Application

This unit of competency describes the skills and knowledge required to implement medical nursing routines, including the preparation and handling of patients (animals) and equipment for specific routines.

This unit applies to veterinary nurses who work independently, under the supervision of a registered veterinarian in a veterinary practice. Veterinary nurses who perform medical nursing routines need to hold and apply specialised knowledge animal anatomy and physiology and medical procedures carried out in a veterinary practice.

Legislative and regulatory requirements apply to veterinary nurses but vary according to state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

NOTE: The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.
