Application

This unit of competency describes the skills and knowledge required to carry out cleaning time tests of milking machines.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Milk Harvesting (MKH)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- make preparations for cleaning-time testing
- carry out cleaning-time tests of milking equipment
- report on cleaning-time test result
- implement enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types, functions, cleaning, monitoring and maintenance of milking machines and all components
- criteria and methods for assessing optimal performance of milking machines and their components
- requirements, procedures and assessment criteria for mechanical testing of milking machines and all components
- requirements, criteria and assessment methods for determining water quality and the impacts of water quality on maintenance and performance of milking machines
- requirements, criteria and assessment methods for determining bacteriology and the impacts of bacteriology on maintenance and performance of milking machines
- possible faults, problems and poor performance with milking machines and their components, impacts on milking operations and corrective actions for these faults and problems
- requirements, criteria, procedures, routines and assessment methods for optimal cleaning and hygiene of milking machines and their components
- types, handling, use and disposal of detergents and cleaning agents, work health and safety and environmental practices for these agents
- requirements, procedures and assessment criteria of cleaning-time tests and the impacts of cleaning-times on maintenance and performance of milking machines
- key aspects and components of collating, interpreting and reporting on test results to an enterprise
- relevant work health and safety requirements

**Assessment Conditions**

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine cooling and storage system requirements
- determine milk pre-cooling requirements
- determine milk storage requirements
- install milk cooling and storage equipment
- operate and maintain milk cooling and storage equipment
- implement enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant requirements and industry standards for design, planning, installing and operating milk cooling and milk storage systems
- types, functions, cleaning, operating, monitoring and maintenance of milk cooling and milk storage systems and all components
- requirements, components and considerations for designing, planning, siting and installing milk cooling and milk storage systems and their components, and to meet the needs of the enterprise
- requirements, criteria and assessment methods for determining water quality and the impacts of water quality on maintenance and performance of milk cooling and milk storage systems
- possible faults, problems and poor performance with milk cooling and milk storage systems and their components, impacts on enterprise operations and corrective actions for these faults and problems
• criteria and methods for assessing performance of milk cooling and milk storage systems and their components
• requirements and assessment methods for determining enterprise milk production levels
• relevant work health and safety requirements

Assessment Conditions

Competency is to be assessed in the workplace and/or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

| **1. Prepare for basic routine maintenance** | 1.1 Read or listen to work instructions from supervisor and clarify where necessary  
1.2 Select tools and supplies required to carry out basic routine maintenance tasks according to job requirements  
1.3 Select, fit and use personal protective equipment applicable to job requirements  
1.4 Carry out routine pre-operational checks of machinery and equipment according to operation and maintenance manual and make adjustments where required  
1.5 Identify and segregate faulty or unsafe machinery and equipment for repair or replacement  
1.6 Identify health and safety hazards in the workplace and report safety concerns to supervisor |
| **2. Carry out basic routine maintenance** | 2.1 Carry out greasing, lubrication and other basic servicing of machinery and equipment  
2.2 Make routine adjustments and repairs to machinery and equipment  
2.3 Use safe workplace practices and methods when undertaking basic routine maintenance tasks |
| **3. Complete basic routine maintenance activities** | 3.1 Clean and store tools according to workplace procedures  
3.2 Clean and maintain work areas and return to operating condition  
3.3 Collect, treat and dispose or recycle waste from maintenance activities according to workplace procedures  
3.4 Report malfunctions, faults, wear or damage of tools to supervisor |

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| Oral communication | • Use clear language to report malfunctions, faults, wear or damage to tools  
• Participate in verbal exchanges to respond to questions and clarify |
Skill | Description
---|---
| information

**Numeracy**
- Interpret machinery and equipment fluid levels including grease, oil and fuel

**Navigate the world of work**
- Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

---

**Range of Conditions**

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| Pre-operational checks must include: | • machinery and equipment damage and serviceability
• checking for missing parts
• fluid leaks and levels
• fuel level.

| Machinery and equipment must include at least two of the following: | • hydraulic equipment
• hydroplats
• stationary engines
• pumps
• irrigation equipment
• seeders
• harvesters
• balers
• spraying equipment
• hedging machines
• solar and wind powered equipment.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assisted with routine maintenance tasks for at least two different types of small engine machinery and associated equipment and has:

- identified hazards and reported to supervisor
- tested machinery and equipment to identify maintenance requirements
- carried out routine repairs and adjustments required for maintenance of machinery and equipment
- cleaned and maintained work area and returned to operating condition
- applied safe and environmentally responsible workplace practices
- used oral communication skills and language competence to communicate effectively with others
- followed workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, characteristics and functions of machinery and equipment
- types, characteristics and functions of tools used in maintenance of machinery and equipment
- machinery and equipment operation and maintenance manual
Assessment Requirements for AIHCMOMI01 Assist with routine maintenance of machinery and equipment

- environmental impacts of machinery servicing and disposal methods for fuels, oils and other wastes
- workplace procedures applicable to health and safety in the workplace and machinery maintenance.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - machinery and equipment
  - maintenance tools and equipment
  - personal protective equipment applicable to the task being undertaken
- specifications:
  - machinery operation and maintenance manual
  - workplace procedures applicable to health and safety in the workplace and machinery maintenance
- relationships:
  - supervisors
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to undertake pre-start checks, operate and shut down two wheel motorbikes.

The unit applies to individuals who operate two wheel motorbikes to undertake routine work under general supervision with limited autonomy and accountability.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| Reading | • Interpret textual information from a range of sources to identify relevant and key information about workplace operations
| Oral communication | • Use clear language to report malfunctions, faults and irregular performance or damage  
• Participate in verbal exchanges to respond to questions and clarify information
| Numeracy | • Calculate quantities of vehicle fluids including oil and fuel  
• Identify correct tyre pressures
| Navigate the world of work | • Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

### Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| Pre-operational checks must include: | • vehicle damage and serviceability  
• engine oil  
• fuel  
• brakes  
• tyres, including pressure and condition  
• vehicle controls.
| Biosecurity implications | • control of cross site contamination.
Two wheel motorbike good riding techniques must include:

- pre-positioning and adjustment of body weight when going uphill, including standing up and body forward
- pre-positioning and adjustment of body weight when going downhill, including standing up and body rearward
- leaning the two wheel motorbike towards the slope and pressing hard on the outside (downhill) footrest, keeping the body weight on top of the tyre tread when riding across slopes
- standing up to improve situational awareness, when operating in restricted visibility situations, rough terrains and crossing obstacles.

Unload, load and secure motorbike must include at least one of the following:

- trailer
- transportation device
- on site vehicle storage.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated a two wheel motorbike on at least two different riding surface conditions and on an even, uneven and sloping terrain and has:

- operated a two wheel motorbike without a passenger
- identified hazards and risks associated with two wheel motorbike areas of operation
- identified and avoided riding surfaces, terrains and slopes that are dangerous to safe operation of two wheel motorbikes
- complied with legislation and workplace safety plan in regard to carrying passengers
- selected and worn two wheel motorbike helmet that was fit for purpose
- selected, correctly fitted, used and maintained personal protective equipment
- started, steered, manoeuvred, positioned and stopped a two wheel motorbike in a controlled manner
- applied two wheel motorbike good riding techniques to pre-position the body to assist bike stability
- unloaded, loaded and secured two wheel motorbike safely.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with two wheel motorbike areas of operation
- components, controls and features of two wheel motorbikes and their functions
- two wheel motorbike functional applications
- operating principles and operating methods of two wheel motorbikes
Assessment Requirements for AHCMOM201 Operate two wheel motorbikes  
Date this document was generated: 18 March 2019

- two wheel motorbike good riding techniques, including requirements to pre-position and adjust body weight for riding uphill, downhill and on uneven terrain
- workplace safety plan and operators manual
- impacts and consequences of substandard environmental and biosecurity practices
- load limits and two wheel motorbike capabilities and the effects to dynamic stability on the two wheel motorbike including:
  - passengers
  - weight distribution
  - load security
  - liquid or shifting loads
  - effect of load when operating on uneven or sloping terrain
- loading and unloading safely from a trailer, transportation device and site storage, including use of:
  - tie down devices
  - vehicle ramps
  - loading surfaces and angle
- effects of different riding surfaces and terrain conditions on the operation of two wheel motorbikes
- variations in state/territory regulations, legislation and licensing requirements in regard to two wheel motorbike use.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - no riders under 16 years of age on adult sized two wheel motorbikes
  - no towing
  - helmets must be worn whilst operating two wheel motorbikes
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
- resources, equipment and materials:
  - two wheel motorbike
  - vehicle fuel
  - two wheel motorbike helmet
  - enclosed shoes
- specifications:
  - two wheel motorbike manufacturer specifications and operator manuals
- timeframes:
  - according to the job requirements.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare for, operate and complete tractor operations under general supervision in the agriculture, horticulture and land management sectors.

Working with tractors is an inherently dangerous activity. Individuals who work at this level must be thoroughly instructed in all health and safety in the workplace aspects of operating tractors. The tractor must also comply with relevant Australian standards for tractors.

The unit applies to individuals who operate tractors to undertake routine work under general supervision with limited autonomy and accountability.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pre-operational checks must include:

• maintenance interval schedule daily check
• machine damage and serviceability
• guards are in place and undamaged
• checking for missing parts
• fluid leaks and levels
• fuel level
• brakes and clutch operation
• condition of tyres or tracks
• machine controls.

Performance Evidence
An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared for, safely operated and completed tractor operations under general supervision at least once and has:

- identified and reported hazards and implemented safe operating procedures
- carried out tractor pre-operational checks and reported faults to supervisor
- driven and operated a tractor safely, in a smooth and controlled manner
- operated tractors in even and uneven terrain conditions
- carried out tractor shut down procedures
- maintained tractor use records and reported faults or malfunctions
- minimised environmental impacts associated with tractor operation
- followed workplace health and safety procedures for safe tractor operation
- followed industry and workplace biosecurity procedures.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- tractor components, controls and features and operational functions
- tractor operation and maintenance manuals
- tractor steering systems and features
- features, operational functions and procedures for attached equipment
- load limits and the principles of weight distribution with regard to load shifting and tractor movement
- distinguishing characteristics of individual tractors including rated performance capacities
• effects of various surface and difficult terrain conditions on tractor operation
• duty of care to self, others and the environment
• relevant legislation with regard to tractor operation and licensing requirements
• environmental impacts relevant to operation of vehicles
• health and safety in the workplace requirements to operate a tractor safely
• industry and workplace biosecurity procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating the machinery

• resources, equipment and materials:
  • tractors
  • safety equipment and personal protective equipment applicable to the task being undertaken

• specifications:
  • tractor operation and maintenance manual
  • industry and workplace biosecurity procedures applicable to tractor operation
  • legislation relevant to tractor operation and licensing requirements

• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has undertaken pre start checks, operated, maintained and shut down at least two types of basic machinery and equipment used in the agriculture, horticulture or land management sectors.

For each type, the individual must have demonstrated the following:

- identified and reported hazards and implemented safe working practices
- carried out basic machinery and equipment pre-operational checks including basic servicing and maintenance according to operation and maintenance manual
- operated basic machinery and equipment in a safe and controlled manner consistent with operation and maintenance manual and manufacturer specifications
- carried out safe shut down and storage procedures for basic machinery and equipment
- followed workplace health and safety procedures during the operation and use of basic machinery and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with basic machinery and equipment operation
- pre-operational and safety checks for basic machinery and equipment
- operating principles and operating methods for basic machinery and equipment
- procedures for cleaning, securing and storing basic machinery and equipment
- risks associated with the operation of machinery and equipment in different types of weather and terrain conditions
- duty of care to self, others and the environment when using and operating basic machinery and equipment
• workplace procedures applicable to work health and safety requirements to operate basic machinery and equipment safely.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating the machinery
• resources, equipment and materials:
  • a range of basic machinery and equipment
  • enclosed toe shoes
  • safety equipment and personal protective equipment applicable to the machinery and equipment being used and the task being undertaken
• specifications:
  • basic machinery and equipment operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to basic machinery and equipment operation
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

### Elements

*Elements describe the essential outcomes.*

### Performance Criteria

*Performance criteria describe the performance needed to demonstrate achievement of the element.*

- **1.** Select and check serviceability of tools, equipment and materials according to machinery operation and maintenance manual
- **2.** Select and maintain personal protective equipment according to workplace safety requirements
- **3.** Fit and use personal protective equipment applicable to maintenance task to be undertaken

#### 2. Perform scheduled maintenance

- **2.1** Undertake machinery basic servicing tasks in line with workplace practices
- **2.2** Adjust equipment according to task requirements
- **2.3** Apply basic diagnostic techniques and identify and fix mechanical faults
- **2.4** Report serious or complex faults to supervisor

#### 3. Complete maintenance activities

- **3.1** Clean and store tools according to workplace procedures
- **3.2** Clean and maintain work areas and return to operating condition
- **3.3** Collect, treat and dispose or recycle waste from maintenance activities according to workplace procedures
- **3.4** Record maintenance procedures in workshop records

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

<table>
<thead>
<tr>

</tr>
<tr>
<td>Navigate the world of work</td>
<td>• Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility</td>
</tr>
</tbody>
</table>

### Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- **Machinery must include at least two of the following:**
  - chainsaws
  - harvesters
  - hedge trimmers
  - mechanical pruners
  - motorcycles
  - rotary hoes
  - sprayers
  - tractors
  - turf mowers
  - vehicles
  - winches.

- **Basic servicing tasks must include:**
  - maintenance interval schedule daily check
  - machinery damage and serviceability
  - removal and replacement of faulty parts and/or components
  - tagging complex faulty parts and/or components
  - checking for missing parts
  - fluid leaks and levels
  - fuel level
  - machine controls
  - servicing tasks applicable to machinery.

- **Basic diagnostic techniques must include at least one of the following:**
  - inspection
  - trouble shooting
  - fault finding.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared for, carried out and completed operational maintenance of at least two types of machinery used in the agriculture, horticulture or land management sectors. For each machinery type, the individual must have demonstrated the following:

- identified and reported hazards and implemented safe working practices
- selected and prepared tools and equipment required for machinery maintenance
- carried out lubrication and operational servicing of machinery
- conducted basic diagnostic tests required for maintenance of machinery
- checked machinery components for wear and tear, replaced parts, tagged and reported defects
- collected, removed and recycled or disposed of wastes according workplace environmental procedures
- followed workplace health and safety procedures when undertaking operational maintenance of machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and uses of lubricants and other commonly used servicing materials
- operating principles of machinery including mechanical and auto-electrical systems
- servicing characteristics of plant and equipment
- types, characteristics, uses and limitations of hand power tools
- functions of components of common mechanical and hydraulic systems
- different working principles of two stroke, four stroke, petrol and diesel engines
Assessment Requirements for AHCMMOM204 Undertake operational maintenance of machinery

- set-up requirements of plant and equipment, and principles of calibration
- basic diagnostic processes and techniques used to identify faults
- sourcing machinery and equipment operation and maintenance manuals
- environmental impacts of machinery maintenance and disposal of fuels, oils and other wastes
- procedures applicable to health and safety in the workplace requirements to maintain machinery safely.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - machinery
  - maintenance tools and equipment
  - personal protective equipment applicable to the task being undertaken
- specifications:
  - machinery operation and maintenance manual
  - workplace procedures applicable to machinery maintenance
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to undertake pre-start checks, operate and shut down vehicles used in the agriculture, horticulture and land management sectors.

The unit applies to individuals who operate vehicles to undertake routine work under general supervision with limited autonomy and accountability.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has undertaken pre-start checks, operated and shut down vehicles used in the agriculture, horticulture and land management sectors on at least one occasion and has:

- identified and reported hazards and implemented safe operating procedures for vehicle operation
- prepared the vehicle for use by undertaking routine pre-operational checks and maintenance tasks
- safely secured loads prior to vehicle operation
- driven the vehicle in a safe and controlled manner
- carried out vehicle shut down procedures including securing of vehicle and safe storage
- minimised environmental impacts associated with vehicle usage and operation
- followed workplace health and safety procedures during preparing vehicle for use, operation and shut down
- followed industry and workplace biosecurity procedures
- completed required documentation for vehicle use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with vehicle operations
- safety requirements for vehicle use and operation
- vehicle operation and maintenance manual
- vehicle components, controls, features, technical capabilities and limitations
- vehicle operating principles and operating methods
• load limits and the principles of weight distribution with regard to load shifting and vehicle movement
• effects of adverse surface and terrain conditions on the operation of vehicles
• duty of care to self, others and the environment when operating vehicles
• relevant legislation with regard to vehicle operation and licensing requirements
• environmental impacts relevant to operation of vehicles
• workplace procedures applicable to workplace health and safety requirements to operate a vehicle safely
• industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating vehicles

• resources, equipment and materials:
  • a range of vehicles
  • vehicle loads
  • tie down devices
  • safety equipment and personal protective equipment applicable to the task being undertaken

• specifications:
  • vehicle operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to vehicle operation
  • legislation relevant to vehicle operation and licensing requirements

• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared for, carried out and shut down grader operations at least once and has demonstrated the following:

- identified hazards and implemented safe operating procedures for grader operations
- carried out pre-operational checks required for safe grader operation
- driven and operated a grader safely and modified operating technique to meet changing work conditions
- carried out grader shut down procedures including securing and safe storage of grader
- minimised environmental impacts associated with grader operation
- followed workplace health and safety procedures while undertaking pre-operational checks, operational and shut down procedures for the grader
- followed industry and workplace biosecurity procedures
- completed required documentation for grader use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with grader operations
- grader and site safety requirements
- grader components, controls, features, technical capabilities and limitations
- grader operation and maintenance manual
- duty of care to self, others and the environment when operating a grader
- relevant legislation with regard to grader operation and licensing requirements
- environmental impacts relevant to the operation of graders
• workplace procedures applicable to health and safety in the workplace requirements to operate a grader safely
• industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating the machinery
• resources, equipment and materials:
  • graders
  • safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • grader operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to grader operation
  • legislation relevant to grader operation and licensing requirements
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

<table>
<thead>
<tr>
<th>Pre-operational checks must include:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• maintenance interval schedule daily check • machine damage and serviceability • checking for missing parts • fluid leaks and levels</td>
<td></td>
</tr>
</tbody>
</table>
- fuel level
- brakes and clutch operation
- condition of tyres or tracks
- machine controls.

Attachments must include at least one of the following:
- bale fork
- bucket
- bull blades
- log fork
- pallet fork
- S Houle rock bucket
- silage fork.

Biosecurity implications must include:
- control of cross-site contamination.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared for, carried out and shut down front-end loader operations at least once and has demonstrated the following:

- identified hazards and implemented safe operating procedures for front-end loader operations
- carried out front-end loader pre-operational checks for safe front-end loader operations
- driven and operated a front-end loader safely and modified operating technique to meet changing work conditions
- operated front-end loader features and attachments consistent with operation and maintenance manual and manufacturer specifications
- carried out front-end loader shut down procedures including securing and safe storage of front-end loader
- minimised environmental impacts associated with front-end loader operation
- followed workplace health and safety procedures while undertaking pre-operational checks, operational and shut down procedures for the front-end loader
- followed industry and workplace biosecurity procedures
- completed required documentation for front-end loader use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with front-end loader operations
- front-end loader site safety requirements
- front-end loader components, controls, features, technical capabilities and limitations
• front-end loader operation and maintenance manual
• duty of care to self, others and the environment when operating a front-end loader
• relevant legislation with regard to front-end loader operation and licensing requirements
• environmental impacts relevant to the operation of front-end loaders
• workplace procedures applicable to health and safety in the workplace requirements to
  operate a front-end loader safely
• industry and workplace biosecurity procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may
    impair judgement
  • individual must not be in a fatigued state when operating the machinery
• resources, equipment and materials:
  • front-end loaders
  • attachments
  • safety equipment and personal protective equipment applicable to the task being
    undertaken
• specifications:
  • front-end loader operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to front-end loader operation
  • legislation relevant to front-end loader operation and licensing requirements
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational
education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare for, carry out and shut down excavator operations in an agricultural environment.

The unit applies to individuals who conduct excavator operations to undertake routine work under general supervision with limited autonomy and accountability.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCMMOM208 Conduct excavator operations

Performance Evidence
An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared for, carried out and shut down excavator operations at least once and has demonstrated the following:

- identified hazards and implemented safe operating procedures for excavator operations
- carried out excavator pre-operational checks for safe excavator operation
- driven and operated an excavator safely including modifying operating technique to meet changing work conditions
- carried out excavator shut down procedures including securing and safe storage of excavator
- minimised environmental impacts associated with excavator operation
- followed workplace health and safety procedures while undertaking pre-operational checks, operational and shut down procedures for the excavator
- followed industry and workplace biosecurity procedures
- completed required documentation for excavator use.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with excavator operations
- excavator and site safety requirements
- excavator components, controls, features, technical capabilities and limitations
- excavator operation and maintenance manual
- duty of care to self, others and the environment when operating an excavator
- relevant legislation with regard to excavator operation and licensing requirements
- environmental impacts relevant to the operation of excavators
workplace procedures applicable to health and safety in the workplace requirements to operate an excavator safely

industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating the machinery

- resources, equipment and materials:
  - excavators
  - safety equipment and personal protective equipment applicable to the task being undertaken

- specifications:
  - excavator operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to excavator operation
  - legislation relevant to excavator operation and licensing requirements

- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

| Pre-operational checks must include: | • maintenance interval schedule daily check                                                                 |
|                                       | • machine damage and serviceability                                                                       |
|                                       | • checking for missing parts                                                                             |
|                                       | • fluid leaks and levels                                                                                 |
|                                       | • fuel level                                                                                              |
|                                       | • brakes and clutch operation                                                                             |
|                                       | • condition of tyres or tracks                                                                           |
|                                       | • machine controls.                                                                                       |
| Biosecurity implications must include: | • control of cross-site contamination.                                                                  |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared for, carried out and shut down scraper operations at least once and has demonstrated the following:

- identified hazards and implemented safe operating procedures for scraper operations
- carried out scraper pre-operational checks for safe scraper operations
- driven and operated a scraper safely including modifying operating technique to meet changing work conditions
- carried out scraper shut down procedures including securing and safe storage of scraper
- minimised environmental impacts associated with scraper operations
- followed workplace health and safety procedures while undertaking pre-operational checks, operational and shut down procedures for the scraper
- followed industry and workplace biosecurity procedures
- completed required documentation for scraper use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with scraper operations
- scraper and site safety requirements
- scraper components, controls, features, technical capabilities and limitations
- scraper operation and maintenance manual
- duty of care to self, others and the environment
- relevant legislation with regard to scraper operation and licensing requirements
- environmental impacts relevant to the operation of scrapers
• workplace procedures applicable to work health and safety requirements to operate a scraper safely
• industry and workplace biosecurity procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating the machinery

- **resources, equipment and materials:**
  - scrapers
  - safety equipment and personal protective equipment applicable to the task being undertaken

- **specifications:**
  - scraper operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to scraper operation
  - legislation relevant to scraper operation and licensing requirements

- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to undertake work using a side by side utility vehicle used for general transport, carrying loads, towing small trailers and mustering stock.

All work must be carried out to comply with workplace procedures, work health and safety requirements manufacturer’s specifications and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

utility vehicle for use | identifying safe working areas, potential hazards and implementation of safe working procedures  
1.2 Conduct safety pre-operational checks on the vehicle and report faults or malfunctions for repair  
1.3 Use and maintain personal protective equipment  
1.4 Attach equipment and loads that do not exceed the weight limitations or change the dynamic stability of the vehicle  
1.5 Secure loads and ensure weight does not exceed limits
2. Operate side by side utility vehicle | 2.1 Operate machinery and equipment in a safe, efficient and controlled manner  
2.2 Operate side by side utility vehicles in accordance with task requirements, conditions and manufacturers operating guidelines  
2.3 Assess and minimise potential risks to self, others and the environment  
2.4 Ensure that the vehicles seat belts and other safety features are functional and used  
2.5 Identify and account for environmental implications associated with machinery operation
3. Complete work | 3.1 Conduct shut-down procedures according to manufacturer's specifications and enterprise requirements  
3.2 Perform routine operational servicing and minor maintenance  
3.3 Identify and report malfunctions, faults, irregular performance or damage  
3.4 Clean, secure and store machinery  
3.5 Ensure biosecurity procedures are followed where required  
3.6 Maintain machinery use records for servicing purposes

---

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

**Unit Mapping Information**

This unit is equivalent to AHC MOM211A Operate side by side utility vehicles.

</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and risks associated with side by side utility vehicle use
- conduct pre and post operational checks
- operate side by side utility vehicles in a safe, efficient and controlled manner
- minimise environmental impacts of side by side utility vehicle use
- perform any required minor maintenance
- follow wash-down procedures in line with biosecurity guidelines
- follow enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- equipment characteristics, technical capabilities and limitations
- safe driving techniques in a range of surface conditions and terrain
- transporting the side by side utility vehicles on a trailer or transportation device
- manufacturer’s specifications and workplace requirements for pre-start checks, machinery operation techniques, load carrying operator level servicing and shutdown emergency procedures
- components and controls, features and functions
- enterprise work health and safety policies
- relevant State/Territory legislation in regard to side utility vehicle use
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting. All evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Assessors must satisfy current standards for RTOs.

</table>

Application

This unit of competency describes the skills and knowledge required to operate and maintain quad bikes as well as load and unload them onto trailers or other vehicles used for their transport.

All work must be carried out to comply with workplace procedures, work health and safety requirements manufacturer’s specifications and operator manuals and sustainability practices.

Working with quad bikes is an inherently dangerous activity. Individuals who work at this level must be thoroughly instructed in all work health and safety aspects of operating quad bikes.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and provide solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Machinery operation and maintenance (MOM)
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Element</strong></td>
<td><strong>Performance criteria</strong></td>
</tr>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

### 1. Prepare a quad bike for operation

1.1 Confirm the activity to be undertaken with supervisor, including potential hazards and implementation of safe working procedures
1.2 Select, fit correctly, use and maintain personal protective equipment including helmets
1.3 Conduct safety pre operational checks on quad bike and report faults or malfunctions for repair
1.4 Identify safe work areas and applications (loads and attachments) from workplace safety plan and operators manual
1.5 Unload quad bike safely from the trailer or transportation device

### 2. Operate a quad bike

2.1 Recognise and control risks to self and others
2.2 Steer, manoeuvre, position and stop quad bike in a smooth and controlled manner
2.3 Apply hand-eye coordination and transfer of body weight appropriately (active riding) to maintain bike stability
2.4 Identify and avoid riding surfaces, terrains and slopes that are dangerous to safe operation
2.5 Identify environmental implications associated with machinery operation and minimise impact
2.6 Identify and account for biosecurity implications associated with machinery operation

### 3. Complete and check quad bike operation

3.1 Conduct shut-down procedures
3.2 Perform routine operational servicing and minor maintenance
3.3 Identify and report malfunctions, faults, irregular performance or damage
3.4 Clean, secure and store quad bike
3.5 Follow wash-down procedures in line with biosecurity guidelines where required
3.6 Maintain quad bike use records for servicing purposes
3.7 Load and secure quad bike safely

## Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions
No passengers, no riders under 16 years of age, no towing. Helmets must be worn at all times.

Candidates must NOT be under the influence of any alcohol or drugs. Candidates must NOT be taking any medication (prescribed or otherwise) that may impair judgement.

Unit Mapping Information
This unit is equivalent to AHCMOM212A Operate quad bikes.

Performance Evidence

The candidate must be observed operating a quad bike using safe work procedures.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and risks associated with quad bike use
- identify safe work areas
- select, fit correctly, use and maintain personal protective equipment including helmets
- operate quad bikes in a range of riding surface conditions and terrain conditions
- steer, manoeuvre, position and stop the quad bike in a smooth and controlled manner
- apply hand-eye coordination and correctly transfer body weight (active riding) to maintain bike stability including riding on uneven or steep terrain
- follow enterprise work health and safety procedures
- unload and load quad bike safely
- follow wash-down procedures in line with biosecurity guidelines

Knowledge Evidence

The candidate must demonstrate knowledge of:

- hazards and risks associated with quad bike use
- components, controls and features of quad bikes and their functions
- a range of quad bikes and functional applications
- operating principles and operating methods of quad bikes
- manufacturer’s instructions, including but not exclusive to the operating manual
- load limits and the principles of weight distribution with regard to load shifting and bike movement including riding on uneven or steep terrain
- loading and unloading safely from a trailer or other transportation device
• effects of different riding surfaces and terrain conditions on the operation of quad bikes

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting. All evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Assessment must be conducted in a range of riding surface conditions and in a range of terrains appropriate for the safe use of quad bikes.

Assessors must satisfy current standards for RTOs.

</tbody>
</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated a hand-held chainsaw at least once, maintained it in working condition and demonstrated the following:

- determined site location for work and work details and clarified with supervisor
- identified site hazards, assessed risks and reported to supervisor
- confirmed work zone with work crew and monitored site
- confirmed first aid and emergency personnel, equipment and procedures
- applied hazard and risk assessment and implemented controls for chainsaw use
- performed routine checks and maintenance for chainsaw usage according to operation and maintenance manual
- identified, tagged and reported chainsaw faults and malfunctions
- recorded and implemented site health and safety in the workplace, environmental and traffic control measures
- used personal protective equipment that complies with Australian Standards
- safely cross-cut fallen timber using compression and tension cuts with a hand held chainsaw
- used appropriate tools and materials to maintain chainsaw
- applied environmentally responsible workplace practices
- applied low risk work practices including stopping, disengaging quickly and dealing with foreign matter
- cleaned and stored chainsaw
- followed workplace procedures relevant to safely operating a chainsaw.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the principles and practice for operating chainsaws
- chainsaw routine checks and maintenance according to operation and maintenance manual, including:
  - checking and adjusting bar
  - cleaning air filter
  - cleaning and replacing spark plug
  - sharpening chain
- workplace safe operating procedures
- hazards and risks when operating a chainsaw
- relevant Australian Standards concerning chainsaw operation including use of personal protective equipment
- components of chainsaws and their respective functions
- common defects in woody materials
- cutting methods and techniques, patterns and sequence of cuts
- health and safety in the workplace requirements for the operation of a chainsaw including caution and hazard signs and symbols
- environmental impacts associated with operating chainsaws.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - personal protective equipment must be worn whilst operating chainsaw
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
- resources, equipment and materials:
  - chainsaws
  - chainsaw tools
  - wood
  - safety equipment and personal protective equipment applicable to the task being undertaken
- specifications:
  - chainsaw manufacturer specifications and operator manuals
- timeframes:
  - according to the job requirements.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare for, carry out and complete cane haulage vehicle operations in the sugar cane production industry.

The unit applies to individuals who operate cane haulage vehicles to undertake routine work under general supervision with limited autonomy and accountability.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements |
--- |
Elements describe the essential outcomes. |

Performance Criteria |
--- |
Performance criteria describe the performance needed to demonstrate achievement of the element. |

| 1.2 Source and interpret relevant cane haulage vehicle operation and maintenance manual and manufacturer instructions. |
| 1.3 Select and maintain personal protective equipment according to health and safety in the workplace requirements. |
| 1.4 Fit and use personal protective equipment according to job requirements and task to be undertaken. |
| 1.5 Conduct cane haulage vehicle routine pre-operational checks. |
| 1.6 Conduct cabin drill according to workplace procedures. |

2. Carry out cane haulage operations |
--- |
2.1 Carry out pre-start, and start up procedures required for vehicle operation. |
2.2 Drive and operate cane haulage vehicle, and modify the operating technique to meet changing work conditions. |
2.3 Select, haul and deliver cane using correct pushing or towing practices according to operation and maintenance manual and within equipment capabilities. |
2.4 Continually monitor hazards and risks, and ensure safety of self, other personnel, plant and equipment. |
2.5 Identify environmental and biosecurity implications associated with cane haulage vehicle operation and undertake actions to minimise impact. |
2.6 Complete work according to the agreed plan and within the operating capacity of the equipment and operator. |

3. Complete cane haulage vehicle operation |
--- |
3.1 Park cane haulage vehicle and conduct shut down procedures. |
3.2 Identify and report malfunctions, faults, irregular performance or damage to supervisor. |
3.3 Clean, secure and store cane haulage vehicle. |
3.4 Remove and store keys. |
3.5 Maintain cane haulage vehicle use records in required format. |

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.
### Skill Description

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Interpret textual information from a range of sources to identify relevant and key information about workplace operations</td>
</tr>
<tr>
<td>Writing</td>
<td>• Document cane haulage vehicle use</td>
</tr>
<tr>
<td>Oral communication</td>
<td>• Use clear language to report malfunctions, faults, irregular performance or damage</td>
</tr>
<tr>
<td></td>
<td>• Participate in verbal exchanges to respond to questions and clarify information</td>
</tr>
<tr>
<td>Numeracy</td>
<td>• Calculate quantities of vehicle fluids including fuel</td>
</tr>
<tr>
<td></td>
<td>• Identify correct tyre pressure or track tension</td>
</tr>
<tr>
<td>Navigate the world of work</td>
<td>• Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility</td>
</tr>
</tbody>
</table>

### Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

<table>
<thead>
<tr>
<th>Cane haulage vehicle must include at least one of the following:</th>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated a cane haulage vehicle to haul a load of cane safely and efficiently at least once and has demonstrated the following:

- identified hazards and risks associated with cane haulage vehicle operation implemented safe work practices
- carried out cane haulage vehicle pre-operational checks
- checked haulage equipment prior to use
- driven and operated a cane haulage vehicle safely including modifying operating technique to meet changing work conditions
- operated cane haulage vehicle features and attachments consistent with operation and maintenance manual and manufacturer specifications
- used safe pushing and towing practices to haul cane safely and efficiently
- carried out cane haulage vehicle shut down procedures
- minimised environmental impacts associated with cane haulage vehicle operation
- followed workplace health and safety procedures
- followed industry and workplace biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with cane haulage vehicle operations
- site safety requirements for cane haulage operations
- cane haulage vehicle components, controls, features, technical capabilities and limitations
- operating methods of cane haulage vehicles including pushing and towing
Assessment Requirements for AHCMMO214 Operate cane haulage vehicle

- principles of weight distribution with regard to load shifting and vehicle movement
- risks associated with the operation of cane haulage vehicles in different weather and terrain conditions
- cane haulage processes and spillage minimisation techniques
- cane harvesting processes as they relate to collection and haulage of harvests
- duty of care to self, others and the environment including environmental impacts relevant to the operation of cane haulage vehicles
- relevant legislation with regard to cane haulage vehicle operation and licensing requirements
- environmental impacts associated with operating a cane haulage vehicle
- workplace procedures applicable to health and safety in the workplace requirements to operate a cane haulage vehicle safely
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating the machinery

- resources, equipment and materials:
  - cane haulage vehicles
  - cane
  - safety equipment and personal protective equipment applicable to the task being undertaken

- specifications:
  - cane haulage vehicle operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to cane haulage vehicle operation
  - legislation relevant to cane haulage vehicle operation and licensing requirements

- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMOM215 Operate commercial lawnmowers

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to operate commercial lawnmowers to mow a lawn surface including preparation of site and equipment requirements, shutdown procedures and routine maintenance.

The unit applies to individuals who operate commercial lawnmowers to undertake routine work under general supervision with limited autonomy and accountability.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Machinery operation and maintenance (MOM)

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare site to be mown

1.1 Confirm site to be mown and identify potential hazards and risks including obstacles and fixtures

1.2 Implement safe working practices to manage risks including removal and replacement obstacles before and after mowing

1.3 Report abnormal conditions or changes in the appearance of the site and existing grass surface
## Elements

Elements describe the essential outcomes.

## Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 2. Prepare equipment for mowing

2.1 Select appropriate tools, equipment and machinery for site to be mown  
2.2 Calibrate lawnmower and adjust to height according to manufacturer guidelines  
2.3 Complete pre-operational checks of tools, equipment and machinery  
2.4 Select and maintain personal protective equipment according to workplace safety requirements  
2.5 Fit and use personal protective equipment according to job requirements  
2.6 Erect safety warning notices during work periods

### 3. Mow site surface

3.1 Assess grass appearance and changes during mowing operations in line with requirements for the site  
3.2 Match implements to the lawnmower according to manufacturers' specifications  
3.3 Maintain continuous oversight of mowing activities including monitoring of hazards and risks  
3.4 Identify environmental impacts associated with operation of equipment and minimise where possible

### 4. Complete mowing and check lawnmower operation

4.1 Conduct shut down procedures in line with workplace practices  
4.2 Perform routine operational servicing and minor maintenance  
4.3 Identify and report malfunctions, faults, irregular performance or damage in required format  
4.4 Clean and store lawnmower and associated equipment in the required location  
4.5 Maintain lawnmower use records in required format

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.
Skill | Description
--- | ---
Reading | • Interpret textual information from a range of sources to identify relevant and key information about workplace operations and products
Writing | • Use clear language, accurate industry terminology and logical structure to prepare lawnmower use records
Numeracy | • Calculate quantities of lawn mower fluids including oil and fuel
Oral Communication | • Use clear language to report abnormal conditions, changes to site appearance, malfunctions, faults, irregular performance or damage
Navigate the world of work | • Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Get the work done | • Take responsibility for routine decisions about operating commercial lawnmowers and reflect on outcomes to identify effectiveness of decisions

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

| Personal protective equipment must include: | • hearing protection  
• eye protection  
• gloves  
• safety footwear  
• long trousers. |
| Routine operational servicing and minor maintenance must include: | • engine oil  
• fuel  
• cutting blades. |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has mown a commercial site using a commercial lawnmower at least once and has:

- determined the condition of the existing grass surface and sought advice for subsequent routine preparations and treatments
- prepared site and equipment used for mowing
- used lawnmower, equipment, machinery and implements according to manufacturer specifications
- operated a commercial mower safely including making adjustments for attached implements and modifying techniques to meeting changed conditions
- minimised environmental impacts associated with lawnmower operation
- implemented lawnmower shut down procedures
- carried out routine servicing and maintenance and recorded malfunctions, faults or irregular performance
- cleaned and stored mower according to workplace guidelines
- followed workplace health and safety procedures for safe use and operation of commercial lawnmowers.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of grass preparation
- preparation methods and treatments required for optimal maintenance of grass surfaces
- effect of adverse outdoor climatic conditions on commercial lawnmower operations
- use of lawnmower, equipment, machinery and implements according to manufacturer specifications
- commercial lawnmower operation and maintenance requirements
- hazards and risks associated with commercial lawnmower operation
• environmental impacts relevant to the operation of commercial lawnmowers
• workplace procedures applicable to health and safety in the workplace requirements to operate a commercial lawnmower safely.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • commercial lawnmower
  • lawnmower implements
  • personal protective equipment specific to lawnmower operation
• specifications:
  • lawnmower manufacturer specifications and manufacturer guidelines
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

| Pre-operational checks must include:          | • vehicle damage and serviceability                                                                                                 |
|                                              | • fuel                                                                                                                                 |
|                                              | • brakes                                                                                                                            |
|                                              | • tyres including pressure and condition                                                                                           |
|                                              | • vehicle controls.                                                                                                                 |
| Personal protective equipment must include:   | • a suitable helmet according to operators manual                                                                                 |
|                                              | • enclosed toe shoes                                                                                                                |
| Side by side utility vehicle driver skills must include: | • parking across the slope when parking on a hill or gradient                                                                       |
|                                              | • on-board weight distribution                                                                                                      |
|                                              | • load security                                                                                                                     |
|                                              | • crossing obstacles                                                                                                                |
|                                              | • avoiding hazards.                                                                                                                 |
| Safety features must include at least three of | • roll-over protective structure                                                                                                   |
|                                              | • seat belts                                                                                                                        |
the following:

- side nets
- doors
- occupant hand holds
- tyre selection and inflation pressure.

Unload, load and secure side by side utility vehicle must include at least one of the following:

- trailer
- transportation device
- on site vehicle storage.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated a side by side utility vehicle on at least two riding surface conditions and on an even, uneven and sloping terrain and has:

- identified hazards and risks associated with side by side utility vehicle use
- identified and avoided driving surfaces, terrains and slopes that are dangerous to safe operation of side by side utility vehicles
- selected and worn side by side utility vehicle helmet that is fit for purpose according to operators manual
- selected, fitted and used other personal protective equipment that is required for the task
- maintained personal protective equipment in suitable condition for use
- unloaded the side by side utility vehicle safely and checked it is safe to use
- operated and manoeuvred side by side utility vehicles in different surface and terrain conditions including uneven and sloping terrain
- started, steered, manoeuvred, positioned and stopped a side by side utility vehicle in a controlled manner
- selected appropriate modes of operation and applied side by side utility vehicle driver skills to assist vehicle stability
- parked the side by side utility vehicle safely and checked for any damage, malfunctions or faults
- loaded and secured side by side utility vehicle safely
- minimised environmental impacts associated with side by side utility vehicle operation
- followed industry and workplace biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with side by side utility vehicle areas of operation
Assessment Requirements for AHCMM216 Operate side by side utility vehicles

- components, controls, modes and features of side by side utility vehicles and their functions
- side by side utility vehicle functional applications, including:
  - occupant hand holds, correct use, importance of reach and keeping body parts inside vehicle
  - roll-over protective structure
  - tyre selection and inflation pressure
  - side nets and doors
- operating principles and operating methods of side by side utility vehicles
- workplace safety plan for operating and maintaining side by side utility vehicles
- side by side utility vehicle operator's manual
- side by side utility vehicle driver skills, including higher level two foot pedal operation skills, for technical applications
- effects of different surfaces and terrain conditions on the operation of side by side utility vehicle
- load limits and attachments specific to side by side utility vehicle capabilities and the effects to dynamic stability of the side by side utility vehicle including:
  - weight distribution
  - load security
  - liquid or shifting loads
  - effect of load when operating on uneven or steep terrain
- loading and unloading safely from a trailer, transportation device and site storage, including use of:
  - tie down devices
  - vehicle ramps
  - loading surfaces and angle
- variations in state/territory regulations and legislation that may apply in regard to side by side utility vehicle use
- environmental impacts associated with operating side by side utility vehicles and consequences of substandard environmental and biosecurity practices
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - helmets must be worn whilst operating side by side utility vehicles according to operators manual
- resources, equipment and materials:
  - side by side utility vehicle
  - vehicle fuel
Assessment Requirements for AHCMM0216 Operate side by side utility vehicles

- side by side utility vehicle helmet as identified by operator manual
- enclosed toe shoes
- specifications:
  - side by side utility vehicle manufacturer specifications and operator manuals
  - industry and workplace biosecurity procedures applicable to side by side utility vehicle operation
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to safely operate quad bikes including undertaking pre-start checks and shut down procedures.

The unit applies to individuals who operate quad bikes to undertake routine work under general supervision with limited autonomy and accountability.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Machinery operation and maintenance (MOM)

Elements and Performance Criteria

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare a quad bike for operation</td>
<td>1.1 Confirm with supervisor activity to be undertaken and that the vehicle is fit for purpose</td>
</tr>
<tr>
<td></td>
<td>1.2 Identify potential hazards and risks and implement safe working practices to manage risks</td>
</tr>
<tr>
<td></td>
<td>1.3 Select and maintain personal protective equipment according to</td>
</tr>
</tbody>
</table>
### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

Performance criteria describe the performance needed to demonstrate achievement of the element.

- Workplace safety requirements
  
  1.4 Use, wear and correctly fit personal protective equipment including quad bike helmet that is fit for purpose
  
  1.5 Conduct routine pre-operational checks on quad bike according to operation and maintenance manual and report faults or malfunctions to supervisor
  
  1.6 Identify and confirm no go areas with supervisor according to workplace safety plan
  
  1.7 Identify quad bike applications, loads and fixed attachments according to operation and maintenance manual

### 2. Operate a quad bike

| 2.1 Start up, steer, manoeuvre, position and stop quad bike in a controlled manner |
| 2.2 Identify environmental and any biosecurity implications associated with quad bike operation and minimise impact |
| 2.3 Identify situations where quad bike active riding techniques are required |
| 2.4 Apply quad bike active riding techniques to pre-position the operators body to assist bike stability |
| 2.5 Identify and avoid riding surfaces, terrains and slopes that are dangerous to safe operation |
| 2.6 Operate and manoeuvre over a variety of surfaces, slopes and terrain safely |
| 2.7 Modify quad bike operation according to local weather conditions |

### 3. Complete quad bike operation

| 3.1 Shut down quad bike |
| 3.2 Park up and secure quad bike in line with workplace practices |
| 3.3 Identify and report malfunctions, faults, irregular performance or damage to supervisor |
| 3.4 Remove and store keys in the required location |
| 3.5 Unload, load and secure quad bike safely |
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Interpret textual information from a range of sources to identify relevant and key information about workplace operations</td>
</tr>
</tbody>
</table>
| Oral communication             | • Use clear language to report malfunctions, faults and irregular performance or damage  
                                | • Participate in verbal exchanges to respond to questions and clarify information |
| Numeracy                       | • Calculate quantities of vehicle fluids including oil and fuel  
                                | • Calculate load volumes and weights  
                                | • Identify correct tyre pressure |
| Navigate the world of work     | • Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility |

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

| Personal protective equipment must include: | • a suitable quad bike helmet  
                                                | • enclosed toe shoes. |
| Pre-operational checks must include:       | • vehicle damage and serviceability  
                                                | • fuel  
                                                | • brake effectiveness  
                                                | • throttle smooth operation and self-closing return  
                                                | • tyres including pressure and condition  
                                                | • vehicle controls. |
| Quad bike active riding techniques must include: | • pre-positioning, correct timing and appropriate adjustment of operator body weight when going uphill including body weight forward  
                                                | • pre-positioning, correct timing and appropriate adjustment of operator body weight when going downhill including body weight rearward  
                                                | • positioning of operator body weight centrally when cornering at |
very slow speeds, and transition to positioning of operator body weight to the inside of the turn when cornering at higher speeds

- positioning of operator body weight centrally when cornering at very slow speeds, and transition to positioning of operator body weight to the uphill side when riding across slopes

- standing up to improve situational awareness and ability to exercise active riding technique, when operating in restricted visibility situations, rough terrains, crossing obstacles and avoiding hazards.

Unload, load and secure quad bike must include at least one of the following:

- trailer
- transportation device
- on-site vehicle storage.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated a quad bike on at least two different riding surface conditions and on an even, uneven and sloping terrain and has:

- identified hazards and risks associated with quad bike areas of operation
- identified and avoided riding surfaces, terrains and slopes that are dangerous to safe operation of quad bikes
- identified and confirmed quad bike no go areas
- selected, fitted and used quad bike helmet and other personal protective equipment that was fit for purpose
- maintained personal protective equipment in suitable condition for use
- unloaded the quad bike safely and checked it is safe to use
- operated and manoeuvred quad bikes in different riding surface and terrain conditions including uneven and sloping terrain
- started, steered, manoeuvred, positioned and stopped a quad bike in a controlled manner
- applied quad bike active riding techniques to preposition operator body weight to assist bike stability
- parked the quad bike safely and checked for any damage, malfunctions and faults
- loaded and secured the quad bike safely
- minimised environmental impacts associated with quad bike operation
- followed industry and workplace biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with quad bike areas of operation including quad bike no go areas
- components, controls and features of quad bikes and their functions
- quad bike functional applications, including appropriate selection of machine for task
• workplace safety plan for operating and maintaining quad bikes
• quad bike operator's manual
• operating principles and operating methods of quad bikes
• circumstances when quad bike active riding techniques should be applied
• quad bike active riding techniques, including both when and when not to apply quad bike active riding techniques
• effects of different riding surfaces and terrain conditions on the operation of quad bikes
• load limits and attachments specific to quad bike capabilities and the effects to dynamic stability of the quad bike, including:
  • weight distribution
  • load security
  • liquid or shifting loads
  • effect of load when operating on uneven or steep terrain
• loading and unloading safely from a trailer, transportation device and site storage, including use of:
  • tie down devices
  • vehicle ramps
  • loading surfaces and angle
• variations in state/territory regulations and legislation that may apply in regard to quad bike use
• environmental impacts associated with operating quad bikes and consequences of substandard environmental and biosecurity practices
• industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • no passengers on single seat quad bikes
  • no riders under 16 years of age on adult sized quad bikes
  • no towing
  • helmets must be worn whilst operating quad bikes
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
• resources, equipment and materials:
  • quad bike
  • vehicle fuel
  • a suitable quad bike helmet
  • enclosed toe shoes
Assessment Requirements for AHCMMOM217 Operate quad bikes

- specifications:
  - quad bike operation and maintenance manual
  - industry and workplace biosecurity procedures applicable to quad bike operation
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has coordinated maintenance and repair of machinery and equipment for a small enterprise and has:

- identified workplace hazards, assessed risks and implemented safe workplace procedures
- interpreted documentation associated with work site activities
- sought specialist advice on repairs requiring specialist attention
- established priorities for repair and maintenance work to be carried out
- co-ordinated staff and resources to achieve work priorities
- minimised environmental impacts of machinery and equipment maintenance and repair activities
- responded to contingencies and taken corrective actions where necessary
- documented activities, timelines and material usage
- applied workplace health and safety procedures when organising and conducting maintenance and repair activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work schedule programming
- possible causes of disruption to work activities and their effect on quality and time schedules
- responsibilities and requirements for maintaining and repairing machinery and equipment range, use and availability of materials, equipment and machinery required for the project
- environmental impacts of machinery and equipment maintenance and repair work and disposal of fuels, oils and other wastes
• workplace procedures applicable to health and safety in the workplace, and machinery and equipment maintenance and repair.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • machinery and equipment
  • maintenance tools and equipment
  • material resources
  • safety equipment and personal protective equipment applicable to the task being undertaken

• specifications:
  • machinery operation and maintenance manual
  • workplace procedures applicable to health and safety in the workplace and machinery maintenance

• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

2. Inspect engine and components

- 2.1 Carry out regular engine and component checks on machinery and equipment
- 2.2 Lubricate all relevant grease or lubricant points
- 2.3 Change oils and filters at intervals prescribed in operation and maintenance manual
- 2.4 Check hydraulic hoses and systems for deterioration and rectify defects according to operation and maintenance manual

3. Inspect transmission

- 3.1 Check drive and steering clutches for operation and adjust where applicable according to operation and maintenance manual
- 3.2 Check transmission oil levels
- 3.3 Check tracks or wheels and undercarriage for oil leaks and wear
- 3.4 Identify faulty seals or leaks and take corrective actions according to operation and maintenance manual
- 3.5 Clean machinery according to workplace requirements

4. Maintain components and attachments

- 4.1 Check components for wear and condition
- 4.2 Replace worn or unserviceable components according to operator and maintenance manual
- 4.3 Complete component inspection and replacement activities in line with workplace procedures
- 4.4 Check moving operational components for wear and condition and adjust to the tolerances specified in operator and maintenance manual
- 4.5 Clean and maintain work areas and return to operating condition
- 4.6 Collect, treat and dispose or recycle waste from maintenance activities according to workplace procedures

5. Record maintenance

- 5.1 Record identified faults and defects in machine record
- 5.2 Record maintenance procedures in workshop record in line with

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has undertaken maintenance of machinery that is used principally in agriculture, horticulture or conservation and land management work at least once and has:

- identified workplace hazards, assessed risks and implemented safe workplace procedures
- carried out engine and equipment inspection and maintenance
- carried out transmission inspection and maintenance
- carried out lubrication and replacement of oils and filters
- checked machinery and equipment components for wear and tear, replaced parts, tagged and reported defects
- minimised environmental impacts associated with undertaking machinery maintenance
- maintained machinery and equipment components
- recorded details of maintenance and monitoring
- applied workplace health and safety procedures when undertaking machinery maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- engine function principles
- turbo charging and after cooling
- assessing engine specifications in line with power requirements
- engine electric and hydraulic indicators and gauges
- transmission and drive systems
- machinery and equipment operation and maintenance manual
• environmental impacts of machinery servicing and disposal of fuels, oils and other wastes
• workplace procedures applicable to health and safety in the workplace and machinery maintenance.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • machinery and equipment
  • maintenance tools and equipment
  • safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • machinery operation and maintenance manual
  • workplace procedures applicable to health and safety in the workplace and machinery maintenance
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare and operate machinery and equipment in a safe and controlled manner that is used principally in agriculture, horticulture, and conservation and land management work.

This unit does not apply to chainsaws, tractors, vehicles or earth moving equipment.

The unit applies to individuals who operate machinery and equipment under broad direction, and take responsibility for their own work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated agricultural or horticultural machinery and equipment at least once and has:

- identified and reported workplace hazards and implemented safe operating procedures
- carried out machinery and equipment pre-operational checks including basic servicing and maintenance according to operation and maintenance manual
- operated machinery and equipment in a safe and controlled manner consistent with task requirements, conditions, operation and maintenance manual and manufacturer specifications
- attached ancillary equipment and checked for correct operation
- carried out machinery shut down procedures
- recognised, reported and documented defects in equipment and machinery and operational capacity
- cleaned, secured and stored machinery and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with machinery and equipment operation
- pre-operational and safety checks for machinery and equipment according to operation and maintenance manual
- operating principles and operating methods for machinery and equipment
- procedures for cleaning, securing and storing machinery, equipment and materials
- risks associated with the operation of machinery and equipment in different weather conditions and difficult terrain conditions
- duty of care to self, others and the environment
- workplace procedures applicable to health and safety in the workplace requirements for operating machinery and equipment.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating machinery and equipment

- **resources, equipment and materials:**
  - a range of machinery and equipment
  - enclosed toe shoes
  - safety equipment and personal protective equipment applicable to the machinery and equipment being used and the task being undertaken

- **specifications:**
  - machinery and equipment operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to machinery and equipment operation
  - records must include details of the machinery and equipment that the individual was assessed on

- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Specialised machinery and equipment must include at least one of the following:

- feed mixers
- specialised turf equipment
- specialised nursery equipment
- livestock feeding systems
- specialised harvesting or planting equipment
- filtering and pumping equipment
- poultry performance monitoring equipment
- fertilising application
- grain handling equipment.

Pre-operational checks must include:

- specialised machinery and equipment damage and serviceability
- engine oil
- fuel
- specialised machinery and equipment controls
- reporting and tagging defects.

Application

This unit of competency describes the skills and knowledge required to prepare and undertake activities required to ground spread fertiliser and soil ameliorants.

This unit applies to individuals who apply industry codes of practice and operating principles to ground spread fertiliser and soil ameliorants under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, manufacturer specifications, sustainability and biosecurity practices.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated fertiliser and soil ameliorant spreading equipment and machinery at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- assessed environmental and physical hazards that may be encountered when undertaking ground spreading operations and taken appropriate action to minimise risks
- communicated with clients to ensure a common understanding and agreement of task to be undertaken
- used maps and interpreted written instructions regarding areas to be spread including types of products and application rates
- maintained, calibrated and operated ground spreading equipment according to operation and maintenance manual, manufacturer specifications and in line with industry standards for uniformity of application
- monitored weather conditions during ground spreading operations and adjusted operations to minimise risk to local environment and personnel in the vicinity
- minimised environmental impacts associated with fertiliser and soil ameliorant application including attention to buffer zones and run-off
- applied fertiliser or soil ameliorants at rate agreed by customer to specified land area
- implemented shut down procedures including cleaning, securing, and safe storage of machinery
- completed operational and equipment maintenance records according to workplace procedures
- followed industry and workplace biosecurity procedures.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with fertiliser and soil ameliorant application, and machinery and equipment operation
- fertiliser and soil ameliorant machinery and equipment operating components, controls, features, technical capabilities and limitations
- operational limits of equipment with regard to uniformity of application and potential health and safety implications
- spreading characteristics of different fertiliser and soil ameliorant products
- environmental impacts associated with fertiliser spreading including hazards to waterways
- purpose of buffer zones
- methods of monitoring local weather conditions and the effects of changes on ground spreading activities
- operating principles and operating methods of fertiliser and soil ameliorant machinery and equipment
- procedures for cleaning, securing and storing fertiliser and soil ameliorant machinery, equipment and tools
- workplace procedures applicable to fertiliser and soil ameliorant application
- workplace procedures applicable to health and safety in the workplace and fertiliser and soil ameliorant application, and fertiliser and soil ameliorant machinery and equipment
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating fertiliser and soil ameliorant machinery
- resources, equipment and materials:
  - fertiliser and soil ameliorant machinery, equipment and tools
  - fertiliser or soil ameliorant products
  - protective clothing
  - respirators
  - protective eyewear
  - unlined rubber or plastic gloves
  - neoprene or nitrile boots
• safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • fertiliser and soil ameliorant machinery and equipment operation and maintenance manuals and manufacturer specifications
  • industry code of practice applicable to fertiliser and soil ameliorant application
  • industry and workplace biosecurity procedures applicable to fertiliser and soil ameliorant application, and fertiliser and soil ameliorant machinery and equipment
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare for, operate and complete cane harvester operations in the sugar cane production industry.

The unit applies to individuals who operate cane harvesters under broad direction, and take responsibility for their own work.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated a cane harvester to harvest a commercial crop of cane at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out cane harvester pre-operational checks according to operation and maintenance manual
- checked cane harvester equipment prior to use
- familiarised self with field and local conditions for harvest
- set and operated a cane harvester in a safe, controlled and correct manner and monitored for performance and efficiency
- operated cane harvester consistent with operation and maintenance manual and manufacturer specifications
- recognised and reported defects in cane harvester equipment and operational capacity
- communicated and co-operated with relevant personnel including haul-out drivers
- controlled and minimised cane spillage
- carried out cane harvester shut-down procedures
- cleaned and sterilised the harvester to prevent cross-site contamination
- minimised environmental impacts associated with cane harvester operation
- followed industry and workplace biosecurity procedures
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with cane harvester operations
• cane harvester and site safety requirements
• cane harvester components, controls, features, technical capabilities and limitations
• operating principles and operating methods for cane harvesters
• cane harvester processes and spillage minimisation techniques
• harvest and haulage processes as they relate to collection and haulage of harvests
• principles of the safe removal of obstacles from harvesters and adjustment of harvester settings
• duty of care to self, others and the environment
• relevant legislation with regard to cane harvester operation and licensing requirements
• environmental impacts associated with operating cane harvesters
• workplace procedures applicable to health and safety in the workplace and operating a cane harvester safely
• industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • in a range of weather and surface conditions and on a range of different terrains
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating cane harvester
• resources, equipment and materials:
  • cane harvester
  • cane
  • safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • cane harvester operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to cane harvesting
  • legislation relevant to cane harvester operation and licensing requirements
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated broadacre and row crop harvesting machinery and equipment at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out harvest machinery and equipment pre-operational checks according to operation and maintenance manual
- performed minor maintenance
- recognised and documented defects in broadacre and row crop harvest machinery equipment and operational capacity
- attached and detached ancillary equipment safely
- operated harvest machinery and equipment according to operation and maintenance manual, manufacturer specifications, task requirements and local conditions
- shut down machinery and equipment and recorded usage
- minimised environmental impacts associated with harvest machinery and equipment operation
- followed industry and workplace biosecurity procedures
- followed workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with broadacre and row crop harvest machinery and equipment operations
- broadacre and row crop harvest machinery and equipment components, controls, features, technical capabilities and limitations
• manufacturer and workplace requirements for:
  • pre-operational checks
  • machinery operation techniques
  • operator level servicing
  • planned and emergency shut down procedures
• relevant legislation with regard to harvest machinery operation and licensing requirements
• environmental impacts associated with operating machinery and equipment used for harvesting
• workplace procedures applicable to health and safety in the workplace requirements and harvest machinery and equipment operation
• industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating harvest machinery
• resources, equipment and materials:
  • harvest machinery and equipment
  • broadacre or row crop
  • safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • harvest machinery and equipment operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to broadacre and row crop harvesting
  • legislation relevant to harvest machinery operation and licensing requirements
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated broadacre sowing machinery and equipment at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out broadacre sowing machinery and equipment pre-operational checks according to operation and maintenance manual
- performed minor maintenance
- recognised and documented defects in broadacre sowing machinery and equipment and operational capacity
- attached and detached ancillary equipment safely
- operated broadacre sowing machinery and equipment according to operation and maintenance manual, manufacturer specifications, task requirements and conditions
- followed sowing requirements
- shut down machinery and equipment and recorded usage
- minimised environmental impacts associated with broadacre sowing machinery and equipment operation
- followed industry and workplace biosecurity procedures
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with broadacre sowing machinery and equipment operations
- broadacre sowing machinery and equipment components, controls, features, technical capabilities and limitations
• manufacturer requirements and workplace requirements for:
  • pre-operational checks
  • machinery operation techniques
  • operator level servicing
  • planned and emergency shut down procedures
• workplace procedures applicable to work health and safety and broadacre sowing machinery and equipment operation
• environmental impacts associated with operating machinery and equipment used for broadacre sowing
• industry and workplace biosecurity procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating broadacre sowing machinery
• resources, equipment and materials:
  • broadacre sowing machinery and equipment
  • safety equipment and personal protective clothing and equipment applicable to the task being undertaken
• specifications:
  • broadacre sowing machinery and equipment operation and maintenance manuals
  • industry and workplace biosecurity procedures applicable to broadacre sowing
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated land-forming machinery and equipment for agricultural or conservation earthworks purposes at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out land-forming machinery and equipment pre-operational checks according to operation and maintenance manual
- performed minor maintenance
- recognised and documented defects in land-forming machinery and equipment and operational capacity
- attached and detached ancillary equipment safely
- operated land-forming machinery and equipment according to operation and maintenance manual, manufacturer specifications, task requirements and conditions
- shut down machinery and equipment and recorded usage
- minimised environmental impacts associated with land-forming machinery and equipment operation
- followed industry and workplace biosecurity procedures
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with land-forming machinery and equipment operations
- land-forming machinery and equipment components, controls, features, technical capabilities and limitations
- manufacturer requirements and workplace requirements for:
  - pre-operational checks
  - machinery operation techniques
  - operator level servicing
  - planned and emergency shut down procedures
- general land forming concepts and practices including:
  - contouring, surface drainage and erosion
  - slope requirements
  - survey and set out
- workplace procedures applicable to health and safety in the workplace requirements for land-forming machinery and equipment operation
- environmental impacts associated with operating machinery and equipment used for land-forming
- industry and workplace biosecurity procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - in a range of weather and surface conditions and on a range of different terrains
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating land-forming machinery
- resources, equipment and materials:
  - land-forming machinery and equipment
  - safety equipment and personal protective clothing and equipment applicable to the task being undertaken
- specifications:
  - land-forming machinery and equipment operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to land-forming
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to operate precision technology used for the control of specialised machinery and equipment and to optimise specialised machinery performance.

The unit applies to individuals who operate precision control technology under broad direction, and take responsibility for their own work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

</tr>
<tr>
<td>1.5 Check ancillary equipment for correct operation</td>
</tr>
<tr>
<td>1.6 Check that data complies with job specifications</td>
</tr>
</tbody>
</table>

## Performance Criteria

### 2. Operate precision technology

- 2.1 Operate precision control technology according to operation and maintenance manual, manufacturer specifications, task requirements and conditions
- 2.2 Monitor activities to ensure that machinery is operating in an efficient and controlled manner and make adjustments as required
- 2.3 Monitor and assess hazards and risks, and ensure safety of self, other personnel and associated equipment
- 2.4 Identify and assess impacts on the environment of precision control equipment operation and undertake activities to minimise

### 3. Complete work

- 3.1 Conduct shut down procedures for precision control equipment according to workplace practices
- 3.2 Download data and complete operational records
- 3.3 Perform basic diagnostic procedures as required according to job specifications
- 3.4 Identify and report malfunctions, faults and irregular performance or damage according to workplace procedures

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>

Skill | Description
--- | ---
Writing | • Complete operational records
Numeracy | • Check and compare precision control technology data against job specifications
 | • Download and interpret precision control technology data and record in operational records
Navigate the world of work | • Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

### Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

| Precision control technology must include at least one of the following: | • on-board Global Positioning System (GPS), Global Navigation Satellite System (GNSS) or Differential Global Positioning System (DGPS) precision control equipment
 | • fixed GPS, GNSS or DGPS precision control equipment.
 | Pre-operational checks must include at least one of the following: | • precision control technology equipment damage and serviceability
 | • Automatic Section Control measurement check
 | • equipment dimension check
 | • GPS offset setting.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has used precision control technology in the operation of agricultural or horticultural machinery at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out precision control technology pre-operational checks according to operation and maintenance manual
- used technology to operate machinery in an efficient and controlled manner
- minimised environmental impacts associated with use of precision control technology to operate machinery
- performed routine maintenance tasks
- performed basic diagnostic procedures
- downloaded and uploaded data for the task
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- manufacturer specifications and requirements for:
  - precision control technology pre-operational checks
  - precision instrument controls, feature and functions
  - minor servicing requirements
- uploading and downloading of data produced during the operation of precision control machinery and associated equipment
- components and controls features and functions of equipment
- diagnostic techniques for operational performance
- characteristics, technical capabilities and limitations of associated machinery and equipment
- environmental impacts of using precision control technology to operate machinery.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating precision control technology equipment

- **resources, equipment and materials:**
  - precision control technology equipment

- **specifications:**
  - precision control technology equipment operation and maintenance manuals

- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated either lateral or centre pivot mobile irrigation machinery and equipment at least once and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out mobile irrigation machinery and equipment pre-operational checks according to operation and maintenance manual
- performed minor maintenance
- recognised and documented defects in mobile irrigation machinery and equipment and operational capacity
- attached and detached ancillary equipment
- operated mobile irrigation machinery and equipment according to operation and maintenance manual, manufacturer specifications, task requirements and conditions
- shut down machinery and equipment and recorded usage
- minimised environmental impacts associated with mobile irrigation machinery and equipment operation
- followed industry and workplace biosecurity procedures
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with mobile irrigation machinery and equipment operations
- mobile irrigation machinery and equipment components, controls, features, technical capabilities and limitations
- manufacturer requirements and workplace requirements for:
Assessment Requirements for AHCMOM13 Operate mobile irrigation machinery and equipment

- pre-operational checks
- machinery operation techniques
- operator level servicing
- planned and emergency shut down procedures
- health and safety in the workplace procedures applicable to mobile irrigation machinery and equipment operation
- environmental impacts associated with operating machinery and equipment used for mobile irrigation
- industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating mobile irrigation machinery
- resources, equipment and materials:
  - mobile irrigation machinery and equipment
  - safety equipment and personal protective equipment applicable to the task being undertaken
- specifications:
  - mobile irrigation machinery and equipment operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to mobile irrigation
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to load, transport and unload machinery used for earth-moving and agricultural operations.

The unit applies to individuals who transport machinery under broad direction, and take responsibility for their own work.

Vehicles must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

</tr>
</tbody>
</table>
Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

| Load must include at least one of the following: | • side loaded  
• rear loaded. |
| Tie down must include at least one of the following: | • webbing straps  
• chains  
• wire rope  
• polypropylene or nylon filament rope  
• clevis claw hook  
• grab hook  
• ratchet hook. |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has loaded, transported and unloaded large machinery used for earthmoving or agricultural operations at least once and has:

- identified hazards and risks and implemented safe work practices and procedures
- safely loaded and unloaded large earthmoving or agricultural machinery
- secured machinery as a transport load
- provided an escort for wide loads
- arranged permits and escorts as required by legislation
- driven machinery to destination, complying with requirements for moving wide loads
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation pertaining to transport of heavy vehicles and machinery
- machinery operating principles and operating methods used for earthmoving and agricultural operations
- tying down procedures for large machinery
- relevant legislation with regard to vehicle operation and licensing requirements
- workplace procedures relevant to health and safety in the workplace requirements to transport machinery safely
- industry practice and workplace procedures relevant to transport of machinery.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating machinery

- **resources, equipment and materials:**
  - a range of machinery
  - tie down devices

- **specifications:**
  - machinery operation and maintenance manuals
  - legislation relevant to vehicle operation and licensing requirements

- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that, on at least one occasion, the individual has calibrated, operated and cleaned specialised liquid or granular chemical application machinery and equipment and has:

- identified hazards and implemented safe workplace practices and procedures
- carried out chemical application machinery and equipment pre-operational checks according to operation and maintenance manual
- sourced and interpreted relevant Safety Data Sheets (SDS)
- performed minor maintenance
- recognised and documented defects in chemical application machinery and equipment and operational capacity
- attached and detached ancillary equipment
- calibrated and set up application components
- operated chemical application machinery according to operation and maintenance manual, manufacturer specifications, task requirements and regulatory requirements
- assessed and minimised spray drift risk
- completed operational records according to legislative and regulatory requirements
- minimised environmental impacts associated with chemical application machinery and equipment operation
- followed industry and workplace biosecurity procedures
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
- hazards and risks associated with chemical application machinery and equipment operations
- categories of information contained in SDS
- chemical application machinery and equipment components, controls, features, technical capabilities and limitations
- manufacturer requirements and workplace requirements for:
  - pre-operational checks
  - machinery operation techniques
  - operator level servicing
  - planned and emergency shut down procedures
- features and functions of chemical application equipment components, including:
  - liquid spray; nozzles, tanks, agitation systems, pumps, filters, pressure regulation valves
  - granular applicators/dusters; hoppers, flow control valves
- effects of meteorological conditions on chemical application
- legislative and regulatory requirements applicable to chemical application
- workplace procedures applicable to health and safety in the workplace for chemical application machinery and equipment operation
- environmental impacts associated with operating chemical application machinery and equipment including spray drift
- industry and workplace biosecurity procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating chemical application machinery
- resources, equipment and materials:
  - chemical application machinery and equipment
  - protective clothing
  - respirators
  - protective eyewear
  - unlined rubber or plastic gloves
  - neoprene or nitrile boots
  - safety equipment and personal protective equipment applicable to the task being undertaken
- specifications:
Assessment Requirements for AHCOMM15 Operate chemical application machinery and equipment

- chemical application machinery and equipment operation and maintenance manuals
  and manufacturer specifications
- legislative and regulatory requirements applicable to chemical application
- industry and workplace biosecurity procedures applicable to chemical application
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has received and stored bulk fuel and has refuelled machinery or a vehicle on at least one occasion and has demonstrated the following:

- identified health and safety hazards in the workplace, assessed risks and implemented suitable controls
- received and stored bulk fuel according to workplace and regulatory requirements
- prepared for refuelling of machinery or a vehicle from fixed storage and from a portable container
- refuelled machinery or vehicle from fixed storage
- refuelled machinery or vehicle from portable containers
- completed refuelling according to workplace procedures
- completed required documentation
- minimised environmental impacts associated with machinery and vehicle refuelling
- applied workplace health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulatory and industry requirements for the receipt and storage of bulk fuel, and refuelling operations
- health and safety in the workplace procedures relevant to machinery and vehicle refuelling
- types, use and maintenance of personal protective equipment
- types, features and use of fuels for machinery and vehicles
- requirements, types, features and facilities used to store and receive fuel
Assessment Requirements for AHC MOM 316 Refuel machinery or vehicle

- workplace procedures for checking fuel storage facilities, refuelling equipment and fuel transfer equipment for leaks
- types, features, use, maintenance and storage of fuel transfer and refuelling equipment
- risks and dangers associated with volatile fuel liquids and vapours, and mitigation and protection measures
- procedures for emptying fuel transfer equipment and checking that they are empty of residual fuel
- methods and procedures for securing portable fuel containers during transport
- environmental impacts of fuel leaks and spills
- types, features, use and maintenance of firefighting and spill response equipment
- legislation and workplace procedures relevant to containment methods and equipment for fuel spills
- workplace procedures applicable to environmental protection and sustainability procedures for mitigation and protection measures for fuel spills.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when refuelling machinery or vehicles
- resources, equipment and materials:
  - a range of machinery or vehicles
  - refuelling equipment
  - fuel
  - safety equipment and personal protective equipment applicable to the task being undertaken
- specifications:
  - machinery or vehicle operation and maintenance manuals
  - regulations, legislation, industry requirements, manufacturer specifications and workplace procedures relevant to machinery and vehicle refuelling and fuel storage requirements
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare for, operate and maintain tractor operations with attached equipment.

Working with tractors is an inherently dangerous activity. Individuals who work at this level must be thoroughly instructed in all health and safety in the workplace aspects of operating tractors. The tractor must also comply with relevant Australian standards for tractors.

The unit applies to individuals who operate tractors with attachments under broad direction and take responsibility for their own work.

Vehicle must be operated according to relevant state/territory licensing authority vehicle licence requirements and regulations.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

</table>

4.4 Safely remove attachments according to manufacturer instructions
4.5 Clean and store removed attachments in designated location
4.6 Clean, decontaminate, secure and store tractor in designated location
4.7 Remove and store keys in the required location
4.8 Maintain tractor and equipment use records in required format

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Interpret textual information from a range of sources to identify relevant and key information about workplace operations</td>
</tr>
<tr>
<td>Writing</td>
<td>• Document tractor and equipment use</td>
</tr>
<tr>
<td>Numeracy</td>
<td>• Calculate quantities of vehicle fluids including fuel • Identify correct tyre pressure or track tension</td>
</tr>
<tr>
<td>Navigate the world of work</td>
<td>• Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility</td>
</tr>
</tbody>
</table>

## Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

<table>
<thead>
<tr>
<th>Pre-operational checks must include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• maintenance interval schedule daily check • machine damage and serviceability • guards are in place and undamaged • checking for missing parts • fluid leaks and levels</td>
</tr>
</tbody>
</table>
• fuel level
• brakes and clutch operation
• condition of tyres or tracks
• machine controls.

Attachment must include one three point linkage, one Power Take Off (PTO) driven and one trailed implement from the following tractor attachments and implements:

• three point linkage implement linkage adjustment
• three point linkage PTO driven
• three point linkage hydraulic operated
• tractor mounted implement direct drive
• tractor mounted implement hydraulic operated
• tractor mounted implement PTO operated
• trailed implement manual adjustment
• trailed implement mechanical adjustment
• trailed implement PTO operated
• trailed implement hydraulic operated.

Biosecurity implications must include:

• control of cross-site contamination.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has used safe working practices when operating tractors and fitting and using attachments on at least one occasion and has:

- identified hazards and risks associated with operating tractors and using attachments
- implemented safe working practices to minimise risks when fitting and using attachments
- carried out tractor pre-operational checks and maintenance including tagging defects
- driven and operated a tractor safely, including modifying operating technique to meet changing work conditions
- selected and safely attached, removed, tested and used one three point linkage, one power take off driven and one trailed implement according to manufacturer specifications and weather conditions
- used safe towing practices
- operated tractors on an incline and an off-road surface with and without attachments and implements
- carried out tractor shut down procedures
- minimised environmental impacts associated with tractor operation
- applied workplace health and safety procedures or safe tractor operation
- followed industry and workplace biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- tractor components, controls and features and operational functions
- tractor steering systems and features
- tractor operation and maintenance manuals
- features, operational functions and procedures for safe fitting and use of attachments and implements
• load limits and the principles of weight distribution with regard to load shifting and tractor movement
• distinguishing characteristics of individual tractors including rated performance capacities
• effects of various surface and difficult terrain conditions on tractor operation and use of attachments
• duty of care to self, others and the environment
• relevant legislation with regard to tractor operation and licensing requirements
• environmental impacts relevant to operation of tractors with attachments
• common injuries, causes and implications of using unsafe practices when operating tractors and fitting attachments
• workplace procedures relevant to health and safety in the workplace requirements to operate a tractor safely
• industry and workplace biosecurity procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
  • individual must not be under the influence of alcohol or drugs
  • individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  • individual must not be in a fatigued state when operating the machinery
• resources, equipment and materials:
  • tractors
  • attachments
  • safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • tractor operation and maintenance manual
  • industry and workplace biosecurity procedures applicable to tractor operation
  • legislation relevant to tractor operation and licensing requirements
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare for, carry out and complete major repair and overhaul of machinery and equipment.

The unit applies to individuals who apply specialised skills and knowledge to ensure that workplace machinery and equipment is repaired or overhauled in a way that enables minimal disruption to workplace operations. They have responsibility for their own work and for the quality of the work of others within known parameters. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that, on at least one occasion, the individual has undertaken major repair and overhaul of machinery and equipment in a manner that allows the core business of the enterprise to continue with minimal disruption and has:

- identified potential workplace hazards and implemented control measures
- diagnosed faults and identified the most effective and economic option in the replacement, repair and overhaul of components
- selected and used tools and materials appropriate to the task
- recognised and replaced deteriorated or worn parts
- disassembled and reassembled parts and components of machinery and equipment according to operation and maintenance manual and manufacturer specifications
- used and operated welding and thermal cutting equipment safely and effectively
- determined appropriate cutting and welding techniques
- disposed of wastes to minimise environmental impact
- recorded details of breakdowns, major repairs, overhauls and incidents in workshop record.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- assemblies and components of drive, electrical and hydraulic systems
- operational requirements of machinery and equipment
- detailed knowledge of mechanics and equipment operating systems
- use and storage of welding equipment
• maintenance manuals and manufacturer specifications for machinery and equipment operation relevant to repair tasks
• environmental impacts of machinery and equipment major repair and disposal of fuels, oils and other wastes
• workplace procedures applicable to health and safety in the workplace for major repair of machinery and equipment.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • machinery and equipment
  • repair and overhaul tools and equipment
  • welding equipment
  • safety equipment and personal protective equipment applicable to the task being undertaken
• specifications:
  • machinery and equipment operation and maintenance manual and manufacturer specifications
  • workplace procedures applicable to health and safety in the workplace and machinery maintenance
• relationships:
  • team members and supervisors
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented and supervised the range of maintenance programs covering property, machinery and equipment that are required to be performed in an agriculture/horticulture industry enterprise, and has demonstrated the following on at least one occasion:

- identified potential workplace hazards and implemented control measures
- planned, costed and scheduled maintenance requirements
- allocated resources
- monitored and controlled costs within workplace budget requirements
- dealt with contingencies and rescheduled maintenance where necessary
- established and monitored performance targets for maintenance team
- monitored and reported on performance of maintenance activities
- ensured property, machinery and equipment are maintained in clean and safe operational condition
- communicated effectively with work team, contractors and management
- monitored health and safety in the workplace and adherence to environmental procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of maintenance requirements with regard to property, machinery and equipment
- maintenance and servicing cycles for property, machinery and equipment
- maintenance planning, scheduling and budgeting
- warranty, insurance agreements and indemnity provisions applicable to property, machinery and equipment maintenance
workplace procedures applicable to health and safety in the workplace and property, machinery and equipment maintenance.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - warranties, insurance agreements, and indemnity provisions
  - property, machinery and equipment maintenance plans and schedules
  - property, machinery and equipment budgets
- specifications:
  - property maintenance schedule
  - machinery and equipment operation and maintenance manual and manufacturer specifications
  - workplace procedures applicable to health and safety in the workplace and property, machinery and equipment maintenance
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to coordinate, monitor and review the operation and maintenance of machinery and equipment for an enterprise.

This unit applies to individuals who apply specialised skills and knowledge to the management of machinery and equipment, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*
Skill | Description
--- | ---
Reading | • Identify and interpret information regarding maintenance requirements for machinery and equipment
Writing | • Document plans and prepare written reports for workplace personnel regarding machinery and equipment operation
Oral communication | • Initiate discussions with staff, contractors and suppliers, using clear language to communicate machinery and equipment maintenance schedules and workplace procedures  
• Use clear communications with management to discuss estimates, servicing costs and budget
Numeracy | • Estimate and calculate resources, machinery and equipment costs and servicing costs
Navigate the world of work | • Identify and describe own workplace requirements associated with own role and area of responsibility  
• Monitor self and others adherence to workplace requirements including safety requirements
Interact with others | • Use appropriate language and communication skills to disseminate information within work team  
• Provide instruction, supervision and mentoring to the work team

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that individual has coordinated, monitored and reviewed the operation and maintenance of machinery and equipment for an enterprise and has demonstrated the following on at least one occasion:

- identified potential workplace hazards and implemented safe working systems for machinery and equipment operation
- monitored machinery and equipment operations for a workplace
- evaluated machinery and equipment requirements for a workplace
- developed machinery and equipment operation and maintenance procedures according to health and safety guidelines, manufacturer specifications, workplace procedures and hazardous substances legislation
- scheduled, supervised and recorded the service and maintenance of machinery and equipment
- monitored machinery and equipment operations and maintenance requirements, and reviewed risk assessments periodically to ensure a safe operating environment
- communicated effectively with staff
- assessed staff capability in machinery maintenance and operation, and provided supervision and mentoring.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- servicing and maintaining machinery and equipment within area of responsibility
- methods of calculating the cost of machines and their contribution
- training and instruction techniques for directing the learning of staff
• hazard identification, risk assessment and procedures for developing risk controls
• workplace procedures, legislation and regulation requirements applicable to machinery and equipment maintenance and management
• environmental legislation applicable to maintenance of machinery and equipment, disposal of waste and hazardous substances
• workplace procedures applicable to health and safety in the workplace and machinery and equipment management.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - machinery and equipment maintenance plans and schedules
  - machinery and equipment budgets
- **specifications:**
  - machinery and equipment operation and maintenance manual and manufacturer specifications
  - workplace procedures and health and safety in the workplace procedures, legislation and regulation applicable to machinery and equipment maintenance and management
  - legislation and regulation requirements applicable to machinery and equipment management
  - environmental legislation applicable to maintenance of machinery and equipment, disposal of waste and hazardous substances
- **relationships:**
  - team members
- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to coordinate and manage services, maintenance and operational requirements of machinery and equipment to implement a machinery management system for an enterprise.

This unit applies to individuals who apply specialised skills and knowledge to implementing a machinery management system, who take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has established and managed a machinery management system for an enterprise and has demonstrated the following on at least one occasion:

- identified machinery and equipment requirements for a workplace
- identified potential workplace hazards and implemented safe working systems for machinery and equipment operation
- sourced, selected and managed machinery services provided by off-property suppliers
- managed machinery and equipment operation for a workplace
- managed machinery maintenance schedules for a workplace
- documented procedures for machinery and equipment operation and maintenance used in the workplace
- communicated effectively with staff
- identified staff training requirements for the safe operation of machinery and maintenance procedures
- developed and implemented training plans related to operation and maintenance of machinery in the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- total costs associated with the use of machinery
- maintenance requirements of machinery and equipment
- storage and housing requirements for machinery
- safe operating procedures for machinery
• systems for monitoring machinery maintenance and operation
• licensing requirements for the operation of machinery
• workplace procedures applicable to health and safety in the workplace and environmental legislation and machinery management systems
• principles of staff learning, development and training.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • machinery and equipment maintenance schedules
  • machinery and equipment budgets
• specifications:
  • machinery and equipment operation and maintenance manual and manufacturer specifications
  • workplace procedures and health and safety in the workplace procedures, legislation and regulation applicable to machinery and equipment management
  • licensing and legislation applicable to machinery operation
  • environmental legislation applicable to maintenance of machinery and equipment, disposal of waste and hazardous substances
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to calculate, review and analyse machinery options within an agricultural, horticultural or land management enterprise.

This unit applies to individuals who apply advanced skills and knowledge to analysing machinery options and take personal responsibility and exercise autonomy in undertaking complex work. They analyse information and exercise judgement to complete a range of advanced skilled activities. They work in contexts that are subject to change and adapt a range of fundamental principles accordingly.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has analysed machinery options for a workplace, including the associated costs and potential returns on capital investments, and has demonstrated the following on at least one occasion:

- compared the productivity and suitability of different types and brands of machinery
- identified and calculated total costs associated with machinery operations
- reviewed machinery requirements for a workplace and evaluated costed alternative options
- analysed the financial costs, tax impacts and investment risks for different types of machinery
- budgeted and incorporated benchmarks of energy efficiency for total running costs of machinery
- calculated potential returns from major capital investments in machinery over designated timeframes
- documented machinery usage analysis and preferred options
- reviewed the machinery options plan and analysis of options.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- benchmarking practices and procedures for determining machinery requirements, including energy efficiency, carbon footprint and water use efficiency
- capital budgeting techniques
- relevant taxation provisions relating to investment in machinery types including related technology and equipment
• risks associated with machinery investments
• analysis and planning processes required for machinery operation and location.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • machinery requirements and machinery options plan
  • machinery costs benchmark data
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare tools and equipment according to organisational requirements
- provide support for natural area conservation work
- stockpile waste materials for removal according to organisational requirements
- clean up site, tools and equipment
- conduct all work according to work health and safety and organisational requirements
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- tools and equipment used in conservation work
- revegetation techniques including planting, direct seeding, assisted natural regeneration and protection of remnant vegetation
- personal protective equipment required for conservation work
- biosecurity measures and sustainability practices required for own work

Assessment Conditions

Assessors must satisfy current standards for assessment.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- follow directions from supervisor to collect, extract, weigh and record seed
- apply safe work practices in collecting seed
- provide seed collecting support to others
- prepare, use and clean tools and equipment for seed collection
- conduct all work to organisational standards, environmental sustainability and biosecurity policies and procedures and work health and safety requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- applicable Commonwealth, State or Territory licensing required as they apply to own role
- range of processes for collecting, treating and storing seed
- organisational and site standards, requirements, policies and procedures for collecting seed
- seed collecting resources and equipment and procedures for their safe use, operation and maintenance
- recording and reporting requirements
- safety and environmental hazards associated with the collection, treatment and storage of seed
- range of seed species required for collection
- seed treatments and storage requirements for seed species collected
- types of diseases and pests likely to infect a range of seed species
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- establish the task and site with supervisor by referring to a revegetation plan
- carry out weed control and ground preparation as part of a team
- transport tools, plants and planting materials to the site
- carry out planting and regeneration techniques to organisational standards
- protect the restored area with plant guards and fencing
- remove any waste at the end of the job and clean site to pre-work condition
- carry out all work according to organisational standards and work health and safety requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- common names of native plants and animals present in restoration area
- common names of weeds and pest animals present in restoration area
- the importance and value of the local provenance species
- natural area restoration techniques
- enterprise requirements for natural area restoration works

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to maintain wildlife habitats and refuges to protect desirable animal species from predators.

All work is undertaken in accordance with statutory and local authority requirements.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- maintain wildlife habitats and refuges to protect desirable animal species from predators
- identify native species that are present in the wildlife refuge
- confirm the features required for a wildlife habitat refuge
- provide harbors and modify habitat where necessary to provide refuge for native species
- assess the risk of vertebrate pest predators within the refuge
- implement strategies to control vertebrate pests in a wildlife habitat as directed by supervisor
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- vertebrate predators present in local area
- harbours used by vertebrate pests
- wildlife habitats used by desirable animal species
- wildlife habitat modification techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare to carry out maintenance activities in a manner which minimises damaging impacts to site
- consult with stakeholders, including traditional owners about pending maintenance works
- carry out agreed maintenance works with minimal damaging impacts to environment
- select and apply protective structures, devices and signs
- clean up the site and remove surplus materials and waste
- report completion of activities to supervisor
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- environmental factors to be considered in maintenance works, including:
  - ecology in land based, coastal zones or marine parks
  - marine, shore and land based species
  - natural and human threats to places of natural significance
  - pollution sources and damage potential
  - basic protection and rehabilitation methods
  - enterprise procedures for reporting maintenance works
  - applicable State or Territory and Commonwealth legislation covering parks, conservation, environmental protection and heritage
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- collect and preserve biological samples as part of a monitoring program according to enterprise procedures
- establish the sampling purpose and requirements
- plan the collection
- prepare equipment and facilities to take biological samples
- carry out biological sampling as part of a monitoring program and according to enterprise procedures
- preserve and record samples as part of a monitoring program and forward for testing if required according to enterprise procedures
- record sampling data and observations according to enterprise procedures
- report outcomes of collection according to enterprise procedures and monitoring program
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of biological samples that may be included in the plan, including water, animal, plant samples
- industry biological sampling and preserving guidelines and protocols
- field procedures for biological sampling and preservation
- collecting equipment and methods
- preservation equipment and processes
• fauna and flora recognition relevant to sampling activities
• own role in complying with relevant environmental legislation

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- carry out all revegetation works according to the planting plan or supervisor instructions
- prepare the site for revegetation works
- conduct a site hazard identification and risk control assessment
- recognise and treat plant diseases on a revegetation site
- treat weeds and competing plants
- clean and maintain the revegetated site
- use, clean, maintain and store machinery and equipment according to manufacturer instructions
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- revegetation techniques
- ecosystems, provenance and habitat requirements
- factors affecting the timing and method of planting
- identification of pests and diseases of trees
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- nutrient requirements of a range of plant species and cultivars
- physiology of plant growth
- techniques for protecting and securing or anchoring trees and shrubs
- soils, nutrients and ameliorants applicable to revegetation program

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- obtain all necessary permissions and approvals to collect seed in a particular area, including operating in a particular jurisdiction, removal of native seed from a national park and permission from Elders or Custodians to work on Country
- use and maintain relevant material, equipment and resources efficiently and safely
- carry out seed collecting, cleaning and storage procedures efficiently and safely
- identify seed species relevant to plan
- follow organisational policies and procedures relevant to collecting seed
- distinguish between healthy and unhealthy parent plants for seed collection
- accurately record seed collection information and results
- apply work health and safety procedures for seed collection
- apply biosecurity measures in collection and storage of seeds
- apply sustainability practices in the context of own work

Knowledge Evidence

The candidate must explain:

- environmental protection requirements and procedures for minimising environmental impact
- native plant and seed characteristics of revegetation site
- types of diseases and pests likely to infect a range of seed species
- work health and safety requirements for seed collection methods
- procedures for collecting, storing and labelling seed
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to setup and use photographic equipment and techniques to take photographs in the field.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| 1. Prepare to take photographs | 1.1 Determine the purpose and intended use of photographs  
1.2 Prepare a photograph specification for subject, purpose and requirements  
1.3 Assess work health and safety hazards and risks for fieldwork |
### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

Performance criteria describe the performance needed to demonstrate achievement of the element.

- Photography and apply controls according to workplace procedures
  1.4 Ensure permits and releases have been obtained according to workplace procedures and copyright requirements

### 2. Identify and select appropriate equipment

- 2.1 Select camera suitability for the intended use
- 2.2 Select and prepare photographic equipment and accessories required to capture intended images
- 2.3 Transport and store photographic equipment and accessories to prevent damage

### 3. Take photos using correct methods and techniques

- 3.1 Implement safety controls and safe work practices
- 3.2 Select and set up camera in position to take photographs
- 3.3 Select camera settings to suit conditions and subject
- 3.4 Select the perspective, framing and sequencing of photographs according to the subject and purpose of photographs
- 3.5 Capture photograph and check image according to selected camera type to ensure fit for purpose
- 3.6 Use specialist photography techniques appropriate to subject, environment and purpose
- 3.7 Record field notes according to workplace procedures

### 4. Store and catalogue photographs

- 4.1 Transfer photographs from camera for storage according to workplace procedures
- 4.2 Maintain photograph records and filing system according to workplace procedures and copyright requirements

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have conducted photography fieldwork, including:

- determined the purpose of the photograph and prepared a specification
- ensured that appropriate permits and releases have been obtained for planned photographs
- assessed work health and safety risks and apply suitable controls
- selected, transported and stored the appropriate camera and equipment for specified photographs
- set up and adjusted camera settings to obtain planned photograph outcomes
- used at least 4 specialised photography techniques, including:
  - macro photography
  - photo points
  - evidentiary photography
- capture photographs and check against the photograph specification
- recorded field notes according to purpose and workplace procedures
- transferred photographs from camera, recorded and stored images according to workplace procedures and copyright requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic types of photography and photographic techniques applicable to field work
- legal requirements of copyright, privacy, permission, releases and environmental protection relating to taking photos for fieldwork
- work health and safety hazards, risks and controls
• purpose, setting up and operation of photographic equipment used in fieldwork
• principles of photography including aperture, shutter speed, depth of field, ISO, white balance, exposure compensation and dynamic range
• purpose and technique for specialist photography in land management, including:
  • identifying flora and fauna
  • vegetation communities and landscapes
  • photo-point surveys
  • photography for compliance evidentiary purposes
  • photography for publications
  • project monitoring and reporting
  • underwater
• media and methods used for documenting, labelling and storing photographs for analogue and digital photography.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in accessible field environment or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • camera, lens, equipment and media for capturing photographs
  • personal protective equipment
• specifications:
  • workplace documents including policies, procedures, processes, instructions and forms
  • use of manufacturer’s operating instructions for specific cameras and equipment
  • photographic specifications or briefs
  • copyright legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have read and interpreted maps, including:

- identified, selected and checked maps and equipment suitable for the navigation activity
- interpreted symbols, lines and features on maps to identify locations
- assessed and selected routes to a location using a map
- navigated and traversed a route of at least 2km long using maps and navigational aids
- identified current position by comparing nearby geographic features on maps
- identified impediments to efficient navigation and planned alternative routes
- interpreted map scale and estimated route distances
- marked location points on a map using map geographical features and Global Positioning Systems (GPS) data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of maps and map reading
- types of maps and their use
- symbols and representations of topographical and geographical information used on maps
- common scales used on maps and their purpose
- features and use of common navigational aids, including:
  - compass
  - map distance meter (analogue and digital)
  - GPS
• compasses and dividers
• rulers and protractors
• advantages and disadvantages of different map and chart types and sources of error
• techniques for determining routes and estimating distances.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in an outdoor setting suitable for map reading and navigational; purposes or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • maps and navigational charts
  • navigational aids for map reading
• specifications:
  • manufacturers’ instructions for navigation aids.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- supervise natural area restoration works
- identify hazards and ensure safe systems of work are in place
- scope the natural area restoration works required and compare to specifications of work on the contract
- develop a work program and source labour and equipment to undertake the work
- maintain the supply of materials and access to equipment to allow restoration work to proceed
- coordinate team to achieve optimum performance
- monitor the work program and make adjustments to task schedule where required
- monitor work to achieve specified outcomes and to minimise environmental disturbance
- inspect work to ensure specifications are met and environmental impact is minimised
- report project completion to management or client according to enterprise requirements
- monitor the application of appropriate sustainability practices in natural area restoration works
- monitor team to ensure work health and safety policies and procedures are followed
- monitor team to ensure biosecurity measures are applied

Knowledge Evidence

The candidate must demonstrate knowledge of:

- strategies and techniques to avoid negative environmental impacts
- work programming
- natural area restoration techniques to be used in the works
• environmental factors to be considered in restoration works, including:
  • the role of native plants and animals in the ecosystem of the area
  • vertebrate pests and options for control
  • impact of weeds and pests and appropriate control methods
  • ability to assess restoration potential of sites
  • basic plant and animal ecology
  • knowledge of different ecosystems
  • team supervision
  • strategies for monitoring work quality and progress
  • application of work health and safety and environmental legislation, codes of practice and enterprise procedures in natural area restoration works

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan the implementation of revegetation works
- investigate site access and establishment issues
- plan for environmental impacts of site work practices and minimise safety risks to workers and the public
- assess site for opportunities and constraints associated with implementation of revegetation works
- establish the purpose and client preferences for the site to be revegetated
- carry out a site visit and confirm any planning requirements
- develop a plan for the site, detailing the resources required and the program of works
- develop schedules for the establishment and maintenance phases of the project
- document the staged implementation plan
- incorporate seasonal factors and impacts in the staging strategy to allow for planting, supply and care, wet day access, machinery use, fire hazards and establishment
- include work health and safety practices in plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the role of revegetation works in the restoration of the environment
- the environmental issues associated with undertaking revegetation works, how to comply with legislation and ensure that the impact on the environment is minimal, including:
  - principles of ecology including specific native plant and animal relationships and habitat requirements
  - identification, propagation and establishment techniques of specific native plant species
• chemical, cultural and biological weed and feral animal control techniques
• soil conservation and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
• soil erosion control and stormwater management techniques
• maintenance requirements and practices for native plants prior to and after initial establishment
• growth habits and cultural requirements of specific native plants under a range of soil and environmental conditions
• site evaluation techniques including methods of analysing soils, waterways and their condition
• practical understanding of the advantages and disadvantages of options for revegetation procedures
• work health and safety hazards associated with undertaking revegetation works and the controls necessary to remove or minimise risks associated with them
• contract documents including specifications, plans of landscape works, services, supplies and surveyors documents

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage natural areas on a rural property.

This unit applies to management of programs on privately owned rural property, which are designed to enhance the sustainable ecological and economic capacity and outcomes of the land.

All work is undertaken in accordance with relevant national, State, Territory and local legislation and regulations.

This unit applies to individuals who manage projects and people and who provide and communicate solutions to a range of predictable and unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

1.4 Source and confirm accuracy of vegetation structure and conservation value data  
1.5 Obtain details of the presence of and threats from pests  
1.6 Assess ecological value of natural areas on property  
1.7 Compile documented evidence of physical impacts on area |
| 2. Prepare management plan | 2.1 Identify budgetary constraints for management plan  
2.2 Design boundary control appropriate to natural area protection guidelines  
2.3 Plan restoration and maintenance strategies in line with budget requirements  
2.4 Reduce or correct physical impacts using industry endorsed strategies  
2.5 Liaise with planning and specialist personnel and local authorities  
2.6 Develop habitat enhancement strategies  
2.7 Develop strategies to integrate management of natural areas into land use and production systems of property  
2.8 Incorporate biosecurity, environmental sustainability and work health and safety procedures into management plan  
2.9 Confirm management plan complies with relevant national, State, Territory and local legislation or regulations relating to environmental concerns  
2.10 Prepare and present management plan |
| 3. Implement management strategies | 3.1 Develop work schedules consistent with production requirements  
3.2 Coordinate people, materials and equipment to carry out work according to management strategy  
3.3 Schedule works in conjunction with operational personnel, taking seasonal weather conditions into consideration  
3.4 Obtain permits or licenses for natural area works  
3.5 Consult with neighbours, local authorities and others, as required, |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine features and characteristics of natural areas
- source topographical information and conservation data about a site
- assess the ecological value of natural areas on a property
- develop and implement management strategies in accordance with organisational guidelines and industry best practice
- consult with neighbouring landholders, local authorities and interest groups
- coordinate team to carry out work in natural areas according to management strategies and within statutory requirements
- develop and implement restoration and maintenance management strategies that meet relevant national, State, Territory and local legislation or regulations relating to environmental concerns
- ensure management plans incorporate work health and safety and biosecurity legislative requirements and appropriate sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- natural area restoration and management principles
- advantages and limitations of sustainable land management strategies, including environment sustainability as a 'whole-system' approach
- property planning and enterprise budgeting systems and procedures
• environmental issues especially in regard to water catchments, air, noise, ecosystems, habitat and waste minimisation that impact on management plan
• relevant State/Territory legislative requirements related to environmental protection and control standards.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to plan and conduct biological surveys and produce a biological survey report, according to client requirements and biological components to be surveyed.

This unit applies to land restoration managers who provide and communicate solutions to a range of predictable and unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan, conduct and report on biological surveys according to client requirements, enterprise policy and industry best practice
- identify the scope, objectives and constraints for a biological survey according to client requirements, the biological components to be surveyed and enterprise policy
- assess the availability of current data and determine data collection and processing needs
- identify biological indicators that are repeatable and statistically representative
- develop a survey plan that documents survey methods and indicators
- schedule survey activities and establish access to the site
- conduct a biological survey with data collection staged and recorded according to the survey plan
- produce a biological survey report with detailed analysis and conclusion, including a description and assessment of the specified biological components, in agreed timeframes to client and enterprise standards
- design and conduct biological survey in accordance with work health and safety and environmental legislative requirements
- ensure survey plan and activities complies with Animal Welfare Codes of Practice
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- biological classification systems
Assessment Requirements for AHCNAR502 Conduct biological surveys

- plant and animal recognition relevant to survey area
- environmental factors that impact on vegetation and animal populations
- requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- ecological principles and terminology
- energy flows and trophic structures of communities
- legal requirements relating to the protection and clearance of vegetation and animal species
- assessment, reporting and client liaison procedures and best practice techniques
- enterprise work team management guidelines
- work health and safety legislative requirements and Codes of Practice
- hazard identification, assessment and control measures

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- design a natural area restoration project according to client specifications and workplace and legislative requirements
- conduct an on site analysis to assess potential for regeneration and determine constraints, and use information to inform the design process
- establish the project purpose, scope and extent, and costs and benefits
- prepare a base plan incorporating landforms, soils, fauna and flora and habitat
- determine options for natural area restoration and incorporate into a concept design
- produce a final design with supporting documentation, including costings, planning, notes and specifications to give an interpretation of the plan to establish the quality and standards of the works and the responsibilities of the contractor during the implementation
- use professional graphic formats to present concept design

Knowledge Evidence

The candidate must demonstrate knowledge of:

- design process
- construction principles and practices
- graphical presentation and drafting techniques
- recognition of plant species and a range of ecological communities
- natural regeneration potential and limits
- ecological restoration theory and techniques
- drafting techniques
- developing and managing budgets
- calculations of materials, labour, machinery and equipment
- environmental implications of restoration works
- legislative requirements for natural area restoration works

**Assessment Conditions**

Assessor must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- manage a natural area restoration program
- carry out a detailed site assessment for restoration
- select appropriate vegetation restoration techniques for the program
- plan a natural area restoration program effectively
- ensure program complies with relevant legislative and program requirements
- calculate staff and resources required
- supervise staff to carry out natural area restoration works according to the program
- review natural area restoration program against issues identified in the management plan for the area
- monitor staff to ensure work health and safety policies and procedures are followed

Knowledge Evidence

The candidate must demonstrate knowledge of:

- plant species and community recognition
- natural regeneration potential and limits
- ecological restoration theory and techniques
- factors affecting the timing and method of plant establishment
- identification of plant and animal threats to treated areas
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- soils and nutrients, plant selection and culture
- calculations for materials

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop and implement sustainable land use strategies
- identify the threats to sustainability for an area or region
- manage water resources and riparian zones
- manage vegetation and plant succession for an area
- manage the health and sustainability of soils
- incorporate sustainability principles into land use practices
- apply work health and safety practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the role of biodiversity in farming systems
- sustainable land and water use principles and practices applicable to the region
- sustainable soil management
- soil appraisal and remediation strategies
- environmental controls and codes of practice applicable to the business and to the improvement works
- relevant legislation and regulations relating to soil and water degradation issues, chemical use and structural works
- relevant work health and safety and environmental protection legislation, regulations and codes of practice
- causes of land degradation
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion established an Australian native bee colony, including:

- recognised and selected appropriate Australian native stingless bees (ANSB) for domestication and prepared a strategy for managing the colony for a defined purpose
- identified a suitable structure to house an ANSB colony and acquired components
- used tools and equipment, including personal protective equipment (PPE), to safely prepare a structure to house an ANSB colony
- procured a population of ANSBs and established and located the colony in a suitable environment
- monitored the colony conditions, pests, diseases and disorders during establishment according to colony workplace and biosecurity procedures
- monitored, manipulated and assessed the colony to achieve strategic outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of Australian native bees and their basic biology and nesting habits for a given locality, including:
  - stinging
  - stingless
  - social
  - solitary
- ANSB and their attributes suitable for "domestication", including:
  - colony forming
  - health and safety risks
  - suitable environmental conditions
• role in pollination
• commercial and non-commercial outcomes for keeping ANSBs, including:
  • pollination and pollination services
  • honey production
  • education
  • conservation
  • pets
• developing, monitoring and assessing basic strategies for keeping ANSBs
• equipment and resources required for keeping ANSBs including beekeeping tools, use and maintenance
• structures to house Australian native stingless bees, including:
  • natural habitats
  • hives and hive designs
• health, hygiene and biosecurity considerations
• health and safety hazards and risks associated with handling and working with ANSB’s, including:
  • PPE
  • public safety
  • lifting and handling
  • safe use of tools
• methods used for procuring and establishing ANSBs, including:
  • legislative requirements when collecting wild populations
  • transfer techniques for wild colony
  • budding
  • splitting
  • trapping
  • purchasing established colony
• locating colonies and establishing native bee meliponary, including:
  • locality/location/region/
  • weather and temperature
  • orientation
  • access to food and water
  • proximity of colonies to each other and competition
• pests diseases and disorders of Australian native stingless bees and their control including biosecurity
• monitoring procedures and signs of a health or declining population
• ANSB manipulation techniques, including:
  • inspections
  • accessing honey
  • splitting.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- Physical conditions:
  - Skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions.

- Resources, equipment and materials:
  - Australian native stingless bee colony.
  - Tools and equipment for assembling and working with Australian native stingless bee colonies.
  - PPE.

- Specifications:
  - Workplace procedures and specifications related to establishing Australian native stingless bee colonies.
  - Manufacturer’s instructions for equipment and machinery to maintain structures to house bee colonies.
  - Access to legislation and codes of practice related to Australian native stingless bee colonies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to plan and implement a biosecurity program.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication, however, where animals are involved in training and assessment, the AHC Training Package has the requirements for animals to be handled humanely to minimise stress and discomfort.

</tbody>
</table>
| the use of physical barriers and hygiene practices | cross the controlled access perimeter into the controlled access zone  
1.3 Restrict entry of workers and equipment into the controlled access zone by transferring inputs, waste and products through access points on the controlled access perimeter  
1.4 Maintain restricted access perimeters and restricted zones  
1.5 Prioritise access to restricted zones on the risks and potential impacts of infection being carried into the zone |
| 2. Implement biosecurity procedures to manage visitors | 2.1 Define the risk level of visitors by gathering information before the visit and during sign in  
2.2 Establish procedures for higher risk visitors  
2.3 Maintain clear signage to direct traffic and discourage unauthorised visitors  
2.4 Communicate the requirements for entry to visitors before they arrive on site  
2.5 Keep visitor parking separate to prevent staff vehicle or traffic way contamination  
2.6 Develop a questionnaire to be completed and signed by visitors to establish their risk levels  
2.7 Develop and post criteria for banning visitors including those who fail to make pre-arrangements  
2.8 Maintain visitor log books to allow traceability of any subsequent disease issues |
| 3. Apply sanitation practices and personnel movements to reduce the risk of disease | 3.1 Monitor and adjust drainage to ensure water doesn't collect and stand  
3.2 Implement and monitor hygiene and clothing procedures for entry to the site  
3.3 Establish and maintain well-defined transition zones for entering restricted zones  
3.4 Select disinfectants that are appropriate for surfaces and water quality  
3.5 Develop and implement standard operating procedures for cleaning and sanitising facilities, tools and equipment  
3.6 Ensure staff movements and animal exposures are from most susceptible animals to least susceptible  
3.7 Ensure boot dips are used correctly and recharged frequently |
| 4. Implement an integrated strategy for pests to reduce the risk of disease | 4.1 Maintain facilities to eliminate potential points of entry for pests  
4.2 Screen all inputs such as feed, fertiliser and animals to reduce the likelihood of pests being introduced  
4.3 Monitor pest numbers through the use of counts or other indicators |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- manage and maintain quarantine
- implement and monitor quarantine area sanitation
- disinfect facilities
- plan and implement pest control strategies
- establish a biosecure area
- manage visitor access and the storage and movement of inputs and outputs for biosecurity
- develop sanitation procedures to reduce the risk of disease
- apply integrated pest management practices to control pests in a biosecure area
- ensure staff are aware of and follow biosecurity procedures
- review biosecurity status based on records system

Knowledge Evidence

The candidate must demonstrate knowledge of:
- diseases and pests that pose a threat and their likely causes of spread
- principles of risk management applied to biosecurity
- requirements for personal hygiene and quarantine procedures for site entry
- principles of disinfecting a site
- safe use of chemicals and cleaning agents
- integrated pest management and rotation of chemical pest controls
- cleaning and disinfecting procedures
- work health and safety, environmental and biosecurity legislation, codes of practice and enterprise procedures
Assessment Requirements for AHCNRM401 Plan and implement a biosecurity program

- record keeping requirements
- reporting incidents or issues
- safety practices related to use of equipment and materials used in cleaning and pest control
- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice, where animals are affected by biosecurity plans

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- develop, implement and evaluate a rehabilitation strategy for a natural area in a coastal zone
- assess the condition of a natural area within a coastal zone and identify threats through review of existing information, site surveys, consultation and expert advice
- determine management options and facilitate the development of a strategy and action plan through analysis of information collected, stakeholder consultation and advice from management authority
- monitor and evaluate the implementation of the strategy
- prepare reports to enterprise and authority standards
- apply work health and safety practices in the context of own work and in managing volunteers and undertaking rehabilitation works
- incorporate sustainability practices into rehabilitation strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- coastal zone topographical features
- ecological principles and environmental assessment techniques
- coastal zone information resources including on native flora and fauna identification, habitat requirements, vulnerable and endangered species
- management and rehabilitation techniques and strategies for application within the coastal zone
- environmental degradation processes
- management strategies for cultural and heritage sites
- natural resource management planning and issues
- relevant legislative and regulatory requirements

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to establish requirements for monitoring water quality and developing a program to monitor water quality in a given site. It includes carrying out water monitoring activities and evaluating program effectiveness.

This unit applies to those working in the role of coordinator or manager in an organisation, group or enterprise concerned with gathering information for land or water management purposes. The role is likely to include delegation of implementation tasks and may include consultation with specialists such as hydrologists and hydrographers.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</table>
### Element | Performance criteria
--- | ---
**1.** Develop monitoring program  | 1.3 Determine water quality indicators to be measured, frequency and volume of sampling required to meet scope, objectives and constraints of project  
1.4 Establish procedures for data collection, processing and reporting that are consistent with the scope, objectives and constraints of the program and legislative requirements  
1.5 Seek estimates of costs involved and sources of funds for the program  
1.6 Identify and assess work health and safety hazards associated with conducting the sampling program  
1.7 Provide a survey strategy that reflects project requirements, scope, objectives and constraints for discussion and approval

**2.** Undertake a site analysis  | 2.1 Identify and record physical and biological features of the site  
2.2 Identify and record resource management factors contributing to water quality  
2.3 Survey biota, as required, to meet the scope and objectives of the program  
2.4 Identify and evaluate sampling points for safety, accessibility and opportunities for repeatable data collection

**3.** Plan monitoring program  | 3.1 Select suitable sites for repeatable monitoring to obtain representative samples  
3.2 Source laboratory and field equipment for the monitoring program and determine costs  
3.3 Confirm suitability and availability of laboratory and field equipment  
3.4 Confirm surveyor access to site for the duration of the monitoring program  
3.5 Document work health and safety controls and emergency procedures for the program in line with organisational policies  
3.6 Document environmental sustainability policies and procedures and biosecurity measures  
3.7 Document sampling techniques to be used  
3.8 Document methods of data collection, monitoring and field techniques for field operators  
3.9 Present survey schedules and procedures to appropriate personnel and the client for approval

**4.** Monitor water quality  | 4.1 Carry out water quality monitoring tasks in line with plan  
4.2 Transport, store and treat samples with regard to temperature, maximum holding periods and other variables  
4.3 Monitor surveying process for accuracy, compliance with the

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must develop a water quality monitoring program in accordance with legislative and organisational policies. The candidate must also undertake the water quality monitoring.

The candidate must provide evidence that they can:

- establish scope, objectives and constraints and water quality monitoring requirements of the project through consultation with client
- undertake research and a site analysis to select suitable monitoring sites
- develop the monitoring plan in accordance with project brief and to meet client needs
- monitor water quality in accordance with project plan
- evaluate the program using data analysis, consultation with client and assessment against program objectives
- collect, transport and treat samples in accordance with organisational guidelines and policies
- analyse data according to scientific standards and organisational policies and guidelines
- apply work health and safety practices in the context of own work
- incorporate biosecurity into monitoring program
- apply sustainability practices in monitoring program
- draw conclusions based on appropriate evidence and reasoned arguments
- produce written reports to enterprise standards

Knowledge Evidence

The candidate must demonstrate knowledge of:
Assessment Requirements for AHCNRM502 Develop a water quality monitoring program

- water quality principles and factors including:
- hydrological cycle
- aquatic ecology
- water quality indicators
- chemical principles
- catchment and coastal management issues contributing to surface and groundwater quality
- standard techniques to assess ecological health of aquatic sites
- mathematical sampling techniques
- analytical techniques appropriate to water quality monitoring
- data storage and management
- accepted scientific processes and standards for data collection and analysis
- statistical analysis
- hazard identification, assessment and control

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must demonstrate their ability to support the implementation of waterways improvement plans using a diverse range of strategies.

The candidate must provide evidence that they can:

- apply appropriate communication techniques to collect information on needs, inform funding opportunities, develop plans and submissions, and educate and resolve conflict
- identify and apply a diverse range of strategies to achieve the priorities and related targets from catchment plans
- liaise with, and give feedback to, a range of stakeholders to solve conflicts as they arise
- evaluate the progress towards achievement of priorities and targets
- prioritise projects based on regional targets and funding provisions
- determine funding requirements and identify enterprise funding mechanisms
- support the development of plans including establishing priorities and targets, strategies and programs, communication procedures, monitoring requirements and strategies and reporting processes
- identify aims, risks, outcomes and stages on the project in the project planning
- determine evaluation and reporting methods in the planning
- develop reports for stakeholders and for future planning purposes according to organisational requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental legislation
• obligations of landholders
• contemporary regional catchment strategies
• principles of community capacity building and engagement
• relevant policies across all levels of government and within the specific region, including those under catchment plans
• waterways management and improvement techniques, including:
  • fencing
  • revegetation
  • habitat restoration
  • pest plant control

**Assessment Conditions**
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to interpret catchment hydrology to report on water quantity and quality within a catchment.

This unit applies to a person employed in a technical capacity to collect, collate, analyse and report on hydrological data for use in floodplain management, asset protection and water allocation. This person will analyse information and exercise judgement to complete a range of skilled activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Natural Resource Management (NRM)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and collate existing hydrological information
- collect and analyse hydrological data using appropriate sustainable practices
- collect and assess a wide range of hydrological data
- determine the movement of water within a catchment from existing data
- assess processes within catchment to evaluate non-sustainable practices in catchments
- report on catchment hydrological behaviour to organisational requirements
- apply work health and safety practices to the collection and testing of water
- apply an awareness of biosecurity in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of factors used for analysis of water catchment area:

- hydrological cycles
- chemical and physical properties of water
- rock and soil types including weathering processes
- fluvial geomorphology:
  - drainage basin function
  - factors influencing stream flow rates
  - interactions between ground and surface water
  - stream hierarchy and ordering
  - human impacts on surface water quality and quantity
- hydrogeology:
Assessment Requirements for AHCNRM504 Interpret and report on catchment hydrology

- aquifer types and properties
- aquifer discharge and recharge
- rates of water movement through aquifers
- human impacts on groundwater quality and quantity
- sustainable use of ground and surface water:
  - uses of water in catchments
  - water allocation
  - policies and strategies determining water use

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- provide technical advice on sustainable catchment management to land managers in a catchment area or region in accordance with State and regional legislation, regulations and strategies and stakeholder requirements
- review State and regional legislation, regulations and strategies relevant to the responsibilities of land managers
- analyse the issues, processes and techniques in sustainable land management and assess land management practices in relation to the long-term objectives of a catchment or region
- source and communicate advice on sustainable land management practices to a variety of land managers in a knowledgeable and non-threatening manner
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- geology:
  - rock types
  - weathering
  - soil formation and soil types
- ecological processes:
  - energy flow through ecological systems
  - matter flow through ecological systems
  - nutrient cycling
- land degradation processes and impacts:
Assessment Requirements for AHCNRM505 Provide technical advice on sustainable catchment management

- soil compaction
- erosion
- tree decline
- pest plant and animal infestations
- eutrophication
- acidification
- salinity
- fertility decline
- catchment management principles:
  - catchment planning priorities and programs
  - roles and responsibilities of land users in catchments
- biodiversity:
  - basic plant identification techniques
  - animal identification
  - ecological vegetation communities
  - whole property planning principles:
    - energy flows
    - sustainable water management
    - land capability

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply effective consultation techniques to ensure stakeholder contribution to project priorities
- research and determine the environmental conditions of project worksites in relation to the wider catchment
- undertake consultation with stakeholders
- work with and support project partners during project implementation
- develop waterway monitoring program that includes selecting representative water quality and macro invertebrate monitoring sites
- monitor project to ensure it is meeting regulatory requirements
- evaluate the impact of projects on sustainable catchment management
- determine the physical and human resources necessary for project success
- determine suitable monitoring procedures that will provide sufficient information for evaluation and review of the project
- evaluate the environmental benefits of the works program using existing techniques and reporting guidelines
- complete reporting requirements to enterprise standards and to meet the needs of stakeholders, partners and investors

Knowledge Evidence

The candidate must demonstrate knowledge of physical characteristics and indicators of health of waterways and catchments, including:

- wetland and floodplain processes and function:
  - factors that influence stream flow
Assessment Requirements for AHCNRM506 Plan and monitor works projects in catchments and waterways

- stream dynamics
- stream formation
- eutrophication
- impacts of land use on waterways
- indicators of catchment health:
  - pest plant and animal infestations
  - vegetation decline
  - soil erosion
  - stream bank erosion
  - water quality decline
- water quality parameters:
  - physical and chemical properties of water
  - biological indicators of water quality

The candidate must demonstrate knowledge of:

- project planning processes
- permits and licences required for on-ground works

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine mechanisms and criteria for reviewing management plans and strategies
- analyse statistical trends to determine changes occurring in land management plans and strategies beyond normal variations
- analyse existing management plans and strategies
- modify management plans and strategies using clear and concise language in a standardised format
- implement modified management plans and strategies within appropriate timeframes, using approved communication and education strategies
- undertake internal and external consultation appropriate to the review process
- undertake training needs analysis for staff on implementing new management plans and strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- mechanisms and criteria for reviewing management plans and strategies
- trends and threats both natural and from human activity, to places of natural significance, including:
  - ecosystems including the interrelationship of geophysical, hydrological, biological and meteorological factors
  - normal and abnormal life cycles of the biodiversity
  - pollution sources and damage potential
- legislation under which enterprise operates
Assessment Conditions
Assessor must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop a monitoring, evaluation and reporting program for an organisation to measure progress against targets and reporting responsibilities.

It includes the development of evaluation strategies to inform implementation of a natural resource management Monitoring, Evaluation, Reporting and Improvement framework (MERI Framework), used to manage human, social, natural, physical and financial assets.

This unit applies to individuals who analyse information and exercise judgement to complete a range of highly skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

<td>achievement of the element.</td>
</tr>
</tbody>
</table>

1. **Define terms of reference, scope and evaluation context**

1.1 Identify and clarify the outcomes sought, who will use the information and for what purpose
1.2 Identify the key stakeholders who will be consulted
1.3 Select evaluation and monitoring methods which are suitable to the size and significance of the program, and the terms of reference
1.4 Complete a review of existing evidence and literature relevant to the proposed evaluation
1.5 Develop an evaluation methodology that supports broader management targets, natural resource management standards, targets and outputs

2. **Identify the key stages and outcomes of the program**

2.1 Define key stages, milestones and timeframe
2.2 Communicate with clients and stakeholders the details of the program and delivery timeline for endorsement
2.3 Identify potential risks, including work health and safety risks, which may impact on the proposed program
2.4 Refine targets and objectives as required

3. **Define reporting and record keeping requirements for data management**

3.1 Identify data collection, management and reporting requirements to meet the objectives of the program
3.2 Identify existing data sets that may be accessed for the program
3.3 Design data collection protocols and methodology so relevant standards and required formats are met
3.4 Identify how data will be stored to ensure security and appropriate access taking into account required formats
3.5 Identify the information products required taking into account client and stakeholder needs, and use in decision making
3.6 Produce reports to suit program audience types

4. **Identify the resources needed to implement the program**

4.1 Identify the personnel and skill sets required to implement the monitoring and evaluation program
4.2 Assess the material resources required to undertake the work

5. **Design and manage the monitoring, evaluation and reporting program plan**

5.1 Document the program plan to enterprise requirements
5.2 Outline reporting requirements for the program
5.3 Incorporate work health and safety, environmental sustainability and biosecurity policies and procedures into the plan
Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- develop a monitoring, evaluation and reporting program for an organisation in accordance with the MERI Framework
- scope a project
- define terms of reference and context
- identify key stages and outcomes of the project
- assess and define data management requirements according to project requirements and objectives
- identify the resources needed to undertake the program, including financial, equipment, material and human resources
- develop data collection, management and analysis methodology and procedures
- design and manage a monitoring, evaluation and reporting program
- produce reports and planning documents to organisational standards
- review existing data and information appropriate to the plan, according to organisational requirements
- incorporate work health and safety practices, policies and procedures into the program

Knowledge Evidence

The candidate must demonstrate knowledge of:
- program design considerations, including equality, technical validation and ethics
- quantitative and qualitative methods for monitoring and evaluation
- data management techniques
- sources of existing evidence and literature relevant to the program
- the MERI framework data collection protocols
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- implement a monitoring and evaluation strategy
- apply monitoring and evaluation methods to ensure integrity and validity of data
- collect and manage data related to the monitoring program according to enterprise procedures
- analyse complex information related to the monitoring program according to enterprise requirements
- prepare reports and information products to enterprise standards and to meet audience needs
- review the monitoring and evaluation process to contribute to continuous improvement

Knowledge Evidence

The candidate must demonstrate knowledge of:

- quantitative and qualitative methods for monitoring and evaluation
- data management processes and systems
- policy and program management processes
- adaptive management and review cycles
- MERI framework

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to provide support for nursery work.

This unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy within established and well known parameters. They identify and seek help with simple problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare tools, equipment, media and plants
- measure media components
- disinfect work areas
- operate potting machinery (if required)
- pot up propagated plants
- handle plants with care
- treat common problems of plants
- use and maintain tools

Knowledge Evidence
The candidate must demonstrate knowledge of:
- the principles and practices of potting up plants
  - appropriate use of personal protective equipment
  - basic plant physiology
  - common problems in a controlled environment
  - enterprise plants and their characteristics
  - hygiene and quality control
  - methods of disposing of waste
  - properties of relevant potting media

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and use appropriate tools and equipment
- maintain nursery hygiene
- Service, repair or replace basic operational irrigation system components and user serviceable parts
- maintain nursery plants as instructed
- check irrigation system performance
- monitor environmental controls
- recognise common problems in nursery plants
- repair or replace user serviceable irrigation components
- record workplace information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of nursery plant care
  - botany and plant physiology as applies to maintaining nursery plants
  - common problems that may occur with containerised plants in a controlled environment and their treatment
  - daily water requirements of nursery plants
  - hygiene and quality control when tending nursery plants
  - principles and operations of irrigation systems used in nurseries, in basic terms
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for plant propagation according to instructions
- collect propagation material as appropriate to species
- apply pre-treatments
- apply water and nutrients
- carry out a variety of propagation techniques
- collect propagation material
- maintain environmental parameters and temperature controls
- minimise damage to and maximise viability of propagated material
- maintain records of activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of propagation
  - botany and plant physiology as it applies to propagation
  - common problems that occur while performing propagation activities
  - enterprise hygiene requirements
  - enterprise requirements for handling and disposal of nursery wastes
  - maintenance requirements of tools and equipment used for propagation
  - plant nutrition
  - propagation methods required for a range of plant species
  - quality specifications/characteristics of a range of parent plants and propagation materials
• record keeping relevant to the work function

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to maintain and care for indoor plants.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Prepare for indoor plant maintenance activities according to instructions
- Inspect plant quality
- Measure quantities and calculate application rates
- Operate, adjust and maintain watering system
- Use a light meter
- Monitor and maintain health of indoor plants
- Maintain indoor plant environment
- Record workplace information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- The principles and practices of indoor plant maintenance
  - Acclimatisation techniques for indoor plants
  - Botany and physiology of indoor plants
  - Common problems that may occur with indoor plants and their treatment
  - Growth requirements of indoor plants
  - Identification and characteristics of common indoor plants and their culture
  - Light and moisture tolerance and intolerance for common indoor plant species
  - Methods of disposing of waste to minimise damage to the environment
  - Operations and maintenance of a range of irrigation and subirrigation systems used for watering indoor plants and displays
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for nursery plant maintenance activities
- calculate daily water needs
- implement a range of plant maintenance activities
- monitor plant health
- operate irrigation systems
- recognise stages of plant growth
- record workplace information
- repair or replace user serviceable irrigation components

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of nursery plant maintenance
  - botany and plant physiology as it applies to plant maintenance
  - characteristics of various types of potting media
  - common problems that occur with nursery plants and their treatment
  - effect of different pruning and intervention methods
  - effects of environmental parameters on plant growth
  - factors affecting the growth of nursery plants
  - methods of calculating daily water needs
  - optimum growing conditions for a range of plants in a nursery
  - principles and operations of a range of irrigation systems used in nurseries
• processes for modifying environmental parameters
• relationship between plant water needs and environmental parameters
• symptoms of unhealthy plants
• treatments required by plants at different stages and environmental parameters

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- evaluate product quality
- interpret order forms
- maintain product records
- meet client service requirements
- monitor and carry out product dispatch and delivery processes
- select product for order requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of receiving and despatching nursery products
  - best practice guidelines for nursery hygiene
  - common sources of cross contamination from transport vehicles
  - environmental controls necessary for transporting plants
  - quality standards for the packing, packaging and labelling of products
  - quarantine policies and relevant quarantine legislation
  - stock control procedures

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess site conditions, requirements and constraints impacting plantscaping
- select plants that meet the requirements of the display and chosen site
- determine spatial measurements of a plantscape
- identify and schedule materials, equipment and personnel to install a plant display
- install plants securely to ensure accessibility for maintenance and ascetic requirements
- maintain plants to meet their water, light and fertiliser requirements
- detect and control pests and diseases

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of installing and maintaining plantscapes
  - acclimatisation techniques for plants
  - characteristics and attributes of a range of plants used for plantscaping
  - commonly occurring problems with plantscaping
  - light and moisture tolerance/intolerance for common plant species
  - options for remedial action
  - photosynthesis, respiration, nutrient uptake and growth rate for plants
  - plant growth requirements

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- calculate orders, sales figures, ratios, proportions and application rates
- communicate with clients, work team members and supervisors
- coordinate own activities to deliver and maintain plant orders
- estimate treatment and product requirements, material sizes and quantities
- interpret and apply delivery schedules and marketing plans
- maintain mobile and remote displays and samples
- use reporting and work procedure documents

Knowledge Evidence

The candidate must demonstrate knowledge of:
- the principles and practices of delivering and promoting plants
  - botanical, common and trade names, growth habits, and presentation requirements for display of plants
  - industry labelling standards and methods
  - practical understanding of the range of plants available from the enterprise
  - standards and methods for the preparation and dispatch of promotional literature and lists for seasonal promotions
  - standards and methods of packaging, and delivery of plant orders, samples and displays
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- estimate treatment and plant requirements, sizes and quantities and calculating ratios, proportions and application rates
- organise and co-ordinate materials and equipment
- implement plant treatments
- meet quality standards for plant health and aesthetic appearance

Knowledge Evidence

The candidate must demonstrate knowledge of:
- the principles and practices of specialised plant preparation
  - aftercare requirements of treated plants
  - characteristics of a range of potted plants commonly treated for special aesthetic purposes
  - different treatments which are applied to specialised plants to achieve desired aesthetic appearance
  - nursery industry best practice
  - optimum timing of treatments

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare the growing environment to suit species and propagation method
- recognise and rectify problems and anomalies with parent plants, propagation material, propagation media, equipment and materials
- select appropriate propagation material
- handle potting mixes and propagation materials in a safe manner
- apply propagation techniques as appropriate to plants being propagated
- Provide aftercare to suit media conditions, plant requirements and propagation techniques

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices for implementing a propagation plan
  - aftercare requirements for a range of propagated plants
  - problems that may occur performing propagation activities and preventative action
  - enterprise hygiene standards required for propagation activities
  - preferred types of propagation media for different species
  - propagation techniques required for a range of plants
  - quality specifications for parent plants and propagation materials
  - testing methods applied to propagation media

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify and assess factors that could impact the growing-on program
- identify labour, materials and activities involved in the growing-on program
- conduct research about production requirements, growth conditions and marketing implications of a growing-on program
- negotiate, budget and document plans
- communicate plans and schedules to staff
- oversee and monitor the growing-on program

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of planning a growing on program
  - application techniques for chemical and non-chemical intervention or treatments
  - chemical, cultural and biological pest, weed and disease control techniques
  - common problems of growing-on and preventative actions that may apply
  - enterprise hygiene standards required for growing-on activities
  - enterprise quality standards of nursery plant production
  - optimal growing requirements of nursery plants
  - preferred types of propagation media for different species
  - processes and techniques for preparing, costing and documenting plans for and scheduling growing-on activities
  - testing methods applied to propagation media
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply principles of organic agriculture to daily work routines
- follow supervisor instructions
- follow work health and safety procedures and where appropriate, food safety procedures
- report any variations from required standards or procedures to supervisor
- apply enterprise quarantine and biosecurity protocols

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of organic production
- organic procedures and recording requirements
- safe work practices relevant to the tasks being undertaken, including safe use of tools and equipment
- food safety requirements for enterprise's activities where appropriate
- work health and safety, biosecurity and environmental protection legislation and enterprise procedures

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage a farming system according to the principles of, and using the practices of, biodynamic agriculture.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to farmers who manage according to the principles of biodynamic agriculture. Work is likely to be done independently and according to the requirements of the National Standard for Organic and Biodynamic Produce.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| 1. Prepare a plan for a biodynamic farming enterprise | 1.1 Work in an environmentally appropriate manner and according to work health and safety requirements and enterprise guidelines  
1.2 Identify requirements for biodynamic certification  
1.3 Incorporate personal, ecological and financial goals for a biodynamic enterprise into an enterprise plan  
1.4 Develop marketing plan for biodynamic produce which maintains product quality and integrity  
1.5 Trial research findings for biodynamic agriculture and incorporate into plans  
1.6 Develop and implement biodynamic production plan based on biodynamic principles and farm strategies |
| 2. Make and apply biodynamic field spray preparations | 2.1 Make and store horn manure (500), horn silica (501) and horn clay preparations  
2.2 Stir preparations by creating vortex and chaos  
2.3 Select equipment for application of biodynamic preparations  
2.4 Calibrate and adjust equipment for suitable application rate  
2.5 Apply preparations according to biodynamic principles |
| 3. Use biodynamic compost preparations, composts and liquid brews | 3.1 Use and store biodynamic compost preparations according to biodynamic principles  
3.2 Identify materials and mineral inputs for compost from farm production plan and soil analysis  
3.3 Build compost heap  
3.4 Apply biodynamic preparations to compost according to biodynamic principles  
3.5 Monitor aeration, moisture and temperature of compost heap  
3.6 Apply compost to enhance natural cycles |
| 4. Apply biodynamic principles and techniques to enhance soil and plant health | 4.1 Plan planting, harvest and pruning times according to moon rhythms and planetary patterns  
4.2 Optimise soil and plant health using biodynamic preparations, cover crops, crop rotation, mulching and composting and through application of farm-based fertility products  
4.3 Identify weeds and insect pests in enterprise  
4.4 Evaluate options for managing weeds and insects that consider natural predators, life cycles, cultural practices, soil health and the plant community |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply biodynamic principles
- develop and implement biodynamic production plan
- make and apply biodynamic preparations and compost
- enhance soil and plant health
- integrate and manage animals in a biodynamic enterprise
- apply enterprise work health and safety policies and guidelines
- implement enterprise animal welfare policies
- implement enterprise environmental sustainability practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- animal health
- biodynamic preparations and their role in soil food web and atmosphere
- biodiversity, shelter belts, birds and native bush on biodynamic farm
- calcium-clay-silica polarities
- crop and animal rotation systems
- cultivation methods
- etheric and astral forces and how they relate to biodynamics
- experiments and testing methods such as chromatography and sensitive crystallisation
- green manuring
- management of insects and birds
• paradigms of various farming systems: biodynamics, organics and permaculture, and holistic management
• peppering for animals and insects
• planting calendar
• purpose of various herbs and organs used for making biodynamic preparations
• relationship between soil, plant, animal and human health
• research in biodynamics principles and practices
• rhythms and cycles of planets and moon
• role of the biodynamic preparations 500-508
• role of bacteria and fungi
• role of humus
• soil: food web information, how it is made, its structure and feeding cycle
• water retention
• weed management
• principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to integrate livestock production into an organic production system.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to farmers who work according to the principles of organic and ecological agriculture.

Work is likely to be done independently and according to the requirements of the National Standard for Organic and Biodynamic Produce and agro-ecological principles. This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Organic Production (ORG)
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Manage animal health and welfare</td>
<td>1.1 Consider natural behaviours of animals and requirements of animal welfare codes of practice in planning for organic livestock production 1.2 Select and use varieties/genetics for the enterprise that match environmental conditions and optimise animal health 1.3 Monitor livestock constantly for health and welfare and keep records 1.4 Develop animal health preventative strategies, communicate to others working on farm and implement 1.5 Identify and use animal health inputs suitable for organic systems where required 1.6 Follow restrictions and prohibited/restricted inputs for certified organic systems and quarantine if applicable 1.7 Conduct animal husbandry and transport in compliance with animal welfare principles and organic certification requirements 1.8 Maintain livestock records required for organic certification</td>
</tr>
<tr>
<td>2. Develop and implement supplementary feed requirements</td>
<td>2.1 Identify feed gaps and requirements for supplementary feed taking into account seasonal conditions and drought 2.2 Incorporate on-farm supplementary feed strategies including fodder crops, agroforestry or standing hay paddocks into the annual program for animal feed and on-farm sustainability 2.3 Implement good storage practices for feed inputs to ensure quality is maintained 2.4 Purchase and use nutritional inputs in the feed program that meet relevant Organic Standards and/or agro-ecological principles where applicable</td>
</tr>
<tr>
<td>3. Develop and implement a sustainable grazing strategy</td>
<td>3.1 Determine feed requirements, sustainable carrying capacity and a sustainable stocking rate for the enterprise that takes into account seasonal variability and livestock needs 3.2 Determine indicators and benchmarks for sustainable pasture, land and soil use for the property 3.3 Identify grazing infrastructure required for a planned grazing strategy and incorporate into a property improvement program 3.4 Develop and implement a planned grazing system that ensures optimal livestock health and productivity at all times 3.5 Develop and implement a planned grazing system that matches</td>
</tr>
</tbody>
</table>
### Element | Performance criteria
--- | ---
| stockin... | stocking rate to carrying capacity and ensure sustainable pasture, land and soil condition at all times 
| 3.6 Optimise soil and plant health to provide a nutrient-dense and balanced diet for livestock |
| 3.7 Monitor the grazing system to ensure productivity and sustainability on an on-going basis |
| 3.8 Implement strategies for controlling weeds in pastures based on Organic Standards and/or agro-ecological principles where applicable |
| 3.9 Keep grazing and feed records for enterprise management and to ensure compliance to Organic Standards where applicable |

| 4. Manage farm fertility for the livestock enterprise | 4.1 Estimate level of nutrients exported from farm |
| | 4.2 Implement a fertility monitoring program such as soil-testing, plant testing or observation of pasture species to monitor pasture and soil fertility |
| | 4.3 Maintain soil nutrient levels and balance through recycling, optimising nutrient availability in soil and/or sourcing fertility inputs that meet Organic Standards and/or agro-ecological principles where applicable |
| | 4.4 Eliminate the risk of weed and chemical contamination to the farm by following Organic Standards and/or agro-ecological principles |
| | 4.5 Keep fertility input records for enterprise management and to ensure compliance to Organic Standards where applicable |

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- monitor and maintain animals in an organic production system
- provide a suitable diet and living environment for animals based on the National Organic Standards for Organic Livestock Production and/or agro-ecological principles
- integrate animals into an organic production system
- manage animal health and welfare using Organic Standards and/or agro-ecological principles
- manage grazing of animals and allowable inputs to enhance soil health and fertility
- apply enterprise work health and safety policies and guidelines
- implement enterprise animal welfare policies
- implement enterprise environmental sustainability practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant organic certification requirements
- organic agriculture and agro-ecological principles
- animal health, pests, parasites and diseases
- relevant animal welfare code of practice
- grazing management, including pasture identification and assessment, feed budgeting and planned grazing strategies
- carrying capacity and sustainable pasture utilisation
- pasture, land and soil condition and indicators
- management options for animal health based on an understanding of pest life cycles, genetic selection and acquired immunity
• permitted, restricted and prohibited inputs and activities as described in the National Organic Standards for Organic Livestock Production relationship between soil, plant and animal health
• work health and safety and animal welfare legislation and codes of practice.
• record keeping
• principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce

**Assessment Conditions**

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- implement principles of organic agriculture and agroecology
- implement knowledge of interrelationships between soil fertility, animals, plants, pests and diseases
- devise and implement a soil improvement plan to correct imbalances and maintain soil fertility
- sample soils and analyse soil test results for a range of indicators of soil fertility
- work with natural processes and allowable inputs to improve and maintain soil fertility
- apply enterprise work health and safety policies and guidelines
- implement enterprise environmental sustainability practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- availability, use and definition of organic fertilisers
- structural properties of soils
- factors contributing to soil acidity, sodicity and salinity
- factors promoting soil and plant water-holding capacity
- importance of soil biological activity
- major nutrient elements and their role in plant growth
- methods and inputs that can be used to correct imbalances and maintain soil fertility
- principles of organic agriculture
- processes and practices that impact on soil structure, biological activity, water-holding capacity and weed patterns
• processes of aggregate and colloid formation
• range of soil analyses available and principles of each
• relationship between soil structure, water holding capacity and nutrient availability
• role of organic matter, humus and micro-organisms
• role of livestock in enhancing soil fertility
• role of macro and micro-elements in soil and plants
• role of weeds
• significance of levels and balance of soil fertility indicators
• soil food chains and food webs
• soil textural types and determinants
• when and how to take soil samples to test for indicators of soil fertility
• principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify farm produce selling options
- identify and comply with requirements of a community marketing scheme and its characteristics
- establish relationships with community stakeholders and customers
- monitor and record community satisfaction levels and customer feedback and address concerns
- communicate the ‘farm story’ and the uniqueness of the enterprise to the community
- arrange timely transport and delivery of produce and address any special transport requirements
- comply with transport legislative requirements
- accurately record pre and post sale documentation and transactions
- identify and record potential improvements
- work with natural processes and allowable inputs to improve and maintain soil fertility
- apply enterprise work health and safety policies and guidelines
- implement enterprise environmental sustainability practices

Knowledge Evidence

The candidate must demonstrate knowledge of:
- applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in selling produce through community based markets
- relevant legislation and regulations relating to work health and safety
- organic certification systems and standards
Assessment Requirements for AHCORG404 Arrange selling through community based marketing

- organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- characteristics and composition of farm business marketing plans
- characteristics of community marketing schemes and the steps within a farm produce supply chain
- product knowledge related to goods and services required by the organisation
- ways to build trust and collaboration as opposed to competition
- business terms and conditions for purchasing, tendering and contracting
- ethical behaviour
- established communication channels and protocols
- procedures for operating electronic communications equipment
- procedures for recording and reporting workplace information and completing relevant documentation

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage the establishment and implementation of sustainable work practices in organic farming enterprises of all sizes and in a variety of work settings.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to production managers and workplace supervisors in an organic farming enterprise that are responsible for identifying selling options, developing a relationship with community groups, complying with community based marketing scheme requirements, organising appropriate transport and keeping sale records.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify businesses guidelines and principles for social, financial and environmental sustainability
- identify and interpret environmental regulations, sustainable organic farming requirements, farm plan and current best practice guidelines and principles
- implement strategies to integrate sustainability principles and practices into the farm system and identify continuous improvement opportunities
- monitor farm business sustainability initiatives for effectiveness and compliance
- adopt and document continuous improvement initiatives
- encourage staff and farm business stakeholders to embrace sustainability practices
- apply enterprise work health and safety policies and guidelines
- implement enterprise environmental sustainability practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- best practice guidelines
- principles and processes relevant to sustainable organic farming
- compliance requirements for all relevant environmental/sustainability legislation, regulations and codes of practice including resource hazards/risks associated with work area, job specifications and procedures
- sustainability issues including environmental and social issues that relate to an organic farm
- external benchmarks used within an organic farming enterprise, including approaches to improving techniques used and expected outcomes
Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

| 1. Identify compliance requirements of the selected organic standard relating to the farm system | 1.1 Access the selected organic certification scheme relevant to the operation and management of the organic farming enterprise  
1.2 Identify and interpret key clauses and requirements of the organic standard that relate to the existing farm system enterprise mix  
1.3 Identify and document compliance of the farm system with the requirements of the selected organic certification scheme  
1.4 Identify and document key farm operations that are impacted by the organic standards |
| 2. Keep records to comply with organic certification requirements | 2.1 Identify the records and detail required for compliance with the organic certification scheme  
2.2 Complete and maintain clear and accurate records to an approved industry standard  
2.3 Communicate recording requirements to appropriate stakeholders and key personnel  
2.4 Monitor the record keeping process and maintain records as required by the National Organic Standard |
| 3. Support compliance with organic standards by staff in the farm business | 3.1 Identify all steps within the production system that require compliance with the selected organic standards  
3.2 Support and train staff and key personnel to implement and foster a compliant organic supply chain culture  
3.3 Keep accurate records at all key supply chain steps to verify and maintain compliance, and to allow reconciliation and traceability  
3.4 Describe certification compliance requirements of staff in Job Descriptions and Key Performance Indicators |
| 4. Meet annual audit requirements of the selected organic certification scheme | 4.1 Comply with the specific certification requirements  
4.2 Prepare the farm and organic records and documents for audit and ensure accessibility  
4.3 Conduct an internal organic audit of the farm system and complete associated records and documents  
4.4 Take corrective actions to comply with the specific certification requirements  
4.5 Participate in an annual organic audit  
4.6 Comply with and close any corrective actions requested |
| 5. Comply with food safety requirements | 5.1 Identify food safety requirements that must be satisfied by the farm system to comply with industry regulations and standards  
5.2 Communicate food safety requirements to all staff |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify and document compliance requirements of the selected organic standard relating to the farm system
- identify and document key farm operations impacted by the organic standards
- support and train key personnel and staff to implement and foster a compliant organic supply chain culture
- keep accurate records at all key supply chain steps to verify and maintain organic compliance
- conduct an internal organic audit of the farm system and accurately complete associated records and documents
- participate in an annual organic audit and successfully close any identified corrective actions
- identify food safety requirements and ensure compliance of the farm system with industry standards
- ensure all farm records, traceability and production data is kept, monitored and maintained in compliance with National Organic Standard requirements
- comply with requirements of relevant organic standards

Knowledge Evidence

The candidate must demonstrate knowledge of:

- organic standards, compliance requirements and industry specifications
- applicable food safety and licensing requirements
- farm supply chain market requirements for product
- organic quality specifications for product
• enterprise and industry quality assurance systems
• strategies for control of hazards to organic compliance
• document control protocols

**Assessment Conditions**

Assessment may take place in a simulated or real workplace, however all evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage a landless production system such as urban beekeeping, rooftop gardens, log-based mushrooms, aquaponics, worm farming or small scale fish farming.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to managers who work according to the principles of organic and ecological agriculture. Work is likely to be done independently and according to the requirements of the National Standard for Organic and Biodynamic Produce or agro-ecological principles.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within know parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- implement and manage a landless organic production system
- provide suitable nutrition and living environment for a landless based biological enterprise based on the relevant Organic Standards or agro-ecological principles
- manage health and welfare for a landless enterprise based on organic or agro-ecological principles
- manage breeding or restocking for a landless enterprise based on organic or agro-ecological principles
- maintain recording systems for production system
- implement biosecurity requirements
- implement organic or agro-ecological principles
- implement enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- organic certification requirements
- organic and agro-ecological principles
- enterprise relevant pests and diseases
- relevant animal welfare legislation and code of practices
- nutrition management, including feed types and assessment, feed budgeting and feeding strategies
- management options for preventative health based on an understanding of nutrition, life cycles, genetic selection, environmental conditions and acquired immunity
Assessment Requirements for AHCORG407 Manage a landless organic production system

- management options for feeding and breeding based on organic and agro-ecological principles
- environmental conditions and infrastructure requirements for optimal enterprise performance and welfare
- work health and safety practices
- record keeping requirements
- relevant principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- implement and manage an on farm compost system
- manage composting processes
- manage a composting site
- evaluate compost quality and implement remedial actions if required
- implement enterprise work health and safety policies
- follow site quarantine and biosecurity protocols

Knowledge Evidence

The candidate must demonstrate knowledge of:

- compost quality standards
- basic principles of composting
- different methods of composting
- characteristics of a range of raw materials
- fundamental characteristics of compost quality
- steps in pre-processing compost materials
- batch documentation techniques
- site and equipment requirements for on farm composting
- key process control stages critical to consistent compost production
- overview of systems and technologies used in compost production, particularly as relevant to farm
- characteristics and categories of a range of compost products
- relevant environmental, work health and safety legislation and regulations
- record keeping requirements
- site quarantine and biosecurity protocols
- agro-ecological principles
- principles, practices and inputs allowable under the National Standard for Organic and Biodynamic Produce if applicable

**Assessment Conditions**

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Application

This unit of competency describes the skills and knowledge required to develop an organic management plan (OMP).

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to those producers who develop an OMP to convert an agricultural or horticultural farm to an organic, biological and ecological system. It requires the capability to set objectives to meet organic certification requirements of the National Standard for Organic and Biodynamic Produce.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| **1. Locate and access assistance in developing the OMP** | 1.1 Locate and access sources of support and advice including agricultural extension officers and training programs  
1.2 Assess industry publications and internet sources for their value in informing decision making  
1.3 Seek and consider contributions of work colleagues and others during planning process  
1.4 Access information from certifier and relevant Organic Standards on OMP requirements |
| **2. Design the organic farming system to be described in the OMP** | 2.1 Develop or obtain map of property to be covered by OMP  
2.2 Determine time scale to be addressed in plan  
2.3 Collect information on soil fertility and management, and weed, pest, disease and animal health status and their interrelationships to serve as benchmarks for development of management options  
2.4 Obtain regional catchment targets for land, water and biodiversity and identify those applicable to property and sub-catchment  
2.5 Identify components of OMP that need to be developed  
2.6 Develop suitable format for planning documents  
2.7 Identify risks to organic integrity for the farm enterprise and outline strategies to manage these risks |
| **3. Develop soil fertility plan** | 3.1 Undertake or commission a soil fertility assessment of farm production areas  
3.2 Map soil types and topography on farm plan  
3.3 Develop and document soil fertility plan that amends soil chemistry, soil structure and soil biology, based on assessment of soil test results, enterprise performance, overall budget and intended cropping/grazing regime  
3.4 Identify appropriate inputs according to the National Standard for Organic and Biodynamic Produce and/or agro-ecological principles  
3.5 Document plan according to established format |
| **4. Develop soil management sub-plan** | 4.1 Determine suitability of land for production based on soil type, slope, aspect and previous use  
4.2 Develop soil management plan to enhance soil structure and prevent compaction and water logging  
4.3 Identify appropriate inputs according to the National Standard for Organic and Biodynamic Produce or agro-ecological principles |
<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
</table>
| **4.** Document sub-plan according to established format  
4.5 Identify farm management practices and strategies that enhance soil fertility | 5.1 Identify problematic weed species and observe weeds as an indicator of soil health  
5.2 Identify life cycles of weeds species to inform management options  
5.3 Identify appropriate inputs according to the National Standard for Organic and Biodynamic Produce or agro-ecological principles  
5.4 Develop integrated farming strategies and cultural practices for managing weeds  
5.5 Document sub-plan according to established format |
| **5.** Develop weed management sub-plan | 6.1 Collect and document evidence of pest and disease burden in farming system  
6.2 Observe and monitor pests and diseases and their life cycles  
6.3 Evaluate evidence of pest and disease burden to develop strategy for management  
6.4 Evaluate pests and diseases as indicators of farming system health  
6.5 Identify options for addressing pest and disease issues, including improving soil health, cultural practices and system redesign  
6.6 Identify appropriate inputs according to the National Standard for Organic and Biodynamic Produce or agro-ecological principles  
6.7 Document sub-plan according to established format |
| **6.** Develop and design an integrated pest and disease management sub-plan | 7.1 Identify regional and farm-based animal health issues  
7.2 Identify options for preventative actions aimed at establishing and maintaining optimal animal health  
7.3 Identify options for treating animal health issues  
7.4 Develop a sustainable grazing management plan that addresses feed requirements, stocking densities and meets regional catchment land and soil condition targets where applicable  
7.5 Develop an animal management program that ensures compliance to organic standards and/or agro-ecological principles  
7.6 Document sub-plan according to established format |
| **7.** Develop animal health and management sub-plan | 8.1 Integrate sub-plans for soil fertility and management, and weed, pest, disease and animal health  
8.2 Develop and implement record-keeping system to track various components of OMP as they are put into practice and reviewed  
8.3 Review and update OMP annually noting any changes to farm practices |
| **8.** Integrate and finalise the organic management plan |  |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify and develop required components of an OMP for a property
- understand and use interrelationships between soil, plant and animal health and farming system's resilience when developing plan
- identify options for prevention and treatment of risks
- apply appropriate regional catchment targets
- document the plan in compliance with certification requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles of organic agriculture, especially fundamental role of soil health
- principles of sustainable production
- requirements and components of an OMP
- systems approach to agriculture and horticulture
- organic and biodynamic certification requirements

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify requirements for organic certification and apply them to one's enterprise
- identify critical points in supply chain at which the organic integrity of one's product may be compromised
- implement and monitor effective risk management for those parts of supply chain under one's control
- identify practices and strategies to minimise the risk of contamination and non-conformance with organic standards
- develop an operational plan for conversion to organic production

Knowledge Evidence

The candidate must demonstrate knowledge of:

- certification process
- chain of custody
- HACCP (Hazard Analysis and Critical Control Points) principles and risk management
- health and food safety requirements and issues
- labelling requirements for domestic and export markets
- market for organic produce, including the organic movement and organic industry
- National Standard for Organic and Biodynamic Produce
- principles of organic agriculture
- procedures and responsibilities in the case of product recall
- procedures for conducting and documenting a risk assessment
- regulatory requirements and their domestic and international contexts
• requirements of an OMP, including record keeping
• role of quality management systems in organic industry including documentation requirements
• working knowledge of the regulated organic industry, including the role of the government, certification bodies and inspectors

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to design and document an organic farm landscape that will be used as the basis for an organic farm enterprise.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Organic Production (ORG)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- source and interpret legislative requirements industry standards and codes of practice
- identify compliant work practices and procedures
- conduct an audit of the natural resources and infrastructure of the property
- identify physical and biological characteristics and landscape features of the property
- develop farm soil map and determine land capability
- develop an organic landscape plan using appropriate development tools
- revise a draft plan and document the final organic landscape plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- applicable legislative documents and codes of practice relevant to farm landscape planning
- landscape types
- habitat and plant communities on farm
- relationship between land shape and soil type
- soil types
- different categories of cultural sites
- organic certification requirements
- landscape hydrology
- landscapes for agro-ecosystems
- native habitat requirements
- the requirements of the organic standard and agro-ecological principles
Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research and evaluate the suitability of different community marketing options for farm products
- research and identify applicable legislative, environmental, and certification requirements relevant to managing a community based marketing chain
- document specifications for the various components of the marketing chain management system in line with organisational and legislative requirements
- establish and document market specifications meet community expectations
- establish product marketing chain to meet marketing options
- establish farm business requirements for each step in the marketing chain
- establish compliance requirements at each step in the marketing chain
- conduct record keeping requirements for each step in the marketing chain
- develop and document a community based marketing plan
- develop and document a promotion plan
- collate customer feedback and use to improve market outcomes

Knowledge Evidence

The candidate must demonstrate knowledge of:

- applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in selling produce through community based markets
- relevant legislation and regulations relating to work health and safety
- organic certification systems and standards
- rural produce marketing and presentation
Assessment Requirements for AHCORG504 Develop and manage a community based marketing supply chain

- organisation policies and procedures related to supply chain management, purchasing, and contracting and tendering
- characteristics and composition of farm business marketing plans
- characteristics of community marketing schemes and the steps within a farm produce supply chain
- product knowledge related to goods and services required by the organisation
- ways to build trust and collaboration as opposed to competition
- business terms and conditions for purchasing, tendering and contracting
- ethical behaviour
- established communication channels and protocols
- procedures for operating electronic communications equipment
- procedures for recording and reporting workplace information and completing relevant documentation

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify personal and enterprise goals
- identify and document physical, biological, social and financial resources under management
- research and evaluate sustainable production systems and select and document a production system that meets sustainability and enterprise management goals
- develop a sustainable production plan
- match land capacity with production system design
- monitor and evaluate effectiveness of the sustainable production system
- modify the enterprise mix or production system where differences between the sustainable production plan and actual results are identified
- record and manage farm system information and data

Knowledge Evidence

The candidate must demonstrate knowledge of:

- applicable federal, state or territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes in developing and monitoring a sustainable production plan
- relevant legislation and regulations relating to work health and safety, contractor engagement, animal health and welfare, chemical use and application, vehicle and plant use and soil and water degradation issues
- environmental protection requirements and codes of practice, including the safe disposal of products and waste material, available to the organisation
• organisational policies and procedures, standards and site requirements for risk management and hazard identification
• sustainable land use principles and practices applicable in the region
• farm planning processes

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare resources and processes for use in recognition activity
- identify desirable and non-desirable plants requiring recognition
- recognise and describe plant attributes
- describe specific handling requirements and growth requirements
- use appropriate methods of research to assist with plant recognition
- document and update information about identified plants

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of plant recognition
  - plant morphology and physiology as they relate to recognising plants
  - plant nomenclature
- procedures for obtaining and providing advice and information about plants
- plant recognition techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have collected and preserved plant specimens for identification, including:

- collected representative parts of plant specimens and recorded and labelled specimens with characteristic data for identification purposes
- stored labelled plant specimens ready for preservation
- determined a plant preservation technique
- arranged and preserved plant specimens according to procedures
- arranged and mounted preserved specimens with observation records ready for identification
- packaged specimens with observation data and submitted for identification
- recorded and catalogued specimen information according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic botanical requirements for plant identification purposes
- principles and practices of collecting plant materials
- characteristics of plants to be collected and recognising suitable specimens for collection
- storing plant specimens before preservation to maintain specimen integrity
- plant preservation techniques and the agencies and organisations that use them
- records and recording systems for plant collections and plant data.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - live plant materials to be collected from the field
  - equipment and materials required for preserving and mounting plant specimens
  - records and recording systems for plants

- **specifications:**
  - workplace procedures and processes for preserving plants
  - workplace instructions and specifications for preserved plants.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to fell small trees where hazards have been assessed as low risk.

It is an introductory or base-level unit that covers felling procedures for small trees.

This unit applies to individuals who undertake defined activities with specialised tools and methods, work in a structured context, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant state or territory.

Pre-requisite Unit

AHCMOM213 Operate and maintain chainsaws

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare, transport and appropriately position support tools to minimise felling delays
- assess topography and site conditions, identify factors influencing tree felling operation and confirm findings with supervisor
- receive instructions for tree felling operations from supervisor and clarify prior to undertaking work
- clear fall zone of obstacles and articles which may be damaged by felled tree
- confirm first aid and emergency personnel, equipment and procedures
- identify site hazards, assess risks and report to supervisor
- record and implement work health, safety, site, environmental and traffic control measures
- select, check, use, maintain and store suitable safety and personal protective equipment
- confirm work zone with work crew and monitor location of other personnel
- determine natural direction of fall, safe fall zone and exclusion zone and confirm with supervisor
- determine standard tree felling techniques by ground conditions and state of canopy
- establish clear escape route appropriate to site
- safely operate a chainsaw to fell small trees
- monitor fall of tree and movement on ground until felled tree is stable
- take corrective action in response to changing conditions or problems encountered

Knowledge Evidence

The candidate must demonstrate knowledge of:

- corrective action
- emergency and first aid procedures
- felling equipment and components
• first aid and emergency personnel, equipment and procedures
• ground conditions
• how to determine natural direction of fall
• how to establish a clear escape route
• industry standard terminology
• low risk work practices
• obstacles and articles which may be damaged by felled trees
• positioning support tools
• safe operating procedures for felling small trees
• safe fall and exclusion zones
• selection, preparation and appropriate equipment for task
• standard tree felling techniques, patterns and cut sequences
• topography, site conditions and other factors influencing tree felling operations

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify goals, target site, soils and plants for implementing the program
- identify materials and their supply source
- monitor soil pH in the implementation site
- identify appropriate products and application methods appropriate to implementing nutrition program
- estimate treatment and product requirements, material sizes and quantities
- conduct a site hazard identification and risk control assessment
- determine nutritional problems in plants
- plant nutrition program specifications
- apply specific products at appropriate rates and record their application
- select, check and calibrate tools, equipment and machinery

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant nutrition
  - botany and plant physiology
  - methods of nutrient uptake by plants
  - nutrient cycling and its practical relevance to the specific plants and soils
  - nutrients required by plants grown within the enterprise
  - soil ameliorants commonly required to treat the soil problems experienced by the enterprise
  - the effects of nutrient deficiency and toxicity on plant species and varieties
• the environmental implications of soil ameliorant and fertiliser use
• the main simple and compound fertiliser products available to the enterprise including analysis, solubility, salt index, application rates and costs
• the relationship between soil characteristics and the availability of nutrients

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop product knowledge through research and access to in-house and online information
- interpret information sheets, labels, horticultural literature, specifications and design symbols
- investigate requests for information, identify and evaluate options, decide on a solution, and deliver recommendation and information to the client
- select plants from a range of available stock lists
- communicate with clients, work team members, supervisors, suppliers, contractors and consultants

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of plant culture
  - broad range of plant species and their cultural requirements
  - duty of care in provision of advice and recommendations to retail, commercial and private clients
  - local plant suppliers, consultants, services, products and contractors
  - pest and disease symptoms, basic physiology and life cycle of pests and diseases, vulnerable plant growth stages, treatment thresholds, treatment products, effective application procedures and environmental implications
  - plant identification techniques, plant selection, plant physiology, habit and growth characteristics of the plants
  - soil characteristics particularly in relation to the local region
weed species, growth stages, treatment thresholds, treatment products, effective application procedures and environmental implications

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have identified plant specimens, including:

- identified and recorded key characteristics of plant morphology and identified to division level
- determined plant health and assessed effect on characteristics indicative to identification
- used reference materials to compare characteristics to taxonomic classification
- identified plant specimen to lowest level of taxonomic level (category)
- compiled identification data and recorded the identification and process according to workplace procedures
- reported outcomes to client according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of plant identification, including:
  - plant health problems indicative of plant species
  - basic physiology and life cycle of pests and diseases
  - botanical terms for plant morphology, physiology
- symptoms of plant pests and diseases that mask characteristics for identification
- methods of data capture
- plant identification techniques
- problem-solving techniques
- soil characteristics particularly in relation to the local region
- plant characteristics including tactile and sensory
• levels (categories) of taxonomic classification.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live plant specimens
  • tools and equipment necessary for plant observations
  • botanical reference materials, plant data bases, plant keys
• specifications:
  • workplace documents including procedures and processes for recording data and preparing reports
  • workplace instructions, specifications or client briefs
• relationships:
  • real clients.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare materials and implement traffic management requirements for tree inspection
- document and implement traffic management requirements where required
- recognise a range of tree species and cultivars common to the region
- identify and report on the general health and condition of trees
- identify obvious potential structural defects, damage, pests and and/or diseases
- recommend treatments for pest and disease problems
- recognise potential structural or other defects that require inspection by an arborist
- record findings and inform client

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for inspecting trees
  - AS4373-2007 Pruning of amenity trees
  - botany and tree physiology
  - local government tree protection and preservation regulations
  - methods of determining tree dimensions
  - methods of low risk work
  - recognition of a wide range of trees common to the region
  - relevant Code of Practice
  - signs of structural defects, decay, damage and stress in trees
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to recommend plants and cultural practices. It applies to both sales staff in plant nurseries and garden centres and others in the amenity horticulture industries.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Plants culture and management (PCM)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- conduct literature and industry research, collate and analyse findings on plant species and cultivars, their characteristics and requirements
- comply with legislative requirements
- explain to the client work health and safety requirements or basic safety precautions relevant to the establishment and on-going maintenance of plants
- document client preferences and site particulars
- select plants that suit client preferences and suitability for the site
- report recommendations to the client that detail the types of plants chosen and their requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for recommending plants and their cultural practices
  - customer service and communication skills
  - features of plant species and cultivars
  - innovation and recent practices in plant selection, use and performance
  - plant nomenclature (family, genus, species and cultivar) for the range of plants recommended by the enterprise
  - practical understanding of the physiology of the range of plants supplied and recommended by the enterprise and their comparative growth and performance characteristics in response to different cultural and environmental factors
  - principles and practices for the establishment and maintenance of plants
• soil characteristics, particularly in relation to the geographical and climatic region from which clients generally originate

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and analyse information on regional site factors
- assess the physical, chemical and biological characteristics of soils
- assess the physical, nutritional and health requirements of plants
- develop a soil, plant and water testing program
- develop a program to achieve appropriate soil conditions and nutrient availability for plant growth, incorporating a soil health and plant nutrition plan
- research and analyse findings on plant nutritional requirements, nutrients available from soils and other growth media, and environmental implications of program
- select suitable management practices, soil amendments, additives and fertilisers

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of soil health and plant nutrition
  - characteristics of soil and other growth media types, uses and additives to enhance available nutrition for specific plants
  - main simple and compound fertiliser products available to enterprise, including analysis, solubility, salt index, application rates and costs
  - methods of nutrient uptake by plants and favourable conditions for effective uptake to occur
  - nutrients and water required by plants grown within enterprise and effects of nutrient deficiency and toxicity on individual plant species and varieties
  - visual and other symptoms of nutrient deficiency and toxicity on individual plant species and varieties
• organic matter, pest and disease, and nutrient interactions in soil and nutrient cycling
• environmental issues associated with selecting nutritional materials, implementing a plant nutrition program, legislation compliance requirements and ensuring minimal impact on environment
• the following types of relationships between soil and growth media characteristics and availability of nutrients to plants: macro and micro elements
• the following types of site evaluation techniques: methods of sampling and analysing soils and other growth media
• soil amendments commonly required to treat soil problems experienced by enterprise

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify symptoms of weed, pest and disease infestation
- develop an integrated pest management (IPM) program
- develop and implement monitoring procedures
- instruct and supervise others to carry out work according to the IPM plan
- oversee the implementation of an IPM pest management plan
- monitor costs of pest management plan to meet budget requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for integrated pest management
- application techniques for chemical and non-chemical treatments
- concept and principles of Integrated Pest Management
- cost/benefit analysis relevant to selection of weed, pest and disease control measures
- crop and plant scouting and monitoring
- ecological impacts of different control treatments
- integration of weed, pest and disease control measures
- lifecycles of hosts, predators and pests and diseases
- sustainable horticultural practices
- weeds and pests of specific horticultural enterprises
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research information about plant health problems, their diagnosis and remedial treatments
- differentiate between pest, disease and nutrient-associated symptoms
- identify signs and symptoms of plant health problems
- assess the severity, extent and speed of onset of health problems in a specific situation
- determine possible causes of the problem
- liaise with specialist services, clients and management
- formulate a weed, pest and disease control program
- implement treatment programs to remedy the diagnosed health problems
- evaluate treatment program and recommend modifications

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant health
  - chemical use, toxicity and compatibility with target plants, growth media, and environmental characteristics of the horticultural region
  - chemical, cultural and biological control methods included in the integrated pest management (IPM) strategy of the enterprise
  - enterprise and industry record keeping and reporting policies and requirements
  - evaluation procedures, including cost/benefit analysis, for plant and growth media treatments in relation to plant health, enterprise budget and performance targets
  - plant anatomy, morphology, physiology, histology, pathology, taxonomy and nomenclature
Assessment Requirements for AHCPCM501 Diagnose plant health problems

- plant nutrition issues associated with the growth media used and horticultural region for specific plant species
- sustainable horticultural practices relevant to the enterprise or horticultural region
- taxonomic descriptions, horticultural function, cultural and growth requirements, and target growth and performance characteristics of specific horticultural plants for the achievement of enterprise production and business plans
- weeds, pests and disease detection methods, taxonomic identification, life cycle stages and characteristic symptoms for the specific horticultural plants of the enterprise

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for plant collecting
- note the location, characteristics and occurrence of specimens at the point of collection
- clean, preserve, mount and label specimens
- use a plant key to identify plants against the botanical description of the species

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant classification
  - herbarium collection techniques and ethics
- physical and biological habitat types including vegetation associations and communities where appropriate
  - plant anatomy, physiology, morphology, taxonomy and nomenclature

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a client brief on client’s needs, objectives and expectations, the purpose of the landscape and plant selection criteria
- compile a database of plant specimens and characteristics
- conduct site inspections and site assessments
- evaluate and determine plant selections
- identify and select from a range of plants appropriate to the site
- research reference sources
- select and appraise soils and growing media
- use comparative techniques
- assess quality of plants and materials meet specifications

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of specifying plants for landscapes
  - basic physiology and life cycle of pests and diseases
  - botany, plant morphology, physiology, taxonomy and nomenclature
  - methods of data capture
  - plant identification techniques
  - soil characteristics particularly in relation to the local region
  - soils appraisal techniques
  - symptoms of plant pests and diseases
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to design a specialised landscape.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Develop a design brief in consultation with client to establish design purpose and requirements
- Identify the implications of climate and environment on plant selection and design
- Identify and design with plants appropriate for use in controlled environments
- Identify and recommend soils and plant nutrition requirements
- Identify and design with plants appropriate to the design criterion
- Use botanical nomenclature when selecting plants
- Identify plant species and cultivars using botanical nomenclature
- Identify weeds and recommend appropriate weed management
- Identify biological, organic and inorganic plant and plant pest management techniques to be used
- Provide garden design solutions
- Compile the recommendations and document a design plan or report

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Principles and practices of specialised landscape design
  - Aesthetic, ornamental, productive and economic plant groups
  - Allied horticultural, environmental and conservation industries and movements
  - Botanical geography (plant families, geographic distribution and links)
  - Botany - plant structures and physiology
  - Ethno botany (sustainability and the stories of plants)
• horticultural media, information and knowledge-based resources
• how to determine suitability of plants for different environments such as green buildings (rooftops), conservatories, glass houses and atriums
• irrigation and current progress in new irrigation techniques
• plant families and detailed knowledge of species and cultivars used in garden design, horticulture industry and other ornamental, productive and economic plant industries
• plant taxonomy and nomenclature
• principles and processes of plant culture
• the use and development of plants though history
• turf culture
• types, properties and characteristics of a wide range of soils and growing media

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Research, identify and document community, government and agricultural industry information, concerns and requirements in relation to fertiliser and soil ameliorant use and environmental stewardship
- Research, identify and document information and standards relating to transporting, handling, storing and applying fertilisers and soil ameliorants
- Identify and evaluate probability and severity of identified environmental risks associated with plant nutrition and soil fertility programs
- Calculate areas, ratios, proportions and application rates
- Liaise with managers and landowners, local and national organisations
- Develop a nutrient management plan
- Monitor effectiveness of plant nutrition and soil fertility management decisions over time
- Identify opportunities to improve efficiency and effectiveness of plant nutrition and soil fertility program
- Estimate treatment and product requirements, material sizes and quantities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Principles and practices of food safety risk assessment
- Environmental implications for environment of soil amendment and fertiliser use, that may include nutrient mining, run-off, nutrient loading of soil and water, toxicity, noise and dust
- Food safety issues relating to the use of fertilisers and soil ameliorants
- Law of the minimum and importance of nutrient interactions
- methods and pathways of nutrient uptake by plants and loss from soil
- nutrient cycling and its practical relevance to specific plants and soils encountered in local area, including role of soil biology
- nutrients required by plants grown within enterprise and effects of nutrient deficiency and toxicity on individual plant species and varieties
- relationship between soil characteristics and the availability of nutrients, including macro and micro elements, to plants
- single nutrient and complete fertiliser products encountered in local area, including physical attributes, nutrient analysis, solubility, salt index, application rates and costs, and appropriate application techniques and equipment
- soil amendments commonly used to treat local soil problems
- soil and water sampling techniques to adapt activities and instructions to a range of environmental contexts
- techniques for interpreting laboratory results and making fertiliser and amendment recommendations
- techniques to assess effects of fertiliser and amendment recommendations on soil, plants and water

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine the economic threshold for a range of weed, pest or diseases
- develop an integrated pest management (IPM) strategy based on analysis of weed, pest or disease presence
- develop and implement monitoring procedures
- monitor costs of pest management plan to meet budget requirements
- oversee the implementation of an IPM pest management plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for developing integrated pest management plans
  - application techniques for chemical and non-chemical treatments
  - cost/benefit analysis relevant to selection of weed, pest and disease control measures
  - crop and plant scouting and monitoring
  - ecological impacts of different control treatments
  - interaction of weed, pest and disease control measures
  - weeds and pests of specific horticultural enterprises
  - lifecycles of hosts, predators and pests and diseases

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine plant health strategies
- determine scheduling and key responsibilities
- develop plant health management strategies
- evaluate plant health management strategies and record results
- provide input to other planning processes
- monitor and adjust plant health management strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant health management
  - environmental controls and codes of practice applicable to the business and to plant health management operations
  - environmental controls and codes of practice applicable to the enterprise
  - Integrated Pest Management (IPM)
  - management of weed, pest and disease infestations
  - management practices and processes to minimise plant health management control operations
  - planning water budgets and irrigation strategies
  - plant growth and development and growth regulators
  - plant growth processes such as photosynthesis, respiration, nutrient uptake, solute transport and metabolism, water balance and osmotic pressure
  - strategic aspects of managing plant quality, performance and nutrition
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with supervisors and workplace colleagues
- recognise basic environmental influences
- contribute to improved permaculture work practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture
  - ethics – earth care, people care, fair share
  - principles – at this level, limited to the trainer/supervisor’s interpretation and simplification of those contained in the two seminal permaculture text books (Mollison 1988 and Holmgren 2002)
- good practice approaches to minimising environmental hazards and risks
  - producing no waste
  - thinking globally and acting locally
  - observing nature and learning from her patterns
  - responding to change creatively and with consideration for the needs of all users of and/or elements in the system
  - learning from mistakes and developing successes
- factors to improve environmental performance in regard to water catchments, ecosystems, habitat, efficient use of resources, sustainability and waste minimisation
- factors to improve community issues, especially in regard to caring for people, sharing surpluses and setting limits to growth
• environmental issues and their potential impacts
  • sustainability of land use and agricultural work practices
  • reduction and disposal of waste
  • improvements to water quality
  • improvements to air quality
  • energy efficiency
  • biodiversity and habitat protection
  • conservation of natural resources
  • wild-fire management and mitigation
  • food, water and energy security
  • human rights and right livelihood

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Application

This unit of competency describes the skills and knowledge required to support resource conservation practices in a permaculture system under supervision, including preparing materials, tools and equipment for resource conservation, undertaking resource conservation activities, storing and stockpiling materials, and cleaning up on completion of work.

This unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy within established and well known parameters. They identify and seek help with simple problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- cooperate with team members
- store and stockpile materials
- clean up on completion of work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices
- tools and equipment used
- principles of resource conservation including:
  - reduce, reuse, recycle, repair, repurpose, restore
  - minimal impact living
  - sustainable food production
  - energy efficiency
  - the following types of appropriate energy: solar and wind power
  - the following types of appropriate technology: composting toilets, grey water re-use
  - water catchment, storage and re-use
  - seed collection and seed banking
  - mulching and soil conservation
  - revegetation
- community and social interaction and support, such as:
  - resource banking
• seed banking
• co-operatives
• Local Energy Trading Systems (LETS)
• Skill-Share

• techniques used in resource conservation, such as:
  • stock piling resources
  • the following types of processing requirements for resources which cannot be stock-piled: composting, fermentation, drying
  • water storage and treatment
  • capture and storage of energy (heat capture in mass, basic turbine function)
  • making connections between everyday living and sustainable use of resources

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Identify common features of permaculture Zone 1 gardens
- identify and check the required materials, tools and equipment
- prepare a garden area for planting plants, seeds or seedlings
- determine the appropriate watering regime and nutrient requirements for the plantings
- harvest plant yields
- store the plant yields

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the characteristics of permaculture Zone 1 gardens
  - how permaculture gardens differ from conventional gardens
  - functions and yields of plants in a Zone 1 garden
  - observing nature and learning from it
- principles of planting in permaculture systems, such as:
  - aspect
  - planting patterns
  - companion planting
  - the soil-water-plant relationship
- plant care techniques and plant nutrition, such as:
  - the role of composts, worm castings, green manures, animal manures and support species in permaculture plant care
  - when to leave weeds, chop-and-drop and mulching
• simple pest protection (cages, rings, stakes and nets)
• simple climate protection (sun/frost/wind)
• how to reuse and recycle excess products of plant care

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III qualification (or higher) in Permaculture and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply problem solving skills to use available resources and prioritise daily tasks
- collect yields from animals including waste materials for composting or worm farms
- clean up on completion of work
- identify basic indicators of animal health

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of animal care in permaculture systems, such as:
  - grazing systems
  - animal tractor systems
  - organic feed and nutrition systems
  - housing and species combinations for welfare of all species
  - predator protection, vermin control and weather protection
- principles of integrating animals into permaculture systems, such as:
  - zone and sector planning in relation to appropriate animal species
  - needs, functions and yields for animals within integrated systems
- the following components of animal care: feed, water, shelter, perch space, bedding, symptoms of ill health or stress
- animal handling techniques
- tools and equipment
- repair and maintenance of animal housing and containment
Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III qualification (or higher) in Permaculture and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and collect information about permaculture
- interpret workplace schedules
- accept responsibility for own work
- promote workplace cooperation
- contribute to a productive workplace environment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture
  - different sectors within a permaculture system
  - relationships between sectors and the whole
  - permaculture services available in the area as listed in available references including:
    - media reports
    - reference books
    - industry journals
    - internet sites
    - libraries
  - observation of nature
  - personal observation and experience
  - relationships between the permaculture enterprise and other industries
  - legislation that affects permaculture enterprises
- unions and industry associations
- career opportunities within permaculture
- work ethic required to work in permaculture enterprises
- ethics of permaculture
  - care for the earth
  - care for all people
  - sharing the surplus
  - setting limits to growth
- permaculture practices and procedures, such as:
  - cooperation over competition
  - respecting and celebrating all ethnicities, religions, ages, genders and abilities
- wwoofing and other labour exchange programs
- lifestyle as a conserver
- workplace expectations and communication channels

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare to harvest seed
- harvest seed
- treat and store seed

Knowledge Evidence

The candidate must demonstrate knowledge of:

- seed harvesting techniques
- characteristics of mature healthy seed
- diseases and pests likely to affect the seed
- the following types of seed extraction:
  - hand selection
  - winnowing
  - sieving
  - vibration
  - flotation and fermentation
  - drying
  - heat-assisted dehiscing
  - crumbling of husks
- the following permaculture practices relating to seed harvesting and storage:
  - appropriate containers including re-used jars, boxes and packets
  - cool, dry location
• freezer or refrigerator
• pest deterrent mechanisms
• light exclusion mechanisms
• non-chemical protection against pathogens
• the following data included in seed saving:
  • genus, species, family, variety and cultivar information
  • provenance – where the seed came from
  • weight or number
  • date collected
  • place collected
  • collector
  • cultural advice or growing conditions
  • seed pre-treatment advice
  • longevity information
  • growing-out trial information
  • storage location information or record locator

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- collect information about the local bioregion
- review the information
- document the information

Knowledge Evidence

The candidate must demonstrate knowledge of:
- designated areas and features of a bioregion, such as:
  - a bioregion, as a land and water territory whose limits are defined not by political boundaries, but by the geographical limits of human communities and ecological systems.
  - water catchment, as one of the key identifiers of the bioregion
  - the vegetation on the catchment, as also an essential feature of a bioregion
- local and common names for plants and animals
- ecological concepts, such as:
  - niche
  - habitat
  - community
  - ecosystem
  - energy flows
  - food webs/chains
  - water cycles
  - species and species relationships
Assessment Requirements for AHPER203 Record information about the local bioregion

- plant and animal succession
- Permaculture perspectives, such as:
  - seeing connections between elements in a system
  - supporting ecological and community co-existence
  - valuing renewable resources and energy
- alternative strategies of trade such as barter and local exchange trading systems (LETS)
- community resources including local skills, public transport options, contractors and facilities

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare to set up a permaculture water system
- set up water systems
- monitor water flows
- place system components in a way that gives most effect and greatest yield
- inspect earthworks for passive water catchment, storage and movement

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices in relation to water systems
- behaviour of water in the natural environment
- reading natural water flows
- operation of permaculture water systems, such as:
  - irrigation systems
  - water collection and storage containers (tanks, dams)
  - recycling
  - waste-water systems
  - water conservation approaches
  - swales
  - contour banks
  - mulch pit and path systems
  - dams
• chinampas
• free-flowing water (streams, rivers)
• aquaculture systems
• aquaponics systems
• productive water bodies (lakes, the sea)
• earthworks for passive water catchment, storage and yield
• components of a water system and their cleaning and storage requirements
• water conservation and management principles and practices including working with passive systems, swales, terraces, dams and other earthworks
• passive harvesting, movement and nutrient adding systems including appropriate earthworks
• biological filtering of water into and out of a permaculture water system

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- handle products and their containers safely
- maintain containers in good condition
- maintain product storage areas and containers
- grade and label products
- pack and store products
- check stored products for damage, repacking or other treatments

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices in relation to product preparation and storage, such as:
  - the range of products produced by permaculture enterprises and their yields
  - parts of products stored
  - preserving the harvest
- correct handling, preparation and treatment techniques for a range of products, such as:
  - observation and identification of harvest readiness
  - storage methods for different products
  - pests and diseases likely to affect storage
  - hygiene issues in the handling and storage of permaculture products
Assessment Requirements for AHCPE205 Prepare and store permaculture products

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- select plant material, tools and equipment for planting
- prepare site for planting
- plant according to permaculture planting plan or pattern
- support, train, guard or protect plants
- follow plans and schedules
- water plantings
- apply treatments to soil

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to planting operations, such as:
  - planting in natural groupings or guilds
  - utilising plant partnerships such as vines on corn crops
  - planting mixed species and interplanting with companion species
  - avoiding soil compaction or disturbance
  - utilising chickens to plough and prepare ground for planting
  - avoiding water, seed or weed leakages from the system
- principles of sustainable horticultural practices
- planting techniques
- basic plant nutrition
- soil improvement and nutrient maintenance, such as:
  - minerals, including rock dusts
• organic matter
• manures, appropriate fertilisers and composts
• foliar feeds or fertigation
• vermicompost and worm castings
• planting of a temporary green manure or cover crop
• legume plantings or interplantings
• sheet mulches
• companion planting
• plant growth and development
• methods of waste disposal causing minimal impact on the environment

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

#### 1. Monitor and assess animal health and welfare

- 1.1 Check animals regularly
- 1.2 Recognise and report symptoms of ill health, common diseases or parasite infestations in animals
- 1.3 Remove and dispose of any dead animals

#### 2. Provide an optimal environment for animals

- 2.1 Assess animal’s needs in conjunction with work team and supervisor
- 2.2 Install equipment and housing
- 2.3 Monitor welfare of animals and report any issues

#### 3. Establish and maintain quality of animal housing

- 3.1 Follow health and safety procedures, practices, policies and precautions, including the use of personal protective equipment
- 3.2 Maintain cleanliness and hygiene of animal housing
- 3.3 Follow any quarantine procedures as instructed by supervisor
- 3.4 Maintain personal hygiene in all animal handling activities
- 3.5 Dismantle and clean equipment and correctly replace fittings
- 3.6 Control pest and vermin when necessary
- 3.7 Dispose of all waste and debris, and deal with run off
- 3.8 Conduct routine disease or parasite infestation prevention procedures

#### 4. Implement and record control strategies

- 4.1 Report any disease incidence or animal losses to the supervisor
- 4.2 Implement preventative strategies and quarantine measures as instructed by the supervisor
- 4.3 Maintain and enter records

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess animal health and welfare
- provide an optimal environment for animals
- feed and water animals
- handle animals safely and humanely
- move animals to different housing or pastures when necessary
- implement and record animal health and welfare control strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to animal care in a permaculture system
- animals common to permaculture systems in a given region or system
- role or niche of animals in system and interrelationship with other animals, plants or systems
- principles of animal feeding and nutrition
- principles of animal health, welfare and care
- symptoms of ill-health in animals
- legislation and regulations relating to animal health and welfare
- signs of animal fear, aggression and stress
- handling of animals
- safe handling of sick and dead animals
Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assess plants for harvest
- prepare for harvest
- carry out harvest operations
- maintain harvesting equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles related to harvesting
- principles of sustainable horticultural practices
- crops common in permaculture systems
- harvesting techniques, such as:
  - selective picking or hand picking ripe from unripe
  - tree shaking
  - picking leaves rather than whole plants
  - cutting plants and allowing to regrow (eg leeks, spring onions)
  - thinning or removing weak or diseased plants from among healthy ones
  - end of season crop extension harvesting (such as hanging tomato plants to ripen indoors)
- equipment and machinery used in harvesting
- sorting and grading, such as:
  - removing out-of-type plants
  - removing physically damaged, unhealthy, rotten or immature fruit and vegetables
• grading of the crop according to variety, size, length, colour, maturity, blemishes, bud count and quality, being subject to seasonal and market forces
• storage, transportation and grading of crops
• methods of waste disposal causing minimal impact on the environment

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Application

This unit of competency describes the skills and knowledge required to recognise integrated plant and animal systems and their roles in permaculture design.

All work is carried out to comply with workplace procedures, including animal welfare, quarantine and work health and safety policies and procedures.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- recognise animals and plants
- name animals and plants by common name
- read a permaculture plan
- identify plants and animals commonly encountered in a permaculture system
- identify plants with useful properties (food, fuel, fibre, medicinal, dyes, shade, habitat etc)
- describe animals with functions in the system
- produce a simple report

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to integrated plant and animal systems, such as:
  - practices which conserve energy and resources
  - protecting water, soil and other resources
  - obtaining a yield
  - preserving heritage or heirloom varieties (biodiversity)
  - re-using or adapting materials for other functions
  - making use of vertical space
  - creating multiple functions for the same thing
  - using nature as the model
  - seed-saving
- animals and plants common to permaculture systems in a given region or bioregion
Assessment Requirements for AHCPER209 Recognize characteristics of integrated plant and animal systems

- the role or niche of animals in system and interrelationship with other animals, plants or systems, such as:
  - native or wild animals and plants
  - pest and feral plants and animals
  - insects, fish, birds and reptiles, both friend and foe
- principles relating to integrated plant and animal systems

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- recognise plant pests, diseases and disorders
- identify interrelationships between weedy plants, pests, diseases or disorders and weather or environmental conditions
- recognise treatment or response methods, or opportunities
- prepare and apply treatments or responses to threats

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices in regard to plant protection, such as:
  - creative solutions to common problems in a permaculture system
  - design for improved predator-pest balance
  - integrated plant and animal systems
  - guilds of planting for mutual support
  - mineral contribution of weeds to soil (bioaccumulation)
  - using pest-weed cycles to advantage (breaking the insect reproductive cycle for example)
- common weedy plants, plant pests, diseases and disorders
- common environmental impacts on permaculture systems
- fire, flood, storm and tsunami behaviours and precautions relevant to permaculture design
- different types of treatments or system modifications and their principles, such as:
  - non-chemical controls including sprays with organic or natural ingredients
  - cultural control methods
Assessment Requirements for AHCPE211 Recognise threats and create opportunities in a permaculture system

- animal systems to control plants or plant residues (chicken or pig tractors)
- shade used as a control
- biodynamic treatments and control measures
- sheet mulching
- composting of residues
- follow-up strategies including spot mulching, seedling disturbance, animals
- environmental considerations when applying treatments

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for plant propagation
- propagate plants using garden techniques
- maintain healthy new plants and mother plants

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to propagation, such as:
  - using reclaimed or reused containers (suitably cleaned to avoid cross-contamination)
  - labelling systems using reclaimed materials
  - maintaining rare and unusual varieties
  - using edges and valuing marginal or unusual plants in micro-climates
  - sharing and swapping to increase biodiversity and mutual wellbeing
  - preserving provenance of locally indigenous species
  - testing and trialling for new plants or resistant varieties
  - global food plant preservation including seed saving
- principles of sustainable horticultural practices
- propagation techniques, such as:
  - soft wood cuttings
  - hard wood cuttings
  - tip and root cuttings
  - layering and division
• grafting (whip and tongue, saddle and wedge)
• seed sowing
• basic plant nutrition
• potting mixes suitable for propagation in a garden setting, such as:
  • compost and worm casting mixes
  • sieved and graded sands
  • blends used for different purposes or different times of year
  • sphagnum moss
• basic plant growth and development
• small-scale glass, shade or poly house structures
• methods of waste disposal causing minimal impact on the environment

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Application

This unit of competency describes the skills and knowledge required to assist with garden soil health and plant nutrition using simple methods and without costly equipment. It requires knowledge of simple soil testing techniques and how to improve soil health and plant nutrition organically.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- undertake simple soil assessment tests
- add organic or allowable nutrients to improve soil
- Protect soil to maintain moisture and overall soil health

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to soil health and plant nutrition, such as:
  - working with natural soils rather than importing soil
  - soil as an ecosystem
  - soil as biomass and carbon capture and storage
- principles of sustainable horticultural practices
- soil testing techniques, such as:
  - jar test for texture
  - ribbon test and ball test
  - pH testing
  - surface evaporation test
  - worm count
- basic plant nutrition
- allowable additives to improve soils, such as:
  - compost and worm castings
  - compost teas
• rock dust
• gypsum
• green manures
• manures/animal bedding materials
• leaf mould
• plantings – green manures, nurse plants
• companion planting
• dynamic accumulators
• chop and drop
• nutrient trapping systems
• greywater use
• organically certified products
• methods of waste disposal causing minimal impact on the environment

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research general information on permaculture
- identify differences between permaculture and other land management or land use practices
- share general information with others on permaculture

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices
- similarities and differences between other land use and management practices and permaculture, such as:
  - conventional broad-acre farming
  - battery chicken farms
  - intensive meat production facilities (e.g. feedlots, piggeries)
  - fish farming
  - biodynamic agriculture
  - organic mixed farms
- culturally appropriate speech and behaviour
- basic research techniques
- using primary data sources:
  - original data gathered by the researcher
  - measurements
Assessment Requirements for AHCPer301 Research and communicate information on permaculture principles and practices

- photographs
- maps or sketches
- soil tests
- observations of light, shade, sun angle
- flora and fauna present at the site
- slope and contour information
- observation of site and adjoining landscape features (e.g. sector analysis)
- weather observations
- using secondary data sources:
  - data provided by government departments and agencies, local groups (such as Landcare) or individuals (such as neighbours)
  - survey documents, maps and plans
  - official weather data
  - photographs, such as Google Earth
- communication techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

</tbody>
</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify client needs and the nature of the job
- determine options for developing an integrated plant and animal system
- communicate with clients, work team members, supervisors, suppliers, contractors and consultants
- identify plants
- provide information on the characteristics, needs and functions of plants and animals in integrated systems
- interpret site designs, maps, ground plans and specifications
- prepare drawings and tables showing how the systems integrate

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles related to integrated plant and animal systems
- permaculture practices, such as:
  - minimising effort for maximum effect
  - multiple uses for each element in the system
  - more than one way of providing important functions
  - re-using and valuing resources and energy
  - encouraging productivity of the system
  - seeing solutions not problems
  - using vertical space and other edges and connections
  - preventing waste and loss of resources from the system
- methods of design, such as planning spatially and allowing for overhead and underground structures, shadow, slope and sun angle
- an understanding of the place of permaculture topics sometimes relevant to integrated plant and animal systems, such as:
  - pattern understanding
  - ecological principles
  - climate and weather
  - water
  - soils
  - earthworks
  - aquaculture
  - species identification and selection information
  - plants in integrated systems
  - animals in integrated systems
- local plant suppliers, animal suppliers, consultants, services, products and contractors and availability of local resources
- patterns in permaculture design, such as:
  - patterns in space, such as planting patterns, naturally occurring patterns in nature (radial and bilateral symmetry, spirals, circles, dendritic and mandala patterns)
  - patterns in time, such as succession planting, breeding cycles, seasonality
  - patterns in human culture, such as gardening systems
  - nature as the model for design, such as stacking or layering as with a natural forest
  - gravity as a force for design, such as using contours in design
  - nutrient, water and energy capture, storage and re-use according to the inputs, outputs and intrinsic features of the system

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan maintenance activities for integrated plant and animal systems
- undertake maintenance
- record and report on completion of activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Integrated plant and animal systems, such as:
  - gardens, orchards, organic farms, woodlots and forests that include animals in free range or rotational systems
  - balanced ecosystems where the needs of all species are met
  - systems where poultry provide fertility, pest control and other services to plants, such as:
    - chicken-orchard systems
    - duck-rice systems
    - poultry used as tractor
  - frogs, birds and other wild creatures attracted to the garden to maintain ecological balance
  - patterns seen in nature, such as stacking and layering of plants in a forest, used in deliberate design
  - plants and animals commonly found on permaculture properties
  - plant groups and vegetation structures
  - permaculture practices, such as:
- composting of weeds
- chop and drop practices
- feeding weeds to animals
- soil support and enhancement strategies
- animal husbandry strategies
- permaculture design information, such as:
  - permaculture site plan
  - components of integrated plant and animal systems
- the role of animals in improving soil, recycling nutrients, managing ‘weedy’ plants and controlling pests and diseases
- plants as indicators and improvers
- typical permaculture solutions to water catchment and storage for integrated plant and animal systems
- recycling of materials and waste

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is NOT sufficient at this level.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- monitor animal housing, enclosures and fencing and act to ensure good care and hygiene
- assess and provide appropriate animal nutrition and watering provision
- manage and reuse manures and other animal ‘wastes’ safely and hygienically
- diagnose parasitic infestations, diseases and injuries
- select and apply appropriate means to treat parasites, diseases and injuries

Knowledge Evidence
The candidate must demonstrate knowledge of:
- permaculture principles
- animal care, maintenance and treatment programs, such as:
  - maintenance of animal housing, enclosures and fencing, covering hygiene and welfare
  - ensuring availability of suitable forage, fodder and supplementary feedstuffs, and adjusting stocking rates, ranging and rotation schedules to suit
  - coordinating integration of animal ranging and maintenance with plant production systems (ranging in orchard to manure trees, reduce weeds, pests, eat windfall fruit, tractoring systems, compost manures and housing litter, maintain firebreaks)
  - researching, assessing, sourcing and preparing supplementary stock feed requirements, feeding quantities and schedules
  - researching and applying organic alternatives for treating stock in compliance with organic certification authorities, which may include herbal and homoeopathic treatments, mineral and vitamin supplements and permitted medications
• developing appropriate handling procedures to reduce stress
• harvesting, sourcing and handling useable products (such as milking and collecting eggs)
• requirements for animal housing, enclosures and fencing
• animal health and nutrition requirements
• information documented in animal care, maintenance and treatment records, such as
  • stocking rates
  • rotation schedules
  • pasture condition
  • feeding details
  • harvest records
  • details of equipment and materials used
  • the performance of equipment, faults and malfunctions
  • number of treated livestock and details of treatment, including spur docking for roosters, hoof trimming and other mechanical, non-chemical treatments
  • any testing carried out and results
  • expiry of withholding periods
  • evaluation of treatment effectiveness
  • observed abnormalities or behaviour in livestock
• methods for harvesting, sourcing and handling useable products (e.g. milking, collecting eggs)
• types of parasite infestation, their symptoms and seasonal incidence
• types of health promotion practices, including allowable organic methods
  • assessing the requirements of the particular animals for shelter, enclosure, rotation, food and medicinal plants
  • dosage and rates of treatments appropriate to the identified type of animal, its body weight and severity of infestation, infection or injury
• relevant Codes of Practice with regard to the safe use and handling of hazardous substances
• withholding periods for treated animals

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to implement crop maintenance and harvesting programs for permaculture systems. Crop maintenance methods may include, thinning, spacing, selective harvesting, training, summer and winter pruning, hedging, skirting, topping and trimming. Crop harvesting methods may include manual and machine-assisted harvesting.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- interpret site plans and crop maintenance and harvesting schedules
- harvest or maintain crops correctly and without damaging produce
- coordinate work group, contractors and own activities

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to obtaining a yield
- principles of maintaining crops and the methods used to maximise crop yields
- maintenance techniques for a range of crops, such as:
  - manual thinning
  - selective harvesting
  - training
  - summer and winter pruning
  - hedging
  - skirting
  - topping
  - trimming
  - picking
  - bagging
  - trellising
- maturity or ripeness properties of crops when ready for harvest
Assessment Requirements for AHCPE305 Implement crop maintenance and harvesting programs for permaculture systems

Date this document was generated: 18 March 2019

- effects of maintenance operations on plant growth, habit and production levels of maintenance operations
- maintenance of soil health and impact on production
- enterprise quality procedures and characteristics of a crop relative to varying market requirements

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- recognise a range of weedy plants and associated organisms within a particular permaculture enterprise
- identify uses of weedy plants in a permaculture system
- identify control methods used in permaculture weedy plant management plan
- implement a permaculture weedy plant management plan
- assess progress and effectiveness of the permaculture weedy plant management plan

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices in relation to the management of weedy plants
- weedy plant recognition
- strategies used in weedy plant management plans, such as:
  - organic chemical, biological and cultural control methods and treatments available to the enterprise within the parameters of a permaculture weedy plant management plan
  - range and use of tools, equipment and machinery available to the enterprise for implementing a permaculture weedy plant management plan
  - animal systems to use the weedy plant as a food source
  - plants and planting strategies to out-compete weedy plants or to be used as a follow up to successful treatment
  - site monitoring and analysis techniques that may be used to implement a permaculture weedy plant management plan
  - roles that weeds play within an ecological system, such as:
Assessment Requirements for AHCPE306 Use weedy plants in a permaculture system

- soil stabilisers
- fodder for wild and domestic animals
- nutrient traps
- nutrient mining from subsoil
- identification of a range of edible weedy plants
- uses for weedy plants including commercial uses, such as:
  - animal fodder
  - basket making
  - compost teas
  - food and medicinal products, such as nettles as cheese wraps or herbal teas

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Certificate is not sufficient at this level.

</table>
### Element | Performance criteria
--- | ---
1. Prepare to establish a rural permaculture system | 1.1 Read and interpret the design for the permaculture system  
1.2 Identify the site, planting methods and system features  
1.3 Select materials, tools, equipment and machinery
2. Coordinate establishment of the rural permaculture system | 2.1 Coordinate work tasks in a sequential, timely and effective manner  
2.2 Establish the permaculture system according to work health and safety requirements and with due consideration for environmental implications  
2.3 Maintain a clean and safe work area throughout
3. Prepare the area | 3.1 Undertake earthworks if required  
3.2 Select and apply additives to the soil as required  
3.3 Mark out patterns or positions of elements on site according to permaculture design
4. Undertake positioning of elements in the rural permaculture system | 4.1 Inspect elements prior to planting, introduction or installation and remove elements with major defects  
4.2 Trim or treat plants with minor defects to maintain health and vigour  
4.3 Position elements to enable them to develop their full potential according to zone and sector analysis, pattern understanding and the permaculture design  
4.4 Provide elements with post-installation care
5. Monitor establishment of the rural permaculture system | 5.1 Monitor the system and take corrective action as needed  
5.2 Identify situations which will prevent elements from reaching their full potential  
5.3 Complete works for the permaculture design
6. Complete establishment of the rural permaculture system | 6.1 Remove or dispose of waste material from the site  
6.2 Clean, maintain and store tools, equipment and machinery  
6.3 Report work outcomes

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
New unit - equivalent to QLD843DES07B.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with work team members, supervisors, contractors and consultants
- utilise recording, reporting, analysis and work procedure documents
- read and interpret the permaculture design
- prepare the area for installation of elements of design
- install elements progressively over an appropriate period of time to establish the rural permaculture system

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of permaculture and practices in a rural context
  - rural permaculture system design for a farm or small holding where permaculture is practiced
- zone and sector analysis, for example:
  - consideration of the frequency of use and intensity of need of elements in the system
  - consideration of the spatial requirements of elements in the system
  - mutual benefit and connections between zones
  - consideration of the specific needs of the location of the system in terms of climate, access, slope, potential for wild fire, flood, tsunami or other catastrophic force
  - Consideration of the neighbouring or local environment, its need, products and intrinsic features
- Establishment of permaculture elements:
  - Elements which together form a system
• species chosen for their functions in the overall system including plants, animals and objects
• elements chosen for mutual benefit
• elements which address important functions such as energy, water, food and fuel
• elements which support the needs of the system within the overall design
• the objectives of the plant system establishment program, including finished plant system forms, site appearance, end use and time constraints
• the interactions between plants and animals and how to maximise the benefits
• cultural requirements, planting procedures and follow-up care for plants
• environment and habitat requirements of animal species
• the identification of pests, diseases, parasites, and deficiencies that are likely to affect plants and animals and the use of appropriate treatments
• soils and appropriate soil amelioration techniques
• the ecology of the native species, and their value in a permaculture system

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Communicate with work team members, supervisors, contractors and consultants
- utilise recording, reporting, analysis and work procedure documents
- interpret the permaculture design
- install elements progressively to establish the urban permaculture system (over an appropriate period of time)

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of permaculture and practices in an urban context
- Urban permaculture systems, such as:
  - houses and gardens where permaculture is practiced, or a productive section of it
  - community gardens or city farms where permaculture is practised
  - school gardens where permaculture is practised, or productive sections of them
  - Chicken, rabbit, guinea pig or other tractor systems
  - continuous worm farm systems
  - chicken dome pattern systems
  - tyre pond and mandala aquaculture systems appropriate to an urban permaculture system
  - aquaponics systems
  - duck and rice systems and other integrated systems appropriate to an urban permaculture system which utilise an animal, fish or bird species to generate a yield in association with plant species
- Zone and sector analysis
  - Consideration of the frequency of use and intensity of need of elements in the system
  - Consideration of the spatial requirements of elements in the system
  - Mutual benefit and connections between zones
  - Consideration of the specific needs of the location of the system in terms of climate, access, slope, potential for wild fire, flood, tsunami or other catastrophic force
  - Consideration of the neighbouring or local environment, its needs, products and intrinsic features
- Elements in permaculture elements
  - Elements which together form a system
  - species chosen for their functions in the system, including plants, animals and objects (built or existing)
  - elements which are chosen for mutual benefit
  - each important function (energy, water, food, fuel etc.) is supported by many elements
  - elements support the needs of the system within the overall design
  - the interactions between plants and animals and how to maximise the benefits
  - plant and animal species and their cultivars or breeds and what they contribute to the system
  - cultural requirements, planting procedures and follow-up care for plants
  - environment and habitat requirements of animal species
  - the identification of pests, diseases, parasites, and deficiencies that are likely to affect plants and animals and the use of appropriate treatments
  - soils and appropriate soil amelioration techniques
  - the ecology of the native species, and their value in a permaculture system
  - site retrofitting for urban permaculture systems:
    - constructing soil retainers
    - installing irrigation and drainage systems including swales, diversion drains, mulch-pit paths
    - establishing integrated plant and animal systems
    - collection and storage of nutrients or water
    - solar passive modifications to structures

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- organise resources for installation work
- set out and prepare site
- install permaculture water systems materials and components, excluding works requiring a licensed plumber.
- commission a permaculture water system
- monitor and maintain permaculture water systems
- communicate with work team members, supervisors, contractors and consultants

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture practices regarding water including natural flows, rainwater and wastewater, storage, movement and retention of water in the system
- permaculture water systems, such as:
  - swales
  - contour banks
  - terraces
  - mulch-pit paths
  - diversion channels and other passive installations
  - mains pressure systems
  - low pressure or gravity systems
  - below-ground systems
  - above-ground systems
- spray, dripper and capillary irrigation systems
- water tanks
- guttering and first-flush diversion system
- water supply components, such as:
  - mains
  - dam
  - bore
  - windmill
  - tank
  - channel
- understanding of contours
- installation methods and techniques for permaculture water systems
- components of permaculture water systems
- characteristics and operation of joints, valves and sprinkler components
- operation of pumps and water flow rates
- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- water quality and water filtration techniques
- calculations for installing permaculture water systems
- soil characteristics
- regulations and legislative requirements, such as:
  - permits for pruning or removal of large trees
  - connecting to water systems
  - licences for operating specialised machinery, such as chainsaws, skid steer loaders and forklifts
  - setting up traffic and pedestrian barriers
  - digging near services (phone, gas, power, water, sewerage and drains)
  - installing dams or diverting water in catchments
  - installing tanks
  - planning acts and codes
  - earth movement and digging guidelines and legislation
  - environmental legislation
  - land restoration codes
  - water conservation guidelines and legislation
  - soil movement regulations
  - habitat and wildlife protection legislation
Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to install permaculture structures and features. These structures and features may include fences, trellises, animal housing, sheds, pergolas, appropriate technologies and other constructed features.

All work is carried out to comply with workplace procedures. Manufacturer’s specifications are observed and operating instructions are followed when using tools and equipment.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- interpret permaculture design drawings and specifications
- measure and mark lengths of materials accurately
- join and cut materials using different techniques and methods
- install and check permaculture structure

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles regarding structures and the built environment
- Permaculture design drawings and specifications, such as:
  - Permaculture design including construction detail drawings
  - measured drawing of structure in accordance with permaculture principles
- measuring principles and techniques
- typical permaculture structures, such as:
  - garden structures and features
  - fences and trellising
  - animal housing and shelters
  - netting structures and protective devices for plants
  - paving and landscaping
  - composting and worm-farming structures
  - retaining walls, observing relevant regulatory conditions
  - sheds or small outbuildings, observing relevant regulatory conditions
• components of houses or other buildings, observing relevant regulatory conditions
• the correct use of hand and power tools and other work health and safety requirements associated with installing structures and features
• comparative environmental implications associated with excavation and construction activity
• safe lifting and transporting techniques
• appropriate use of personal protective clothing and equipment (PPE)
• appropriate use and installation of safety signs and barriers
• site access points
• implication of alteration to water flow during and after construction

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit provides the skills and knowledge required to identify and select small livestock for slaughter, preparing killing equipment, conducting safe and humane slaughter of small livestock, dressing and protecting meat, appropriately storing meat and ensuring meat is suited to end-use requirements. Competency also requires the application of skills and knowledge to hygienically clean equipment and slaughter areas and dispose of waste materials.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

### 1. Prepare for slaughter operations

1.1 Identify reasons for slaughter
1.2 Prepare equipment and transport to slaughter area
1.3 Select small livestock to be slaughtered and prepare for slaughter
1.4 Determine slaughter method and prepare slaughter area

### 2. Slaughter animal

2.1 Conduct slaughter humanely, with a minimum of stress to the animal or to other animals and people
2.2 Dress, hang and protect carcass
2.3 Follow all relevant WHS, regulatory and animal welfare requirements during slaughter operations

### 3. Complete slaughter operations

3.1 Dispose of waste products in an environmentally responsible manner
3.2 Process usable offal immediately. Separate other useable products and prepare as required
3.3 Identify intended end-use of meat
3.4 Prepare meat for end-use and store or treat as required
3.5 Hygienically clean equipment and store for re-use
3.6 Hygienically clean slaughter area

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify and select small animals for slaughter
- humanely and hygienically kill small livestock
- dress and butcher small livestock carcasses
- clean facilities and equipment
- prepare and store meat
- dispose of wastes in an environmentally responsible manner

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture practices with regard to killing small livestock, such as:
  - need to supply meat for domestic human or animal consumption
  - need to cull pest animals such as rabbits
  - need to cull animals in excess
  - need to destroy old or sick small livestock
- health restrictions and laws applying to the slaughter of livestock for sale, including not offering for sale small livestock slaughtered for domestic consumption, except where these laws are well understood and adhered to)
- relevant legislative work health and safety requirements, especially where they relate to livestock and slaughter, and animal handling techniques
- animal welfare legislation, such as:
  - meat industry health and safety guidelines
  - Australian standard for hygienic production of meat for human consumption
Assessment Requirements for AHCPE311 Kill and dress small livestock for domestic consumption

- ANZFA food standards code
- state and territory regulations regarding meat slaughter handling and consumption
- industry and enterprise quality assurance standards
- withholding periods
- animal welfare legislation
- disease control legislation and requirements
- withholding periods
- usable products other than meat, such as:
  - feathers
  - skins
  - chicken feet and combs
- usable offal and offal disposal regulations, such as:
  - select cuts, such as poultry offal or rabbit kidneys, that are fit for human consumption
  - handling offal safely and hygienically
- human health and hygiene
- health issues affecting both humans and small livestock
- end uses for animal carcasses, such as:
  - meat for human consumption
  - disposal of culled old or sick small livestock
  - maximising useful meat cuts and other products of slaughter
- storage or treatment of products from animal slaughter, such as:
  - cool room, refrigerator and freezer
  - smoke-house or curing facilities
  - salting barrel
  - cauldron or large boiler for cooked treatments
  - containers for storage
- poultry and small animal carcass hanging methods, such as:
  - dressing to avoid cuts to carcass or pelt
  - preparing skin for drying, storage or disposal
  - protecting from dust, heat, flies, wild birds or wild animals with appropriate gauze or bags or shelters until process is complete
  - cold room or cool room
  - refrigerator or freezer

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess site for planting
- test soil and analyse the results
- select plants
- identify zones and sectors of site to ascertain best planting locations
- identify structures and services and how these may impact on the plan
- develop planting plan to include at least 5 fruit trees or shrubs

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and ethics
- permaculture site planning
  - boundaries of sites drawn at an appropriate scale
  - direction of North (or sunward)
  - location of plants
- other information relevant to a permaculture garden and orchard system drawn in clear and accurate graphic style
- planting schedules and timelines, including Gantt charts
- zone and sector planning, such as:
  - zones for garden and orchard systems (Zones 1 and 2)
  - sector information such as prevailing winds, fire aspect, winter and summer sun angles, best locations for sun-loving and shade-tolerant species
  - microclimate information
Assessment Requirements for AHCPER312 Plan organic garden and orchard systems

- zone and sector plans drawn as overlays to a site plan
- garden and orchard systems, such as:
  - an orchard with 5 to 10 or more assorted fruit trees or shrubs
  - integrated plant and animal systems
  - consideration of and design for plant ecosystem relationships
- soil structure, types and function, including soil tests for agricultural purposes
- soil maintenance and improvement techniques
- aims and purposes of building organic garden and orchard systems
- design principles for organic garden and orchard systems
- features and characteristics of plants used in organic garden and orchard systems
- growing requirements of plants used in organic garden and orchard systems
- biosecurity policies and principles

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan for preparation of permaculture products
- process and preserve permaculture products
- pack, present and store permaculture products
- coordinate the work of others in the preparation and storage process

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles related to product preservation and storage
- seasonal availability cycles
- products suitable for storage
- the following plant products:
  - fruits
  - vegetables
  - seeds
  - herbs
  - flowers
  - foliage
  - grains
  - bulbs
  - tubers
  - nuts
- mushrooms
- wild harvest plants
- oils
- firewood

  - meat
  - eggs
  - milk and dairy products
  - honey and bee products
  - young animals
  - fish fingerlings
  - feathers
  - wool
  - manure
  - bones
- storage methods appropriate to particular products
- treatment methods appropriate to particular products:
  - removal of dirt and foreign material
  - stripping excess leaves and/or trimming
  - brushing
  - washing/hydration
  - drying
  - applying preservatives
  - dipping
  - observing quarantine requirements
  - storing in a controlled environment
  - comply with organic standards, if appropriate
- the importance of maintaining the quality of products including handling and storage requirements
- correct storage conditions for products:
  - specifications for storage facilities
  - environmental conditions such as temperature, humidity and light
Assessment Requirements for AHCPER313 Coordinate preparation and storage of permaculture products

- length of storage
- position in the storage facility: shed, cellar, root cellar, pantry, barn, refrigerator, freezer, drying room
- cleaning processes to ensure a level of hygiene that protects the quality and health status of the stored products
- hygiene issues in the handling and storage of biological products

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- define maps and plans
- determine distances and areas
- identify topographical features
- identify site boundaries and site structures
- use maps to take-off information
- use maps in field situations

Knowledge Evidence

The candidate must demonstrate knowledge of:

- maps and plans
  - paper
  - electronic
  - 3D models of sites, including sand-box models
  - contour models
  - elevations and cross-sections
  - aerial photographs
- the following mapping conventions: symbols, distance and scale, direction, coordinate systems, line and area symbols, true North, grid North and magnetic North
- land survey systems, map projections, colour and symbol systems
- contours, slopes and slope profiles
- keyline and key point locations, as described in *Water for Every Farm* by P.J. Yeomans
- topographic features
Assessment Requirements for AHCPER314 Read and interpret property maps and plans

- curved planes on flat surface distortions
- means of locating current position in the field, such as:
  - GPS
  - other positioning systems such as the sun, moon and stars
  - compass bearings

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to coordinate small-scale community projects and small groups of people working on a permaculture-related project.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- read and interpret documentation associated with community projects
- organise field staff and volunteers
- represent and support community organisations
- calculate material and resource requirements
- coordinate project activities
- document and report results

Knowledge Evidence

The candidate must demonstrate knowledge of:

- community projects, such as:
  - small or short-term projects
  - projects that form part of larger projects
  - arranging social events
  - carrying out fundraising and sponsorship
  - representing a community group or project
- environmental awareness associated with undertaking project works to ensure minimal impact on the environment
- work schedule programming
- hiring and subcontracting of labour
- attracting volunteers
- possible causes of disruption to work activities and contingency situations, such as:
  - delay in delivery and/or breakdowns with equipment and machinery
Assessment Requirements for AHCPE315 Coordinate community projects

- poor weather conditions
- poor quality materials
- unforeseen problems
- provision for providing other work on the site or away from the site while problems are fixed
- delaying a project if possible and necessary
- responsibilities and requirements for obtaining external agency permits as necessary
- the range, use and availability of materials, equipment and resources required for a project
- work health and safety issues, legislative requirements and Codes of Practice
- community consultation
- project coordination principles
- meeting and committee protocols
- project reporting
  - the project name
  - author name and date
  - project description
  - progress of activities
  - promotions and publicity
  - OHS issues
  - expenditure
  - future project-related activities that require planning

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assess permaculture system needs
- research plants and animals to inform the new permaculture system design
- select plant and animal species for a permaculture system
- monitor plant and animal systems during the establishment phase

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to species selection
- permaculture needs analysis
- bioregional analysis
- plant and animal species and their interactions and interrelationships
  - permaculture combinations – guilds, companions, nurse plants and animal companions
  - EVCs (Ecological Vegetation Classes)
  - indigenous animals and plants
  - what grows or thrives locally – plants, animals, birds, insects, fish, frogs, reptiles
  - food, fodder and medicinal plant species suitable for chosen animals
  - integrated plant and animal systems such as chicken tractors, cell grazing, aquaculture systems
- basic research techniques
  - using primary data sources:
    - original data gathered by the researcher
    - local wisdom
Assessment Requirements for AHCPER316 Select plant and animal species for permaculture systems

- weather observations
- flora and fauna observations
- using secondary data sources:
  - data provided by government departments and agencies
  - publications
  - reference books, websites and journals
  - official weather data
- communication techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research building methods
- prepare for the building project
- build with earth, straw and/or reclaimed materials
- limit and re-use surplus and waste materials
- ensure the standard of the finished built structure is appropriate to the permaculture design

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles regarding structures and the built environment
- Building methods, such as
  - mud brick
  - straw bale
  - cobb & light earth
  - rammed earth (Pise)
  - wattle and daub
  - stabilised/compressed earth brick
  - earth ship
  - aerated concrete
  - compressed paper and timber fibres
  - wool brick
  - air dried timber
• structural issues
• planning issues
• properties of materials and suitability of local soils and timbers for building uses
• environmental, logistical and safety factors, such as:
  • issues related to harvesting and milling of local timbers
  • possible contaminants in or on materials
  • weight and size of materials and their transport to the site
• reclaimed materials, such as:
  • commercial timber off-cuts and wastes
  • demolition materials (timbers, windows and doors, plumbing fittings, roofing materials, bricks and other masonry items)
  • railway sleepers, telegraph poles, bridge timbers and other heavy reclaimed timbers
  • metal mesh and grill-work (fridge and oven shelves, wire baskets, fence panels, bed frames and bases, chicken wire, aviary mesh, pig/dog wire and other wire mesh products in small or large quantities)
  • reinforcing mesh and rods, trench mesh
  • pallets and packaging crates
  • shipping containers, ex-transport carriages, old cars, trailers and caravans
  • mirrors
  • bottles (glass and plastic)
  • ceramics and flower pots
  • car & truck tyres, windscreens, panels and seats
  • machinery parts
  • drums and cans
  • palings and weatherboards
  • reclaimed concrete
• typical permaculture structures, such as
  • garden structures and features
  • fences and trellising
  • animal housing and shelters
  • seating and garden walls
  • retaining walls and small dam walls (including observing all regulatory conditions)
  • sheds or small outbuildings (including observing all regulatory conditions)
  • components of houses or other buildings ((including observing all regulatory conditions and work with professionals on larger structures)
• the correct use of hand and power tools and other work health and safety requirements associated with installing structures and features
• techniques for working with reclaimed materials such as de-nailing, stripping old paint, dressing timber
• WHS considerations associated with recycled materials such as identification of lead paint, broken glass, rusty metal, chemically treated materials
Assessment Requirements for AHCPE317 Build with earth, straw and reclaimed materials

- comparative environmental implications associated with excavation and construction activity
- safe lifting and transporting techniques
- appropriate use of personal protective clothing and equipment (PPE)
- appropriate use and installation of safety signs and barriers
- site access points
- implication of alteration to water flow during and after construction

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to plan propagation activities for a permaculture system. It requires the application of permaculture principles, seasonal propagation opportunities, organic principles and plant growth science.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research propagation requirements for the permaculture system
- develop a propagation plan
- implement a propagation plan
- maintain propagated plants to maturity or end use.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to propagation:
  - using reclaimed or reused containers (suitably cleaned to avoid cross-contamination)
  - labelling systems using reclaimed materials
  - maintaining rare and unusual varieties
  - using edges and valuing the marginal – unusual plants in micro-climates
  - sharing and swapping to increase biodiversity and mutual wellbeing
  - preserving provenance of locally indigenous species
  - testing and trialling for new plants or resistant varieties
  - global food plant preservation, including seed saving
- propagation plan including such considerations as:
  - seasonal activities
  - seed saving
• needs of the system for plants
• mother plant location and frequency of use
• schedules and timelines
• principles of sustainable horticultural practices
• propagation techniques, such as:
  • cuttings – softwood, hardwood, semi-hardwood, root and tip
  • layering – stool, aerial and runner
  • division
  • grafting – whip and tongue, saddle, wedge, approach and bench
  • budding – shield and patch
  • seed sowing
• potting media suitable for propagation in a garden setting, such as:
  • compost and worm casting mixes
  • sieved and graded sands
  • blends used for different purposes or different times of the year
  • sphagnum moss
  • water (hydroponics or aquaponics)
• plant growth, development and nutrition
• botany and physiology
• maintaining moisture levels in simple systems without causing disease
• systems for protecting new plants and seedlings, such as:
  • polyhouse or shade-house systems, including hoop systems on garden beds
  • systems using reclaimed materials, such as bag-and-frame cloches, bottle protectors for seedlings, tyre stacks, birdcages and wire baskets
  • glass houses
  • shade houses
  • naturally occurring or planned microclimates
• minimal environmental impact waste disposal and composting systems which destroy pathogens.

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
Element | Performance criteria
--- | ---
1. Take soil samples from a number of places in the permaculture system | 1.1 Obtain samples from several places over a site 1.2 Prepare the samples for testing 1.3 Label containers accurately with location identifier, date, soil test and tester

2. Test soil for range of plant and structural needs | 2.1 Carry out soil tests for texture, organic matter, structure, pH, water infiltration and compaction 2.2 Have samples tested by a laboratory for nutrient levels and deficiencies if concerned or if particular requirements exist for the crops and livestock in the permaculture system 2.3 Re-test in a different season or soil temperature

3. Analyse soil improvement requirements | 3.1 Determine requirements for soil improvement from tests carried out 3.2 Determine requirements for soil improvement from the laboratory test results, if taken 3.3 Identify soil biota in soil and ascertain how to optimise biodiversity 3.4 Research soil improvement options, including discussing with neighbours and experienced practitioners appropriate options for soil improvement

4. Implementing soil improvement plan | 4.1 Develop a plan for soil improvement over time and vary it depending on the location on the site and the crop or livestock being grown 4.2 Calculate required quantities of allowable additives and supplements to improve soil health 4.3 Use products at recommended rates and according to any existing certification system applying to the land 4.4 Protect soil biota present in soil, including using appropriate mulches for perennial and annual plants

5. Maintain health of soil according to organic guidelines | 5.1 Observe changes over time and record using tables and photographic records 5.2 Avoid practices that can cause deterioration in soil health such as over- or under-watering, over-grazing, over-cultivating and off-contour ploughing 5.3 Follow organic and permaculture guidelines to increase soil carbon

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- take soil samples
- test soils
- analyse soil improvement requirements
- implement soil improvement plan according to permaculture guidelines
- maintain soil health

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to soil health and plant nutrition
  - working with natural soils rather than importing soil
  - soil as an ecosystem
  - soil as biomass and carbon capture and storage
- principles of sustainable horticultural practices
- how to read a laboratory soil test
- soil testing techniques, such as:
  - jar test for soil structure
  - ribbon test and ball test for soil texture
  - infiltration or permeability test
  - pH testing
  - compaction test
  - non-wetting soil test
Assessment Requirements for AHCPR319 Test, improve and maintain healthy soil in a permaculture system – Date this document was generated: 18 March 2019

- air-filled porosity test
- worm count
- microscopic biota in soils
- plant nutrient uptake and mineral action
- soil chemistry
- science of composting
- fungal and bacterial action and mulches appropriate to different plants
- additives to improve soils, such as
  - compost and worm castings compost teas
  - biochar
  - green manures
  - organic mulch
  - manures/animal bedding materials
  - leaf mould
  - plantings – green manures, nurse plants
  - companion planting
  - chop and drop
  - nutrient trapping systems
  - greywater use
  - organically certified products
  - amendments that may include rock dust, gypsum, dolomite, lime, zircon, sulphur and other minerals
- plant growth and development
- soil life, including microscopic life
- methods of waste disposal causing minimal impact on the environment
- the effects of conventional agricultural chemicals on soils and soil ecosystems

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to manage plant pests, diseases and disorders in a permaculture system. It requires knowledge of healthy permaculture systems and the pests, diseases and disorders that might need management. It includes focussing on solutions in an integrated design, rather than reacting to infestations.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

</table>
| 1. Identify existing and potential pests, diseases and disorders in the permaculture system | 1.1 Using observation of plants in the permaculture system, identify existing or potential for pest attack, disease or disorders  
1.2 Using climatic data and weather observations, identify existing or potential for pest attack, disease or disorders  
1.3 Monitor balances within the system such as pest and predator balances  
1.4 Maintain a record of observations |
| 2. Research pest, disease and disorder prevention methods | 2.1 Research pests, diseases and disorders using both primary and secondary sources  
2.2 Consult widely and use both electronic and conventional reference material  
2.3 Establish prevention methods for maintaining a healthy balance  
2.4 Research possible negative effects of treatments on other elements of the permaculture system |
| 3. Develop a pest and disease management program | 3.1 Develop a plan based on the research conducted and the observations made  
3.2 Include information about weather conditions, time of year, cycle of pests or disease vectors in the management program |
| 4. Implement the pest and disease management program | 4.1 Provide solutions that address the interactions of many elements in the system rather than spot treating outbreaks  
4.2 Avoid practices that spread disease, such as propagating using diseased plants, or using un-sanitised tools when pruning orchard trees  
4.3 Provide habitat and microclimate conditions for useful insects, plants, birds and animals  
4.4 Carry out permaculture practices that minimise the risk of pest and disease problems  
4.5 Update the management program regularly so that it is active and useful to the permaculture system |
| 5. Monitor and record the management of plant pests, diseases and disorders over time | 5.1 Keep records of pest and disease control operations, noting weather conditions and times of year  
5.2 Use records to enable predictions of or responses to possible disease and pest recurrences in similar weather or times of the year  
5.3 Maintain records over time to build a history of the permaculture system |
Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify existing and potential pests, diseases and disorders in the system
- research methods of managing pests, diseases and disorders in a permaculture system
- develop a pest and disease management plan
- implement a pest and disease management plan
- monitor pest and disease managements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to managing plant pests, diseases and disorders
- principles of maintaining healthy permaculture crops, such as:
  - companion planting
  - increasing diversity
  - providing habitat and food for pests’ natural predators
  - healthy, balanced soil
  - minimal use of soluble fertilisers
- allowable control methods in organic systems, such as
  - deterrent organic sprays
  - pheromone traps and lures
  - predatory and/or parasitic insects, mites and other organisms as part of biological control
  - nutrient additives
Assessment Requirements for AHCPER320 Manage plant pests, diseases and disorders in a permaculture system

- crop rotation
- covers and netting
- BT (*Bacillus thuringiensis*) and other action-specific micro-organisms
- symptoms of disease and disorders in plants
- care needed to avoid transferring infections (such as through grafting and pruning practices)
- stages of development of pest organisms and signs of pest presence on plants and animals
- planting for insectivorous birds, lizards, frogs and microbats
- fungal, bacterial and viral infestations and their symptoms
- disease vectors and plants that harbor them
- companion planting
- succession planting

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to demonstrate permaculture practices to small groups of learners. Demonstration of techniques related to animals, plants, structures, energy, resources and community development are covered in a non-threatening and experiential setting. It is intended for school teachers and those who demonstrate permaculture skills to small groups of learners in different situations and contexts.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| 1. Identify audience for demonstration | 1.1 Identify characteristics of audience to cater to their needs  
1.2 Confirm numbers and, if possible, names of individuals  
1.3 Identify time allowed for demonstration  
1.4 Identify location and facilities where demonstration will take place |
| 2. Identify topic for demonstration | 2.1 Identify topic/s for demonstration  
2.2 Research topic/s and clarify best demonstration location and facilities  
2.3 Develop order of demonstration, from patterns to details |
| 3. Develop demonstration methods and resources | 3.1 Develop participatory planning activities for the sessions  
3.2 Develop participatory learning activities for each topic  
3.3 Prepare materials and equipment, including enough of everything for the audience size  
3.4 Develop review and revision activities for longer sessions  
3.5 Confirm all materials, tools and equipment is present and in working order, including safety equipment for the demonstration |
| 4. Conduct demonstration | 4.1 Conduct a site and safety briefing  
4.2 Conduct a group introduction session for names and stories of participants  
4.3 Clarify the planning of sessions for the participants  
4.4 Clarify each learning activity and then conduct it  
4.5 Conduct review and revision activities as required  
4.6 Close the session and clean up in a participatory way that includes session participants |
| 5. Take feed-back from audience | 5.1 Conduct a review of the demonstration/s  
5.2 Collect feed-back information and address any issues identified  
5.3 Use feed-back in future demonstration planning |

### Foundation Skills

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify audience for demonstration
- identify topic/s for demonstration
- prepare resources for demonstration
- conduct demonstration
- collect and use feedback to address immediate issues or for future demonstration planning

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and ethics
- Permaculture practices, such as:
  - minimising effort for maximum effect
  - multiple uses for each element in the system
  - using more than one way to provide important functions
  - re-using and valuing resources and energy
  - encouraging productivity of a permaculture system
  - seeing solutions, not problems
  - using vertical space and other edges and connections
  - preventing waste and loss of resources from a permaculture system
- participatory planning and learning activities for topics such as:
  - methods of design
  - pattern understanding and integrated systems
Assessment Requirements for AHCPER321 Demonstrate permaculture practices to small groups of learners

- animal and plant species selection methods
- ecological principles
- climatic and geological influences
- water in the system
- soils
- earthworks for capturing nutrients
- permaculture structures and features
- different appropriate technologies that can be used
- resource use and reuse
- energy

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify client needs and requirements for information and advice
- propose a selection of permaculture practices and strategies that best suit the needs and resources of the client and the potential of the site
- provide information on permaculture principles
- provide advice on permaculture practices and strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of permaculture based on 12 principles in David Holmgren *Principles and Pathways Beyond Sustainability* and the work of Mollison and Slay
- ethics of permaculture: care for the earth, care for all people, fair share of surpluses, setting limits to biophysical growth (population, resource use and waste)
- permaculture practices and strategies, such as
  - personal, household, community and bioregional strategies
  - sustainable agriculture, horticulture, aquaculture and organic gardening
  - economic alternatives that support sustainable living
  - low energy and low embodied energy building and manufacturing
  - appropriate technology
  - restoration ecology and maintenance of biodiversity
  - sustainable community development, bioregional development and relocalisation
  - Reuse and return of products in manufacturing cycle and waste utilisation, waste water, grey water, sewage and resource treatment for re-use and recycling
Assessment Requirements for AHPERE401 Provide advice on permaculture principles and practices
Date this document was generated: 18 March 2019

- Sustainability education
- elements of permaculture systems
- functions of permaculture systems
- permaculture design techniques
- innovation in plant, animal and technology selection, use and performance
- recent practice in bioregional community development and local energy descent planning
- client communication techniques, record keeping and listening techniques
- preparation of reports and presentations for clients
- uses of Statements of Limitation in the giving of advice

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a design brief for a rural permaculture system
- draw permaculture and landscape plans
- identify rural permaculture design solutions
- develop permaculture system concepts
- develop planting schedules, budget and bills of quantity
- develop a final design
- present design to client

Knowledge Evidence

The candidate must demonstrate knowledge of:

- elements of rural permaculture design
  - representation of up to 5 zones
  - detailed representation of Zones 1 to 3
  - sector analysis
  - bioregional analysis
  - superimposing of design over commercial aerial photograph or other geospatial representation
- principles of permaculture
- strategies in rural permaculture design, such as:
  - land shaping including contour ploughing, swaling, keyline dam systems, berms and terraces
  - integrated plant and animal systems that suit the bioregion and the land
• natural system preservation and incorporation into overall design
• soil and water preservation
• forest ecology and recharge plantings for maximum water and nutrient cycling
• innovative agricultural systems such as cell grazing, inter-cropping, commons and food forests
• preservation of old and rare breeds of animals
• biodiversity and habitat preservation and enhancement strategies
• design brief
  • statement of scope of design
  • statement of client needs and requirements
  • listing of project elements
  • listing of assessable tasks
  • options for dealing with client needs and requirements
• design analysis and research
  • investigation of permaculture books and publications, online material, audio and video material, maps, plans, charts and tables
  • searches in libraries and databases
  • viewing maps
  • searching geospatial data
  • talking to people in the local area or neighbours
• plan interpretation and map reading
• site analysis
  • initial on-site estimations of soil type, pH, texture
  • topography
  • aspect
  • zone and sectors planning
  • existing vegetation
  • climatic factors
  • indicator species or other landscape-reading notes
• site surveying methods and tools
  • surveying instruments for taking vertical measurements on site
  • surveying instruments for measuring angles on site
  • surveying instruments for measuring distance and horizontal measurements on site
• design concept, such as:
  • preliminary conceptual sketches
  • bubble diagrams
  • preliminary plan, section and elevation design drawings
  • use of design drawing and drafting conventions
  • presentable and legible design drawings for client use
• rural permaculture design
• integration of brief requirements, analytical information and conceptual planning
• rational justification for placement of design elements
• integration of elements to produce an efficient and functional rural permaculture system
• conventional design symbols and those to convey permaculture elements
• design drafting and drawing conventions
• plant and animal selection
• final design
  • rendered plan, elevation and section drawings to scale
  • use of design drawing and drafting conventions
  • use of consistent graphic style
  • supporting legends and keys of elements
  • supporting materials lists, tables, bills of quantity, timelines, installation plans and management plans
  • construction detail drawings
• methods of design
  • zone and sector planning
  • slope planning
  • patterns in space and time

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to design an urban system. It requires the ability to negotiate with clients to develop a permaculture design brief, undertake site analysis, develop design concepts and produce final design documentation.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- draw permaculture and landscape plans
- identify urban permaculture design solutions
- analyse zones and sectors of site
- develop design concepts
- develop detail and construction drawings
- develop planting schedules, budget and bill of quantities
- develop a final design
- present a design to a client

Knowledge Evidence

The candidate must demonstrate knowledge of:

- elements of urban permaculture design
  - Zones 1 and 2, as the furthest areas represented on the plan (otherwise it is a rural design)
  - needs supplied by other zones, even if they are supplied off site
  - sector analysis
  - bioregional analysis
  - design which may utilise existing architects’ drawings or local maps and plans
- principles of permaculture
- strategies in urban permaculture design
- edible landscapes and aesthetics in design
- public landscapes and community garden design
• design brief
  • statement of scope of design
  • statement of client needs and requirements
  • list of project elements
  • list of assessable tasks
  • options for dealing with client needs and requirements
• design analysis and research techniques
• plan interpretation and map reading
• site analysis
  • onsite measurement of site boundaries
  • mapping of boundaries to scale to a plan drawing
  • mapping of contour lines to a scale plan drawing
  • measurement and location of existing infrastructure and features on site
  • mapping of existing infrastructure and features to a scale plan drawing
  • measuring and plotting location of services (power, water, sewer, gas)
  • measuring and plotting location of meters or access points
• surveying methods and tools
  • surveying instruments for taking vertical measurements on site
  • surveying instruments for measuring angles on site
  • surveying instruments for measuring distance and horizontal measurements on site
• design concepts
  • preliminary conceptual sketches
  • bubble diagrams
  • preliminary plans, sections and elevation design drawings
  • use of design drawing and drafting conventions
• presentable and legible design drawings for client use, such as:
  • domestic systems for urban and suburban properties
  • rooftop, balcony and courtyard gardens
  • public landscapes such as streets, parks, car parks, commercial premises, industrial estates and community centres
  • school gardens and learnscapes
  • community gardens and city farms
  • Community Supported Agriculture systems, urban market gardens and peri-urban small holdings
  • urban forestry
• conventional design symbols and those to convey permaculture elements
• design drafting and drawing conventions
• plant and animal selection
• final design
  • rendered plan, elevation and section drawings to scale
Assessment Requirements for AHCPER403 Design an urban permaculture system

- use of design drawing and drafting conventions
- use of consistent graphic style
- supporting legends and keys of elements
- supporting materials lists, tables, bills of quantity, timelines, installation plans and management plans
- construction detail drawing
- methods of design
  - zone and sector planning
  - slope planning
  - patterns in space and time

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- write reports for supervisors, clients and contractors
- assess a site for opportunities and constraints associated with implementation of permaculture works
- implement a staged permaculture works plan
- determine tools and equipment required
- calculate amounts of materials required

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices
- permaculture works, such as
  - implementing permaculture designs
  - following a permaculture works plan as part of a permaculture project
  - constructing permaculture structures and features
  - implementing permaculture earthworks
- practical understanding of the environmental issues associated with undertaking permaculture works, such as:
  - use of materials that come from sustainable sources
  - duty of care in conserving site’s natural values
  - work practices
  - the use and movement of machinery, storage of materials, removal of weeds and movement of soil and other materials into, across and beyond the site
• principles of ecology, including specific plant and animal relationships and habitat requirements
• statutory compliance and obligations, such as:
  • compliance with legislation, ordinances, regulations or bylaws relating to the works or the work site
  • Site responsibilities include OHS, industrial relations and equal opportunity and employment
• site evaluation techniques including methods of analysing soils, waterways and their condition
• practical understanding of the advantages and disadvantages of a range of permaculture procedures
• selection and use of appropriate combinations of machinery and tools
• work health and safety hazards associated with undertaking permaculture works and the controls necessary to remove or minimise risks associated with them
• contract documentation including specifications, plans of permaculture works, services, supplies and surveyors documents
• scope of works determination
• works’ breakdown into tasks
• scheduling and time line generation
• task specifications and evaluation

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- investigate appropriate technologies for permaculture systems
- evaluate permaculture systems capabilities in relation to the use of new technologies
- evaluate suitability of new technology solutions to the permaculture application
- communicate information and options

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and ethics
- appropriate technologies, such as:
  - technologies involving solar, wind, wood, biomass and water driven equipment for generating power, performing pumping duties, heating hot water and biochar production
  - alternative and resource conserving technologies such as rainwater collection, waste water treatment, composting toilets, cooking stoves, cob ovens, space heating and cooling, household appliances, pedal-powered appliances, enterprise plant and equipment
  - building technology such as natural and resource conserving building materials and techniques including passive solar design strategies and features
  - tools and implements employed in gardening and farming operations such as electric fencing, hand vs. power tools, shredders, mulching machines and use of animal power
- lifestyle choices and behavioural adjustments to conserve energy and resources to meet sustainability objectives
• smaller scale and lower cost solutions such as maintaining and riding a bicycle, using a refillable pen, using a razor with replaceable blades and substituting other non-disposable items where disposables are normally used
• low energy devices
• ingenuity applied to complex problems to develop simple solutions such as solar powered street lighting
• criteria for determining appropriateness of energy and resource conservation technologies
• principles of passive solar design, embodied energy and carbon emission reduction
• innovations in energy and resource conservation technologies
• role of appropriate technology in energy descent planning and greenhouse gas emission reduction
• types of appropriate technology systems commonly available and applied to the design of energy and resource conscious houses, farms, offices and community projects
• the benefits from combining a number of different appropriate technologies and the limitations of each different technology
• design of systems integrating appropriate technologies

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to research, extract and provide information on bioregional characteristics and resources. It requires the ability to process a request for information on bioregional characteristics and resources, identify information sources, organise self and others, ensure information meets request, prepare and finalise reports.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify sources of information on bioregional characteristics and resources
- organise self or others to extract information on bioregional characteristics and resources
- ensure information meets requests
- employ appropriate media to present a report
- prepare, finalise and present a report

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and ethics
- bioregional characteristics and resources, such as:
  - a bioregion as a land and water territory whose limits are defined not by political boundaries, but by the geographical limits of human communities and ecological systems
  - a town or a segment of a city as typical as the main node of a bioregion, as was the pattern of most settlement and economic development until the 20th century
  - water catchment as one of the key identifiers of the bioregion, with the water catchment, storage, use/treatment of effluent and the water quality of rivers and creeks as essential to permaculture design
  - The Ecological Vegetation Class (EVC) of the area or the population of endemic species, as well as the suitability of any other species to grow or breed in the area
  - history, social make-up, land use and population information that go towards understanding an area
Assessment Requirements for AHCPER406 Identify and analyse bioregional characteristics and resources

- bioregional resources, including the human and social capital or culture of an area, its capacity to produce its own needs and supply surplus to others and its resilience in responding to change or catastrophe
- the natural (biophysical), built, social and cultural elements of the area, including water supply and catchment management systems, transport systems, local exchange trading systems (LETS) and cooperatives, food supply systems, fuel and fibre supply systems
- data held by local councils, community groups, historical societies, individuals and organisations that adds value to a study of the bioregion
- the following bioregional issues: transition initiatives, local food and water security and bioregional self-reliance regarding other components of daily life from local sources as opposed to importing basic needs from long distances at a high cost to the environment
- embodied energy, including how to measure it and compare it with energy output over the life of the item, and consideration of the waste disposal of an item as part of its energy ‘cost’
- types of information sources
- methods and means of accessing data
- methods of presenting and formatting information
- means of validating information

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine harvesting, post-harvest and storage system requirements
- identify requirements for maintaining optimum condition of products from a permaculture system
- prepare a harvesting and storage plan
- communicate harvesting and storage plan to clients and others

Knowledge Evidence

The candidate must demonstrate knowledge of:

- products from a permaculture system commonly harvested and stored, such as:
  - vegetables where the whole plant is harvested
  - vegetables where part of the plant is harvested
  - perennial plants where fruit/nuts are harvested
  - forests where timber, fuel and fibre crops are selectively removed
  - forests where a range of other medicinal and craft crops are harvested
  - harvest from wild systems (e.g. fruit, nuts, fungi and seeds), where a clear abundance of product has been identified
  - animal products such as eggs, feathers, hides, bone, milk and meat
  - Products may also include those derived from insects (such as honey)
  - fish (such as roe), and other organisms, such as fungi, algae and moss
- design systems for meeting year-round supplies of fresh and stored produce, such as:
  - growing requirements and crop regulation strategies calendar or seasonal chart with planting times of crops
• selection of early, mid- and late season varieties to extend harvest
• number of plants and area to be planted
• crop regulation and maintenance program involving tipping, mounding, thinning, staking
• sequential planting and/or harvesting schedules
• climatic conditions for harvesting crop such as appropriate time of day
• harvest and post-harvest factors influencing plant metabolism and quality
• post-harvest treatment and preparation techniques, such as:
  • flow chart of harvest, treatment, preservation and storage process
  • harvest and post-harvest treatment timelines and schedules
  • design or plans of processing and storage area
  • design of processing technology or equipment such as solar food dryer
  • lists of materials, tools, equipment and ingredients
  • manuals and operating instructions for equipment
  • recipes and instructions
  • anticipated shelf-life of product
  • labelling and recording systems
  • work health and safety, food safety, hygiene and other relevant enterprise and work practices
• preservation methods and processes for products from a permaculture system, such as:
  • drying and dehydrating
  • bottling
  • cheese-making
  • extraction (honey, cold-pressed and distilled oils)
  • culturing or fermenting
  • preserving with vinegar, oil, brine, sugar, salt and other natural agents
  • air exclusion (sealing with fats, wax, vacuum seal)
  • cellaring and root-cellaring
  • other processes that use minimal fossil fuel energy while maintaining the integrity of the harvested crop
• technologies used in crop processing, treatment, preservation and storage systems
• design of storage areas, such as:
  • buildings such as sheds
  • cupboards
  • shelving and racks
  • work benches
  • store rooms
  • pantry
  • cool store
  • cellar
• root cellar
• bins and containers
• developing planting and harvesting schedules for products from a permaculture system
• identifying training needs for harvest and storage workers, such as:
  • work health and safety, and other relevant enterprise and work practices
  • food safety and hygiene standards
  • appropriate clothing and personal protective equipment (PPE)
  • harvest and post-harvest handling, processing and storage practices
  • food preserving techniques
  • operation and maintenance of tools and equipment
  • reporting, recording and labelling procedures
• preparing plans and reports
• food safety, health and hygiene requirements for preservation and storage of products for human consumption

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit provides the skills and knowledge to implement and monitor animal health and welfare programs for a permaculture system. It requires the ability to provide information to clients and animal owners about animal welfare, facilitate the participation of others in complying with animal health and welfare guidelines, implement and monitor enterprise programs for animal care, deal with animal emergencies and maintain animal health records.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</table>
| 1. Provide information about animal care in a permaculture system | 1.1 Accurately and clearly explain to the client relevant permaculture practices towards animal health and welfare  
1.2 Provide readily accessible information on animal care and maintenance and accurately and clearly explain this to clients and animal owners  
1.3 Regularly provide information about identified animal health and welfare requirements and accurately and clearly explain this to clients and animal owners |
| 2. Facilitate the participation of workers in animal care and maintenance in a permaculture system | 2.1 Follow the permaculture plan for animal care and maintenance  
2.2 Monitor animal health and welfare compliance with workers and others  
2.3 Ensure adequate resource allocation and monitor to ensure effective animal health and welfare programs continue |
| 3. Implement and monitor animal health and welfare procedures in a permaculture system | 3.1 Identify and report existing and potential hazards to animal health and welfare so that effective remedial measures are implemented  
3.2 Carry out animal health and welfare induction and training for workers and others  
3.3 Establish strategies to maintain routines for animal health and welfare in the permaculture system  
3.4 Monitor the procedures for animal health and welfare implemented by workers and others, to ensure consistency and adherence to the permaculture plan |
| 4. Implement workplace procedures for dealing with animal health and welfare emergencies | 4.1 Implement workplace procedures for dealing with animal health and welfare emergencies where necessary to ensure that prompt and effective control action is taken  
4.2 Report animal health and welfare emergencies in accordance with established procedures  
4.3 Implement measures to prevent recurrence and minimise risk of animal health and welfare emergencies |
| 5. Implement and monitor enterprise procedures for maintaining animal health and welfare records | 5.1 Complete animal health and welfare records accurately and legibly in accordance with permaculture procedures and legislative requirements  
5.2 Identify potential hazards to animal health and welfare by using aggregate information from animal health and welfare records  
5.3 Provide regular training to workers and others so that records are understood and used for the health and welfare of animals |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- provide information to clients, workers or animal owners about animal health and welfare
- implement animal health and welfare procedures
- monitor animal health and welfare procedures performed by others
- maintain animal health and welfare records
- provide training in understanding and using records for the health and welfare of animals in a permaculture system

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices relating to integrated animal systems, such as:
  - minimising effort for maximum effect
  - multiple uses for each element in the system
  - using more than one way to provide important functions
  - re-using and valuing resources and energy
  - animal welfare and freedom from cruelty as part of care for the earth
  - encouraging productivity of the system
  - seeing solutions not problems
  - preventing waste and loss of resources from the system
- animal health and welfare requirements, practices and procedures, such as:
  - maintenance of animal housing, enclosures and fencing, covering hygiene and welfare
• ensuring availability of suitable forage, fodder and supplementary feedstuffs, and adjusting stocking rates, ranging and rotation schedules to suit
• Coordinating the following integration of animal ranging and maintenance with plant production systems: ranging in orchard to manure trees, reducing weeds, controlling pests, eating windfall fruit, tracting systems, composting manures and housing litter and maintaining firebreaks
• researching, assessing, implementing and monitoring supplementary stock feed requirements, feeding quantities and schedules
• researching and applying organic alternatives for treating stock in compliance with organic certification authorities, which may include herbal and homoeopathic treatments, mineral and vitamin supplements and permitted medications
• developing appropriate handling procedures to reduce stress
• harvesting, sourcing and handling the following useable products: milking, collecting eggs
• providing range areas for shade and shelter from climatic extremes through appropriate planting, including forage and fodder plants.
• equipment, including feeders and waterers, and back-up systems and alarms in case of equipment failure.
• lighting
• ventilation including fresh air, dust filters, humidity, and noxious gases.
• temperature, including cooling and heating, extreme weather conditions
• protection from predators, vermin, fires and floods.
• food with diet containing adequate nutrients
• water, including sufficient drinkable water to meet livestock requirements and monitoring water quality.
• health and distress, with signs of ill-health or distress in animals (as evidenced by behavioural changes) including reduced food and water intake, reduced production, changes in the nature and level of their activity, abnormal condition or changed physical features.
• prevention of infectious disease and internal and external parasitism.
• transport of growing and adult livestock
• animal physiology
• animal emergencies, such as:
  • injury
  • disease
  • failure of feeding or watering systems
  • poisoning
  • tick fever
  • birthing difficulties
  • escapement from housing or enclosures
  • predator attack
  • natural disasters such as bushfire, flooding, severe storm, other extreme weather event
• relevant animal welfare legislation and codes of practice
• animal health and welfare records, such as:
  • farm livestock records
  • daily harvest/yield records (eggs, milk)
  • feeding schedules and rosters
  • rotation schedules and successional grazing regimes
  • accident and emergency reports
  • entries into data base or other management software
  • worker records and reports
  • emergency reports
  • animal morbidity
  • work procedures and practices
  • seasonal factors and weather records
  • questioning client and/or workers
  • observations from inspecting animal systems
  • operational practices such as bedding change rotation, cell grazing, alternating flocks
• industry animal health requirements
• legislative requirements, such as:
  • compliance with council ordinances
  • planning approval
  • licence from government agency
  • animal welfare legislation
  • workplace legislation and awards

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to manage a permaculture seed bank. It requires the ability to plan seed collection, implement seed collection and maintain a seed collection in storage. Managing a permaculture seed bank requires knowledge of plant biology, handling and extraction of seed, treatment and documentation, collecting ethics, protocols and legislative parameters and storage techniques.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| 1. Plan seed collection for a permaculture seed bank | 1.1 Analyse requirements for seed collecting, and interpret them for required seed characteristics and implementation issues  
1.2 Identify opportunities for seed collection from field observation and liaison with other specialists in this field  
1.3 Identify and mark on a plan suitable areas and plants for seed collection  
1.4 Select method of seed collection appropriate to the geography of the local area, size and type of plants and available resources  
1.5 Determine and document quantity of seed to be collected from each provenance  
1.6 Liaise with relevant authorities or owners and seek approvals where required |
| 2. Implement seed collection program | 2.1 Coordinate and schedule people, materials and equipment required by the seed collection program  
2.2 Identify and obtain any permits and approvals required for the seed collection  
2.3 Identify the seed and complete the required documentation |
| 3. Maintain a seed collection | 3.1 Check the quantity, quality and provenances of the collected seed  
3.2 Check and monitor the health of seed collected and take remedial action where required  
3.3 Control pests and conditions detrimental to seed health  
3.4 Dispose appropriately of seeds that are non-viable owing to age or pest attack  
3.5 Supply true to type and appropriately labelled seed to others  
3.6 Record up to date details of seeds held in storage |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan seed collection
- implement a seed collection program
- maintain a seed collection

Knowledge Evidence

The candidate must demonstrate knowledge of:

- flowering biology of the target species
- biological signs which indicate that the seed crop is ready to be collected
- seed banks, such as:
  - community seed banks and networks
  - private seed collections
  - organic food production enterprises such as market gardens
  - community supported agriculture seed sources
  - community garden and city farm seed banks
  - supply of vegetative propagation for perennial plants
  - heritage and non-hybrid seed distributors
  - heritage and non-hybrid seed producers
  - permaculture plant and seed nurseries
  - community seed swaps
- methods of seed collection, such as:
  - hand-picking seeds or seed capsules
harvesting whole plant
- collecting and ripening fruit
- collecting after felling
- using ladders
- climbing
- shaking
- high-powered rifles (licensed operators only)
- elevated platforms
- extraction of the seed from the collected material
- handling of the seed crop after picking
- storage of seed, such as:
  - bags or envelopes
  - appropriate containers
  - cool, dry location
  - dehumidifying agents (silica gel, wood ash)
  - oxygen exclusion techniques
  - freezer or refrigerator
  - pest deterrent mechanisms
  - light exclusion mechanisms
- documentation of the extracted seed, such as:
  - information on provenance
  - botanical name: family, genus, species, variety and/or cultivar
  - common names
  - brief plant description
  - identity of collector
  - date collected or use by date
  - quantity (by weight or number of seeds)
  - viability test results
  - organic certification of grower
  - growing instructions such as recommended season and spacing
- provenances of seed, such as:
  - location and growing conditions of parent plant
  - sub-catchment identification of seed from endemic native plant populations
  - species and/or varieties adapted to local conditions
- collecting ethics, protocols and legislative parameters, such as:
  - limits on quantity allowed for collection
  - limits on time period for collection
  - particular use or destination for seed
  - indigenous plant regulatory conditions
Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research a community and a bioregion
- work within an existing sustainable community or bioregional development program
- participate in ongoing development of the sustainable community or bioregional development program.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to sustainable community and bioregional development
- sustainable community and bioregional development programs, including:
  - Transition Towns group activities or programs
  - climate change programs
  - peak oil or peak resource programs
  - alternative economic systems, such as local exchange trading systems
  - environmental, water catchment and natural resource conservation projects
  - social and cultural programs
  - housing and community development programs
  - community supported agriculture, organic and sustainable primary production and consumer networks and programs
  - energy descent action planning
• local food and water security projects
• renewable energy and appropriate technology projects
• greenhouse emission reduction and sequestration projects
• community profile development
• community consultation and facilitation methodologies, including:
  • team and community building activities
  • community forums and discussion
  • open space events
  • cultural mapping processes
  • creative problem solving processes
  • visualisation and experiential processes
  • information gathering processes
• group dynamics and conflict resolution strategies.

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to operate within a permaculture aid and development program. It requires knowledge of aid organisations and issues, working with other cultures and communities, group dynamics and communications.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research the permaculture aid and development program
- work within a permaculture aid and development program
- support ongoing development of the permaculture aid and development program

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to permaculture aid and development
- permaculture aid and development programs, such as:
  - within other NGOs and government projects or organisations
  - overseas aid for disaster relief and recovery
  - Aboriginal and Torres Strait Islander programs
  - migrant and refugee programs
  - food and resource security programs
  - health and wellness programs
  - educational programs
  - organisational policies and procedures
  - personal health and safety risk assessment procedures
  - community consultation and facilitation methodologies
  - group dynamics and conflict resolution strategies
Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this.

Application

This unit of competency describes the skills and knowledge required to evaluate suitability of species as solutions for permaculture applications.

It requires knowledge of botany, zoology, ecology and climate science and the ability to research species in detail and make recommendations for a particular scenario. All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

1. Research species in detail and assess for usefulness
   1.1 Carry out research into species for use in the permaculture project
   1.2 Assess the usefulness of species for the roles or functions required in the system
   1.3 Document research and include photographs or illustrations for correct identification

2. Assess the needs of the permaculture system
   2.1 Undertake a complex needs analysis of the permaculture system
   2.2 Confirm that the species selected will provide the solutions needed
   2.3 Undertake further research if needed

3. Recommend species as solutions for permaculture applications
   3.1 Prepare a report recommending species as solutions to permaculture applications
   3.2 Support the recommendations with evidence from the research
   3.3 Explain species interactions and inter-relationships

4. Evaluate suitability of species in a permaculture design
   4.1 Review the permaculture design once species are in place
   4.2 Evaluate suitability of the species in the design
   4.3 Re-assess any species that are not performing the function as expected
   4.4 Research alternatives or additional species to support the function

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- formulate and justify research questions
- design a field research plan
- conduct research and evaluate information
- enter, analyse and organise data quantitatively and qualitatively in charts, tables and graphs
- produce written reports on research outcomes and provide conclusions based on appropriate evidence and reasoned arguments

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, practices and ethics, such as:
  - topics for field research
  - people or groups of people participating in or related to permaculture projects
  - people or groups of people participating in or related to other topics which themselves relate to permaculture
  - systems and/or technical elements of permaculture systems
  - animals-related studies (including insects, reptiles, birds and fish)
  - plant-related studies
  - studies of integrated plant and animal systems
  - appropriate technologies or technological solutions
  - appropriate energy generation, storage and capture
  - water treatment, catchment and storage systems
• natural systems
• environmental issues
• product comparisons
• field research methods, such as:
  • group and individual interviews
  • dialogue and storytelling
  • use of communications technology
  • records and testimonials
  • electronic recordings
  • questionnaires
  • statistical sampling
  • observation
  • surveys
• research methodologies, such as:
  • action research
  • needs studies
  • case studies
  • statistical sampling
• field research plan design – a staged sequence of steps and accompanying methodologies for obtaining answers to research questions
• permaculture systems implementation and management techniques and practices
• growth habits, physiological properties and taxonomic specification of animals and plants involved in permaculture
• participants and stakeholders of permaculture systems and projects, such as:
  • those who will use the research to influence decision making and policy
  • those who will benefit from the research
  • the researchers
  • ethics committees
  • anyone who is researched
• scientific and mathematical research approaches, data collection, processing and analytical techniques and procedures
• auditing and reporting procedures
• research planning and budgeting

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to design integrated permaculture systems in a range of contexts including developing a design brief, undertaking a site analysis, developing conceptual designs and producing a final design. It includes knowledge of landscape, building and settlement design and working with specialists and professionals. It includes drawing plans and projections by hand as well as using computer aided drafting and design.

The preparation of an integrated permaculture system design requires detailed knowledge of permaculture design principles, the ability to transfer concepts to novel permaculture situations, strong evaluation and planning skills, landscape design skills and research capacities.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- demonstrate drafting and drawing techniques
- negotiate with clients
- undertake a site analysis and site survey
- provide urban and rural permaculture design solutions
- analyse zones and sectors of a site
- develop concepts
- develop planting schedules and bills of quantity
- develop a design budget
- develop final design drawings including elevations and projections
- design presentations

Knowledge Evidence

The candidate must demonstrate knowledge of:

- elements of integrated permaculture design
- principles of integrated permaculture design
- strategies for urban and rural permaculture design
- strategies for building design and working with builders and architects
- strategies for settlement design and working with planning authorities
- design brief elements
  - statement of scope of design
  - statement of client needs and requirements
  - food production
- system efficiency
- system production
- fibre, energy and building material production
- water harvesting
- waste treatment
- energy planning and design
- biodiversity habitat
- soil carbon building
- soil fertility
- establishment of financial budget
- establishment of time budget
- maintenance of financial budget
- maintenance of time budget
- design of establishment documents
- maintenance planning
- sustainable commercial enterprises
- social amenities
- cultural considerations
- list of project elements
- list of assessable tasks
- design analysis and research techniques
- plan interpretation and map reading
- site surveying methods and tools
  - onsite measurement of site boundaries
  - mapping of boundaries to scale to a plan drawing
  - onsite layout of 1m contour
  - mapping of contour lines to a scale plan drawing
  - measurement and location of existing infrastructure and natural features on site
  - mapping of existing infrastructure and natural features to a scale plan drawing
  - dumpy level or equivalent surveying instrument for taking vertical measurements on site
  - dumpy level or equivalent surveying instrument for measuring angles on site
  - GPS, satnav
  - measuring tapes for measuring distance on site.
- design concepts and detailed design drawings
  - property boundaries, scale and north point
  - authors of plans, contact details
  - address of site
  - date plan drawn
  - existing infrastructure and natural features
- drawing to scale
- relevant overlays and drawing numbers
- large format planning (at least A1 or A2)
- overlays such as fire, flora and fauna, soil and geology, local planning ordinances, buffer and riparian zones, use zones
- contour lines or other appropriate indication of slope direction and gradients
- drainage features
- Lot, DP, landowner address and contact details
- permaculture design methods
- conventional design symbols
- design drafting and drawing conventions
- computer-aided drafting and design
- plant and animal selection

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is NOT sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to develop a strategic plan for a permaculture project or enterprise. It requires the ability to prepare a strategic plan brief, research and analyse planning information, develop strategic plan stages, document a strategic plan, and review a strategic plan against desired outcomes. Developing a strategic plan for a permaculture project requires knowledge of permaculture principles and practices, climate change and peak oil impacts, sustainable community development practices, research methods and strategic planning methodologies.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a strategic plan brief
- acquire project resources
- undertake stakeholder consultation
- document a strategic plan
- evaluate the vision statement
- interpret feedback on the strategic plan
- demonstrate group leadership

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices
  - The two main summaries of permaculture principles are found in Bill Mollison and Reny Mia Slay *Introduction to Permaculture* (1991) and David Holmgren *Permaculture: Principles & Pathways Beyond Sustainability* (2002)
- sustainable agriculture
- garden agriculture
- sustainable horticulture
- sustainable aquaculture
- soil restoration
- bush regeneration
- biodiversity regeneration
- sustainable community development
Assessment Requirements for AHCPer503 Develop a strategic plan for a permaculture project or enterprise

- sustainable project and enterprise development
- bioregional development
- relocalisation
- sustainable design
- sustainability education
- earth care
- people care
- return of surpluses and setting limits to growth
- permaculture values
  - environmental restoration
  - sustainable food production
  - sustainability education
  - environmentally sustainable human habitation
  - sustainable community development
  - sustainable community transition
  - right livelihood
  - social justice
  - ecological economics
  - universal human rights
  - cultural recognition
- permaculture projects or enterprises
  - community gardens
  - permaculture workshops, training and education
  - sustainable agricultural systems
  - urban permaculture systems
  - community sustainable transition initiatives
  - climate change initiatives
  - conservation organisations
  - sustainability not-for-profits, NGOs, businesses, companies, trusts and incorporated community associations
  - permaculture design consultancies
  - permaculture system implementation services
  - alternative community finance and economic systems
  - permaculture information and communication services
- strategic planning
  - vision statement
    - statements of where project or enterprise would like to be in future
    - imagined futures
    - statements of possible futures for world outside of project
  - project or enterprise goals
Assessment Requirements for AHCPE503 Develop a strategic plan for a permaculture project or enterprise

- environmental targets
- community development targets
- food production
- design criteria
- happiness indicators
- sustainability indicators
- strategies
  - human resource management
  - financial planning
  - purchases and acquisitions
  - cost cutting
  - income generation
  - promotion and marketing
  - organisational restructuring
  - project or enterprise start up
  - mentoring and education
  - new project or enterprise initiatives
  - political lobbying
  - grant applications
  - community consultation
  - research and development
- action plans - sequences of smaller steps necessary to achieve strategies
- timelines
- benchmarks, such as
  - verifiable stage completion criteria
  - numerical indicators
  - qualitative indicators
  - observable outcomes
- community development
- project management
- feasibility study methodology
- contract law
- budgetary frameworks

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to manage a permaculture project or enterprise. It requires the ability to initiate, plan, manage, monitor and complete a permaculture project or enterprise. Managing a permaculture project or enterprise requires knowledge of permaculture principles and practices, permaculture design, bioregional and community development, community sustainable transition strategies, ecological agriculture, costing and pricing, and project management.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine and review project scope of work
- assess a site for opportunities and constraints associated with implementation of permaculture works
- prepare schedules for implementation of permaculture works
- prepare a staged permaculture works plan
- complete a work health and safety briefing
- prepare a Statement of Environmental Effects
- supervise permaculture project works

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices
- Permaculture project works, such as:
  - food gardens
  - community gardens
  - urban permaculture systems
  - rural permaculture systems
  - aquaculture systems
  - horticultural systems
  - forest systems
  - grazing and pasture systems
  - animal systems and tractors
• integrated food, fibre and energy systems
• permaculture structures
• soil treatments
• preparation of soil surfaces
• installation of irrigation and/or drainage systems including earthworks
• planting methods such as hand sowing, direct seeding, tube planting, hand or machine assisted planting of seedlings, planting of divisions and transplanting
• natural area regeneration
• fencing of stock and pest animals
• the cultural or biological control of weeds and feral animals
• protection of plants by staking, tying and guarding
• permaculture design techniques including zone and sector planning
• biophysical factors of a site, such as:
  • location of the site
  • site boundaries
  • environmental considerations
  • access issues
  • potential hazards
  • utility service
  • availability and locations
  • adjacent landholder considerations
  • security issues
  • aspect of the site
  • rainfall
  • humidity
  • wind and sunlight intensity
  • soil types
  • nutrients and deficiencies
  • slope
  • natural and artificial watercourses
  • outcrops of rock
  • presence of indigenous or other significant vegetation, indigenous or otherwise
  • plants that may become a weed problem
  • animals that may become a management issue, feral species or otherwise
• practical understanding of the environmental issues associated with undertaking permaculture works, such as:
  • use of materials that come from sustainable sources
  • duty of care in conserving sites natural values
  • work practices
• the use and movement of machinery, storage of materials, removal of weeds and movement of soil and other materials into, across and beyond the site
• principles of ecology including specific plant and animal relationships and habitat requirements
• statutory compliance and obligations, such as
  • compliance with legislation, ordinances, regulations or by laws relating to the works or the work site
  • site responsibilities, including OHS, industrial relations and equal opportunity and employment
• site evaluation techniques including methods of analysing soils, waterways and their condition
• control techniques against unwanted plant and animal species
• soil conservation, erosion control and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
• selection and use of appropriate combinations of machinery and tools
• work health and safety hazards and the controls necessary to remove or minimise risks associated with them
• contract documentation including specifications, plans of permaculture works, services, supplies and surveyors documents
• scope of works determination
• works breakdown into tasks
• scheduling and time line generation
• task specifications and evaluation

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify key issues in the transition community
- work with community to develop energy descent action strategies
- develop an energy descent action strategy or an Energy Descent Action Plan (EDAP)
- consult with the community on the strategy or EDAP
- support actions from the strategy or plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices
- relocalisation of essential services and community functions
- Climate Change strategies
- transition Towns
- Energy Descent Action Planning
- positive action strategies for:
  - food production and supply
  - infrastructure – urban and rural
  - water and waste water
  - energy production and supply
  - housing and settlement design
  - communications
  - education and upskilling
  - employment
- economics and alternative economics
- health and wellbeing

Application

This unit of competency describes the skills and knowledge required to gather and validate information in order to advise on planned permaculture projects. Researching and interpreting requirements for a permaculture project requires knowledge of permaculture principles and practices, research methodologies, consultation models, feasibility studies, information systems, report presentation, cultural analysis of information, cultural implications of research methods and legislative requirements.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and justify appropriate research strategies
- gather information
- assess practical from impractical solutions
- consult with key people with an interest in the issues relating to the permaculture project
- organise and analyse information
- report the findings of the research

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices and their role in sustainable development and design
- climate change science and mitigation strategies
- research methods, such as:
  - group and individual interviews
  - dialogue and storytelling
  - libraries – digital and conventional
  - electronic recordings
  - questionnaires
  - statistical sampling
  - observation
  - surveys
- research methodologies, such as:
Assessment Requirements for AHCPER507 Research and interpret requirements for a permaculture project

- action research
- needs studies
- literature searches and correct referencing
- case studies
- consultation models

Application

This unit of competency describes the skills and knowledge required to manage a permaculture aid and development project in a remote community. It requires good management, communication and financial management skills. It requires knowledge of the aid and development industry, organisational structures, government and non-government functions, legal issues covering charities and working with vulnerable communities, disaster planning, relief and response issues.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>

## 1. Obtain information on the aid project
1.1 Contact the peak aid organisation or government department to obtain information about aid projects
1.2 Research similar projects and their outcomes
1.3 Research the remote community or location to start fully informed about cultural protocols and issues

## 2. Develop a plan for the project in consultation with others
2.1 Ascertain the nature of the project, the issues and the key personnel at the remote location
2.2 Work with other organisations involved in the aid project and clarify chain of command
2.3 Establish clear communication channels as early as possible
2.4 Confirm budget allocations and allowances attached to the project
2.5 Document the permaculture aid and development project as a strategic plan
2.6 Distribute the strategic plan as required

## 3. Obtain resources and confirm logistics for transportation to remote location
3.1 Negotiate material resources, equipment and other needs with the remote community
3.2 Communicate in a culturally sensitive manner at all times and maintain correct communication sequence
3.3 Arrange transportation to remote location with full documentation, procedures and cultural protocols in place
3.4 Monitor transportation phase closely

## 4. Organise human resources and confirm transit and living arrangements, food and supplies for staff
4.1 Interview and engage personnel
4.2 Confirm living arrangements with contact at remote community
4.3 Confirm food and supply lines for personnel separately from aid arrangements
4.4 Document and communicate these arrangements
4.5 Brief personnel on arrangements and project ahead of departure

## 5. Document the emergency plan
5.1 Write up the emergency plan with the aims and objectives of the project
5.2 List strategies for achieving the aims

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- obtain information about the permaculture aid and development project
- develop a plan for project consultation
- obtain resources for the permaculture project
- obtain human resources for the permaculture project
- document the emergency plan.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices related to aid and development in remote communities and overseas
- permaculture aid and development projects, such as:
  - disaster response and recovery
  - disaster planning
  - community projects in remote communities
  - social and economic development projects
  - educational projects in remote communities
  - health and wellbeing projects in remote communities
  - resource management project for remote communities
  - sustainable farming projects
  - regional autonomy projects
• strategic planning
• project management, such as:
  • human resource management
  • financial planning
  • purchases and acquisitions
  • organisational structure
  • mentoring
  • training
  • new project or enterprise initiatives
  • grant applications
  • community consultation
• research and development
• community development
• cultural protocols and taboos
• religious practices and sensitivities
• engineering issues associated with remote area power supply, water supply, sewerage and waste treatment, erosion and sediment control, structural support and emergency housing
• feasibility study methods, such as:
  • economic and financial assessment
  • legal and planning issues
  • market opportunities and challenges
  • community and cultural acceptance
  • bioregional suitability
  • operational considerations
  • resource availability
  • sustainability criteria
  • energy descent/transition strategies
  • climate change strategies
  • environmental, water catchment and natural resource conservation issues
• contract law
• budgetary frameworks
• benchmarking.

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to design permaculture structures and features. It requires the ability to develop a design brief, undertake a site analysis, develop a concept design, produce a final plan and prepare bill of quantities and estimates. Designing permaculture structures and features requires knowledge of permaculture design process, construction and engineering principles, drafting techniques, cost estimating, and calculations of materials, labour, machinery and equipment.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- devise strategies for facilitating participatory planning and learning
- facilitate group processes in an engaging and inclusive way
- conduct participatory planning and learning activities
- communicate with people of a wide diversity of ages and socio-economic or cultural groups
- review and report on participatory planning and learning
- coordinate and brief team members
- problem-solve and build group dynamics

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices
- learning styles and methodologies, including accelerated and experiential learning
- strategies for facilitation of participatory planning and learning
- participatory planning and learning activities and processes, such as:
  - team building – ice breakers, trust games, creative and social activities, goal-setting, celebration and cultural activities
  - creative expression – wild design, mime, performing and visual arts, story telling
  - problem solving – brainstorming, mind mapping, random-input processes, PMI, SWOT, Six Thinking Hats, theming and chunking, affinity matrix, modelling
  - experiential – visualisation, affirmation, role play, cultural mapping, 6 senses, modelling, simulations, educational and experiential games
- information gathering – group and individual research and observation activities, sharing information, questioning, resource and skills mapping, surveys, field trips
- Negotiation – open forum, active listening, prioritisation, consensus building, win-win.
- *Dynamic Groups, Dynamic Learning*™ facilitation skills and methodology (Robin Clayfield)
- conflict resolution and strategies to deal with strong personalities
- codes of conduct and ethical behaviour
- group presentation methodology

Application

This unit of competency describes the skills and knowledge required to plan community governance and decision-making processes. It requires the ability to assess future needs and, for existing groups, current community governance and decision-making processes. It requires the ability to develop options for community governance and decision-making frameworks and processes and report on preferred options for implementation. Planning community governance and decision-making processes requires knowledge of strategic planning, legal frameworks, advanced negotiation techniques, organisational change and development, group and individual goal setting techniques, risk management processes and techniques, action planning methods and information technology.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| 1. Assess current community governance and decision-making processes | 1.1 Identify responsibilities and duties of individuals and community groups  
1.2 Investigate and define proposed or existing community governance and decision-making processes  
1.3 Collate information on proposed or existing governance issues and arrangements |
| 2. Develop options for community governance and decision-making processes | 2.1 Identify opportunities and constraints for development of community governance and decision-making process options  
2.2 Consult with community on options for community governance and decision-making processes  
2.3 Evaluate options in consultation with community through detailing advantages and disadvantages for each |
| 3. Report on preferred options for implementation | 3.1 Select preferred options for implementation based on comparative advantages  
3.2 Base options for community governance and decision-making processes on sufficient, valid and reliable information and analysis  
3.3 Ensure options for community governance and decision-making processes are consistent with legal frameworks and community and group values, policies, needs, guidelines and procedures  
3.4 Implement options for community governance and decision-making processes, and provide for decisions to be made in and actioned in the appropriate timeframe |

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assess current community governance and decision-making processes
- assess community needs and plan around these needs
- demonstrate high level communication skills
- develop options for community governance and decision-making processes
- report on preferred options for implementation

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices
- community governance and decision-making processes, such as:
  - governance of community resources, enterprises and activities
  - meeting facilitation, negotiation and mediation
  - conflict resolution procedures
  - decision-making methodologies
  - consensus processes
  - qualified decision-making processes
  - protocols
  - codes of conduct
  - recording and sorting decisions, such as Many Baskets process (Robin Clayfield)
• strategic planning
• community needs analysis techniques, such as:
  • SWOT analysis
  • 6 thinking hats (de Bono)
  • PMI (de Bono)
  • T.O.A.S.T. processes (Robin Clayfield)
  • L.O.V.E. processes (Robin Clayfield)
• opportunities and constraints for community development, such as:
  • seeing solutions rather than problems
  • viewing the negative in a positive light
  • modifications or extensions of existing systems to solve inherent problems
  • applying old or simple technology to new or complex problems
  • behaviour change, including organisational change and transformation
  • willingness or unwillingness to participate
  • legal framework requirements
  • vested interests and hidden agendas
• advanced negotiation techniques
• organisational change and development
• group and individual goal setting techniques
• risk management processes and techniques
• action planning methods
• information technology
• legal frameworks obligations and responsibilities.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to provide support for gardening work.

This unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy within established and well known parameters. They identify and seek help with simple problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Parks and gardens (PGD)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare materials, tools and equipment
- handle materials and equipment
- follow safe work practices and safety directions
- undertake gardening work as directed
- clean up on completion of gardening work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of gardening work
  - garden tools and equipment
  - maintenance practices for planted areas
  - planting techniques
  - repair and maintenance of garden features
  - safe work practices

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- prepare for planting operations
- apply root treatments
- excavate planting holes
- inspect root ball condition
- install plants
- use tools and equipment for planting

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for planting trees and shrubs
  - basic plant structure and the physical and nutritional requirements of plants
  - botany and plant physiology as it applies to planting trees and shrubs
  - factors affecting the timing and method of tree or shrub planting
  - initial establishment needs of young plants
  - mulches and fertilisers
  - planting techniques relating to specific species
  - soil amelioration techniques
  - the effect of adverse outdoor climatic conditions
  - the impact of planting activities on the surrounding environment

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- identify and report site and tree hazards
- prepare for tree or shrub removal
- prepare crown, root ball and earthworks
- prune roots where appropriate
- use tools and equipment in a safe and effective manner
- remove tree or shrub from original site
- transplant tree or shrub in selected site
- maintain transplanted specimen
- install support devices

Knowledge Evidence
The candidate must demonstrate knowledge of:
- principles and practices of transplanting trees
  - causes of damage or drying-out of trees and shrubs, and prevention methods
  - factors affecting the timing and method of lifting trees and shrubs
  - techniques of securing and anchoring transplanted trees and shrubs
  - the effect of adverse outdoor climatic conditions, such as rain, hail, or very high ultraviolet radiation, which may prevent or impede transplanting operations
  - transference of soil or root-borne diseases
  - transplanting practices associated with different soil types and relationships to plant care
  - trees and shrubs that are most suited to transplanting
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to carry out routine visual inspections of park and recreational facilities to identify visible hazards and existing and potential risks.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Parks and gardens (PGD)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- prepare for visual inspection of park facility
- carry out a visual inspection of park facility
- determine the extent of problems
- evaluate serious issues that may be present
- identify environmental risks and impacts from site facilities
- rate the condition of facilities
- rate the hazards and associated environmental implications of malfunctioning facilities, equipment and services
- report urgent situations
- complete and submit inspection activity checklist and report

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of park facility visual inspection
  - cleaning, servicing and hygiene requirements of public conveniences
  - hazards investigation and risk assessment
  - effective maintenance and repair work particularly in relation to end use of the facilities and equipment, and the safety of users
  - recognition of the range of park facilities, equipment and services relevant to the enterprise
  - reporting requirements, procedures and materials for use in park inspection
  - terminology used to describe different components of the range of facilities, equipment and services relevant to the enterprise
the effect of adverse outdoor climatic conditions, such as rain, hail, wind, or very high ultraviolet radiation, on park facilities inspection activities

- hazards that are likely to be encountered by visitors using the park facilities and equipment

- the practical application of site plans, checklist descriptions and presentation standards to locate and effectively assess facilities and equipment against the required parameters

- the relevant Australian Standards

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- prepare to establish a planting area
- interpret site plans and plant establishment specifications
- measure quantities, calculate material requirements, area, volume, ratios and application rates
- carry out planting operations
- ensure planting methods comply with plant species and cultivar growing requirements
- prune plants to ensure they develop a sound framework for their growth and habit
- inspect and determine plant quality and health
- record and report work outcomes

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of plant establishment
  - soils and soil amelioration techniques
  - the identification of pests and diseases, plant symptoms of infections, treatment threshold levels, recommended treatments, methods of application and environmental implications
  - the objectives of the plant establishment program, including finished plant forms, site appearance, end use and time constraints
  - the physiology of required plant species and cultivars, culture and planting procedures, including growth rates, main nutrient and water requirements, deficiency symptoms, recommended treatments and associated environmental implications

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare design plans and specifications
- determine spatial measurements of display site
- calculate number of plants and materials
- select plants according to the display that comply with quality specifications and the ability to survive for the length of the display.
- place the plants according to the display plan and pattern
- complete plant display in a timely manner
- maintain the plant display

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant display maintenance
  - aim and purpose of building plant displays
  - common problems occurring with display plants
  - design principles for plant displays
  - features and characteristics of a range of plants used for display purposes
  - growing requirements of a range of common plants used in plant displays
  - remedial action required for display plants displaying health problems

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- determine the purpose of the inspection and the facilities and equipment to be inspected and tested
- carry out pre-operational and safety checks on tools and equipment
- clarify specific terminology used in checklists with the supervisor
- identify workplace health and safety hazard, assess risks and implement controls
- interpret design symbols and terminology
- compare actual measurements of inspected components with legal, workplace health and safety and/or enterprise standards and specifications
- determine the degree of urgency to report serious situations
- evaluate the condition of facilities
- use proforma reporting and work procedure documents

Knowledge Evidence

The candidate must demonstrate knowledge of:

- different modes of non-conformity that may be identified in reference to relevant Australian Standards and work health and safety requirements
- identification, assessment and control of hazards
- inspection procedures and techniques, and legal and enterprise reporting requirements for maintenance, repair and replacement recommendations
- principles and practices of park facility operational inspections
- terminology used to describe different components of park or recreational facilities and equipment
- operational expectations and enterprise standards for the presentation and working order of a range of park or recreational facilities and equipment
- the range, use and safety parameters of park or recreational facilities and equipment, their material construction and maintenance requirements
- work health and safety legislative requirements and codes of practice associated with public use of park facilities

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to implement a maintenance program for an aquatic environment in a park or garden setting.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Parks and gardens (PGD)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- interpret site plans and maintenance program requirements, and use proforma reporting, recording, analysis and work procedure documents
- measure materials and aquatic site dimensions
- schedule and implement monitoring activities correctly and record, interpret and apply monitoring data

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of aquatic environment maintenance
  - aquatic systems ecology
  - correct safety procedures working from boats or adjacent to large bodies of water
  - enterprise systems and procedures for the safe operation and maintenance of machinery and equipment in aquatic environments
  - food chain and nutrient cycling in aquatic systems
  - recognition, physiology and biological characteristics of animals and/or plants specific to the aquatic environment
  - regulations and industry standards for water quality requirements in association with specified use
  - relevant legislation regarding water pollution and management
  - safe systems and procedures for handling, transporting and storing chemicals and hazardous substances taking into account toxicity levels and environmental impacts
  - wildlife habitats associated with the aquatic environment
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to design plant displays in a wide range of locations and situations, buildings and structures. It applies to permanent, semi-permanent and temporary displays of plant life under a range of gardening, exhibition, visual merchandising, marketing and commercial leasing and hiring activities.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- develop maintenance programs
- evaluate sites or locations to determine the effect of aesthetic, environmental and physical attributes on nature of display
- research and analyse information about plant and materials specifications, cultural requirements and environmental requirements
- consult with clients

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant display design
- characteristics of a range of plants used in plant displays
- growth and maintenance requirements of plants in natural and artificial environments
- horticultural conventions for design plans
- plant selection
- principles of design
- processes and techniques for preparing, costing and documenting plans for plant displays
- plants commonly used in plant displays

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- plan a plant establishment program
- consult with clients
- document plans, specifications and work procedures
- comply with legislative requirements
- write plans and reports that staff, clients and contractors can understand
- calculate the cost and spatial and logistical requirements of components of the plant establishment program.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- identification, propagation and establishment techniques of specific plant species and cultivars
- the advantages and disadvantages of a range of plant establishment procedures
- maintenance requirements and practices for specific plant species and cultivars, prior to and after initial establishment
- processes and techniques for preparing, costing and documenting plans for and scheduling plant establishment activities
- processes and techniques for scheduling plant establishment activities.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- determine requirements of the restoration work
- consult with clients
- select restoration procedures that are consistent with the agreed concept plan, appropriate to the site and account for historical and cultural values, available resources and relevant environmental factors
- calculate the cost and spatial and logistical requirements of components of the restoration works
- comply with legislative requirements
- research and evaluate information
- prepare and document the restoration plan and specifications
- prepare a site plan that can be understood by on-site personnel

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of park and garden restoration
  - construction procedures, plant selection and cultural practices for historically or culturally significant parks and gardens
  - growth habits and cultural requirements of specific plants under a range of soil and environmental conditions
  - historic parks and gardens management principles and guidelines
  - legislation and regulations relating to heritage sites and restoration works
  - maintenance requirements and practices for specific plants prior to and after initial establishment
• principles of the Australian Natural Heritage Charter, the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
• role of project briefs and client consultation processes in planning restoration works
• site evaluation techniques, including methods of analysing the condition of soils, plants and waterways for restoration activities

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- assess environmental impacts on the immediate and related environments and impact reduction techniques
- assess financial systems, prepare and monitor budgets and liaise effectively with consultants and other industry contacts on the spatial and logistical aspects of management systems and on-ground operations
- assign work, receive and interpret staff feedback and consultants’ reports, and respond effectively to achieve management objectives
- interpret business, financial, marketing and human resource management plans
- research and consult to obtain the information required for effective maintenance and development of the park or reserve.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of park and reserve management:
  - asset and resource management
  - budgeting, monitoring systems and allocation of monetary resources
  - legislative and regulatory requirements relevant to parks and reserve land use applications and management activities including OHS, HAZCHEM, dangerous goods, duty of care and Australian Standards as they apply to Parks and Gardens - AS/NZS 4486.1:1997
  - management information systems
  - performance management and benchmarking
• policies applying across all levels of government and within the specific region, including those under catchment plans
• principles of the Australian Natural Heritage Charter and the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
• sports and recreational land use applications and associated environmental implications
• staff training and development principles, practices and techniques
• technologically assisted management tools such as computing systems, software and hardware, and telecommunications equipment.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop and implement a streetscape management plan.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Parks and gardens (PGD)

| 2. Undertake preliminary planning activities | 2.1 Identify major stakeholders  
2.2 Determine the availability of specialists to assist in management planning work and prepare contracts where required  
2.3 Establish timelines for development of the management plan and reporting arrangements to client  
2.4 Identify required resources for developing management strategies |
| 3. Prepare a site description | 3.1 Identify and map landscape values of the area  
3.2 Identify and map physical features and characteristics of the streetscape  
3.3 Research land, including current, cultural and historical modifications, and determine and record their effects on the streetscape  
3.4 Assess and document physical condition of site  
3.5 Document the biological characteristics of the site |
| 4. Analyse site information and description | 4.1 Evaluate information in terms of core principles and objectives  
4.2 Produce documents, including plans, technical reports and maps  
4.3 Determine priorities and key management issues  
4.4 Identify and document opportunities and constraints to meeting planning objectives and goals  
4.5 Make a presentation to clients and residents and incorporate feedback into planning documentation |
| 5. Identify management strategies | 5.1 Identify management strategies that address defined objectives  
5.2 Design management strategies to alleviate existing impacts or to target management action  
5.3 Cost management strategies and compare to existing budgets and available resources  
5.4 Plan implementation of work to prioritise outcomes and management resource allocation  
5.5 Consult with clients and residents and incorporate feedback into documentation |
| 6. Prepare the management plan | 6.1 Develop a draft management plan that includes site information and management strategies  
6.2 Consult with stakeholders and clients and incorporate agreed changes into the final plan  
6.3 Present final plan to client |
Element | Performance criteria
--- | ---
7. Implement the management plan | 7.1 Implement the management plan within predetermined budget, and according to the schedule and strategies set out in the plan.  
7.2 Modify the implementation strategy to address on-going feedback from clients and residents.  
7.3 Provide reports to clients and residents on the progress of implementation works.

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- define the need for a management plan
- undertake preliminary planning activities
- analyse site information and description
- identify management strategies
- prepare the management plan
- prepare a site description
- implement the management plan

Knowledge Evidence

The candidate must explain:

- principles and practices for streetscape management planning
  - basic civil design
  - community consultation processes
  - horticultural, landscape and arboricultural practices used in streetscape management
  - landscape assessment, survey and analysis techniques
  - management planning principles and issues
  - soil, plant and water testing processes and procedures, interpretation and application of results

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare for a comprehensive inspection of park facilities
- carry out a comprehensive inspection of park facilities
- interpret design symbols and terminology
- interpret standards, specifications and legal requirements
- determine age and calculate effective lifespan of existing park facilities
- estimate costs of repair or replacement

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of park facility inspection
  - different modes of non-conformity that may be identified in relation to specific park facilities and equipment
  - hazard identification, assessment and control
  - information management systems such as AS4456
  - hazards associated with conducting a comprehensive inspection of park facilities and equipment, and the controls necessary to remove or minimise associated risks
  - park facilities and equipment including installation methods, intended use, intended users and safety parameters
  - practical understanding of inspection and auditing procedures and techniques, and legal and enterprise reporting requirements for recommendations on maintenance, repair and replacement of park facilities
  - practical understanding of the terminology used to describe different components of park facilities and equipment
• relevant national industry standards such as AS486.1, AS4422, AS1924.1 and AS1924.2)
• work health and safety legislative requirements and Codes of Practice

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply agricultural chemicals under supervision
- apply enterprise quality standards
- estimate spacing and planting patterns
- follow safety procedures
- identify workplace hazards
- measure quantities of plant materials and treatments
- operate machinery to manufacturers specifications and low risk operating procedures
- select planting material
- use and maintain planting equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for planting horticultural crops
  - basic plant physiology
  - basic preparation of soil and growing media
  - environmental impacts and risks of planting horticultural crops
  - growing requirements of plants
  - importance of correct timing and procedures for crop planting
  - importance of field hygiene and quality control in regard to crop planting
  - nutritional, water and other requirements of the crop
  - principles of pest, weed and disease control
  - pre-planting soil and plant treatments and their importance
• soil structure and health

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret instructions correctly
- communicate with team members and supervisor
- calculate hours and personal production rate
- participate in teams and contribute to team objectives
- use and maintain basic hand and power tools and equipment
- dispose of pruning waste in an environmentally aware and sensitive manner

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of canopy maintenance
- basic canopy maintenance techniques and their importance in relation to the desired quality of fruit the enterprise is aiming to produce
- the difference between fruiting and non-fruiting wood
- the effect of different climatic conditions on canopy maintenance requirements
- the importance of hygiene and quality control when performing basic canopy maintenance activities
- work health and safety responsibilities of employees when maintaining a canopy

Assessment Conditions

Assessors must satisfy current standards for RTOs.

**Application**

This unit of competency describes the skills and knowledge required to pick crops and perform related tasks such as routine estimation of crop readiness for harvest, basic sorting, bunching and grading, and transportation of the crop from the field.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

**Pre-requisite Unit**

Nil.

**Unit Sector**

Production horticulture (PHT)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- estimate the readiness of produce for picking
- harvest the crop using the correct technique
- select and grade produce at picking where required
- stack produce in containers without causing damage or losses
- transport produce from the field according to enterprise requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for harvesting horticultural crops
  - enterprise quality procedures
  - grading characteristics of each crop
  - recognition of crop maturity of a range of crops
  - the effect of adverse climatic conditions such as rain, hail, extreme wind with dust, or very high ultraviolet radiation, which may downgrade the quality of affected crop, prevent or impede harvest operations or severely influence the time taken to complete the harvest program
  - the importance of maintaining quality of produce, including cooling requirements and quick transport from field to processing areas

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and prepare stock for budding and grafting
- demonstrate a range of budding and grafting techniques
- maintain labels and records of the budding and grafting operation
- store unused grafting material
- treat plants after budding/grafting

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for field budding and grafting
  - cleaning requirements of work area and equipment
  - common problems and corrective action required
  - environmental issues and controls
  - importance of selection and use of rootstock
  - maintenance requirements of equipment
  - operation, components and purpose of budding/grafting and equipment
  - plant features and processes relevant to budding and grafting
  - procedures and responsibilities for reporting problem
  - recording requirements and procedures
  - root stocks and scion stock
  - stages of the budding/grafting procedure and their purpose
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify post-harvest treatments and operations to be performed
- label produce accurately and correctly
- maintain records of post-harvest operations to allow traceability
- minimise handling damage to produce
- transport, grade, treat, pack and store harvested produce according to market requirements and industry and enterprise standards
- use a range of equipment for handling and transporting produce

Knowledge Evidence

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of post-harvest operations
  - attributes of enterprise produce in relation to desired quality of produce to be presented to client
  - characteristics and procedures for the use of cool rooms
  - cool chain principles and practices
  - correct storage temperatures for a range of enterprise produce
  - disposal of waste materials to minimise damage to external environment
  - environmental effects of post-harvest treatments
  - humidity levels and its effect on quality of enterprise produce
  - hygiene issues in the handling and storage of plant produce
  - industry standards for packaging
  - produce handling and cooling requirements
• relationship between quality attributes of produce and packing techniques and packaging
• storage methods for different enterprise produce

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- summer prune vines according to enterprise requirements
- select, fit and use appropriate personal protective equipment (PPE)
- handle and use trellis drying tools, equipment and machinery safely
- identify parts of the vine
- carry out post-harvest drying

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for producing trellis dried grapes
  - crown and cordon bunch picking or removal requirements and procedures
  - environmental impact issues
  - hazard identification and control
  - processor quality standards and requirements
  - summer pruning requirements and procedures
  - year-round preparation required for trellis drying

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCPHT301 Carry out a crop regulation program

Modification History
Not applicable.

Application
This unit of competency describes the skills and knowledge required to carry out a crop regulation program in which thinning and pruning of flower, fruit or vegetable crops is undertaken to control yield and quality.

Unit Sector
Production horticulture (PHT)

Elements and Performance Criteria

<table>
<thead>
<tr>

Performance Evidence

The candidate must demonstrate evidence of their ability to satisfy holistically all of the requirements of unit. Performance should be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess the effects on plant growth, habit and production levels of thinning and pruning operations
- co-ordinate work groups
- prepare for crop regulation activities
- carry-out crop thinning procedures as required
- use a range of methods to achieve crop regulation goals
- record or report activities
- store and maintain equipment and materials

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of crop regulation
  - effects on plant growth, habit and production levels of thinning and pruning operations in relation to the market goals of the enterprise
  - enterprise quality procedures and characteristics of a crop relative to varying market requirements
  - environmental impacts of crop regulation and disposal of waste
  - principles of thinning and pruning and the methods used to achieve crop regulation goals
  - safe work procedures for use of machinery and equipment
  - types of crop regulation materials
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to implement a post-harvest program for horticultural crops.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Production horticulture (PHT)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify post-harvest operations to be performed
- coordinate post-harvest operations
- dispose of hazardous waste materials in line with guidelines and enterprise requirements
- implement post-harvest treatments and packing, presentation and storage requirements according to market specifications.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices post-harvest treatments and processes
- attributes of produce in relation to the desired quality of produce to be presented to the client
- characteristics and procedures for the use of cool rooms
- cool chain principles and practices
- correct storage temperatures for a range of produce
- enterprise confined spaces policy and safety procedures
- environmental effects of post-harvest treatments and hazardous waste disposal methodologies, application and purpose
- humidity levels and their effect on the quality of produce
- hygiene issues in the handling and storage of plant produce
- industry standards for packaging
- integrated pest management principles and enterprise policy
• relationship between the quality attributes of produce and packing techniques and packaging
• storage methods for a range of produce
• the importance of maintaining the quality of produce including handling and cooling requirements.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out ground preparation and apply pre-planting treatments
- prepare and service machinery and equipment
- carry out sowing/planting operations and fertiliser application
- monitor the environmental impacts of establishing the crop
- clean, secure and store machinery and equipment
- keep records of the sowing/planting operation

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for establishing crops
  - crop types, preparation of seeds/plants, seeding/planting methods and application techniques
  - effects of weather conditions on seeding/planting and fertilising applications
  - enterprise policies for seeding/planting operations and recording and reporting routines
  - fertiliser types, rates of application and crop nutrient requirements
  - operating principles and operating methods for machinery and equipment
  - positive environmental practices, negative environmental impacts and minimisation measures associated with seeding operations
  - personal protective equipment (PPE) and when and how it should be used
  - pre-operational and safety checks, servicing and maintenance procedures for seeding/planting machinery and equipment
  - principles of weight distribution with regard to load shifting and vehicle movement
• procedures for cleaning, securing and storing machinery, equipment and materials
• relevant legislation, regulations and codes of practice with regard to workplace health and safety and the use and control of hazardous substances
• sustainable land management and soil conservation techniques

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- conduct and interpret basic field test results to confirm effective processing and define intervention required to rectify composting processes
- establish and maintain appropriate compost batch documentation accurately and promptly
- prepare batches for composting according to defined compost recipes
- prepare raw materials for composting according to enterprise product requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for preparing composting raw materials
  - Australian composting standards
  - batch documentation techniques
  - characteristics of a range of raw materials
  - compost production cycle
  - compost quality standards
  - fundamental characteristics of compost quality
  - key process control stages critical to consistent compost production
  - overview of systems and technologies used in compost production
  - principles of commercial compost production
  - range and characteristics of categories of compost product
  - steps in pre-processing compost materials
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to prepare or blend compost with other materials or products to produce various value added compost-based products.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Production horticulture (PHT)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify value-added product requirements
- interpret batch sheets and follow enterprise production procedures
- prepare batches of value-added product according to defined batch recipes and methods
- recognise value-added products and their characteristics
- recognise, quantify and handle products

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for preparing value added compost based products
  - Australian standards for products
  - common product contaminants
  - enterprise product specifications and standards
  - environmental license requirements, aspects and management measures associated with operation of machinery and equipment
  - hazards in handling materials and additives and appropriate risk control measures
  - identification of contaminants
  - legislation, regulations and codes of practice with regard to licensing, roads and traffic requirements
  - legislation, regulations and codes of practice with regard to workplace health and safety and use and control of hazardous substances
  - operating principles and methods for plant and machinery
  - potential risks and hazards associated with operation of machinery and equipment
Assessment Requirements for AHCPHT308 Prepare value added compost-based products

- procedures for cleaning, securing and storing machinery, equipment and materials
- product types and characteristics
- raw materials, compost and additives commonly used to manufacture value-added products
- value-added product types and characteristics

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- observe and report non-compliance with farm quality standards
- organise the process of mushroom substrate preparation
- coordinate work activities so that standards relating to productivity, workflow requirements, farm procedures and quality are met
- record and report production information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for supervising mushroom substrate preparation
  - casing function, application, required depth and required surface structure
  - impact on mushroom production cycle of deviations of mushroom substrate quality from farm standards for substrate
  - overview of mushroom production cycle
  - overview of Phase I and Phase II substrate production
  - relevant legislation and industry codes of practice
  - site quarantine protocols
  - standards and procedures for workplace health and safety, food safety, HACCP, quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- coordinate a work group
- maintain harvest requirements
- monitor crop quality
- prepare for crop harvesting activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for
  - effect of adverse climatic conditions (e.g., rain, hail, extreme wind, or very high ultraviolet radiation), which may prevent or impede crop harvesting operations, or severely influence the time taken to complete the tasks necessary to fulfil the operation
  - enterprise quality procedures and characteristics of a crop relative to varying market requirements
  - grading characteristics of each crop
  - importance of maintaining quality of produce including cooling requirements and quick transport from field to processing areas
  - industry wage rates and conditions, contractors services, conditions and rates
  - licensing requirements for use of forklifts, trucks and machinery
  - recognition of the maturity parameters of a range of crops
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess and select cost-effective techniques, resources and equipment for the regulation of horticultural crops
- develop a crop regulation program to achieve the yield and quality specified in the enterprise production plan
- document a crop regulation plan, specifications and quotation
- document detailed schedules and work procedures
- prepare a cost-benefit analysis on available crop regulation methods
- review the crop regulation program
- implement appropriate courses of action in response to identified shortcomings

Knowledge Evidence

The candidate must demonstrate knowledge of:

- crop regulation published data on the species and cultivars
- principles and practices for developing a crop regulation program
- processes and techniques for preparing, costing and documenting plans for scheduling crop regulation activities
- site evaluation techniques, including analysis of the condition of soils, plants and the site for production activities
- specific crop physiology and timing of regulation
- the characteristics of soil and other growth media types and the use of additives to enhance the available nutrition for specific plant species and cultivars
- the relationship between enterprise crop regulation methods, such as thinning, pruning and RDI, and the yield and quality of specific crops
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- arrange for an appropriate method of processing to produce the desired style and quality of oil
- document the specifications and related processing requirements in a report
- estimate and schedule fruit maturity
- incorporate specifications into a contract
- select an appropriate style of oil that can be produced from a crop and describe it using standard industry terminology

Knowledge Evidence
The candidate must demonstrate knowledge of:

- principles and practices for developing specifications for olive oil
  - how an olive oil is produced from olives
  - influence of processing on chemical composition of oil (polyphenols, aroma and flavour compounds)
  - influence of various harvesting methods on olive oil style and quality (bitterness, pungency, aroma and flavour)
  - market preferences for styles of olive oil
  - methods of olive oil extraction and advantages/disadvantages associated with each
  - post-harvest handling (including storage and transport) requirements for olive fruit intended for olive oil processing
  - post-processing storage and handling requirements of olive oil
• relevant legislation and regulations covering food safety, trade practices and contract law

Assessment Conditions
Assessors must satisfy current standards for RTOs.

2. Coordinate the harvest strategy
2.1 | Implement harvesting operations according to customer requirements, weather, equipment and staff availability
2.2 | Coordinate and monitor equipment operation for maximum efficiency and effectiveness
2.3 | Identify and control hazards

3. Complete harvest operation
3.1 | Locate storage resources
3.2 | Determine strategies for drying crops if necessary
3.3 | Monitor work to ensure that crop is graded, packed and stored according to enterprise requirements
3.4 | Evaluate harvesting operations and outcomes against harvest strategy
3.5 | Provide feedback on performance to personnel under supervision
3.6 | Document crop quality, pre-harvest treatments and outcomes of harvest for continual analysis and effective planning management

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

### Unit Mapping Information
This unit is equivalent to AHCPHT404A Implement and monitor a horticultural crop harvesting program.

### Links
Companion Volume implementation guides are found in VETNet - https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- coordinate equipment
- document a crop harvesting report
- establish strategies for pre-harvest and harvest
- estimate crop quality and yield
- evaluate harvest operations and outcomes
- implement treatments for control and eradication of pests
- implementing safe workplace and positive environmental practices
- organise resources for the harvest

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for crop harvesting
  - crop measurement techniques and parameters
  - customer requirements
  - environmental controls and codes of practice applicable to harvesting operations
  - functions and limitations of harvesting equipment
  - location and relative skills and abilities of available staff, contractors or casual staff
  - market information and sources
  - relevant legislation and regulations relating to workplace health and safety, contractor engagement, chemical use and application, and vehicle and plant use
  - required productivity rates
  - weather or other conditions that may affect harvest
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- establish and review farm procedures for mushroom substrate preparation
- monitor and manipulate all interactions between inputs, conditions and outputs for each stage of substrate process
- set and monitor productivity standards for mushroom substrate and rest of production cycle
- record and analyse production data

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for managing mushroom casing production
- casing function, application, required depth and required surface structure
- detailed knowledge of all stages in Phase II substrate preparation process
- farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
- how mushrooms are grown, with a focus on interaction between compost, environmental factors (such as temperature, water, relative humidity, carbon dioxide and ammonia) and mushroom growth
- industry and workplace awards and conditions
- key parameters to be recorded and monitored and appropriate ranges in relation to temperature, ammonia, relative humidity, moisture content, carbon dioxide and time
- overview of mushroom production cycle and possible impact of deviations from farm standards on substrate and rest of production cycle
Assessment Requirements for AHCPHT405 Manage mushroom substrate preparation

- overview of Phase I compost production
- relevant legislation and industry codes of practice and quality

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess room or tunnel layout and determine most appropriate locations for taking substrate and air measurements
- carry out effective troubleshooting during Phase II process
- differentiate between Phase I substrate and substrate ready for spawning and describe desired parameters of each stage
- monitor and manage Phase II process for at least eight crops

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for controlling Phase II processes
  - concept of compost selectivity and biological indicators of compost quality
  - correct probe placement and calibration
  - factors influencing air quantity and distribution
  - farm standards and procedures, including those relating to workplace health and safety, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure
  - interpretation of chemical test results
  - how different systems (shelf, tray and tunnel) impact on temperature zones in substrate
  - key parameters to be recorded and monitored relating to temperature, ammonia and moisture content
  - objectives and desired parameters of each sub-stage of Phase II substrate preparation
  - overview of Phase I compost production and how it impacts on Phase II process
Assessment Requirements for AHPCT406 Control Phase II mushroom substrate process

- relevant legislation and industry codes of practice
- site quarantine protocols

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop work schedules
- maintain environment within parameters for production
- monitor and manage growing room conditions, watering and flush development of mushroom crops
- identify stages of growth and development, and factors impacting on yields and mushroom quality
- identify the interdependency of stages of growth and impact of early stages of production cycle on production results

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of mushroom crop development
  - available options of additives to irrigation water to promote mushroom quality and the main considerations of their use
  - basic understanding of air conditioning principles, particularly relative humidity
  - casing function, application and depth and surface structure requirements
  - desirable physical, biological and chemical characteristics of casing
  - farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
  - goals and sub-stages of Phase II substrate preparation and impact of Phase II on yields and quality
• growth phases of a mushroom crop and interactions that occur between the compost, casing, environmental factors (such as temperature, water, relative humidity and carbon dioxide) and growth of the mushroom
• how nature of casing and the appearance and quantity of mycelium growth in casing affect the number, distribution and quality of fruit bodies formed
• impact of mushroom numbers and size on picking and quality
• industry and workplace awards and conditions
• management impacts of supplementing at spawning or casing
• management requirements of casing - Compost Added at Casing (CAC) and/or Casing Inoculums (CI)
• OHS and environmental legislation, industry codes of practice and enterprise procedures
• overview of Phase I substrate production and its impact on yields and quality
• site quarantine protocols

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine and organise work schedules
- determine maintenance requirements for the vineyard
- oversee the implementation of vineyard practices
- plan and program vineyard practices
- recognise wine grape varieties and cultivars

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for overseeing vineyard practices
  - irrigation systems
  - plant nutrition practices
  - safe operating practices
  - supervision and team building
  - trellis and harvesting systems
  - vineyard practices and growing systems for grape varieties and cultivars
  - weed, pest and disease control practices
  - wine grape varieties and cultivars

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a horticultural production plan that reflects client preferences and requirements
- design and incorporate infrastructure into planning
- document and cost the production plan
- establish product specifications
- research site factors and land use issues
- select and source plants or plant material for seeding or propagation
- develop a monitoring program to cover the horticultural operation from sowing to sale

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for developing a horticultural production plan
  - advantages and limitations of sustainable horticulture systems
  - establishment and maintenance of a range of enterprise horticultural products in relation to client needs and the standards required by the marketplace
  - establishment procedures, plant selection and cultural practices for a range of enterprise horticultural products
  - processes and techniques for preparing, costing and documenting plans for and scheduling horticultural production
  - role of business and marketing plans and client consultation processes in planning horticultural production
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage controlled growing environments.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Production horticulture (PHT)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a management plan to cover staff training, budgets, operating procedures and remedial actions
- develop environmental monitoring procedures
- evaluate and document the achievements towards management objectives
- identify the growing requirements of the crop
- prepare specifications for controlled growing infrastructure

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for managing controlled growing environments
  - controlled environmental conditions in regard to crop plant physiology, growth stages, and product quality and quantity
  - legislation and regulations relating to the controlled environment systems
  - market requirements for crop quantity and quality
  - monitoring, analysis and recording systems
  - plant physiology and biochemistry
  - quality production methods and techniques for a range of controlled environment plants
  - staff training requirements
  - techniques and methods of implementing optimal growing conditions for a range of horticultural crops
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research, evaluate and record relevant information calculate the cost and logistical requirements of the production plan
- Plan and schedule grape production activities
- Plan and schedule marketing
- communicate and negotiate with the client, staff, managers, suppliers, contractors and consultants
- document plans, specifications and production work procedures
- prepare reports for staff, managers, clients and contractors
- produce a site plan which can be readily understood by on-site personnel

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for developing a grape production plan
  - establishment and management of grape production in relation to client needs and the standards required by the marketplace
  - establishment procedures, plant selection and cultural practices for grape production
  - processes and techniques for preparing, costing and documenting plans for and scheduling grape production
  - the role of business and marketing plans and client consultation processes in planning grape production
  - trends and issues of the Australian viticulture industry
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- perform chemical analyses necessary for the winemaking process
- evaluate a wine, following tasting
- determine the effect of winemaking techniques on wine
- determine wine characteristics and faults using organoleptic evaluation techniques
- identify and recommend improvements to viticultural practices that will contribute to enhanced wine quality in the next season
- analyse current packaging methods, bottle closure methods and wine labelling laws research, evaluate and record information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for evaluating wine
  - 'balance' in relation to wine taste
  - changes to the chemical characteristics of grapes during ripening including acid, sugar and flavour
  - changes to the physical characteristics of grapes during ripening including size, hardness and colour
  - climatic and physical features of wine grape growing areas and wine styles produced
  - factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
  - food safety requirements
  - ideal Australian cellaring conditions
  - main export markets
- packaging, regulations and relationship to product marketing and quality
- sensory evaluation of wines with potential for cellaring
- types and styles of wine produced in Australia
- varieties of wine grapes in Australia
- vintage ratings in Australia

**Assessment Conditions**
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- acquire and process grapes for wine production
- calculate the cost and logistical requirements of components of the wine production
- identify and recommend improvements to viticultural practices that will contribute to enhanced wine quality in the next season
- identify, establish, supervise and monitor daily cellar work practices
- initiate and manage the fermentation process
- make additions and finings as required
- operate the filtration and bottling processes
- operate the range of equipment required to process grapes from winery receival point to the fermentation tank
- organise and undertake routine cellar operations
- perform chemical analyses necessary for the winemaking process
- perform must handling processes
- plan processes that may be used to maximise production of grapes that meet winery quality requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for managing a wine making process
  - 'balance' in relation to wine taste
  - changes to the chemical characteristics of grapes during ripening, including acid, sugar and flavour
• changes to the physical characteristics of grapes during ripening, including size, hardness and colour
• climatic and physical features of wine grape growing areas and wine styles produced
• equipment and processes for wine filtration
• factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
• ideal Australian cellaring conditions
• must and marc handling procedures
• processes involved in handling grapes from the vineyard to the winery in order to produce wine
• routine winemaking and cellar operation procedures including maintenance of a clean, safe working environment
• ranges of equipment and using this equipment to process grapes and must in a winery
• types and styles of wine produced in Australia
• varieties of wine grapes in Australia
• vineyard practices relevant to the production of grapes that meet the requirements of the winery

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to collect, store and handle fertile eggs from breeder flocks.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- follow personal hygiene requirements
- check nest boxes and egg belts are free of obstructions
- match egg collection equipment flow rate to handling rate
- collect nest and floor eggs and keep separate
- ensure that practices to minimise floor eggs are implemented
- assess and sort eggs into settable and non settable and categories within each
- place eggs on trays pointed end down
- pack, label and store eggs correctly
- complete hygiene and administration activities
- operate egg washing equipment at correct temperature and sanitiser/detergent levels
- clean and sanitise equipment, egg washing equipment, cool rooms and work areas
- monitor pest and vermin presence and implement control measures
- identify work health and safety hazards, assess risks and implement suitable controls
- follow biosecurity requirements
- follow enterprise animal welfare procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:
- industry standards, codes of practice, and enterprise procedures for collecting, handling, sorting, packing and storing settable eggs
- commonly used methods of pest and vermin control
- types, uses, cleaning and maintenance of machinery and equipment
• relevant documentation, records and reports that are required
• criteria for sorting and determining eggs that are unfit for setting and disposal methods
• procedures for egg handling, collection, washing, sorting, packing, labelling, storage and fumigation
• temperature, humidity, cleaning and operation for cool rooms and egg washing machines
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• procedures for taking and handling samples for testing
• enterprise environmental and sustainability requirements, and procedures for disposal and management of wastes, debris and run-offs
• enterprise work health and safety, biosecurity and animal welfare policies and procedures

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to maintain poultry health and welfare.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- monitor and assess poultry health and welfare
- provide an optimal environment for poultry
- administer medicines or other chemicals
- collect samples for analysis
- remove non-viable poultry
- report and complete records
- follow enterprise work health and safety policies
- follow biosecurity protocols
- follow enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity and quarantine
- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for animal welfare of poultry
- signs of health, signs of ill health, and methods for assessing poultry health and welfare
- common diseases of poultry, treatment regimes, prevention and management strategies
- criteria for determining birds to be culled
- relevant documentation, records and reports that are required
- types, functions and characteristics of housing, housing infrastructure and housing equipment for poultry, and the criteria and methods for determining that they are in working condition
- types, uses, handling, storage and routes of administration of commonly used veterinary medicines and chemicals
- procedures for taking, handling, labelling, packing and transporting swab samples
- procedures for assisting a post-mortem examination
- effects and impacts of individual bird health and welfare on flock health status and vice versa
- relevant work health and safety requirements and environmental policies

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- make preparations to work in poultry sheds
- check cleanliness of shed and equipment
- check and maintain shed and equipment
- check pest and vermin controls are in place
- prepare shed (spread litter or place paper, setup feeders, drinkers, adjust time clocks)
- place day old chicks
- check chick behaviour
- complete hygiene and administration activities
- follow enterprise work health and safety policies
- follow biosecurity procedures
- follow enterprise animal welfare and environmental policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity
- relevant animal welfare requirements and practices for poultry and day old chicks
- types, uses, cleaning and maintenance of suitable equipment, tools, machinery and personal protective equipment
- types, characteristics, cleaning and maintenance of poultry sheds
- commonly used methods of pest and vermin control
- types, characteristics and maintenance of bird wires and rodent barriers
- lighting systems, time switches, alarm systems, brooders, watering systems, feeding systems, ventilation systems and fogging systems, and methods for determining that they are in working condition
- requirements of day old chicks to ensure their health and welfare
- behavioural signs of health and methods for assessing health and welfare in day old chicks
- types, characteristics, uses and maintenance of litter for poultry
- biosecurity requirements for brooding and rearing chickens
- relevant environmental and sustainability requirements, and procedures for disposal and management of wastes
- relevant documentation and records that are required
- relevant work health and safety requirements.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow personal hygiene requirements
- match egg feed rate to grading equipment flow rate
- assess and grade eggs
- pack and store eggs
- clean and sanitise equipment, cool rooms and work area
- check equipment is working correctly
- follow enterprise work health and safety policies and biosecurity requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- industry standards, codes of practice, and enterprise procedures for sorting, candling, grading, washing, oiling, packing and storing eggs
- commonly used methods of pest and vermin control
- egg labelling requirements
- relevant documentation and records that are required
- types, uses, cleaning and maintenance of equipment and machines
- criteria for determining non-conforming eggs and disposal methods
- temperature, humidity, cleaning and operation for cool rooms
- temperatures, cleaning and sanitising and operation of the egg washing process
- procedures for handling, measurement and usage of egg washing and cleaning chemicals, and sanitisers
- procedures for taking and handling egg samples for testing
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes, debris and run-offs
• relevant work health and safety and biosecurity requirements

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to catch, handle and load poultry for transfer to new facilities or processing plant. Poultry can be meat chickens, layer or breeder pullets or spent hens.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| 1. Prepare to catch or pick up poultry | 1.1 Follow biosecurity procedures  
1.2 Confirm and identify sheds, flocks and bird numbers to be caught and loaded  
1.3 Identify work health and safety hazards, assess risks and implement suitable controls  
1.4 Select, use and maintain suitable personal protective equipment  
1.5 Dim lights and set ventilation and cooling appropriately  
1.6 Raise feeders, drinkers, nests and perches as required  
1.7 Check and ensure that catching, movement path and vehicle loading area is clear of all obstacles  
1.8 Set up catching equipment according to age, stock type and production system  
1.9 Select, use and maintain tools and equipment  
1.10 Follow relevant work health and safety and animal welfare procedures |
| 2. Catch or pick up poultry | 2.1 Quietly and calmly move birds into catching area  
2.2 Catch and handle birds gently and calmly  
2.3 Place birds in crates/modules according to space or weight requirements  
2.4 Check birds regularly for overheating and smothering  
2.5 Move crates/modules and load onto vehicle gently and calmly |
| 3. Complete hygiene and administration activities | 3.1 Clean, sanitise, maintain and appropriately store equipment and tools  
3.2 Dispose of waste and debris in line with enterprise environmental procedures  
3.3 Complete required records and documentation promptly and accurately |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow biosecurity requirements
- identify flocks or shed to be caught
- make preparations for catching
- set up shed and catching area
- catch and handle poultry gently, quietly and calmly
- load birds into crates/modules according to space or weight requirements
- complete hygiene and administration requirements
- follow work health and safety procedures
- follow biosecurity procedures
- follow animal welfare procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant work health and safety requirements
- relevant biosecurity requirements
- relevant animal welfare requirements and practices
- types, uses, cleaning and maintenance of equipment, tools, machinery and personal protective equipment required
- techniques and methods for handling, catching, placing into containers and loading poultry
- how to assess poultry condition and welfare including overheating and smothering
Assessment Requirements for AHCPLY206 Catch and load poultry

- relevant environmental requirements, and procedures for disposal and management of wastes, debris and fluids
- relevant documentation and records that are required

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for artificial insemination of poultry
- apply personal hygiene
- carry out semen collection
- carry out artificial insemination of birds
- complete hygiene and administration activities
- implement biosecurity procedures
- implement animal welfare requirements
- follow enterprise work health and safety policies
- implement enterprise hygiene standards and environmental policy

Knowledge Evidence

The candidate must demonstrate knowledge of:

- resource and manpower requirements, biosecurity requirements, industry standards, codes of practice and procedures for artificial insemination of poultry
- relevant animal welfare practices for the conduct of artificial insemination in poultry
- relevant work health and safety requirements
- collection, handling, storage and use of poultry semen for artificial insemination
- preparation of birds for collection of semen and insemination
- handling, dilution and insemination of poultry
- types, uses, maintenance and storage of equipment
- methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• relevant documentation and records that are required
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes and debris
• requirements and procedures for cleaning and maintaining work areas

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- check and confirm that shed or section is ready for brooding
- place hatchlings
- carry out brooding operations
- monitor chick behaviour and sensors and adjust temperature and ventilation appropriately
- monitor body weight and beak tipping where applied regularly
- complete cleaning, maintenance and administration activities
- implement work health and safety policies
- follow biosecurity procedures
- follow enterprise animal welfare policies
- apply enterprise environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- the effects and impacts of brooding operations on enterprise production processes
- the types, uses, maintenance and storage of relevant tools, machinery and equipment
- relevant work health and safety requirements
- the requirements, industry standards, codes of practice and procedures for welfare and health of poultry during brooding
- the effects and impacts of temperature and shed climate on chick behaviour and how temperature and shed conditions are checked
- the range, effects and impacts of stocking density and overcrowding on poultry behaviour, health and welfare
- the relevant lighting and lighting programs for chickens and pullets and effects on welfare and performance
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes
• the requirements and procedures for cleaning and maintaining work areas
• relevant records and reports that are required
• describe relevant animal welfare and biosecurity requirements

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- make preparations for beak tipping poultry
- carry out beak tipping
- complete beak tipping and post-operation procedures
- carry out euthanasia of cull birds in line with enterprise policies
- implement enterprise work health and safety policies
- implement enterprise biosecurity procedures
- implement animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, industry standards, codes of practice and enterprise biosecurity principles and enterprise requirements for poultry production
- relevant work health and safety requirements for beak tipping operations
- relevant animal welfare principles and practices for beak tipping operations
- signs of health, signs of ill health and methods of assessing health and welfare of poultry
- beak treatment and beak trimming procedures and the effects and impacts (negative and positive) of such procedures on the health and welfare of poultry
- relevant regulatory requirements, codes of practice, industry standards, methods and procedures for euthanasia of poultry
- types, uses, cleaning, maintenance and servicing of beak treatment and beak trimming equipment and tools
- site preparation procedures for beak tipping operations
- criteria for determining birds to be culled before and after beak tipping operations
• types and uses of documentation, records and reports that are required for beak tipping operations

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to wet or dry clean and disinfect (sanitise, disinfect or fumigate) sheds used for poultry production. The standard of cleaning and disinfection applied depends on the type of stock, enterprise disease status and disease risk.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

Candidates should confirm the regulatory requirements in regard to the use of fumigants that apply in their relevant State or Territory before undertaking this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- make preparations to clean sheds
- raise or remove equipment including feeders and drinkers
- clean equipment, sheds and surrounds
- maintain sheds, silos, feeders, drinkers and all equipment
- clean silos safely
- prepare sheds and equipment for cleaning
- sanitise, disinfect or fumigate sheds and equipment safely and in line with legislative requirements
- apply insecticide both in and outside shed
- dry clean and effectively cover electrical equipment
- complete hygiene and administration tasks
- implement enterprise work health and safety procedures
- apply biosecurity requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of sheds, machinery and equipment found in sheds
- how to handle, raise or remove equipment in sheds
- methods of sealing or covering electrical or sensitive equipment to prevent entry of water
- methods for litter and manure removal
- methods for dry cleaning electrical equipment
- procedure for dry or wet cleaning sheds and equipment
• environmental impacts of shed cleaning operation, and measures to mitigate these impacts
• equipment and machinery used for shed cleaning and disinfection, its operation, maintenance and storage
• methods of disposal of effluent and waste
• cleaning, maintenance and servicing of filters, drinker lines, tanks and silos
• handling and application of insecticides, sanitisers, disinfectants and fumigants and the relevant legislative requirements
• types, handling, use and disposal of cleaning agents
• types of documentation and records that need to be completed after the cleaning operations
• relevant work health and safety requirements
• relevant biosecurity requirements
• environmental impacts and controls of cleaning and fumigating sheds
• chemical spillage management and safety equipment and clothing

Assessment Conditions
Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to implement and monitor biosecurity measures for poultry enterprises.

All work must be carried out to comply with workplace procedures, legislation, codes of practice, and guidelines relating to work health and safety, biosecurity, animal welfare, and sustainability practices.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They provide and communicate solutions to a range of predictable problems in relation to biosecurity.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Note:

Pest is a bird or animal or insect which can be a carrier of infectious disease or which can cause stock losses or loss of productivity through predation.

Weed is a poisonous plant or one declared as a noxious weed (free range runs).

</tr>
</tbody>
</table>
| 1. Apply biosecurity procedures for site entry | 1.1 Identify potential biosecurity threats to the enterprise  
1.2 Identify potential sources of disease, pest or weed contamination being carried between sites  
1.3 Consult with supervisor and management on the requirements for maintaining the enterprise as a biosecure zone as appropriate, in compliance with relevant legislation, Codes of Practice, industry guidelines and enterprise procedures  
1.4 Maintain the integrity of enterprise as a biosecure zone  
1.5 Maintain personal sanitation and hygiene on entry to enterprise  
1.6 Complete sign in procedures  
1.7 Ensure contractors and visitors are signed in, checked for risk profile and instructed in biosecurity requirements  
1.8 Ensure all equipment, machinery or vehicles prior to entry onto the site are cleaned and disinfected  
1.9 Check poultry, feed and feed ingredients to be introduced to the enterprise for health, pest and contamination status and isolate them from other poultry and feedstock where necessary  
1.10 Implement enterprise work health and safety policies  
1.11 Use and maintain appropriate personal protective equipment |
| 2. Implement biosecurity procedures to minimise spread of disease, pest or weed where relevant within the enterprise | 2.1 Implement procedures for entering production areas or facilities or moving from one site to another  
2.2 Implement enterprise requirements, order of priority and prescribed routes for specified movements of personnel, vehicles, equipment, feedstuffs and poultry  
2.3 Ensure all surface water used for drinking, cooling and washing down is sanitised  
2.4 Implement appropriate personal sanitation and equipment cleaning procedures for movement between sites  
2.5 Implement a health control program including vaccination  
2.6 Keep enterprise areas clear of debris  
2.7 Implement biosecure procedures for carcass, effluent, organic waste and inorganic waste removal and disposal |
| 3. Implement biosecurity procedures on detection of disease, pest or weed where | 3.1 Identify signs of disease, pest or weed incursion, or unusual signs in the poultry flocks  
3.2 Follow enterprise animal welfare policies |
<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
</table>
| relevant | 3.3 Assess severity and extent of disease or incursion  
          | 3.4 Seek immediate advice from supervisors, professionals or  
          | appropriate authorities where signs indicate an unusual disease or  
          | pest presence  
          | 3.5 Immediately report signs of unusual disease or pest to  
          | management or appropriate authorities  
          | 3.6 Implement instructions from supervisors, enterprise and  
          | appropriate authorities for additional biosecurity measures |

| 4. Apply enterprise sanitation and disinfection practices to reduce the risk of disease, pest or weed | 4.1 Ensure all used bedding, organic and inorganic waste are removed from facilities or sites and disposed of in line with enterprise environmental policies  
        | 4.2 Remove dust from surfaces  
        | 4.3 Clean production areas, facilities or sites using pressure cleaning, water or dry cleaning method where appropriate  
        | 4.4 Clean feeding and watering equipment using an appropriate method  
        | 4.5 Sanitise or disinfect facilities, sites and equipment appropriately |

| 5. Implement pest control | 5.1 Identify pests that can introduce or spread high risk pathogens  
                            | 5.2 Exclude wild birds from the poultry housing and other pests from the facilities by effective physical barriers  
                            | 5.3 Monitor wild bird and pest numbers  
                            | 5.4 Carry out procedures to discourage wild birds and to control pests |

| 6. Monitor, record and report | 6.1 Monitor effectiveness and progress of control activities and compare with enterprise requirements  
                                | 6.2 Monitor production areas, facilities or sites as part of work duties to ensure work practices and procedures are applied  
                                | 6.3 Complete records accurately and timely  
                                | 6.4 Report issues and concerns with biosecurity to management  
                                | 6.5 Work with management to review procedures, activities and communicate revisions to other staff |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- apply biosecurity procedures for site entry and between sections
- implement biosecurity procedures
- implement biosecurity procedures as instructed on detection of disease, pest or weed where relevant
- identify abnormal signs in a flock
- implement wild bird, pest and weed control measures
- monitor application of biosecurity procedures
- implement enterprise work health and safety policies
- implement enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- relevant statutory requirements, codes of practice, industry standards and procedures for biosecurity
- types, characteristics, methods of spread, signs, prevention, control and treatment of diseases, pests or weeds relevant to the enterprise
- requirements for maintaining an enterprise as a biosecure zone including perimeter fencing, lockable gates, vehicle access, enterprise boundaries, production area boundaries, dirty and clean production areas, poultry housing and pasture boundaries and appropriate signage
- specific biosecurity procedures applicable to an enterprise and enterprise work routines, including personnel, visitors, vehicles, equipment, machinery, introduced poultry, pests, wild birds and health program
Assessment Requirements for AHCPLY307 Implement and monitor biosecurity measures in poultry production

- requirements, procedures and resources for entry to enterprise, production areas, facilities or sites
- normal signs of a healthy flock
- relevant work health and safety requirements
- methods and procedures for cleaning and disinfection of facilities, sheds, feeding and watering equipment and other shed equipment
- requirements, methods and procedures for treatment and sanitisation of drinking, cooling and washing down water supplies as appropriate to an enterprise
- procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
- relevant environmental and sustainability requirements, methods and procedures for disposal and management of effluent, organic and inorganic waste and debris
- essential principles and key aspects of Commonwealth and State disease control emergency plans, including AUSVETPLAN
- types and maintenance of relevant documentation and records
- requirements and methods for reporting, reviewing, revising and communicating biosecurity procedures

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that they have treated weeds using at least two different techniques, including:

- recognised and recorded target weeds and confirmed with supervisor
- discussed and selected control options with supervisor
- prepared control options and treatments following required procedures
- identified health, safety and environmental hazards and risks and applied controls according to workplace procedures
- identified, selected, fitted and used personal protective equipment
- applied treatments safely ensuring off-target species were unaffected
- shut down, cleaned and stored personal protective equipment and application equipment according to environmental procedures
- disposed of waste according to workplace procedures and environmental procedures
- maintained records according to workplace procedures and legislative and regulatory requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common weeds identification and naming conventions
- weeds and dispersal methods common to work area
- common weed treatment options, including:
  - cultural
  - chemical
  - mechanical
  - biological
• Integrated Pest Management
• basic environmental considerations when using chemicals for treating weeds, including:
  • spray drift and off target damage
  • inversion
  • re-entry period
  • residues
  • chemical handling
• regulatory requirements and responsibilities when applying weed treatments
• weed control equipment, capabilities and limitations
• health and safety in the workplace including personal protective equipment required for controlling weeds
• principles and methods for securing treatment sites including, caution or hazard signs and signals
• purpose and use of chemical labels and safety data sheets (SDS)
• environmental considerations when controlling and disposing of weeds and waste materials
• record keeping methods and requirements.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated on a site with weed infestation or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • weeds to be identified and controlled
  • tools and equipment suitable for control options and treatments
  • personal protective equipment
  • treatment materials
• specifications:
  • workplace documents including treatment and control procedures and processes and forms for recording treatments
  • use of manufacturers’ operating instructions for specific equipment, machinery used for weed control
  • SDS for treatment materials
  • specific regulations
• relationships:
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have treated plant pests and diseases, including:

- recognised and recorded target pests, diseases and disorders and confirmed with supervisor
- discussed and selected control options with supervisor
- prepared control options and treatments following required procedures
- identified health and safety in the workplace and environmental hazards and risks and applied controls according to workplace procedures
- identified, selected, fitted and used personal protective equipment
- applied treatments safely ensuring off-target species were unaffected
- shut down, cleaned and stored personal protective equipment and application equipment according to environmental procedures
- disposed of waste according to workplace procedures and environmental procedures
- updated records according to workplace procedures and legislative and regulatory requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common pests, diseases and disorders identification
- pests, diseases and disorders and dissemination method common to work area
- pests, diseases and disorders treatment options, including:
  - cultural
  - chemical
Assessment Requirements for AHCPM202 Treat plant pests, diseases and disorders

- mechanical
- biological
- Integrated Pest Management

- basic environmental considerations when using chemicals for treating pests, diseases and disorders, including:
  - spray drift and off target damage
  - inversion
  - re-entry period
  - residues
  - chemical handling
- regulatory requirements and responsibilities when applying control measures
- pests, disease and disorders control equipment, capabilities and limitations
- health and safety in the workplace including personal protective equipment required for treating pests, disease and disorders
- principles and methods for securing treatment sites including, caution or hazard signs and signals
- purpose and use of chemical labels and safety data sheets (SDS)
- environmental considerations when treating pests, diseases and disorders, and disposing of waste materials
- record keeping methods and requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - samples of pests, diseases and disorders to be identified and controlled
  - tools and equipment suitable for control options and treatments
  - personal protective equipment
  - treatment materials
- specifications:
  - workplace documents including instructions, treatment and control procedures and processes and forms for recording treatments
  - manufacturers' operating instructions for specific equipment
  - SDS for treatment materials
  - specific regulations
- relationships:
  - supervisor.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to interpret and apply industry and workplace procedures and standards to daily work activities when working in the pest management sector. It requires the ability to identify and follow legislative and procedural requirements while under supervision.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they can work effectively in a pest management environment, including:

- recognised common pests and identified the characteristics and impact on community
- identified and monitored effectiveness of pest management plans for pests recognised for impact on workplace performance
- identified, selected and safely used equipment required to implement pest management program
- identified and took corrective action for equipment faults
- recognised and implemented workplace strategies for controlling pests
- applied health and safety in the workplace and environmental practices and procedures ethically according to legislative requirements
- identified permissions, licences and necessary permits required prior to entering properties
- followed safe waste disposal procedures
- prepared and used communication and navigational equipment relevant to workplace requirements
- assisted with identifying key stakeholders and contributed to stakeholder engagement
- used communication strategies to engage with supervisor and stakeholders
- complied with designated timelines
- maintained pest management records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• common pest management methods, strategies and monitoring techniques for specific pest species
• standard operating procedures and codes of practice applicable to pest control
• invasive pest species common to field of work and their harmful impact, including:
  • signs and symptoms of active pests
  • effect of pests on work environment
• basic environmental considerations when controlling pests, including:
  • spray drift and off target damage
  • inversion
  • re-entry period
  • residues
  • chemical handling
• pest control strategies, including:
  • cultural
  • chemical
  • mechanical
  • biological
  • Integrated Pest Management
• risk factors, including human, health and environmental associated with the pest management activity
• record keeping and reporting processes and procedures, including:
  • databases
  • paper based
  • mandatory reporting
• licenses, permits and permissions when entering properties
• common equipment used for, controlling pests, navigating and communicating on properties, including:
  • calibration requirements
  • basic operation principles
  • maintenance and repairs
• health and safety in the workplace procedures and legislative requirements.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in the field or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live pests for identification and control
  • tools and equipment for pest control, navigation and communications
Assessment Requirements for AHCPMG203 Work effectively in a pest management environment

- personal protective equipment
- specifications:
  - workplace documents including policies, procedures, processes, instructions, records and forms
  - manufacturers' operating instructions for specific equipment, machinery
  - relevant legislation, regulations and codes of practice
- relationships:
  - industry stakeholders
  - supervisor
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to plan and coordinate weed control activities using appropriate strategies to provide effective, economic control while minimising environmental damage.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated on at least one occasion that they have controlled weeds, including:

- identified, recorded and assessed weeds and their impact on the target area
- investigated the suitability of weed control approaches and effect on site environment and non-target entities
- planned and coordinate weed control activities
- identified tolerable levels of weed infestation for the target site
- conducted a site hazard, risk assessment and identified controls for weed control
- ensured personal safety by using appropriate personal protective equipment
- selected and applied weed management methods appropriate to the target site
- maintained records of weed management activities
- monitored, recorded and reported the effectiveness of methods
- ensured control measures had minimal effect on non-target species and environment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- weeds and their tolerable levels and impact on target area, including:
  - economic, aesthetic, health, fire hazard and environmental thresholds of common weeds
  - non-target entities common to the area
  - effect of weed infestation on required plant health and growth
• basic weed biology, including:
  • lifecycle and ecology of a range of weeds
  • cyclical nature of weeds and control programs
  • weed characteristics, morphology and dispersal
• weed management strategies and their selection criteria, including:
  • cultural
  • chemical
  • mechanical
  • biological
  • Integrated Pest Management
• risk factors including human, animal health and environmental associated with control measures
• factors that affect the efficacy of weed management strategies, including:
  • prevailing weather and atmospheric conditions
  • impact of off target damage on non-target entities
  • residues and maximum residue levels
• weed control activities and disturbance to other plant or animal species
• signs of adverse impact of control measures and ways to minimise their effect on non-target entities, including:
  • humans
  • animals
  • non-target plants
  • environment
• site-monitoring techniques that may be used to implement the weed control plan
• hazard and risks assessment and control methodologies
• equipment including personal protective equipment appropriate to control measure
• health and safety in the workplace requirements
• pest management planning and survey strategies
• legislative requirements relevant to weed control.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in the field or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live weeds
  • tools and equipment used for weed control program
  • personal protective equipment
• specifications:
• workplace documents including policies, procedures, processes and forms for record keeping
• manufacturers' operating instructions for specific equipment and machinery
• safety data sheets
• workplace instructions and client briefs
• specific regulations and codes of practice
• relationships:
  • clients.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that on at least one occasion they can control pests, disease and disorders, including:

- identified and recorded pests, diseases and disorders, beneficial organisms on host plants in target area
- assessed damage, threat and threshold of pests diseases or disorders on host plants according to client, market or environment requirements
- selected and implemented pest, disease and disorder control measures according to workplace, environmental and safe work practices
- identified and selected tools equipment and resources necessary to implement the control measure
- identified and assessed health and safety hazards and risks and incorporate and implemented in controls strategies according to health and safety procedures
- identified, fitted and used personal protective equipment according to workplace procedures
- monitored the effectiveness of pest and disease control
- adjusted control measure on crop and off-target entities where outcomes were below expectation
- maintained records of pest and disease control activities according to regulatory and workplace requirements
- coordinated the control strategy with others according to planned outcomes.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest, disease and disorder and symptom recognition of host stress
- economic, aesthetic or environmental thresholds for a range of plant pests, diseases and disorders
- control strategies for pests diseases and disorders, including:
  - chemical
  - biological
  - cultural methods
  - treatments available
  - Integrated Pest Management
  - industry best practice
- tools, equipment and machinery for implementing the control strategies and the importance of calibration
- site monitoring and analysis techniques used to implement a control strategy
- implications of control strategies for:
  - target and off-target
  - site limitations
  - environmental implications
  - end market and production
  - environmental objectives
- health and safety in the workplace responsibilities for employees and employers
- correct use, maintenance and storage of personal protective equipment
- health and safety in the workplace and environmental regulatory requirements including hazardous substances regulations
- basic communications skills
- workplace and mandatory record keeping requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pests, diseases and disorders
  - tools and equipment for control program
  - personal protective equipment
- specifications:
• workplace documents including policies, procedures, processes and forms for record keeping
• manufacturers' operating instructions for specific equipment and machinery
• safety data sheets
• workplace instructions and client briefs
• specific legislation/codes of practice
• relationships:
  • clients
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to euthanise animals using firearms and techniques appropriate for the type and mobility of the animal.

The unit applies to individuals who hold a valid firearms license and work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions. Destruction of pest animals must comply with state animal cruelty legislation.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated the skills to use a firearm to euthanise animals, including:

- planned the shoot within the boundaries and location of the target animal its range and habitat according to the timeframe, pest management plan and monitoring program
- ensured licences and permits were valid and applicable and environmental and public safety risks were mitigated
- identified target animal and its anatomical vulnerabilities for a clean kill
- operated a firearm safely in accordance with statutory requirements
- zeroed and test fired the firearm safely at a range under supervision at a distance that is commensurate with the target animals to be destroyed
- selected and checked serviceability of transport, equipment, firearms and ammunition, and stowed the firearm and ammunition safely for transport
- cleaned, maintained and stored equipment, firearms and ammunition safely and in accordance with statutory requirements
- checked target animal was dead, and euthanised immediately, if signs of life, according to relevant animal welfare codes of practice
- used personal protective equipment (PPE) to handle carcases to ensure health and safety in the workplace
- identified health and safety in the workplace hazards and risks and applied control measures and used PPE according to health and safety in the workplace procedures
- applied biosecurity measures when handling, transporting or disposing of carcases
- maintained records and reporting procedures.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest management plan and their purpose
- environmental hazards and risks associated with the use of firearms
- safety hazards and risk management strategies associated with shooting
- checking and preparing a firearm and ammunition
- checking target animal for life after discharging the firearm
- anatomy and physical features and vulnerable organs, or humane points on target animals
- procedures for the safe handling of carcases required for research or commercial use
- procedures for the safe disposal of animal carcases not required for other purposes
- reporting and recording procedures required by the pest management plan
- location and boundaries for the shoot
- habitats, habits and range of movement of target animals
- PPE required for the shoot
- firearm's licensing requirements
- firearm and ammunition types recommended for the target animal
- State and territory gun control laws, acts and regulatory requirements including firearms agreements and codes of practice, relating to the use of firearms for euthanising animals
- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- prevention of cruelty to animals legislation applicable to destruction of animals
- basic requirements for biosecurity in the context of destruction of animals.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an outdoor field environment with pest animals or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pest animals, carcases or targets
  - firearms
  - PPE
- specifications:
  - workplace documents including procedures for firearm use
  - operating instructions for firearms
  - licences and permissions to discharge firearms
  - specific legislation and codes of practice for firearm use and animal welfare
- timeframes:
  - checked animal for signs of life after discharge of firearm.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit:

- must possess firearms licences
- appropriate experience in using firearms for pest control.

Application

This unit of competency describes the skills and knowledge required to survey pest abundance for plants, vertebrate or invertebrate animals. This will be carried out using a range of observation techniques in conjunction with workplace pest management plan, survey strategy and a monitoring program according to established standards and protocols.

The unit applies to individuals who work under broad direction and take responsibility for their own work use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have surveyed pests, including:

- organised and completed a pest survey according to the organisation’s pest management plan and survey strategy
- recognised signs or evidence of common pests
- counted, calculated and recorded observations
- operated equipment safely and according to workplace and environmental procedures
- cleaned and stored the equipment at the conclusion of the job
- took appropriate safety and environmental precautions for all pest survey activities
- applied appropriate animal welfare practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- survey techniques and equipment appropriate to the geography and type of pest being surveyed
- health and safety considerations with survey techniques including aerial observation
- the basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- relevant parts of the organisation’s pest management plan and survey strategy
- permits and permissions required for survey work
- pest survey plans and their application
- pest behaviour and habitats including areas that have a high probability of infestation
- direct evidence requirements of range of pests included in pest management plan
- survey recording methods and procedures
• map reading techniques for survey work.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated on a site with pests to be surveyed or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • live pests to be surveyed
  • survey tools and equipment
  • personal protective equipment

• specifications:
  • workplace documents including survey plans, procedures, survey records and forms
  • manufacturers' operating instructions for specific equipment
  • workplace instructions or briefs]
  • specific animal welfare codes of practice

• relationships:
  • team member, supervisor or key stakeholder.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have determined pest control techniques, including:

- assessed the impact of pests on assets
- identified the target pest and its characteristics
- determined the desired outcomes, constraints and measures for pest control techniques
- planned and discussed appropriate humane pest control techniques with supervisor and stakeholder
- used a variety of monitoring techniques to determine pest numbers
- identified non-target species and biosecurity risks affected during a control program
- identified pest control permissions and licences required for pest control techniques
- determined the legal, economic and social constraints affecting pest control techniques
- included health and safety in the workplace policies and procedures when planning pest control techniques.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest lifecycles and behaviours, including modes of dispersal, biology and reproduction
- features of target and non-target species
- habitats of target and non-target pest animals
- impacts pest control activities can have on native species
- licenses, permits and clearances that may need to be obtained
- the impact pest control can have on nearby urban areas and off target species
- pest control techniques appropriate for different contexts
key conditions for the survival of pests and methods for eliminating or controlling those conditions

basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice, where target pests are vertebrate animals

pests and their impact on assets, including the environment and their acceptable population densities

types of constraints that apply to pest control techniques

legislation applicable to pest control including declared species.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions

- resources, equipment and materials:
  - live pests

- specifications:
  - workplace documents including survey plans, procedures, records and forms
  - workplace instructions or briefs
  - specific animal welfare codes of practice
  - technical information and resources applicable to pest.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have applied animal trapping techniques, including:

- determined objectives for trapping and confirmed target animal characteristics and trapping location and size
- estimated trapping period and identified, selected and prepared baits, equipment, traps and transport for trapping activities
- set and trapped animals humanely and released or destroyed animals according to workplace procedures and animal welfare code of practice
- identified presence of target and non-target animals
- identified environmental, health and safety in the workplace hazards, risks and applied controls according to workplace and environmental procedures
- checked method of transport, equipment and materials for serviceability and cleaned equipment before and after trapping activities
- selected, prepared and restored trapping site during trapping activities
- positioned, set, calibrated and checking trapping equipment according to workplace procedures
- applied lures or baits according to trapping plan
- selected, used and stored baits or toxins according to workplace procedures
- inspected traps in a timely manner and handled and euthanised captured animals in accordance with workplace procedures and animal welfare practices
- maintained records using global positioning system data
- summarised and presented trapping data and reports according to workplace procedures
- cleaned and stored equipment and carcases using approved chemicals according to safety data sheets (SDS) and workplace procedures to minimise biosecurity risks.
Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- purpose for trapping the animal
- target animals and non-target animals
- target animal’s range, movement patterns and behaviour and how to apply knowledge of these to selecting trapping location and equipment
- reproductive cycle of the target animal to determine appropriate timing of trapping activities
- food preferences, both general and local, of target animals
- capture and kill points for target animals
- traps and techniques for target animals
- permissions that may be required to undertake trapping
- principles relating to property, stock and duty of care when trapping
- precautions that need to be taken to minimise trapping of non-target animals
- trap camouflage materials and techniques
- trap types, setting and operating release to render them inactive
- health and safety in the workplace procedures that relate to trapping activities
- recording and reporting requirements
- use of decoys and lures
- baits or toxins types and preparation
- applicable state or territory legislation on the use and storage of baits or toxins
- applicable legislation on the capture and handling of animals
- suitable personal protective equipment
- transportation methods for captured animals.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live animals in the field
  - traps appropriate to trapping technique required
  - baits, lures or poisons relevant to trapping context
  - methods of transport relevant to trapping context
  - cleaning products
- specifications:
• workplace documents including plans, procedures, records and forms
• workplace instructions or briefs
• specific regulations and animal welfare codes of practice
• technical information and resources applicable to pest
• specific SDS
• relationships:
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit if firearms are used to destroy animals:
• must possess firearms licences
• appropriate experience in using firearms for pest control.

Application

This unit of competency describes the skills and knowledge required to assist in the implementation of a pest management plan for weeds, vertebrate or invertebrate pests.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that they have implemented a pest management strategy, including:

- accessed and interpreted pest management plan and discussed requirements
- identified declared species
- identified stakeholders, resources, health and safety in the workplace requirements and budgetary constraints of pest management plan
- assessed the target pest status, control technique and impact
- implemented the pest management plan using appropriate techniques ensuring safety of non-target species and environment
- applied the techniques to achieve long term outcomes
- applied standard monitoring techniques
- reviewed pest management plan and presented recommendations on improvements
- disposed of waste and cleaned, stored and maintained equipment according to workplace and legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- appropriate legislative requirements with regards to declared species
- basic sustainability principles, including the ecological role provided by some pests
- federal and state legislation relating to property, animal welfare and duty of care
- risk management approaches
- stakeholder engagement and consultation strategies
• pest physiological and biological characteristics that influence on pest management, particularly with regard to pest populations and the ability of pests to rapidly recolonise
• pest management control methods and techniques and how they fit into an integrated pest management strategy
• standard monitoring techniques
• pest status in the context of location, land use, benefits and damage caused
• types of follow up techniques that may be required to minimise the possibility of reinestation
• information sources used for identifying and managing pests
• animal welfare requirements for vertebrate pest control
• legislative requirements for the destruction, movement and propagation of a declared species
• biosecurity principles, including prevention of pest spread
• requirements for ensuring the welfare of animals described in the relevant Codes of Practice
• conflicting and cross purpose land use resolution processes.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live pests
  • vehicle, tools and equipment and resources appropriate to the control methods
  • personal protective equipment
• specifications:
  • workplace documents including procedures, processes, forms
  • manufacturers' operating instructions for specific equipment and machinery
  • safety data sheets where chemicals have been used
  • workplace instructions, job specifications or client briefs
  • specific legislation/codes of practice
  • financial budget for project
• relationships:
  • clients
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to apply control techniques for pest animals, in compliance with a pest management plan. This includes involving the use of vertebrate pesticides, traps (except leg hold traps), cages, lures and firearms with the animal humanely destroyed according to industry guidelines or protocols.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Elements describe the essential outcomes. | Performance criteria describe the performance needed to demonstrate achievement of the element.

1.3 Identify health and safety hazards and risks in the workplace that could adversely impact on the environment, off-target animals and public and apply controls
1.4 Select and check materials, equipment and vehicles according to pest management plan
1.5 Clean, calibrate and prepare equipment according to workplace procedures
1.6 Obtain permits, permissions and licences for affected properties and follow appropriate notification plan for stakeholders
1.7 Prepare timeline for pest control operation according to industry best practise or protocols

2. Implement pest control
2.1 Identify target and non-target animals according to workplace procedures
2.2 Select site to maximise impact of control methods on target animals and minimise impact on non-target animals.
2.3 Check planned control technique applies to current target pest, site, current conditions and timing
2.4 Install notification and warning signage according to control plan and health and safety in the workplace procedures
2.5 Carry out control activities according to control plan and health and safety in the workplace procedures
2.6 Follow control timelines for control technique
2.7 Maintain records of control plan activities and outcomes according to workplace procedures
2.8 Monitor site according to control plan and local conditions
2.9 Euthanise animals according to pest control plan and workplace procedures

3. Complete the pest control work
3.1 Ensure equipment and unused resources are reconciled against plan and removed from site according to pest control plan and workplace procedures
3.2 Dispose of waste and animal carcasses and restore site according to pest control plan, workplace and environmental procedures
3.3 Clean, maintain and store equipment and materials according to workplace procedures
3.4 Report results of control activities according to workplace procedures and legislative and regulatory requirements

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have applied a pest animal control technique, including:

- identified the control techniques and selected equipment and resources required
- identified hazards and risks and controls measure
- identified target and non-target animals
- obtained permits and licences and notified stakeholders of intended works
- checked vehicles, selected equipment and materials for serviceability and cleaned equipment before and after implementation
- prepared timeline and selected and prepared the site for control activity and restored it on completion
- prepared, installed and checked, safety warning signs, control equipment, materials according to plan
- applied controls according to timelines and control plan
- reconciled controls against plan within specified timeframes
- recorded details of control activities to comply with enterprise and legislative requirements
- reported results of control
- reconciled, cleaned and maintained equipment and disposed of waste according to workplace and environmental procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• requirements for ensuring the welfare of animals described in the relevant Codes of Practice and standard operating procedures
• the purpose and scope of the animal control program
• suitable control techniques and timing of control activities based on:
  • the target animal's range, movement patterns, behaviour and habitats
  • the reproductive cycle of the target animal
  • target animal behaviours and biology relevant to control technique
  • food preferences, both general and local, of target animals
  • scent station and other animal tracks and traces
  • target pests and non-target native animals found in the area
  • the environment and terrain of the target area
• appropriate calibre of firearm required to euthanise animals
• euthanasia procedures, including capture and kill points for animals
• licencing, permissions and notification protocols
• precautions that need to be taken to minimise harm to non-target animals
• health and safety in the workplace procedures that relate to animal control activities including personal protective equipment
• recording and reporting requirements
• procedures for using, recording and reconciling baits and poisons
• relevant legislation for pest animal control activities
• transportation methods for captured animals or carcasses
• land reparation works, waste disposal and the environment.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in the field or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live pest animals
  • tools and equipment used for pest animal control program
  • personal protective equipment
• specifications:
  • workplace documents including policies, procedures, processes and forms for record keeping
  • use of manufacturers’ operating instructions for specific equipment, machinery
  • safety data sheets
  • workplace instructions and client briefs
  • specific legislation and codes of practice.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit if firearms are used to destroy animals:

- must possess firearms licences
- appropriate experience in using firearms for pest control.

Application

This unit of competency describes the skills and knowledge required to prepare, monitor and maintain biological control agents for weed control prior to release in an experimental or field situation. Biological agents must be maintained and stored in an effective way to optimise its potency on targeted weed species.

All work is carried out to comply with the organisation’s pest management plan.

The unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare and propagate biological agents according to laboratory policies and procedures
- transfer cultures to growing environment according to laboratory policies and procedures
- harvest and store biological agents according to laboratory policies and procedures
- monitor and keep records of observations and details of any abnormalities according to laboratory policies and procedures
- apply work health and safety policies and procedures in the context of own work
- apply appropriate sustainability and biosecurity practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- laboratory procedures
- the range of media available for culture maintenance
- culture and media preparation techniques
- available biological control agents and their use
- the range of pest species that are to be targeted with biological agents
- biosecurity and quarantine requirements

Assessment Conditions

Candidates must have access to bioagent media and cultures, appropriate equipment and resources for the purpose of assessment.

Assessors must satisfy current standards for RTOs.
Assessment Requirements for AHCPM310 Prepare, monitor and maintain biological agents

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have used a firearm to control pest animals from an aircraft, including:

- obtained and complied with approvals, permits and conditions for planned activity
- confirmed flight plan, emergency procedures and search and rescue operations with pilot
- checked, sighted and used a firearm safety to shoot pest animal targets from an aircraft
- applied air safety practices when entering and occupying aircraft
- stored firearms safely in an aircraft
- applied health and safety in the workplace practices
- checked accurate location, carried out pest control and ensured all animals were humanely destroyed according to animal welfare codes of practice and workplace procedures
- cleaned maintained and stored firearms and equipment and disposed of waste according to workplace procedures
- maintained records of pest numbers and reported outcomes according to workplace procedures.

Knowledge Evidence

- An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
  - requirements for ensuring the welfare of animals described in relevant codes of practice and workplace procedures
  - map reading and plotting position
  - air safety principles and emergency procedures appropriate to firearms
  - approvals required for carrying firearms airside
  - firearms’ licensing requirements
Assessment Requirements for AHCPM311 Use firearms for pest control activities from aircraft

Date this document was generated: 18 March 2019

- health and safety in the workplace procedures
- environmental, animal welfare, prevention of cruelty to animals, and pest control legislation
- appropriate personal protective equipment (PPE)
- principles and methods of using firearms from an aircraft.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an aircraft suitable for pest animal control activities or an environment that accurately represents these conditions
- resources, equipment and materials:
  - live pest animals
  - appropriate firearms for pest animal management
  - suitable PPE for the individual's task
- specifications:
  - workplace and Civil Aviation Safety Authority documents such as policies, procedures, processes, forms and instructions
  - operating instructions for firearms
  - licences and permissions to discharge firearms from an aircraft
  - legislation, regulations and codes of practice for animal welfare and firearm use from aircraft
- relationships:
  - pilot and supervisors
- timeframes:
  - according to the specified flight plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and standards.

In addition, the following specific assessor requirements apply to this unit:

- the assessment team must include assessors with firearms licences and appropriate experience in using firearms from aircraft for pest control.

Application

This unit of competency describes the skills and knowledge required to prepare pest animal baiting programs. This includes the safe preparation and distribution of poison baits for the control of vertebrate pest animals affecting the rural and natural environment according to legislative and regulatory requirements.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion demonstrated the ability to apply poison baits for vertebrate pest animals in a rural or natural environmental landscape ensuring they have:

- identified pest animal species and abundance
- identified and assessed the availability, mode of action of poison and their application for control of vertebrate pest animal species
- identified and selected the poison and baits required for the target pest and calculated the requirements for bait size according to poison label and regulatory requirements
- determined the timing for undertaking a baiting program in consideration of target animal ecology, behaviour, location and landscape
- identified the various approaches to baiting for pest animal species and selects most appropriate form of baiting for target pest animal species and environment
- assessed environmental and off target hazards and risks
- developed a poison baiting program and monitoring protocol suitable for pest control objectives for target vertebrate pest and location
- identified and accessed legislative and regulatory forms and made application for approvals to access and implement a poison baiting program
- confirmed approvals and notified stakeholders of poison baiting program
- assessed health and safety in the workplace hazards, risks and implemented control procedures for applying and handling poison baits according to poison label, safety data sheets (SDS), legislative and regulatory requirements, and workplace procedures
- used personal protective equipment for all poison bait activities
- prepared baits for target species in a suitable location
- prepared bait for storage and stored the bait safely ready for distribution according to poison label and workplace procedures
- monitored and assessed weather to ensure effective baiting conditions according to workplace procedures and poison label
- transported baits according to legislative requirements
- installed signage and distributed baits ensuring effective target access and minimising off-target risks according to baiting program
- monitored bait stations in a timely manner according to poison label and baiting program
- cleaned equipment, spills, and disposed of waste and baits according to workplace and environmental procedures, SDS and poison labels
- maintained records and reported incidents according to workplace procedures and legislative and regulatory requirements.

### Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- vertebrate pests and their impact on the rural and environmental landscape
- vertebrate pesticides, toxins or poisons to control and manage pest animal species, including:
  - types
  - origin
  - mode of action
  - application
- application and use of pesticides in vertebrate animal baiting program
- baiting techniques for the delivery of vertebrate pesticide toxins or poisons to target species in a baiting program
- regulatory conditions for the use of vertebrate pesticides in pest animal baiting programs, including:
  - legal implications
  - requirements of poison labels
  - role of SDS
  - regulated poisons including Schedule 7
- federal, state or territory guidelines and codes of practice for the preparation and use of poison baits for pest animals
- types and characteristics of vertebrate pests and their impact on the human and natural environment, including:
  - life cycle
  - effect on farms and farmland
  - effect on natural ecosystem and landscape
  - effect on the urban environment
- options for controlling vertebrate pests for a control program, including:
  - poison baiting
  - fumigation
  - habitat destruction
  - concussive (explosive) force
  - trapping
• shooting
• fencing
• Integrated Pest Management
• guard animals
• aversions
• bait techniques and technologies, including:
  • grains
  • meat
  • fruits and vegetables
  • bait stations
  • baiting trails
  • replacement baiting programs
  • canid pest ejectors
  • aerial baiting
• legislation, regulations and licensing requirements in relation to access and use of poisons and poison baits, including:
  • application process for permits and licencing
  • roles and responsibilities of land owners, pest controllers and government agencies for using poison baits
• stakeholders and required notifications including, neighbours, staff and statutory notifications
• bait distribution techniques and considerations, including:
  • impact of weather
  • pest species and their habits
  • breeding cycle
  • feeding and caching (storing) behaviours
  • watering behaviours
• predation risk to rural and environmental assets being protected
• building baiting program into farm or park management activities
• factors that contribute to off target risks, including:
  • proximity to urban and peri urban environment
  • domestic animal behaviours
  • pest animal interactions
  • native birds and animal activities
• hazards of poisons and their application, including:
  • human and animal health
  • environmental contamination
  • residues in environment, plants and animals
  • timing for checking bait stations/sites
• safety requirements when handling, treating and distributing poisonous baits, including:
Assessment Requirements for AHCPM6312 Apply poison baits for vertebrate pest control in rural and environmental landscapes

Date this document was generated: 18 March 2019

- procedures
- personal protective equipment
- signage
- preparing poisonous baits, including:
  - bait types
  - sizes
  - preparation before and after treatment
  - equipment and methods of treating baits
- safe handling, transport and storage of treated baits and poison concentrates
- requirements for disposal of waste poison and baits, clearing spillages and equipment clean up.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - poison baits
  - personal protective equipment
- specifications:
  - workplace documents including work instructions and procedures for bait distribution and planning
  - poison labels and SDS
  - legislation and regulations relevant to the use of poisons and poison baits
  - access to weather forecasts or means to measure local weather.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare, monitor and maintain biological control agents for weed control prior to release in an experimental or field situation. Biological agents must be maintained and stored in an effective way to optimise their potency on targeted weed species.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have prepared, monitored and maintained biological agents for weed control, including:

- prepared and propagated biological agents according to laboratory policies and procedures
- procured and transferred cultures to growing environment according to laboratory policies and procedures
- maintained, harvested and stored biological agents according to laboratory policies and procedures
- monitored and kept records of observations and details of any abnormalities according to laboratory policies and procedures.
- applied health and safety in the workplace procedures, environmental sustainability and biosecurity practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- context of biological agents used for weed control
- laboratory procedures for biological agents
- media available for culture maintenance
- culture and media preparation techniques
- available biological control agents and their use
- the range of pest species that are to be targeted with biological agents
- biosecurity and quarantine requirements
- health and safety in the workplace for laboratories and biological agents, including:
  - use of personal protection equipment (PPE)
- environmental sustainability and biosecurity practices when using biological agents.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a laboratory suitable for handling biological agents or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - live biological agents
  - laboratory tools, equipment and materials to produce and store media
  - PPE
- **specifications:**
  - workplace and laboratory policies, procedures and processes
  - safety data sheets
  - workplace instructions and specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they can implement a pest management plan, including:

- determined all operational parameters and objectives and identified the budgetary allocations, health and safety in the workplace, biosecurity, human and operational resources required for the pest management plan
- supervised others to meet health and safety in the workplace, legislative and regulatory requirements in their work
- procured and ensured machinery, equipment tools and materials met operational and statutory requirements
- communicated with stakeholders and personnel on pest management activities
- supervised others to carry out pest management work according to the pest management plan and provided feedback, advice and coaching
- informed and advise personnel on duties and expected standards
- reviewed and rescheduled works and notified stakeholders of changed schedules
- reviewed and compiled outcomes of pest management plan and prepared reports to stakeholders on progress.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest management plans their structure and implementation
- factors affecting the selection of pest control methods and techniques, including:
  - pest biology and lifecycle
  - potential diseases and toxicity
• principles of sustainability
• herbicide resistance and the alternatives that are available
• pest status in the context of location, land use, benefits and damage caused
• pest management control programs and how to use them in an integrated manner, including:
  • key concepts of integrated pest management as a strategy
• contingency management principles
• risk assessment and management processes
• legal responsibilities of stakeholders including landowners
• local, regional, state and national pest management strategies
• federal, state or territory legislation and regulations relating to pest management activities
• the basic concepts and underpinning principles of the strategic approach to invasive pest management and how to manage damage caused by pests
• the basic principles and importance of monitoring and evaluating the effectiveness of invasive pest management and how to plan and implement an appropriate monitoring program for a pest management plan
• common causes of failure in pest management
• requirements for ensuring the welfare of animals described in relevant codes of practice
• relevant environmental and pesticides legislation as they apply to the workplace
• developing operational parameters and objectives, timelines and milestones
• reporting and recording requirements for the various stakeholders
• scheduling workload and developing work plans.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live pest animals
  • tools and equipment required to implement the plan
  • personal protective equipment
  • baits and poisons
• specifications:
  • workplace documents including policies, procedures, processes
  • pest management plan
  • manufacturers' operating instructions for specific equipment and machinery
  • specific safety data sheets
  • workplace instructions and job specifications
  • specific legislation/codes of practice
• relationships:
• clients
• team member(s)/work crew
• supervisors/management
• timeframes:
  • schedules and planned completion dates for a pest management plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to implement the pest monitoring plan and evaluate and report on performance of pest management.

Pests may be weeds, vertebrate or invertebrate pests or a combination of these.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

| available data | 1.2 Collate data on pest numbers, economic and environmental impacts of pests and pest management plan operating costs  
1.3 Consult with stakeholders about the pest management plan  
1.4 Identify pest signs and confirm if there is presence of recent pest activity around the site  
1.5 Identify signs of previous control activity |
| 2. Monitor the pest management plan | 2.1 Determine monitoring points in the monitoring plan  
2.2 Measure response to the control procedures used  
2.3 Confirm that work health and safety requirements are being followed  
2.4 Confirm that environmental requirements are being followed  
2.5 Record any corrective actions required, processes used and outcomes achieved and report to management |
| 3. Evaluate data against objectives and performance criteria | 3.1 Compare data with objectives and performance criteria in the monitoring plan  
3.2 Compare costs with budget  
3.3 Document costs and benefits |
| 4. Compile a report of the evaluation | 4.1 Isolate and examine indicators of good and poor performance  
4.2 Use clearly stated conclusions, supported by data, in relation to changes in pest abundance and impacts  
4.3 Compile a report that includes discussion of data analysis results |
| 5. Recommend modifications | 5.1 Make recommendations to modify or eliminate causes of poor performance or to enhance current performance  
5.2 Make recommendations to reduce impacts on land management and production processes  
5.3 Provide recommendations to management in the required format |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit has resulted from the merging of AHCPMG407A Monitor and evaluate the local pest management action plan, AHCPMG408A Assess and monitor weed, pest and/or disease control programs and AHCPMG505A Evaluate the pest management strategy and is not equivalent to any of these units.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- implement a pest monitoring and evaluation plan to organisational requirements
- collate data as required in the pest monitoring and evaluation plan
- conduct a site inspection
- consult with stakeholders about the plan
- measure responses to the organisation's pest control procedures
- analyse data against objectives and performance criteria
- produce a report on the results of monitoring operations and a report with evaluation results
- apply all monitoring techniques stipulated in the monitoring and evaluation plan
- apply work health and safety policies and procedures in all monitoring activities

Knowledge Evidence

The candidate must demonstrate knowledge of:
- how to compare data with objectives and performance criteria
- how to compare actual costs with budgeted costs
- environmental and economic impacts of pests on land management and production processes
- the organisation's pest management plan
- monitoring and evaluation principles and how they work in the pest management plan
- land management and production purposes
- range of pests identified in the pest management plan, their lifecycles, threshold levels and the effects of control methods upon them
Assessment Requirements for AHCPMG-410 Implement the pest monitoring and evaluation plan

- relevant local, regional, State or Territory and national pest management strategies
- Federal, State or Territory legislation and regulations relating to pest management activities
- principles of integrated pest management

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed meeting with a stakeholder. All work must be carried out in accordance with relevant Federal, State or Territory legislation regarding pest management activities and the destruction and movement of declared pests.

The candidate must provide evidence that they can:

- identify a non-compliance issue
- provide advice to stakeholders of a non-compliance issue according to authority guidelines and in a manner and language appropriate to the situation
- provide advice and support to stakeholder to manage the issue in accordance with authority guidelines
- follow right of entry requirements
- investigate and collect evidence of breaches
- report findings of non-compliance and compliance according to legislative requirements
- issue relevant notices
- complete recording and reporting requirements to authority and workplace standards

Knowledge Evidence

The candidate must demonstrate a knowledge of:

- relevant Federal, State, Territory and local government legislation regarding pest management and the destruction and movement of declared species
- the legislative status of particular pests and how to identify whether a pest is a declared species
• the types of breaches that generally occur in the locality and the appropriate control options
• conflict avoidance and resolution techniques
• property owners’ rights
• delegations under the relevant Acts and Certificates of Authority
• control measures appropriate to the pests and environment in the area

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have developed a pest management plan, including:

- developed the scope, goals and time frames for a pest management plan
- consulted with stakeholders in the development of the plan
- defined and documented the objectives, roles and responsibilities for the plan
- identified and documented the activities and developed a schedule of critical control points
- conducted a risk assessment for management of community, environment production and health and safety in the workplace and developed contingency plans
- determined and developed operational procedures and methods for monitoring the plan, control methods to be used, site clean-up strategy, and biosecurity
- identified resources and estimated cost of pest management plan
- prioritised activities according to budgetary constraints
- incorporated health and safety in the workplace, environmental and biosecurity procedures and regulations into pest management plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- project planning and management processes
- factors that impact on selection of pest management activities, including:
  - pests in the context of weeds, vertebrate and invertebrate animals and diseases
  - pest behaviour
  - pest population dynamics and economic and environmental thresholds
Assessment Requirements for AHCPMG412 Develop a pest management plan

Date this document was generated: 18 March 2019

- target pest biology and lifecycles
- potential diseases or toxicity risks
- relevant local, regional, state or territory and national pest management strategies
- the principles that underpin the strategic approach to managing pests
- land management and production processes of targeted area
- Federal, state or territory legislation and regulations relating to pest management activities including animal welfare
- chemical, biological, physical and habitat control techniques for pest management
- pest control methods and techniques
- critical control points in the target pests’ life cycle, land management and production activity cycles
- develop objectives for specific, measurable, achievable, realistic and time-based outcomes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - technology and resources for documenting plans
- specifications:
  - workplace documents including policies, procedures, processes
  - pest management planning tools
  - workplace instructions and job specifications
  - specific legislation and codes of practice
- relationships:
  - clients
  - team member(s)/work crew
  - supervisors/management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have produced a written report that details the pest problem in a target area, including:

- identified and consulted with stakeholders
- collected information on pest impact and defined the pest problem in consultation with stakeholders
- determined the target pest population and distribution and factors impacting population and distribution
- determined non-target species populations and distribution in area
- accessed and analysed information to validate pest impact
- identified appropriate times for pest control activities and identified and documented pests' characteristics that impact on program effectiveness
- conducted a cost-benefit analysis for managing target pest
- prepared a report and assessed the viability for a pest management plan for pest population
- identified environmental impact of pest presence and pest management activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- impact of pests on environment, land use, land management and production processes
- behaviour of target pests, particularly those behaviours that impact pest susceptibility to being effectively managed
- animal welfare and related codes of practice and workplace procedures
Assessment Requirements for AHCPMG413 Define the pest problem

- pest biology and lifecycles of target pests
- principles that underpin the strategic approach to managing pests
- land management and production processes of targeted area
- ecology of targeted area
- performance criteria for measuring land management and production outcomes
- techniques used to validate the target pest population and distribution data supplied by stakeholders and sources of relevant data
- measuring or estimating economic implication and environmental impacts of pests
- potential ecological role some pests provide
- potential disease or toxicity risks
- relevant parts of local, regional, state or territory and national pest management strategies
- factors that influence pest population and distribution
- periods of vulnerability in the lifecycle of pests
- critical control points for management of pest problem
- range of pests, non-target species, plant pests and diseases.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - site with pests to evaluate
  - technology and resources for documenting reports and cost benefit analysis
- specifications:
  - workplace documents including policies, procedures, processes
  - research materials and data for pests
  - workplace instructions and job specifications
  - specific legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to effectively use leg hold traps to capture predator species, to release the animal unharmed as part of research programs or to humanely euthanase in accordance with pest management programs.

This unit primarily deals with the use of leg or foothold traps to capture predator pest species including dogs, foxes and cats. Animals may be native animals, domestic animals, animals determined to be pests or feral animals. Trapping techniques call for the use of a variety of equipment and may include the use of lures or attractants baits.

Trapping must be carried out in accordance with an approved pest management plan or research project plan.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

Some forms of traps are strictly regulated in some States and Territories in Australia. Specific determination should be sought through the relevant State or Territory authority.

Where feral animals are trapped they may need to be euthanased with a firearm. Firearms licensing conditions apply to this unit, in particular the use of either Cat A, B or C firearms. Specific approval should be sought through the relevant State or Territory Firearms licensing agency.

Appropriate firearms licences and training are also required for those involved in training and assessment against this unit.
In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- humanely trap animals and release or destroy the animals as required
- identify target and non-target animals in the field
- check vehicles, equipment and materials for serviceability and clean equipment before starting and on completing the job
- select and prepare the trapping site and restore it on completion of the job
- position, set, calibrate and regularly check trapping equipment
- manufacture and apply lures or attractants, if required
- handle and euthanase captured animals in accordance with animal welfare guidelines
- identify signs of target animals, using scent stations and other animal tracks and traces
- summarise and present trapping data to supervisor
- use appropriate data sheets or other recording instruments to record details of trap sets and lures as well as target and non-target capture
- apply work health and safety practices in the context of own work
- apply appropriate animal welfare practices in trapping and handling trapped animals

Knowledge Evidence

The candidate must demonstrate knowledge of:

- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice and Standard Operating Procedures
- the purpose of the animal capture
- the target animals’ range, movement patterns and behaviour and how to apply knowledge of these to selecting trapping location and equipment
• Factors affecting choices around equipment and resources and timing of trapping activities, including:
  • the reproductive cycle of the target animal
  • food preferences, both general and local, of target animals
  • biology of non-target animals that may be impacted by trapping program in the area
  • permissions and permits that may be required
  • suitable traps for the target animal
  • precautions that need to be taken to minimise trapping non-target animals
  • capture and humane killing methods for target animals
  • principles relating to property, stock and duty of care
  • how to camouflage traps
  • how to safely set off traps to render them inactive
  • work health and safety procedures that relate to trapping animals
  • recording and reporting requirements
  • how to use decoys and lures
  • how to prepare toxins
  • applicable State or Territory legislation on the use and storage of toxins
  • applicable legislation on the capture and handling of pest animals
  • suitable personal protective equipment
  • transportation methods for captured animals

Assessment Conditions
Assessment must be conducted in a real work environment trapping live animals.

The assessment team must include assessors with firearms licences.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage the implementation of legislation and provide support and advice to landholders to ensure compliance within organisational guidelines or legislative requirements.

This unit relates to management of pests, including weeds, vertebrate or invertebrate pests or a combination of these.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They demonstrate deep knowledge in a specific technical area and analyse information and exercise judgement to complete a range of advanced skilled activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must demonstrate that they can:

- develop procedures to identify infestations in accordance with relevant legislation
- interact with landholders to explain the ramifications of legislation
- provide pest management advice to landholders which is consistent with organisational guidelines and legislative requirements
- explain policies detailing right of entry to relevant workers
- if required, serve penalty notices
- collate evidence and findings for presentation in a court or to legal representatives
- write ministerial briefs and responses to correspondence

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Commonwealth and State/ Territory legislation and regulation relevant to pest management
- relevant legislation regarding identification, destruction, movement, and propagation of declared species
- legislation relating to gathering and presenting evidence
- appropriate record-keeping systems
- environmental protection processes
- land management and production principles
- policy and procedure development techniques
- how to present evidence for court proceedings
- principles that underpin a strategic approach to managing pests
Assessment Requirements for AHCPM506 Manage the implementation of legislation

- pest control treatments relating to pests dealt with under legislation
- monitoring points in the pest management plan and evidence of infestations
- potential diseases and toxicity
- relevant local, regional, State/Territory and national pest management strategies

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop a pest management plan that applies to a large or regional level. It also describes the skills and knowledge required to gain agreement and commitment from stakeholders to implement the plan.

Pest management plans are used by land managers who practice sustainable land management principles and require a collaborative approach with neighbouring landholders.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They demonstrate deep knowledge in specific technical areas, are able to analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- produce a pest management plan that contains objectives and management options which comply with relevant legislation and best practice principles of pest management
- consult with stakeholders to reach agreed upon outcomes from identified objectives
- scope geographical area, landscape and land uses within area and with stakeholders
- develop pest management plan according to defined pest problem
- align pest management plan to biosecurity plans or legislation
- develop pest management plan in accordance with sustainable land use principles, economic feasibility, environmental acceptability and statutory requirements for pest control
- develop, evaluate and document all management options to control, eradicate or prevent pest populations
- achieve approval of the plan by key stakeholders
- conduct risk assessments and cost-benefit analyses of the range of management options available in order to select the best option for the specific context
- apply work health and safety policies and procedures in the context of own work
- include appropriate animal welfare Code of Practice and Standard Operating Procedures in the plan
- apply appropriate sustainability practices in the plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- planning techniques
• concepts of the strategic approach to pest management, the importance of monitoring and the effectiveness of management evaluation
• relevant local, regional, State/Territory and national pest management strategies
• Federal, State or Territory legislation and regulations relating to pest management activities
• principles of integrated pest management
• types of monitoring technology available
• land use processes, ecological systems and production systems
• pest management options and strategies
• techniques used to validate target pest population and distribution data supplied by stakeholders, and methods of obtaining other relevant data
• how to measure or estimate economic losses and environmental impacts from pest presence
• Federal and State or Territory legislation and regulations relating to property, stock and duty of care
• target pest biology and lifecycles
• potential diseases or toxicity risks
• pest population dynamics and economic and environmental thresholds
• wildlife issues and how to minimise risks to non-target species as well as deal with pest behaviour
• environmental protection legislation
• basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a pest monitoring and evaluation program, in accordance with the local, regional, State or Territory and national pest management strategies
- consult with stakeholders to assess attitudes and land management practices, where relevant
- research and identify required operational and performance monitoring
- develop procedures for monitoring and evaluation, including how to access relevant techniques and adapt them for the pest management plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- procedures for monitoring and recording
- pest biology, behaviour and lifecycles and how they influence monitoring procedures
- pest population dynamics and economic and environmental thresholds
- relevant local, regional, State, Territory and national pest management strategies
- Federal, State or Territory legislation and regulations relating to pest management activities
- key concepts in the Integrated Pest Management strategy
- monitoring and evaluation principles and how they should be included in the management program
- reporting and recording procedures, including knowing how to appropriately package information in the correct format and at the appropriate level for the various target groups
- how to monitor and record pest abundance and the damage caused by the target pest
- target pests and monitoring points
• non-target species in the area
• potential economic and environmental impacts of pest population
• factors that would trigger an emergency response
• aims, objectives and milestones in the pest management plan
• requirements for ensuring the welfare of animals described in the relevant Codes of Practice, where monitoring plan involves pest animals
• potential diseases and toxicity relevant to the area and pests

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to investigate causes of pest control failure after the implementation of a pest management plan.

Pests may be weeds, vertebrate or invertebrate pests or a combination of these.

Treatment may be any measure used to decrease the pest population and the damage caused by it.

This unit applies to regional pest control officers and managers who take personal responsibility for their own work and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

Individuals operating in this field are required to hold current chemical handling certification and a first aid certificate. Other licensing conditions may also apply to this unit. Specific determination should be sought through the relevant State or Territory.

Application

This unit of competency describes the skills and knowledge required to develop a plant pest survey strategy to determine the presence, distribution and prevalence of a pest. Pests may be weeds, vertebrate or invertebrate pests or a combination of these.

The work may be conducted as part of an emergency response to an incursion or as part of routine surveillance, and must be conducted in accordance with established standards and protocols.

This unit applies to individuals who have been appointed or engaged to undertake a role within a pest incursion response. They may also be involved with planning responses to emergency animal diseases and aquatic animal diseases. Individuals take personal responsibility and exercise autonomy in undertaking complex work. They are accountable for the work of others within broad parameters and analyse information and exercise judgement to complete a range of advanced skilled activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- produce a pest survey strategy in accordance with local, regional, State/Territory and national pest management strategies
- write work instructions for survey teams
- work with other technical experts
- analyse biological information for survey design
- develop survey methodology appropriate for target pest, environment and terrain
- prepare plans to workplace and authority standards
- develop review processes according to workplace requirements
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate detailed knowledge of:

- biometric principles to biological survey design
- the biology of groups of pests and pathogens relevant to the survey
- the types and distribution of hosts relevant to the survey
- requirements for ensuring the welfare of animals described in the relevant Codes of Practice
The candidate must demonstrate knowledge of:

- pest biology, behaviour and lifecycles
- diagnostic tests for use in confirming pest presence in samples
- resources required for survey activities

**Assessment Conditions**

Assessment must take place in a functioning control centre, or a control centre established for a pest response simulation exercise.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to care for the health and welfare of pigs. This unit applies to workers in pork production enterprises operating under routine supervision.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Pork (PRK)

Elements and Performance Criteria

</table>
| 1. Check and assess pig health and welfare | 1.1 Check pig health and welfare regularly  
1.2 Recognise and report signs of ill health, diseases, parasite infestations and physical abnormalities  
1.3 Record pig health and welfare status  
1.4 Seek immediate advice where signs indicate an unusual disease |
| 2. Provide an optimal environment for pigs | 2.1 Operate and check temperature and other environment control equipment where appropriate  
2.2 Record relevant information on shed environmental conditions |
| 3. Establish and maintain hygiene | 3.1 Use and maintain personal protective equipment, and follow work health and safety procedures  
3.2 Follow biosecurity procedures  
3.3 Follow personal hygiene practices  
3.4 Clean work areas, machines and surfaces appropriately  
3.5 Remove and dispose of all waste and debris appropriately in line with enterprise environmental policies |
| 4. Administer medication to pigs | 4.1 Store labelled vaccines, veterinary medicines and other chemicals appropriately as directed  
4.2 Carry out routine disease or parasite prevention procedures  
4.3 Measure and administer medication under supervision  
4.4 Administer vaccines as required, and identify pigs that have been vaccinated  
4.5 Complete required documentation and records for administration of vaccines, medicines and chemicals |
| 5. Remove dead or non-viable pigs | 5.1 Dispose of dead pigs appropriately  
5.2 Recognise, report and carry out appropriate procedures for unhealthy or non-viable pigs  
5.3 Provide post-mortem assistance where necessary |
| 6. Report and complete records | 6.1 Complete all required documentation and records of diseases, pig losses and treatments clearly, promptly and accurately  
6.2 Report to enterprise where relevant so that prevention strategies can be planned and implemented |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit is equivalent to AHCPRK201A Care for health and welfare of pigs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- check and assess pig health and welfare
- provide an optimal environment for pigs
- establish and maintain hygiene
- administer medication to pigs
- remove dead or non-viable pigs
- report and complete records
- follow work health and safety policies
- follow biosecurity policies
- follow animal welfare policies
- follow environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity
- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for animal welfare of pigs
- signs of health, signs of ill health, and methods for assessing pig health and welfare
- techniques and methods for humane handling and restraint of pigs
- common diseases of pigs, treatment regimes, prevention and management strategies
- criteria for handling compromised pigs
- relevant documentation, records and reports that are required
• types, functions and characteristics of housing, housing infrastructure and housing equipment for pigs, and the criteria and methods for determining that they are in working condition
• types, uses, handling, storage and routes of administration of commonly used vaccines, veterinary medicines and chemicals
• requirements, methods and procedures for removing and disposing of waste and debris
• procedures for conducting post-mortem examinations
• effects and impacts of individual pig health and welfare on herd health status and vice versa
• relevant work health and safety requirements and environmental practices

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.
