanting equipment • Dispensing pumps • Hand tools
B. Procedur	All	• WHS/OHS • Job safety analysis

© Commonwealth of Australia, 2025 Powering Skills Organisation

es		• Manual handling • Cylinder inspection • Cylinder filling • Checking for leaks • Emergency procedures and response action
C. Unplanned event	At least one occasion	Deal with an unplanned event by drawing on required skills and l knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.
- These should be part of the formal learning/assessment environment.
-

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

© Commonwealth of Australia, 2025 Powering Skills Organisation

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to inspecting and filling LPG cylinders by weight using scales or by decanting or by dispenser pump at an LPG terminal or a cylinder filling installation compliant to the requirements of AS1596.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate Persons
- Equipment
- Inspection Checks
- Legislative Requirements

Unit Sector(s)

Not applicable.

Competency Field

Competency Field **11)**

LPG.

UEGNSG616A Refurbish gas cylinders

Modification History

This unit replaces UEGNSG605B Refurbish gas cylinders

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers inspecting, testing and refurbishing approved liquefied petroleum gas (LPG) cylinders accordance with relevant legislation, codes, regulations and established procedures.

It encompasses following procedures to correctly and safely carry out the work using appropriate materials, tools and equipment.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to work sites where LPG gas cylinders are refurbished and filled for distribution, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 2 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are subject to license regulation. The work site must be registered and certified as a cylinder test station with LPG cylinders on the scope of registration.

Competency can only be applied under the supervision of a test station signatory unless certified by SAI Global as a test station signatory. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to refurbish LPG cylinders	1.1	Work instructions are received and confirmed
	1.2	Relevant requirements and established procedures to be followed for the work to be performed are discussed with all persons to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.4	Appropriate persons are consulted to ensure the work is coordinated effectively and suggestions to assist with the refurbishing of gas cylinders are made to others involved in the work
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.6	Materials, tools and personal protective equipment required for the job are obtained and in working order according to established procedures
	1.7	Relevant responsibilities associated with related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures are followed.
	1.8	Client issues are referred to appropriate persons in accordance with industry and community standards
	1.9	Site is prepared according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Inspect and refurbish LPG cylinders	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing and use of tools, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.3	Operational knowledge for the refurbishing of gas cylinders is confirmed to ensure completion in an agreed timeframe and to quality/ safety/ environmental standards according to requirements and established procedures
	2.4	The refurbishing of gas cylinders is carried out in accordance with given instructions and established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Cylinders that are damaged or do not comply to standards are coded and condemned according to established procedures
	2.7	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.8	Problems associated with the refurbishing of gas cylinders are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.9	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Work undertaken is checked against work schedule and anomalies reported to authorised persons in accordance with established procedures
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Inspection results and completion processes are performed according to established procedures
	3.6	Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the inspection and refurbishment of LPG cylinders.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G616A LP Gas cylinders inspection and refurbishment

Evidence shall show an understanding of inspecting and refurbishment of liquefied petroleum gas (LPG) cylinders in accordance with relevant legislation, codes, regulations and established procedures to an extent indicated by the following aspects:

T1. Relevant Australian Standards, guidelines and codes of practice including AS1596 and AS2030 or replacements

T2. Relevant OHS policies and procedures.

- Safety signs including workplace hazards and warnings

T3. LPG cylinders

- Properties of LP Gas
- Types, construction, size, valves, labelling, Material Safety Data Sheets (MSDS)
- Handling
- Inspection requirements, types, procedures, required equipment/tools

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Leak testing requirements, types, procedures, required equipment/tools
- Condemning and disposal
- Refurbishment requirements, types, procedures, required equipment/tools

T4. Personal Protection Equipment

- Types, application, checking, maintenance and storage

T5. Hazard identification, risk assessment and control

- Work Permits, JHA’s, JSA’s, JSEA’s, SWM’s, etc.
- Use of spill kits and PPE

T6. Manual handling

- Characteristics, types, techniques

T7. Accidents and emergency

- Types: fire, gas leak
- Emergency equipment and procedures
  - breathing apparatus
  - gas detectors/oxygen monitoring devices
- Reporting

T8. Organisation's policies, quality requirements, specifications, forms and reports for work activity

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

© Commonwealth of Australia, 2025 Powering Skills Organisation

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Inspecting and refurbishing liquefied petroleum gas (LPG) cylinders in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Tools/equipment	At least 10	• Liquid withdrawal valves • Vapour service valves • Relief valves • Contents gauges • In situ fill valves • Multiport valves

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Ullage tubes • LPG cylinders • Cylinder inverter • Decanting equipment • De-valving/re-valving tools • Date and test station stamping tools • Callipers • Stencils and decals • Cylinder destruction • Scales • Hand tools • Test equipment
B. Procedures	All	• Clean • Paint • Refurbish • Correct storage • Quarantine, purge, destroy and dispose of condemned cylinders
C. Inspection/test procedures	All	The following inspection checks are made and met requirements before returning cylinder to service: • Test date • Ownership • Corrosion and impact damage • Tare weight • Valve and thread condition • Safety relief valve capped and free from obstruction • Internal deposits • Paintwork

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Fire/heat damage • Stencilling and decals appropriate to cylinder type • Leak test
D. Recording procedures	All	• Standard operation procedures • Emergency procedures and response action • State regulations/statutes and permits • Record inspection/ refurbishment information accurately on gas industry forms and reports according to legislative requirements and established procedures
E. Unplanned event	At least one occasion	Deal with an unplanned event by drawing on required skills and knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency

© Commonwealth of Australia, 2025 Powering Skills Organisation

Standard Unit.

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.
- These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of

© Commonwealth of Australia, 2025 Powering Skills Organisation

learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to inspecting and refurbishing PLG cylinders at a work site registered and certified as a LPG cylinder test station, in accordance with relevant legislation, codes, regulations and established procedures.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate Persons
- Test Station
- Materials
- Tools and Equipment
- Inspection Checks
- Damage to Cylinders
- Testing

UEGNSG617A Monitor and control the transfer of bulk LPG

Modification History

This unit replaces UEGNSG606B Monitor and control the transfer of LPG

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers the safe transfer of liquefied petroleum gas (LPG) into or out of bulk storage at an LPG terminal or refinery by pipelines and hoses. This includes ship to tank, tank to tank, tank to tanker and tank to distribution network.

It encompasses following procedures to correctly and safely carry out the work using appropriate materials, tools and equipment, relevant emergency response procedures and documentation.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to work sites where liquefied petroleum gas is stored and transferred in bulk quantities, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace..

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan and prepare to transfer of LPG	1.1	Availability of equipment is determined against work schedule(s) and established procedures and material lists are received, analysed and confirmed if necessary by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to requirements and established procedures for monitoring and controlling the transfer of LPG are obtained and confirmed for the purposes of the work performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Equipment is checked and relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Pipelines and hoses are connected and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8	Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures according to requirements
	1.9	Liaison and communication issues with authorised persons, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared and valves are operated

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2 Transfer of LPG	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces and/or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Required skills and knowledge for the monitoring and control of the transfer of LPG is applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	The monitoring and transfer of LPG is carried out in accordance with the work schedule and to established procedures
	2.5	Transfer equipment is operated and identified hazards, WHS/OHS risks and control measures are monitored and preventative action taken in accordance with requirements and established procedures
	2.6	Pressure limits and liquid levels are monitored and unplanned events in the monitoring and control transfer of LPG are undertaken with the scope of established procedures
	2.7	Emergency response is selected and applied and known solutions to a variety of problems are applied using Essential Knowledge and Associated Skills
	2.8	Ongoing checks of quality of the work are

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Emergency shutdown procedures are applied in the event of serious equipment failure or operational parameters being exceeded in accordance with standard operating procedures
	3.7	Work completion records, reports as installed drawings and documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for monitoring and controlling the transfer of bulk LPG.

- Reporting

T9. Organisation's policies, quality requirements, specifications, forms and reports for work activities

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

© Commonwealth of Australia, 2025 Powering Skills Organisation

risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
    - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
    - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Monitoring and controlling the bulk transfer of liquefied petroleum gas (LPG) in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment	At least 4	• Pumps and compressors • Pipes • Hoses • Valves • Gauges • Tank connections and fittings • Articulated arms • Earthing clamps and connections
B. Applications	At least 2	Transfer of LPG by: • Ship to storage terminal • Tanker to tank • Tank to tanker • Tank to tank
C. Requirements	All	• WHS/OHS, environmental and associated legislative requirements • Australian Dangerous

UEGNSG618A Process Liquefied Petroleum Gas (LPG)

Modification History

This unit replaces UEGNSG607B Process LPG

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the processing of liquefied petroleum gas including the manufacture of TLGP, LPG and blending/mixing and de-odourising LPG.

This encompasses processing of LPG; process monitoring; relevant emergency response and completion of relevant documentation by following procedures to correctly and safely carry out the work using appropriate materials, tools and equipment.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to work sites where liquefied petroleum gas is processed, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG617A	Monitor and control the transfer of bulk LPG

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to process LPG	1.1	Pipelines and hoses are connected in accordance with manufacturer's specifications and standard operating procedures
	1.2	Appropriate valves are operated in the correct sequence against relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to requirements and established procedures for processing of LPG are obtained and confirmed for the purposes of the work performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work authorisations are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8	Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures according to requirements
	1.9	Liaison and communication with authorised persons, authorities, clients and land owners is

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		completed so that work can be carried out where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2 Process LPG	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Required Skills and Knowledge for the processing of LPG is applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Adjustment and monitoring of controls and the processing of LPG is carried out in accordance with the work schedule and to requirements and established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Emergency response is selected and unplanned events in the processing of LPG are undertaken with the scope of established procedures
	2.7	Known solutions to a variety of problems are applied using required Skills and Knowledge
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and established procedures
3 Complete work and relevant documentation	3.1	Work completion is notified and work undertaken is checked against work schedules for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Shutdown is completed in accordance with standard operating procedures and operating conditions
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Work completion is notified and relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Work completion records, reports and information is finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit*

Evidence shall show that knowledge has been acquired of safe working practices for the processing of LPG.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G618A LP Gas processing

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show an understanding of processing LPG in accordance with relevant legislation, codes, regulations and established procedures to an extent indicated by the following aspects:

T1. Relevant Australian Standards, guidelines and codes of practice

T2. Relevant WHS/OHS policies and procedures.

- Safety signs including workplace hazards and warnings

T3. LPG storage/pressure vessels

- Types, construction, size, valves, labelling, Material Safety Data Sheets (MSDS)
- Testing and inspection procedures

T4. LPG bulk transfer

- Requirements, applications, methods, procedures
- Equipment/tools
  - Types, selection, manufacturers specifications/instructions, testing, set up, adjusting
  - Compressors, pumps
  - Pipes and hoses

T5. LPG processing

- Requirements, applications, methods, procedures
- Mix/blend properties and specifications
- Equipment/tools
  - Types, selection, manufacturers specifications/instructions, testing, set up
  - Analytical judgements for appropriate adjustments to plant and equipment
  - Variations and irregularities identification
- Gas analysis equipment
- Safety
- Gas alarm and communication equipment
- Ignition prevention/control
- Leak testing requirements, types, procedures, required equipment/tools

T6. Personal Protection Equipment

- Types, application, checking, maintenance and storage

T7. Hazard identification, risk assessment and control

- Work Permits, JHA’s, JSA’s, JSEA’s, SWM’s, etc.
- Use of spill kits and PPE

T8. Manual handling

- Characteristics, types, techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T9. Accidents and emergency

- Types: fire, gas leak
- Emergency response equipment and procedures
  - breathing apparatus
  - gas detectors/oxygen monitoring devices
  - compliance requirements
- Reporting

T10. Organisation's policies, quality requirements, specifications, forms and reports for work activities

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
    - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
    - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded

© Commonwealth of Australia, 2025 Powering Skills Organisation

result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti -discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Processing liquefied petroleum gas in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment	All	• Pumps • Valves • Vessels • Control and monitoring equipment • Mixing/sampling equipment
B. Processes	At least 1	• Processing LPG: • Blending/mixing LPG • Manufacturing TLGP • De-Odourising LPG
C. Process monitoring includes checks for:	At least 4 *Must do	• Stock levels* • Pressures* • Gas heating valves • Shutdown system* • Molecular sieve de-odourisation • Aeration
D. Emergency Response	All	• Gas leaks and fire • Equipment failure • Hazards and incidents

© Commonwealth of Australia, 2025 Powering Skills Organisation

E. Requirements	All	• WHS/OHS, environmental and associated legislative requirements • Product specifications and quality assurance documentation • Manufacturer's specifications • Australian Standards
F. Unplanned events	At least one occasion	Deal with an unplanned event by drawing on required skills and knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG617A	Monitor and control the transfer of bulk LPG
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to processing LPG. This may include blending/mixing LPG, manufacturing TLGP and de-odourising LPG

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Equipment
- Processing LPG
- Process monitoring

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers carrying out scheduled maintenance and the repair and replacement of parts on liquefied petroleum gas processing or storage facilities and equipment. This includes pressure vessels, valves and fittings; transfer equipment, pumps, compressors, transfer hoses, pipework and seals.

It encompasses following procedures to correctly and safely carry out the work using appropriate materials, tools and equipment,

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to work sites where liquefied petroleum gas is processed and stored, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti- discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Relevant Trade qualification, for example

- Certificate III in Plumbing – Gas Fitter
- Certificate III in Mechanical Fitter

Plus

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG006A	Use portable gas detector

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare and plan for maintenance and repair activities	1.1 All necessary and appropriate facilities, tools, test and measurement instruments, materials and components to allow the completion of the work are selected against the work schedule(s), including drawings, plans, requirements and established procedures
	1.2 Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3 WHS/OHS, environmental and sustainable energy policies and procedures related to performing minor maintenance on gas processing and storage facilities and equipment are obtained and confirmed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6 The facilities and equipment is made safe by ensuring it is safely isolated, depressurised, purged, tagged and locked out before allowing any repair or maintenance work to be undertaken and the relevant work permits are obtained to access and perform work according to requirements and established procedures
	1.7 Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8 Relevant persons at worksite are confirmed to be current in First Aid and other related work procedures according to requirements
	1.9 Liaison and communication with authorised persons, authorities, clients and land owners is completed so that work can be carried out where necessary
	1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11 Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.12 Fault-finding and troubleshooting techniques are applied to operational systems in order to identify any repairs or maintenance which may

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		need to be undertaken
	1.13	Road signs, barriers and warning devices are positioned in accordance with requirements including traffic management plans
2 Perform scheduled maintenance and repairs to gas processing/storage facilities	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Required Skills and Knowledge for the performing of minor maintenance on gas processing and storage facilities and equipment is applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Adjustments to calibration and test equipment and devices are made to ensure equipment and devices operate within specific ranges and to maintain correct flow parameters to ensure gas availability
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Unplanned events in performing minor maintenance on gas processing/storage facilities and equipment are undertaken with the scope of established procedures
	2.7	Parts are repaired or replaced and known solutions to a variety of problems are applied using Essential Knowledge and Associated Skills
	2.8	Maintenance is performed and ongoing checks of quality of the work are undertaken in

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Maintenance results are documented and work undertaken is checked against work schedules for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Work completion records, reports and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for to performing scheduled maintenance and the repair and replacement of parts on liquefied petroleum gas processing or storage facilities and equipment.

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is

© Commonwealth of Australia, 2025 Powering Skills Organisation

recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Maintaining and repairing LPG processing or/storage facilities and equipment in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment	At least 7	• Pressure vessel • Vapourisers • Earth connections • Relief valves • System(s) isolation • Emergency shut-down valving (e.g. ISC valves) • Manual shut-down valving • Pipe work • Vessel footings • Regulators

UEGNSG620A Organise the repair of faults in LPG processing or storage facilities and equipment

Modification History

This unit replaces UEGNSG609B Coordinate repair of faults in gas processing/storage facilities and equipment

Unit Descriptor

Unit Descriptor **1)**

1.1) Descriptor

This unit covers organising the repair of faults, which occur during the processing and/or storing of liquefied petroleum gas (LPG) in accordance with relevant legislation, codes, regulations and established procedures.

This unit encompasses identifying the types of faults; liaising with the appropriate persons to authorise and conduct repairs; and providing the relevant documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to work sites where liquefied petroleum gas (LPG) is processed, stored and handled, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan and prepare to organise repairs in LPG processing/storage facilities and equipment	1.1	Appropriate persons are consulted to ensure the work is organising effectively with others involved in the worksite against work schedule(s), including drawings, plans and established procedures
	1.2	Relevant requirements and established procedures for the work are communicated to all persons and identified for all work sites
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures, related to organising the repair of faults in gas processing/storage facilities and equipment, are obtained and confirmed for the purposes of the work performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8	Relevant persons at worksite are confirmed to be current in related work procedures according to requirements
	1.9	Liaison and communication issues with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		authorised persons, authorities, clients and land owners are resolved and activities organised to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2 Organise repair of faults in LPG processing/storage facilities and equipment	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working in confined spaces or aloft, and use of power tools, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Required Skills and Knowledge to organise repair of faults in gas processing/storage facilities and equipment is applied to ensure completion in an agreed timeframe and to quality/ safety/ environmental standards according to requirements
	2.4	Repair work and the replacement of faulty work equipment is monitored to ensure activities are carried out to standard operating procedures, permit to work requirements, and minimal impact occurs on existing operations and environment
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Unplanned events in organising and repairing of faults in gas processing/storage facilities and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		equipment are undertaken with the scope of established procedures
	2.7	Known solutions to a variety of problems are applied using Required Skills and Knowledge
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Systems are monitored or activated to ensure they are operating both safely and effectively
	3.2	Accidents and injuries are reported in accordance with established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Repaired and installed equipment is brought back on line in accordance with standard operating procedures
	3.7	Work completion records, reports as installed and modified, drawings and documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for organising the repair of faults in LPG processing/storage facilities and equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G620A PLG processing/storage facility and equipment repair

Evidence shall show an understanding of safe working practices for organising the repair of faults in LPG processing/storage facilities and equipment in accordance with relevant legislation, codes, regulations and established procedures to an extent indicated by the following aspects:

T1. Relevant Australian Standards, guidelines and codes of practice

T2. Relevant WHS/OHS policies and procedures.

- Safety signs including workplace hazards and warnings

T3. LPG processing/storage facilities

- Requirements, specifications and plant operation
- Variations and irregularities identification
- Safety
- Gas alarm and communication equipment
- Ignition prevention/control
- Leak testing requirements

T4. Personal Protection Equipment

- Types, application, checking, maintenance and storage

T5. Hazard identification, risk assessment and control

- Work Permits, JHA’s, JSA’s, JSEA’s, SWM’s, etc.
- Use of spill kits and PPE

T6. Accidents and emergency

- Types: fire, gas leak
- Emergency response equipment and procedures
- Reporting

T7. Scheduled maintenance requirements

T8. Fault identification

T9. Organising of repair and replacement of components and parts

T10. Shut-down procedures

REQUIRED SKILLS AND KNOWLEDGE

- Manual
- Emergency

T11. Organisation's policies, quality requirements, specifications, forms and reports for work activities

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
    - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
    - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
    - Demonstrate an appropriate level of employability skills
    - Conduct work observing the relevant Anti discrimination

© Commonwealth of Australia, 2025 Powering Skills Organisation

legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Safe working practices for organising the repair of faults in LPG processing/storage facilities and equipment in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment	At least 7	• Gas detectors • Purging gas • Hand tools • LPG hoses • Flare • Valves • Compressor • Vessels • Pump • Road tanker • Control and instrumentation equipment
B. Faults:	At least 7	• Gas leak • Electrical problems • Over filled vessel • Compressor failure • Pump failure • Out of current inspection status • Gauge failure • Hose rupture/leaks • Instruments out of calibration • Non-flow of LPG • Cylinder scales out of

© Commonwealth of Australia, 2025 Powering Skills Organisation

		calibration • Meter out of calibration
C. Documentation:	All	• Item maintenance record • Work permit • Job card documentation to inform relevant authorities, company persons or manufacturer • WHS/OHS, environmental and associated requirement documentation
D. Unplanned event	At least one occasion	Deal with an unplanned event by drawing on required skills and knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either

© Commonwealth of Australia, 2025 Powering Skills Organisation

an actual workplace or under a simulated work environment.

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment

8.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG132A	Carry out work activities in a gas industry work environment
UEGNSG141A	Apply Workplace Health and Safety regulations codes and practices in the gas industry
UEGNSG140A	Apply environmental policies and procedures in the utilities industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to organising the repair of faults in gas processing or storage facilities and equipment.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate persons
- LPG facility plant and equipment
- Types of faults
- Permit to Work
- Documentation (3)

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for the storage of LPG	1.1	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved on the work site and the availability of equipment is determined
	1.2	Equipment is checked in accordance with standard operating procedures and relevant requirements
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to requirements and established procedures for control storage of LPG in terminal are obtained and confirmed for the purposes of the work performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and/or established procedures
	1.7	Appropriate valves are operated and other resources including appropriately persons, equipment, tools and personal protective equipment required for the job are identified, scheduled and obtained and confirmed in working order
	1.8	Relevant persons at worksite are confirmed to be current in related work procedures according to requirements
	1.9	Site is prepared according to the work schedule to minimise risk and damage to property, commerce and individuals in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2 Control Storage of LPG	2.1	LPG is stored in a safe and efficient manner in accordance with standard operating procedures and the condition of LPG is controlled within specifications and in accordance with legislative requirements
	2.2	Lifting, climbing, working in confined spaces or aloft, and use of tools, techniques and practices are safely followed and currency maintained according to requirements confirmed
	2.3	Required Skills and Knowledge for the control storage of LPG in terminal is applied to ensure completion in an agreed timeframe and to quality/ safety/ environmental standards according to requirements
	2.4	Controlling the storage of LPG in terminal is carried out in accordance with the work schedule and to established procedures
	2.5	Emergency response procedures and potential hazards, safety risks and control measures are monitored and preventative action taken and referred to appropriate authorities in accordance with requirements and established procedures
	2.6	Abnormalities are reported and unplanned events incurred while controlling the storage of LPG in a terminal are undertaken within the scope of established procedures and responsibility
	2.7	Fault-finding and troubleshooting techniques are applied to operational systems and equipment in order to identify any repairs or maintenance which may need to be undertaken
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete work and relevant documentation	3.1	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported in accordance with established procedures
	3.2	Accidents and injuries are reported in accordance with requirements and established procedures where applicable
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate are cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permit(s) are signed off and equipment is returned to service in accordance with requirements
	3.6	Work completion records, reports as installed and modified, drawings and documentation and information are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for the controlling the bulk storage of LPG in a terminal or depot.

UEGNSG622A Assess the operational capability of gas safety equipment on a delivery vehicle

Modification History

This unit replaces UEGNSG613A Assess the operational capability of gas safety equipment on delivery vehicle

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the assessment of the gas and safety equipment on a delivery vehicle for the distribution of gaseous fuel in accordance with relevant legislation, codes, regulations and established procedures.

It encompasses assessing the equipment, identifying faults, using standard operating procedures, liaising with appropriate persons, conducting inspections and tests. Delivery vehicles include heavy rigid or heavy combination gaseous fuel bulk tankers.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to work sites where the bulk distribution of liquefied petroleum gas (LPG) occurs using delivery vehicles, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an entry level AQF 3 competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the*

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to assess gas and safety equipment on delivery vehicles	1.1	Work instructions are received and confirmed according to standard operating procedures
	1.2	Relevant requirements and established procedures to be followed for the work to be performed are discussed with all persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.4	Suggestions to assist with the assessing the operational capability of gas safety equipment on delivery vehicles are made to others involved in the work
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures
	1.6	Resources including equipment and tools are visually inspected and personal protective equipment required for the job are obtained and in working order according to established procedures
	1.7	All components of the delivery vehicle and associated equipment are checked and the relevant responsibilities associated with First Aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.8	Inspection procedures are carried out according to manufacturer's specifications and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Assess and identify and faults of gas and safety equipment on delivery vehicles	2.1	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Lifting, climbing, working aloft, and use of tools, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents
	2.3	Operational knowledge for the assessing of the operational capability of gas safety equipment on delivery vehicles is confirmed to ensure completion in an agreed timeframe and to quality/ safety/ environmental standards according to requirements and established procedures
	2.4	Assessing the operational capability of gas safety equipment on delivery vehicles is carried out in accordance with requirements and given instructions and established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Problems associated with the assessing of the operational capability of gas safety equipment on delivery vehicles are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.8	Records are maintained and ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete work and relevant documentation	3.1	Work undertaken is checked against work schedule and anomalies reported to authorised persons in accordance with established procedures
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Results of inspection and testing are accurately recorded and Appropriate persons are notified of work completion according to established procedures
	3.6	Clear reference is made to any items which may affect future operational outcomes and work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for assessing the operational capability of gas safety equipment on delivery vehicles in accordance with relevant legislation, codes, regulations and established procedures. .

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G622A Operational capability of delivery vehicles

Evidence shall show an understanding of safe working practices for assessing the operational capability of gas safety equipment on delivery vehicles in accordance with relevant legislation, codes, regulations and established procedures to an extent indicated by the following aspects:

T1. Relevant Australian Standards, guidelines and codes of practice

T2. Relevant WHS/OHS policies and procedures.

- Safety signs including workplace hazards and warnings

T3. Gaseous fuel bulk tankers

- Requirements
- Types, construction, size, valves, labelling, Material Safety Data Sheets (MSDS)
- Testing and inspection procedures

T4. Tanker gaseous fuel transfer systems

- Requirements, applications, methods, procedures
- Equipment/tools
  - Types, selection, manufacturers specifications/instructions, testing, set up, adjusting
  - Compressors, pumps
  - Pipes and hoses
- Safety systems and equipment
- Monitoring, testing, inspection and reporting procedures and requirements
- Manufacturer's specifications and standard adjustments to equipment
- Identifying variations and irregularities
- Making analytical judgments for appropriate adjustments to equipment
- Gas alarm and communication equipment
- Ignition prevention/control
- Leak testing requirements, types, procedures, required equipment/tools

T5. Personal Protection Equipment

- Types, application, checking, maintenance and storage

T6. Hazard identification, risk assessment and control

- Work Permits, JHA’s, JSA’s, JSEA’s, SWM’s, etc.
- Use of spill kits and PPE

T7. Manual handling

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Characteristics, types, techniques

T8. Accidents and emergency

- Types: fire, gas leak
- Emergency response equipment and procedures
  - breathing apparatus
  - gas detectors/oxygen monitoring devices
  - compliance requirements
- Emergency shutdown, fire protection and security requirements
- Reporting

T9. Organisation's policies, quality requirements, specifications, forms and reports for work activities

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

© Commonwealth of Australia, 2025 Powering Skills Organisation

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

- Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:
    - A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
    - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
    - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that

© Commonwealth of Australia, 2025 Powering Skills Organisation

the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Safe working practices for assessing the operational capability of gas safety equipment on delivery vehicles in accordance with relevant legislation, codes, regulations and established procedures as described in 9.) Range Statement and including;

Range of tools/equipment/procedures/workplace		
Group	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment	At least 6	• Tanks, valves and fittings • Seals and gaskets • Pump and drive shaft • Meters • Emergency equipment • Pipes • Pneumatic/electronic control equipment • Gauges • Hoses and connections including hose protection systems • Earthing straps • Hydraulic equipment
B. Faults	At least 4	• Water leaks • Oil leaks • Damaged hoses • Gas/air leaks • Valves not operating

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Electric control cable damage
C. Work Practices	All	• Work utilising relevant procedures • Maintain a safe and clean workplace • Work safely with hazardous materials and equipment • Apply safe manual handling techniques • Respond to emergency situations • Communicate effectively in the workplace • Apply basic planning skills • Identify and report faults • Operate equipment within its limitations
D. Unplanned event	At least one occasion	Deal with an unplanned event by drawing on required skills and knowledge to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment.

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility asset

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEGNSG133A	Comply with environmental policies and procedures in a utilities industry work environment
UEGNSG134A	Establish a utilities infrastructure work site

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to assessing the operational capability of gas safety equipment on delivery vehicles. Delivery vehicles include heavy rigid or heavy combination gaseous fuel bulk tankers.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Gas safety equipment
- Faults
- Standard operating procedures
- Appropriate persons
- Inspection and testing
- Delivery vehicles
- Requirements
- Established procedures

UEGNSG705A Disconnect and reconnect small capacity gas meters

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers disconnecting, replacing and reconnecting small capacity (union connected) gas meters and associated components by a designated gas industry person following company standard operating procedures in accordance with relevant legislative, standard and code requirements.

It encompasses the use of hand tools and equipment to test the customer gas piping system and associated meter connections filters, regulators and components for soundness following occupational health and safety requirements and completing records and appropriate documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where small capacity gas meters are installed, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 entry level competency for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are generally not subject to licence regulations other than those directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti- discrimination and training.

However, in some States/Territories they may be subject to Gas Fitting or G Class Gas license regulations.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A Apply Workplace Health and Safety

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

	regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to disconnect, replace and reconnect gas meter.	1.1	Instructions for the work to be performed are received and confirmed to ensure clear understanding
	1.2	Relevant requirements and established procedures to be followed for the work are provided and discussed with relevant persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed to ensure they are understood
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit/authorisation is received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, tools, resources, materials and personal protective equipment needed to undertake to gas meter work are identified, obtained and checked for correct operation and safety.
	1.7	Relevant responsibilities associated with related work safety and emergency procedures at the worksite are confirmed in accordance with requirements and established procedures
	1.8	Appropriate persons are consulted to ensure the appliance relight is coordinated effectively with others involved
	1.9	Client issues are referred to appropriate persons in accordance with industry standards and established procedures
	1.10	Work site is preparation, safety plan and work schedule are confirmed in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
2 Disconnect, replace and reconnect gas meter	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and devices are selected and used correctly and safely.
	2.3	Operational knowledge for utilising correct and safe use of basic equipment and tools to perform gas meter work is confirmed
	2.4	Gas meter work is undertaken s using appropriate stray current testing and protection following company procedures
	2.5	Customer piping system and associated components are tested for soundness
	2.6	Gas meters, filters and regulators are stored and transported as per company and manufacturers requirements
	2.7	Work is carried out efficiently, to the required quality standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.9	Further instructions are sought from appropriate persons for unplanned events or conditions occurring
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and requirements
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Final checks including visual observation is performed to ensure the quality of the work complies with established procedures and to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		appliance manufacturers instructions
	3.2	Appropriate persons are notified of completion of the work
	3.3	Equipment, tools and any surplus resources and materials are cleaned, checked and stored securely or disposed of in accordance with established procedures
	3.4	Work area is tidied and made safe in accordance with given instructions and established procedures
	3.5	Work completion records and documentation are updated in accordance with instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for disconnecting, replacing and reconnecting small capacity gas meters and associated components

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

KS01-G705A Gas meter disconnection, reconnection and replacement

Evidence shall show an understanding of disconnecting, replacing and reconnecting small capacity gas meters and associated components in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Safety requirements

- hazards, risk assessment and control measures
- Identify environmental and safety hazards, assess risks and implement control measures which includes the use of stray current testing and protection, bonding clamps and PPE
- Safety requirements for entering domestic and commercial customer sites

T3. Customer liaison

T4. Procedures for purging service lines, gas meter and associated components to outlet of meter set.

T5. Procedures for gas meter disconnection, reconnection, replacement

T6. Soundness testing procedures

T7. Reading and recording gas meter details

T8. Gas meter installation requirements as to AS 5601 and relevant company requirements

T9. Gas meter storage & transporting requirements

T10. Relevant documentation

- signs, symbols terminology and legends as used in industry procedures and documents
- workplace forms and reports

resources for assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in conducting appliance relights.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of

UEGNSG706A Test New Residential and Small Commercial Gas Installations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers conformance testing of new residential and small commercial gas installations and associated components by a designated gas industry person following company standard operating procedures in accordance with relevant legislative, standard and code requirements.

It encompasses the use of hand tools and testing equipment to pressure test the customer piping system and associated gas meter connections filters, regulators and components and inspecting the installation to meet AS5601 and State/Territory regulatory requirements and completing required records and appropriate documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any new residential and small commercial gas installation, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 3 competency for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under

© Commonwealth of Australia, 2025 Powering Skills Organisation

an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are subject to licence regulation directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to test new gas installation	1.1	Work instructions are received and confirmed to ensure clear understanding
	1.2	Relevant requirements and established procedures to be followed for the work are discussed with relevant persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed to ensure they are understood
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit/authorisation are received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, tools, resources, materials and personal protective equipment needed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		conformance testing are identified, obtained and checked for correct operation and safety
	1.7	Relevant responsibilities associated with related work safety and emergency procedures at the worksite are confirmed in accordance with requirements and established procedures
	1.8	Appropriate persons are consulted to ensure the appliance relight is coordinated effectively with others involved
	1.9	Client issues are referred to appropriate persons in accordance with industry standards and established procedures
	1.10	Work site is preparation, safety plan and work schedule are confirmed in accordance with established procedures
2 Test new gas installation	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and devices are selected and used correctly and safely.
	2.3	Operational knowledge for utilising correct and safe use of basic equipment and tools to perform conformance test is confirmed
	2.4	Conformance test of the new gas installation is undertaken s using appropriate pressure testing equipment and stray current testing and protection equipment following company procedures and State/Territory regulatory requirements
	2.5	Customer piping system and associated components including appliances are tested for conformance to AS5601 requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.6	Installation is left connected or disconnected depending on results of conformance test.
	2.7	Work is carried out efficiently, to the required quality standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.9	Further instructions are sought from appropriate persons for unplanned events or conditions occurring
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and requirements
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Final checks including visual observation is performed to ensure the quality of the work complies with established
	3.3	Appropriate persons are notified of completion of the work
	3.4	Equipment, tools and any surplus resources and materials are cleaned, checked and stored securely or disposed of in accordance with established procedures
	3.5	Work area is tidied and made safe in accordance with given instructions and established procedures
	3.6	Work completion records and documentation are updated in accordance with instructions and established procedures as required in each state

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of conformance testing of new residential and & small commercial new gas installations and associated components

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G706 Testing of Residential & Small Commercial New Gas Installation

Evidence shall show an understanding of conformance testing of new residential and & small commercial new gas installations and associated components in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Safety requirements

- hazards, risk assessment and control measures
- environmental and safety hazards, assess risks and implement control measures which includes the use of stray current testing and protection, bonding clamps and PPE Safety requirements for entering domestic and commercial customer sites

T3. Customer liaison skills

T4. Procedures for purging service lines, gas meter and associated components to outlet of meter set.

T5. Procedures for testing of residential & small commercial new gas installation to AS 5601.company and regulatory requirements

T6. Reading and recording gas meter details

T7. Appliance installation requirements as to AS 5601 and relevant company and regulatory requirements

T8. Documentation for testing of residential & small commercial new gas installations

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this

© Commonwealth of Australia, 2025 Powering Skills Organisation

Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Conformance testing of new residential and & small commercial new gas installations and associated components as described in 9.) Range Statement and including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Requirements	All	• Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Communicate effectively with appropriate personnel and customers • Accurately complete records and documentation • Follow work schedules including meeting appointments • Effectively use tools and equipment to test residential & small commercial new gas installation • Use of WADS/disconnection discs and valve locks • Use of pressure testing equipment Drop test/ bubble leak detector etc • Advise stakeholders of potentially dangerous or nonconforming installations
B. Procedures	All	• Stray current testing and protection including Bonding clamps and PPE • Storage and transport requirements for gas meters and associated equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Documentation for testing of residential & small commercial new gas installation
C. Unplanned events	On at least one occasion	Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in conducting appliance relights.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

Nil

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Unit shall be demonstrated in relation to conformance testing of new residential and & small commercial new gas installations and associated components.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate persons
- Hand tools to disconnect and reconnect meters test residential & small commercial new gas installations
- Includes footprints, spanners, neon tester, bonding leads, soap tester, Pressure testers
- Safe working procedures
- Legislative requirements
- Personal Protective Equipment

UEGNSG708A Pressure Test Residential and Small Commercial Gas Installations

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor

This unit covers pressure testing residential and small commercial gas installations and associated components by a designated gas industry person following company standard operating procedures in accordance with AS5601 and State/Territory regulatory requirements.

This encompasses the use of hand tools and testing equipment to pressure test the customer piping system and associated fittings and components and completing required records and appropriate documentation.

Application of the Unit

Application of the Unit

2)

This competency standard shall apply to any basic and safe residential and small commercial work site where Gas Industry operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 entry level competency for new entrants in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are generally subject to State/Territory Gas Fitting licence regulations for gas connections and installations.

However, some regulators require that before a fuel gas network starts to supply fuel gas to a gas system, the person connecting fuel gas to the gas system must ensure the gas system is pressure tested in accordance with the current version AS/NZS 5601 Gas installations or equivalent and there is no significant leakage of fuel gas from the gas system. This unit provides the required knowledge and skills to enable the person connecting fuel gas to the gas system to carry out this pressure test.

They are also subject to those regulations directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the gas industry
UEGNSG132A	Carry out basic work activities in a gas industry work environment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to pressure test gas installation	1.1 Instructions for the work to be performed are received and confirmed to ensure clear understanding
	1.2 Relevant requirements and established procedures to be followed for the work are provided and discussed with relevant persons to establish and confirm the work schedule
	1.3 WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed to ensure they are understood.
	1.4 Equipment, tools and personal protective equipment needed for pressure testing are identified, obtained and checked for correct operation and safety.
	1.5 Resources and materials needed to carry out the pressure test are confirmed and obtained in accordance with established procedures.
	1.6 Client issues are referred to appropriate persons in accordance with industry standards and established procedures
	1.7 Work site is preparation, safety plan and work schedule are confirmed in accordance with established procedures
2 Carry out pressure test of gas installation	2.1 WHS/OHS policies and procedures and safe work practices for the pressure test are followed to eliminate or minimise incidents and hazards
	2.2 Schedule of work is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste
	2.3 Operational knowledge for utilising correct and safe use of basic equipment and tools to perform conformance test is confirmed.
	2.4 Pressure test of the gas installation is undertaken using appropriate pressure testing equipment following company procedures and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		regulatory requirements
	2.5	Customer piping system and associated components including appliances are pressure tested for conformance to AS 5601 requirements
	2.6	Installation is left connected or disconnected, depending on results of pressure test.
	2.7	Ongoing checks of quality of the work are undertaken in accordance with instructions and requirements
3 Complete pressure test and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Final checks including visual observation is performed to ensure the quality of the work complies with established procedures
	3.3	Appropriate persons are notified of completion of the work
	3.4	Equipment and tools are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures
	3.5	Work area is tidied and made safe and sustainable energy practices are followed
	3.6	Appropriate records and documentation are updated in accordance with instructions and established procedures as required by the regulator.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G708A Gas Installation Pressure Testing

Evidence shall show an understanding of pressure testing residential and small commercial gas installations in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Safety requirements

- hazards, risk assessment and control measures
- identify environmental and safety hazards, assess risks and implement control measures which includes the use of stray current testing and protection, bonding clamps and PPE
- safety requirements for entering domestic and commercial customer sites

T3. Customer liaison

T4. Procedures for pressure testing of gas installation to AS 5601

- Australia Standard requirements
- regulatory requirements
- enterprise guidelines and requirements
- tools and equipment

T5. Documentation and reporting pressure testing of gas installations

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

© Commonwealth of Australia, 2025 Powering Skills Organisation

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Pressure testing residential and small commercial gas installations as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Procedures	All	• Work utilising relevant OHS/WHS legislation, regulations, codes of practice, policies and procedures • Communicate effectively

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with appropriate personnel and customers • Accurately complete records and documentation • Follow work schedules including meeting appointments • Effectively use tools and equipment to test residential & small commercial gas installation • Use of pressure testing equipment Drop test/ bubble leak detector etc. • Advise stakeholders of potentially dangerous or nonconforming installations
B. Requirements	All	• PPE • Documentation for testing of residential & small commercial gas installation
C. Unplanned events	At least on one occasion	Respond to an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in conducting appliance relights.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG711A Process meter reading information using appropriate technology

Modification History

This unit replaced UEGNSG701A Process meter reading information using appropriate technology

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the processing of meter reading information by using the appropriate technology for recording of information in accordance with relevant legislation, standards, codes and established procedures. It may include gas, water and electricity supply industries.

It encompasses the use of relevant tools and equipment including hand held or wireless/remote recording equipment, computers/computer software, CD-ROMS, hard and floppy disks, drives and back-up systems.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any and safe work site where Gas, Water or Electricity Industry operations occur, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 entry level competency for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

© Commonwealth of Australia, 2025 Powering Skills Organisation

risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conduct work observing the relevant Antidiscrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Process meter reading information using appropriate technology as described as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Equipment	All	• Hand held recording equipment • Computers/computer software • CD-ROMS • Hard and floppy disks, drives and back up systems
B. Requirements	All	• Interpret maps, diagrams and workplace documents • Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Maintain a safe and clean workplace • Work safely with hazardous materials and equipment • Apply safe manual handling techniques • Communicate effectively in the workplace • Apply basic planning skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

C. Unplanned event	At least one occasion	Respond to an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in processing meter reading information using appropriate technology.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the l required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B Carry out work activities in a utilities industry work environment

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to processing meter reading information using appropriate technology.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Services
- Appropriate persons
- Tools and equipment
- Legislative requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector(s)

Utilities Industry

Competency Field

Competency Field **11)**

Support services

UEGNSG712A Read and record meter readings

Modification History

This unit replaced UEGNSG702A Read and record meter readings.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the planning, sequencing, using and recording utilities industries meter reading data. This includes efficient planning and scheduling of routes that includes availability of competent meter readers, vehicle and appropriate meter reading equipment.

It encompasses scheduled requirements; sequencing a route for an individual; account information aspects; records relating to previous; methods used to record meter readings; damage or faults to meters; new and changed information.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where Gas, Water or Electricity Industry operations occur, subject to all Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 entry level competency for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy **4.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

skills	Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy' Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills	**5)** This unit contains Employability Skills The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and record meter reading routine/sequence	1.1 Work instructions are received and confirmed and routes are mapped to correspond to schedule requirements
	1.2 Records relating to previous routes are confirmed and other established procedures are followed for the work to be performed against the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures to be followed for the work to be performed are received and confirmed
	1.4	Suggestions to assist with the reading and recording of meters are made to others involved in the work
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.6	Scope of responsibility under the relevant work permit/authorisation are received and confirmed with relevant persons according to requirements and established procedures
	1.7	Resources including equipment, tools and route sequences are obtained and are checked for working correct operation and safety
	1.8	Relevant responsibilities associated related work safety and emergency procedures at the worksite are confirmed in accordance with requirements and established procedures
	1.9	Client issues are referred to appropriate persons in accordance with industry and community standards and established procedures
	1.10	Records are maintained according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Carry out meter reading process	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed
	2.2	Appropriate materials, tools, equipment and devices are selected and used correctly and safely.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.3	Meter reading work is carried out efficiently, to the required quality standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles
	2.4	Reading and recording of meter readings is carried out in accordance with given instructions and established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Non-routine events are referred to the immediate authorised persons for directions according to established procedures
	2.7	Problems associated with establishing the work site are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete the reading and recording of meter readings process	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Accidents and incidents are actioned and reported to authorised persons in accordance with established procedures
	3.3	Work site is tidied and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, cleaned, checked and stored securely

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.5	Appropriate persons are notified of work completion according to established procedures
	3.6	Work completion records, report forms and data sheets are completed accurately, with unusually high or low meter readings noted and new or changed information updated in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas, water or electricity industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit

KS01-G0712A Meter reading and recording

Evidence shall show an understanding of meter reading and recording using appropriate technology in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Safety requirements

- hazards, risk assessment and control measures

T3. Relevant documentation

- signs, symbols terminology and legends as used in industry procedures and documents
- workplace forms and reports

T4. Maps/directories

- reading maps and directories
- planning and determining routes

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- locating meters on maps and directories
- documenting any hazards identified on the route.

T5. Communication for reading utilities meters

- orally and written format for reporting meter reading
- liaising with relevant authorities
- communicating with colleagues

T6. Meter reading

- types of meters used for utilities industries meters
- record reading using hand held electronic recording device
- accurately record meter reading

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

© Commonwealth of Australia, 2025 Powering Skills Organisation

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Read and record meter readings using appropriate technology as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Methods used to record meter readings	All	• Meter reading cards • Meter reading sheets • Electronic reading devices such as Portable Data Entry Terminal (PDET)
B. Damage or faults to meters:	At least 2	• Unreadable meters • Incorrect meter locations • Suspected tampering with the meter • Suspected illegal connections
C. New or changed information:	At least 3	• Special customer requirements • Additions of new meters • Deletion of meter when necessary • Changes to meter numbers

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Changes to property information • Changes in location of meter
D. Requirements	All	• Work utilising relevant OHS legislation, regulations, codes of practice, policies and procedures • Maintain a safe and clean workplace • Apply safe manual handling techniques • Communicate effectively in the workplace • Read and interpret diagrams and drawings • Apply basic planning skills
E. Unplanned Event	At least one occasion	Respond to an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in reading and recording meter readings.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan the investigation of billing exceptions/conditions	1.1	Account exceptions and conditions are correctly identified and comprehensively researched in a timely manner against work schedule(s) and established procedures and confirmed if necessary by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		relevant persons
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to investigating billing exceptions/conditions are obtained and confirmed for the purposes of the work performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule
	1.6	Relevant work permits/authorisations are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for investigating billing exceptions/conditions are identified, scheduled and obtained and checked for operation and safety
	1.8	Liaison and communication with authorised persons, authorities, clients and land-owners is completed so that work can be carried out where necessary
	1.9	Work site preparation, safety plan and work schedule are confirmed in accordance with established procedures
	1.10	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2 Carry out investigation of billing	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
exceptions/conditions		
	2.2	Appropriate materials, tools, equipment and devices are selected and used correctly and safely.
	2.3	Analysis of information to identify key issues is undertaken as required and information is evaluated for relevance and validity to the requirements
	2.4	Dealings with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.5	Investigation of billing exceptions/conditions is carried out efficiently to the required quality standard to ensure completion in an agreed timeframe and to quality standards without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.6	Investigating billing exceptions/conditions is carried out in accordance with the work schedule and established procedures
	2.7	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.8	Unplanned events in the carrying out of the investigation of billing exceptions/conditions are undertaken within the scope of established procedures
	2.9	Known solutions to a variety of problems are applied using acquired Essential Knowledge and Associated Skills
	2.10	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete the investigation of billing exceptions/conditions	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Solutions are developed based on consideration of relevant information and options and proposed solutions are communicated and implemented as required against work schedule and anomalies reported in accordance with established procedures
	3.3	Accidents and injuries are actioned and reported to authorize persons in accordance with requirements and established procedures
	3.4	Solution is implemented in accordance with standard operating procedures ensuring that action is correctly documented, the transaction is accurately processed and the customer is advised
	3.5	Work completion records, reports and documentation are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas, water or electricity industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G0713A Billing investigations

Evidence shall show an understanding of investigating billing exceptions in

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Administrative working environments in the utilities Industry

- manage work to achieve goals and results
- use available routine information appropriate to work responsibility
- make decisions within responsibility and authority
- understand and adhere to standard operating procedures in a gas environment
- ability to liaise with a broad range of clients
- general business and organisational skills
- ability to write concise and clear business letters
- telephone techniques and verbal communication
- basic bookkeeping.

T2. Communication, negotiation and problem solving techniques

- monitor/introduce practices designed to improve performance
- use effective consultative processes
- communicate routine and non-routine information clearly to senior managers, peers and subordinates
- ability to liaise effectively with a range of clients
- clear and accurate observation and analytical skills
- negotiation and dispute resolution and problem solving.

T3. Appropriate accounting programs

- select and use available and appropriate technology including accounting systems.

T4. Utilities industries meters

- types and functions of the various types of utilities industries meters.

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of 8.1)

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

© Commonwealth of Australia, 2025 Powering Skills Organisation

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Investigating billing exceptions as described in 9.) Range Statement and including:

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Exceptions and	At least 6	• Long term bill accounts (12 months) • Meter changes • Manual bills

© Commonwealth of Australia, 2025 Powering Skills Organisation

conditions:		• Daily accounts • Active and inactive accounts • Gas used on an inactive account i.e. vacant premises • Meter reader is unable to find the meter • Missing meter/records • Unknown consumer investigations • Vacant premises investigations • Meter relocations
B. Investigating billing exceptions, field calls regarding:	At least 4	• Owner/occupiers' of properties • Dates of entry of owner/occupier • Meter reading for billing purposes • Meter identification details • Other relevant information such as forwarding address • Payment arrangements
C. Telephone contact to:	At least 3	• Consumers • Council/rates office • Real estate agents • Internal employees/departments • Other statutory authorities
D. Liaison with customers through:	All	• In person • Telephone • Fax • Letter • Internet
E. Solutions	At least 4	• Arrange the removal of inactive meters

© Commonwealth of Australia, 2025 Powering Skills Organisation

include:		• Account billed • Change meters • Arrangements for payment made • Adjust accounts • Access for future meter reading made
F. Requirements	All	• Administrative working environments in the Gas Industry • Communication, negotiation and problem solving techniques • Understand and use appropriate accounting program • Utilities industries meters
G. Unplanned events	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in investigating billing exceptions/conditions.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to investigating billing exceptions/conditions.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Exceptions and conditions
- Problems
- Investigating billing exceptions
- Telephone contact
- Liaison with customers
- Solutions

UEGNSG714A Relight Type A gas appliances

Modification History

This unit is a revised version of the UEG11 unit UEGNSG704A Conduct an appliance relight.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers relighting a Type A gas appliance by a designated gas industry person following the interruption to gas supply using manufacturers lighting instructions and company standard operating procedures in accordance with relevant legislative, standard and code requirements.

It encompasses the use of hand tools for purging gas service pipework, testing the installation for soundness, identifying and reporting potentially dangerous installations and isolating unsafe appliances, relighting safe appliances and completing appropriate documentation.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to any safe work site where Type A gas appliances are installed, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace.

This unit is intended as an AQF 2 entry level competency for new entrants in the gas industry. It is suitable for pre-employment and employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training.

In the workplace:

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limit the age at which a person can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG005A	Prepare to work in the Australian gas industry

Literacy and numeracy **4.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

skills	Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy' Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills	**5)** The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to conduct a Types A appliance relight	1.1	Work instructions for the appliance relight are received and confirmed to ensure clear understanding
	1.2	Relevant requirements and established procedures to be followed for the work are provided and discussed with relevant persons to establish and confirm the work schedule
	1.3	WHS/OHS, environmental and sustainable

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		energy policies and procedures are received and confirmed to ensure they are understood
	1.4	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored according to established procedures
	1.5	Scope of responsibility under the relevant work permit/authorisation are received and confirmed with relevant persons according to requirements and established procedures
	1.6	Equipment, tools, resources, materials and personal protective equipment needed to conduct an appliance relight are identified, obtained and checked for correct operation and safety.
	1.7	Relevant responsibilities associated with related work safety and emergency procedures at the worksite are confirmed in accordance with requirements and established procedures
	1.8	Appropriate persons are consulted to ensure the appliance relight is coordinated effectively with others involved
	1.9	Client issues are referred to appropriate persons in accordance with industry standards and established procedures
	1.10	Work site is preparation, safety plan and work schedule are confirmed in accordance with established procedures
2 Carry out an installation soundness test and an appliance relight	2.1	WHS/OHS and risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and devices are selected and used correctly and safely.
	2.3	Operational knowledge for utilising correct and safe use of basic equipment and tools to test the installation for soundness and relight an appliance is confirmed

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.4	Appliance relight is undertaken following manufacturer's instructions and company procedures
	2.5	Work is carried out efficiently, to the required quality standard without waste of materials or damage to apparatus, equipment, the surrounding environment or services and using sustainable energy principles.
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.7	Further instructions are sought from appropriate persons for unplanned events or conditions occurring
	2.8	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Final checks including visual observation is performed to ensure the quality of the work complies with established procedures and to appliance manufacturers instructions
	3.3	Appropriate persons are notified of completion of the work
	3.4	Equipment and tools and any surplus resources and materials are cleaned, checked and stored securely
	3.5	Work area is tidied and made safe in accordance with given instructions and established procedures
	3.6	Work completion records and documentation are updated in accordance with instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for relighting a Type A gas appliance by a designated gas industry person following the interruption to gas supply.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G714A Type A appliance relight

Evidence shall show an understanding of relighting a Type A gas appliance in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Relevant legislation, Australian Standards, codes, regulations and procedure requirements

T2. Safety requirements

- hazards, risk assessment and control measures
- environmental and safety hazards, assess risks and implement control measures
- safety requirements for entering domestic and commercial customer sites

T3. Customer liaison

T4. Procedures and tools for purging service lines

T5. Soundness testing tools, equipment and procedures

T6. Procedures for identifying and isolating unsafe appliances/ installations

T7. Procedures for conducting Type A appliance relights

T8. Reading and recording gas meter details

T9. Relevant documentation

- signs, symbols terminology and legends as used in industry procedures and documents
- workplace forms and reports

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this

© Commonwealth of Australia, 2025 Powering Skills Organisation

Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines — UEG11'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required knowledge and skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti-discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Relight a Type A gas appliance as described in 9.) Range Statement and including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of tools/equipment/procedures/workplace		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A. Procedures	All	• Work utilising relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures • Communicate effectively with appropriate personnel and customers • Accurately complete records and documentation • Follow work schedules including meeting appointments • Effectively use tools and equipment to conduct a Type A appliance relight • Advise stakeholders of potentially dangerous or illegal situations
B. Requirements	All	• Installation reconnection following interruption of supply • Installation soundness (leak) testing • Identifying non-conforming appliances and installations • Isolation of unsafe appliances and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		installations
C. Unplanned events	At on at least one occasion	Respond to an unplanned event by drawing on required knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in conducting appliance relights.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.

Method of assessment **8.4)**

This Unit shall be assessed by methods given in Volume 1 Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Unit applies.

© Commonwealth of Australia, 2025 Powering Skills Organisation

This requires that the specified Required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Required Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units

8.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Units where listed.

UEGNSG132 A	Carry out basic work activities in a gas industry work environment

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Unit shall be demonstrated in relation to relighting a Type A gas appliance by a designated gas industry person following the interruption to gas supply.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Appropriate persons
- Hand tools to disconnect and reconnect meters, including footprints, spanners, neon tester, bonding leads, soap tester, safety matches
- Safe working procedures
- Legislative requirements
- Personal Protective Equipment

UEGNSG804A Maintain Single Stage and Single Run Gas Flow and Pressure Control and Measuring Devices

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers maintaining gas distribution flow and pressure regulating and measuring devices and associated equipment in accordance with relevant legislation, codes, regulations and procedures.

It encompasses single stage and single run regulator systems, manual control valves, diaphragm and sleeve regulators, small capacity union connected positive displacement meters.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to the following the types of gas facilities, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS)and duty of care requirements being met for the workplace:

- District and customer metering and regulator sets
- Distribution line and path valves

This unit is intended as an AQF 2 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS), gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti- discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age at which persons can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the gas industry

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*	*Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.*

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare maintain gas flow and pressure control and measuring devices	1.1	WHS and environmental measures for the site are identified, obtained and understood.
	1.2	Work requirements for the work are interpreted from plans, specifications and instructions
	1.3	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule and respective responsibilities.
	1.4	WHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.5	Hazards are identified, WHS risks are assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of the responsibility under the relevant work permit and/or relevant notification is received and confirmed to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for correct operation and safety.
	1.8	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.10	Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.11	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work"
	1.12	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Maintain gas flow and pressure control and measuring devices	2.1	WHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Gas detectors are used to determine if gas concentration in worksite is safe and to locate and pinpoint any gas escapes and immediate supervisor is advised immediately if site is unsafe.
	2.3	Appropriate materials, tools, equipment PPE and measuring devices are selected and used correctly and safely.
	2.4	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements
	2.5	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.6	Hazard warnings and safety signs are recognised and WHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures
	2.7	Information on gas flow and pressure measurement

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and control devices performance is collected and reported in accordance with established procedures.
	2.8	Scheduled maintenance of components conducted in accordance with the work schedule and established procedures
	2.9	Regulator filter and meter components are setup and operated, system is purged and pressurised in accordance with established procedures
	2.10	Faults and operational conditions of the components are identified, repaired or replaced and reported in accordance with organisational requirements
	2.11	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.12	Routine quality checks are carried out in accordance with work instructions
3 Complete work and relevant documentation	3.1	WHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for

REQUIRED SKILLS AND KNOWLEDGE

carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge required is provided below. It forms an integral part of this unit.

KS01-G804A Single Stage Gas Flow and Pressure Control & Measurement Maintenance

Evidence shall show an understanding of operating and maintaining single stage and run gas flow and pressure measuring and regulating devices in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas distribution regulator facilities

- types
- principles of operation
- components

T2. Manual gas flow control

- principles of operation
- components

T3. Gas filtering systems

- system types
- principles of operation
- components including gas strainers, filters, differential pressure indicators
- maintenance
- fault finding, repair and replacement

T4. Pressure control equipment

- types
  - Diaphragm and Sleeve Regulators
  - Slam shuts and OPSO’s
  - Pressure Relief Devices
- principles of operation
- fault finding, repair and replacement

T5. Flow measurement equipment

- types
  - Small capacity union connected positive displacement meters
  - operation
  - maintenance
  - fault finding, repair and replacement

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T6. Component venting and purging operations

T7. Manufactures specifications, manuals and procedures.

T8. Organisations manuals and procedures

T9. Relevant Legislation, Standards, Codes and Regulations including:

- AS2885.3 Pipelines - Gas and liquid petroleum
- AS/NZS 4645 Gas distribution networks
- AS/NZS 5601 Gas installations

T10. Reporting and documentation requirements

T11. PPE and Safety Equipment Bonding clamps and electrical protection

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines — UEG11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures

- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carry out work on single stage and run gas flow and pressure measuring and regulating devices in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices

    C. Maintaining manual valves, filters and diaphragm and sleeve regulators and pressure relief devices

    D. Operating, adjusting/testing, fault finding and maintaining pressure measurement, control and relief devices

    E. Purging and venting components

    F. Completing required documentation and reporting.

    G. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the maintenance of gas distribution and transmission facilities in accordance with relevant legislation, codes, regulations and procedures.

It encompasses the maintenance of gas stations to equipment level which includes non SCADA operated multi-stage and multi-run systems, control valves, regulators and meters.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to the following types of gas stations, subject to all Workplace Health and Safety (WHS/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace:

- pressure reduction stations, district and customer regulator sets
- compressor stations
- meter stations and customer meter sets
- custody transfer stations
- inlets and city gates
- scraper stations
- gas storage facilities
- non SCADA main line valves

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract

of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS) gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age at which persons can operate certain equipment. Other

License to practice **3)**

conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEGNSG804A	Maintain Single Stage and Single Run Gas Flow and Pressure Measuring and Regulating Devices

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare maintain multi-stage and multi-run gas flow and pressure measuring and regulating devices	1.1	WHS and environmental measures for the site are identified, obtained and understood.
	1.2	Work requirements for the work are interpreted from plans, specifications and instructions
	1.3	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule and respective responsibilities.
	1.4	WHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.5	Hazards are identified, WHS and risks are assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of the responsibility under the relevant work permits and/or relevant notification is received and confirmed to access, isolate/de-energise systems and perform work according to requirements and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures
	1.7	Equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for correct operation and safety.
	1.8	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.9	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.10	Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.11	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work".
	1.12	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Maintain multi-stage and multi-run gas flow and pressure measuring and regulating devices	2.1	WHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Gas detectors are used to determine if gas concentration in worksite is safe and to locate and pinpoint any gas escapes and immediate supervisor is advised immediately if site is unsafe.
	2.3	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.4	Hazardous activities such as lifting, climbing, working in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements
	2.5	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		services and using sustainable energy principles.
	2.6	Hazard warnings and safety signs are recognised and assessed WHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.7	Data on system performance and usage is collected, reviewed and reported in accordance with established procedures.
	2.8	Gas station venting and purging operations are undertaken in accordance with established company procedures
	2.9	Regulator and meter runs and components are setup and operated, system is purged and pressurised in accordance with established company procedures.
	2.10	Faults and operational conditions of the components are identified, repaired or replaced and reported in accordance with organisational requirements
	2.11	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.12	Routine quality checks are carried out in accordance with work instructions
3 Complete work and relevant documentation	3.1	WHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the essential knowledge and associated skills (EKAS) required is provided below. It forms an integral part of this unit.

KS01-G805A Multi-Stage Gas Flow and Pressure Control & Measurement Maintenance

Evidence shall show an understanding of operating and maintaining gas flow and pressure measuring and regulating devices in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas distribution and transmission stations

- types
- principles of operation
- components

T2. Gas flow control

- principles
- component types and operation
- maintenance
- fault finding, repair and replacement

T3. Gas monitoring equipment

- types
- principles of operation
- components
- maintenance
- fault finding, repair and replacement

T4. Pressure control equipment

- types
  - Pilot loaded diaphragm and sleeve regulators
  - Slam shuts
  - PSVs
- principles of operation
- multi-runs and stage systems, inter-stage, active/monitor, etc.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- maintenance
- fault finding, repair and replacement

T5. Flow measurement equipment

- types
  - Positive displacement meters
  - Turbine meters
- operation
- maintenance
- fault finding, repair and replacement

T6. Gas station alarms and safety devices

- types
- operation
- maintenance
- fault finding, repair and replacement

T7. Gas station valves

- types
- operation
- maintenance
- fault finding, repair and replacement

T8. Gas station venting and purging operations

T9. Manufactures specifications, manuals and procedures.

T10. Organisations gas facility manuals, schematics, P+ID’s and procedures

T11. Relevant Legislation, Standards, Codes and Regulations including:

- AS2885.3 Pipelines - Gas and liquid petroleum
- AS/NZS 4645 Gas distribution networks
- AS/NZS 5601 Gas installations

T12. Reporting and documentation requirements

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines — UEG11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carry out work on gas flow and pressure measuring and regulating devices in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:

    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.

    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices

    C. Replacing, operating, fault finding, adjusting and maintaining gas valves, filters, regulators and pressure relief devices

    D. Replacing, operating, fault finding, adjusting/testing, and maintaining pressure measurement, control, boosters and relief devices

    E. Purging and venting components

    F. Completing required documentation and reporting.

© Commonwealth of Australia, 2025 Powering Skills Organisation

G. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG804A	Maintain Single Stage and Single Run Gas Flow and Pressure Measuring and Regulating Devices
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for*

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to, the operation and maintenance of gas flow, pressure control & measurement equipment in at least 3 of the following types of gas stations:

- Pressure reduction stations, district and customer regulator sets
- Compressor stations
- Meter stations and customer meter sets
- Custody transfer stations
- Inlets and city gates
- Scraper stations
- Gas storage facilities
- Non SCADA main line valves

The equipment includes the following;

- Valves, types: Ball, Plug, Double Black and Bleed
- Pressure Controllers
- Regulators, at least 2 types: Diaphragm, Sleeve and Hydraulic Plug
- Meters, at least 2 types: Diaphragm, Rotary and Turbine

Note: Fault finding is limited to the component level.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Monitoring, adjusting and controlling
- Regulation of flow and pressure
- Gas Measurement
- Recording and reporting
- Regulation of the system
- Equipment
- Organisational and statutory requirements

UEGNSG806A Maintain SCADA controlled flow and pressure equipment and electronic gas measurement equipment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the monitoring, operating and maintaining Supervisory Control and Data Acquisition System (SCADA) controlled gas distribution and transmission station facilities in accordance with relevant legislation, codes, regulations and procedures.

It encompasses Gas Station monitoring, operation and maintenance of equipment which includes remotely operated and controlled valves, air loaded & SCADA controlled regulators, Coriolis, Ultrasonic and electronic meters.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to the following types of gas stations, subject to all Workplace Health and Safety (WHS) / Occupational Health and Safety and duty of care requirements being met for the workplace:

- Compressor stations
- Custody transfer stations
- Inlets and city gates
- Scraper stations
- Gas storage facilities
- SCADA controlled Main Line Valves

This unit is intended as an AQF 4 competency for

© Commonwealth of Australia, 2025 Powering Skills Organisation

existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace Health and Safety, Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age at which persons can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detectors to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Workplace Health and Safety regulations, codes and practices in the gas industry
UEGNSG804A	Maintain Single Stage and Single Run Gas Flow and Pressure Control and Measuring Devices
UEGNSG805A	Maintain Multi-Stage and Multi-Run Gas Flow and Pressure Measuring and Regulating Devices

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) **Elements describe the essential outcomes of a competency standard unit**

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to maintain SCADA controlled gas flow and pressure equipment & electronic gas measurement equipment	1.1	WHS/OHS and environmental measures for the site are identified, obtained and understood.
	1.2	Work requirements for the work are interpreted from plans, specifications and instructions
	1.3	Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule and respective responsibilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.4	WHS/OHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.5	Hazards are identified, WHS/OHS and risks are assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of the responsibility under the relevant work permits and/or relevant notification is received and confirmed are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for correct operation and safety.
	1.8	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.9	Materials, plans, diagrams, drawings and resources required for work are confirmed, scheduled and obtained in accordance with established procedures
	1.10	Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.11	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work".
	1.12	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Maintain SCADA controlled gas flow and pressure equipment & electronic gas measurement equipment	2.1	WHS/OHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Gas detectors are used to determine if gas concentration in worksite is safe and to locate and pinpoint any gas escapes and immediate supervisor is advised immediately if site is unsafe.
	2.3	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and

ELEMENT	PERFORMANCE CRITERIA	
		with work instructions
3 Complete the work and relevant documentation	3.1	WHS/OHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the required skills and knowledge and their level for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the required skills and knowledge is provided below. It forms an integral part of this unit.

KS01-G806A Electronic (SCADA) Gas Flow, Pressure Control & Measurement

Evidence shall show an understanding of operating and maintaining Supervisory Control and Data Acquisition System (SCADA) gas flow and pressure measuring and regulating devices in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Principles of SCADA use in monitoring and control of applicable organisational gas infrastructure

T2. Component types, function and operation including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- data collection and equipment control functions including:
  - Remote Terminal Unit (RTU)
  - Plant Control System (PCS) what's this mean?
  - PLC's Programmable Logic Controllers
  - DCS's Distributive Control Systems
- system controller interface such as Human Machine Interface (HMI)
- data and voice communication including:
  - Satellite Link
  - Internet Protocol (IP)
  - Modem/ISDN
  - UHF/VHF Radio
  - Microwave
  - Local Area Network (LAN)
  - Wide Area Network (WAN)

T3. Remote Telemetry Units (RTU's) and associated controller maintenance including:

- start up and shut down of process controllers and RTU equipment
- adjustment of process set point control and status e.g. local/remote and auto/manual
- alarm monitoring, acknowledgement, prioritisation and escalation
- alarm inhibit/enablement/disablement.

T4. SCADA operated gas conditioning and monitoring equipment

- principles of operation
- components
- maintenance
- fault finding, repair and replacement

T5. SCADA operated pressure control equipment

- types
  - Air loaded diaphragm and sleeve regulators
  - SCADA operated valves
  - ALBs
- principles of operation
- maintenance
- fault finding, repair and replacement

T6. SCADA gas flow measurement equipment

- types
  - Coriolis meters
  - Ultrasonic meters
  - Turbine meters
- operation
- maintenance

© Commonwealth of Australia, 2025 Powering Skills Organisation

- fault finding, repair and replacement

T7. SCADA gas station alarms and safety devices

- types
- operation
- maintenance
- fault finding, repair and replacement

T8. SCADA operated gas station valves

- types
- operation
- maintenance
- fault finding, repair and replacement

T9. SCADA controlled gas station venting, purging and pressurisation operations

T10. Gas station maintenance requirements and procedures

- change over regulator and meter runs
- change over filters/separators
- purge and pressurise station
- adjust set points

T11. Manufactures specifications, manuals and procedures.

T12. Organisations gas facility manuals, schematics, SCADA displays, switches, P+ID's and procedures

T13. Relevant Legislation, Standards, Codes and Regulations including:

- AS2885.3 Pipelines - Gas and liquid petroleum
- AS/NZS 4645 Gas distribution networks
- AS/NZS 5601 Gas installations

T14. Reporting and documentation requirements

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **8.2)**

Before the critical aspects of evidence are considered all

© Commonwealth of Australia, 2025 Powering Skills Organisation

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines — UEG11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the required skills and knowledge as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Maintaining SCADA controlled gas flow and pressure measuring and regulating devices in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.
    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices
    C. Replacing, operating, fault finding, adjusting and maintaining gas valves, filters, regulators and pressure relief devices

© Commonwealth of Australia, 2025 Powering Skills Organisation

D. Replacing, operating, fault finding, adjusting/testing, and maintaining pressure measurement, control, boosters and relief devices

E. Purging and venting components

F. Completing required documentation and reporting.

G. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- WHS/OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved

© Commonwealth of Australia, 2025 Powering Skills Organisation

industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site

BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to the operation & maintenance of SCADA controlled gas flow, pressure control & electronic gas measurement equipment in gas regulator and compressor stations

The equipment includes the following;

- Remotely operated valves, types: Double block and Bleed
- Remote Telemetry Units (RTU's) and controllers
- Actuators: Pneumatic, Electric and I to P convertors
- Pressure Controllers
- Meters: Coriolis and Ultrasonic

Note: Fault finding is limited to the component level.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Monitoring, adjusting and controlling
- Regulation of flow and pressure
- Gas Measurement
- Recording and reporting
- Regulation of the system
- Equipment
- Organisational and statutory requirements

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the installation of gas flow, measuring and pressure regulating devices in accordance with relevant legislation, codes, regulations and procedures.

It encompasses the installation of gas valves, pressure controllers, regulators and meters in gas facilities and stations.

Application of the Unit

Application of the Unit **2)**

This competency standard shall apply to the following types of gas stations, subject to all Workplace Health and Safety (WHS)/Occupational Health and Safety (OHS) and duty of care requirements being met for the workplace:

- pressure reduction stations, district and customer regulator sets
- compressor stations
- meter stations and customer meter sets
- custody transfer stations
- inlets and city gates
- scraper stations
- gas storage facilities
- main line valves

© Commonwealth of Australia, 2025 Powering Skills Organisation

This unit is intended as an AQF 3 competency for new and existing workers in the gas industry. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are also subject to licence regulation directly related to Workplace Health and Safety (WHS)/ Occupational Health and Safety (OHS) gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as hazardous areas, confined

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age at which persons can operate certain equipment. Other conditions may apply to this competency under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEGNSG005A	Prepare to work in the Australian gas industry
UEGNSG006A	Use a portable gas detector to locate escape
UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG134A	Establish a utilities infrastructure work site
UEGNSG140A	Apply environmental policies and procedures in the utilities industry
UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the workplace

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have

© Commonwealth of Australia, 2025 Powering Skills Organisation

reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to install gas flow, measuring and pressure regulating devices	1.1 WHS and environmental measures for the site are identified, obtained and understood.
	1.2 Work requirements for the work are interpreted from plans, specifications and instructions
	1.3 Relevant requirements and established procedures for the work are discussed with relevant persons to establish and confirm the work schedule and respective responsibilities.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.4	WHS, environmental and sustainable energy policies and procedures are received and confirmed.
	1.5	Hazards are identified, WHS and risks are assessed and control measures are prioritised, implemented and monitored according to established procedures.
	1.6	Scope of the responsibility under the relevant work permits and/or relevant notification is received and confirmed to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Equipment, tools and personal protective equipment needed to carry out the work are identified, scheduled, obtained and checked for correct operation and safety.
	1.8	Appropriate persons are consulted to ensure the work is coordinated effectively with others involved
	1.9	Materials, plans, diagrams, drawings and resources required for work are confirmed and obtained in accordance with established procedures
	1.10	Relevant responsibilities associated with first aid and other related work safety procedures for an incident at the worksite are checked and confirmed.
	1.11	Third party issues are referred to appropriate persons in accordance with established procedures, for example "low voltage electrical work".
	1.12	Site preparation, safety plan and the work schedule are confirmed in accordance with established procedures.
2 Install gas flow, measuring and pressure regulating devices	2.1	WHS risk control measures, schedule of work and standard operating procedures for carrying out the work are followed.
	2.2	Appropriate materials, tools, equipment and measuring devices are selected and used correctly and safely.
	2.3	Hazardous activities such as lifting, climbing, working

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		in confined spaces, excavations, trenches, or aloft, and use of power tools, techniques and practices are conducted safely in accordance with given instructions and to requirements
	2.4	Work is carried out efficiently, to the required standard without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.5	Hazard warnings and safety signs are recognised and assessed WHS risks and incidents are reported to the immediate authorised persons for directions according to established procedures.
	2.6	Installation of components is conducted in accordance with the work schedule and established procedures
	2.7	Regulators, filters and meter components system are purged, pressurised and checked for soundness in accordance with established procedures
	2.8	Procedures for referring non-routine events to the immediate authorised persons for directions are followed.
	2.9	Routine quality checks are carried out in accordance with work instructions
3 Complete work and relevant documentation	3.1	WHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are cleaned, checked and securely stored.
	3.4	Appropriate persons are notified of work completion according to established procedures
	3.5	Work completion documentation is completed accurately and provided to appropriate persons in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the essential skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies. The extent of the essential knowledge and associated skills (EKAS) required is provided below. It forms an integral part of this unit.

KS01-G805A Gas Flow and Pressure Control & Measurement Devices Installation

Evidence shall show an understanding of installing gas flow and pressure measuring and regulating devices in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Gas distribution and transmission stations

- types
- principles of operation
- components

T2. Gas flow control

- principles
- component types and operation
- installation

T3. Gas filtering systems

- system types
- principles of operation
- components including gas strainers, filters, differential pressure indicators
- maintenance
- fault finding, repair and replacement

T4. Gas monitoring equipment

- types
- principles of operation
- components
- installation

T5. Pressure control equipment

- types
  - Pilot loaded diaphragm and sleeve regulators

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

  - Slam shuts
  - PSVs
- principles of operation
- single run and single stage systems
- multi-run and multi-stage systems, inter-stage, active/monitor, etc.
- installation

T6. Flow measurement equipment

- types
  - Small capacity union connected positive displacement meters
  - Positive displacement meters
  - Turbine meters
- operation
- installation

T7. Gas station alarms and safety devices

- types
- operation
- installation

T8. Gas station valves

- types
- operation
- installation

T9. Gas station venting, purging, pressurising and soundness check operations

T10. Manufactures specifications, manuals and procedures.

T11. Organisations gas facility manuals, schematics, P+ID’s and procedures

T12. Relevant Legislation, Standards, Codes and Regulations including:

- AS2885.3 Pipelines - Gas and liquid petroleum
- AS/NZS 4645 Gas distribution networks
- AS/NZS 5601 Gas installations

T13. Reporting and documentation requirements

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE

conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in **8.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines — UEG11". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrate performance across a representative range of contexts from the prescribed items below.
  - Carry out work on gas flow and pressure measuring and regulating devices in accordance with relevant legislation, code, regulations and procedures as described in 9.) Range Statement and including:
    A. Identifying and interpreting correctly drawings, diagrams, schedules, procedures and manuals relevant to the work to be undertaken.
    B. Selecting correct materials, equipment, tools, personal protection equipment and measurement devices
    C. Installing gas valves, filters, regulators and pressure

© Commonwealth of Australia, 2025 Powering Skills Organisation

relief devices

D. Installing pressure measurement, control, boosters and relief devices

E. Purging, pressurising, checking soundness and venting components

F. Completing required documentation and reporting.

G. Dealing with unplanned events by drawing on essential knowledge and skills, procedures/ protocols to provide appropriate solutions incorporated in the holistic assessment with the above listed items, for example encroachment and/or contact with assets

Context of and specific resources for assessment **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

These should be part of the formal learning/assessment environment.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

© Commonwealth of Australia, 2025 Powering Skills Organisation

The resources used for assessment should reflect current industry practices in relation to locating, proving and protecting utility assets.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Required Skills and Knowledge are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required skills and knowledge described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG140A	Apply environmental policies and procedures in the utilities industry

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This unit shall be demonstrated in relation to the installation of gas flow, pressure control & measurement equipment in at least 3 of the following types of gas facilities/stations:

- District and customer metering and regulator sets
- Distribution line and path valves
- Pressure reduction stations, district and customer regulator sets
- Compressor stations
- Meter stations and customer meter sets
- Custody transfer stations
- Inlets and city gates
- Scraper stations
- Gas storage facilities
- Non SCADA main line valves

The equipment includes the following;

- Valves, types: Manual, Ball, Plug, Double Black and Bleed
- Pressure Controllers
- Actuators
- Regulators, at least 2 types: Diaphragm, Sleeve and Hydraulic Plug
- Meters, at least 2 types: Small capacity union connected positive displacement meters, Diaphragm, Rotary and Turbine

Note: Fault finding is limited to the component level.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Monitoring, adjusting and controlling
- Regulation of flow and pressure

Licensing/Regulatory Information

License to practice **3)**

During Training:

Competency development activities are subject to regulations directly related to licensing, workplace health and safety/occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace:

The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Workplace/Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti-discrimination and training.

Note:

Other conditions may apply under State and Territory legislative and regulatory requirements, for example:

Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment.

Permits may also be required for some work environments such as hazardous areas, confined spaces, working aloft, near live electrical devices, site rehabilitation.

Compliance may be required in various jurisdictions relating to currency in First Aid, hazardous areas, confined space, lifting and risk safety measures

Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age at which persons can operate certain equipment.

Elements and Performance Criteria Pre-Content

6) *Elements describe the essential outcomes of a competency standard unit*

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to monitor and operate complex gas flow control, measuring and regulating devices	1.1	Work requirements for monitoring and operating complex flow control, measuring and regulating devices are interpreted from plans, specifications and instructions
	1.2	Relevant requirements and established procedures for the work are communicated to all persons
	1.3	WHS/OHS, environmental and sustainable energy policies and procedures related to the monitoring and operating of complex flow controls are obtained and confirmed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Risk control measures for identified hazards are prioritised, implemented and monitored against the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.6	Relevant work permits are obtained to access, isolate/de-energise systems and perform work according to requirements and established procedures
	1.7	Resources including appropriately licensed persons, equipment, tools and personal protective equipment required for the work identified, scheduled and obtained and confirmed in a safe working order
	1.8	Liaison and communication with authorised persons, authorities, clients and land-owners is completed so that work can be carried out where necessary
	1.9	Persons participating in the work, including plant operators and contractors are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
2 Monitor and operate complex gas flow control, measuring and regulating devices	2.1	Information on device and equipment performance is collected and reported in accordance with organisational requirements
	2.2	Dealings with customers are consistent with standard operating procedures and the special needs of customers are identified and considered in targeting client service
	2.3	Knowledge and Skills required for monitoring and operating complex flow control devices are applied to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Routine inspections of system are scheduled and monitored in accordance with the work schedule and established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		directions according to established procedures
	2.6	Data on system performance and usage is collected, analysed and reported and unplanned events in the monitoring and operation of complex flow control are undertaken with the scope of established procedures
	2.7	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Control and adjust flows and compile records and reports	3.1	Flow regulating systems are inspected and adjustments made to meet demand and customer requirements
	3.2	Accidents and injuries are reported in accordance with established procedures where applicable
	3.3	Flows and diversions are determined to facilitate repair or emergency activities in accordance with organisational requirements
	3.4	Process faults and operational conditions of the system are identified, addressed and reported in accordance with organisational requirements
	3.5	Work completion records, reports and documentation are finalised and processed and appropriate persons notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) *This describes the skills and knowledge and their level, required for this unit.*

Evidence shall show that knowledge has been acquired of safe working practices for carrying out work in a gas industry environment.

KS01-G811A Complex flow control device operation

Evidence shall show an understanding of monitor and operate complex flow control, measuring and regulating devices for gas distribution systems in accordance with relevant legislation, standards, codes and established procedures to an extent indicated by the following aspects:

T1. Basic principles of SCADA use in monitoring and control of applicable organisational gas infrastructure

T2. Component types, function and operation including:

- data collection and equipment control functions including:
  - Remote Terminal Unit (RTU)
- system controller interface such as Human Machine Interface (HMI)

T3. Remote Telemetry Units (RTU's) and associated controller operation including:

- start up and shut down of process controllers and RTU equipment
- adjustment of process set point control and status e.g. local/remote and auto/manual
- alarm monitoring, acknowledgement, prioritisation and escalation
- alarm inhibit/enablement/disablement.

T4. SCADA operated gas conditioning and monitoring equipment

- principles of operation
- components
- fault finding, adjustments and minor repairs

T5. SCADA operated pressure control equipment

- types
  - Air loaded diaphragm and sleeve regulators
  - SCADA operated valves
  - ALBs
- principles of operation
- fault finding, adjustments and minor repairs

T6. SCADA gas flow measurement equipment

- types
  - Coriolis meters
  - Ultrasonic meters
  - Turbine meters
- operation
- fault finding, adjustments and minor repairs

T7. SCADA gas station alarms and safety devices

- types
- operation
- fault finding, adjustments and minor repairs

© Commonwealth of Australia, 2025 Powering Skills Organisation

T8. SCADA operated gas station valves

- types
- operation
- maintenance
- fault finding, adjustments and minor repairs

T9. SCADA controlled gas station venting, purging and pressurisation operations

T10. Gas station operation requirements and procedures

- change over regulator and meter runs
- change over filters/separators
- purge and pressurise station
- adjust set points

T11. Manufactures specifications, manuals and procedures.

T12. Organisations gas facility manuals, schematics, SCADA displays, switches, P+ID’s and procedures

T13. Relevant Legislation, Standards, Codes and Regulations

Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord

assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in monitoring and operating complex flow control, measuring and regulating devices for gas pressure control.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment **8.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified required Knowledge and Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the required knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **8.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of

© Commonwealth of Australia, 2025 Powering Skills Organisation

learning and assessment effort being concurrently managed with allied competency standard units where listed.

UEGNSG132A	Carry out basic work activities in a gas industry work environment
UEGNSG141A	Apply Occupational Health and Safety regulations, codes and practices in the gas supply industry
UEGNSG140A	Comply with environmental policies and procedures in the utilities industry
UEGNSG134A	Establish a utilities infrastructure work site
BSBFLM312B	Contribute to team effectiveness
BSBFLM303C	Contribute to effective workplace relationships

Range Statement

RANGE STATEMENT

9) *This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.*

This Competency Standard Unit shall be demonstrated in relation to the monitoring and operating of complex flow control, measuring and regulating devices for gas pressure and flow control in:

- Custody transfer stations
- Inlets and city gates
- Scraper stations
- Gas storage facilities
- Main Line Valves

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Inspecting and controlling
- Regulation of flow and pressure
- Measuring
- Recording and reporting

UEPMNT367A Install and commission stationary gas fuelled reciprocating engines

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the installation and commissioning of stationary gas fuelled reciprocating engines for approval where required. It encompasses working safely and to installation standards matching the plant/equipment, location, components and fuel train pipe-work to given specifications. Commissioning the plant and equipment including: pre commissioning tests, start up, adjusting components and controls to safe and efficient operation. Completing all necessary installation and commissioning documentation.

Application of the Unit

Application of the Unit **2)**

General Application **2.1)**

This competency standard unit is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set.

Importation **2.2)**

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC/NSSC Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Package Policy should ensure all pre-requiste units are also imported into the relevant Training Package and qualification.

Licensing/Regulatory Information

License to practice **3)**

During Training: Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit in some States/Territories requires an authority to practice in the workplace. Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
CPCCOHS1001A	Work safely in the construction industry
HLTCPR201A	Perform CPR

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills	**4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following levels. A description of what each level entails is provided in Section 2.3.1 Language, Literacy and Numeracy.

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

Employability Skills	**5)**

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to install and commission stationary gas fuelled reciprocating engine	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Health and safety risks are identified and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	established risk control measures and procedures in preparation for the work are followed.
	1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4 Design specification for gas fuelled reciprocating engines to be installed and commissioned is accessed, analysed, interpreted and confirmed through a detailed site inspection.
	1.5 Design specification matters requiring clarification are resolved through liaison with designer and gas authorities.
	1.6 Formal authority to proceed with installation and commissioning is obtained before commencing work, in accordance with regulatory and code of practice requirements.
	1.7 Installation is prepared in consultation with others affected by the work and sequenced appropriately in line with quality assurance requirements.
	1.8 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
	1.9 Plant, equipment and component specifications and manufacturer manuals are obtained for planned work activity.
	1.10 Locations of plant, equipment, fuel train pipe-work and components are planned within the constraints of work site, significants and requirements.
	1.11 Materials needed for the installation work are obtained in accordance with design specification and established procedures
	1.12 Tools, equipment, including personal protective equipment, and testing devices needed to for the installation and commissioning work are obtained in accordance with established procedures and checked for correct operation and safety.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.13 Work area is prepared to support efficient installation and commissioning of the plant and equipment.
	1.14 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2 Install stationary gas fuelled reciprocating engine	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.
	2.3 Gas and electrical circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Stationary gas fuelled reciprocating engine components, including fuel train and associated pipe-work and flue/exhaust systems are installed in accordance with approved design specification and comply with technical standards and regulatory requirements, with sufficient access to affect terminations, adjustment and maintenance.
	2.5 Ventilation systems are installed in accordance with approved design specifications
	2.6 Electrical components, wiring enclosures and wiring, including terminations are installed in accordance with design and manufacturer's specifications, and functional and regulatory requirements.
	2.7 Ongoing compliance and safety inspections of the installed reciprocating engine , equipment, pipe-work, components and accessories are undertaken and defects are rectified
	2.8 Installation is carried out efficiently without unnecessary waste of materials or damage to plant, equipment, pipe-work, components, accessories, the surrounding environment or services and using sustainable energy principles.
	2.9 Unexpected situations are dealt with safely and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		with the approval of an authorised person.
3 Commission stationary gas fuelled reciprocating engine	3.1	OHS risk control measures and procedures for carrying out the work are followed.
	3.2	Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.
	3.3	Gas and electrical safety checks and isolation procedures, including purging are completed and recorded to manufacturer and other authority requirements before testing and commissioning are commenced.
	3.4	Operational parameters of individual components are tested and adjusted to conform to specifications
	3.5	The reciprocating engine operations are tested first without and then with fuel, adjustments are completed as necessary and results recorded in accordance with approving authority requirements.
	3.6	Exhaust gases are analysed in accordance with recognised industry practice and other authority requirements.
	3.7	Unexpected situations are dealt with safely and with the approval of an authorised person
	3.8	Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
4 Completion and report installation and commissioning activities.	4.1	OHS work completion risk control measures and procedures are followed.
	4.2	Final check of the installed reciprocating engine is made to verify that it complies with all requirements, including any certification required by local authorities.
	4.3	Work area is cleared and materials disposed of or recycled in accordance with federal, state and territory legislation and workplace procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	4.4 Tools and equipment are cleaned, checked, serviced and stored in accordance with manufacturer recommendations and workplace procedures
	4.5 Work site is cleaned and made safe in accordance with established procedures.
	4.6 'As-installed' reciprocating engine equipment components, pipe-work, flue/exhaust systems and accessories are documented, accessed and an appropriate person or persons notified in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and commissioning of gas fuelled reciprocating engine

All knowledge and skills detailed in this unit should be contextualised to current industry standards, technologies and practices

The extent of the essential knowledge and associated skills (EKAS) required is given below. It forms an integral part of this unit.

KS01-PM367A Installation and commissioning of gas fuelled plant and equipment

Evidence shall show an understanding of installation and commissioning techniques for stationary gas fuelled reciprocating engines, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1. Gas fuels encompassing:

- Types, properties and applications
- Safety
- Hazards
- Combustion
- Ignition types

T2. Gas fuelled reciprocating engine overview encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Types
- Major components
- Operating principles
- Manufacturer's specifications and diagrams

T3. Fuel train requirements encompassing:

- Pipe-work and connections
- Valves
- Metering devices
- Regulating valves
- Electrical controls

T4. Exhaust/flue requirements encompassing:

- Materials
- Terminations
- Sizing

T5. Location ventilation requirements encompassing:

- Materials
- Calculations
- Interlocks
- Locations

T6. Hazardous area requirements encompassing:

- Locations
- Housing requirements
- Distances

T7. Codes, regulations and standards encompassing:

- AS 3814
- AS 5601

T8. Design specifications encompassing:

- Accessing
- Analysis and interpretation
- Calculations

T9. Required authority to proceed encompassing:

- Regulatory requirements (Scope and restrictions)
- Standards and code of practice requirements.
- Required documentation and submissions

T10. Site Arrangements encompassing:

- Location and environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Piping requirements for gas fuel train pipe-work
- Suitable equipment/equipment plant locations

T11. Site Safety encompassing:

- Hazards
- Checklists
- Reports

T12. Plant/equipment diagrams encompassing:

- Mechanical layouts
- Gas pipe-work drawings
- Electrical circuits

T13. Installation encompassing:

- Reciprocating engines plant and equipment
- Gas train pipe-work and components
- Exhaust/flue system
- Ventilation system
- Pressure testing and purging
- Authorisations and certification requirements and procedures

T14. Commissioning encompassing:

- Inspection of the installed reciprocating engines, pipe-work, components and accessories
- Testing reciprocating engine operation first without and then with fuel
- Testing and adjusting regulator, operation and safety controls
- Exhaust gases analysis throughout operating parameters including bifuel applications
- Compliance with design specification, regulations, codes, standards and manufacturers specifications
- Documentation and reports
    - As-installed' reciprocating engine components, pipe-work, flue/exhaust systems and accessories are documented and reported

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate **9.2)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEP12'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Install and commission gas fuelled plant and equipment as described as described in 8) and including:

    A Obtaining formal authority to proceed with installation and commissioning before commencing work, in accordance with regulatory and code of practice requirements.

    B Reading and interpreting drawings related to plant/equipment locations and pipe-work connections

    C Installing, securing, aligning and connecting plant, equipment, pipe-work, components and

© Commonwealth of Australia, 2025 Powering Skills Organisation

accessories accurately in their planned location and in compliance with codes and standards.

D Undertaking on-going compliance and safety inspections

E Rectifying any defects revealed through on-going inspections

F Pressure testing, repairing leaks and purging the fuel train system entire system to the appropriate design test pressures.

G Commissioning plant and equipment operation as necessary and results recorded in accordance with approving authority requirements

H Correctly documenting 'as-installed' plant, equipment, pipe-work, components and accessories

I Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing low voltage electrical apparatus and associated equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **9.4)**

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in either UEENEEE101A or CPCCOHS1001A and HLTCPR201A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation and commissioning of stationary gas fuelled reciprocating engines as follows:

Each of the following:

- Installing and connecting gas fuel train pipe-work, regulators, valves, metering and protective devices from gas pipeline to the reciprocating engine.
- Installing and connecting flue/exhaust system
- Pressure testing and purging gas fuel train
- Commissioning gas fuelled reciprocating engine, adjusting components and

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

controls to safe and efficient operation.

The gas fuel can be from gas gathering lines, gas transmission pipelines, distribution pipeline, and consumer gas installations. Gas Fuels can be natural gas, LPG, SNG, bio-gas, waste gas or sewage gas, used as a single gas fuel or part of a duel fuel system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Section 2.1.00 Preliminary Information and Glossaries.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers the isolation, disconnecting, repairing, reconnecting and maintenance of stationary gas fuelled reciprocating engines for approval where required. It encompasses working safely and to relevant standards disconnecting, carry out repairs and replacement of fuel train components to given specifications. Reconnecting the engine including: pre start tests, start up, adjusting components and controls to safe and efficient operation. Completing all required documentation.

Application of the Unit

Application of the Unit **2)**

General Application **2.1)**

This competency standard unit is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher.

The unit may be selected as an elective unit (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set.

Importation **2.2)**

RTOs wishing to import this unit into any qualification under the flexibility provisions of NQC/NSSC Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Package Policy should ensure all pre-requiste units are also imported into the relevant Training Package and qualification.

Licensing/Regulatory Information

License to practice **3)**

During Training: Competency development activities are subject to regulations directly related to licensing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit in some States/Territories requires an authority to practice in the workplace. Other conditions may apply under State and Territory legislative and regulatory requirements.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to repair and maintain gas fuelled reciprocating engines	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 Health and safety risks are identified and established risk control measures and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		in preparation for the work are followed.
	1.3	Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
	1.4	Formal authority to proceed with repair and maintenance is obtained before commencing work, in accordance with regulatory and code of practice requirements
	1.5	Repair and maintenance is prepared in consultation with others affected by the work and sequenced appropriately.
	1.5	The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
	1.6	Plant, equipment and component specifications and manufacturer manuals are obtained for planned work activity
	1.7	Material needed for the repair and maintenance work is obtained in accordance with established procedures and checked against job requirements.
	1.8	Tools, equipment, including personal protective equipment, and testing devices needed to for the repair and maintenance work are obtained in accordance with established procedures and checked for correct operation and safety.
	1.9	Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2 Repair and maintain gas fuelled reciprocating engines	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.
	2.3	Gas and electrical circuits/machines/plant are checked and recorded as being isolated and safe where necessary in strict accordance authority and OHS requirements and procedures before

ELEMENT	PERFORMANCE CRITERIA	
		work is commenced.
	2.4	Nature and possible cause of faults or out of specification performance are identified from defect reports or operational records.
	2.5	Fault finding is approached methodically drawing on knowledge of gas fuelled reciprocating engines using observation, measurement, calculations and comparison with normal system and component parameters/values.
	2.6	Faults beyond the scope of gas fuel train, ignition or fume exhaust work are identified and arrangements are made for appropriately competent and authorised person to rectify faults
	2.7	Engine is disconnected where necessary to carry out maintenance and repairs in strict accordance authority and OHS requirements and procedures. Note: No modifications are permitted.
	2.8	Components are removed/dismantled where necessary and parts stored to protect them against loss or damage
	2.9	Faulty components are rechecked and their fault status confirmed.
	2.10	Materials required to rectify faults are sourced and obtained in accordance with established procedures
	2.11	Repair and maintenance work is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
	2.12	Effectiveness of the repair is tested in accordance with established procedures.
	2.13	System is reassembled, reconnected and finally tested to ensure it is operating safely, effectively and complies with relevant requirements.
	2.14	Unexpected situations are dealt with safely and

  - As-installed' plant and equipment components, pipe-work, flue/exhaust systems and accessories are documented and reported

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEP12'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Repairing and maintaining gas fuelled reciprocating engines as described as described in 8) and including:

    A Conducting maintenance

    B Finding faults efficiently

    C Disconnecting engine

    D Rectifying faults without damage

    E Reconnecting

    F Providing written reports on work undertaken

    G Dealing with unplanned events

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to installing low voltage electrical apparatus and associated equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **9.4)**

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in either UEENEEE101A or CPCCOHS1001A and HLTCPR201A and other discipline specific occupational health and safety units shall be incorporated in relation to this unit.

Range Statement

ANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to repairing and maintaining stationary gas fuelled reciprocating engines as follows:

Each of the following:

- Gas fuel train pipe-work, regulators, valves, metering and protective devices from gas pipeline to the engine.
- Flue/exhaust system
- Pressure testing and purging gas fuel train
- Disconnecting and reconnecting gas fuelled reciprocating engines, adjusting components and controls to safe and efficient operation.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ANGE STATEMENT

It does not include the following:

- Repairs the internal mechanical components of the engine

The gas fuel can be from gas gathering lines, gas transmission pipelines, distribution pipeline, and consumer gas installations. Gas Fuels can be natural gas, LPG, SNG, bio-gas, waste gas or sewage gas, used as a single gas fuel or part of a duel fuel system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Section 2.1.00 Preliminary Information and Glossaries.

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

There are no pre-requisite units

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following levels. A description of what each level entails is provided in Section 2.3.1 Language, Literacy and Numeracy.

Reading 2 Writing 2 Numeracy 2

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Select and use equipment	1.1	The appropriate medium for communication is determined from analysis of available options, previous communication or current circumstances and used in accordance with enterprise guidelines, manufacturer's and/or site requirements
		1.2	Communication procedures for opening, passing and receiving messages are conducted to enterprise/site requirements
		1.3	Communication equipment is used in accordance with manufacturer's and enterprise/site procedures
		1.4	Limitations of communication links are identified and alternatives considered
		1.5	Communication is conveyed logically, concisely and articulately in a manner appropriate to the situation to satisfy job requirements
		1.6	Where appropriate, the teams and individuals roles and responsibilities within the team are identified and, where required, assist in the provision of the on-the-job training
2	Monitor communication system	2.1	Data acquisition is monitored and assessed for quality and action taken in accordance with enterprise/site procedures
		2.2	Effectiveness of communication, including understanding of the intent and content, is confirmed between the parties in accordance with site requirements
		2.3	The need for communication assistance is identified and addressed in accordance with job requirements
3	Complete documentation	3.1	Documentation is updated, logs maintained and equipment problems, abnormalities and status are reported and logged in accordance with enterprise/site procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and communication systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-PO203B Communication Systems

Evidence shall show an understanding of communication systems to an extent indicated by the following aspects:

T1 Use of a range of electronic communication tools including:

- facsimile;
- telephone (POTS and mobile);
- two-way radio or CB radio;
- SMS messaging;
- personal computers;
- e-mail;
- Internet/Intranet messaging;
- pager; and
- intercom

according to licensing regulations, enterprise requirements and manufacturers' instructions.

T2 Use of a range of non-electronic communication tools, including:

- spoken communication; and
- hand signals.

T3 Communication protocols and procedures required when using the following mediums:

- facsimile;
- telephone (POTS and mobile)
  - answering procedures
  - limitations of mobile phones including black/dead spots;
- two-way radio or CB radio
  - call signs
  - calling in and signing off
  - Privacy and security

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- using common channels and repeaters
- limitations including black/dead spots;
- SMS messaging;
- E-mail
  - etiquette;
- Internet/Intranet messaging
  - privacy and security;
- pager;
- intercom;
- report forms;
- log books;

T4 Interpersonal communication

- communicating facts clearly;
- communicating technical concepts to non-technical people;
- active listening skills;
- dealing with difficult, angry or irate people;
- on-the-job training techniques.

T5 Enterprise Recording Procedures

- Reports;
- Logs;
- Databases;
- Escalation procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the Range Statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this competency standard unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all pre-requisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

the "Assessment Guidelines – UEP12". Evidence shall also comprise:

- Each Element on at least two occasions
- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the Essential Knowledge and Associated Skills as described in 6) Essential Knowledge and Associated Skills of this unit
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Knowledge and application of relevant sections of: Occupational, health and safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
  - Acknowledging and prioritising fault communication
  - Selecting and applying communication systems
  - Monitoring communication systems
  - Dealing with an unplanned event by drawing on Essential Knowledge and Skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions
- Suitable work environment, facilities, equipment and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

to undertake actual work as prescribed by this competency standard unit

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of work.

In addition to the resources listed above in Context of assessment', evidence should show competency working in confined spaces, with different types of plant and equipment as well as different structural/construction types and method and in a variety of environments

Method of assessment **9.4)**

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified Essential Knowledge and Associated Skills be assessed in a structured environment, which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Plan and prepare for the work	1.1	Work requirements are identified from request/work orders or equivalent and clarified/confirmed with appropriate parties or by site inspection
	1.2	Occupational Health and Safety standards, statutory requirements, relevant Australian standards, codes of practice, manufacturers' specifications, environmental requirements and enterprise procedures are identified, applied and monitored throughout the work procedure
	1.3	Resources required to satisfy the work plan are identified, obtained and inspected for compliance with the job specifications
	1.4	Relevant plans, drawings and texts are selected and interpreted in accordance with the work plan
	1.5	Correct size, type and quantity of materials/components are determined, obtained and inspected for compliance with the job specifications
	1.6	Work is planned in detail including sequencing and prioritising and considerations made, where appropriate, for the maintenance of plant security and capacity in accordance with system/site requirements
	1.7	Co-ordination requirements, including requests for isolations where appropriate, are resolved with others involved, affected or required by the work
	1.8	Potential hazards are identified and prevention and/or control measures are selected in accordance with the work plan and site procedures
	1.9	Work area is prepared in accordance with work requirements and site procedures
2 Conduct minor	2.1	Required isolations are confirmed where

ELEMENT	PERFORMANCE CRITERIA	
maintenance		appropriate in accordance with enterprise requirements
	2.2	Minor maintenance is conducted in accordance with the work plan and site requirements
	2.3	Minor adjustments are undertaken in accordance with prescribed procedures and schedules and site requirements
	2.4	Faults are reported to the relevant parties in accordance with site/enterprise procedures
3 Complete the work	3.1	Work is completed and appropriate personnel notified in accordance with site/enterprise requirements
	3.2	Work area is cleared of waste, cleaned, restored and secured in accordance with site/enterprise procedures
	3.3	Plant, tools and equipment are maintained and stored in accordance with site/enterprise procedures
	3.4	Work completion details are finalised in accordance with site/enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and minor mechanical maintenance.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-PO205B Mechanical Maintenance - Minor

Evidence shall show an understanding of how to undertake minor mechanical maintenance to an extent indicated by the following aspects:

T1 Use of a range of hand tools, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Basic measuring tools, including rulers
- Screwdrivers

i. Flat blade

ii. Phillips head

iii. Posidrive

iv. Torx™

- Metal hacksaw
- Hammers

i. Ball pein

ii. Claw hammer

iii. Club hammers

iv. Soft-faced hammers or mallets

- Spanners and sockets

i. Open-ended spanners

ii. Ring spanners

iii. Adjustable spanners

- Pliers

i. Combination pliers

ii. Long nose pliers

iii. Multi-grip

iv. Vice grips

- Wrenches

i. Stillson

ii. Footprint

- Allen keys
- Scrapers.

T2 Use of a range of small power tools, including:

- Pistol drills
- Battery drills and screwdrivers
- Angle grinders and polishers (buffers)
- Sanders

T3 Use a range of engineering workshop tools, including:

- Benders
- Guillotines

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T4 Identification of a range of different types of metals, including:

- Mild Steel
- Sheet steel
- Aluminium
- Sheet aluminium
- Copper
- Brass

T5 Drill a range of materials using the correct drill bit type, including:

- Mild Steel
- Aluminium
- Copper

T6 Prepare surfaces on engineering materials for maintenance through:

- Sanding
- Grinding
- Polishing

T7 Clean machinery using techniques including:

- Water
- Pressure washers
- Steam cleaners
- Hydrocarbon solvents

T8 Air receivers and air lines

- Blow down air receivers
- Maintain oil levels in oilers
- Empty and wipe out dryers

T9 Health, Safety and Environment practices and procedures, including:

- Risk assessment
- Control of hazards
- Identification and correct use of personal protective equipment
- Manual handling techniques
- Compliance with ‘Permit-to-Work’ requirements and equipment isolation procedures
- Dealing with waste in an environmentally appropriate manner
- Housekeeping

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Minor maintenance may include lubrication, , gland nipping, draining of water taps, filter cleaning and changing, charging bowl and ball mills, exchange of conveyor rollers, removing/replacing access covers, replacing shear pins, applying plastic metals, degreasing, preparing surfaces, limited mechanical assembly and minor fabrication tasks e.g. brackets, gaskets.

Inspections should be planned with the appropriate parties to determine access, conditions and work requirements.

Materials may refer to lubricants, cleaning agents and emery paper.

Equipment may include pumps, fans, compressors, blowers, transmissions, a.c./d.c. rotating electrical plant, pipe work, heat exchangers, tanks, dampers, mills, feeders, crushers, conveyors and air slides.

Tools may include drills, angel grinders, buffers, sanders, grease guns, benders, guillotines, pressers, scrapers and hand tools.

Appropriate parties may refer to supervisor, tradesperson or operations personnel.

Work completion details and plans may include plant and maintenance records, job cards, check sheets, on device labelling updates and reporting and/or documenting equipment defects.

Work site environment may be affected by nearby plant or processes, e.g. chemical, heat, dust, noise, gas and oil.

Isolations can refer to electrical/mechanical or other associated processes.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information and Glossaries.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Plan and prepare work	1.1 Safety issues are identified to comply with enterprise/site requirements
	1.2 Work requirements are identified from relevant personnel and documentation
	1.3 Documentation to determine plant status is assessed and evaluated
	1.4 Localised plant inspection and field preparations for service are carried out in accordance with manufacturer and enterprise procedures
	1.5 Plant operational pre-requisites are established in accordance with manufacturer and enterprise procedures
	1.6 Sequence for recommissioning of plant is determined to suit existing circumstances in accordance with enterprise requirements
	1.7 Where appropriate, the teams and individuals roles and responsibilities within the team are identified and, where required, assist in the provision of the on-the-job training
2 Operate plant	2.1 Plant is operated in accordance with enterprise and manufacturer operating procedures
	2.2 Plant is monitored and observed to detect deviations from normal operating conditions
	2.3 Corrective actions are taken to rectify abnormalities in accordance with manufacturer and enterprise procedures
3 Test plant operation	3.1 Tests are performed in accordance with defined procedures applicable to the operational test
	3.2 Plant is observed for correct operational response in accordance with enterprise / manufacturers requirements
	3.3 Correct action is taken in accordance with enterprise procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		3.4	Plant is returned to required operational status upon completion of test
4	Analyse system faults	4.1	Causes of abnormal plant operating conditions are identified by analysing the technical and operational information in a logical and sequential manner
		4.2	Corrective action taken is in accordance with enterprise procedures
		4.3	Plant integrity and personnel safety are maintained through consultation with appropriate personnel, and with reference to plant, technical and operational documentation
5	Monitor and inspect plant	5.1	Plant to be monitored/inspected is physically identified
		5.2	Plant is monitored/inspected for normal operation or to detect deviations
		5.3	Corrective action taken is in accordance with enterprise procedures
		5.4	Appropriate personnel are notified when defects are detected
6	Complete Documentation	6.1	Documentation is updated and plant problems, movements, abnormalities and status are reported and logged in accordance with enterprise/site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and operate and monitor fixed fire protection systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

KS01-PO317B Operate and monitor fixed fire protection systems

Evidence shall show an understanding of how to operate and monitor fixed fire protection systems, to an extent indicated by the following aspects:

T1 Principles of combustion

- Fire triangle
- Agents used to control and extinguish fires.
- Fire hazards in electricity generation plants.

T2 Fire suppression systems:

- Types:
  - Water deluge;
  - Foam;
  - Halon;
  - Gas;
  - CO2.
- Theory of operation
- Hazards of gas fire suppression systems

T3 Interpretation of documentation:

- Hard-copy and computer-based documentation;
  - Enterprise/site safety and emergency documentation;
  - Equipment and alarm manuals;
  - Enterprise/site log books;
  - Manufacturers' manuals.

T4 Fire protection system testing:

- Communication with Central Controller and other staff;
- Isolation of alarm system;
- Remote communications and data-logging systems testing;
- Stand-by power supply testing;
- Lamp indicator testing;
- Alarm testing;
- Valve testing.

T5 Confirmation of operational status of fire fighting and fire prevention equipment:

- Currency of inspection tags and log book entries;
- Fire and smoke detectors;
- Inventory and visual checks of extinguishers, fire blankets, hydrant reels, signage and other on-site fire fighting and fire prevention equipment;
- Valves, actuators and dampers in correct operating position;
- Availability of emergency water supply;

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Fire doors, fire walls and fire barriers;
- Fire pump engine
  - fuel supply;
  - lubrication;
  - starter battery;
  - coolant.

T6 Reporting, record and log keeping:

- as per Statutory, Enterprise and manufacturers' requirements;
- reporting of non-compliant fire protection or fire suppression systems or equipment.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place,

© Commonwealth of Australia, 2025 Powering Skills Organisation

access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all pre-requisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEP12". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in 6) Essential Knowledge and Associated Skills of this unit

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Knowledge and application of relevant sections of: Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
  - Preparation and planning of work
  - Operation of fixed fire protection systems
  - Operationally testing plant
  - Analysing plant faults
  - Monitoring plant operation
  - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of work.

In addition to the resources listed above in Context of assessment', evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and methods and in a variety of environments.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **9.4)**

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines..

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Systems may include fire control, supervisory, alarm and control equipment; valves, actuators and dampers (electric, hydraulic, pneumatic and manual); storage plant; detectors water deluge; detection systems; foam, halon, gas and CO2 suppression systems.

Safety standards may include relevant sections of Occupational Health and Safety legislation enterprise safety rules, relevant state and federal legislation, national standards for plant and environmental legislation.

Information and documentation sources may include verbal and written communications, enterprise/site safety rules documentation/form(s), equipment and

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

alarm manuals, dedicated computer equipment, enterprise/site standing and operating instructions, enterprise/site log book and manufacturer operation and maintenance manuals.

Technical and operational indicators may include stimuli (audio, smell, touch, visual), local indicators and recorders, computers and alarms (visible and or audible).

Communications may be by means of telephone, two way radio, pager, public address system, facsimile, computer (electronic mail) and operating log (written or verbal).

Tests may include stand-by plant tests, post maintenance operating tests and alarm tests.

Appropriate personnel to consult, give or receive direction may include supervisor/team leader or equivalent, power system control personnel or equivalent, contractor and specialist personnel, maintenance staff and power plant operations personnel.

Test, fault finding and operating tools may include hand and power tools and CO2 equipment.

Operating environment may be during inclement or otherwise harsh weather conditions, in wet/noisy/dusty/hot areas, during night periods and during continuous operation.

Faults and abnormal operating conditions may include motor/pump/ actuator/valve/damper failure/malfunction, control equipment failure/ malfunctions, loss of electrical supply to plant and equipment, loss/ low air, water, lubricating oil to plant/ equipment, CO2 system faults/ malfunctions, CO2 leaks, high filter/ strainer dp, and excessive vibration pumps/ motors.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information and Glossaries.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit deals with the skills and knowledge required to undertake the management of an in-service gas turbine unit.

Application of the Unit

Application of the Unit **2)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Pre-Requisites

Prerequisite Unit(s) **4)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

There are no pre-requisite units.

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following levels. A description of what each level entails is provided in Section 2.3.1 Language, Literacy and Numeracy.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Plan and prepare work	1.1	Safety issues are identified to comply with enterprise/site requirements
		1.2	Work requirements are identified from relevant personnel and documentation
		1.3	Pre operational checks are carried out on plant according to manufacturer recommendations and site requirements
		1.4	Where appropriate the teams and individuals roles and responsibilities within the team are identified, and where required, assist in the provision of the on-the-job training
2	Operate plant	2.1	Output is adjusted to achieve required gas turbine operating conditions and demand, observing operatic requirements
		2.2	Plant is operated within limits of plant design, enterprise or site requirements
		2.3	Plant is monitored and observed to detect deviations from required operating conditions
		2.4	Corrective actions are taken to rectify abnormalities in accordance with manufacturer and enterprise/site procedures
3	Test plant operation	3.1	Tests are performed in accordance with defined procedures applicable to the operational test
		3.2	System and plant is observed for correct operational response
3		3.3	Corrective action is taken when response is not in accordance with documentation, plant integrity or personnel safety requirements
		3.4	Plant is returned to required operational status upon completion of test
4	Analyse system faults	4.1	Causes of abnormal plant operating conditions are identified by analysing the technical and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		operational information in a logical and sequential manner
	4.2	Corrective action taken is in accordance with enterprise/site procedures
	4.3	Plant integrity and personnel safety is maintained through consultation with appropriate personnel, and reference to plant, technical and operational documentation
	4.4	Appropriate personnel are notified when defects are detected
5 Monitor plant	5.1	Plant to be monitored is identified
	5.2	Plant is monitored for normal operation or to detect deviations
	5.3	Appropriate personnel are notified when defects are detected
6 Complete documentation	6.1	Documentation is updated and plant problems, movements, abnormalities and status are reported and logged in accordance with enterprise/site procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of conducting single energy source isolation procedures.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

The extent of the Essential Knowledge and Associated Skills required follows:

KS01-PO336B A gas turbine unit

Evidence shall show that knowledge has been acquired for safe working practices of:

T1 Relevant Environmental, Occupational Health and Safety legislation and regulations

REQUIRED SKILLS AND KNOWLEDGE

T2 Enterprise procedures

T3 Plant drawings and manufacturers manuals

T4 Introduction to and typical arrangements of power production plant

T5 Relevant plant and equipment, its location and operating parameters

T6 Electric motor types and characteristics

T7 Pump and compressor types and characteristics

T8 Valve, damper and actuator types and characteristics

T9 Switchgear types and characteristics

T10 Electrical protection types and characteristics

T11 Relevant state and territory regulations

T12 Gas turbine principle of operation

T13 Air intake, types and characteristics

T14 Air inlet cooling and heating systems, types and characteristics

T15 Exhaust, types and characteristics

T16 Lubrication systems, types and characteristics

T17 Control oil systems, types and characteristics

T18 Water wash systems, types and characteristics

T19 Cooling systems, types and characteristics

T20 Water/steam injection systems, types and characteristics

T21 Combustion system, types and characteristics

T22 Generator, types and characteristics

T23 Generator excitation system, types and characteristics

T24 Electrical fundamentals

T25 Plant status

T26 Enterprise recording procedures

T27 Control and data acquisition systems

T28 Computers and software

T29 supervisory, alarm, protection equipment

T30 Fire protection control system, types and characteristics

KS02-PO336B A gas turbine unit

Specific skills needed to achieve the Performance Criteria:

T1 Interpret plant drawings and manufacturers manuals

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T2 Apply relevant state and territory regulations

T3 Apply enterprise recording procedures

T4 Identify plant status

T5 Prepare plant/equipment for operation

T6 Organise resources

T7 Operate gas turbine plant and equipment

T8 Apply diagnostic and testing techniques

T9 Identify and respond to abnormal plant operating conditions

T10 Plan and prioritise work

T11 Use relevant hand tools

T12 Communicate effectively

T13 Apply data analysis techniques and tools

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full

can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all pre-requisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UEP12". Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in 6) Essential Knowledge and Associated Skills of this unit
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Knowledge and application of relevant sections of: Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
  - Preparation and planning of work
  - Operation of gas turbine plant/equipment
  - Operationally testing plant
  - Analysing plant faults
  - Monitoring plant operation
  - Knowledge of the system components and their interaction;
  - Knowledge of gas turbine operational processes
  - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Plant and equipment may include; electrical supply switchboard(s) and transformers; gas turbine and auxiliary plant; fuel and fuel delivery system plant; fuel management system; flame detection equipment; air inlet, cooling systems, fuel conditioning,

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

turning gear, water wash system, starter systems plant, gas turbine temperature control plant; electric motors (a.c. and d.c., high and low voltage); electricity distribution system (a.c. and d.c. transformers); diesel engine driven auxiliary plant; station water distribution systems; hydraulic power oil system; compressed air systems; computers with equipment control functions; supervisory, alarm, protection and control equipment.

Safety standards may include relevant sections of Occupational Health and Safety legislation, enterprise safety rules, electricity workers act, national standards for plant.

Information and documentation sources may include verbal or written communications; enterprise isolation documentation; site operating instructions; plant limit book; equipment and alarm manuals; crippled plant book; daily log book; dedicated computer equipment; documented enterprise instructions, local and general.

Technical and operational indicators may include stimuli (audio, smell, touch, visual), remote or local indicators and recorders, computers, alarms (visible and/or audible).

Communications may be by means of telephones, two way radios, pagers, facsimiles, computers (electronic mail), operating logs (written or verbal).

Tests may include loss of major auxiliary controls response checks, stand-by plant "cut-in" tests, dampers/valves operating checks, performance tests.

Appropriate personnel to consult, give or receive direction may include, supervisor/team leader or equivalent; other coordinators of energy production or equivalent; technical and engineering officers or equivalent; maintenance staff; other operating staff; contractor staff.

Operating environment may be remote from plant and equipment being operated; operation is assisted by remote indicators of plant status and other parameters monitored; wet/noisy/dusty/hot areas, continuous operation.

Plant operations (systems requirements) may include normal operating/generating mode.

Faults and abnormal operating conditions may include loss of a major auxiliary; loss of electrical supply to switchboard(s), motors; operating limits exceeded; control system malfunctions; high temperatures, exhaust (back end), motor, fan, pump bearings and lubricating oil, motor windings; fuel preparation and delivery systems fires; fuel system malfunction; excessively high heating/cooling rates; high dp's on oil/air filters and strainers; failed field devices; failed/malfunctioning actuators/dampers/valves; gas turbine protection operation and gas turbine surging.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information and Glossaries.

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in 6) Essential Knowledge and Associated Skills of this unit
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Knowledge and application of relevant sections of: Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
  - The full range of displays and applications available is explained
  - Operation of screed based equipment
  - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of

© Commonwealth of Australia, 2025 Powering Skills Organisation

work.

In addition to the resources listed above in Context of assessment', evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and methods and in a variety of environments.

Method of assessment

9.4)

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Safety standards may include relevant sections of Occupational Health and Safety legislation, enterprise safety rules, relevant state and federal legislation and national

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

standards for plant.

Information and documentation sources may include verbal or written communications; enterprise safety rules documentation; enterprise operating instructions; dedicated computer equipment; enterprise/site standing and operating instructions; enterprise log books; manufacturer operation and maintenance manuals; and equipment and alarm manuals.

Communications may be by means of telephone, two way radio, pager, computer (electronic mail) and operating logs (written or verbal).

Appropriate personnel to consult, give or receive direction may include supervisor/team leader or equivalent, power plant operations personnel or equivalent, technical and engineering officers or equivalent, maintenance staff, other operating staff or equivalent, system controller/network controller, field operator and restricted HV operators.

Operating environment may be remote from plant and equipment being operated.

Displays and functions may include trends, alarms, generation plant, fuel supplies, remote plant and equipment, substations, power distribution network, transmission network, stakeholder systems, multiple screens, multiple windows, linkage between screens, trending facilities, index searches, formats, colours, tags, key commands, dedicated keys and alarms.

Faults and abnormal operating conditions may include hardware and software faults and system failures.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information and Glossaries.

UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers compliance with working safely up to the defined "safe approach distance" near energised electrical apparatus (inc. electrical powerlines) for non-electrical workers. It includes work functions that may be performed, such as vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus by a non-electrical worker. Also included is the preparation of risk assessment control measures that encompass job safety assessment. It does not include any work that is or may be performed by other competent operatives within the defined "safe working zone". The defined "safe working zone" is that so defined by relevant State or Territory regulatory agencies/bodies, local government legislation, Industry bi-partite body – Guidelines/Codes of Practices or other related requirements for Safe work and access near live Electrical and Mechanical Apparatus.

Application of the Unit

Application of the Unit **2)**

This competency standards unit shall apply to Transmission, Distribution, Rail Traction, Telecommunications and Vegetation Management Control industry sectors.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

There are no prerequisite competencies to this unit.

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3 Writing 3 Numeracy 3

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work safely near live electrical apparatus as non-electrical worker	1.1 Instructions related to the work to be performed safely near live electrical apparatus as non-electrical worker are received and confirmed.
	1.2 Relevant requirements and established procedures to be followed and, relevant personnel to be communicated with for the work to be performed are identified.
	1.3 OHS policies and procedures to be followed for the work to be performed are received and confirmed.
	1.4 Suggestions to assist in meeting the safety requirements for working near live electrical apparatus as a non-electrical worker are made to others involved in the work.
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		clear according to established procedures.
	1.6	Scope of responsibility and process of relevant work permit(s) issue is identified, received and confirmed according to requirements and established procedures.
	1.7	Relevant responsibility associated with First Aid, Safety Observers and/or other related work safety procedures at the worksite are identified in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident.
	1.8	Processes for identifying and reporting client issues to appropriate personnel in accordance with industry/acceptable /community standards are identified.
	1.9	Site and the work schedule to be prepared are confirmed according to given instructions for a quality outcome and to minimise risk and damage to property, commerce, stock and individuals in accordance and established procedures.
	1.10	Electricity infrastructure assets, related voltages and requirements for working safely near live electrical apparatus as non-electrical worker are identified.
	1.11	Safe approach distances including any zones thereof that may apply, as defined in industry guidelines, requirements and/or established procedures for the intended work are confirmed.
2 Carry out the work safely near live electrical apparatus as non-electrical worker.	2.1	OHS principles and practices to reduce the incidents of accidents are identified in accordance with given instructions, requirements and/or established procedures.
	2.2	Working safely and complying with all safety requirements for working near live electrical apparatus as a non-electrical worker are followed in accordance with given instructions and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established routines/procedures.
	2.3	Processes for monitoring and reporting/referring hazards and OHS risks to the immediate authorised personnel for directions according to established procedures are followed.
	2.4	Non-routine events are referred to the immediate authorised personnel for directions according to established procedures.
	2.5	Unexpected events associated with working safely near live electrical apparatus as a non-electrical worker are responded to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met.
3 Complete the work safely near live electrical apparatus as non-electrical worker.	3.1	Work schedule and anomalies for completion and checking of the work are reported to authorised personnel in accordance with established procedures.
	3.2	Processes for reporting to authorised personnel accidents and/or incidents are confirmed in accordance with established procedures.
	3.3	Requirements for returning work permit(s) and/or access authorisation permits are confirmed.
	3.4	Appropriate personnel are notified of work completion according to established procedures.
	3.5	Works completion records, report forms/data sheets are completed accurately in accordance with given instructions and established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of working safely near live electrical apparatus as non electrical worker.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TEL14A Power Line Safety – Non Electrical Workers

Evidence shall show an understanding of power line safety – non electrical workers to an extent indicated by the following aspects:

T1 Basic electrical principles encompassing:

- Fundamental units - basic measurement of units
- Electrical characteristics of material: characteristics of solid materials, insulators; terms electrical charge, electrical current, electromagnetic forces
- Nature of electrical current and change - basic rules of electrical current flow
- Sources of Electricity: basic fundaments of alternating current, direct current and single EMF source (induction)
- A simple circuit - circuit protection devices used on the network, effects of an open circuit, a closed circuit and a short circuit and earthing – using the ground as a form of conductor to return current back to a source
- Resistance - relationship between voltage and current and resistance (Ohms Law)
- Effects of current - physiological effects and protection for physiological effects; basic principle by which electrical current can result in the production of heat, light and electromagnetic fields and typical effects of current.
- Three phase and single phase power systems: star delta configurations, three phase star connections, relationship between line and phase voltages, three phase 4 wire systems - purpose of the neutral
- Consequences of short circuits - arc flash, ESI Protection schemes
- Magnetism - magnetic field patterns, concepts of electromagnetism, effects of electromagnetism and magnetic fields around straight conductors
- Hazards encountered in an ESI environment - touch and step potentials, electric shock, fire, chemicals, falls, safe use of tools and equipment.

T2 Transmission, distribution and rail power systems encompassing:

- Relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
- Characteristics of a transmission, a distribution and a rail system - principal components, typical voltage levels and methods of transmission and distribution including grid type transmission systems, radial, parallel and ring main feeders
- Relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications.
- Single line drawings and layouts - drawings and layouts of transmission and distribution systems including, radial, parallel and ring main feeders and the HV

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

equipment associated with substations

T3 Fundamentals for working safely near live electrical apparatus for non-electrical worker encompassing:

- Standards, guidelines/codes of practice, State/Territory/local government legislation, supply authority regulations and or enterprise requirements including relevant certification and licensing, applicable to working safely up to the defined "safe working zone" near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker
- Definitions of terminologies - 'safe working zone', 'risk assessment', 'safe approach distances zones', 'safe working distances',' work permits', access authorisation permits', 'Technical standards', 'isolation procedures' and compliance requirements'
- OHS policies and procedures for working safely - duties of a safety observer, permit to work systems and isolation procedures, safe application of different types of tools and equipment and operation of mobile plant and machinery (e.g. EWP) near live electrical apparatus
- Techniques and precautions in undertaking different work functions and working safely up to the defined "safe working zone" near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker (work functions that may be performed include, vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker)

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1)**
	Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline,

© Commonwealth of Australia, 2025 Powering Skills Organisation

work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
- Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and

- Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All of the following:	Confirmation of the "safe working zone" for Safe work and access near live Electrical Apparatus Identification of the relevant technical standards. Acts, regulations and codes/guidelines Identification of established (Enterprise) procedures
B	All of the following:	Confirmation of the principles of electricity,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		the three phase power system, electric shock and resuscitation, power system Recognition of aerial voltage systems Identification of Low Voltage Aerial Circuits Identification of High Voltage
C	All of the following:	Procedures in the event of an incident Events constituting an incident Procedures for responding to incidents Hazard and risk assessment procedure Conduct Work-site Hazard Assessment Confirmation of essential components of Hazard Assessment Checks Applying Hazard Identification in Electrical Work Confirmation of the Basic Safety Principles for Work on Electrical works Hazard Identification and Risk Assessment Hazard Control Risk Assessment and Management (JSAs) Control The Hierarchy of Controls including Evaluation, Worksite Hazard and Risk

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Assessment Checklist, Pre-job Hazard Assessment Check (HAC) Items, Planned Inspection and Pre-Work Hazard Risk Assessment Form
D	All of the following:	Use of work permits and/or authorisation permits Sustainable energy principles and practices Possible affects of weather conditions on working near electrical apparatus as a non-electrical worker
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to safely undertake actual work near live electrical apparatus

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit is not recommended to be assessed concurrently with any other unit.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to safe working so defined by relevant State or Territory regulatory agencies/bodies, local government legislation, Industry bi-partite body – Guidelines/Codes of Practices or other related requirements for Safe work and access near live Electrical Apparatus.

Work functions that may be performed, such as vegetation control, operation of cranes, elevating work platforms, excavators, concrete pumps etc, scaffolding,

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

rigging, painting, and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus by a non-electrical worker/

Working safely up to the defined "safe working zone" near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker including an understanding of risk assessment control measures that encompass job safety assessment but excluding any work that is or may be performed by other competent operatives within the defined "safe working zone".

Safe use of plant, equipment and tools within electrical environments including but not limited by the electricity supply infrastructure assets, infrastructure constructions and excavations including an understanding of safe approach distances zones/Safe Working Clearance, work permit(s) and/or access authorisation permits, technical standards and Industry Guidelines, rural applications, road construction, pavements and effect of inclement weather

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons
- Appropriate authorities
- Assessing risk
- Authorisation
- Drawings and specifications
- Emergency
- Established procedures
- Hazards
- Identifying hazards
- Legislation
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Work clearance systems
