AHCSOL506 Manage erosion and sediment control

Release: 1

AHCSOL506 Manage erosion and sediment control

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify areas with erosion and sediment problems, and develop, implement, manage and evaluate an erosion and sediment control plan.

The unit applies to individuals who apply specialist skills and knowledge to the management of erosion and sediment control, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Soils and Media (SOL)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Conduct an audit and identify areas with erosion and sediment	1.1 Identify soils susceptible to erosion and sediment loss and relationship to land classes for erosion potential 1.2 Conduct a property or site audit and document details using

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
problems	<p>appropriate methodology</p> <p>1.3 Identify and classify types of erosion and sediment loss</p> <p>1.4 Identify environmental and manmade factors that influence rates and effects of erosion and sediment</p> <p>1.5 Estimate the economic and environmental losses caused by erosion and sediment losses</p> <p>1.6 Identify appropriate external sources of support to assist in the planning processes</p> <p>1.7 Identify regulatory planning authorities and environmental legislation relevant to current and future project planning</p>
2. Develop erosion and sediment control plan	<p>2.1 Investigate erosion and sediment control measures consistent with industry guidelines</p> <p>2.2 Develop and record erosion and sediment control strategies for project area in cooperation with landowner, relevant government and planning authorities, and stakeholders</p> <p>2.3 Identify contingency procedures for potential problems that may require future rectifications</p> <p>2.4 Develop erosion and sediment control plan to meet design principles including environmental concerns, physical impacts, land use, production systems and personnel</p> <p>2.5 Develop monitoring processes for evaluating and reporting performance against erosion and sediment control plan for achieving short-term and long-term outcomes</p> <p>2.6 Determine and communicate roles and responsibilities of personnel and stakeholders</p> <p>2.7 Document erosion and sediment control plan</p>
3. Implement and manage the erosion and sediment control plan	<p>3.1 Implement tasks according to erosion and sediment control plan and design principles</p> <p>3.2 Assess the workplace health and safety risks and environmental impacts associated with control plan activities, and implement suitable controls</p> <p>3.3 Manage the communication process, including strategies for conflict resolution and problem solving</p> <p>3.4 Monitor progress to ensure time, performance, cost and quality of work are achieved</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	3.5 Investigate and negotiate proposed variations to plan with key stakeholders
4. Evaluate the erosion and sediment control plan	4.1 Conduct inspection to review work completion and collate monitoring data 4.2 Identify alterations or modifications to the plan, and report to key stakeholders, developer or consent authority 4.3 Review outcomes of completed erosion and sediment control plan against agreed short-term and long-term objectives and report to key stakeholders

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information on regulatory planning authorities and environmental legislation relevant to current and future project planning
Oral communication	<ul style="list-style-type: none"> Initiate discussions with landowner, relevant government and planning authorities, and stakeholders using clear language to discuss erosion and sediment control strategies Use clear communications with personnel and key stakeholders to confirm their roles and responsibilities, and with developer or consent authority to discuss and report alterations or modifications to the plan and review outcomes of completed plan
