AHC Agriculture, Horticulture and Conservation and Land Management Training Package

Release: 3.0
## CONTENTS

**AHC Agriculture, Horticulture and Conservation and Land Management Training Package**  
AHC10116 Certificate I in Conservation and Land Management ........................................ 56  
AHC10216 Certificate I in AgriFood Operations .................................................................. 57  
AHC10316 Certificate I in Horticulture .............................................................................. 60  
AHC10416 Certificate I in Permaculture ............................................................................ 64  
AHC20116 Certificate II in Agriculture .............................................................................. 66  
AHC20316 Certificate II in Production Horticulture ........................................................... 76  
AHC20416 Certificate II in Horticulture ............................................................................ 80  
AHC20516 Certificate II in Arboriculture .......................................................................... 85  
AHC20616 Certificate II in Parks and Gardens ................................................................. 89  
AHC20716 Certificate II in Production Nursery .................................................................. 92  
AHC20816 Certificate II in Retail Nursery ......................................................................... 95  
AHC20916 Certificate II in Sports Turf Management ......................................................... 98  
AHC21016 Certificate II in Conservation and Land Management ...................................... 101  
AHC21116 Certificate II in Irrigation .................................................................................. 108  
AHC21216 Certificate II in Rural Operations ..................................................................... 111  
AHC21316 Certificate II in Shearing .................................................................................. 113  
AHC21416 Certificate II in Wool Handling ........................................................................ 115  
AHC21516 Certificate II in Floriculture ............................................................................ 117  
AHC21616 Certificate II in Landscaping ........................................................................... 120  
AHC21716 Certificate II in Permaculture .......................................................................... 123  
AHC30116 Certificate III in Agriculture ........................................................................... 126  
AHC30216 Certificate III in Agriculture (Dairy Production) ............................................. 137  
AHC30318 Certificate III in Rural and Environmental Pest Management ....................... 142  
AHC30416 Certificate III in Pork Production ..................................................................... 147  
AHC30516 Certificate III in Poultry Production ................................................................. 153  
AHC30616 Certificate III in Production Horticulture ......................................................... 158  
AHC30716 Certificate III in Horticulture .......................................................................... 162  
AHC30816 Certificate III in Arboriculture ........................................................................ 166  
AHC30916 Certificate III in Landscape Construction ......................................................... 173  
AHC31016 Certificate III in Parks and Gardens .................................................................. 175  
AHC31116 Certificate III in Production Nursery ................................................................ 179  
AHC31216 Certificate III in Retail Nursery ....................................................................... 183  
AHC31316 Certificate III in Sports Turf Management ....................................................... 186  
AHC31416 Certificate III in Conservation and Land Management .................................. 189  
AHC31516 Certificate III in Indigenous Land Management ............................................ 196  
AHC31616 Certificate III in Lands, Parks and Wildlife ..................................................... 202  
AHC31716 Certificate III in Natural Area Restoration ....................................................... 207  
AHC31816 Certificate III in Beekeeping .......................................................................... 211  
AHC31916 Certificate III in Rural Machinery Operations .................................................. 214  
AHC32116 Certificate III in Commercial Seed Processing .............................................. 218  
AHC32216 Certificate III in Commercial Composting ....................................................... 221  
AHC32316 Certificate III in Conservation Earthworks ....................................................... 224  
AHC32416 Certificate III in Irrigation .............................................................................. 227  
AHC32516 Certificate III in Aboriginal Sites Work ........................................................... 230  
AHC32716 Certificate III in Rural Merchandising ............................................................... 236  
AHC32816 Certificate III in Rural Operations ................................................................... 240  
AHC32916 Certificate III in Shearing .............................................................................. 242

Assessment Requirements for ACMEQU205 Apply knowledge of horse behaviour ..........443
ACMEQU206 Perform horse riding skills at walk, trot and canter .........................445
Assessment Requirements for ACMEQU206 Perform horse riding skills at walk, trot and canter.................................449
ACMGAS301 Maintain and monitor animal health and wellbeing..............................452
Assessment Requirements for ACMGAS301 Maintain and monitor animal health and wellbeing.................................455
ACMGAS303 Plan for and provide nutritional requirements for animals ..................458
Assessment Requirements for ACMGAS303 Plan for and provide nutritional requirements for animals.................................461
ACMGAS305 Rescue animals and apply basic first aid........................................463
Assessment Requirements for ACMGAS305 Rescue animals and apply basic first aid.466
ACMHB201 Check and treat horses..................................................................468
Assessment Requirements for ACMHB201 Check and treat horses..........................471
ACMHB203 Provide daily care for horses..............................................................473
Assessment Requirements for ACMHB203 Provide daily care for horses.................477
ACMHB302 Carry out basic hoof care procedures...................................................479
Assessment Requirements for ACMHB302 Carry out basic hoof care procedures ....483
ACMHB303 Carry out natural mare mating procedures...........................................485
Assessment Requirements for ACMHB303 Carry out natural mare mating procedures489
ACMHB304 Assist with artificial insemination of mares........................................491
Assessment Requirements for ACMHB304 Assist with artificial insemination of mares495
ACMHB305 Assess suitability of horses for specific uses........................................497
Assessment Requirements for ACMHB305 Assess suitability of horses for specific uses501
ACMHB307 Handle young horses.......................................................................503
Assessment Requirements for ACMHB307 Handle young horses...........................506
ACMHB309 Follow stud operational procedures.....................................................509
Assessment Requirements for ACMHB309 Follow stud operational procedures ......512
ACMHB310 Prevent and treat equine injury and disease........................................514
Assessment Requirements for ACMHB310 Prevent and treat equine injury and disease518
ACMHB311 Raise young horses..........................................................................521
Assessment Requirements for ACMHB311 Raise young horses...............................524
ACMHB312 Carry out procedures for foaling down mares......................................526
Assessment Requirements for ACMHB312 Carry out procedures for foaling down mares.................................530
ACMHB401 Carry out stud stable management duties.............................................532
Assessment Requirements for ACMHB401 Carry out stud stable management duties 535
ACMHB403 Handle and care for stallions...............................................................537
Assessment Requirements for ACMHB403 Handle and care for stallions..................541
AHCAGB301 Keep production records for a primary production business..............543
Assessment Requirements for AHCAGB301 Keep production records for a primary production business.........................546
AHCAGB401 Plan and implement property improvement........................................548
Assessment Requirements for AHCAGB401 Plan and implement property improvement551
AHCAGB402 Analyse and interpret production data..............................................553
Assessment Requirements for AHCAGB402 Analyse and interpret production data..555
AHCAGB403 Keep financial records for primary production business....................557
Assessment Requirements for AHCAGB403 Keep financial records for primary production business .........................560
AHCAGB501 Develop climate risk management strategies....................................562
Assessment Requirements for AHCAGB501 Develop climate risk management strategies565
AHCAGB502 Plan and manage infrastructure requirements.....................................567
Assessment Requirements for AHCAGB502 Plan and manage infrastructure requirements ................................................................. 570
AHCAGB503 Plan and monitor production processes ................................................................. 572
Assessment Requirements for AHCAGB503 Plan and monitor production processes 575
AHCAGB504 Plan production for the whole business ................................................................. 577
Assessment Requirements for AHCAGB504 Plan production for the whole business 581
AHCAGB505 Develop a whole farm plan ............................................................................. 583
Assessment Requirements for AHCAGB505 Develop a whole farm plan 586
AHCAGB506 Manage application technology ..................................................................... 588
Assessment Requirements for AHCAGB506 Manage application technology 591
AHCAGB507 Select and use agricultural technology ............................................................... 593
Assessment Requirements for AHCAGB507 Select and use agricultural technology 596
AHCAGB508 Improve agricultural sustainability using renewable energy and recycle systems ............................................................................. 598
Assessment Requirements for AHCAGB508 Improve agricultural sustainability using renewable energy and recycle systems 601
AHCAGB509 Select and implement a Geographic Information System (GIS) for sustainable agricultural systems ............................................................................. 603
Assessment Requirements for AHCAGB509 Select and implement a Geographic Information System (GIS) for sustainable agricultural systems 606
AHCAGB510 Implement the introduction of biotechnology into the production system 608
Assessment Requirements for AHCAGB510 Implement the introduction of biotechnology into the production system ............................................................................. 611
AHCAGB511 Develop and manage a plan for sustainable production reflecting sustainable production principles ............................................................................. 613
Assessment Requirements for AHCAGB511 Develop and manage a plan for sustainable production reflecting sustainable production principles 616
AHCAGB601 Develop export markets for produce ................................................................ 618
Assessment Requirements for AHCAGB601 Develop export markets for produce 620
AHCAGB602 Manage estate planning ................................................................................. 622
Assessment Requirements for AHCAGB602 Manage estate planning 625
AHCAGB603 Manage the production system ....................................................................... 627
Assessment Requirements for AHCAGB603 Manage the production system 630
AHCAGB604 Analyse business performance ..................................................................... 632
Assessment Requirements for AHCAGB604 Analyse business performance 634
AHCAGB605 Manage business capital .............................................................................. 636
Assessment Requirements for AHCAGB605 Manage business capital 639
AHCAGB606 Manage price risk through trading strategy ....................................................... 641
Assessment Requirements for AHCAGB606 Manage price risk through trading strategy 644
AHCAIS201 Assist with artificial insemination procedures ..................................................... 646
Assessment Requirements for AHCAIS201 Assist with artificial insemination procedures 649
AHCAIS301 Collect semen ................................................................................................... 651
Assessment Requirements for AHCAIS301 Collect semen .................................................. 654
AHCAIS302 Process and store semen .................................................................................. 656
Assessment Requirements for AHCAIS302 Process and store semen 659
AHCAIS303 Artificially inseminate livestock ....................................................................... 661
Assessment Requirements for AHCAIS303 Artificially inseminate livestock 664
AHCAIS401 Supervise artificial breeding and embryo transfer programs .......................... 667
Assessment Requirements for AHCAIS401 Supervise artificial breeding and embryo transfer programs 670
AHCARB201 Apply a range of treatments to trees ................................................................. 672
Assessment Requirements for AHCARB201 Apply a range of treatments to trees 675
AHCARB206 Operate and maintain stump grinding machines ............................................. 678
Assessment Requirements for AHCARB206 Operate and maintain stump grinding machines.........................................................................................682
AHCARB207 Perform ground based rigging .................................................................687
Assessment Requirements for AHCARB207 Perform ground based rigging ........690
AHCARB208 Recognise trees.....................................................................................694
Assessment Requirements for AHCARB208 Recognise trees..................................697
AHCARB209 Assist with aerial rescue from the ground .............................................700
Assessment Requirements for AHCARB209 Assist with aerial rescue from the ground.703
AHCARB210 Work effectively in the arboriculture industry.......................................707
Assessment Requirements for AHCARB210 Work effectively in the arboriculture industry711
AHCARB301 Implement a tree maintenance program..................................................716
Assessment Requirements for AHCARB301 Implement a tree maintenance program ...719
AHCARB302 Inspect trees for access and work...........................................................722
Assessment Requirements for AHCARB302 Inspect trees for access and work ........725
AHCARB303 Perform pruning operations.................................................................728
Assessment Requirements for AHCARB303 Perform pruning operations .................732
AHCARB305 Dismantle trees......................................................................................736
Assessment Requirements for AHCARB305 Dismantle trees ....................................740
AHCARB306 Undertake aerial rescue...........................................................................744
Assessment Requirements for AHCARB306 Undertake aerial rescue .......................749
AHCARB307 Use advanced climbing techniques.......................................................753
Assessment Requirements for AHCARB307 Use advanced climbing techniques ....757
AHCARB308 Install cable and bracing.......................................................................762
Assessment Requirements for AHCARB308 Install cable and bracing.......................765
AHCARB309 Implement a tree protection program......................................................768
Assessment Requirements for AHCARB309 Implement a tree protection program ....771
AHCARB310 Perform aerial rigging............................................................................774
Assessment Requirements for AHCARB310 Perform aerial rigging .........................778
AHCARB311 Tie, dress, set and finish arborist knots....................................................782
Assessment Requirements for AHCARB311 Tie, dress, set and finish arborist knots ...786
AHCARB312 Use standard climbing techniques to access trees..................................790
Assessment Requirements for AHCARB312 Use standard climbing techniques to access trees.................................................................793
AHCARB313 Identify trees.........................................................................................797
Assessment Requirements for AHCARB313 Identify trees........................................800
AHCARB401 Verify pruning specifications..............................................................803
Assessment Requirements for AHCARB401 Verify pruning specifications................807
AHCARB402 Supervise and audit tree operations.....................................................812
Assessment Requirements for AHCARB402 Supervise and audit tree operations ....815
AHCARB403 Perform a ground-based tree defect evaluation....................................818
Assessment Requirements for AHCARB403 Perform a ground-based tree defect evaluation..................821
AHCARB404 Conduct a safety audit.......................................................................825
Assessment Requirements for AHCARB404 Conduct a safety audit .........................828
AHCARB405 Perform geospatial data collection.......................................................831
Assessment Requirements for AHCARB405 Perform geospatial data collection ....834
AHCARB502 Identify, select and specify trees...........................................................837
Assessment Requirements for AHCARB502 Identify, select and specify trees ........840
AHCARB504 Develop an arboricultural impact assessment report..........................845
Assessment Requirements for AHCARB504 Develop an arboricultural impact assessment report..........................849
AHCARB505 Document and audit tree work.............................................................853
Assessment Requirements for AHCARB505 Document and audit tree work............856

production ..................................................................................................1107
AHCBCAC401 Manage pastures for livestock production ....................................1109
Assessment Requirements for AHCBCAC401 Manage pastures for livestock production1112
AHCBCAC402 Plan a pasture establishment program .......................................1114
Assessment Requirements for AHCBEK302 Manipulate honey bee brood ........................................... 1127
AHCBEK303 Manage honey bee swarms ......................................................................................... 1132
AHCBEK304 Plan and implement agricultural crop maintenance .................................................... 1134
AHCBEK305 Supervise agricultural crop harvesting ................................................................. 1137
AHCBEK306 Maintain grain quality in storage ............................................................................. 1139
AHCBEK307 Save, prepare and store agricultural seed ............................................................... 1142
AHCBEK308 Manage agricultural crop production ....................................................................... 1144
AHCBEK309 Prepare and use a bee smoker .................................................................................. 1147
AHCBEK501 Manage integrated crop and pasture production .................................................. 1154
AHCBEK502 Manage forage conservation .................................................................................... 1157
AHCBEK503 Manage integrated crop and pasture ......................................................................... 1160
AHCBEK504 Plan and manage a stored grain program ............................................................... 1163
AHCBEK505 Plan and manage long-term weed, pest or disease control in crops ..................... 1166
AHCBEK506 Plan and implement agricultural crop maintenance ................................................. 1168
AHCBEK507 Develop production plans for crops ..................................................................... 1171
AHCBEK508 Develop production plans for crops ..................................................................... 1174
AHCBEK509 Apply plant biology to agronomic practices ......................................................... 1177
AHCBEK510 Open and reassemble a beehive .............................................................................. 1181
AHCBEK511 Open and reassemble a beehive .............................................................................. 1184
AHCBEK512 Prepare and use a bee smoker .................................................................................. 1187
AHCBEK513 Prepare and use a bee smoker .................................................................................. 1190
AHCBEK514 Assemble and maintain beekeeping components ..................................................... 1193
AHCBEK515 Assemble and maintain beekeeping components ..................................................... 1196
AHCBEK516 Manage honey bee swarms ...................................................................................... 1200
AHCBEK517 Manage honey bee swarms ...................................................................................... 1203
AHCBEK518 Manipulate honey bee brood .................................................................................... 1206
AHCBEK519 Manipulate honey bee brood .................................................................................... 1209
AHCBEK520 Re-queen a honey bee colony .................................................................................... 1213
AHCBEK521 Re-queen a honey bee colony .................................................................................... 1216
AHCBEK522 Remove a honey crop from a hive ............................................................................. 1219
AHCBEK523 Remove a honey crop from a hive ............................................................................. 1222
AHCBEK524 Collect and store propolis ........................................................................................ 1225
AHCBEK525 Collect and store propolis ........................................................................................ 1228
AHCBEK526 Produce and harvest royal jelly ................................................................................. 1230
AHCBEK527 Produce and harvest royal jelly ................................................................................. 1233
AHCBEK528 Trap and store pollen ............................................................................................... 1236
AHCBEK529 Trap and store pollen ............................................................................................... 1239
AHCBEK310 Process raw wax into moulds .................................................................................. 1242
AHCBEK311 Process raw wax into moulds .................................................................................. 1243
AHCBIO305 Apply biosecurity measures
Assessment Requirements for AHCBIO305 Apply biosecurity measures...

AHCBIO302 Identify and report unusual disease or plant pest signs
Assessment Requirements for AHCBIO302 Identify and report unusual disease or plant pest signs...

Assessment Requirements for AHCMKH401 Carry out cleaning-time tests of milking machines .................................................................................................................2802
AHCMKH402 Design and fabricate milking equipment installations........................................2804
Assessment Requirements for AHCMKH402 Design and fabricate milking equipment installations .................................................................................................................2807
AHCMKH403 Design and install enterprise milk cooling and storage .........................................2809
Assessment Requirements for AHCMKH403 Design and install enterprise milk cooling and storage .................................................................................................................2812
AHCMKH404 Install milking equipment.........................................................................................2814
Assessment Requirements for AHCMKH404 Install milking equipment ....................................2817
AHCMKH405 Performance test milking machines .....................................................................2819
Assessment Requirements for AHCMKH405 Performance test milking machines.....................2821
AHCMOM101 Assist with routine maintenance of machinery and equipment.........................2823
Assessment Requirements for AHCMOM101 Assist with routine maintenance of machinery and equipment .................................................................................................................2827
AHCMOM201 Operate two wheel motorbikes ..............................................................................2829
Assessment Requirements for AHCMOM201 Operate two wheel motorbikes .........................2833
AHCMOM202 Operate tractors ..................................................................................................2836
Assessment Requirements for AHCMOM202 Operate tractors .................................................2840
AHCMOM203 Operate basic machinery and equipment ..............................................................2842
Assessment Requirements for AHCMOM203 Operate basic machinery and equipment ............2846
AHCMOM204 Undertake operational maintenance of machinery ..............................................2848
Assessment Requirements for AHCMOM204 Undertake operational maintenance of machinery .................................................................................................................2852
AHCMOM205 Operate vehicles .................................................................................................2854
Assessment Requirements for AHCMOM205 Operate vehicles ..............................................2858
AHCMOM206 Conduct grader operations ..................................................................................2860
Assessment Requirements for AHCMOM206 Conduct grader operations ..................................2864
AHCMOM207 Conduct front-end loader operations ....................................................................2866
Assessment Requirements for AHCMOM207 Conduct front-end loader operations ..................2870
AHCMOM208 Conduct excavator operations ..............................................................................2872
Assessment Requirements for AHCMOM208 Conduct excavator operations ............................2876
AHCMOM209 Conduct dozer operations .....................................................................................2878
Assessment Requirements for AHCMOM209 Conduct dozer operations ....................................2882
AHCMOM210 Conduct scraper operations ...............................................................................2884
Assessment Requirements for AHCMOM210 Conduct scraper operations ..................................2888
AHCMOM211 Operate side by side utility vehicles .....................................................................2890
Assessment Requirements for AHCMOM211 Operate side by side utility vehicles ....................2893
AHCMOM212 Operate quad bikes .............................................................................................2895
Assessment Requirements for AHCMOM212 Operate quad bikes ...........................................2898
AHCMOM213 Operate and maintain chainsaws ........................................................................2900
Assessment Requirements for AHCMOM213 Operate and maintain chainsaws .......................2905
AHCMOM214 Operate cane haulage vehicle ..............................................................................2908
Assessment Requirements for AHCMOM214 Operate cane haulage vehicle .............................2912
AHCMOM215 Operate commercial lawnmowers .......................................................................2915
Assessment Requirements for AHCMOM215 Operate commercial lawnmowers .......................2919
AHCMOM216 Operate side by side utility vehicles .....................................................................2921
Assessment Requirements for AHCMOM216 Operate side by side utility vehicles ....................2925
AHCMOM217 Operate quad bikes .............................................................................................2928
Assessment Requirements for AHCMOM217 Operate quad bikes ...........................................2932
AHCMOM301 Coordinate machinery and equipment maintenance and repair .........................2935
| Assessment Requirements for AHCMOM301 | Coordinate machinery and equipment maintenance and repair | 2939 |
| AHCMOM302 | Perform machinery maintenance | 2941 |
| Assessment Requirements for AHCMOM302 | Perform machinery maintenance | 2945 |
| AHCMOM304 | Operate machinery and equipment | 2947 |

AHCPER320 Manage plant pests, diseases and disorders in a permaculture system ............................... 3635
Assessment Requirements for AHCPER320 Manage plant pests, diseases and disorders in a permaculture system ........................................................................................................ 3638
AHCPER321 Demonstrate permaculture practices to small groups of learners ........................................... 3640
Assessment Requirements for AHCPER321 Demonstrate permaculture practices to small groups of learners ........................................................................................................... 3643
AHCPER401 Provide advice on permaculture principles and practices ...................................................... 3645
Assessment Requirements for AHCPER401 Provide advice on permaculture principles and practices .......... 3648
AHCPER402 Design a rural permaculture system ....................................................................................... 3650
Assessment Requirements for AHCPER402 Design a rural permaculture system .................................... 3653
AHCPER403 Design an urban permaculture system ................................................................................... 3656
Assessment Requirements for AHCPER403 Design an urban permaculture system ............................... 3659
AHCPER404 Plan and implement permaculture works .............................................................................. 3662
Assessment Requirements for AHCPER404 Plan and implement permaculture works 3665
AHCPER405 Select appropriate technology for a permaculture system ................................................... 3667
Assessment Requirements for AHCPER405 Select appropriate technology for a permaculture system .......... 3670
AHCPER406 Identify and analyse bioregional characteristics and resources ............................................. 3672
Assessment Requirements for AHCPER406 Identify and analyse bioregional characteristics and resources ........................................................................................................... 3675
AHCPER407 Design harvesting and storage systems for permaculture products .................................... 3677
Assessment Requirements for AHCPER407 Design harvesting and storage systems for permaculture products ........................................................................................................... 3680
AHCPER408 Implement and monitor animal health and welfare programs for a permaculture system .......... 3683
Assessment Requirements for AHCPER408 Implement and monitor animal health and welfare programs for a permaculture system ............................................................. 3686
AHCPER409 Manage a permaculture seed bank ....................................................................................... 3689
Assessment Requirements for AHCPER409 Manage a permaculture seed bank .................................... 3692
AHCPER410 Recommend approaches for sustainable community and bioregional development ................ 3695
Assessment Requirements for AHCPER410 Recommend approaches for sustainable community and bioregional development ................................................................................. 3698
AHCPER411 Operate within a sustainable community and bioregional development program

Assessment Requirements for AHCPER411 Operate within a sustainable community and bioregional development program

AHCPER412 Operate within a permaculture aid and development program

Assessment Requirements for AHCPER412 Operate within a permaculture aid and development program

AHCPER413 Evaluate suitability of species as solutions for permaculture applications

Assessment Requirements for AHCPER413 Evaluate suitability of species as solutions for permaculture applications

AHCPER501 Carry out permaculture field research

Assessment Requirements for AHCPER501 Carry out permaculture field research

AHCPER502 Design an integrated permaculture system

Assessment Requirements for AHCPER502 Design an integrated permaculture system

AHCPER503 Develop a strategic plan for a permaculture project or enterprise

Assessment Requirements for AHCPER503 Develop a strategic plan for a permaculture project or enterprise

AHCPER504 Manage a permaculture project or enterprise

Assessment Requirements for AHCPER504 Manage a permaculture project or enterprise

AHCPER505 Plan and supervise the implementation of permaculture project works

Assessment Requirements for AHCPER505 Plan and supervise the implementation of permaculture project works

AHCPER506 Develop a reallocation or transition project

Assessment Requirements for AHCPER506 Develop a reallocation or transition project

AHCPER507 Research and interpret requirements for a permaculture project

Assessment Requirements for AHCPER507 Research and interpret requirements for a permaculture project

AHCPER508 Manage a permaculture aid and development project

Assessment Requirements for AHCPER508 Manage a permaculture aid and development project

AHCPER509 Design permaculture structures and features

Assessment Requirements for AHCPER509 Design permaculture structures and features

AHCPER510 Prepare a sustainable community and bioregional development strategy

Assessment Requirements for AHCPER510 Prepare a sustainable community and bioregional development strategy

AHCPER511 Facilitate participatory planning and learning activities

Assessment Requirements for AHCPER511 Facilitate participatory planning and learning activities

AHCPER512 Plan community governance and decision-making processes

Assessment Requirements for AHCPER512 Plan community governance and decision-making processes

AHCPGD101 Support gardening work

Assessment Requirements for AHCPGD101 Support gardening work

AHCPGD201 Plant trees and shrubs

Assessment Requirements for AHCPGD201 Plant trees and shrubs

AHCPGD202 Prepare and maintain plant displays

Assessment Requirements for AHCPGD202 Prepare and maintain plant displays

AHCPGD203 Prune shrubs and small trees

Assessment Requirements for AHCPGD203 Prune shrubs and small trees

AHCPGD204 Transplant small trees

Assessment Requirements for AHCPGD204 Transplant small trees

AHCPGD205 Prepare a grave site

Assessment Requirements for AHCPGD205 Prepare a grave site

Qualification Description

This qualification is an entry-level qualification aimed at individuals entering conservation and land management industry. It allows individuals to develop basic skills and knowledge to prepare for work. They may undertake a range of simple tasks under close supervision. The range of technical skills and knowledge is limited.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides a general vocational outcome in agriculture. The qualification enables individuals to select a livestock production, cropping or livestock context as a job focus or, in the case of mixed farming enterprises, both cropping and livestock.

Individuals with this qualification carry out routine tasks under general supervision and exercise limited autonomy with some accountability for their own work. Job roles vary across different industry sectors and may include:

- Assistant animal attendant/stockperson
- Assistant farm or station hand
- Assistant farm or station worker
- Assistant farm or station labourer.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
• 18 units of competency:
  • 3 core units plus
  • 15 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

• 7 units from Group A
• 5 units from the remaining units in Group A, or from Group B
• up to 3 may be selected from the remaining units listed in this qualification or from any currently endorsed Training Package or Accredited Course.

**Core Units**

<table>
<thead>
<tr>
<th>Unit Code</th>

Qualification Description

The qualification enables individuals to select a tree cropping, vegetable or berry production, grape growing or mushroom production context as a job focus, or a mixture in the case of mixed enterprises.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Total number of units = 15
- Core Units = 1
- Elective Units = 14

Core Units

Qualification Description

This qualification underpins a range of work functions and job roles that can lead to a horticultural trade qualification.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 5 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 8 units from the electives listed below
- 2 units may be selected from the remaining electives list below and/or from this or any other currently endorsed Training Package or Accredited Course.
## Core Units

<table>
<thead>
<tr>
<th>Unit Code</th>

Qualification Description

This qualification provides occupation outcomes with knowledge and skills to undertake a range of ground-based tree work activities and as a pathway for further learning required for tree workers in the arboriculture industry.

This qualification is suitable for an Australian Apprenticeship.

Occupational Licensing, legislative or certification requirements may apply to this qualification in some jurisdictions. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in retail nursery industry. The nursery industry expects this qualification to be achieved to meet job outcomes at this level.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 7 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 5 units from list below
- 3 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in retail nursery work and must be chosen to ensure the integrity of the qualification outcome at AQF level 2.

Core Units
AHCNSY202 | Care for nursery plants  
AHCNSY204 | Maintain indoor plants  
AHCPCM201 | Recognise plants  
AHCSOL202 | Assist with soil or growing media sampling and testing  
AHCWHS201 | Participate in work health and safety processes  
SIRXSL002 | Follow point-of-sale handling procedures  
SIRXSL001 | Sell to the retail customer  

**Elective Units**

AHCBO202 | Follow site quarantine procedures  
AHCHM201 | Apply chemicals under supervision  
AHCDRG201 | Maintain drainage systems  
AHCIROG217 | Assist with pressurised irrigation operations  
AHCMOM203 | Operate basic machinery and equipment  
AHCNSY201 | Pot up plants  
AHCNSY203 | Undertake propagation activities  
AHCMPMG202 | Treat plant pests, diseases and disorders  
AHCWRK204 | Work effectively in the industry  
AHCWRK209 | Participate in environmentally sustainable work practices  
BSBINM201 | Process and maintain workplace information  
BSBWOR204 | Use business technology  
HLTAID002 | Provide basic emergency life support

</tbody>
</table>

Qualification Description

This qualification provides an occupational outcome in conservation and land management. Work would be carried out under general guidance and supervision.

The qualification enables individuals to select an Indigenous land management, conservation earthworks, lands, parks and wildlife or natural area management context as a job focus or a mix of these.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 2 core units plus
  - 13 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 must be selected from Group A
- at least 6 must be selected from the remaining units in Group A or Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- a maximum of 3 units may be selected from qualifications packaged at Certificate II or III levels in this Training Package or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification describes the job roles of supervised entry-level workers in the irrigation industry. It covers the employment areas of irrigation installation and irrigation operations and is suitable for VET in schools programs.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication. However, an individual Unit of Competency may specify relevant licensing, legislative or regulatory requirements. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome for industries and agencies in rural and regional Australia.

Depending on the units selected individuals can be employed not only in rural industries but also other rural and regional sectors, such as local government, tourism, hospitality, transport, construction, community services, information technology and metals.

Industry expects individuals with this qualification to carry out routine tasks under general supervision and exercise limited autonomy with some accountability for their own work.

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Total number of units = 15

- Core Units = 3
- Elective Units = 12

Qualification Description

This qualification provides an entry level occupational outcome in shearing. It recognises the work of a novice shearer who is able to shear a minimum of 40 adult merino sheep or 50 adult crossbred sheep per day to an acceptable industry standard. The shearing industry expects this qualification to be achieved to meet job outcomes at this level.

This qualification is suitable for an Australian Apprenticeship.

Possible job titles relevant to this qualification include:
- Shearer - novice level

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in permaculture. Work would be carried out under general guidance and supervision.

The qualification is suited to VET in Schools, labour market and environmental skills programs. It provides a range of technical skills and knowledge in supporting food growing programs and community programs and is suited to learners with an interest in permaculture as a practical solution for sustainable living.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides a general vocational outcome in agriculture. The qualification enables individuals to select a livestock production, cropping or livestock context as a job focus or, in the case of mixed farming enterprises, both cropping and livestock.

Individuals with this qualification perform tasks in a variety of contexts, which involve some judgement in selecting equipment and services. Job roles vary across different industry sectors and may include:

- Farm or station hand
- Farm or station worker
- Livestock transport driver.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
• 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

To provide the Certificate III in Agriculture, the electives are to be chosen as follows:

• 5 must be selected from the electives listed in Group A
• 5 must be selected from remaining electives in Group A, or from electives listed in Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
• 4 may be selected from the remaining electives listed in Groups A or B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification, or from any currently endorsed Training Package or Accredited Course packaged at Certificate II, III or IV levels.

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows:

• 10 electives must be selected from Group A, including at least 5 units beginning with the code AHCLSK and at least 5 units beginning with the code TLI for the award of the Certificate III in Agriculture (Livestock Transport).

Qualification Description

This qualification provides an occupational outcome in the dairy industry. The dairy industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a dairy farmhand.

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge required for pest management contractors, pest management field officers, vertebrate pest management field officers and weed management field officers in the pest management industry.

The qualification covers those who work in weed management as well as vertebrate pest management in conservation, land management, horticulture and agriculture settings. Individuals in these roles work under general direction and:

- participate in strategic invasive species management practices
- prepare for management programs
- complete and assess management programs
- carry out weed management programs that require chemical spraying
- maintain required records.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 6 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.
For the award of Certificate III in Rural and Environmental Pest Management the electives are to be chosen as follows:

- 6 units must be selected from the elective groups A, B, C, D or E
- Up to 2 units from the remaining electives or any currently endorsed Training Package or accredited course packaged to reflect AQF Certificate II, III or IV outcomes.

Where appropriate, electives may be packaged to provide a qualification with a specialisation.

For the award of Certificate III in Rural and Environmental Pest Management (Pest animal controller) the electives are to be chosen as follows:

- 5 units must be selected from the elective group A
- 1 unit must be selected from the elective group C or E
- 2 units must be selected from remaining electives in group C and E or any currently endorsed Training Package or accredited course packaged to reflect AQF Certificate II, III or IV outcomes.

For the award of Certificate III in Rural and Environmental Pest Management (Weed Controller) the electives are to be chosen as follows:

- 2 units must be selected from the electives group B
- 1 unit, AHCBIO201 Inspect and clean machinery for plant, animal and soil material, must be selected
- 3 units must be selected from the elective group D or E
- 2 units must be selected from remaining group D or E or any currently endorsed Training Package or accredited course packaged to reflect AQF Certificate II, III or IV outcomes.

Qualification Description

This qualification provides an occupational outcome in the pork industry. The pork industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a piggery attendant.

The pork industry expects that graduates from this qualification will be able to perform tasks involving a broad range of skilled applications applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

Possible job roles relevant to this qualification include:
- Piggery attendant
- Stockperson

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in the poultry industry. The poultry industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a poultry hand.

Job roles vary and may include:

- Poultry hand
- Poultry stockperson

The poultry industry expects that graduates from this qualification will be able to perform tasks involving a broad range of skilled applications applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides a vocational outcome in production horticulture. The qualification enables individuals to select a tree cropping, vegetable or berry production, grape growing or mushroom production context as a job focus, or a mixture in the case of mixed enterprises.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 1 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 7 units from Group A or B
• 3 units may be selected from Group B or from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification provides occupation outcomes with a range of specialised knowledge and skills to undertake skilled work and as a pathway for further learning required for arborists in the arboriculture industry.

Possible job titles relevant to this qualification include the general title Arborist, and the specialisation titles:

- Climbing Arborist
- EWP Arborist
- Ground-based Arborist.

The qualification covers both ground-based workers and those working at heights. This qualification does not require a person to work at heights, however, units that include the skills and knowledge required to work at heights, both from an elevated work platform (EWP) and by climbing trees, are included as elective streams.

This qualification is suitable for an Australian Apprenticeship.

Occupational licensing, legislative or certification requirements may apply to this qualification in some jurisdictions. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
• 23 units of competency:
  • 14 core units plus
  • 9 elective units.

Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment at Certificate III level and contribute to a valid, industry-supported vocational outcome in Arboriculture. The electives are to be chosen to provide a specialisation.
The testamur issued for this qualification is to be titled AHC30816 Certificate III in Arboriculture with an additional descriptor added by the RTO to reflect unit selection for a specialisation:

- AHC30816 Certificate III in Arboriculture (Climbing)
- AHC30816 Certificate III in Arboriculture (Elevated Work Platform)
- AHC30816 Certificate III in Arboriculture (Climbing and Elevated Work Platform).

### Climbing Specialisation

In order to achieve the Climbing specialisation:

- select all 5 units from Group A.
- select at least 1 unit from Group D
- the remaining 3 units may be selected from Group D, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification, or from any currently endorsed Training Package or Accredited Course.

### Group A

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>AHCARB305*</td>
<td>Dismantle trees</td>
</tr>
<tr>
<td>AHCARB306*</td>
<td>Undertake aerial rescue</td>
</tr>
<tr>
<td>AHCARB307*</td>
<td>Use advanced climbing techniques</td>
</tr>
<tr>
<td>AHCARB310*</td>
<td>Perform aerial rigging</td>
</tr>
<tr>
<td>AHCARB312*</td>
<td>Use standard climbing techniques to access trees</td>
</tr>
</tbody>
</table>

### Elevated Work Platform (EWP) Specialisation

In order to achieve the EWP specialisation:

- select all 4 units from Group B.
- select at least 2 units from Group D
- the remaining 3 units may be selected from Group D, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification, or from any currently endorsed Training Package or Accredited Course.

### Group B – EWP

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>AHCARB305*</td>
<td>Dismantle trees</td>
</tr>
<tr>
<td>AHCARB306*</td>
<td>Undertake aerial rescue</td>
</tr>
</tbody>
</table>
AHCARB310* Perform aerial rigging

TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Climbing and EWP Specialisation

In order to achieve the Climbing and EWP specialisation:

- select all 6 units from Group C
- an additional 3 units may be selected from Group D, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification, or from any currently endorsed Training Package or Accredited Course.

Group C – Climbing and EWP

<table>
<thead>
<tr>
<th>Unit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AHCARB305*</td>
<td>Dismantle trees</td>
</tr>
<tr>
<td>AHCARB306*</td>
<td>Undertake aerial rescue</td>
</tr>
<tr>
<td>AHCARB307*</td>
<td>Use advanced climbing techniques</td>
</tr>
<tr>
<td>AHCARB310*</td>
<td>Perform aerial rigging</td>
</tr>
<tr>
<td>AHCARB312*</td>
<td>Use standard climbing techniques to access trees</td>
</tr>
<tr>
<td>TLILIC2005</td>
<td>Licence to operate a boom-type elevating work platform (boom length 11 metres or more)</td>
</tr>
</tbody>
</table>

For a ground-based outcome without a working-at-height specialisation:

- select 6 units from Group D or from the Prerequisite Requirements list if a unit is a required for packaging the qualification,
- the remaining 3 units may be selected from any other currently endorsed Training Package or Accredited Course.

Group D

<table>
<thead>
<tr>
<th>Unit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AHCARB206*</td>
<td>Operate and maintain stump grinding machines</td>
</tr>
<tr>
<td>AHCARB207*</td>
<td>Perform ground based rigging</td>
</tr>
<tr>
<td>AHCARB301*</td>
<td>Implement a tree maintenance program</td>
</tr>
<tr>
<td>AHCARB308</td>
<td>Install cable and bracing</td>
</tr>
</tbody>
</table>
### Prerequisite requirements

Note: Units listed in the *Prerequisite requirement* column that have their own prerequisite requirements are shown with an asterisk (*).

<table>
<thead>
<tr>

Qualification Description

This qualification provides a general vocational outcome for a nurseryperson working in a production nursery. The nursery industry expects this qualification to be achieved to meet job outcomes at this level.

Job roles and titles covered by this qualification may include:
- production nursery tradesperson

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
- 16 units of competency:
  - 11 core units plus
  - 5 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 3 units from list below
- 2 unit may be selected from may be selected from units aligned to Certificates II, III or IV in this or any other endorsed Training Package or Accredited Course

Selected units must be relevant to job outcomes in nursery production and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification provides a general vocational outcome in the conservation and land management industry.

The qualification enables individuals to select an Indigenous land management, lands, parks and wildlife or natural area management context as a job focus or a mix of these.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
  - 14 elective units

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 must be selected Group A
- at least 6 units must be selected from the remaining units in Group A or Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- a maximum of 4 units may be selected from the remaining units listed in this qualification or from units aligned to Certificate II, III or IV qualifications in this Training Package or from any other currently endorsed Training Package or Accredited Course.

**Core Units**

**Work health and safety**

| AHCWH301  | Contribute to work health and safety processes |

**Work**

| AHCWRK309  | Apply environmentally sustainable work practices |

**Elective Units**

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

**Group A**

**Indigenous land management**

| AHCILM302  | Provide appropriate information on cultural knowledge |
| AHCILM305  | Work with an Aboriginal Community or organisation |
| AHCILM308  | Identify traditional customs and land rights for an Indigenous Community |
| SITTGDE001 | Interpret aspects of local Australian Indigenous culture |

**Natural area restoration**

| AHCNAR301  | Maintain natural areas |
| AHCNAR302  | Collect and preserve biological samples |
| AHCNAR303  | Implement revegetation works |
| AHCNAR304  | Undertake direct seeding |
| AHCNAR305  | Collect native seed |

Qualification Description
This qualification provides a vocational outcome required for an Indigenous land worker operating within Aboriginal Communities, following Community protocols and using a mix of traditional and contemporary land management strategies.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements
There are no entry requirements for this qualification.

Packaging Rules
To achieve this qualification, competency must be demonstrated in:
- 16 units of competency:
  - 2 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select 4 units from Group A
- Select 7 units from Group A or Group B
- A maximum of 3 units may be selected from the elective lists of Certificate II, III or IV of this or any other endorsed Training Package or Accredited Course. Selected units must be relevant to job outcomes in Indigenous land management and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification reflects the roles of national parks and wildlife workers who are responsible for conducting a number of functions focusing on the maintenance of natural environments, park infrastructure and services, and stakeholder management. National parks workers will carry out a number of duties to protect, enhance and manage natural environments, recreational and cultural assets. National parks workers will work autonomously, as well as under supervision of a park ranger.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification describes the skills and knowledge of a honey bee (Apis) beekeeper, including the establishment of beehives and apiaries, the transport of live bees and the management of bees for honey production and/or provision of pollination services. Legislation, regulations and by-laws relating to beehive ownership and biosecurity codes of practice apply in some states and territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 18 units of competency:
  - 13 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 3 units must be selected from the electives listed below
- the remaining 2 units may be selected from the remaining electives listed below
- up to 2 units may be selected from any currently endorsed Training Package or accredited course packaged at AQF Certificate II, III or IV levels.

Core Units

| AHCBEK203 | Open and reassemble a beehive |

Qualification Description

This qualification describes the skills and knowledge for job roles in the agricultural industry including; farm managers, farm workers, machinery operators, plant operators/contractors, local government/council workers, parks and gardens workers, and the sports turf industry.

Individuals with this qualification perform tasks involving a broad range of skills that are applied in a wide variety of contexts, which will involve discretion and judgement in selecting and operating equipment, services and applying contingency measures during work.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

Licensing or certification requirements apply to this qualification but vary according to state/territory jurisdictions. Users are advised to check with the relevant regulatory authority.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 7 core units plus
  - 9 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 6 must be from the electives listed below
- 3 from the remaining electives listed below, or any currently endorsed Training Package or accredited course.
A maximum of 4 elective units that are coded with an AQF indicator at AQF level 2 or below, or reflect outcomes at AQF level 2 or below, can be selected.

Qualification Description

This qualification reflects the roles of workers in commercial seed cleaning, grading and processing plants.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 9 units of competency:
  - 5 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from list below
- 1 unit may be selected from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in commercial seed processing and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

### Core Units

Qualification Description
This qualification provides a general vocational outcome for a person working in a commercial composting business. The composting industry expects this qualification to be achieved to meet job outcomes at this level.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements
There are no entry requirements for this qualification.

Packaging Rules
To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 1 core units plus
  - 9 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 5 units from Group A
- Select 2 units from Group A or B
2 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in commercial composting and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification reflects the skills and knowledge required to become installation or operations technicians within the irrigation industry.

It applies to skilled workers who carry out installation and operations job roles in the irrigation servicing, horticulture and agriculture industries.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication. However, an individual Unit of Competency may specify relevant licensing, legislative or regulatory requirements. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in agriculture, horticulture and conservation land management and at least one and up to four other related industries.

Individuals with this qualification perform tasks in a variety of contexts, which involve some judgement in selecting equipment and services. Depending on the units selected individuals will be able to seek employment not only in rural industries but also other industry sectors, such as local government, tourism, hospitality, transport, construction, information technology and metals.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
• select at least 6 units from Certificate III qualifications in the AHC endorsed Training Package
• up to 8 units aligned to AQF levels 2, 3, or 4 qualifications may be selected from up to 4 currently endorsed Training Packages or Accredited Courses.

Qualification Description

This qualification covers occupational outcomes for shearing at the professional level. This requires a high standard of workmanship at a rate of at least 120 adult merino sheep or 140 adult crossbred sheep per day. The shearing industry expects this qualification to be achieved to meet job outcomes at this level.

This qualification is suitable for an Australian Apprenticeship.

Job titles relevant to this qualification include:
- Shearer - professional level

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

To be eligible to enrol in this qualification applicants must be able to demonstrate shearing skills and knowledge at Certificate II in Shearing level by completion of that certificate or by Recognition of Prior Learning.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 1 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 7 units from Group A or B
- 3 units may be selected from Group B or this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in floriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification provides an occupational outcome in beef cattle feedlot operations. Electives must be chosen to cover a feedlot maintenance, pen riding, or feeding and milling stream.

The testamur issued for this qualification is to be titled AHC33316 Certificate III in Feedlot Operations. An additional descriptor may be added by the RTO to reflect unit selection. This includes:

- AHC33316 Certificate III in Feedlot Operations (Feedlot Maintenance)
- AHC33316 Certificate III in Feedlot Operations (Feeding and Milling)
- AHC33316 Certificate III in Feedlot Operations (Pen Riding)

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Elective Units

- In order to achieve Feedlot Maintenance specialisation, 8 units must be selected from Group A
- In order to achieve Feeding and Milling specialisation, 8 units must be selected from Group B
- In order to achieve Pen Riding specialisation, 8 units must be selected from Group C
- 3 units aligned to AQF levels 2, 3, or 4 may be selected from Groups A, B, C, or D, or this or any other endorsed Training Package or Accredited Course
  Selected units must be relevant to job outcomes in the feedlot industry and must be chosen to ensure the integrity of the qualification outcome at AQF level 3

NOTE: Units marked with an asterisk (*) require completion of prerequisite Unit/s which is identified under the Unit.

Qualification Description

This qualification relates to those individuals who work either independently or in teams to establish and maintain permaculture systems for private clients, organisations or community entities. They perform tasks involving a broad range of skilled applications in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, elements in a design or contingency measures.

The qualification is suited to learners who wish to work at the skilled tradesman level within permaculture projects and enterprises, and may involve supervision of others and working with people of diverse backgrounds and abilities.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the agriculture industry. It is designed to meet the needs of supervisors or team leaders in the agriculture industry.

Individuals with this qualification will take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems. Job roles vary across different industry sectors and include:

- Farm team leader
- Farm supervisor.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 4 units must be selected from Group A electives listed below
- 5 units must be selected from either the remaining Group A electives or from the Group B electives, or from the Prerequisite Requirements list if a unit is required for packaging the qualification
- up to 2 units may be selected from the remaining electives listed below, or from the Prerequisite Requirements list if a unit is required for packaging the qualification
- up to 2 units may be selected from any currently endorsed Training Package or Accredited Course packaged in qualifications at AQF levels 3, 4 or 5.

### Core Units

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the production horticulture industry. It is designed to meet the needs of supervisors or team leaders in the production horticulture industry.

The qualification enables individuals to select a tree cropping, vegetable, berry or flower production, grape growing or mushroom production context as a job focus, or a mixture in the case of mixed enterprises.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select 3 units from Group A
- Select 5 units from Group A or B
- 3 units may be selected from Group B or from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become a senior or head gardener. The parks and gardens industry expect this qualification to be achieved to meet job outcomes at this level.

No occupational licensing, legislative or certification requirements known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 7 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 4 units from the list below
- 3 units may be selected from the list below or this or any other endorsed Training Package or Accredited Course.
Selected units must be relevant to job outcomes in parks and gardens and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the production nursery industry. The nursery industry expects this qualification to be achieved to meet job outcomes at this level.

Job roles and titles covered by this qualification may include:

- production nursery supervisor

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 7 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 4 units from list below
• 3 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in nursery production and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the turf industry. The sports turf industry expects this qualification to be achieved to meet job outcomes at this level.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 4 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 6 units from the list below
2 units may be selected from the elective units below or from units packaged at Certificates III, IV or Diploma level from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in sports turf management and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the conservation and land management industry.

This qualification enables a selection of units from indigenous land management, natural area restoration, conservation earthworks or lands, parks and wildlife to create a general qualification as a job focus.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core unit plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- up to 11 units may be selected from the electives listed in this qualification, or from the Prerequisite Requirements list if a unit is required for packaging the qualification.
- up to 4 units, aligned to Certificate III, IV or Diploma qualifications, may be selected from this or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification allows individuals to develop agribusiness skills and knowledge within the agriculture and production horticulture industry. They may undertake a range of complex and non-routine tasks related to the administration of an agribusiness. The range of technical skills and knowledge is proficient and leadership of others would be expected.

This qualification is suitable for an Australian Apprenticeship.

Job roles vary across different industry sectors and include:
- Agribusiness administrator

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
- 12 units of competency:
  - 1 core units plus
  - 11 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select at least 9 units from the elective list
- 2 units aligned to AQF levels 3, 4, or 5 may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course

Selected units must be relevant to job outcomes in rural business and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

**Core Units**

**Work health and safety**

| AHCWHS401 | Maintain work health and safety processes |

**Elective Units**

**Agribusiness**

| AHCAGB301 | Keep production records for a primary production business |

Qualification Description

This qualification reflects the technical and supervisory skills and knowledge required to operate as supervisors and specialists within the irrigation industry. It applies to irrigation installation site managers and managers of irrigation systems in the irrigation servicing, horticulture and agriculture industries.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication. However, an individual unit of competency may specify relevant licensing, legislative or regulatory requirements. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Total number of units = 12
- Core Units = 1
- Elective Units = 11

Core Units

<table>
<thead>
<tr>
<th>Unit Code</th>

Qualification Description

This qualification allows individuals to develop higher level skills and knowledge in the seed production industry. It is designed to meet the needs of supervisors or team leaders in the seed production industry.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 5 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 5 units from list below
- 2 units may be selected from this or any other endorsed Training Package or Accredited Course.
Selected units must be relevant to job outcomes in seed production and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification reflects the roles of senior seed analysts who perform a range of advanced tests on seed in seed laboratories and may supervise the work of seed analysts.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

Entrants into the Certificate IV in Seed Testing must hold the following units of competency or their equivalent:

- AHCSDT301 Prepare a working sample
- AHCSDT302 Identify seeds
- AHCSDT304 Perform a seed purity analysis
- AHCSDT305 Perform a seed moisture test
- AHCSDT306 Perform a seed germination test
- AHCSDT307 Perform a 'Determination of Other Seeds by Number' test
- AHCWHS301 Contribute to work health and safety processes
- AHCWRK306 Comply with industry quality assurance requirements
- AHCWRK309 Apply environmentally sustainable work practices

Packaging Rules

Qualification Description

This qualification allows individuals to develop skills and knowledge within the organic farming and general agriculture industry. It is designed to meet the needs of supervisors or team leaders working in the organic agriculture industry.

This qualification is suitable for people currently working or who wish to find employment on an organic farming enterprise.

Job roles and titles will vary. Possible job titles relevant to this Qualification include:

- Organic farm team leader
- Organic farm supervisor
- Organic farmer.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
  - 11 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 4 units from Group A
- select 5 units from Group A or Group B
- 2 units aligned to AQF levels 3, 4, or 5 may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in agriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

<td>This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This qualification provides occupation outcomes for supervisors and senior field officers in the pest management sector. The qualification covers those who work in weed management as well as vertebrate pest management in a range of settings including conservation, land management, agriculture, horticulture and parks and gardens.

Supervisors and senior field officers may undertake the following job functions:

- preparing and carrying out pest management programs
- participating in strategic invasive species management practices
- completing and assessing pest management programs.

Some job functions covered by this qualification may require occupational licencing or certification. Specific determination should be sought through the relevant State or Territory agency.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 4 core units plus
  - 8 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 3 units from Group A
- select 3 units from Group A or Group B
- A maximum of 2 units may be selected from the elective lists of Certificate III or above of this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in pest management and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification provides occupation outcomes with a range of specialised knowledge and skills to undertake skilled work and as a pathway for further learning required for supervising arborists in the arboriculture industry.

This qualification is suitable for an Australian Apprenticeship.

Occupational licensing, legislative or certification requirements may apply to this qualification in some jurisdictions. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 10 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select at least 3 units from the elective list
- an additional 2 units may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in Arboriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the landscape industry. It is designed to meet the needs of supervisors or team leaders.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 8 units listed from the either Group A or Group B below
- 3 units may be selected from either Group A or Group B or from this or any other endorsed Training Package or Accredited Course.
Selected units must be relevant to job outcomes in the landscape industry and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification relates to individuals who work as project supervisors and designers for private clients or organisations. They require high level permaculture design skills, and knowledge in a broad range of areas in keeping with permaculture’s multi-disciplinary nature. They may be involved in supervising individuals and teams of people on urban and rural work sites and in community projects.

The qualification is suited to learners who wish to work at the supervisory level within permaculture design projects, and may involve the supervision of others and working with people of diverse backgrounds and abilities.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Qualification Description

This qualification reflects the role of personnel working on farms and stations who manage enterprise production units and employees and sole operators of agribusinesses who provide crop production advice and services to production enterprises.

Industry expects individuals with this qualification will take personal responsibility and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities.

Job roles vary across different industry sectors. Possible job titles relevant to this qualification include:

- Farm production manager
- Production unit manager
- Agronomist
- Station/property manager.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 5 units from Group A
- select 3 units from Group A or Group B
- 2 units aligned to AQF level 4 or above may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in agriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification provides an occupational outcome for personnel working on piggeries who manage enterprise production units. The pork industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a piggery manager.

Possible job roles relevant to this qualification include:

- Production unit manager

The pork industry expects that graduates from this qualification will be able to perform tasks involving the analysis and synthesis of information, design and communication of solutions to complex problems, organise the work of self and others, and take broad responsibility for the quality of the work of others (teams).

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Qualification Description

The Diploma of Production Horticulture reflects the role of personnel working on production horticulture farms.

The qualification can be contextualised for a tree cropping, vegetable, berry or flower production or mushroom production context as a job focus or, in the case of mixed enterprises, both.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Total number of units = 10

- Core Units = 0
- Elective Units = 10

Elective Units

- Select 3 units from Group A
- Select 5 units from Group A or B
- 2 units aligned to AQF level 4 or above may be selected from this or any other endorsed Training Package or Accredited Course

Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5

</tbody>
</table>

Qualification Description

The Diploma of Horticulture reflects the role of those who manage amenity horticultural enterprises where a range of skills and knowledge across the breadth of the industry is required or personnel working in horticulture at a level requiring higher technical skills.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- Total number of units = 10
  - Core Units = 0
  - Elective Units = 10

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 8 units must be selected from the electives listed below
- 2 units may be selected from the remaining elective units listed below
- 2 units, packaged in qualifications aligned to AQF level 4 or above, may be selected from this or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification provides occupation outcomes with integrated knowledge and skills for skilled or paraprofessional work and as a pathway for further learning required for consulting arborists in the arboriculture industry.

Occupational licensing, legislative or certification requirements may apply to this qualification in some jurisdictions. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

Total number of units = 10
- Core Units = 7
- Elective Units = 3

Core Units

NOTE: Units marked with an asterisk (*) require completion of prerequisite Unit/s which is identified under the Unit.

Qualification Description

This is a specialist qualification for landscape designers.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 4 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 5 units from the electives listed below
- 3 units, aligned to AQF qualifications at level 4 or above, may be selected from this or any other endorsed Training Package or Accredited Course.

Qualification Description

The Diploma of Conservation and Land Management reflects the role of personnel working in management positions with technical level skills in conservation and land management roles.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 units from Group A
- at least 4 units from the remaining units listed in Group A or from Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification.
• up to 2 units, packaged in qualifications aligned to AQF level 4 or above, may be selected from this or any other currently endorsed Training Package or Accredited Course.

Elective Units
An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Qualification Description

This qualification reflects the role of personnel working in community coordination and facilitation, which focuses on fostering, promoting and supporting community development, particularly in rural communities that are engaged in land management activities.

Job roles and titles vary across different industry sectors. Possible job titles relevant to this qualification include:

- Volunteer
- Project manager
- Community group leader/coordinator
- Regional coordinator

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select a minimum of 4 units from Group A
- Select a minimum of 4 units from Group A or Group B
- A maximum of 2 units may be selected from the elective list of any Certificate IV or above of this or any other endorsed Training Package or Accredited Course
  Selected units must be relevant to job outcomes in community coordination and facilitation and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification provides occupation outcomes for senior officers and managers in the pest management sector. These roles include functions such as planning, coordinating, managing and completing small to large scale pest management programs and may include participating in emergency operations such as disease outbreak or natural disasters.

The qualification is applicable to individuals who work in weed management as well as vertebrate pest management in a range of contexts, including conservation, land management, agriculture, horticulture, and parks and gardens.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select at least 5 Units from Group A
- Select at least 3 Units from Group A or Group B
- A maximum of 2 units may be selected from the elective list of a Certificate IV or above of this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in Conservation and Land Management and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

**Elective Units**

**Group A**

**Natural area restoration**

| AHCNAR502 | Conduct biological surveys |

**Natural resource management**

| AHCNRM602 | Develop a monitoring, evaluation and reporting program |
| AHCNRM603 | Implement a monitoring, evaluation and reporting program |

**Pest management**

| AHCPMG506 | Manage the implementation of legislation |
| AHCPMG507 | Develop a regional pest management plan |
| AHCPMG508 | Develop a system to monitor and evaluate the pest management plan |
| AHCPMG509 | Investigate a pest control failure |
| AHCPMG510 | Develop a pest survey strategy |

**Work health and safety**

| AHCWHS501 | Manage work health and safety processes |

**Group B**

Qualification Description

This qualification is designed to meet the needs of managers in the viticulture industry.

There are no formal entry requirements for this qualification. However, the qualification assumes that a learner has current or past work experience where operational or technical skills have already been gained and a production management level of responsibility exists.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 4 core units plus
  - 6 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 4 units must be selected from the electives listed below
- 2 units may be selected from this or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification reflects the role of personnel working within an organic farming enterprise who manage enterprise production units, manage the certification and continued compliance with organic standards and develop and maintain organic produce supply chains. It is designed to meet the needs of owners and managers of organic farming enterprises.

This qualification is suitable for people currently working or who wish to find employment on an organic farming enterprise or who own an organic farming enterprise.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 2 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- select 2 units from Group A
- select 5 units from Group A or Group B
- 1 unit aligned to AQF level 4 or above may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in agriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification provides occupation outcomes for individuals to work in a leadership capacity for organisations, groups or enterprises. They require a whole system approach to planning, designing, managing and implementing integrated permaculture projects and programs, permaculture community programs, and the operation of permaculture enterprises.

The qualification is suited to learners who wish to work within organisations and enterprises where skills in strategic planning and project management, natural system and land use planning, and specialist permaculture design are required. Work is likely to involve working with teams of people at the strategic level as well as working with people of diverse backgrounds and abilities.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification reflects the roles of individuals working in a range of agribusinesses. The units covered in this qualification are uniquely contextualised for the agribusiness sector and reflect the need for agribusiness specific management expertise in planning and analysis, financial and human resource management together with an emphasis on sustainability.

This qualification is also suited to the needs of individuals who possess significant theoretical agribusiness skills and knowledge that they would like to further develop in order to create further educational or employment opportunities.

Job roles and titles vary across different industry sectors. Possible job titles relevant to this qualification include:

- Rural and regional agribusiness manager (including lending managers, insurance brokers, machinery dealers, chemical resellers, stock agents, grain marketers, real estate agents)
- Agriculture enterprise business manager
- Production horticulture enterprise business manager

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification reflects the roles of individuals working in regional and senior management roles in conservation and land management.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 8 units of competency:
  - 0 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 6 units from the elective list
- 2 units may be selected from the elective list of this or any other endorsed Training Package or Accredited Course.

Elective Units
**Biosecurity**

| AHCBER601 | Plan and oversee an emergency disease or plant pest control program |

**Business**

| AHCBUS605 | Manage human resources |
| AHCBUS608 | Manage risk |
| AHCNRM601 | Review land management plans and strategies |
| AHCNRM602 | Develop a monitoring, evaluation and reporting program |
| AHCNRM603 | Implement a monitoring, evaluation and reporting program |
| BSBFIM501 | Manage budgets and financial plans |
| BSBMGT617 | Develop and implement a business plan |
| PUFFPCY010 | Manage policy implementation |
| PUAFIR504B | Assist with the formulation and implementation of plans and policies |
| PUAFIR601B | Develop and administer agency policy, procedures and practices |

**Community coordination and facilitation**

| AHCCCF601 | Coordinate the development of regional plans |

**Indigenous land management**

| AHCLM601 | Manage cultural processes in an Indigenous organisation |

**Lands, parks and wildlife**

| AHCLPW601 | Coordinate the preparation of a regional resource management plan |

Qualification Description

This qualification provides occupation outcomes with broad knowledge and skills for paraprofessional/highly skilled work and further learning required for consulting arborists in the arboriculture industry.

Possible job roles relevant to this qualification include:

- Consulting Arborist
- Senior Consulting Arborist
- Senior Arborist

Occupational licensing, legislative or certification requirements may apply to this qualification in some jurisdictions. Specific determination should be sought through the relevant State or Territory.

Entry Requirements

AHC50516 Diploma of Arboriculture.

Packaging Rules

Total number of units = 10

- Core Units = 7
- Elective Units = 3

Core Units

NOTE: Units marked with an asterisk (*) require completion of prerequisite Unit/s which is identified under the Unit.

<table>

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to identify, safely catch, control and handle calm, consistent and obedient horses educated for the relevant activity. It covers knowledge of potential risks working with and around horses and following industry guidelines and procedures to ensure the welfare and safety of the individual, other workers and the horse.

The unit applies to individuals who have no experience, limited experience or no recent experience working in the relevant horse industry sector. They undertake defined routine activities under supervision and have limited responsibility for their own work. Working environments may include stables, paddocks, yards, tracks, exercise arenas and public areas.

No licensing or certification requirements apply to this unit at the time of publication, except for the racing industry, where requirements vary between states and territories. Users working in the racing industry are advised to contact the relevant Principal Racing Authority for advice on current requirements.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- ACMEQU205 Apply knowledge of horse behaviour.

Unit Sector

Equine (EQU)
### Elements and Performance Criteria

<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual safely handled at least three different calm, consistent and obedient horses educated for the activity being performed including:

- carrying out a basic risk assessment prior to each activity, including observing and identifying horse body language
- communicating clearly with supervisor, including raising safety risks or concerns
- approaching, catching, controlling, leading, standing and tying up horses safely in at least one public space and one confined space, under supervision, including:
  - following work health and safety (WHS) procedures in the context of own work
  - applying safe horse handling techniques according to animal welfare requirements
  - fitting and correctly using horse handling gear and personal protective equipment (PPE)
- loading and unloading horses to a horse transport vehicle under supervision in a calm and humane manner.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common features of a horse, including points, colour, markings, gender, and common breeds
- basic characteristics of common horse behaviour and social traits
- features of horse body language
- communication protocols with supervisor, and procedures within the work environment
- potential hazards and risks when dealing with horses in open and confined spaces
- common types of injuries sustained by horses, handlers and others during handling activities
- safe horse handling zones
• purpose and use of PPE and gear for handling horses
• features of defective equipment and the implications to safety
• quick release knots and methods of securing horses
• types of horse transport and common loading configurations
• difficult situations that may occur when loading and unloading horses and procedures for dealing with difficulties.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions, including open and confined spaces in suitable environments
• resources, equipment and materials:
  • various calm, consistent and obedient horses educated for the activity and assessed as suitable for the experience and skill of the individual
  • appropriate tack for individual, horse and activity
  • horse transport vehicle
  • PPE that is appropriate for activity and correctly fitted for individual
  • other people and horses in the vicinity of the assessment activity
• specifications:
  • work instructions
• relationships with others:
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to develop basic knowledge of horse behaviour, read horse body language and minimise risk to self and others when interacting with horses.

The unit applies to individuals who are new or inexperienced in handling, working with and/or riding horses. Individuals at this level work under supervision.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. As requirements vary between industry sectors and state/territory jurisdictions, users must check with the relevant authority for specific requirements.

NOTE: The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has:

- observed and interpreted horse behaviour and body language of at least three different horses on separate occasions
- identified hazards and determined how to minimise risk to self and others when interacting with horses in at least three different workplace areas, environments or scenarios.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- features of horse instinct and behaviour, including:
  - social organisation, need for space and companions
  - attachment, separation anxiety
  - flight and fear responses, arousal
- features of horse senses, including vision, touch, smell, hearing and vocalisation
- how to read horse body language, including posture and body position, facial features, ears, legs and tail
- how to read horse body language to identify:
  - flight response
  - threatened or defensive behaviour
  - stress, agitation or unsettled behaviour
- situations where horse behaviour may cause harm to handlers or other horses, including:
  - approaching from a horse’s blind spot
  - around other horses
• leading through gateways or restricted spaces
• safe handling zones when interacting with horses
• basic features of how horses learn:
  • cues
  • repetition and reward
  • exposure to new situations and activities
• basic handling and riding cues that assist in the control of horses
• types of rewards used for horses, including pressure release, food, scratch and rub, and rest
• potential hazards and risks associated with interacting with horses
• strategies to minimise and control common risks associated with interacting with horses.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a safe workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • opportunities to observe and interpret live horses displaying different behavioural states and body language in different environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to control a horse under saddle that is suitably educated for a beginner rider. It focuses on walking, trotting and cantering calm, obedient and consistent horses that are suitable for the level of rider experience, during controlled, supervised horse riding activities.

It covers knowledge of potential risks when working with and around horses, and the application of industry guidelines and procedures to ensure the welfare and safety of the individual, other participants and horses.

The unit applies to individuals who have limited or no horse riding experience, and who are developing skills needed to ride horses for work tasks. They undertake defined routine activities under supervision with limited responsibility for their own work. Working environments may include exercise yards and fenced horse riding areas or arenas.

No licensing, legislative or certification requirements apply to this unit at the time of publication, except for the racing industry, where licensing or registration varies between states and territories. Users working in the racing industry are advised to contact the relevant Principal Racing Authority for advice on current requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

The prerequisite units of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

| **1. Prepare for horse riding activity** | 1.1 Discuss current skill level, riding skill development goals and horse suitability with riding instructor  
1.2 Identify potential hazards and risks associated with the specific location, environment and horse riding activity, and apply control measures as directed  
1.3 Select and correctly fit personal protective equipment (PPE) required for preparing and riding the horse according to WHS requirements  
1.4 Catch, groom and tack-up assigned horse as directed using tack appropriate for rider, horse and discipline  
1.5 Present horse to instructor appropriately tacked up for riding for gear check prior to mounting |
| **2. Demonstrate controlled riding skills** | 2.1 Mount horse in a safe and balanced manner as instructed  
2.2 Ride horse through gaits in a balanced and controlled manner  
2.3 Use recognised aids including legs, weight, hands and voice to control movement, speed and direction of horse at halt, walk, trot and canter  
2.4 Cue horse through a range of movements and direction, maintaining control of horse  
2.5 Control horse under saddle among other horse and rider combinations, maintaining safe group riding practices while performing a variety of required movements  
2.6 Negotiate potential hazards appropriately to minimise risks  
2.7 Dismount safely and lead horse in a controlled manner |
Elements | Performance Criteria
---|---
Elements describe the essential outcomes. | Performance criteria describe the performance needed to demonstrate achievement of the element.

3. Complete and report post-riding activities | 3.1 Perform post-riding cool down of horse as directed
3.1 Remove tack safely and check condition
3.3 Report to riding instructor on condition of gear and horse post-exercise
3.4 Discuss with riding instructor, using objective and positive language, personal performance and goals for future riding skill development

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual performed horse riding skills at walk, trot and canter, on at least two different horses assessed as suitable for rider skills and experience. The individual must have ridden each horse on at least three different occasions, with and without other horses and riders in the immediate vicinity, during which the individual has:

- discussed with instructor current skill level and suitability of chosen horse prior to riding
- used and correctly fitted personal protective equipment (PPE)
- fitted gear and equipment for nominated horses, including:
  - saddle
  - saddle cloth
  - bridle
  - accessory gear
- mounted horse using a stirrup mount, mounting block, leg-up assisted mount
- controlled horse under saddle at all times in the following tasks:
  - demonstrating an effective riding position at walk, trot (or jog) and canter (or lope) according to chosen discipline
  - using hand, seat and leg aids according to discipline
  - using transitions or increasing and decreasing speed within a gait according to chosen discipline
  - following arena figures of circles, straight and diagonal lines and changes of direction
  - cantering for a continuous distance of a minimum of 200 metres
- dismounted using a stirrup dismount and a vault dismount
- dealt with risks associated with riding horses around others
- accepted and applied feedback from riding instructor
- reported progress and discussed future personal riding skills needs with riding instructor.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic process for assessing horse suitability and matching to own skills
- purpose and use of different items of gear, including accessory tack and equipment and personal protective equipment (PPE)
- purpose of appropriate aids to communicate with a horse
- safe group riding techniques
- safe horse handling techniques
- key animal welfare principles and practices for handling horses
- basic work health and safety (WHS) risk assessment and control principles relating to interacting with horses, riding in an arena and with others
- how to address common undesirable horse behaviours including:
  - travelling too fast
  - reefing and pulling
  - jogging sideways
  - running backwards
- risk factors that influence riding horse behaviour, including:
  - other horses
  - vehicles, fences and equipment
  - other people or animals
  - wind, noise and environmental hazards
  - riding with others
- factors that influence horse ability to respond to rider position and application of the natural and artificial aids.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - confined arena in a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - various calm, consistent and obedient horses assessed as suitable for the experience and skill of the individual
  - other riders
  - appropriate tack for walk, trot and canter riding activities suitable for horse, rider and discipline
  - correctly fitted PPE for the individual, including riding boots, safety vest and Australian standard or equivalent compliant helmet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

The following specific assessor requirements apply to this unit. The assessor must:

- hold a current, recognised qualification for instructing or coaching horse riding and handling skills (refer to User Guide for details), and
- have three years of experience organising groups and responding to different types of riders and horses in order to prevent incidents that could lead to injury of rider or horse.

Application

This unit of competency describes the skills and knowledge required to follow animal health management practices to monitor animal health via daily observations of behaviour and condition.

This unit is applicable to those working in animal care industry sectors where it may be necessary to care for a range of animal species and to monitor the wellbeing of healthy, ill or injured animals by observing and measuring indicators of ideal and poor development or response to treatments. These animals may be being kept long-term in the workplace or being raised or prepared for sale, rehousing or release to their native habitat.

This unit applies to individuals who work under broad supervision and provide and communicate solutions to a range of predictable problems.

Regulatory requirements apply to this unit but vary according to state/territory jurisdictions. Users are advised to check with the relevant regulatory authority.

| 1. Follow animal health management practices | 1.1 Maintain personal health and hygiene standards  
1.2 Identify animal diseases and their impact on animals and humans  
1.3 Identify broad categories of parasitic infestations  
1.4 Prepare and maintain quarantine areas in accordance with quarantine protocols  
1.5 Identify and isolate animals requiring quarantine  
1.6 Maintain quarantine records  
1.7 Use and maintain personal protective equipment |
| 2. Monitor and maintain the physical wellbeing of animals | 2.1 Identify and examine different types of animals' anatomy and physiology to determine physical appearance and particular body structures, and record observations  
2.2 Monitor and test indicators of animal health regularly, and follow quarantine requirements involving movement of animals within or between facilities  
2.3 Assess the physical environment of animals for evidence of problems that may affect the physical wellbeing and welfare of animals  
2.4 Maintain records of animal activity monitoring, and health information |
| 3. Identify and report signs of ill health or injury in animals | 3.1 Recognise signs of illness or injury and report to supervisor  
3.2 Recognise abnormal animal behaviour and conditions and report to supervisor  
3.3 Collect samples and record as directed  
3.4 Separate sick or injured animals from other animals, as required, and care for as advised by supervisor or veterinarian  
3.5 Handle animals that are ill or injured appropriately |
| 4. Administer and record animal treatments | 4.1 Administer authorised animal treatments under supervision, and record dosages  
4.2 Monitor, administer and record routine preventative health treatments regularly  
4.3 Store treatments appropriately according to workplace procedures  
4.4 Complete records relating to the nature of treatment, and animal health status before and after treatment |
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained and monitored the health and wellbeing of a minimum of three different animals and, on each occasion, the individual must have:

- applied work practices for personal safety and personal hygiene standards
- monitored and tested indicators of animal health
- assessed the physical environment of animals for evidence of problems that may have affected the physical wellbeing and welfare of animals
- maintained records of quarantine, observations, monitoring activities and samples
- administered treatments under supervision.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- anatomical and physiological structures and functions related to animal health and wellbeing
- anatomical and physiological terminology and glossary of terms
- broad categories of parasitic infestations
- common infectious diseases, including:
  - bacteria
  - fungi
  - internal and external parasites
  - virus
  - zoonoses
- common non-infectious diseases, including:
  - allergies
- chemical toxicities
- genetic
- metabolic
- neoplastic
- nutritional
- indicators of animal health
- observing and reporting unusual behaviour for nominated animal:
  - aggression or docility (depending on animal)
  - disinterest in surroundings, other animals, people or usual stimuli
  - excessive licking, scratching and rubbing
  - lethargy
  - nest building
  - self-mutilation
  - trembling
  - vocalising
- observing and reporting indicators of illness or injury:
  - bleeding
  - changes in drinking or eating patterns
  - lameness or reluctance to move and vocalising when attempting to move
  - swelling
  - unusual amounts, colour or texture of faeces
- indicators of poor response to treatment or management of young, ill, injured or compromised animals
- indicators of recovery from illness or injury
- quarantine protocols
- safe work practices
- the methods used to measure, interpret and record animals' weight and other objective measures of animal health
- the principles of animal welfare and ethics.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - a range of animals
  - equipment and resources typically available in an animal care environment
- specifications:
  - access to organisational policies and procedures, current legislation and relevant codes of practice
• relationships (internal and/or external):
  • interactions with supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to calculate rations based on animal species needs and availability of foodstuffs.

The unit applies to individuals working under supervision in the animal care industry where it may be necessary to plan nutritional requirements for animals, including but not restricted to companion animals in pet shops, boarding kennels and catteries, dog and cat breeding establishments, research technology animals, native and exotic animals in zoos, wildlife parks and animal rescue and rehabilitation facilities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned for and provided a diet that provided the appropriate nutritional requirements for a minimum of three different animals, covering two species, including:

- developing diets for animals in consultation with others
- preparing, storing and distributing food according to animal needs, workplace protocols and procedures, whilst maintaining quality control and hygiene practices
- monitoring response to feeding program and modifying diets as required in consultation with supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- animal classifications that influence dietary needs and styles of eating
- behavioural features related to feeding styles and unsuitable responses to diets
- methods used to monitor nutritional uptake:
  - blood and faecal tests to check nutritional uptake
  - comparing food distributed and food not eaten
  - estimating condition scores
  - weighing animals
- principles of contamination and cross-contamination
- feedstuffs available and approved in Australia for animals, their availability, cost, shelf life, method of storage, preparation and presentation to animals
- feeding methods of different animals
- appropriate containers for food for different animals
• common nutrition-related health problems
• protein, carbohydrate, vitamin and mineral supplement and fibre needs for a range of animal groups
• sources of nutrients for particular animal classes and groups
• the potential causes of poor response to diets
• safe and humane animal handling techniques.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • an environment that accurately reflects a real workplace setting
• resources, equipment and materials:
  • a range of animals
  • equipment and resources appropriate to work undertaken in an animal care environment
• specifications:
  • access to organisational policies and procedures
• relationships (internal and/or external):
  • interactions with supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to rescue and restrain animals, and to provide basic first aid.

The unit applies to individuals working as animal keepers and carers, where it may be necessary to identify where assistance is required in the rescue of animals and the management of animal stress and injuries. These individuals work under broad supervision and use discretion and judgement in the selection and use of available resources. Work routines must meet industry standards and compliance requirements for ethical handling and welfare of animals, work health and safety, and biosecurity appropriate to the work role.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual, on two different animals, has:

- planned and rescued according to WHS requirements
- applied basic first aid and care
- gathered information and accurately recorded and maintained records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the animal emergency network, including animal welfare bodies and support facilities
- animal first aid techniques
- examination techniques for health status
- first aid casualty management principles
- methods used to capture, restrain and examine animals, including equipment commonly used
- methods used to identify animals
- personal protective clothing and equipment and when and how it should be used
- safe animal handling techniques and procedures
- organisation policies and procedures, including WHS and emergency procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
Assessment Requirements for ACMGAS305 Rescue animals and apply basic first aid

- a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live or simulated animals for capture
  - PPE for handling animals
  - first aid equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to carry out routine checks on horses, provide treatments under direction and assist with veterinary procedures when required.

The unit applies to workers who carry out work under routine supervision within organisation guidelines, while exercising limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

<table>
<thead>
<tr>

### 1. Carry out routine horse checks
1.1 Identify and minimise risks relating to safe handling of horses in open and confined spaces
1.2 Observe signs of good health and condition in horses
1.3 Check horses for signs of lameness or soreness
1.4 Check horses for signs of heat or swelling in legs
1.5 Check horses for signs of distress
1.6 Report all abnormalities according to organisational guidelines

### 2. Carry out horse treatments
2.1 Check safety controls or required support and assistance are in place prior to treating horses
2.2 Ensure all horse restraints are suitable for the task
2.3 Provide routine medications and treatments, and record in workplace forms according to instructions
2.4 Clean hooves and examine shoes for wear and damage
2.5 Report faulty, broken or loose shoes

### 3. Support veterinary procedures
3.1 Report life-threatening ailments promptly to supervisor
3.2 Carry out basic emergency or first aid procedures
3.3 Report serious cuts and abrasions
3.4 Provide assistance during veterinary treatment
3.5 Treat cuts, abrasions and bruises
3.6 Report and record treatments and procedures
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has checked and treated at least two horses. Each horse must be checked on three separate occasions and include:

- identifying and minimising risks while handling each horse
- performing duties around each horse in a firm but calm, gentle and unhurried manner
- monitoring basic horse health and observing and identifying signs of:
  - ill health, injury or lameness
  - abnormal or depressed appetite
  - non-routine behaviour
- cleaning hooves and examining each horse for loose or broken shoes
- reporting signs of illness or injury
- controlling, leading and handling each horse in an open and a confined space.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic horse husbandry techniques
- animal welfare requirements, including ethical and humane treatment
- key horse breeds and characteristics
- indicators and signs of:
  - lameness or soreness
  - heat or swelling in legs
  - distress in horses
- detecting signs of illness
- recordkeeping systems
- hazard identification and actions to minimise risks working with horses in open and confined areas
- safe horse handling techniques.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - various live horses assessed as suitable for the experience and skill of the individual
  - materials and equipment for checking and treating horses
  - appropriate tack for horse and activity
  - personal protective equipment (PPE) correctly fitted and appropriate for checking and treating horses
  - workplace recording forms

- **specifications:**
  - work instruction and organisation guidelines for checking and treating horses.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit of competency describes the skills and knowledge required to provide daily care for horses.

The unit applies to individuals who carry out work under routine supervision within organisation guidelines and with limited autonomy for their own work. They undertake defined activities and work in a structured context within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- ACMEQU205 Apply knowledge of horse behaviour.

Unit Sector

Horse Breeding (HBR)

Elements and Performance Criteria

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out daily care for at least two calm, consistent and obedient horses. Prior to carrying out tasks with horses there must be evidence that the individual has:

- checked and confirmed safety requirements, stable routines and instructions
- identified and reported safety concerns
- acquired required tools, equipment and personal protective equipment (PPE)

There must be evidence that the individual has carried out the following tasks for each horse:

- handling horses safely and ethically
- cleaning and caring for saddlery and equipment
- completing basic hoof care procedures
- grooming and rugging horses
- measuring quantities required for feed
- exercising horses according to instructions
- monitoring horse health and welfare
- reporting signs of illness or injury.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of horse behaviour and psychology
- indicators of horse health
- common feed stuffs
- care and maintenance of hooves and the lower limbs
Assessment Requirements for ACMHBR203 Provide daily care for horses

Date this document was generated: 18 March 2019

- organisational procedures for care of horses:
  - cleaning of stables, yards and gear
  - safe work practices, including safe handling of horses
  - types and purpose of personal protective equipment (PPE).

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions

- resources, equipment or materials:
  - a range of calm, consistent and obedient horses assessed as suitable for the experience and skill of the individual
  - appropriate tack for horses and activity
  - personal protective equipment (PPE) correctly fitted and applicable for task for handler
  - materials and equipment for providing daily care of horses
  - workplace recording or reporting forms

- specifications:
  - work instruction and stable routine or program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to maintain horse hooves in premium condition.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

<table>
<thead>
<tr>

1. Prepare to perform hoof care on horses

1.1 Interpret work instructions and confirm with management
1.2 Identify organisational requirements for the care and handling of horses according to animal health and welfare, and work health and safety (WHS) requirements
1.3 Hold discussions with other workers to ensure smooth operation of the process
1.4 Identify work health and safety (WHS) hazards while handling horses, assess risks and implement suitable controls
1.5 Select, check and maintain work tools and equipment

2. Provide hoof care to horse

2.1 Select basic farriery tools and personal protective equipment (PPE) appropriate for task
2.2 Lift horse feet, check health and condition, and pick and clean hooves according to set leg routines
2.3 Hold leg and present hoof
2.4 Provide basic hoof care, including administration of hoof treatment medications

3. Complete maintenance and administration

3.1 Clean equipment according to organisational procedures
3.2 Clean and store attachments and other equipment
3.3 Dispose of all containers, leftover fluids, waste and debris safely, according to environmental and organisational requirements
3.4 Record and document hoof care procedures for horses

Foundation Skills
This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.
### Skill Description

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out basic hoof procedures on at least two compliant and manageable horses, including:

- identifying hazards, assessing risks and implementing suitable controls related to hoof procedures
- checking horse body language and behaviour prior to handling each horse, as part of risk assessment
- handling and restraining each horse safely for hoof procedures working around them in a firm, calm and unhurried manner
- using and maintaining farriery tools and personal protective equipment (PPE) to perform basic hoof care
- providing basic hoof care for each horse, including administration of hoof treatment medications
- completing maintenance and administrative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and purpose of items of farriery equipment
- hoof care procedures
- hoof injuries
- hygiene practices and awareness
- structure of the hoof and associated problems
- common horse behaviour and reactions to hoof care
- safe work practices:
• safe horse handling techniques
• hazard and risk identification and minimisation
• key requirements of work health and safety legislation
• types and purpose of personal protective equipment (PPE).

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • various compliant and manageable horses requiring basic foot care, assessed as suitable for the experience and skill of the individual
  • appropriate tack for horse and activity
  • farrier equipment and materials
  • personal protective equipment (PPE) correctly fitted and applicable to tasks for individual
  • workplace recording and reporting forms or systems
• specifications:
  • work instructions or program for carrying out basic hoof procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to carry out mare mating procedures using stallions for natural service to maximise conception rates and live foal outcomes. It includes identifying mares in oestrus, attending mares for service, providing support for reproductive services and keeping accurate records.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts within horse breeding environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out mating procedures for at least three mares, including at least one with a foal at foot, including:

- using industry accepted oestrus detection methods, including teasing
- handling mare for serving using safe horse handling techniques
- preparing mare for serving, cleaning and bandaging according to stud practice
- loading mare in crush and securing or controlling foal according to stud practice
- applying restraints appropriate for procedure to mare
- providing support to veterinarian or stallion manager
- keeping and maintaining accurate records of mating and breeding activities for individual horses.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices relevant to mare mating procedures:
  - relevant horse breeding terminology
  - relevant anatomy and physiology of male and female reproductive systems in horses, including conception and gestation
  - key regulatory requirements relating to animal welfare
- safe work practices:
  - safe horse handling techniques
  - hazard and risk identification and minimisation
  - personal protective equipment (PPE)
  - biosecurity and hygiene practices relevant to mating procedures
Assessment Requirements for ACMHBR303 Carry out natural mare mating procedures

Date this document was generated: 18 March 2019

- procedures for preparation for mating
- requirements of veterinarians in carrying out follicle and pregnancy testing
- mare handling procedures
- mare identification methods, including mare status and stallion booking
- types and purpose of different handling restraints for mares
- common infertility in mares and what may be treated by veterinarians
- oestrus cycle in mares and dioestrous behaviour and its detection
- workplace recording and reporting procedures, including stud recordkeeping requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace with teasing yards, stud veterinary facilities, breeding area or barn and foal restraint areas
- resources, equipment and materials:
  - various classes of mares to be mated, assessed as suitable for the experience and skill of the individual
  - at least one working stallion and teaser
  - tack, equipment and restraints required for teasing, mating and veterinary testing for follicle and pregnancy testing, and uterine infection treatment
  - personal protective equipment (PPE) correctly fitted and applicable to activity for the individual
- specifications:
  - workplace recording and reporting forms or systems
  - work instructions or program for carrying out mating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to assist with mare artificial insemination (AI) procedures to maximise conception rates and live foal outcomes. It includes identifying mares in oestrus, attending mares for service, providing support for reproductive services and keeping accurate records.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts within horse breeding environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out artificial insemination (AI) procedures with at least three mares, including at least one with foal at foot, including:

- using industry-accepted oestrus detection methods, including teasing
- handling mare and foal, if present, for AI and assisting using safe horse handling techniques
- preparing mare for AI, cleaning and bandaging according to stud practice
- loading mare in crush and securing or controlling foal appropriately
- applying restraints appropriate for procedure to mare
- providing support to veterinarian or AI technician
- keeping and maintaining accurate records of AI and breeding activities for individual horses.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant horse breeding terminology
- relevant anatomy and physiology of male and female reproductive systems in horses, including conception and gestation
- procedures for preparation for AI
- requirements of veterinarians in carrying out follicle and pregnancy testing
- mare handling procedures
- mare identification methods, including mare status and stallion booking
- types and purpose of different handling restraints for mares
- common infertility in mares and what may be treated by veterinarians
- oestrus cycle in mares and dioestrous behaviour and its detection
• key regulatory requirements relating to animal welfare
• safe work practices:
  • safe horse handling techniques
  • hazard and risk identification and minimisation
  • personal protective equipment (PPE)
  • biosecurity and hygiene practices relevant to mating procedures
• workplace recording and reporting procedures, including stud recordkeeping requirements.

**Assessment Conditions**
Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • various mares requiring artificial insemination (AI) assessed as suitable for the experience and skill of the individual
  • tack, equipment and restraints required for AI
  • personal protective equipment (PPE) correctly fitted and applicable for task for individual
  • workplace recording and reporting forms or systems
• specifications:
  • work instructions or program for carrying out AI procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to assess the suitability of horses for specific uses, and defines the standard required to identify horse conformation, assess soundness and temperament of horses, and maintain accurate data documentation.

The unit applies to individuals who work under broad direction, taking responsibility for their own work. They complete routine activities and work in a range of known contexts within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:
- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

<table>
<thead>

</tbody>
</table>
| 1. Assess horse conformation | 1.1 Observe horse body language and behaviour to identify potential safety risks prior to approaching individual horses  
1.2 Determine conformation requirements for specific use of a horse  
1.3 Evaluate the conformation of a horse using relevant horse sector criteria and practices  
1.4 Report on the desirable conformation of a horse |
| 2. Report on unsoundness and blemishes in the horse | 2.1 Examine the horse for unsoundness and blemishes using safe horse handling techniques  
2.2 Observe unsoundness and report blemishes detected, including those on the fore and hind limbs and hooves, and assess level of effect for specific use |
| 3. Report on the way of going of horses | 3.1 Evaluate and report on essential elements of the way of going of the horse  
3.2 Assess and report on the natural gaits of the horse  
3.3 Detect and report defects in the way of going of the horse, including lameness |
| 4. Report on the undesirable vices and habits of horses | 4.1 Observe and determine any behavioural issues the horse has that could pose a workplace risk  
4.2 Report behavioural issues that may be hazardous to people and other horses, according to workplace practices |
| 5. Evaluate overall suitability of the horse for specific uses | 5.1 Identify the horse characteristics needed for a specific use  
5.2 Analyse findings from examining and observing individual horses to determine suitability for the specified use  
5.3 Identify breed of horse and determine the effect this may have on suitability for use  
5.4 Report on the findings of horse suitability for specific uses using correct concepts and horse industry terminology |

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has assessed and reported on the suitability of at least three horses for specific uses, including:

- identifying each horse by colour, markings, sex, age and brands or microchips
- assessing horse conformation
- determining soundness and detecting blemishes in fore and hind limbs and hooves
- evaluating and reporting on the way of going of the horse, including:
  - evaluating horse gait
  - observing and detecting horse temperament, behavioural issues and vices
  - researching and identifying breeding or parentage of individual horse
  - maintaining appropriate records of horse viewed and assessed
  - making final assessment and reporting on findings of horse suitability both short- and long-term for specific use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- desirable and undesirable conformations for specific uses
- common blemishes on fore and hind limbs and hooves
- common behavioural issues and vices in horses
- desirable and undesirable natural gaits
- process for determining characteristics needed for specific uses
- impact of breeding or parentage on individual horse suitability for a specific use
- factors that affect suitability of an individual horse for a specific use, including gender, class and age
- how the final assessment could affect value of horse
• horse industry terminology relevant to assessing horse suitability.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • various live horses assessed as suitable for the experience and skill of the individual to be assessed for suitability for specific uses
  • forms for recording and reporting horse suitability for a specific use

• specifications:
  • criteria for specific uses the horses are to be used for.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has safely handled and conducted a range of routine activities with at least three young horses (one foal, one weanling and one yearling), including:

- assessing and minimising risk associated with handling young horses
- checking facilities and equipment for safety
- observing and monitoring young horse behaviour and recognising abnormalities
- catching and handling a foal safely and humanely
- fitting rugs, bits, bridles and halters
- teaching a weanling to lead and accept a halter
- grooming and exercising yearling
- preparing yearling for sale, including:
  - trimming and tidying yearling for presentation for sale
  - teaching a yearling to stand correctly for presentation at sale.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- suitable facilities for weaning
- potential dangers to the foal during weaning and appropriate actions to reduce them
- stress responses sometimes associated with weaning:
  - fretting
  - over-heating
  - refusing food
  - overeating
  - self-inflicted injuries
- suitable facilities for yearling preparation
• potential dangers to the yearlings during sale preparation and appropriate actions to reduce them:
  • removing any potential hazards from stalls and handling areas
  • exercising in confined areas
  • monitoring exercise
• effects of exercise on joints and bones of the legs
• various responses in yearlings associated with sale preparation:
  • fretting
  • poor appetite
  • overeating
  • stable vices
• safe horse handling techniques for young horses
• key features of regulatory requirements for:
  • work health and safety
  • animal welfare.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions, including a small handling yard and crush
• resources, equipment and materials:
  • various young horses including weaning foals and weanlings – note that young horses can be less compliant and highly reactive, and should be assessed as suitable for the experience and skill of the individual
  • appropriate tack for handling and caring for young horses
  • personal protective equipment (PPE) correctly fitted and applicable for task for individual
• specifications:
  • work instructions and workplace procedures for handling young horses.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has followed stud operational procedures for the sale or exhibition of at least three horses, including:

- organising the nomination of horses for sale and exhibition
- gathering information, records and registrations for others, including breed societies and stud book keepers
- completing forms and records related to:
  - sales and exhibitions
  - breeding records
- entering financial information and data into workplace systems
- maintaining accurate financial and business management records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- nature of stud business in which the individual works
- processes and protocols of the stud business in which the individual works
- requirements and procedures laid down by the relevant breed societies or the keeper of the relevant stud book
- legislative requirements and workplace procedures and instructions relevant to role for:
  - animal health and welfare
  - workplace health and safety.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• specifications:
  • stud or organisational records for selected horses
  • application or entry forms for exhibitions or sales
  • financial and other workplace records.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has implemented disease or injury prevention measures including performing each of the following points at least once:

- performing stable hygiene practices procedures
- disease and ailment prevention procedures
- quarantine procedures.

There must also be evidence that the individual has treated equine injury or disease for at least two horses including:

- assessing and recording vital signs of horses, including temperature, pulse, respiration and capillary refill
- handling and restraining horses for observation and treatment
- detecting and reporting signs of common ailments, ill health and injury
- treating equine injury and disease according to instructions.

When performing all of the above points there must be evidence that the individual has:

- assessed and controlled risks handling horses and in work area
- handled horses safely and ethically in a firm but calm, gentle and unhurried manner
- completed horse health and medication records in accordance with requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and signs of common horse injuries
- types and signs of common ailments that affect horses
• indicators that can be used to assess horse health
• signs and symptoms of:
  • abnormal or depressed appetite
  • life threatening conditions
• range of treatments that must be applied under veterinary supervision
• common horse behavioural problems
• safe and ethical horse handling techniques and restraints
• animal health and welfare principles and practices
• hygiene and environmental practices relevant to maintaining healthy horse environments
• work health and safety practices:
  • assessing and controlling risks
  • use of personal protective equipment
  • safe horse handling techniques
  • safe areas to carry out procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • various compliant and manageable horses assessed as suitable for the experience and skill of the individual
  • materials and equipment for treating horses
  • appropriate tack for individual, horse and activity
  • personal protective equipment (PPE) correctly fitted and applicable to activity for the individual
• specifications:
  • work instructions and treatment and prevention program for individual horses
  • workplace recording or reporting forms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to raise young horses, including observing foal development, meeting dietary needs, and handling and assisting with educating young horses.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts within horse breeding and horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- ACMHBR307 Handle young horses.

Note the following chain of prerequisites that also applies to this unit.

<table>
<thead>
<tr>
<th>Unit of competency</th>

1. Monitor foal development
   1.1 Observe and assess foal health and development
   1.2 Detect and report symptoms of ill health, common diseases and developmental disorders
   1.3 Record foal health and growth rate according to workplace practices
   1.4 Vaccinate foals under instruction

2. Meet the dietary requirements of young horses
   2.1 Monitor mares for adequate nutrition for milk supply
   2.2 Wean foals onto suitable pasture and supplement with feeds
   2.3 Meet feed requirements of growing horses
   2.4 Ensure feeding plans for yearlings allow growth and development for sale or growing on

3. Handle and assist with the education of young horses
   3.1 Check paddocks and facilities to minimise the risk of injury and blemishes to young horses
   3.2 Use safe and ethical horse handling techniques to assist in educating young horses to be led and tied up
   3.3 Provide young horses with social support of other young horses or foster mares
   3.4 Train weanlings and yearlings to parade for sale

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

</table>

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has safely handled and raised at least three young horses (covering new born foals to yearlings), including:

- assessing and minimising risk associated with handling each young horse
- safely and ethically handling and educating each young horse including a foal, weanling and yearling
- monitoring the health and wellbeing of a foal, weanling and yearling to help them settle and adapt from weaning
- vaccinating, worming and carrying out seasonal parasite checks to each young horse according to instructions
- detecting signs of abnormal behaviour and development in each young horse
- training a weanling and yearling to be led, tied up and paraded for sale
- recording and reporting health and development information for individual young horses.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for raising young horses, including:
  - desirable and undesirable conformation and strategies to address undesirable conformation or characteristics
  - developmental disorders of young horses
  - diseases and common illnesses associated with young horses
- animal health and welfare practices for young horses:
  - feeding and nutrition requirements for young horses and weaning foals
  - vaccination, worming and rotational or seasonal parasite programs
  - weaning practices
- work health and safety practices applicable to working with young horses
• safe horse handling techniques for educating young horses
• key principles and features of animal welfare legislation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • various young horses, including weaning foals and weanlings (Note that young horses can be less compliant and highly reactive, and should be assessed as suitable for the experience and skill of the individual)
  • appropriate tack and equipment used for handling and caring for young horses
  • personal protective equipment (PPE) correctly fitted and applicable for task of individual
• specifications:
  • work instructions and workplace procedures for handling young horses.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has foaled down at least one mare, including:

- identifying hazards and controlling risks in foaling environment
- preparing foaling environment, materials and resources to industry standards
- carrying out mare husbandry procedures and detecting signs of imminent foaling
- monitoring mare condition and wellbeing
- assisting at foaling in the event of difficulties
- assisting with tying up placenta once mare stands
- detecting abnormalities in foaling behaviour, expulsion of foetus and placenta, and progress of foal immediately after birth
- handling newly born foals safely
- recording and reporting details of mares and foals according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for foaling down mares, including:
  - signs of dystocia or malpresentation by timing rate of progress in giving birth and the initial presentation of the foal
  - stages of foaling, including water breaking, expulsion of the foetus, and expulsion of afterbirth
  - scenarios where specialist advice or assistance is needed
  - reasons for undertaking and timing of IgG (immunoglobulin) test on newborn foals
  - features of safe and secure post-foaling environment
- safe work practices:
  - safe and ethical horse handling techniques
Assessment Requirements for ACMHBR312 Carry out procedures for foaling down mares

- hazard identification and practices for controlling risks in foaling and post-foaling environment
- personal protective equipment (PPE)
- maintaining hygienic and environmentally responsible workplace practices
- workplace recording and reporting requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - various live mares in-foal and newborn foals assessed as suitable for the experience and skill of the individual
  - appropriate tack for horse and activity
  - PPE correctly fitted and applicable to activity for the individual
  - equipment required for foaling down
- specifications:
  - work instructions for carrying out foaling down of mares
  - foaling recording/reporting forms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to nominate horses for sale or exhibition, complete and forward required pedigrees, transfer forms and stud records for the property, and other administrative matters.

The unit applies to individuals who use specialised knowledge and skills, have responsibility for a work activity, area or team, and provide and communicate solutions to a range of predictable and sometimes unpredictable problems in the horse breeding sector.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out stud stable management duties for the sale or exhibition of at least three horses, including for following points for each horse:

- managing the nomination of horse for sale or exhibition
- collating and forwarding information, records and registrations for horse to others, including:
  - breed societies
  - stud book keepers
  - horse owners
- preparing and presenting forms and records for horse related to:
  - sale or exhibition
  - breeding records
- overseeing and maintaining accurate financial and business management records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- operations and business objectives of the workplace stud
- workplace stud program, procedures and instructions
- requirements and procedures for:
  - breed societies
  - keeper of the relevant stud book
  - sales and exhibition bodies
- regulatory requirements relevant to role for:
  - animal health and welfare
• work health and safety
• employment of staff and contractors
• financial reporting.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • application or entry forms for exhibitions or sales
  • financial and other workplace records or systems
• specifications:
  • stud or organisational records for selected horses.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ACMHBR403 Handle and care for stallions

**Modification History**

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

**Application**

This unit of competency describes the skills and knowledge required to handle and care for stallions, particularly throughout the mating process.

The unit applies to individuals who use specialised horse breeding knowledge and skills and have experience working with stallions. They have responsibility for a work activity, area or team, and provide and communicate solutions for a range of predictable and sometimes unpredictable problems in the horse breeding sector.

Licensing, legislative, regulatory or certification requirements apply to this unit. Users are advised to check with the relevant Principal Racing Authority for current licence or registration requirements.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

**Pre-requisite Unit**

Prerequisite unit of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

<table>
<thead>
<tr>
<th>Unit of competency</th>
<th>Prerequisite requirement</th>
</tr>
</thead>

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has handled, cared for and assisted at least one stallion throughout the mating process, including:

- using safe handling techniques and safe work practices to ensure safety of handlers, mares and foals
- catching, grooming, feeding and exercising stallion
- preparing teasing mare and teasing area
- handling stallion safely to ensure satisfactory mating or semen collection
- providing support to veterinarian for a range of procedures
- observing and detecting signs of disease, ill health or injury in stallion
- reporting and recording information about stallion according to workplace practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for handling and caring for stallions, including:
  - stallion behaviour, body language and potential safety risks
  - common equine injury and disease that affects breeding stallions
  - procedures for monitoring stallion health
  - indicators of stallion health and welfare
  - accurate identification and recording in the mating process
  - strategies for managing efficient and well-managed stud activities to maximise conception rates and live foal outcomes
- work health and safety requirements and safe work practices:
  - safe horse handling techniques
• hazard identification, risk assessment and controls
• handling frozen semen and working with liquid nitrogen
• types and correct fit of personal protective equipment (PPE)
• duty of care for workers
• key requirements of environmental and biosecurity procedures for disposing of wastes
• workplace recording and reporting procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
• a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
• at least one live stallion – note that stallions can be less compliant and highly reactive, and should be assessed as suitable for the experience and skill of the individual
• various mares for mating, or dummies
• equipment and restraints required for mating activities
• appropriate tack for horse and activity
• personal protective equipment (PPE) correctly fitted and applicable to activity for the individual
• specifications:
• workplace recording and reporting forms or systems
• work instructions or program for carrying out mating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to keep production business records such as paddock and livestock activity in accordance with workplace requirements auditing purposes.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with others to obtain information
- collect information relating to primary production
- organise and store information
- maintain inventory records
- complete a livestock reconciliation
- follow enterprise work health and safety policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the organisation’s policies and procedures applying to production records
- relevant legislation and codes, relating to the operation of a business and to the tasks undertaken
- recording processes to meet QA requirements
- the organisation’s software and technology used to record and analyse production information.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan and implement the construction of physical resources
- organise and schedule the maintenance of physical resources
- analyse and assess the costs and benefits of plans and layouts in the light of all considerations including: work health and safety, financial, environmental and animal welfare
- prepare written plans and procedures for implementation by others
- prepare drawn plans or sketches
- estimate and order the materials required
- follow enterprise work health and safety policies
- follow enterprise sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- function and requirements of infrastructure requirements
- sustainable land and water use principles and practices applicable in the region
- environmental controls and codes of practice applicable to the business and to the improvement works
- whole property plan
- legislation, regulations and codes of practice relating to soil and water degradation issues, animal health and welfare, chemical use, building construction and workplace health and safety.
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research, analyse and interpret climate and enterprise data
- prepare risk management strategies
- integrate climate risk with opportunities and management strategies at a business management level
- implement enterprise sustainability policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- current forecasting techniques and phenomena, such as El Nino, ENSO, Southern Oscillation Index (SOI) and Pacific and Indian Ocean SST patterns
- impact of weather and climate on business activities
- causes of general patterns of weather and climate over Australia
- climate variability and climate change
- direct and indirect impacts of climate variability on land management and sustainability
- property and enterprise management decisions affected by the variable climate
- recognition of climate risks and opportunities
- seasonal climate forecasting systems and related indicators
- natural disaster planning
- climate and weather issues pertaining to sustainable agriculture
- potential impacts of greenhouse warming on land and natural resource management
- strategic options and planning in response to climate variability for a range of seasons (normal, drier or wetter than normal), and other risks and opportunities
• calculating financial returns for different strategic options
• computer applications and Internet to access, record and analyse data
• principles of decision-making based on the variable climate and seasonal climate forecasts.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to plan and manage infrastructure requirements.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify infrastructure requirements for the enterprise
- source, construct and modify infrastructure to meet enterprise requirements
- develop an infrastructure maintenance program including scheduling and responsibilities
- establish a recording system for infrastructure purchase, construction and maintenance
- interpret, analyse and extract information from a range of sources
- identify, build and use network and support groups
- recognise potential opportunities to use or install more environmentally efficient systems or equipment
- implement enterprise work health and safety policies
- implement enterprise sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- sustainable land use principles and practices
- property planning, financial management and enterprise budgeting systems and procedures
- environmental controls and codes of practice available to the organisation
- sound management practices and processes to minimise noise, odours and debris from production processes
- sustainable land use principles and practices applicable in the region
- relevant legislation and regulations relating to infrastructure management.
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- review strategic plans and production goals
- prepare enterprise budgets and calculate financial returns of the business
- develop financial management and marketing plans for the business
- review the natural resource base of the enterprise and incorporating principles of sustainability
- incorporate into production planning the personal aims and priorities of management and, the availability, productivity and training needs of labour
- assess the skills and expertise of self and colleagues
- facilitate group decision making within the business
- plan production processes
- assess environmental impacts and implement impact reduction techniques
- implement enterprise sustainability policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- holistic business planning and benchmarking
- marketplace in which the organisation operates
- land use planning including sustainable land use principles and practices
- soil nutrient cycling potential and limitations
- chemical and biological methods for pest control
- property planning, financial management and enterprise budgeting systems and procedures
• relevant State or Territory legislation, regulations and codes of practice which impact on rural production businesses
• monitoring strategies for financial, production, land use, and human resource development plans
• methods for assessing skills and expertise
• reasons for and methods of succession planning
• value and methods of risk assessment.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- audit the natural resources of the property
- monitor legal requirements impacting on the management of the property
- develop management strategies to address natural resource management issues
- integrate business objectives and production plans with sustainable land management in a whole farm plan.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- SWOT analysis
- sustainable land management practices
- property planning processes and approaches
- land capability
- water, vegetation, soil, fire and wildlife management strategies
- legal requirements impacting on whole farm planning
- risk management.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency specifies the outcomes required to provide information or manage application technology in crops or pastures. The technology applies to the application of chemicals such as herbicides, fungicides, insecticide and fertilisers as well as biological and organic agents.

The unit involves the application of a broad knowledge base to identify and apply solutions to a range of problems. This includes plant morphology and physiology, plant protection, nutrition requirements, environmental impacts, the use of information technology and occupational health and safety hazards.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit of competency applies to work in a range of agricultural or support enterprises, such as agronomists and rural merchants. Work will be undertaken without supervision. Responsibility for and organisation of the work of others involved in the program may be required.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret, analyse and extract information from a range of sources
- establish processes, strategies, procedures and controls for the application of chemical and biological agents
- prepare written plans and procedures for implementation by others
- explain and deliver instructions about the plans and scheduling of operations
- identify and react appropriately to environmental implications and work health and safety hazards
- identify and assess weeds, pests, diseases and nutritional and other deficiencies
- formulate efficient, cost effective control programs
- read and interpret manufacturer’s instructions and agent labels
- record recommendations and applications.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- characteristics of pest, weed and disease species including their life cycles and reproduction capability
- principles of integrated pest and weed management
- range and classes of fertilisers, herbicides, insecticides and fungicides available and their basic chemistry
- growth stages of weeds and plant morphology
- the effects on crops of weeds, pests, diseases and/or lack of soil fertility
- mode of action of chemical or biological control agents and long term effects of these agents with respect to plant back periods and resistance
- range and effect of different nozzles, pressures, spray patterns, droplet sizes and basic physics of droplets and fluids
- work health and safety hazards and controls and environmental impacts
- best management practices and processes to minimise the impact of agents
- federal, state and local government legislation and regulations.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the selection and application of modern agricultural technology in production systems. Applications include the recording and reporting of farm activities, mapping, farm and production planning, data collection and analysis and variable rate technology. This unit assists land managers to make informed decisions specific to production systems and applications.

Applications in agricultural science range from spatial information tools to the precision application of production inputs and growth models for the improvement of production.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to persons who have a role in managing or operating a land based production business or providing expert advice such as consultants, industry specialists and extension officers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify a range of technologies and how to apply them in an agricultural system
- obtain and process data and information using technology
- assess and review production information for application into farm management
- identify appropriate training and support for staff
- identify and manage issues that may arise in the use of the technology
- complete a cost and benefits analysis
- analytical skills to evaluate opportunities.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- basic principles of technology used for agricultural applications
- basic principles of cost-benefit analysis
- equipment, tool and resource requirements
- context in which particular organisations operate and how this may impact on the selection and use of technology
- potential barriers to learning, and strategies to address these
- range of technology options available to support organisational activities
- strategies that can be used to evaluate technology use
- training and technical support options available to the organisation to develop skills in the use of technology
- sources of information related to agricultural technology
- trends and developments in technology relevant to agriculture.
Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the development of planning strategies to address sustainability issues, using renewable energy sources and opportunities to recycle products, improve the efficiency of the business and reduce off-site impacts from the production system.

It will involve working in a safe manner and applying sustainable renewable energy systems to rural, regional and local conditions. All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to a person who has role in the management of the following land based business:

- Agricultural related industries
- Production Horticulture
- Agro-Forestry

This unit will require the consultation with external experts such as alternative energy consultants and suppliers of alternative energy equipment, planning authorities, State and Federal Government Departments who administer subsidies and provide advice.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify key parts of the enterprise operation that may be converted to renewable energy sources, reducing greenhouse emissions and recycling opportunities using key principles of sustainability
- establish a budget, organising materials and staff
- develop a plan to use renewable energy and recycling systems in agricultural systems including environmental risk management strategies
- develop workflow plan strategies and monitor progress of the plan during the implementation stages including work health and safety issues
- establish and evaluate improvement outcomes
- identify sustainability issues and implement associated systems for the use of renewable energy and recycling systems
- plan and budget cost efficient savings by implementing renewable energy of project
- monitor the plan and address contingency plans including risk management strategies
- recognise work health and safety hazards and implement control measures on the work site
- recognise environmental safety issues associated with the use of renewable energy
- organise materials, plant and human resources for implementation for the adoption of renewable energy or recycling opportunities
- measure and evaluate improvement outcomes.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• key principles of sustainability associated with using of renewable energy and recycling systems
• government legislation, regulatory requirements, licensing and subsidies
• environmental and work health and safety risk management strategies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify a range of software systems and how to apply them into a production system
- interpret production and land management maps to apply into everyday farming management
- identify erosion, soil management techniques, salinity, farming systems, bio-diversity and weeds by using GIS
- apply solutions to erosion, soil management techniques, salinity, farming systems, bio-diversity and weeds using GIS
- manage and co-ordinate work teams using GIS and associated technology
- complete a cost and benefits analysis
- use a computer, including computer aided drafting
- analysis digital map images
- communicate with staff and other parties on instruction and training in the use of GIS
- use self-diagnosis manuals to identify technical systems faults.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- financial management and strategic planning benefits from the implementation of a GIS
- legal concepts on the gathering of data to be used in GIS applications
- GIS applications and associated technology
- mapping principles of GIS
- computer concepts
• spatial calculations using GIS.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Application

This unit of competency covers the process of evaluating the implications of introducing bio-technology and genetically modified organisms into the current production system. Strategies are developed to implement and monitor the integration of bio-technology products in a sustainable system by preparing strategies for the implementation, monitoring and evaluating the integration bio-technology products into the production plan.

This technology will require producers to identify potential risks and benefits, responsibly manage all aspects of risks to the neighbours, local community, and to the environment, relevant to the existing and new production system.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to persons who have a role in managing a land based production business. This unit is likely to require consultation with external experts, such as extension officers from State Agricultural Departments, Agri-business representatives, agronomists and regulators including insurance agencies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research implications of introducing bio-technology for business
- identify applications for business and production systems
- develop and implement plans for production systems and risk management strategies
- recognise potential opportunities of introducing bio-technology (business and production)
- assess and adopt profitable innovations from the use of bio-technology products
- interpret, analyse and extract information from a range of sources such as professional literature, legal documents, discussions and workshops
- undertake cost benefit analysis in relation to the introduction of bio-technology
- communicate with industry contacts, colleagues and family regarding the land/farm based business
- design risk management strategies including installing a Total Quality Management System (TQMS)
- conduct a risk management audit before and after the introduction of bio-technology products
- complete and maintain appropriate quality assurance documentation for a TQMS.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- benefits and risks of introducing biotechnology into a production system
- principles of sustainability
- relevant State/Territory legislation, regulations and codes of practice with regards to work health and safety, use and control of hazardous substances and biotechnology in production systems
• financial cost analysis tools and techniques
• methods of risk assessment audits for the production system
• implementing, monitoring and maintenance of a Total Quality Management System (TQMS)
• stewardship to fellow farmers and community when using bio-technology in a production system.

Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the process of developing a farm plan for a rural enterprise to reflect organic, biodynamic and biological farming principles. It requires the ability to determine the philosophy of the farm business. An audit of the farm and the resources will be undertaken to assess the current status of the property. A management plan is developed to ensure sustainability of the farm business and the natural areas on the property. The plan is to convert the property and the management system to reflect the philosophy and the orderly transition to the new short term and long-term goals. It is also to manage the production system including crops, pasture and livestock within the organic, biodynamic and biological farming system. Records will be kept to maintain the integrity and quality of the product and meet legal requirements for accreditation.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to a person who has a role in managing a farm. This unit is likely to require consultation with certification bodies, auditors and producers with similar philosophies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine directions for the organic, biodynamic or biological business
- audit the natural resources on the property
- monitor legal and certification requirements impacting on the management of the property
- develop management strategies to address natural resource management issues
- research information on production changes and methods for the chosen philosophy
- ability to interpret accurate data
- communicate information to people and groups inside and outside the industry sector
- record treatments of parasites and diseases of animals with suitable preparations according to animal welfare and organic, biodynamic and biological farming principles
- assess and sample soils
- interpret and make recommendations regarding outcomes of soil tests
- recognise plants and pasture species
- calculate a feed budget
- document production processes and activities including developing a flow chart for the supply chain
- document a risk assessment
- develop procedures to respond to customer feedback
- analyse benefits to the family and farm from adopting the philosophy.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• sustainable land management practices
• property planning process
• water, vegetation, livestock, pasture, soil, fire and wildlife management strategies within the accreditation guidelines
• legal requirements impacting on the whole farm plan
• risk management strategies
• credible sources of information relating to organic, biodynamic and biological farming principles and practices
• supply chain for the organic, biodynamic and biological farming sector and your position in the chain
• permitted/restricted and prohibited inputs and activities for Organic Production
• grazing management including feed budgeting and grazing strategies
• animal health and options for maintaining health based on pathogen life cycles and the use of suitable preparations
• maintaining biodiversity to complement the organic, biodynamic and biological farming philosophy
• principles of sowing according to moon phase and maintaining crops with biodynamic preparations.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to evaluate and develop a product for export.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities. They work in contexts that are subject to change and adapt a range of fundamental principles accordingly.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine cost of production
- allocate overhead costs against enterprises
- assess risk to financial returns through market or currency movements
- analyse trends and evaluating forecasts
- monitor and assess price movements
- implement a trading strategy for price risk management.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- supply, demand and price relationships
- price trends and sources of market information/forecasts
- cost of production
- overhead costs
- risk assessment and attitudes to risk
- selling options for the relevant commodity
- operation of futures markets, forward selling arrangements, put options
- foreign exchange rates
- contract law
- cash flow and taxation planning
- contingency planning.
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to assist with artificial insemination procedures.

This unit applies to those who provide technical support to a registered veterinarian or licensed inseminator.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Artificial Insemination (AIS)

</tr>
</tbody>
</table>

### 1. Assist with preparation of animals for insemination

1.1 Detect animals on heat and record or report information
1.2 Move animals on heat to the insemination area
1.3 Restrain animals using safe and humane techniques in line with enterprise animal welfare policies
1.4 Provide assistance for the appropriate preparation of tools and equipment
1.5 Select, use and maintain suitable personal protective equipment and clothing in line with enterprise work health and safety policies

### 2. Support insemination procedure

2.1 Sterilise and clean or dispose of insemination equipment
2.2 Identify and prepare recipient animal
2.3 Restrain recipient animal appropriately and assist the insemination procedure to optimise results
2.4 Record details of insemination, identification of the semen used and identifies of the female animals in line with enterprise requirements

### 3. Clean work area and equipment

3.1 Dispose of waste and debris appropriately in line with enterprise environmental policies
3.2 Clean and maintain work area and equipment appropriately
3.3 Return animals to designated area
3.4 Clean and maintain restraints and harnesses

## Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

## Unit Mapping Information

This unit is equivalent to AHCAIS201A Assist with artificial insemination procedures.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assist with preparation of animals for insemination
- support insemination procedure
- clean work area and equipment
- follow work health and safety policies
- follow animal welfare practices
- follow enterprise environmental policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- resource and manpower requirements, biosecurity requirements, industry standards, codes of practice and procedures for artificial insemination of the livestock species
- reproductive anatomy and reproductive physiology in the livestock species
- signs of heat, methods for detection of oestrus and management of animals on heat
- techniques and methods for humane handling and restraint of the livestock species
- relevant animal welfare practices for the conduct of artificial insemination in the livestock species
- types, uses, maintenance, servicing and storage of equipment
- methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
- procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
- relevant work health and safety requirements
- relevant documentation and records that are required
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes and debris
• requirements and procedures for cleaning and maintaining work areas.

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to routinely collect semen for artificial insemination of livestock.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

Working with entire male animals is an inherently dangerous activity. Individuals who work at this level must be thoroughly competent in all aspects of handling entire male animals.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare animals for collecting semen
- prepare for and undertake hygienic collection of semen
- collect semen using industry approved collection techniques
- transfer semen safely to the preparation and storage area
- handle animals in a humane, stress free, and safe manner
- clean up work areas and equipment and record data.
- follow enterprise work health and safety, biosecurity and animal welfare policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types, uses and maintenance of personal protective equipment
- resource and manpower requirements, biosecurity and animal welfare requirements, industry standards, codes of practice and procedures for artificial insemination of the livestock species
- types, uses, maintenance, servicing and storage of equipment
- requirements and features of semen collection work areas
- requirements, methods and techniques for processing and storage of semen
- techniques and methods for humane handling and restraint of the livestock species
- relevant animal welfare practices for the conduct of artificial insemination in the livestock species
- methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
- types of diseases transmissible from male to female animals through artificial insemination/semen, and methods of testing, control and prevention
- procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
- relevant work health and safety policies
- relevant environmental requirements, and procedures for disposal and management of wastes and debris
- requirements and procedures for cleaning and maintaining work areas
- relevant documentation and records that are required.

Performance Evidence

The candidate must be observed artificially inseminating livestock.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for insemination
- observe animals on heat to detect correct insemination timing
- prepare equipment and work sites
- correctly select and thaw semen for insemination
- restrain and inseminate animals using recognised methods that reduce stress
- complete documentation and records
- clean work area and equipment
- follow enterprise work health and safety, biosecurity and animal welfare policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- working knowledge of enterprises herd improvement or animal production plan
- basic breeding principles, including the oestrus cycle and its significance
- pregnancy testing
- animal health and abnormalities
- preparation techniques such as puberty stimulation
- semen thawing and storage techniques
- preparation requirements for artificial insemination of animals
- animal movement and behavioural characteristics
- harness and restraint equipment, components and functions
• handling techniques, restraint methods and when to use them
• enterprise and industry identification system for animals
• personal protective equipment and when and how it should be used
• relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS and animal welfare
• legislative and regulatory controls with regard to artificial insemination
• enterprise and industry policies with regard to artificial insemination and recording and reporting routines.

Assessment Conditions

The candidate must demonstrate knowledge of:

• resource and manpower requirements, biosecurity requirements, industry standards, codes of practice and procedures for artificial insemination of the livestock species
• hygiene procedures for artificial insemination
• requirements, methods and procedures for sourcing, acquiring, transporting and storing semen
• requirements and procedures for preparation of artificial insemination
• types, uses and maintenance of personal protective equipment
• requirements and procedures for selection, preparation and thawing of semen
• methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• relevant anatomy and physiology of female livestock
• reproductive physiology and behaviour of female livestock
• techniques and methods for humane handling and restraint of the livestock species
• relevant animal welfare practices for the conduct of artificial insemination in the livestock species
• relevant documentation and records that are required
• relationship, cause and effect between herd performance and artificial insemination programs
• criteria and methods for determining conception rates
• requirements, methods and procedures for improving the success of artificial insemination and its impacts on herd performance
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes and debris
• requirements and procedures for cleaning and maintaining work areas and equipment
• enterprise work health and safety policies

Application

This unit of competency describes the skills and knowledge required to supervise artificial breeding and embryo transfer programs.

This unit also applies to artificial breeding technicians who provide advice to farmers.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They use discretion and judgement in the selection, allocation and use of available resources and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

1. Determine breeding method
   1.1 Review options for artificial breeding to determine most suitable and affordable method according to breeding objectives
   1.2 Select and match artificial breeding option to resources and breeding objectives
   1.3 Identify, source and arrange resource implications of breeding programs
   1.4 Prepare program schedules according to available resources
   1.5 Ensure suitable personal protective equipment for staff and self are available in line with enterprise work health and safety policies

2. Implement breeding method
   2.1 Check the disease status of donor and recipient animals in line with enterprise biosecurity policies
   2.2 Obtain genetic material from appropriate and reliable source
   2.3 Receive, check and store genetic material appropriately
   2.4 Handle animals appropriately in line with animal welfare policies
   2.5 Ensure females are inseminated at the optimal stage of the oestrus cycle where artificial insemination is the selected option
   2.6 Check to ensure intended recipients are prepared and correctly scheduled where embryo transfer (ET) is the selected option
   2.7 Provide hormone injections to intended recipients at appropriate stages of transfer programs where ET is the selected option
   2.8 Conduct embryo transfers in compliance with relevant codes of practice and industry standards where ET is the selected option

3. Monitor and maintain program
   3.1 Monitor the need for return to service of intended recipient
   3.2 Monitor health of livestock in the breeding program
   3.3 Review adjustments in genetic material transfer practices to enhance success of future programs
   3.4 Document and maintain data on genetic material transfer programs

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine breeding method
- implement breeding method
- monitor and maintain program
- apply work health and safety requirements in the context of own work
- apply biosecurity requirements in the context of own work
- apply animal welfare practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- legislative requirements, biosecurity requirements, codes of practice, industry standards and procedures for artificial insemination and embryo transfer
- resources requirements, types and characteristics of artificial breeding methods and programs
- advantages, disadvantages and cost-benefit analysis of artificial breeding programs for the livestock enterprise
- types, uses and maintenance of personal protective equipment
- requirements, methods and procedures for sourcing, acquiring, transporting and storing genetic material
- relevant anatomy and physiology of female livestock
- reproductive physiology, reproductive behaviour and pregnancy development of female livestock
- requirements and procedures for artificial insemination
- requirements and procedures for embryo transfer
Assessment Requirements for AHCAIS401 Supervise artificial breeding and embryo transfer programs

- causes, signs, treatment and management of reproductive diseases and complications in female livestock
- requirements, methods and procedures for improving the success of artificial breeding programs and their impacts on herd performance
- relevant documentation and records that are required
- relevant work health and safety and animal welfare requirements.

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to remedy common tree problems by applying treatments including alleviating tree stress and improving soil condition. Treating trees also requires consideration of the environmental implications of treatment methods, techniques and procedures.

This unit applies to individuals who undertake defined activities, work in a structured context, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- locating trees on streets using maps
- recognising trees requiring treatment
- identifying site hazards, assessing risks and reporting to supervisor
- confirming work zone with work crew and monitoring site
- selecting and use personal protective equipment
- selecting, preparing, and carrying out pre-operational and safety checks, on tools, equipment and machinery
- confirming first aid personnel, equipment and procedures applicable to tree work
- communicating with work team during operations
- reading packaging labels to maintain awareness of work hazards
- cleaning or sterilising tools and equipment
- avoiding disease transfer and biosecurity issues
- recording and implementing work health, safety, site, environmental and traffic control measures
- removing competing plants to ensure maintenance of adequate space, light, water and nutrient requirements of tree
- applying nutrient additives at specified rates and locations
- amelioration of soil structure in relation to aeration and drainage
- amelioration of soil condition with plant-based mulch application
- determining benefit and limits of decompaction methods
- calibrating application equipment
- applying treatment with due regard for environmental implications
- applying chemicals under supervision
• maintaining awareness of effect on environment of own work practices
• cleaning and storing personal protective equipment
• clearing and cleaning sites
• awareness of work health and safety in the context of own work.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• methods of locating trees on streets and maps
• tree recognition
• methods of identifying site hazards, assessing risks and reporting to supervisors
• risk assessment systems
• confirmation of work zones
• how trees react to stress
• personal protective equipment
• pre-operational and safety checks, on tools, equipment and machinery
• first aid
• first aid personnel, equipment, and first aid plan procedures
• communication systems using voice, hand and whistle signals
• application of packaging instructions
• methods of cleaning and sterilising tools and equipment
• methods of disease transfer
• biosecurity principles and practices
• work health, safety, site, environmental and traffic control measures
• plant removal methods
• soil nutrition
• rates of nutrient application
• soil amelioration techniques
• soil structure, aeration and drainage
• mulch
• compaction and decompaction
• correct preparation prior to applying treatment to trees
• calibration techniques of application equipment
• chemical application techniques, usage restrictions and risk controls
• environmental implications of chemical use in own work practices.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.
Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**  
  - spray application equipment  
  - spill kit  
  - measuring and weighing equipment  
  - signage - chemical use  
  - personal protective equipment (PPE)  
  - first aid and emergency kit  
  - traffic management kit  
  - signage - work zone  
  - trees

- **materials:**  
  - tree recognition form  
  - hazard identification and risk control form  
  - equipment and PPE check form  
  - emergency preparation form  
  - work communications form  
  - chemical and treatment application form  
  - tree maintenance form  
  - soil assessment form  
  - work site operations form  
  - work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to operate motorised stump grinding machines to remove tree stumps from the ground.

This unit applies to individuals who undertake defined activities with specialised tools and methods, work in a structured context, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures, in accordance with manufacturers recommendations and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Performance Evidence

The candidate must be observed removing stumps using a motorised stump grinder using low-risk work procedures. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining site location and details and clarifying with supervisor
- determining the depth below ground of stump grinding works
- determining and confirm location and depth of above-and-below-ground services
- unload stump grinder machine
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- checking maintenance log complete and up to date
- checking belts appropriately tensioned and in good order
- checking teeth are sharp
- checking no teeth are missing or loose
- checking tyre pressure is correct or tracks are appropriately tensioned
- checking levels of oils and fluids
- checking hoses
- checking brakes are operational
- checking cutter head rotates freely and is not obstructed
- checking guards for belt, power take-off (PTO) and grinder head are in place
- checking kill switch clearly identifiable and working
- checking that dead-man is working if fitted
- checking debris curtain present and in good order
- checking dust suppression system is working if fitted
- selecting and use appropriate personal protective equipment
- confirming first aid and emergency personnel, equipment and procedures
- exposing stump surrounds manually and check for and remove foreign bodies
- moistening surrounds as required
- recording and implementing work health, safety, site, environmental and traffic control measures
- determining exclusion zone for work operations
- isolating exclusion zone with barriers and signs
- positioning machine level within recommended ranges to avoid rollover
- avoiding holes with machine wheels
- positioning machine to minimise impact from flying debris
- positioning operator in low risk position
- positioning operator to provide a clear view of the stump
- locating safety screens as required
- communicating with work team during operations using voice, hand and whistle signals
- confirming work zone cleared prior to starting cutter head
- planning to complete a series of passes across the stump
- starting cutter head
- stopping work if exclusion zone is breached and disengage cutter head if required
- positioning cutter head over stump
- maintaining engine speed in revolutions-per-minute (rpm)
- ensuring grinding process is accurate, smooth and ergonomic
- grinding stump to recommended depth of cut on each cutting pass
- ensuring the cut size of each pass is not excessively deep causing the machine to labour excessively or to stall
- grinding stump to predetermined spread and depth
- operating equipment without damaging underground services and surrounding areas
- repositioning machine away from ground stump
- disengaging cutter head if risk of making unwanted contact
- waiting and remaining clear of cutter head until cutter head stops moving
- removing build-up of grindings
- making check in calls at prearranged times
- inspecting grinder as required between stumps and when refueling
- shutting down immediately if abnormal vibration and/or noise develops
- stopping the engine before refueling and allow engine to cool as required
- following safe work method statement instructions for refueling
- replacing and securing fuel cap before restarting
- disengaging cutter head and ensure a complete stop before moving to a new stump
- back-filling stump hole to original ground level
- maintaining clean and safe work area throughout work and upon completion
- collecting waste material and dispose of or recycle in a manner causing minimal environmental damage
- cleaning, maintaining and storing tools and equipment
- performing basic maintenance, including sharpening grinder and replacing teeth as required
- loading grinder in accordance with safe work method statement
• securing grinder for transport
• updating records of operator usage in log record
• updating records of maintenance and replacement items.

Knowledge Evidence

The candidate must demonstrate knowledge of:

• site hazard identification methods
• site risk assessment systems
• control measures for work health, safety, site, environmental and traffic control
• personal protective equipment
• communication systems using voice, hand and whistle signals
• first aid
• emergency procedures
• methods of locating services
• pre-operational checks of stump grinders including:
  • logs
  • belts
  • teeth
  • tyre pressure
  • oils and fluids
  • hoses
  • brakes
  • cutter head
  • guards
• safety checks of stump grinders including:
  • guards for belt, power take-off (PTO) and grinder head
  • kill switch
  • dead man
  • debris curtain
  • dust suppression
• exclusion zones
• operation of stump grinders
• cutter head engagement and disengagement
• positioning of stump grinders and operator
• work zone
• methods of determining spread and depth of cut
• recommended depths of cut
• cutting plan
• engine speed (rpm)
• abnormal vibration
- methods of back-filling
- environmental implications of removal activities
- appropriate methods of collecting waste material and disposal or recycling methods
- basic maintenance of stump grinders
- methods of sharpening stump grinders
- methods of teeth replacement of stump grinders
- records of operator usage in log record
- methods of maintaining records for basic maintenance and replacement items.

### Assessment Conditions

It is an industry requirement for competency in this unit that assessment includes a log record, verifying ten (10) hours of operating a stump grinder, and five (5) hours of unloading and loading, setup and pre-operational and safety checks, preparatory work, backfilling and cleaning up, sharpening and basic maintenance, performed by the candidate.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - stump grinder
  - sharpening equipment
  - refuelling kit
  - spill kit
  - emergency communication system
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage – work zone
  - tree stumps
- materials:
  - stump grinder operations form
  - hazard identification and risk control form
  - pre-operational and safety check form
  - emergency preparation form
Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to perform ground based rigging. This unit does not cover crane operations.

The unit applies to ground based workers who undertake defined activities with specialised tools and methods, work in structured and changing contexts, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Performance Evidence

The candidate must be observed using ground based rigging to raise, lower, control and redirect a load during tree pruning and tree removal. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of worksite
- determining correct tree from scope of works
- identifying site hazards, assess risks and report to supervisor
- confirming work zone with work crew and monitoring site
- confirming first aid and emergency personnel, equipment and procedures
- recording and implementing work health, safety, site, environmental and traffic control measures
- assisting with tree examination by observation of defects
- discussing rigging method with work crew
- confirming rigging method supports identified risk controls
- selecting appropriate rigging equipment
- examining, assembling, installing and checking rigging equipment for defects
- selecting and using appropriate personal protective equipment
- communicating with work team during operations using voice, hand and whistle signals
- tying, dressing, setting and finishing arborist knots as required for rigging task
- monitoring rigging system, work team movements and environmental conditions
- maintaining effective communications specific to the rigging task
- controlling load and raising, balancing, lowering or redirecting as communicated
- adjusting rigging as required for mass or dimensions of load
- disconnecting load from rigging system
- checking rigging equipment components
- returning appropriate components to aerial work team member
• removing load from drop zone
• confirming completed rigging operation
• cleaning and checking tools, equipment and machinery, and storing
• reporting and tagging faulty or worn tools and equipment
• cleaning and storing personal protective equipment
• use of industry-standard terminology to describe rigging processes and equipment
• applying work health and safety requirements in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• work zone
• first aid, emergency personnel, equipment and procedures
• work health, safety, site, environmental and traffic control measures
• tree examination
• observation of tree defects
• rigging equipment
• rigging methods
• rigging system
• examination of rigging equipment for defects
• examination of rigging equipment
• assembling rigging equipment
• installing rigging equipment
• checking rigging equipment
• personal protective equipment
• voice, hand and whistle signals
• communications specific to the rigging task
• environmental conditions
• tying, dressing, setting and finishing arborist knots
• controlled loads
• load raising
• lowering loads
• redirecting loads
• balancing load on centre of gravity
• rigging adjustments
• mass of load
• dimensions of load
• rigging equipment components
• rigging operation
• tagging faulty or worn tools and equipment.
Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - rigging equipment
  - static and dynamic rope kit
  - harness
  - lowering and friction devices
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - signage – work zone
  - trees
- **materials:**
  - rigging operations form - ground based
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - site assessment form
  - tree recognition form
  - work communications form
  - work site operations form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to recognise trees and their environmental and social benefits.

This unit applies to individuals who undertake defined activities, work in a structured context, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- locating trees on streets using maps
- examining and recording form, structures and local environment of tree
- examining and recording shape, colour and size of leaves
- examining and recording features of buds, branches and bark
- examining and recording flower type, colour and shape
- examining and recording features of fruit if present
- using all relevant available senses to assist in tree recognition
- examining tree for general condition
- observing signs and symptoms of diseases, pests and problems that assist in recognition of tree
- recording condition of tree and signs and symptoms of diseases, pests and problems on hazard identification form and report to supervisor
- using field guides and photographs to assist in tree recognition
- recognising tree using common name and botanical name where possible
- requesting confirmation of tree recognition from work team in common and botanical names as required
- examining tree for existing habitat use and food source supply
- recognising environmental benefits provided by tree in current location
- recognising value of benefits to the client and community
- recording tree features and observations of tree recognition process
- noting key features observed in the process of tree recognition
- informing client or organisation as required.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- methods of locating trees on streets using maps
- form, structures and local environment of tree
- shape, colour and size of leaves
- features of buds, branches and bark
- flower type, colour and shape
- features of fruit if present
- use of sensory methods in tree recognition
- general condition of trees
- signs and symptoms of diseases, pests and problems that assist in recognition of trees
- hazard identification forms
- field guides and photographs that assist in tree recognition
- recognition of common names of trees and botanical name where possible
- tree examination for existing habitat use and food sources
- environmental benefits provided by trees
- recognition of value of tree benefits to the client and community
- methods of recording tree features and observations of tree recognition process
- key features of trees observed in the process of tree recognition
- methods of informing client and organisation of tree recognition.

Assessment Conditions

It is an industry requirement for competency in this unit that assessment requires methods of assessment that focus on the process of recognition, incorporating the use of multiple reference sources and pathways to recognise trees.

Assessment must provide for a minimum of thirty-five (35) different trees local to the region.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - field guides
• camera/phone camera
• trees and tree samples
• materials:
  • tree recognition form
  • disease profile form
  • hazard identification and risk control form
  • work site operations form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to assist with an aerial rescue where an injured person is in a tree or on an elevated work platform (EWP).

Aerial rescue is likely to be undertaken in emergency situations and involves close, effective team-work to ensure the safety of all personnel and the public during a rescue or the management of an aerial casualty.

The unit applies to ground based workers who undertake defined activities with specialised tools and methods, work in structured and changing contexts, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory.

Pre-requisite Unit

HLTAID003 Provide first aid
AHCARB207 Perform ground based rigging
   
   AHCARB311 Tie, dress, set and finish arborist knots

Performance Evidence

The candidate must be observed assisting in a rescue from an EWP and participating in the rescue of a climber from the ground. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying site hazards, assessing risks and reporting to supervisor
- confirming emergency communication system is working
- confirming emergency services contact numbers are documented
- selecting and checking suitable safety equipment, rescue kit and personal protective equipment
- positioning rescue and first aid equipment for easy access
- clarifying own role in rescue situations
- confirm first aid, rescue personnel, equipment and rescue plan procedures with work team prior to undertaking work
- selecting and using personal protective equipment
- communicating with work team during operations using voice, hand and whistle signals
- attempting communication with casualty
- determining condition of casualty as accurately as possible
- calling emergency services and electricity supply authority as required before assisting with rescue
- determining if the EWP is in contact or closer than ‘safe approach distances’ with electrical wires and apparatus
- determining EWP is structurally stable
- maintaining ‘safe approach distances’
- accessing EWP only if safe to do so
- accessing truck-based controls and lowering bucket to ground if safe to do so
- determining if tree or climber is in contact or closer than ‘safe approach distances’ with electrical wires and apparatus
• maintaining communications with rescuer and casualty, work team and emergency personnel
• keeping all ropes clear and free
• observing rescue route and provide feedback to rescuer
• assisting with managing casualty as they approach ground
• determining if tree or climber is in contact or closer than ‘safe approach distances’ with electrical wires and apparatus
• informing climber of presence of electrical wires
• providing rescue equipment requested by the climber
• installing or use existing high point as instructed
• informing climber of lowering procedure
• installing or using existing friction device to raise and lower the climber as required to lowering the climber to the ground
• applying necessary first aid once casualty is on ground until medical professionals arrive
• securing worksite and control entry until appropriate authorities inspect and release site
• follow procedures for reporting accidents
• isolating equipment involved in accident for potential investigation and preventing re-use until checked
• removing all rescue equipment in a controlled manner
• cleaning and storing rescue equipment
• cleaning and storing personal protective equipment
• maintaining records of aerial rescue in appropriate format
• use of industry-standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• emergency procedures to assist in ground-based rescues of EWP and climbing workers
• hazard identification methods
• risk assessment systems
• Safe Approach Distances
• recognition of live electrical wires or apparatus
• electrical wires and apparatus safety
• first aid procedures
• contents of a first aid kit
• use of a first aid kit
• emergency services communication systems
• emergency services contact numbers
• emergency plans
• appropriate placement of rescue equipment
• rescue kits
• rescue personnel, equipment and rescue plan procedures
• how to control risk to rescuer, victim and others
Assessment Requirements for AHCARB209 Assist with aerial rescue

- types of reporting required after rescue
- personal protective equipment
- how to deal with an emergency
- lowering mechanisms for an aerial rescue
- work health and safety records with regards to incident reporting.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - rescue kit
  - rescue dummy
  - high decibel whistle
  - rigging equipment
  - static and dynamic rope kit
  - harness
  - lowering and friction devices
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage – work zone
  - trees

- materials:
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - rescue assistance form
  - work communications form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be observed working in the arboriculture industry, following instructions from supervisor and meeting industry standards. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying key industry sectors and occupations in arboriculture industry
- recognising and using tools and equipment common in arboriculture industry
- recognising and using common names for trees common in the area and their physiology and growth habits
- recognising and locating trees on streets using maps
- describing arboriculture-specific risks
- describing plant attributes, specific handling and growth requirements of trees
- recognising the benefits of trees and values of those benefits
- recognising risk of harm to self and others from dust, toxic plant parts, fungi, insects, animals and other substances
- interpreting written or verbal work instructions and clarifying inconsistencies with supervisor
- identifying deadlines and planning priorities with supervisor
- reporting variations and difficulties to supervisor
- undertaking own work, responsibilities and duties
- applying work health and safety requirements in the context of own work
• working within team and work environment in accordance with low risk work practices
• following organisation’s workplace procedures, site standards and requirements
• demonstrating a positive attitude to cooperation within workplace
• identifying workplace hazards and report to supervisor
• selecting, wearing and maintaining personal protective equipment (PPE) suitable for work locations and conditions
• selecting PPE appropriate to noise levels
• preparing tools and equipment prior to use and check for faults
• using low risk operating procedures for a variety of equipment and tools in arboriculture
• implementing requirements and issues with working in various weather conditions
• tagging defective equipment and report faults to supervisor
• checking tools and equipment for bluntness and sharpen if required
• checking guards are fitted, securely attached and functioning where applicable
• moving equipment and materials safely using appropriate manual handling methods
• carrying out basic mechanical fault finding and basic tests on machinery and equipment
• testing safety and emergency shutoff devices
• working safely around power sources, services and assets
• communicating with work team during operations using voice, hand and whistle signals
• tying, dressing, setting and finishing arborist knots
• assisting with traffic management around worksite
• assisting in emergency and rescue situations
• confirming first aid and emergency personnel, equipment and procedures
• managing ropes and other objects in the work zone
• monitoring the movement and whereabouts of other workers
• maintaining and monitoring safety and security of equipment while on-site
• recycling or disposing of waste materials
• cleaning and storing tools and equipment and carry out basic servicing where required
• clean vehicles where required
• maintaining workplace records.

Knowledge Evidence

The candidate must demonstrate knowledge of:

• key industry sectors and occupations in arboriculture industry
• tools and equipment common in arboriculture industry
• common names for trees common in the area and their physiology and growth habits
• tree recognition
• methods of locating trees on streets using maps
• arboriculture-specific risks
• plant attributes, specific handling and growth requirements of trees
• benefits of trees and values of those benefits
- risk of harm to self and others from dust, toxic plant parts, fungi, insects, animals and other substances
- interpretation written or verbal work instructions
- clarification of inconsistencies
- deadlines and planning priorities
- variations and difficulties
- work responsibilities and duties
- work health and safety in the context of own work
- teamwork and work environment in accordance with low risk work practices
- organisation’s workplace procedures, site standards and requirements
- importance of drug and alcohol free worksites
- sustainability practices
- hygiene and biosecurity practices
- identification of workplace hazards
- methods of reporting to supervisors
- selection, wearing and maintenance of PPE suitable for work locations and conditions
- selecting PPE appropriate to noise levels
- preparation and fault-checking of tools and equipment prior to use
- low risk operating procedures for a variety of equipment and tools in arboriculture
- requirements and issues of working in various weather conditions
- tagging defective equipment
- checking tools and equipment for bluntness
- sharpen tools and equipment
- checking guards to ensure they are fitted, securely attached and functioning
- appropriate manual handling methods for moving equipment and materials safely
- basic mechanical fault finding and basic tests on machinery and equipment
- safety and emergency shutoff device testing
- safety around power sources, services and assets
- work team communications during operations
- voice, hand and whistle signals
- tying, dressing, setting and finishing arborist knots
- traffic management around worksite
- emergency and rescue situations
- first aid and emergency personnel, equipment and procedures
- rope management and management of other objects in the work zone
- methods of monitoring the movement and whereabouts of other workers
- safety and security of equipment while on-site
- recycling or disposing of waste materials
- cleaning and storing tools and equipment
- basic servicing of tools and equipment
- vehicle cleaning
- maintenance of workplace records.
Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - sharpening equipment
  - static and dynamic rope kit
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - signage - work zone
  - tree and tree samples

- **materials:**
  - work effectiveness form
  - tree recognition form
  - tree maintenance form
  - hazard identification and risk control form
  - equipment and PPE check form
  - knot identification form
  - emergency preparation form
  - work communications form
  - work site operations form
  - work records form.

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to implement a tree maintenance program. It also describes the skills and knowledge required to apply a range of tree maintenance techniques; and monitor and review the maintenance program over the course of a year.

The work requires application of extensive arboricultural knowledge and a broad range of arboricultural skills. This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCCHM303 Prepare and apply chemicals
AHCCHM304 Transport, handle and store chemicals

Unit Sector

Arboriculture (ARB)
## Elements and Performance Criteria

Performance Evidence

The candidate must be observed applying physical and chemical treatments to a range of trees in accordance with a full one-year treatment program. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- performing a site assessment to identify conditions which may impact upon the health of trees on site
- recognising stress inducing factors in accordance with characteristics of species
- recognising a wide range of common diseases, pests and nutritional deficiencies in trees
- assessing abiotic issues affecting health of trees, or impact on growth
- researching species characteristics on tree health
- collecting specimens of stressed material
- recording and report results of site assessment and tests
- accessing and read treatment program and confirm activities with management
- selecting, using and maintaining suitable personal protective equipment
- selecting appropriate treatment methods and equipment
- identifying environmental implications of undertaking treatment program,
- assessing likely outcomes of treatment programs and taking appropriate action
- determining annual maintenance requirements for trees
- contributing to preparation of a comprehensive full-year maintenance program
- recording and implementing work health, safety, site, environmental and traffic control measures
- preparing and using equipment
- applying physical or chemical treatments with due regard for environmental implications
- maintaining growing environment in accordance with species needs
• monitoring and reviewing maintenance program over season of one year
• disposing of infected plant material and chemical waste appropriately
• sterilising equipment
• following up physical or chemical treatments to ensure effectiveness
• determining timetables for follow up treatments and communicating to work team
• maintaining records and documenting a report for that year
• use of appropriate treatment methods and equipment
• communicating within the work team
• complying with relevant Australian Standards
• use of industry standard terminology to describe arboriculture and work environment
• applying work health and safety requirements in the context of own work.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• site-specific risk assessment methods
• treatments and treatment methods commonly used on trees
• comprehensive full-year maintenance programs
• recognition of a wide range of common diseases, pests and nutritional deficiencies in trees
• the abiotic issues that could affect the health of tree species
• methods of recording, storing and processing data
• how to interpret a treatment program
• the appropriate personal protective equipment
• methods of collecting and storing specimens for identification
• methods of testing collected specimens of stressed material
• worksite traffic control
• stress inducing factors for a variety of tree species
• methods for treating tree pests and diseases
• methods of analysing nutritional status of trees
• health characteristics of tree species.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:
Assessment Requirements for AHCARB301 Implement a tree maintenance program

- equipment:
  - sprayers/application equipment
  - measuring and weighing equipment
  - spill kit
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage - chemical use
  - signage - work zone
  - trees
- materials:
  - tree inspection form
  - tree maintenance form
  - site assessment form
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - chemical and treatment application form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be observed inspecting a range of trees, compiling a complete record of work site and tree risk assessment data to determine the appropriate access method and work method. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- preparing forms for recording inspection
- determining the scope of works
- determining stakeholder needs and local regulations
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- selecting, preparing, and carrying out pre-operational and safety checks, on tools, equipment and machinery
- selecting and using personal protective equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- recording tree type, location and dimensions
- inspecting for tree access and tree work methods
- inspecting branches for health, vitality and integrity of attachment
- inspecting tree for defects, signs and symptoms of disease, insects and other fauna
- tree structure and structural defects
- recording findings on hazard identification form
- undertaking load testing
- probing cavities and testing hollows by sounding
- recording result when tree condition requires modified work methods
• selecting appropriate method of access and tree work method
• assessing risk of selected method of access and tree work method
• conducting a meeting and confirming selected method of access and tree work method
• recording work site confirmation of method of access, work method and appropriate risk controls
• recording result when tree access or work is inappropriate
• advising client and stakeholders of requirements for further advice or testing
• seeking further advice from consulting arborist or access specialist
• completing inspection forms and submitting to client and stakeholders.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• tree inspection method/s and principles
• preparation of forms for inspection, hazard identification, environmental conditions and risk control
• determination of location of above-and-below-ground services
• site-specific risk assessments
• pre-operational and safety checks, on tools, equipment and machinery
• personal protective equipment
• work health, safety, site, environmental and traffic control measures
• methods of determining tree types, location and dimensions
• tree access and tree work methods
• branch health, vitality and integrity of attachment
• defects, signs and symptoms of disease, insects and other fauna of trees
• methods of load testing, cavity probing and hollows testing
• methods of tree access and tree work
• modified tree access or work methods
• inappropriate methods of tree access and tree work
• requirements for further advice or testing
• methods of seeking further advice from consulting arborists or access specialists
• completion and submission of forms.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.
The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage - work zone
  - trees

- **materials:**
  - tree inspection form
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to perform corrective and remedial pruning operations. The application of this unit of competency can occur on the ground or in aerial locations, once the candidate is situated in position to perform work. This unit of competency is independent of where the pruning occurs and the method of accessing the work location.

This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, materials and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable current versions of Australian Standards such as AS 4373 Pruning of amenity trees.

Pre-requisite Unit

<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare for pruning operations
   1.1 Determine location of above-and-below-ground services
   1.2 Undertake a site-specific risk assessment by identifying work health and safety hazards and assessing risk
   1.3 Receive pruning instructions from supervisor and clarify prior to undertaking work
   1.4 Confirm first aid, rescue personnel, equipment and procedures
   1.5 Communicate with work team during operations using voice, hand and whistle signals

2. Determine requirements of pruning work
   2.1 Identify and confirm location of tree to be pruned
   2.2 Inspect trees for access and work
   2.3 Determine type, extent and limit of pruning work in accordance with specifications, scope of works and client brief
   2.4 Maintain awareness of power line proximity, safe approach distances and clearances

3. Select and prepare tools and equipment
   3.1 Select appropriate tools and equipment for pruning
   3.2 Consider access and impact value of secateurs, handsaws, chainsaws and polesaws
   3.3 Carry out pre-operational and safety checks on pruning tools and equipment
   3.4 Select and use personal protective equipment
   3.5 Sterilise pruning equipment in between individual tree work in accordance with hygiene and biosecurity considerations
   3.6 Record and implement work health, safety, site, environmental and traffic control measures

4. Determine tree part to be removed
   4.1 Investigate stem bark ridge, old cuts, dead branches and occluded and occluding branches
   4.2 Determine separate parts to be a branch or co-dominant stem in relation to tree anatomy and branch attachment
   4.3 Determine the part requiring removal to be a branch or co-dominant stem to select the appropriate pruning procedure

5. Carry out branch pruning operations
   5.1 Use sharp pruning tools to make clean cuts
   5.2 Operate chainsaws and polesaws as required to implement

Performance Evidence

The candidate must perform the remedial and corrective pruning operations involved in branch pruning, reduction pruning and stem pruning. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- receiving pruning instructions from supervisor and clarifying prior to undertaking work
- communicating with work team during operations using voice, hand and whistle signals
- confirming first aid, rescue equipment and rescue procedures applicable to tree work
- identifying location of tree to be pruned
- inspecting trees for access and work
- determining type extent and limit of pruning work in accordance with the specifications, scope of works or client brief
- maintaining awareness of power line proximity, safe approach distances and clearances
- selecting appropriate tools and equipment for pruning
- considering access and impact value of secateurs, handsaws, chainsaws and polesaws
- selecting, preparing, and carrying out pre-operational and safety checks, on tools, equipment and machinery
- selecting and using personal protective equipment
- sterilising pruning equipment in between work on individual trees in accordance with hygiene and biosecurity considerations
- recording and implementing work health, safety, site, environmental and traffic control measures
• investigating stem bark ridge, old cuts, dead branches and occluded and occluding branches
• determining the separate parts to be a branch or co-dominant stem in relation to the tree anatomy and branch attachment
• determining the part requiring removal to be a branch or a co-dominant stem
• using sharp pruning tools to make clean cuts
• operating chainsaws and polesaws
• implementing pruning cuts to the standards required by AS 4373
• applying compartmentalisation of decay in tree (CODIT) principles
• pre-cutting or undercutting branches to avoid splitting or tearing
• removing remaining stub with final cut
• observing final cut procedure for branch removal for cutting as close as possible to the branch collar without cutting into the branch collar or leaving a protruding stub.
• using branch bark ridge to determine angle of cut when removing a branch in the absence of a visible collar
• ensuring bark at edge of all branch pruning cuts remains firmly attached
• using the branch bark ridge as a guide to the angle and position of the final cut when making reduction cuts
• ensuring the lateral branch to which the final cut is made, is at least one third of the diameter of the branch being reduced at the point of the final cut.
• using the stem bark ridge to determine the angle of cut when removing a co-dominant stem
• being guided to the position and angle of the final cut, by positions and angles of joins between tissue of declining or dead stems and those of healthy stems elsewhere in tree
• ensuring bark at edge of all stem pruning cuts remains firmly attached
• inspecting past pruning cuts to determine tree response
• using tree response to assess the quality of past pruning cuts
• seeking feedback on pruning from other arborists
• identifying and rectifying incorrect pruning cuts
• modifying future pruning cuts based on tree responses and feedback from others
• dropping pruning material into designated drop zone
• cleaning, maintaining and storing tools and equipment
• collecting and disposing of, or recycling pruned material in a manner that causes minimal environmental damage
• maintaining workplace records
• use of industry-standard terminology to describe arboriculture and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:

• risk assessment
• visual tree assessment
• tree health, growth habit, structure, stability and growing environment
• first aid
• operation of chainsaws and polesaws
• tree and branch anatomy and attachments: lateral branch collars, branch bark ridges, stem bark ridges
• pruning cuts to the standards required by AS 4373
• reduction cuts
• tree response to pruning
• correct and incorrect pruning cuts
• rectifying cuts
• pruning hygiene
• biosecurity
• communications using voice, hand and whistle signals
• power line proximity, safe approach distances and clearances
• rescue personnel, equipment and procedures applicable to tree work
• interpreting specifications
• maintaining workplace records
• disposal of plant debris in environmentally aware and sensitive manner
• work health and safety procedures for pruning operations.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment; however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • chainsaws - climbing saw
  • pole saw
  • pruning handsaws
  • high decibel whistle
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
  • signage - work zone
  • trees and tree parts
• materials:
- pruning operations form
- hazard identification and risk control form
- equipment and PPE check form
- emergency preparation form
- work communications form
- work site operations form
- work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to dismantle trees in confined spaces and in difficult or hazardous circumstances.

This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, materials and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Discretion and judgement is required. The work requires the application of extensive arboricultural knowledge. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

The prerequisite units of competency for this unit are:

- AHCARB310 Perform aerial rigging
- AHCARB307 Use advanced climbing techniques
  OR
  TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)
- FWPFGM3212 Fall trees manually (intermediate).

Note the following chain of prerequisites that also applies to this unit of competency.
### Unit of competency

### Unit Sector

Arboriculture (ARB)

### Elements and Performance Criteria

#### Element

Elements describe the essential outcomes.

#### Performance criteria

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. **Prepare for tree removal**
   1.1 Determine access to site and gain approval by owner or site management
   1.2 Confirm site preparations, including notification of local residents and authorities where necessary
   1.3 Determine location of above-and-below-ground services
   1.4 Undertake a site-specific risk assessment by identifying work health and safety hazards and assessing risk
   1.5 Protect, relocate and secure assets, property and vegetation related to work zone activities from potential damage during tree removal
   1.6 Inspect trees to determine dimensions, appropriate removal methods and to confirm appropriateness of selected risk controls
   1.7 Determine drop zone and communicate to all personnel
   1.8 Confirm first aid, rescue personnel, equipment and procedures applicable to tree work
### Element | Performance criteria
--- | ---
1.9 | Carry out pre-operational and safety checks on tools, equipment and machinery
1.10 | Select and use personal protective equipment
1.11 | Record and implement work health, safety, site, environmental and traffic control measures

2. Implement dismantling of trees

2.1 | Communicate with work team during operations, as required, verbally, using hand signals and whistles
2.2 | Calculate mass of tree section, balance of load and confirm mass does not exceed safe working limit of equipment
2.3 | Use dismantling techniques to ensure branches and trunk sections fall or are lowered safely into determined drop zone, with no damage to property and equipment or injury to personnel
2.4 | Use and control friction devices as required
2.5 | Dismantle branches and trunk sections using the ‘cut and drop’ method, and cut and lower by ropes and other lowering devices
2.6 | Use directional felling techniques to ensure trunk of dismantled tree falls safely into determined drop zone with no damage to property and equipment or injury to personnel
2.7 | Use and control elevated work platforms as required

3. Complete tree removal

3.1 | Reduce dismantled tree sections to manoeuvrable lengths
3.2 | Remove plant material and debris from site
3.3 | Clean and check tools, equipment and machinery, and store
3.4 | Lean and store personal protective equipment
3.5 | Record completion of tree removal and report to owner or site manager

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

Performance Evidence

The candidate must be observed removing a tree in a confined space using directional felling and removing a tree in a confined space using a dismantling process. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- inspecting trees to determine appropriate removal methods
- confirming appropriateness of selected risk controls
- determining access to site and gaining approval by owner or site management
- confirming site preparations, including notification of local residents and authorities where necessary
- recording and implementing work health, safety, site, environmental and traffic control measures
- determining drop zone and communicating to all personnel
- protecting, relocating and securing assets, property and vegetation related to work zone activities from potential damage during tree removal
- selecting, preparing, checking and using tools, equipment and machinery
- selecting and using personal protective equipment
- selecting and using safety equipment
- calculating mass of tree section
- confirming mass of tree section does not exceed the safe working limit of equipment
- dismantling branches and trunk sections using the ‘cut and drop’ method, and
- cutting and lowering sections by ropes and other lowering devices
• using dismantling techniques to ensure branches and trunk sections fall or are lowered safely into determined drop zone, with no damage to property and equipment or injury to personnel
• using directional felling techniques to ensure trunk of dismantled tree falls safely into determined drop zone with no damage to property and equipment or injury to personnel
• using and controlling friction devices where required
• using and controlling elevated work platforms as required
• reducing dismantled tree section to manoeuvrable lengths without injury to operator
• removing dismantled tree material and debris from site
• cleaning and checking tools, equipment and machinery, replacing if faulty or worn, and storing
• recording completion of tree removal and reporting to owner or site manager
• use of advanced rigging techniques
• calculating tree dimensions, mass of tree section and balance of load
• erecting signage, barriers, warning devices and traffic management equipment
• coordinating and sequencing work team activities
• use of industry standard terminology to describe arboriculture and work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

• site and tree hazards that might be encountered
• selection of low risk tree removal methods
• advanced climbing techniques and rope handling
• selecting and tying, dressing, setting and finishing arborist knots
• operation of lowering devices where required
• types of lowering devices that might be required, including friction devices, and methods for using them
• how to estimate density of tree sections
• the impact of force, breaking strength, safety factors and cycles to failure
• how to identify and evaluate structural defects in trees
• how to determine the density of tree sections
• safe working limits on all relevant rigging and lowering equipment
• methods of estimating mass and balance of load
• first aid and rescue personnel, equipment and procedures applicable to tree work
• methods of minimising environmental impact
• legislation and local regulations governing tree removal.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.
Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - rigging equipment
  - single rope technique (SRT) climbing kit
  - static and dynamic rope kit
  - harness
  - lowering and friction devices
  - gaffs/spurs
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - signage – work zone
  - trees

- **materials:**
  - dismantling operations form
  - chainsaw operations form
  - pruning operations form
  - knot identification form
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - rescue form - aerial
  - work communications form
  - work site operations form
  - work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to perform an aerial rescue where an injured or unconscious person is safely brought to the ground from a tree or elevated work platform (EWP).

The unit applies to Arborists preparing and planning for the coordination and execution of rescue operations and the implementation of safety and first aid requirements.

Aerial rescue is likely to be undertaken in emergency situations with little or no supervision. It involves working closely with other members of a team to ensure the safety of all personnel and the public during a rescue operation. This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, materials and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

The prerequisite units of competency for this unit are:
- HLTAID003 Provide first aid
- AHCARB310 Perform aerial rigging.

Note the following chain of prerequisites that also applies to this unit of competency.

Performance Evidence

The candidate must be observed planning and implementing a rescue operation and undertaking an aerial rescue. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming emergency communication system is working
- confirming emergency services contact numbers are documented
- selecting, preparing and checking first aid equipment and rescue kit
- positioning rescue and first aid equipment for easy access
- clarifying own role in rescue situations
- confirming first aid, rescue personnel, equipment and rescue plan procedures with work team prior to undertaking work
- selecting and using personal protective equipment
- communicating with work team during operations using voice, hand and whistle signals
- attempting communication with casualty
- activating emergency plan and requesting assistance from work team and public in accordance with rescue plan
- identifying hazards associated with rescue, assessing risks and implementing suitable controls
• determining presence of live electrical wires or apparatus that will interfere with ability to access casualty and take appropriate action
• applying ‘safe approach distance’ measures to live electrical situations
• using appropriate access equipment to carry out rescue in accordance with rescue plan
• maintaining communication with casualty
• securing rescuer safely
• securing casualty
• assessing injuries to determine whether or not to move casualty based on first aid procedures and risk assessment
• applying first aid that can be performed above ground, as required
• supporting, but do not move, a casualty with possible neck or spinal injuries and awaiting expert medical treatment
• maintaining communications with ground crew
• informing casualty of lowering procedure
• preparing casualty for descent in accordance with first aid, rescue plan and risk assessments
• descending tree safely in a controlled manner
• lowering casualty safely to ground with support of ground crew
• applying first aid on ground as needed
• obtaining emergency assistance as required
• isolating equipment involved in accident for potential investigation and prevent reuse until checked
• removing all equipment in a controlled manner
• cleaning and storing equipment
• cleaning and storing personal protective equipment
• maintaining records of aerial rescue in appropriate format
• using industry standard terminology to describe aerial rescues and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• emergency procedures to assist in ground-based rescues of EWP and climbing workers
• hazard identification methods
• risk assessment systems
• Safe Approach Distances
• recognition of live electrical wires or apparatus
• electrical wires and apparatus safety
• first aid procedures
• contents of a first aid kit
• use of a first aid kit
• emergency services communication systems
• emergency services contact numbers
• emergency plans
• appropriate placement of rescue equipment
• use of rescue kits
• rescue personnel, equipment and rescue plan procedures
• how to control risk to rescuer, victim and others
• types of reporting required after rescue
• personal protective equipment
• how to deal with an emergency
• lowering mechanisms for an aerial rescue
• work health and safety records with regards to incident reporting.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:
• equipment:
  • rescue kit
  • rescue dummy
  • emergency communication system
  • rigging equipment
  • single rope technique (SRT) climbing kit
  • static and dynamic rope kit
  • harnesses
  • lowering and friction devices
  • high decibel whistle
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
  • signage – work zone
  • trees
• materials:
  • rescue form - aerial
  • hazard identification and risk control form
  • equipment and PPE check form
Assessment Requirements for AHCARB306 Undertake aerial rescue

- emergency preparation form
- knot identification form
- work communications form
- work site operations form.

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to climb trees with ropes, harnesses and specialist equipment using advanced techniques for the purpose of mobility around the required sections of trees for work positioning.

This unit applies to individuals who have a range of cognitive, technical and communication skills to select and apply a specialised range of methods, ropes, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Discretion and judgement is required. The work requires the application of extensive arboricultural knowledge. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCARB312 Use standard climbing techniques to access trees

AHCARB311 Tie, dress, set and finish arborist knots

Unit Sector

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare site and inspect equipment
   - 1.1 Determine appropriate method for accessing tree – climbing or using an elevated work platform (EWP) – through discussion with work team
   - 1.2 Determine location of above-and-below-ground services
   - 1.3 Undertake a site-specific risk assessment by identifying work health and safety hazards and assessing risk
   - 1.4 Confirm first aid and rescue personnel, equipment and procedures
   - 1.5 Ensure work team member present, capable, willing and equipped to assist or perform aerial rescue operations
   - 1.6 Prepare and carry out pre-operational and safety checks, on ropes, harnesses, tools and equipment
   - 1.7 Select and use personal protective equipment
   - 1.8 Record and implement work health, safety, site, environmental and traffic control measures

2. Select climbing equipment
   - 2.1 Select harness and appropriate equipment for climbing
   - 2.2 Inspect tree to determine low risk access route through discussion with work team and seek feedback
   - 2.3 Estimate tree height and load in relation to safe working limits of ropes and equipment
   - 2.4 Determine the hold, release and grip attributes of rope
   - 2.5 Select and use static and dynamic rope as required
   - 2.6 Select and use triple locking carabiners
   - 2.7 Determine limits, relative advantages and disadvantages of friction hitches

3. Prepare to access tree
   - 3.1 Tie, dress, set and finish climbing knots and hitches
   - 3.2 Communicate with work team during operations using voice, hand and whistle signals
   - 3.3 Maintain awareness of power line safe approach distances and vegetation clearances
   - 3.4 Select low risk anchor points in accordance with strength, suitability requirements and branch weight

4. Prepare climbing spurs and gaffs for dismantling operations
   - 4.1 Prepare climbing spurs and gaffs for dismantling operations
   - 4.2 Check all components of climbing spurs for defects and wear
   - 4.3 Check gaff tip profile for correct dimensions using gaff gauge
   - 4.4 Sharpen gaff tip cutting edge with file at defined angle using gaff gauge

Performance Evidence

The candidate must be observed ascending and descending trees using advanced tree climbing practices.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts. The candidate must provide evidence for and demonstrate:

- appropriate method for accessing tree – climbing or using an EWP – through discussion with work team
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming first aid and rescue personnel, equipment and procedures
- ensuring work team member present, capable, willing and equipped to assist or perform aerial rescue operations
- preparing and carrying out pre-operational and safety checks, on ropes, harnesses, tools and equipment
- selecting and using personal protective equipment and safety equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- selecting harness and appropriate equipment for climbing
- inspecting tree to determine low risk access route through discussion with work team and seek feedback
- estimating tree height and load in relation to safe working limits of ropes and equipment
- determining the hold, release and grip attributes of rope
- selecting and using static and dynamic rope as required
- selecting and using triple locking carabiners
• determine limits, relative advantages and disadvantages of friction hitches including: Tautline, Blake’s, Prussik, Klemheist, Valdetain, French Prussik and specialised variations
• tying, dressing, setting and finishing climbing knots and hitches
• communicating with work team during operations using voice, hand and whistle signals
• maintaining awareness of power line safe approach distances and vegetation clearances
• selecting low risk anchor points in accordance with strength, suitability requirements and branch weight
• accessing and ascending tree using low risk access route with harness and lanyard
• ascending using single rope, double rope and selected friction hitch as required
• ascending using uni-ascenders and foot ascenders as required
• using micrograbs, grigris and micro-pulleys as required for access and tree operations
• demonstrating ability to carry out change-overs
• setting up redirects and belays using slings and anchors
• selecting multiple lines to access trees and tree parts
• selecting multiple lines to perform tree operations
• descending tree in a controlled manner
• removing all access equipment in a controlled manner
• cleaning and storing climbing equipment
• cleaning and storing personal protective equipment
• use of industry standard-terminology to describe climbing and the work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• appropriate method of tree access
• selection of climbing or EWP access
• determination of location of above-and-below-ground services
• site-specific risk assessment
• first aid personnel, equipment and procedures
• rescue personnel, equipment and procedures
• work health, safety, site, environmental and traffic control measures
• pre-operational and safety checks, on ropes, harnesses, tools and equipment
• personal protective equipment
• types of climbing ropes
• dynamic and static ropes
• rope characteristics
• uses of climbing ropes
• safe working limits of ropes
• safe working limits of equipment
• defects in ropes, tools and equipment
• climbing harnesses and lanyards
• climbing equipment
Assessment Requirements for AHCARB307 Use advanced climbing techniques

- triple action carabiners
- friction hitches including:
  - Tautline, Blake’s, Prussik, Klemheist, Valdetaín, French Prussik and specialised variations
- arborist knots
- tying knots
- dressing knots
- setting knots
- checking knots
- finishing knots
- industry voice, hand and whistle signals
- low risk access routes
- estimation of tree height
- estimation of load
- safe working limits
- tree access techniques and equipment
- strength and suitability requirements
- single and double rope techniques
- uni-ascenders and foot ascenders
- micrograbs, grigris, micro-pulleys
- use of climbing spikes of various lengths
- change-overs
- redirects and belays using slings and anchors
- use of multiple lines to access trees and tree parts
- advanced climbing techniques
- low risk anchor points
- maintenance of awareness of power lines
- power line safe approach distances and vegetation clearances
- controlled descent operations
- controlled removal of access equipment
- cleaning of equipment
- storage of equipment.

Assessment Conditions

It is an industry requirement that delivery of training and assessment in this unit provides for the explicit conditions of work team capability for aerial rescue operations. It is an industry requirement for competency in this unit that assessment must include a log record of two hundred (200) hours of advanced climbing.
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit. Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - single rope technique (SRT) climbing kit
  - harness
  - chaps
  - climbing friction hitches
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - trees

- **materials:**
  - climbing techniques form - advanced
  - climbing log record – advanced
  - tree inspection form
  - hazard identification and risk control form
  - equipment and PPE check form
  - knot identification form
  - work communications form
  - rescue form - aerial

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to install cable and bracing hardware into the structure of a tree.

The work requires the application of extensive arboricultural knowledge. This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems.

Some discretion and judgement may be required to the extent of pruning and cable and bracing required for a particular tree. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Performance Evidence

The candidate must be observed installing cable and bracing according to a pruning program.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment
- determining cable and bracing requirements from client brief
- confirming first aid and rescue procedures applicable to tree work
- examining structural tree components
- examining vitality and structural integrity of branch attachments
- identifying work health and safety hazards and assessing risk
- recording and implementing site and traffic control measures
- use of tree climbing techniques or ability to work from an elevated work platform
- installing cable and bracing
- determining requirement for additional pruning
- checking and recording completed program for quality of work
- use of industry standard terminology to describe arboriculture and work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the effect of pruning on tree growth, habit and form
- tree anatomy and tree physiology
- tree pruning techniques appropriate to requirements of species
• visual tree assessment
• selection of appropriate cable and bracing tools and equipment
• selection of suitable personal protective equipment
• the principles and methods of pruning (tree anatomy and physiology)
• identification of work health and safety hazards, risk assessment and risk control application
• quality of pruning work
• cable and bracing techniques appropriate to tree species
• cable and bracing theory
• Compartmentalisation of Decay in Trees (CODIT) principles
• implications of pruning cuts and the way trees respond
• sustainable growth requirements of trees
• natural habit and form of trees
• first aid and rescue personnel, equipment and procedures applicable to tree work
• local government tree protection and preservation regulations
• Australian Standard 4373–2007 relating to tree pruning.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • dynamic and static cable and bracing tools and products
  • high decibel whistle
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
  • signage – work zone
  • trees
• materials:
  • cable and bracing operations form
  • hazard identification and risk control form
  • equipment and PPE check form
  • emergency preparation form
• work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be observed determining the protection requirements of a tree, setting out a site according to the requirements of the protection program and constructing protective devices appropriate to the needs of the tree.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- identifying trees to be protected, reasons for protection and types of protection methods
- assessing and recording environmental impacts of the program
- determining, scheduling and allocating implementation tasks
- making allowances for contingencies
- marking location of protection areas on the site
- erect safety barriers and signage to ensure public and operator safety
- carrying out pre-operational and safety checks
- recording and implementing work health, safety, site, environmental and traffic control measures
- constructing or assembling tree protection devices appropriate for needs of tree
- installing tree protection devices
- inspecting completed protection devices for viability
- monitoring tree health
- reporting and repairing broken, damaged or ineffective protection devices
- dismantling and removing protection devices
- maintaining records
• recognising healthy, stressed and damaged trees
• use of industry standard terminology to describe arboriculture and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• methods of identifying and protecting trees
• tree protection systems, types and methods of protection
• methods of marking sites
• environmental impact assessment methods
• selection, use and maintenance of suitable personal protective equipment
• application of work health safety and environmental controls
• task scheduling and contingency management
• tree health (tree physiology)
• systems for use installation of safety barriers and signage
• tree protection plans
• techniques for assembling or constructing tree protection devices suitable to the requirements of tree species
• protection requirements of tree species
• remedial actions for tree health
• first aid and rescue personnel, equipment and procedures applicable to tree work
• specifications and construction methods for installing protection devices
• environmental factors affecting trees
• principles, regulations and practices for restricting access and traffic management.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:
• equipment:
  • tree protection devices/equipment
  • construction tools
  • personal protective equipment (PPE)
  • first aid and emergency kit

Application

This unit of competency describes the skills and knowledge required to perform aerial rigging by selecting and using appropriate equipment and methods. This work requires application of extensive arboricultural skills and knowledge, including various rigging techniques for lowering, controlling and redirecting loads during tree pruning and tree removal. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Discretion and judgement is required. Elevated work platforms may be involved.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCARB207 Perform ground based rigging*

AHCARB311 Tie, dress, set and finish arborist knots

Performance Evidence

The candidate must be observed demonstrating rigging techniques for lowering, controlling and redirecting loads during tree pruning and tree removal.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- confirming location of worksite and location of correct tree as identified in scope of works
- ensuring scope of works is within capacity and limits of team and equipment
- obtaining required site permits and licenses
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- inspecting trees and identifying structural defects in relation to taxonomic tree species, tree anatomy, and tree physiology
- considering impact of wind speed and direction on rigging methods
- considering ‘cycles to failure’ of load-bearing equipment
- selecting, preparing, and carrying out pre-operational and safety checks, on tools, equipment and machinery
- selecting and using personal protective equipment
- discussing and confirming work-zones locations and areas with work team
- recording and implementing work health, safety, site, environmental and traffic control measures
- communicating with work team during operations using voice, hand and whistle signals
- determining load limit of rigging system
- selecting appropriate anchor and attachment points
• considering mass and dimensions of tree part, centre of gravity, dimensions in relation to working space
• calculating load and balance
• consider breaking strength and safety factor of equipment in use
• determining impact of force under normal and failure conditions and apply safety factor
• designing rigging system to allow for load and impact of force
• discussing rigging system with work team
• selecting appropriate rigging equipment and inspecting for defects
• assembling and installing rigging equipment
• identifying problems, unsafe rigging practices and provide alternative rigging solutions
• maintaining effective communication with work team during rigging process
• attaching rigging and using appropriate knots as required
• monitoring and adjusting rigging system, taking into account environmental conditions
• testing tensioned load
• controlling load and raise, lowering or redirecting as required and in a manner appropriate to worksite
• operating lowering and friction devices
• performing tip lowering, butt lowering, horizontal lowering and lifting as required
• matching load frequency and size to processing capacity of ground crew
• retrieving appropriate components of rigging system
• checking proper completion of rigging operations
• cleaning and checking tools, equipment and machinery, replacing if faulty or worn, and storing
• use of industry standard terminology to describe arboriculture, equipment and work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• site-specific risk assessments
• above-and-below-ground services
• selection, tying methods and purpose of appropriate industry knots
• types and purposes of a range of rigging equipment and devices
• estimation of distances and dimensions of tree parts and equipment
• estimation of centre of gravity for balancing a load
• how to estimate areas for safe work zones
• estimation of breaking strength, safety factor and cycles to failure
• signals and communication systems
• common problems and hazards with rigging and their potential consequences and solutions
• breaking strain, safe working load and ‘cycles to failure’ for rigging equipment
• anatomy, physiology, and taxonomy of tree species for a range of trees
• how variations in weather such as wind speed and direction affect work
• signs of equipment defects
• structural defects in trees
• operational use of lowering and friction devices
• first aid and rescue personnel, equipment and procedures applicable to tree work.

**Assessment Conditions**

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - rigging equipment
  - single rope technique (SRT) climbing kit
  - static and dynamic rope kit
  - harness
  - lowering and friction devices
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - signage – work zone
  - trees

- **materials:**
  - rigging operations form - aerial
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - rescue form - aerial
  - work communications form
  - knot identification form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.
Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Ground-based Rigging applications must include knowledge of:
- Alpine butterfly knot
- Bowline on the bight
- Cows hitch with better half
- Clove hitch + two half hitches
- Half hitch pre knot
- Klemheist friction knot
- Marline pre knot
- Marline spike hitch
- Riggers knot + two half hitches
- Running bowline
- Sheet bend
- Slippery sheet bend
- Timber hitch
- Zeppelin bend

Above Ground applications must include knowledge of:
- Scaffold knot
- Double Fishermans Knot/Prusik loop
- Girth Hitch
- English Prusik Knot
- Marlin Spike
- Clove Hitch
- Double Overhand Stopper Knot
- Sheet bend
- Slippery Sheet Bend
- Bowline Knot
- Running Bowline Knot

Aerial Rigging applications must include knowledge of:
- Cows hitch
- Riggers knot + two half hitches
- Clove hitch + two half hitches
- Alpine butterfly knot
- Half hitch pre knot
- Marline pre knot
- Marline spike hitch
- Zeppelin bend
- Running bowline
- Bowline on the bight
- Rolling hitch
- Timber hitch
- Sheet bend
- Slippery sheet bend

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming first aid and emergency equipment and procedures applicable to tree work
- selecting and using appropriate personal protective equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- communicating with work team during operations using voice, hand and whistle signals
- determining work application for:
  - ground-based knots
  - aerial knots
  - rigging knots and
  - climbing knots
- determining appropriate knot for locking and non-locking attributes, strength, impact on rope strength, loosening and slippage
- determining loss of rope strength using selected knot
- determining appropriate rope for knot application
- determining requirements for secondary knots and stopper knots
- determining appropriate rope used for knot application
- tying knot to form intended knot
- leaving appropriate tail length approximately five times diameter of rope
- dressing knot to align all parts of knot
- setting knot to ‘tighten and load’ knot prior to use
- finishing knot with selected stopper knot as required
• inspecting completed knot
• checking knot for correctness of assembly
• confirming knot for correct work application
• maintaining effective communication with work team
• installing and using knot in work application
• untangling knot at completion of work task
• clean and check ropes
• reporting and tagging faulty or worn ropes
• cleaning and storing personal protective equipment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

• site-specific risk assessment
• first aid and emergency equipment and procedures
• personal protective equipment
• work health, safety, site, environmental and traffic control measures
• voice, hand and whistle signals
• work applications for knots
• knots for ground-based rigging tasks
• knots for aerial rigging tasks
• knots for climbing work tasks
• determination of appropriate knot by evaluation of knot attributes:
  • locking and non-locking attributes
  • impact on rope strength
  • loosening and
  • slippage
• determining loss of rope strength using selected knot
• determination of appropriate rope for knot application
• knot tying
• intended knot
• tail length
• diameter of rope
• alignment of knot parts
• knot setting
• knot tightening and loading
• stopper knot
• knot finishing
• correctness of assembly and use in application
• inspection, installation and use of knots
• effective work team communications
• tagging system
• checking and cleaning ropes.

**Assessment Conditions**

It is an industry requirement for the assessment of the knots appropriate to the work application as listed in the Range of Conditions section of this unit of competency.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • static and dynamic rope kit
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
• materials:
  • knot identification form
  • hazard identification and risk control form
  • equipment and PPE check form
  • emergency preparation form
  • work communications form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to climb trees with ropes and harnesses using standard techniques for the purpose of accessing required sections of trees.

This unit applies to workers who have a range of cognitive, technical and communication skills to select and apply a specialised range of methods, ropes, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

Performance Evidence

The candidate must be observed climbing trees using standard climbing techniques in a safe manner. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- appropriate method for accessing tree – climbing or using an EWP – through discussion with work team
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming first aid and rescue personnel, equipment and procedures
- ensuring work team member present, capable, willing and equipped to assist or perform aerial rescue operations
- preparing and carrying out pre-operational and safety checks, on ropes, harnesses, tools and equipment
- selecting and using personal protective equipment and safety equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- selecting harness and appropriate equipment for climbing
- inspecting tree to determine low risk access route through discussion with work team and seek feedback
- estimating tree height and load in relation to safe working limits of ropes and equipment
- determining the hold, release and grip attributes of rope
- selecting and using dynamic rope
- selecting and using triple locking carabiners
- tying, dressing, setting and finishing climbing knots and hitches
- communicating with work team during operations using voice, hand and whistle signals
- maintaining awareness of power line clearances
• selecting low risk anchor points in accordance with strength, suitability requirements and branch weight
• accessing and ascending tree using low risk access route with harness and lanyard
• ascending using double rope with prussik technique
• ascending using trunk walking technique and foot ascenders as required
• descending tree in a controlled manner
• removing all access equipment in a controlled manner
• cleaning and storing climbing equipment
• cleaning and storing personal protective equipment
• use of industry standard-terminology to describe climbing and the work environment.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

• appropriate method of tree access
• selection of climbing or EWP access
• determination of location of above-and-below-ground services
• site-specific risk assessment
• first aid personnel, equipment and procedures
• rescue personnel, equipment and procedures
• work health, safety, site, environmental and traffic control measures
• pre-operational and safety checks, on ropes, harnesses, tools and equipment
• personal protective equipment
• types of climbing ropes
• dynamic ropes
• rope characteristics
• uses of climbing ropes
• safe working limits of ropes
• safe working limits of equipment
• defects in ropes, tools and equipment
• climbing harnesses and lanyards
• climbing equipment
• triple locking carabiners
• arborist knots
• tying knots
• dressing knots
• setting knots
• checking knots
• finishing knots
• industry voice, hand and whistle signals
• low risk access routes
• estimation of tree height
Assessment Requirements for AHCARB312 Use standard climbing techniques to access trees

- estimation of load
- safe working limits
- tree access techniques and equipment
- strength and suitability requirements
- double rope with prussik technique
- trunk walking and foot ascenders
- standard climbing technique
- low risk anchor points
- maintenance of awareness of power lines
- power line clearances
- controlled descent operations
- controlled removal of access equipment
- cleaning of equipment
- storage of equipment
- work health and safety measures relating to own work.

Assessment Conditions

It is an industry requirement that delivery of training and assessment in this unit provides for the explicit conditions of work team capability for aerial rescue operations. It is an industry requirement for competency in this unit that assessment must include a log record of two hundred (200) hours of standard climbing.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - standard climbing kit
  - harness
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - trees
Assessment Requirements for AICARB312 Use standard climbing techniques to access trees

Materials:
- Climbing techniques form - standard
- Climbing log record - standard
- Hazard identification and risk control form
- Equipment and PPE check form
- Emergency preparation form
- Work communications form
- Knot identification form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
- Arboriculture vocational competencies at least to the level being assessed
- Current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to identify trees and their environmental and social benefits.

This unit applies to individuals who undertake defined activities with appropriate methods, tools and information, work in a structured context, apply knowledge and skills to demonstrate limited autonomy and judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- inspecting the form, structures and local environment of tree
- examining and describe tree morphology in botanical terms
- describing leaf morphology for shape, colour and size
- examining and record features of buds, petiole, branchlets, branches and bark
- examining and record flower characteristics
- examining and record fruit type and characteristics
- using all relevant available senses to assist in tree identification
- recording useful and key identifying attributes of tree parts
- inspecting tree canopy and structures for general health and condition
- using observations to recognise signs and symptoms of diseases, pests or deficiencies that assisting in identification of tree
- recording relevant data and identify tree where possible at this stage
- comparing tree samples to images to recognise genus and species where possible
- selecting and using research, reference materials and field guides to define closer identification
- using taxonomic keys to analyse specific characteristics of tree to identify species and cultivar where possible
- examining tree for existing habitat use and food source supply
- identifying environmental benefits provided by tree in current location
- rating performance of tree in its current condition in terms of environmental and social benefits
- identifying and describing value of benefits to the client and community
- recording identification achieved
- highlighting key identifying features observed in the process
- informing the client or organisation of the results of the identification process.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- form, structures and local environment of tree
- tree morphology in botanical terms
- leaf morphology for shape, colour and size
- features of buds, petiole, branchlets, branches and bark
- flower characteristics
- fruit type and characteristics
- use of sensory methods in tree identification
- useful and key identifying attributes of tree parts
- tree canopy and structures
- general health and condition of trees
- signs and symptoms of diseases, pests or deficiencies of trees that assist in tree identification
- methods of tree identification
- recording of data
- using tree samples for identification
- comparison of tree samples to images of trees
- recognition of genus and species where possible
- using research, reference materials and field guides
- taxonomy
- using taxonomic keys to identify species and cultivar where possible
- tree examination for existing habitat use and food sources
- environmental benefits provided by trees
- performance rating of tree condition
- identification of value of tree benefits to the client and community
- methods of description of value of tree benefits to the client and community
- methods of recording tree identification
- key identifying features for identification
- methods of informing client and organisation of tree identification.

Assessment Conditions

It is an industry requirement for competency in this unit that assessment requires methods of assessment that focus on the process of identification, incorporating the use of multiple reference sources and pathways to identify trees.

Assessment must provide for a minimum of sixty-five (65) identifications of different trees local to the region.
Assessment Requirements for AHCARB313 Identify trees

Assessment must provide for a minimum of ten (10) identifications using a taxonomic key or field guide.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - use of multiple reference sources
  - taxonomic keys
  - field guides
  - camera/phone camera
  - trees and tree specimens
- materials:
  - tree profile and benefits form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- confirming trees to be pruned and the desired outcomes for pruning works in accordance with client brief
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- identifying and record tree species using botanical nomenclature and common names
- verifying location of tree using fixed reference points of boundary lines, residential housing and fences
- determining and document dimensions of tree recording the characteristics of the approximate height, canopy, spread and diameter-at-breast-height (DBH)
- recording and implementing work health, safety, site, environmental and traffic control measures
- evaluating tree for pruning
- considering tree’s health, growth habit, structure, stability and growing environment
- determining class, code, species application and clause of pruning required in accordance with current Australian Standard ‘pruning of amenity trees’
- determining compensatory tree care required to offset losses arising from pruning of live tissue
- determining requirement to meet biosecurity regulations for transmission of diseases by pruning equipment and materials
- verifying smallest diameter of dead branches to be removed.
- determining maximum and average diameter of live branches to be pruned
- verifying for crown thinning operations: maximum diameter of branches; and total percentage of total crown foliage permitted to be cut
• verifying for selective pruning operations: identity and locations of specific branches to be cut
• verifying for formative pruning operations: identify and locations of specific branch
• verifying for reduction pruning operations: an extent of pruning best described as a percentage, and the approximate dimensions and precise nodes
• verifying for crown lifting operations: maximum diameter & location + maximum height (or minimum height)
• verifying for pollarding: dimensions of permanent structure
• verifying for remedial and restorative pruning: any key reference points in the tree and any key measurement and any objectives
• verifying for line clearance: minimum clearance distances
• verifying branch location and identity by identification process starting with closest branch to ground labelled as branch number one
• readying branch pattern from the ground up, select branch required and label branch with number in sequential order
• determining and document direction of branch growth by selecting north, south, east, or west and label branch
• estimating and document height of branch attachment from ground
• describing structural order of branches: first order - directly off the trunk; second order - immediately off first order; third order etc.
• verifying approximation of branch collar diameter at location of pruning point
• using photographs to verify and confirm location of pruning cuts
• recording information on pro-forma documents
• confirming written pruning specifications
• clarifying the terminology used and extent of works with the client
• documenting a written record of contract for the client as required
• providing completed written specification to client and work crew
• assessing pruning work performed against anticipated outcomes and record anomalies
• seeking feedback from client on work performed
• seeking feedback from work crew on clarity of specifications
• recording areas of improvement for future use in specifications
• signing off on specified work and completing required records
• use of industry standard terminology to describe pruning specifications
• awareness of work health and safety in the context of own work.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• site-specific risk assessment
• tree species using botanical nomenclature and common names
• fixed reference points
• dimensions of tree
- characteristics of the approximate height, canopy, spread and diameter-at-breast-height (DBH)
- tree’s health, growth habit, structure, stability and growing environment
- tree age class, code, species application and clause of pruning required in accordance with current Australian Standard ‘Pruning of amenity trees’
- compensatory tree care
- losses arising from pruning of live tissue
- biosecurity regulations
- transmission of diseases by pruning equipment and materials
- specification for crown thinning operations
- specification for selective pruning operations
- specification for formative pruning operations
- specification for reduction pruning operations
- specification for crown lifting operations
- specification for pollarding
- maximum and average diameter of live branches
- total crown foliage
- identity and locations of specific branches
- extent of pruning best described as a percentage
- approximate dimensions and precise nodes
- maximum height (or minimum height)
- dimensions of permanent structure
- specification for remedial and restorative pruning
- specification for line clearance
- specification for branch location and identity by identification process
- key reference points in the tree
- minimum clearance distances
- branch pattern
- sequential order
- direction of branch growth by selecting north, south, east, or west
- approximation of branch collar diameter
- location of pruning point
- pro-forma documents
- pruning specifications
- terminology
- written record of contract
- specifications
- anticipated outcomes
- anomalies
- specified work.
**Assessment Conditions**

It is an industry requirement for competency in this unit that assessment includes the assessment of pruning works on each of the maintenance and modification operations:

- crown maintenance pruning
- crown thinning operations
- selective pruning operations
- formative pruning operations
- reduction pruning operations
- crown lifting operations
- pollarding
- remedial and restorative pruning
- line clearance

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - internet connection
  - digital camera/phone camera
  - tree
- materials:
  - site-specific risk assessment form
  - pruning specification form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to carry out supervision and auditing of tree operations on arboricultural work sites in accordance with existing tree hazard evaluation and pruning specification documentation.

This unit applies to individuals who supervise others and provide and communicate solutions to a range of predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCARB404 Conduct a safety audit
AHCARB302 Inspect trees for access and work*
   AHCARB313 Identify trees

Unit Sector

Arboriculture (ARB)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- assessing site conditions for requirements of equipment, personnel and access
- determining appropriate pruning tools, equipment and machinery according to pruning specification and site-specific assessment
- recording and implement work health, safety, site, environmental and traffic control measures
- supervising and confirm site establishment conforms to requirements
- confirming toolbox meeting participation and documentation
- confirming tree evaluation from hazard evaluation report provided
- using provided written specification for pruning works
- communicating written specification to work team and confirm response
- conducting safety audit of personnel, equipment, machinery and documentation
- supervising and monitor tree operations
- documenting areas of improvement in work operations
- issuing verbal and written improvement notices
- monitoring pruning techniques for compliance to the written specifications and as 4373
- estimating and record volume of pruning program works
- auditing quality of pruning works
- documenting and record additional pruning works required
- reporting compliance and audit results
- use of industry standard terminology to describe supervision and audit operations.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- location of above-and-below-ground services
- site-specific risk assessment
- work health and safety hazards
- work health, safety, site, environmental and traffic control measures
- site conditions
- appropriate pruning tools, equipment and machinery
- pruning specification
- site establishment
- conformance to requirements
- toolbox meeting
- tree evaluation
- hazard evaluation
- written specification for pruning works
- safety audit of personnel, equipment, machinery and documentation
- verbal and written improvement notices
- compliance to the written specifications
- tree operations
- auditing quality of pruning works
- compliance and audit results
- work health and safety in the context of own work.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- confirming trees to be evaluated in accordance with client brief
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- determining targets that need to be considered
- determining tree hazard benchmarks appropriate for project
- recording and implementing work health, safety, site, environmental and traffic control measures
- inspecting tree from ground
- determining tree health
- examining tree for past failures
- examining tree for visual indicators of outwardly apparent defects
- examining tree for visual indicators of concealed defects
- examining tree for visual indicators of disease leading to structural failure
- determining if failure is likely to result in target being impacted
- sounding for cavities suggested by openings and visual indicators
- probing any accessible cavities and openings
- exposing root crown where required
- removing loose bark where appropriate
- determining if tree exceeds tree hazard benchmarks for project
- photographing and recording tree species and site of tree
- recording health and approximate dimensions of the tree
- recording and photographing defects and visual indicators
• describing, illustrating and indicating on image or device, the approximate location on the tree
• recording approximate dimensions of affected tree part and defect
• recording results and advising client of evaluation
• advising client immediately of evaluation where a tree poses an imminent threat
• taking action as instructed in accordance with workplace policies and client brief
• isolating the tree or move target as instructed in accordance with workplace policies and client brief
• documenting immediate actions taken.
• compiling hazard evaluation documentation
• recommending further action of aerial inspection and load testing or seek further advice from a consulting arborist
• determining and documenting any tree work required to mitigate risks
• submitting tree hazard evaluation report to client or employer
• use of industry standard terminology to describe hazard evaluation.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• client briefs
• site-specific risk assessment
• work health and safety hazards and assessing risk
• targets and the role of targets in tree risk assessment
• tree hazard benchmarks
• work health, safety, site, environmental and traffic control measures
• tree inspections
• tree health
• methods of determining tree health
• tree anatomy and morphology for past failures
• tree examinations for outwardly apparent defects
• tree examinations for visual indicators of concealed defects
• tree examinations for visual indicators of disease leading to structural failure
• tree examinations for visual indicators of organisms causing damage leading to structural failure
• likelihood of target impaction
• cavity sounding and probing techniques
• visual indicators of root crowns and bark
• determination whether tree or tree parts are a hazard in accordance with benchmarks
• photography and recording of tree species, site of tree, approximate location of trees, and defects and visual indicators
• health and approximate dimensions of the tree and affected tree part and defect
• imminent threat
• tree isolation methods
Assessment Requirements for AHCARB403 Perform a ground-based tree defect evaluation

- methods of moving targets
- documentation of hazard evaluation
- risk mitigation
- recommendations of aerial inspection and load testing
- advice from a consulting arborist
- presentation of reports.

Assessment Conditions

It is an industry requirement for competency in this unit that assessment includes a minimum of twenty (20) ground-based tree defect evaluations, and requires a minimum of at least one (1) consultation with a consulting arborist to participate in a ground-based tree defect evaluation. The evaluations are required to cover twenty separate and individual trees, of a minimum of fifteen (15) different tree species, and each of the evaluations is required to be a whole-of-tree investigation.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - trees
  - cross-sectioned tree visual indicators of defects and diseases
- materials:
  - site-specific risk assessment form
  - defect evaluation form
  - tree evaluation report

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can demonstrate:

- determining technical and business requirements for geospatial data collection
- determining suitability and requirements of using geographical information system (GIS)
- determining suitability of software application for intended purpose
- consider features of remote positioning and satellite shadow reduction
- considering end-to-end capability as required
- determining asset management requirements
- considering functional ease-of-use, mobility and reliability
- evaluate future-proofed solutions and outcomes
- selecting geospatial data collection equipment
- completing relevant start-up procedures
- determining operational data fields
- determining data tables and associated attributes
- configuring fields for operational use
- undertaking functional testing of hand held device for connectivity
- using co-ordinates to locate designated trees
- correcting co-ordinate data at tree site visually as required
- updating and correcting tree attribute data as required
- collecting and entering data
- checking data for accuracy for post-processing
- downloading business data
- processing business data
- analysing data with appropriate techniques
- use of industry standard terminology to describe.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- geospatial data
- collection of geospatial data
- technical and business requirements for geospatial data collection
- suitable software applications for using geospatial data
- remote positioning
- satellite shadow reduction
- end-to-end capability
- asset management
- attributes of functional ease-of-use, mobility and reliability
- geospatial data collection equipment
- configuring data fields
- global positioning system (GPS)
- latitude and longitude co-ordinates
- start-up procedures
- data fields
- data tables
- tree attribute data
- data entry
- data processing.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - GIS data collection equipment
  - computer and software
  - internet connection
- materials:
  - data operations form
Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to inspect, identify, select and specify a range of trees for suitability for an intended purpose.

The unit has a wide range of applications in urban and regional areas for local government and legal contexts in the specification of trees in residential, commercial, public open spaces and amenity areas. The unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work, to analyse and synthesise information, and design and communicate solutions for complex problems. The role involves the self-directed application of knowledge with substantial depth in areas such as tree identification, tree selection criteria and tree functionality.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable current versions of Australian Standards such as AS 2303, AS 2223 and AS 3743.

Performance Evidence

The candidate must produce a report of the tree identification, selection and specification process that recommends tree species for a site and incorporates the tree selections into a database of tree specimens and characteristics. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- consulting client, developing a brief and gaining agreement
- undertaking site inspection according to the client brief
- determine legislative requirements, regulatory requirements and requirements of Australian Standards including AS 2303, AS 2223 and AS 3743
- determining functional life expectancy of site and plantings
- determining tree function for the precise location within the plan
- confirming that species and cultivar selection is appropriate for the aspect and site dimensions
- researching trees suitable for the intended purpose using multiple reference sources
- identifying trees suitable for the intended purpose using multiple reference sources and use of taxonomic keys
- giving consideration to tree morphology, physiology and ethnobotany in the identification of suitable trees
- estimating planting area dimensions for the tree species or cultivar
- confirming that soil volume is proportioned to the size of tree in consideration and assess soil for suitability as a growth medium
- considering environmental conditions including site hydrology for the functional characteristics of the tree and apply findings
- evaluating soils, soil mixes and growing media for density, organic content, nutrient status, and physical and chemical properties
- appraising a wide range of soils, soil mixes and growing media
• making recommendations for soil, soil mix and growth medium improvements by determining soil suitability for intended purpose
• evaluating trees from an extensive range of trees common in the region
• selecting trees in accordance with suitability for the intended purpose as quality criterion
• evaluating and document the rationale for tree selection
• recommending tree species or cultivars for replacement or new plantings
• documenting tree selections, selection criteria and notes on quality expectations as specifications
• incorporating determined criteria for size of stock selection into the specifications
• matching species and cultivars appropriately to the determined selection criteria for species-specific characteristics
• evaluating selection criteria for mature trees against capability for transplanted trees
• assessing final selections against the specified soil, site location and client brief and confirm the tree specification
• inspecting selected plants on site for structural quality, root health and quantities according to the specifications
• inspecting delivered materials, soils and growing media on site for quality assurance in accordance with the specifications
• recording quality checks on delivered plants and products
• compiling tree selections into a database of tree specimens and characteristics based on tree taxonomy and nomenclature, and suitability characteristics
• producing a report of the identification, selection and specification process and incorporate the correlated records
• presenting the client or organisation with the report.

Knowledge Evidence

The candidate must demonstrate knowledge of:

• client consultation and client brief
• legislative requirements and regulatory requirements
• site inspections
• functional life expectancy of tree and site
• tree functionality for precise locations
• selection of tree species and cultivars
• appropriateness of species and cultivar selection for site aspect and dimensions
• how to research and use multiple sources of reference material
• concept of ‘suitability for a purpose’
• trees suitable for an intended purpose
• methods of determining the suitability of a tree for a purpose
• tree identification using multiple reference sources
• tree identification using taxonomic keys
• ethnobotany, morphology, physiology, taxonomy and nomenclature
• tree species-specific characteristics
- environmental conditions for the functional characteristics of the tree
- estimation of planting area dimensions
- soil volume proportions to the size of tree
- site hydrology
- evaluation of soils, soil mixes and growing media for characteristics of density, organic content, nutrient status, and physical and chemical properties
- appraisal of a wide range of soils, soil mixes and growing media
- recommendations for soil, soil mix and growth medium improvements
- soil suitability for intended purpose
- methods of assessment of soil for suitability as a growth medium
- evaluation of trees from an extensive range of trees common in the region
- tree selection methodology using quality criteria of suitability for purpose
- evaluation and documentation of rationale for tree selection
- recommendations for tree species or cultivars for replacement or new plantings
- documentation of tree selections, selection criteria and notes on quality expectations as specifications
- incorporation of criteria for size of stock selection into specifications
- methods of matching species and cultivars appropriately to the determined selection criteria for species-specific characteristics
- selection criteria for mature trees against capability for transplanted trees
- assessment of final selections against the specified soil, site location and client brief and confirmation of the tree specification
- inspection methods for structural quality, root health and quantities of plants on site
- inspection of delivered materials, soils and growing media on site for quality assurance in accordance with the specifications
- methods of quality control and quality assurance
- how to monitor quality and apply quality controls
- tree structural quality
- recording quality checks on delivered plants and products
- methods of data capture
- database construction
- characteristics of taxonomy and nomenclature required for database use
- characteristics of tree ‘suitability for a purpose’ required for database use
- compilation of tree selections into a database of tree specimens and characteristics based on tree taxonomy and nomenclature, and suitability characteristics
- report production of the identification, selection and specification process.
Assessment Conditions

It is an industry requirement for competency in this unit that assessment includes construction of a database that must contain a minimum of eighty (80) tree species with general characteristics of suitability for the intended purpose and key identifying features, and an additional twenty (20) intensive tree profiles detailing attributes of the location, taxonomic characteristics, edaphic and environmental preferences and limitations of the tree. The database must include woody monocots and gymnosperms.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - computer
  - word processing software
  - internet connection
  - digital camera/phone camera
  - soil testing equipment
  - loupe
  - field guides
  - print and digital taxonomic keys
  - trees
  - soils, soil mixes and growing media

- **materials:**
  - tree profile and benefits form
  - tree selection and specification form
  - database of tree selections and suitability characteristics
  - report of the identification, selection and specification process

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to plan for and monitor the protection of trees at sites where there may be threats to the trees.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work, to analyse and synthesise information and design, and to communicate solutions to complex problems. The role involves the self-directed application of knowledge with substantial depth in some areas such as tree assessment techniques, the impact of development on trees and specialist tree protection techniques and reporting methods.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards such as the current AS 4970 Protection of trees on development sites.

Performance Evidence

The candidate must compile reports, plans and guidelines into an arboricultural impact assessment report and develop an evidentiary tree protection portfolio.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying and researching relevant legislation and Australian Standards
- determining specific requirements of statutory authorities in relation to trees on development site
- determining local government planning laws, tree protection and preservation regulations
- conducting a site assessment and identify conditions that impact tree protection program
- identifying work health and safety hazards that impact safety of staff and public, assess level of risk and apply controls
- identifying hazards, activities and circumstances that have potential to harm trees and assess the level of risk
- locating and confirming trees plotted on survey plan
- plotting trees not on plan onto survey plan
- collecting available relevant plans and documentation
- identifying and record tree genus and species by botanical and common name
- recording tree dimensions, height, crown spread and diameter-at-breast-height (DBH)
- determining age class and estimate life expectancy
- determining tree health in relation to tree physiology and pathology
- determining condition of tree structure in relation to tree anatomy
- considering heritage and cultural issues
- considering habitat, ecology and other matters relevant to the site
- considering location relative to existing and past site structures
• determining the retention value
• compiling all tree assessment data required for report
• recording all trees and groups of trees suitable for retention
• determining indicative tree protection zone for each tree
• plotting tree identifiers and indicative tree protection zone on survey plan
• documenting preliminary arboricultural report
• interpreting existing plans, working drawings, terms and symbols
• interpreting development and design language
• considering how development can result in mechanical and chemical damage and determine appropriate controls
• determining impact of proposed development on trees
• providing preliminary feedback to client on potential areas of improvement
• assessing development requirements for site access and logistics
• considering indicative tree protection zone
• determining extent of encroachment into indicative tree protection zone
• determining whether works will impact on structural root zone
• determining extent and area of structural root zone
• determining actual tree protection zone for trees to be retained
• defining and recording the actual tree protection zones
• determining level of encroachment
• assessing for a major encroachment: location and distribution of roots; potential loss of root mass; species tolerance to root loss; and age, health, size, lean and stability of tree
• considering impact of major encroachment on health, physiology and structural integrity of tree
• assessing soil characteristics and volume and presence of existing or past structures and design factors
• considering how site and design factors minimise impact of proposed encroachment on tree
• demonstrating that the tree would remain viable
• determining additional remedial measures required
• developing an evidentiary portfolio of tree protection devices, techniques, tree-sensitive design and construction measures and tree responses to development activities
• specifying protection devices, techniques and systems to minimise impact of development
• determining installation and construction methods for tree protection and produce working drawings for on-site personnel for implementation
• providing advice on tree removal and tree pruning program to client
• preparing draft arboricultural impact assessment report
• developing tree protection plan and tree protection plan (drawing)
• preparing and documenting tree management and monitoring guidelines with alternative strategies for possible problems
• consolidating relevant reports, plans and guidelines into final version of arboricultural impact assessment report in digital and print format and presenting to client.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation and Australian Standards
- specific requirements of statutory authorities in relation to trees on development site
- local government tree protection and preservation regulations
- site assessment and conditions that impact tree protection programs
- plotting trees/ tree identifiers onto survey plans
- tree genus and species by botanical and common name
- tree dimensions, height, crown spread and diameter-at-breast-height (DBH)
- age class and estimate life expectancy
- tree health in relation to tree physiology and pathology
- heritage and cultural issues
- habitat, ecology and other matters relevant to the site
- methods of calculation of retention value
- indicative tree protection zones
- preliminary arboricultural reports
- interpretation of existing plans, working drawings, terms and symbols
- development and design language
- principles and methods of mechanical and chemical damage control
- impact of proposed development on trees
- structural root zone
- actual tree protection zones
- level of encroachment
- assessment of a major encroachment: location and distribution of roots; potential loss of root mass; species tolerance to root loss; and age, health, size, lean and stability of tree
- soil assessment of characteristics and volume
- viability of a tree
- evidentiary portfolio of tree protection devices, techniques, tree-sensitive design and construction measures and tree responses to development activities
- principles and techniques of tree protection devices, methods and systems
- installation and construction methods for tree protection
- principles and methods relating to protecting trees from human activities
- working drawings for on-site personnel for implementation
- methods of documentation of tree management and monitoring guidelines
- draft arboricultural impact assessment report
- anatomy, physiology and pathology of trees
- interpretation of plans and working drawings
- tree protection plan and tree protection plan (drawing)
- documentation of tree management and monitoring guidelines
- final version of arboricultural impact assessment report
- digital and print formats.
Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - computer
  - word processing software
  - internet connection
  - personal protective equipment (PPE)
  - digital camera/phone camera
  - loupe
  - basic diagnostic tools including sounding hammer, trowel, probe, cordless drill
  - basic soil testing equipment
  - trees

- **materials:**
  - preliminary arboriculture report
  - arboricultural impact assessment report

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must produce a tree work audit report that contains all findings, recommendations, non-conformance, notifications and an ongoing management plan. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:
- identifying audit objectives, scope and focus
- identifying target operations and documentation
- determining audit process and sampling technique
- determining frequency and random timing of audit event
- preparing audit documentation
- conducting pre-audit communications with client and relevant stakeholders
- gathering relevant information, sample documentation, codes of practice and Australian Standards
- organising on-site inspections to conduct the audit process
- auditing the specific tree works operation being undertaken
- auditing any pruning, removal, transplanting, planting, tree protection techniques and arboricultural practices being undertaken
- inspecting and assessing arboricultural works that may impact on the tree physiology, anatomy, pathology and environment
- auditing works in relation to relevant documentation and legislation
- determining the extent of work with conformance to relevant documentation and legislation
- identifying and recording non-conformance
- assessing extent and manner of non-conformance
- documenting findings and relevant field notes
- inspecting and assessing non-arboricultural works that may impact on the tree or its environment
• determining impact of non-arboricultural works of clients, contractors and stakeholders
• providing feedback on non-arboricultural works to clients, contractors and stakeholders
• providing feedback on the findings of the inspections to clients, contractors and stakeholders
• providing advice for improvement, rectification and management of non-conformances
• prioritising required ongoing management
• documenting audit report and non-conformance notifications
• advising statutory authorities where required
• documenting an ongoing management plan specifying the tree management techniques and practices required to address the audit findings
• documenting a rectification plan specifying the required rectifications of non-conformances
• presenting reports and plans to client and relevant stakeholders.

Knowledge Evidence
The candidate must demonstrate knowledge of:

• audit objectives, scope and focus
• auditing terminology
• audit processes
• audit sampling techniques
• frequency and random timing of audit events
• preparation of audit documentation
• pre-audit communications
• relevant audit information and sample documentation
• relevant codes of practice and Australian Standards
• relevant legislation and documentation
• on-site inspections
• targeting and documentation of specific tree works operations
• auditing of pruning, removal, transplanting, planting, tree protection techniques and arboricultural practices
• tree physiology, anatomy, pathology and environment
• inspection and assessment of tree physiology, anatomy, pathology and environment
• arboricultural works that may impact on the tree physiology, anatomy, pathology and environment
• non-arboricultural works that may impact on the tree or its environment
• determination of impact of non-arboricultural works
• documentation and legislation relevant to auditing works
• determination of extent of works with conformance to documentation and legislation
• identification of non-conformance
• assessment of extent and manner of non-conformance
• provision of feedback and findings of inspections to clients, contractors and stakeholders
• improvement, rectification and management of non-conformances
- notification of non-conformance
- provision of advice of non-conformance
- documentation of audit reports
- specification of tree management techniques and practices required to address audit findings
- methods of advising statutory authorities
- audit reporting methods
- documentation of an ongoing management plan
- specifications for required rectifications of non-conformances
- documentation of a rectification plan
- report and plan production and presentation.

**Assessment Conditions**

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - internet connection
  - digital camera/phone camera
  - trees
- materials:
  - compliance and audit report form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to prepare arborist reports with specific arboricultural content at consultant level.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work, to analyse and synthesise information and design and communicate solutions to complex problems. They provide professional services in arboricultural report writing involving tree assessment and risk, tree management, arboricultural impact, tree pathology and structural tree problems.

Preparing arboricultural reports involves the self-directed application of knowledge with substantial depth in some areas such as tree identification, tree assessment techniques and reporting methods.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must produce a body of work compiling evidentiary data, research material, data, observations and test results into a stylised presentation of custom format using component industry conventions. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining the client brief and manage client expectations
- determining client need for evidentiary data records
- determining statutory requirements for report
- establishing specific focus points within report topic
- establishing report limits and assumptions
- determining arboricultural content required by evaluation of all relevant requirements and limitations
- determining the textual and visual content of report
- researching information about topic and specific focus points
- assessing primary and secondary sources of research material
- inspecting and recording details and observations of site, trees, location and matters relevant to focus points and topic
- recording relevant visual evidence using photographic equipment
- obtaining and recording information from test results
- collating observations, test results, research material and inspection data into a body of evidentiary data
- backing up and storing data for later retrieval
- determining presentation style of report to meet client and statutory outcomes
- determining requirements for specific document content and layout using accepted arboriculture industry conventions
- obtaining necessary permissions for use of tables, diagrams or other copyright information
• utilising appropriate custom document templates, logo, tables, charts, and art required to produce word-processor documents
• inserting required document elements such as title, page numbers, table of contents, footers and headers and watermark
• incorporating collated data, information and evidentiary data into formatted body of the report
• operating computer and software application to edit document for language use, text content, spelling, grammar and punctuation appropriate for consulting arborists
• assessing a body of evidentiary data
• determining value of supporting and contradictory evidence
• using considered viewpoints to make an informed decision
• formulating a conclusive determination
• informing client whether or not determination can meet the client brief
• developing a set of recommendations based on that determination in accordance with the client brief
• preparing a draft document based on brief, method, observation, conclusion and recommendations system
• evaluating the impact of using active and passive voice
• seeking feedback on prepared report
• responding to feedback and editing report based on feedback provided
• drafting final sections of report document
• developing summary of report
• producing final version of arboricultural report
• delivering final report to client and statutory authority
• formulating a glossary of arboricultural terminology and industry jargon.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• client briefs
• management of client expectations
• client need for evidentiary data records
• statutory reporting requirements
• specific focus points within report topics
• limits and assumptions of reports
• required arboricultural content
• textual and visual content of report
• information research
• assessment of primary and secondary sources of research material
• methods of determining information validity and reliability
• site inspections
• photographic equipment for recording of visual evidence
Assessment Requirements for AHCARB506 Prepare arborist reports

- collation of observations, test results, research material and inspection data into a body of evidentiary data
- data collection, collation, backup, storage and retrieval
- reporting and presentation styles for statutory and client outcomes
- requirements for specific document content and layout using accepted arboriculture industry conventions
- permissions for use of tables, diagrams or other copyright information
- custom document templates, logo, tables, charts, and art required to produce word-processor documents
- document elements such as title, page numbers, table of contents, footers and headers and watermark
- computer and software application to edit documents
- language use, text content, spelling, grammar and punctuation
- consulting arborist terminology
- assessment of a body of evidentiary data
- evaluation of supporting and contradictory evidence
- consideration of different viewpoints in making informed decisions
- decision-making processes
- formulation of conclusive determinations
- draft document preparation
- system of brief, method, observation, conclusion and recommendations
- evaluation of impact of using active and passive voice
- report editing based on feedback provided
- development of a report summary
- final report formulation, formatting and writing
- production of a glossary of arboricultural terminology and industry jargon.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - digital camera/phone camera
  - internet connection
- word processing software
- trees
- materials:
  - arborist report
  - glossary of arboricultural terminology

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must produce tree protection plan drawing containing tree protection zones (TPZ) and encroachments, and perform area calculations using computer-aided design software (CAD).

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- confirming project requirements for computer-aided design (CAD) drawings
- identifying drawing requirements, purpose and scope and confirm with relevant project personnel
- setting up basic drawing environment
- creating layering strategy as required
- creating arboricultural and architectural library of standard detail and components
- creating text and dimension styles
- creating line types of different thicknesses to provide visual differentiation of plan elements
- creating hatch patterns and types
- setting up title blocks for different drawing sizes
- setting up reference schedules as required
- using 2-D CAD software programs and functions to produce different types of 2-D drawings using appropriate layers as required
- importing digital text and drawing files from other software applications into 2-D CAD drawings
- scanning and save hard copy documents as correct file types to import into 2-D CAD drawings
- deleting or purge elements that are not required from drawings
- adding notations to drawings as required
- adding dimensions and scales to drawings as required
- using editing commands to modify drawing elements and text
- plotting trees with precision
- differentiating visually trees to be retained, removed and transplanted
- calculating areas of tree protection zones (TPZ), encroachments and distances
- undertaking quality control check of drawing
- setting page layout with appropriate scale and lineweights for the drawing file to suit printing requirements
- setting print parameters for the printer
- printing drawings on the correct media
- creating suitable file directories for the drawing project
- saving drawing files for later retrieval and back up to specified drives or directories
- creating drawing files and send to external personnel for use in different software applications
- creating portable document format (PDF) files for relevant personnel to view completed drawings without using CAD software packages.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

- project requirements
- types of drawings
- computer-aided design (CAD) drawings
- drawing requirements
- purpose of drawing
- scope of drawing
- project personnel
- drawing environment
- layers and layering strategy
- arboricultural library of standard detail and components
- architectural library of standard detail and components
- text and dimension styles
- line types of different thicknesses
- visual differentiation of plan elements
- hatch patterns and types
- title blocks for different drawing sizes
- reference schedules
- 2-D CAD software programs
- different types of 2-D drawings
- notations
- dimensions and scales
- editing commands

Application

This unit of competency describes the skills and knowledge required to examine and assess tree health, age, taxonomy, risk, amenity value and significance and compile a tree assessment report.

This unit applies to individuals with broad theoretical and technical knowledge of a specific area or a broad field of work and learning and cognitive, technical and communication skills to demonstrate autonomy, judgement and defined responsibility in undertaking complex work within broad parameters to provide specialist advice and functions.

The role involves the self-directed application of knowledge with substantial depth in areas such as tree identification, pathology and diagnostics, tree assessment and valuation techniques, tree risk assessment and reporting methods.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCARB403 Perform a ground-based tree defect evaluation*

AHCARB302 Inspect trees for access and work**

Performance Evidence

The candidate must be observed inspecting and assessing a broad range of trees for identification, health, growth habit, structure, stability and indications of disease. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying the scope of survey
- determining the client’s risk threshold
- documentation of the data capture procedures
- identifying, sourcing and recording all current data research relevant to survey requirements
- checking equipment for assessing trees and prepare for use
- selecting, checking and using personal protective equipment
- plotting tree locations on a device, drawing or plan of the site
- determining the tree dimensions and structure
- measuring the tree height, spread and diameter-at-breast height (DBH)
- examining and recording form of tree
- assessing tree for asymmetry of canopy
- assessing if tree has a lean and calculate the lean
- assessing how form of crown relates to or is responsive to surrounding trees and structures
- determining the potential impact of wind loading of the tree
- inspecting tree and record fruit type and characteristics
- describing leaf morphology for shape, colour and size
- examining and recording buds, branchlets, branches and bark
- inspecting for and describing trichomes on lamina, petiole and branchlets
- describing and recording floral characteristics of structure of inflorescence, location of the flower, flower colour, details of the flower parts present, absent or modified
- examining and record the canopy density and distribution
- assessing recorded leaf colour and size against a healthy specimen
- assessing for the presence of epicormic shoots
- assessing for dead tips or excessive numbers of dead branches
- examining roots, root crown, stem, branches and canopy for signs of biotic and abiotic disease
- evaluating and describing symptoms presenting on tree
- determining how presence of disease might be affecting tree
- recognising and recording wounds to the tree
- considering size, location and cause of wounds
- determining if species is uninode or multinodal
- recording the dimensions of the tree
- examining tree for evidence of growth increments including bud scars, sympodial growth and flush marks
- estimating average annual increase in diameter of sample of xylem stained as required
- researching historic images of tree or trees of same species in similar environments
- providing a reasoned estimate of age of tree, tree part or wound
- assessing tree for indicators of habitat use
- assessing tree for ecological significance
- assessing tree for cultural significance
- assessing tree for historical significance
- evaluating various amenity tree valuation methods
- considering strengths and weaknesses of each method
- determining amenity tree valuation method to be used
- collecting and collating appropriate unit values and data
- calculating and recording the amenity value of individual trees
- assessing trees to determine their structure and stability
- consideration of the tree’s age, condition, habitat, wind loading, distribution of foliage, wound size and the potential impacts of proposed recommendations
- using testing equipment to detect decay, disease and scope of tree problems
- evaluating visual indications of disease and health issues in trees
- use of visual tree assessment (VTA) method to identify hazards
- use of basic diagnostic tools to confirm the presence and extent of hazards
- determining level of risk
- giving consideration to qualification and quantification of tree risk
- comparing the risk level against commonly published levels of risk from non-arboricultural activities and items
- determining controls required to mitigate risks in accordance with the client’s pre-determined threshold
- documenting risk controls and recommendations for monitoring and review of risks
• documenting diagnoses of tree problems with reference to the anatomy, physiology and pathology of the tree
• recording specific recommendations for remedial action for tree problems
• producing a tree assessment report that identifies a hazardous tree and contains recommendations for appropriate remedial actions and risk controls
• preparing an expert witness statement
• use of industry standard terminology to describe arboriculture and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• risk thresholds
• data capture procedures
• survey requirements
• tree assessment equipment
• plotting methods on devices, drawings and plans
• tree morphology attributes: fruit type and characteristics, leaf morphology for shape, colour and size, trichomes on lamina, petiole and branchlets, floral characteristics of structure of inflorescence, location of the flower, flower colour, details of the flower parts present, absent or modified, buds, branchlets, branches and bark
• canopy density and distribution
• comparison of leaf colour and size against a healthy specimen
• epicormic shoots
• examination of roots, root crown, stem, branches and canopy for signs of biotic and abiotic disease
• disease symptoms
• effects of disease on tree
• tree dimensions and structure
• tree height, spread and diameter-at-breast height (DBH)
• form and morphology of tree
• symmetry and asymmetry of canopy
• calculation of tree lean
• relationship of form of crown to surrounding trees and structures
• responsiveness of form of crown to surrounding trees and structures
• determination the potential impact of wind loading of the tree
• tree wound recognition, size, location and cause
• uninodal and multinodal tree species
• growth increments including bud scars, sympodial growth and flush marks
• estimation average annual increase in tree diameter
• xylem staining
• research of historic images of tree or trees of same species in similar environments
• assessment of tree indicators of habitat use
• assessment of tree ecological significance
• assessment of tree cultural significance
• assessment of tree historical significance
• evaluation of methods of amenity tree valuation
• calculation of amenity tree value of individual trees
• tree structure and stability
• tree assessment attributes: tree’s identification, age, health, condition, habitat, wind loading, distribution of foliage, wound size and the potential impacts of proposed recommendations
• testing equipment to detect decay, disease and scope of tree problems
• visual indications and symptoms of disease and health issues
• tree diseases
• visual tree assessment (VTA)
• methods of detecting decay and structural defects in trees
• causes of instability, decay, damage and stress in trees
• use of basic diagnostic tools
• identification and extent of tree hazards
• methods of determination of levels of risk
• quantification and qualification of tree risk
• commonly published levels of risk from non-arboricultural activities and items
• controls required to mitigate risks in accordance with the client’s pre-determined threshold
• diagnoses of tree problems
• tree anatomy, physiology and pathology
• remedial action of tree problems
• production of a tree assessment report that identifies hazardous trees, recommends appropriate remedial action, and determines appropriate risk controls
• preparation of an expert witness statement.

**Assessment Conditions**

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • computer
  • word processing software
  • internet connection
• digital camera with macro
• personal protective equipment (PPE)
• diagnostic tools including sounding hammer, trowel, probe, cordless drill
• cross-sectioned defects and diseases
• soil testing equipment
• basic digital dissection microscope 10-100x
• compound microscope
• microtome, staining and slide mounting equipment
• slides and coverslips
• temporary/permanent mountant
• histochemical stains
• materials:
  • tree assessment report
  • tree profile and benefits form
  • disease profile form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to diagnose tree diseases including diseases of palms and other woody monocotyledons.

This unit applies to individuals with broad theoretical and technical knowledge of a specific area or a broad field of work and learning and cognitive, technical and communication skills to demonstrate autonomy, judgement and defined responsibility in undertaking complex work within broad parameters to provide specialist advice and functions.

The role involves the self-directed application of specialised knowledge in arboriculture with substantial depth in areas such as with substantial depth in areas such as disease diagnostics and disease classification and management.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be observed diagnosing and recording diseases of trees, and developing, monitoring and documenting a report on a tree disease management plan.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying the tree and determining its region of origin
- determining seasonal growth stages of the tree
- ascertaining current and past cultural practices
- determining characteristics of the growing environment affecting the growth of a specific tree species
- identifying environmental and cultural factors that predispose the tree to disease
- determining and assessing the relevant physical and chemical properties of the soil or growing media
- determining impact of disease type on tree parts and systems
- use of industry standard terminology to describe disease aspects of tree anatomy, physiology, pathology and taxonomy
- developing a glossary of disease terminology
- considering natural defence systems of trees against major disease types
- determining disease groups according to a disease classification guide
- interpreting signs and symptoms of disease to identify which trees are diseased
- recording symptoms and signs of disease using accepted nomenclature
- collating samples and evidence into a reference collection
- determining disease type according to a disease classification guide
- determining identification of macro biotic disease to family level
- preparing specimens for microscopic examination of microbiotic diseases
• collecting, package and dispatch specimens for specialist diagnosis or laboratory testing where required
• determining current health and energy reserves of the tree
• assessing severity and extent of the disease
• researching virulence of the disease on the specific host
• determining phenology of the host and the disease
• researching and considering lag time of management options
• considering influences of environmental conditions on host, disease and management options
• providing an informed prognosis in writing and verbally
• researching management options such as Integrated Pest Management (IPM) and recommending appropriate options
• developing a disease management program within IPM guidelines
• recording and documenting tree diseases and management programs in a report
• monitoring management plans and modifying or refining as needed
• compiling a disease reference collection
• use of industry standard terminology to describe disease aspects of tree anatomy, physiology, pathology and taxonomy.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• disease classification guides
• virulence, phenology, prognosis and disease severity and extent
• critical systems in the tree; physiologically, anatomically and biochemically
• patterns of host – disease interaction for each major disease type
• tree nutrition issues associated with the soil or media
• identification of signs and symptoms of tree health problems
• determination of possible and probable physiological, anatomical and biochemical impacts on the tree
• disease detection methods, taxonomic identification, life cycle stages and characteristics of the specific horticultural trees of the organisation
• natural defence systems of trees
• chemical use, toxicity and compatibility with target trees, soil and environmental characteristics of the horticultural region
• tree anatomy, physiology, pathology and taxonomy
• seasonal growth anatomy of the tree
• primary cellular and anatomical structures of the tree
• preparation of specimens of microbiotic diseases for microscopic examination
• horticultural function, cultural and performance requirements and characteristics of the trees or other woody plants being considered
• chemical, cultural and biological control methods as part of an Integrated Pest Management strategy
• methods of providing a reasoned prognosis
• the growing requirements and characteristics of trees
• the impact of the growing environment on tree health
• how to research information about tree health problems, diagnoses and remedial treatment available
• nomenclature of symptoms and disease signs
• industry standard terminology to describe disease attributes in relation to tree anatomy, physiology, pathology and taxonomy
• applicable legislative requirements.

Assessment Conditions

Performance must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

Performance Evidence

It is an industry requirement that competency in this unit requires the analysis and critique of a minimum of five different diagnostic tool test results. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- compiling a portfolio of sample reports of diagnostic test results including: dynamic and static loading, drill resistance measurement device, sap flow measurements, electronic impedance, chlorophyll fluorescence, increment core, sonic tomography, radar imaging system, bulk density, laboratory, soil test and pH tests
- compiling peer reviewed papers on the use of each diagnostic tool
- reviewing the diagnostic tool specifications and user manuals
- researching output ranges for each diagnostic tool
- identifying key thresholds and benchmarks
- determining suitability of tool selection for purpose of test
- identifying and evaluating testing methods used
- assessing relevance, benefits and limitations of methodology used
- determine assumptions used
- determining currency of the equipment, software or system used
- accessing raw data and testing evidence where available
- verifying data relevance and accuracy
- reviewing references cited in the report
- recording non-conforming practices and treatments
- identifying instances of incorrect application of diagnostic tools
- highlighting unsupported statements and factual errors
- detailing significant omissions, errors and ambiguities
- detailing inconsistencies and errors of logic
- identifying variances to specifications
- detailing incorrect use of arboricultural terminology
- assessing the suitability of the testing process as fit for purpose
- analysing the results
- comparing evaluation with original interpretation
- considering and account for anomalies
- determining the validity of outcomes of original report
- develop substantiated positions to inform critical analysis of test results
- determining further testing required to verify or falsify results
- documenting feedback on original results
- compiling the analysis
- reviewing the completeness and accuracy of the analysis
- recording analysis outcomes and rationale
- documenting the analytical processes
- providing alternative analysis and conclusion
- documenting critique in a report
- presenting report in agreed format and within agreed timelines
- use of industry standard terminology to describe diagnostic tools and tests.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:
- portfolio of sample reports of diagnostic test results
- peer reviewed papers on the use of each diagnostic tool
- diagnostic tool specifications
- user manuals
- output ranges
- key thresholds
- benchmarks
- suitability of tool selection
- purpose of test
- testing methods
- methodology
- raw data
- testing evidence
- cited references
- data relevance
- data accuracy
- non-conforming practices
- non-conforming treatments
- unsupported statements
- factual errors
- significant omissions, errors and ambiguities
• variances to specifications
• incorrect use of arboricultural terminology
• suitability of the testing process
• fit for purpose
• analysis of results
• anomalies
• validity of outcomes
• verification and falsification of results
• alternative analysis
• critiquing.

Assessment Conditions

It is an industry requirement that competency in this unit requires the analysis and critique of a minimum of five different diagnostic tool test results.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • computer
  • word processing software
  • statistical software
  • internet connection

• materials:
  • critique of test results
  • portfolio of sample reports of diagnostic test results

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- researching urban forest case studies and management reports
- reviewing best management practices in urban forest planning and management
- researching applications and functional tools measuring benefits of urban forests
- analysing social benefits of urban forests
- analysing psychological benefits of urban forests
- analysing environmental benefits of urban forests
- documenting evidence-based research into a preliminary report on benefits of urban forests
- conducting sampling analysis of an urban forest
- determining required sample size to assess total tree population
- determining accuracy of sample size
- calculating canopy cover, total carbon storage, annual carbon dioxide sequestration, rainfall interception, air pollution removal, energy savings benefit, environmental benefits and amenity benefits
- identifying base financial value for each functional benefit
- calculating financial values of functional and environmental benefits of current tree population
- determining benefits of heat island modification of urban areas
- documenting a preliminary report on total asset valuation of an urban forest
- analysing urban forest structure and functions
- describing urban tree population half-life, vacant planting ratio, species distribution and population diversity
- estimating life expectancy of tree population
- compiling results of urban forest analysis
• identifying urban forest issues within tree population sample area
• determining recommendations for tree species and diversity
• determining extent of current tree planting and replacement programs
• determining volume and rate of planting programs required for improvements to urban forest performance
• determining required modifications to planting practices
• determining targets for urban forest improvement
• documenting a report on urban forest performance that provides recommendations for improvement of urban forests.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• urban forest case studies
• urban forest management reports
• best management practices in urban forest planning and management
• applications and functional tools measuring benefits of urban forests
• social benefits of urban forests
• psychological benefits of urban forests
• environmental benefits of urban forests
• evidence-based research
• analysis of sampling of an urban forest
• requirements of sample sizes to assess total tree populations
• accuracy of sample size
• calculations of canopy cover, total carbon storage, annual carbon dioxide sequestration, rainfall interception, air pollution removal, energy savings benefit, environmental benefits and amenity benefits
• base financial value for functional benefits of urban forests
• calculations of financial values of functional and environmental benefits of tree populations
• benefits of heat island modification of urban areas
• total asset valuation of an urban forest
• urban forest structure and functions
• urban tree population half-life, vacant planting ratio, species distribution and population diversity
• life expectancy of tree population
• urban forest analysis
• identification of urban forest issues within tree population sample areas
• recommendations for tree species and diversity
• tree planting and replacement programs
• volume and rate of planting programs
• modifications to planting practices
• targets for urban forest improvement.
Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
- computer
- word processing software
- statistical software
- internet connection
- measurement and data collection tools
- materials:
- report on urban forest performance

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to provide consultation in a legal framework within an arboriculture context.

This unit applies to individuals with broad theoretical and technical knowledge of a specific area or a broad field of work and learning and cognitive, technical and communication skills to demonstrate autonomy, judgement and defined responsibility in undertaking complex work within broad parameters to provide specialist advice and functions.

The role involves the self-directed application of specialised knowledge in arboriculture with substantial depth in areas such as legislation, legal systems and processes and expert witness requirements.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

- providing arboricultural information based on the legal context
- determining alternative courses of action, and legal and non-legal consequences, and discuss with client
- providing advice within the context of statutes and precedent cases
- analyzing and reviewing policy documents in light of legislation and relevant cases
- preparing policy documents based on legislation and relevant cases
- determining areas of uncertainty in policy documents
- seeking appropriate legal advice
- developing expertise and specialised knowledge in arboriculture
Assessment Requirements for AHCARB605 Provide consultation in a legal framework

- following statutory framework to give advice as an expert
- confirming status as independent and unbiased provider of expert evidence within witness code of conduct programs
- recording all observations and test results with precision
- stating assumptions underpinning policy documents
- substantiating opinions using external authorities where possible
- preparing and providing a detailed evidentiary report
- preparing for the particular jurisdiction and matter at hand
- preparing evidence based on factual data, documented observations and results and complying with the rules of evidence
- providing oral evidence and respond to questions impartially
- seeking and providing clarification on areas of uncertainty.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation, statutory regulations, environmental planning instruments in state, territory and federal jurisdictions in relation to entities pertaining to trees and interactions with people, property, environment and the arboriculture industry
- court systems, common law, statute law, civil law, law of torts, and precedents to strategies and management of client needs
- detailed knowledge of legal and ethical standards, processes and practices, responsibilities, constraints and issues relating to own professional practice
- relevant precedents in law and published case studies
- arboricultural information based on the legal context
- expertise and specialised knowledge in arboriculture
- common legal terms associated with within the consultants area of practice with a clear understanding of their meaning and implications
- preparation of policy documents based on legislation and relevant cases
- preparation of detailed evidentiary reports.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

6.3 Develop draft operational tree management plan |
| 7. Incorporate feedback and prepare plan | 7.1 Prepare draft plan for public exhibition  
7.2 Notify stakeholders and community groups and obtain feedback |
### Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

Tree management plans must include knowledge of operational areas of:
- tree inspections and assessments
- tree selection and planting
- tree management
- tree maintenance
- tree protection
- tree removal
- risk identification and mitigation
- infrastructure protection
- habitat protection
- power line clearance
- community and private trees, pest and disease control
- significant trees
- trees of a selected geographic area

### Unit Mapping Information

New unit - no equivalent.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining the specific operational area for management plan
- determining the objectives, performance targets and intended outcomes of management plan
- sourcing policy from tree policy documentation
- determining the geographical area and other limits of plan
- determining the history and cultural heritage of the area covered by the plan
- determining land use of the area
- determining the relevant state and local government acts, zoning and planning controls, development and planning laws noting requirements for disability discrimination and companion animals
- determining ownership of the area
- determining key stakeholders and community groups
- determining core objectives for trees and area
- determining current and permissible usage of area
- determining trees for management
- determining assessments required such as tree health, hazards, site conditions, soils
- defining and collect data required for operational management
- assessing the tree species, type, diversity and distribution at required detail
- determining position of planting locations
- determining selection criteria for replacement trees
- determining tree removal and tree replacement processes
- establishing tree inventory
- determining financial resources available
- determining management requirements of trees
- estimating cost of works required for operational program
- determining priority of works incorporating risk into determination
- determining frequency of pruning cycles required
- determining personnel, supplies, equipment and other resources required.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:
- operational areas for formulating a tree management plan
- objective, performance targets and intended outcomes
- tree management planning
- tree policy documentation
- history and cultural heritage
- land ownership
- land use
- state and local government acts
- zoning and planning controls,
- development & planning laws
- disability discrimination
- companion animals
- value
- maintenance needs
- frequency of pruning cycles
- contractual, leasing and licensing obligations
- infrastructure protection
- data collection
- tree inventory
- tree species, type, diversity and distribution
- soils analysis
- planting locations
- selection criteria
- replacement trees
- stakeholders
- community groups
- permissible usage
- tree protection plan
- operational procedures
- tree removal
- tree replacement
- street tree planting
- tree inspections and assessments
- tree pruning operations
- power line clearance
- habitat protection
- pesticide use
- draft and final documents
- print media
- public submissions
- public hearing
- operational tree management plan.

**Assessment Conditions**

It is an industry requirement for the assessment of the operational plans as listed in the Range of Conditions section of this unit of competency.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - statistical software
  - internet connection
- materials:
  - tree inventory
  - operational tree management plan

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying stakeholders, consult and establish stakeholder needs
- researching historic and current tree policies
- analysing statutory context and policy context of the current or proposed tree policy
- researching current and historic tree management activities
- analysing current industry tree policy models
- evaluating comparative tree methodologies and systems
- researching current policy and strategic information to inform and develop policy
- identifying key management objectives and management metrics
- establishing benchmarks
- analysing existing policies, procedures and systems for compliance with policy planning requirements
- evaluating conflicting stakeholder needs
- determining tree management strategies
- defining policy reflecting strategic objectives of organisation
- defining strategic objectives of the policy
- developing and communicate change management strategies
- making recommendations for policy options
- determining legal parameters, statutes and local planning laws
- determining if policy is included or referred to in statutory documents
- seeking advice about legal implications of policy
- determining parameters of policy
- determining and record localised soil types, rainfall infiltration and runoff
- compiling database of local and indigenous tree species
• compiling database of exotics that perform well
• creating list of preferred and desired species
• determining extent and type of tree data from tree inventory
• setting diversity goals for tree species and tree families
• developing tree policy to meet strategic objectives
• developing and communicating procedures to implement policy
• developing policy determinations for hazard identification and mitigation, significant trees, tree selection, tree replacement, street tree planting, tree removal, tree inspections and assessments, tree pruning operations, power line clearance, habitat protection, infrastructure protection and pest and disease control as required
• developing draft of strategic tree policy
• promoting tree policy and expected outcomes to key stakeholders
• seeking feedback from stakeholders
• reviewing and amending policy
• developing tree policy documentation
• developing compliance programs in policy documentation
• implementing strategies for continuous improvement
• use of industry standard terminology to describe tree policy.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• current and historic tree management activities
• historic and current tree policies
• tree policy models
• benchmarks
• management objectives
• management metrics
• strategic objectives
• key stakeholders
• tree management strategies
• legal parameters, statutes and local planning laws
• compliance with policy planning requirements
• legal implications of policy
• localised soil types, rainfall infiltration and runoff
• databases
• tree inventory
• policy determinations for hazard identification and mitigation, significant trees, tree selection, tree replacement, street tree planting, tree removal, tree inspections and assessments, tree pruning operations, power line clearance, habitat protection, infrastructure protection and pest and disease control
• development of draft and final documents.
Assessment Conditions

It is an industry requirement for competency in this unit that assessment includes construction of a database that must contain a minimum of twenty (20) trees that are the preferred and desired species highly suitable for local use, and incorporating intensive tree profiles detailing attributes of the location, taxonomic characteristics, edaphic and environmental preferences and limitations of the tree. The database must include local, indigenous and exotic tree species.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - computer
  - word processing software
  - statistical software
  - internet connection

- **materials:**
  - tree policy documentation
  - tree profile and benefits form
  - database of local, indigenous and exotic tree species

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to identify and analyse aspects of tree biomechanics that affect the physical loads and strengths of trees, branches and anchorage in the ground; understand the assessment of tree strength and the loads that occur; and assess factors that can weaken the tree and are likely to increase the chance of failure.

This unit applies to individuals with broad and coherent theoretical and technical knowledge with depth in one or more disciplines or areas of practice and cognitive, technical and communication skills to demonstrate autonomy, well developed judgement and responsibility in undertaking complex self-directed work and learning to provide specialist advice and functions.

The role involves the self-directed application of specialised knowledge in arboriculture with substantial depth in areas such as with substantial depth in areas such as tree statics, dynamics, wind loading and structural failure.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining existing physical loads affecting trees
- identifying areas of high stress on trees and the factors that affect these areas of high stress
- assessing root plate environment including depth and consistency of soil, spatial limitations and history of site excavations
- assessing prior tree pruning operations to branches and roots
- determining extent of decay and damage of trunk and root system
- assessing strength and material properties of structural wood, particularly in areas of high stress
- determining wind environment of tree
- determining surface area of structure exposed to wind
- determining crown surface area exposed to wind
- assessing aerodynamic drag factor of tree crown in relation to trunk diameter and extent of hollowness
- estimating primary loads occurring in seasonal climatic events
- determining wind-load of prevailing storms
- determining load associated with saturated foliage
- considering additional drag associated with saturated foliage
- determining appropriate static load on trees for structural integrity testing as an estimate of a wind equivalent load
- calibrating static load testing instruments so loads are accurately applied and maintained within limits of structural safety during a static test
- carrying out a static test that loads the tree, measures the trunk strength and assesses root plate anchorage in the ground
- monitoring loads and forces electronically
Assessment Requirements for AHCARB701 Analyse tree biomechanics

- monitoring tree to ensure loads are kept within safe limits and damage is avoided to tree
- maintaining accurate records of all data from static test.
- comparing data with benchmarks obtained from stable tree populations
- documenting a report on structural integrity testing of tree from the static load test.
- researching tree biomechanics studies using dynamic methods of analysis
- understanding simple models of tree dynamics
- researching complex models and finite element analyses that provide multimodal approaches representing dynamics of branches on trees
- calculating the existing mass of branches
- determining degree of open-grown form of tree by calculation the of branch mass
- calculating the vector of force on the tree
- determining the tree dynamic response in defined wind velocity and direction
- researching the level of contribution of material properties in tree dynamics
- researching the dynamic effect of branches on frequency and damping
- determining the level of contribution of form and morphology in tree dynamics
- reviewing suitability of invasive and non-invasive methods of testing
- evaluating and determining likelihood of structural failure
- confirming level of anchoring potential of root system and stability of tree
- documenting a structural integrity report and provide to client.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- physical loads affecting trees
- areas of high stress on trees
- root plate environment including depth and consistency of soil, spatial limitations and history of site excavations
- prior tree pruning operations to branches and roots
- extent of decay and damage of trunk and root system
- assessment of strength and material properties of structural wood
- wind environment of tree
- surface area of structure exposed to wind
- crown surface area exposed to wind
- aerodynamic drag factor of tree crown in relation to trunk diameter and extent of hollowness
- estimation of primary loads occurring in seasonal climatic events
- wind-load of prevailing storms
- load associated with saturated foliage
- additional drag associated with saturated foliage
- static load
- static load test
- appropriateness of a static load on trees for structural integrity testing as an estimate of a wind equivalent load
Assessment Requirements for AHCARB701 Analyse tree biomechanics

- calibrating static load testing instruments
- limits of structural safety during a static test
- measurement of trunk strength
- assessment of root plate anchorage in the ground
- monitoring loads and forces electronically
- monitoring of tree to ensure loads are kept within safe limits
- avoidance of damage to tree
- maintenance of accurate records of all data from static test
- benchmarks obtained from stable tree populations
- reporting on structural integrity testing of tree
- researching tree biomechanics studies using dynamic methods of analysis
- simple models of tree dynamics
- complex models and finite element analyses
- multimodal approaches representing dynamics of branches on trees
- calculations of existing mass of branches
- open-grown form of tree
- vector of force on trees
- tree dynamic response
- wind velocity and direction
- material properties in tree dynamics
- dynamic effect of branches on frequency and damping
- form and morphology in tree dynamics
- of invasive and non-invasive methods of testing
- likelihood of structural failure
- level of anchoring potential of root system
- stability of tree
- structural integrity reporting.

Assessment Conditions

It is an industry requirement that competency in this unit requires the assessment of:

- five (5) static load tests, and
- five (5) dynamic load analyses.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.
The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - internet connection
  - wind environment statistics
  - static load equipment
  - models of tree dynamics
- materials:
  - structural integrity report

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- tree biomechanics vocational competencies at least to the level being assessed
- current tree biomechanics skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to safely work within a laboratory environment, collect and identify wood decay fungi specimens, prepare in vitro cultures, and carry out primary experiments.

This unit applies to individuals with advanced theoretical and technical knowledge and skills for professional or highly skilled work and/or further learning in one or more disciplines or areas of practice. This unit applies to individuals with advanced cognitive, technical and communication skills to provide specialist advice, analyse, generate and transmit solutions to complex problems, and to demonstrate autonomy, well-developed judgement, adaptability and responsibility as a practitioner or learner.

The role involves the self-directed application of specialised knowledge in arboriculture with substantial depth in areas of tree pathology and mycology.

Work is performed under standard laboratory procedures of hygiene and safety for sampling, and use, sterilisation and cleaning of standard laboratory equipment and instruments.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

- documentation of experimental assay test results
- development and maintenance of culture collections
- methods of submission to relevant government databases and culture collections
- documentation of diagnostic reports
- emergency plant pest (EPP)
- PLANPLAN guidelines.
Assessment Conditions

It is an industry requirement that competency in this unit requires the:

- field identification of a minimum of ten (10) wood decay fungi to generic level
- field identification of a minimum of ten (10) non-pathogenic fungi to generic level
- analysis of the lifecycle, biology, ecology and effects of a minimum of ten (10) saprophytic wood decay fungi species
- analysis of the lifecycle, biology, ecology and effects of a minimum of ten (10) pathogenic wood decay fungi species
- laboratory identification of a minimum of five (5) wood decay fungi to generic level.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - digital camera with macro
  - diagnostic tools including sounding hammer, trowel, probe, cordless drill
  - soil testing equipment
  - digital dissection microscope 10-100x
  - compound microscope
  - microtome, staining and slide mounting equipment
  - slides and coverslips
  - temporary/permanent mountant
  - histochemical stains
  - laboratory equipment to perform aseptic techniques in a sterile environment
- materials:
  - emergency plant pest diagnostic report

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- mycology vocational competencies at least to the level being assessed
- current mycology skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- researching and define elemental components of urban forests
- researching role of urban forests as a primary component of urban ecosystems
- researching threats to and resilience of urban forests in cities
- researching regulation of hydrological processes, retention of precipitation, mitigation of salinity, and effects of trees on water quality
- researching relationship of soil biological network, soil chemistry, soil structure and trees to soil structure stabilisation and erosion potential
- determining contribution of trees towards rhizosphere biodiversity, bioremediation and soil health
- researching energy conservation and micro-climate modification systems of trees and urban forests
- researching heat island analyses of an urban area
- evaluating health, social and psychological benefits of urban forests
- documenting evidence-based research into a preliminary report on benefits of urban forests
- researching current methods and technologies for spatial mapping of urban forests
- analysing process of carbon sequestration in urban forests
- analysing methods for sampling urban forests
- evaluating urban forest valuation methodologies
- documenting a preliminary report on valuation of an urban forest
- researching contribution of urban forest to carbon cycles
- determining local climate, soil factors and management factors affecting forest growth and sequestration
- researching contribution of forest carbon sequestration to mitigation of climate change
• documenting an evaluation of forest mitigation on climate change
• documenting a report on the social, environmental, economic and climatic values of urban forests
• determining challenges of increased urbanisation and urban densification on urban forests
• determining potential benefit of urban forest to mitigate climate change
• compiling preliminary reports and documenting a report describing multi-disciplinary solutions to challenges of urbanisation on urban forests.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• elemental components of urban forests
• role of urban forests as a primary component of urban ecosystems
• threats to and resilience of urban forests in cities
• regulation of hydrological processes, retention of precipitation, mitigation of salinity, and effects of trees on water quality
• relationship of soil biological network, soil chemistry, soil structure and trees to soil structure stabilisation and erosion potential
• contribution of trees towards rhizosphere biodiversity, bioremediation and soil health
• energy conservation and micro-climate modification systems of trees and urban forests
• heat island analyses of an urban area
• health, social and psychological benefits of urban forests
• current methods and technologies for spatial mapping of urban forests
• process of carbon sequestration in urban forests
• methods for sampling urban forests
• urban forest valuation methodologies
• contribution of urban forest to carbon cycles
• local climate, soil factors and management factors affecting forest growth and sequestration
• contribution of forest carbon sequestration to mitigation of climate change
• evaluation of forest mitigation on climate change
• social, environmental, economic and climatic values of urban forests
• challenges of increased urbanisation and urban densification on urban forests
• potential benefit of urban forest to mitigate climate change
• multi-disciplinary solutions to challenges of urbanisation on urban forests.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.
Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - statistical software
  - internet connection
  - measurement and data collection tools
- materials:
  - urban forest report

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- urban forestry vocational competencies at least to the level being assessed
- current urban forestry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to conduct an entomology research project.

This unit applies to individuals with broad and coherent theoretical and technical knowledge with depth in one or more disciplines or areas of practice and cognitive, technical and communication skills to demonstrate autonomy, well developed judgement and responsibility in undertaking complex self-directed work and learning to provide specialist advice and functions.

The role involves the self-directed application of specialised knowledge in arboriculture with substantial depth in areas of tree pathology and entomology.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Arboriculture (ARB)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- describing and identifying anatomical, morphological and taxonomical features of insect specimens
- examining and describe the behaviour, ecology and nutrition of insect interaction with trees
- researching annualised population and generational behaviour of insects
- constructing a database of tree pests and vectors
- developing and documenting an insect collection
- compiling host climatic and geographic distribution data
- researching and identifying natural antagonists, predators and parasitoids of insects
- identifying phytophagous and damaging insect-tree dynamics
- identifying symbiotic/beneficial and insect-tree dynamics
- researching physiology of tree resistance to insects
- researching host-pathogen and pathogen-vector interactions
- evaluating conditions associated with the selection of host trees by subcortical feeding insects and the factors associated with successful attack
- researching and assess insect transmission of disease
- evaluating multi-trophic interactions between host plant-pest-pathogen/parasitoids from a systems approach
- determining economic costs of insects
- evaluating insects as environmental indicators
- determining insect biological hazards
- investigating direct and indirect impact and effects of chemical pesticides or biocontrol agents on target and non-target organisms
- researching insect resistance to pesticides
• investigating fungi as biological control agents of tree pests
• evaluating biological control methods of integrated pest management (IPM)
• researching and evaluating plant health management options to offset the effects of insect damage
• collecting, tabulating, and statistically analysing data for publications
• determining the relevance of the results to arboriculture
• compiling and communicate research and test results in a research paper
• submitting research paper to a professional technical peer-reviewed journal
• reviewing feedback and amend where appropriate
• communicating key facts and conclusions to industry in an article published in a non-technical industry publication or via presentation to an industry training event.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• anatomical, morphological and taxonomical features of insect specimens
• behaviour, ecology and nutrition of insect interaction with trees
• annualised population and generational behaviour of insects
• database construction of tree pests and vectors
• annualised population of insects
• generational behaviour of insects
• insect collections
• generational phenology
• host, climatic and geographic distribution data
• natural antagonists, predators and parasitoids of insects
• phytophagous and damaging insect-tree dynamics
• symbiotic/beneficial and insect-tree dynamics
• physiology of tree resistance to insects
• host-pathogen and pathogen-vector interactions
• conditions associated with the selection of host trees by subcortical feeding insects
• factors associated with successful attack
• insect transmission of disease
• multi-trophic interactions between host plant-pest-pathogen/parasitoids from a systems approach
• economic costs of insects
• insects as environmental indicators
• insect biological hazards
• direct and indirect impact and effects of chemical pesticides or biocontrol agents
• target and non-target organisms
• insect resistance to pesticides
• fungi as biological control agents of tree pests
• biological control methods of Integrated Pest Management (IPM)
• plant health management options to offset the effects of insect damage
• collection, tabulation, and statistical analysis of data for publications
• compilation and communication of research and test results in a research paper
• professional technical peer-reviewed journal
• methods of reviewing and amending feedback
• methods of communicating key facts and conclusions in articles and presentations
• publishing in non-technical industry publications.

Assessment Conditions

It is an industry requirement that competency in this unit requires the identification by anatomical, morphological and taxonomical features of insect specimens, compiled into a collection of a minimum of one hundred (100) specimens of arboricultural concern or benefit from at least four (4) orders of insects. The collection may be digital and/or physical, correctly labelled and containing information on:

• date of collection
• location of collection
• host where applicable
• insect genus, and
• species where possible.

It is an industry requirement that research projects and management strategies include two or more of the following inter-disciplinary programs, and must focus on a specified insect or closely related insect species:

• Conceive, design, and implement safe and efficacious control strategies
• Research and develop alternative management strategies
• Investigate the longevity, infectivity, and virulence
• Monitor and assess infestation levels of outbreaks
• Design and implement biocontrol strategies using predators, parasitoids, and entomopathogenic fungi
• Design and implement methods for monitoring and assessment of population dynamics and distribution of tree pest species
• Conduct and evaluate a comparative ecological field study investigating efficacy and compatibility
• Trial and research a management plan for a phytophagous insect
• Trial and research a breeding program for a beneficial insect
• Conduct research of three model systems to examine tritrophic effects of susceptibility
• Design, implement, investigate, evaluate and report on tritrophic interactions
• Investigate preference and survivability
• Design projects investigating the subsequent risk analysis and tests required
• Develop a tree pest survey strategy
• Research and report on geographical or climatic distribution
• Coordinate an international and domestic multidisciplinary collaborative research initiative
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - internet connection
  - digital camera with macro
  - diagnostic tools including sounding hammer, trowel, probe, cordless drill
  - soil testing equipment
  - digital dissection microscope 10-100x
  - compound microscope
  - microtome, staining and slide mounting equipment
  - slides and coverslips
  - temporary/permanent mountant
  - histochemical stains

- materials:
  - entomology research paper
  - insect collection/database of pests and vectors

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- entomology vocational competencies at least to the level being assessed
- current entomology skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to contextualise diagnostic testing and execute a diagnostic test project.

This unit applies to individuals with advanced theoretical and technical knowledge and skills for professional or highly skilled work and/or further learning in one or more disciplines or areas of practice. This unit applies to individuals with advanced cognitive, technical and communication skills to provide specialist advice, analyse, generate and transmit solutions to complex problems, and to demonstrate autonomy, well-developed judgement, adaptability and responsibility as a practitioner or learner.

The role involves the self-directed application of knowledge in tree anatomy, physiology, pathology, tree dynamics and the edaphic environment with substantial depth in areas such as diagnostic tool application methods and analysis of diagnostic test results.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

It is an industry requirement that competency in this unit requires the analysis of five different diagnostic test results.

The candidate must provide evidence for and demonstrate:

- researching peer reviewed documentation and relevant case studies
- developing competency in correct, functional operation of diagnostic testing equipment
- interpreting the underpinning scientific principles of test processes
- describing the physical and other limits of the testing process
- determining the diagnostic assumptions and limitations of the testing process for the selected diagnostic tool
- analysing quantification, variance and tolerance requirements
- researching calibration baselines and seek verification where required
- verifying appropriate calibration processes have been performed
- selecting one or more appropriate testing processes for each of the primary domains of tree anatomy, physiology, pathology, tree dynamics and the edaphic environment
- contextualising testing for each domain with appropriate selection of diagnostic tools
- defining scientific research method using a basis of hypothesis testing, the measurement of functional relationships, and observational research.
- investigating and determine scientific literature resources referenced by the science of each primary domain
- describing the efficacy of the test in terms of the primary domain
- conceiving and executing a diagnostic test project
- expressing results in performance metrics of selected diagnostic tools
- interpreting results against normal and anticipated ranges
• confirming predictive responses in terms of post treatment to pre treatment results
• articulating meaning of results within context of primary domain
• providing an informed prognosis
• researching management options and lag time
• documenting management plans into report
• monitoring management plans and modify or refine as needed
• use of industry standard terminology to describe arboricultural diagnostic testing processes.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

• peer reviewed documentation and case studies
• correct, functional operation of diagnostic testing equipment
• underpinning scientific principles behind the test processes
• physical and other limits of the testing process
• diagnostic assumptions and limitations of tools
• quantification
• baselines
• calibration processes
• tree anatomy
• tree physiology
• tree dynamics
• the edaphic environment of trees
• research methods
• hypothesis testing
• measurement of functional relationships
• verifying efficacy of a test
• performance metrics
• normal anticipated ranges of test result
• scientific research methods
• scientific literature
• diagnostic test projects and processes
• the contextual meaning of tests results
• prognostics
• management of diagnostic outcomes
• management plans
• monitoring management plans.
Assessment Conditions

It is an industry requirement that competency in this unit requires the analysis of a minimum of five different diagnostic test results, one in each of the primary domains of tree anatomy, physiology, pathology, tree dynamics and the edaphic environment.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - statistical software
  - internet connection
  - diagnostic tools selected for testing
- materials:
  - diagnostic test project
  - diagnostic test project management plan

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- researching repose angle of soil materials
- researching soil plasticity
- measuring soil moisture content and field capacity of soil
- researching the effects of soil moisture on soil cohesion and plasticity
- researching modes of soil liquefaction
- determining soil texture
- assessing level of soil cohesion
- determining shear strength of the soil of concern
- researching load bearing capacity of soil of concern
- determining mass of the soil plate
- determining root morphology, division and distribution
- determining amount of buttressing of tree
- determining species development of tap root system
- researching identifying anatomical features of tree roots
- identifying tree roots based on anatomical features
- researching, experimentally modelling or demonstrating forces and pressures exerted into or through the soil, directly and indirectly by trees
- estimating and measuring dimensions of roots exerting a force on a structure of concern
- calculating total surface area of the roots exerting a force on a structure of concern
- calculating force exerted by roots per unit of surface area of structure
• calculating total force exerted by roots of a given surface area
• measuring and determine volume of structure of concern
• researching and calculate mass of the structure and adjacent structures
• considering the impact of gravity on mass
• determining effect of leverage on the forces exerted by tree roots onto structure of concern
• determining factors of root–soil matrix interactions
• considering area of contact between root and soil
• considering elasticity, tensile strength and breaking stress of roots
• investigating root cross-sectional morphology
• assessing extent of root plate damage, deficiencies or defects
• estimating impact of static and dynamic testing for root plate stability
• evaluating the likelihood of root failure by root breakage
• evaluating the likelihood of anchorage failure by soil breakage or slippage
• researching and considering effects of increasing mass
• researching and considering methods for, and effects of, increasing the modus of rupture
• researching and considering effects of use of curved structures
• researching and considering effects of soil mass and friction
• researching and considering effects of use of anchors, braces and props
• compiling a portfolio of above research including personal annotations and calculations
• preparing report on likelihood of tree causing damage to structure of concern including all test results, assumptions and calculations
• providing design suggestions to mitigate likelihood of damage to a similar replacement structure
• preparing report on relative stability of tree as a result of a defective or damaged root plate
• providing design suggestions to mitigate likelihood of whole tree failure as a result of defective or damaged root plate
• preparing expert witness report on harm by roots on structures; or on stability of tree with a defective or damaged root plate, as required
• reviewing construction and engineering language terminology
• discussing installation and protection measures to non-arboricultural team members
• resolving issues in construction and engineering terminology
• communicating in the language, concepts, basic science and technology of construction, architecture and engineering allied professions.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• repose angle of soil materials
• soil plasticity
• soil moisture content
• field capacity of soil
• effects of soil moisture on soil cohesion and plasticity
• modes of soil liquefaction
• soil texture
• soil cohesion
• shear strength of the soil
• load bearing capacity
• mass of soil plate
• root morphology
• root division
• root distribution
• buttressing
• species development of tap root systems
• anatomical features of tree roots
• identification of tree roots based on anatomical features
• research, experimental modelling and demonstration methods
• forces and pressures exerted into or through the soil, directly and indirectly by trees
• estimation and measurement of dimensions of roots exerting a force on a structure
• calculation of the total surface area of the roots exerting a force on a structure
• calculation of the force exerted by roots per unit of surface area of structure
• calculation of the total force exerted by roots of a given surface area
• measurement of volume of structures
• calculation of the mass of structures
• impact of gravity on mass
• effect of leverage on the forces exerted by tree roots onto structure
• factors of root–soil matrix interactions
• area of contact between root and soil
• elasticity of roots
• tensile strength of roots
• breaking stress of roots
• root cross-sectional morphology
• extent of root plate damage
• extent of root plate deficiencies
• extent of root plate defects
• impact of static and dynamic testing for root plate stability
• likelihood of root failure by root breakage
• likelihood of anchorage failure by soil breakage or slippage
• effects of increasing mass
• effects of use of curved structures
• effects of soil mass and friction
• effects of, increasing the modus of rupture
• effects of use of anchors, braces and props
• portfolio of research
• personal annotations and calculations
• report preparation
• test results and assumptions
• relative stability of tree
• whole tree failure
• design suggestions for mitigation of damage and whole tree failure
• harm by roots on structures
• expert witness reports
• expert witness report on harm by roots on structures
• construction language terminology
• engineering language terminology
• installation and protection measures
• concepts, basic science and technology of structural engineering
• concepts, basic science and technology of construction
• concepts, basic science and technology of architecture.

Assessment Conditions

It is an industry requirement that competency in this unit requires the preparation of a minimum of two (2) different reports:

• a report on harm by roots on structures
• a report on stability of tree with a defective or damaged root plate

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • computer
  • word processing software
  • internet connection
  • digital camera with macro
  • diagnostic tools including sounding hammer, trowel, probe, cordless drill
  • soil testing equipment
  • digital dissection microscope 10-100x
  • compound microscope
  • microtome, staining and slide mounting equipment
  • slides and coverslips
  • temporary/permanent mountant
• histochemical stains
• materials:
  • structural damage and stability report
  • glossary of construction, architecture and engineering terminology
Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
• tree biomechanics vocational competencies at least to the level being assessed
• current tree biomechanics skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to protect places of cultural significance to Aboriginal people. It requires following Aboriginal cultural protocols and details the specific cultural, gender and kinship sensitivities of working in Aboriginal communities and on Country with diverse cultural requirements.

This unit applies to those whose work on Country and in cultural keeping places and includes protecting cultural places, sites and objects often in co-operation with a range of stakeholders and with reference to Aboriginal communities and/or line management. The unit involves and requires a high level of awareness and experience with Aboriginal culture and communities and the need to observe Aboriginal cultural protocols. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit, due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate cultural authorities for a Community, place or for a site
- develop working relationships with Aboriginal and non-Aboriginal stakeholders in cultural sites
- canvass views in determining the cultural significance and heritage value and preservation issues of an Aboriginal cultural site
- contribute to planning for the protection of an Aboriginal cultural site including identifying resources required and submissions to be completed
- observe Aboriginal cultural protocols when working with stakeholders and land managers
- identify threats to Aboriginal site and measures to mitigate and manage the risk of damaging incidents or loss of cultural integrity
- identify natural resources and how they relate to cultural protocol, spirituality, art, environment, values, beliefs and lore/law
- identify cultural rights and responsibilities when using Community knowledge, information and material
- identify groups to be consulted in relation to owners or custodians of cultural and Community knowledge, information and material
- use Aboriginal names and standard industry terminology appropriate to the task
- apply work health and safety practices in the context of own work
- apply appropriate sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
Assessment Requirements for AIICASW301 Protect places of Aboriginal cultural significance

- Community’s history, cultural values and interpersonal and Community protocols related to the place
- Authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- Industry, organisational and enterprise policies and procedures for conservation of places of cultural significance
- Key concepts of Burra Charter and Guidelines
- Key concepts of Cultural and Heritage Legislation and National Parks and Wildlife Service (NPWS) legislation relevant to the protection of Aboriginal significant places.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to understand cultural landscapes from Aboriginal perspectives. The unit introduces overarching belief systems that operate where Aboriginal sites work takes place. It provides a conceptual foundation for understanding Aboriginal cultural protocols, cultural customs and cultural practices that the Aboriginal sites worker is likely to encounter in daily work routines.

This unit applies to Aboriginal worldviews and beliefs as they impact and affect Aboriginal sites work on Country. The unit applies to working either as an autonomous sites worker or under the supervision and cultural authority of Traditional owners or Elders for specific Country and is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge and materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- explain traditional Aboriginal belief systems of the Community
- identify examples and impacts of disintegration and disconnection with Aboriginal culture
- describe the relationship between the land and environment and Aboriginal peoples in culturally relevant ways
- explain the relationship between Dreaming, traditional beliefs, Ceremony and sites
- use Aboriginal names and standard industry terminology appropriate to the task.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- how to source appropriate cultural and lore/law authority for specific Country and/or sites
- protocols and customs relating to disclosure of knowledge about Country
- Aboriginal cultural and social frameworks
- Community’s ancestral beliefs
- kinship names, sections and networks
- totems, moieties, skin names
- relationship of Community’s Dreaming to the site and how it is evolving
- rules and limitations to access to cultural knowledge
- different social structures of various Indigenous Communities
- Indigenous cultural customs and heritage of the Community
- recording and documentation procedures used by organisation.
Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can record information and knowledge on Country from both an Aboriginal and non-Aboriginal perspective.

The candidate must provide evidence that they can:

- record details of Aboriginal sites, objects and cultural landscapes consistent with the requirements of the relevant Information Management System
- record and collate information on Aboriginal culture and history for Country whilst following Aboriginal cultural protocols
- follow Community guidelines and Aboriginal cultural protocols regarding the use of information on sites, objects and cultural landscapes
- identify appropriate cultural authorities for a Community, site, story or Ceremony
- apply Community protocols and permissions to determine cultural information, material and cultural expression that is appropriate to be shared
- identify groups to be consulted in relation to owners and custodians of cultural and Community knowledge, information or material
- use Aboriginal names and standard industry terminology appropriate to the task
- apply work health and safety practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Community Aboriginal history, cultural values and interpersonal and Community protocols related to the site
- cultural rights and responsibilities when using Community knowledge, information and material
• authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
• designated cultural areas and features, boundaries and extent of Country
• protocols and customs relating to disclosure of knowledge about Country.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to observe, record and report on the presence of plants of Indigenous cultural significance against criteria provided by a supervisor or as required under legislation, regulations, and or community protocols.

This unit involves the recognition of plants of Indigenous significance that are commonly encountered in land management situations and covers knowledge of Indigenous plant identification techniques, Indigenous plant names, community and organisational procedures for obtaining and supplying advice and information about Indigenous plants, and community or organisational expectations about the range and number of Indigenous plants to be recognised.

This unit has a particular focus on culturally significant Indigenous plants, management and conservation.

This unit applies to the identification and recording of Indigenous plants, local bushland and bush foods on Country. The unit applies to working with lore/law men and women either as an autonomous worker or under the supervision and cultural authority of Traditional Owners or Elders for specific Country.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify Indigenous culturally significant plants
- observe and accurately identify species of Indigenous plants
- document observations in required format, according to Community and organisational needs
- apply environmentally sustainable practices to carry out survey activities in a natural area in order to minimise disruption to the environment
- explain and/or demonstrate uses of plants for food and medicine
- utilise available resources and equipment to identify Indigenous plants accurately
- read map and grid references to identify locations of plants
- use standard industry terminology and local Community names for Indigenous plants
- apply work health and safety practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- criteria used to categorise plant species
- common and scientific names of Indigenous plants
- biological species occurring in the study area
- the importance, value or potential impact of the species in a designated area
- rare and endangered species
- plant identification techniques and plant names used by enterprise
- organisational expectations relating to the range and number of Indigenous plants to be recognised in the survey
Assessment Requirements for AHCASW304 Identify Indigenous culturally significant plant:

- cultural protocols for obtaining and utilising information about Indigenous plants
- nutritional and medicinal purposes of bushland and/or bush foods
- land management and conservation techniques applicable to Aboriginal sites work.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop an awareness of the protocols involved in Aboriginal culture as they relate to individuals and communities, specifically in relation to materials with restrictions on access for cultural reasons.

The unit covers Community cultural processes including the need to identify the appropriate persons when approaching a Community and the cultural and social rules associated with that task.

This unit applies to following Aboriginal cultural protocols when coming into contact and working with cultural materials defined as Aboriginal ceremonial secret sacred objects. The unit applies to working with this material on Country and off Country where rules apply to limited access to the material for cultural and ceremonial reasons. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols
Unit Sector

| 1. Conduct background research and consultation with Traditional Owners, Community, Cultural Managers/Knowledge holders | 1.1 Confirm traditional ownership of cultural material and objects and consult appropriate Owners or Cultural Managers and Communities  
1.2 Identify gender requirements for consultations, handling of and access to materials according to Aboriginal cultural protocols  
1.3 Consult with Traditional Owner/s, Community groups and experts to determine suitable holding for materials not authorised for general exhibition  
1.4 Obtain permissions from cultural authorities for access and use of Aboriginal secret, sacred and ceremonial materials  
1.5 Consult with Community to determine culturally appropriate handling of material and any limitations on access to materials  
1.6 Demonstrate confidentiality and neutrality in consultations and dealings with Traditional Owners and Cultural Managers |
| 2. Handle Aboriginal secret sacred cultural material | 2.1 Allow for and carry out any required Ceremony and procedure associated with seeing, handling or moving the material  
2.2 Identify, move, store, maintain and return cultural material according to Aboriginal cultural requirements and enter into agreements  
2.3 Note aspects of cultural material requiring repair or attention and pass onto supervisor or person with relevant expertise  
2.4 Communicate specific Aboriginal cultural requirements to colleagues  
2.5 Select and use appropriate handling and moving equipment according to safe work practices and to protect sacred and ceremonial material  
2.6 Adhere to cultural restrictions and limitations on secret, sacred and ceremonial material  
2.7 Demonstrate handling cultural material in a manner that protects individual items, assists efficient loading and unloading processes if moving, and in accordance with safe work practices  
2.8 Handle, move, store and manage secret sacred cultural material in accordance with Burra Charter guidelines and legislative requirements |
### Element | Performance criteria
---|---
3. Contribute to documenting a generational succession plan for passing on ownership of secret sacred material | 3.1 Discuss options for inheritance of ownership with Traditional Owners and/or Elders  
3.2 Participate in documenting the process, guidelines and timeframes agreeable to Traditional Owners and Cultural Managers for handover of ownership, control and access to secret sacred materials

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify cultural authority for ceremony in a particular area or site
- consult effectively with Traditional Owners and relevant Community representatives about the handling, access to and display of cultural material
- observe Aboriginal cultural protocols and follow collection management practices and industry cultural requirements when moving, storing, displaying and maintaining cultural material
- select and use handling, storage and transport systems in accordance with Aboriginal cultural protocols
- create, maintain and store records of the process, guidelines and timeframes for handover of ownership, control and access to secret sacred materials
- use standard industry terminology and Aboriginal names for sites and materials, as appropriate
- apply work health and safety practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- issues that frame the development of cultural protocols
- Community Aboriginal history, cultural values and interpersonal and Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- ownership relationships for secret, sacred material
• content of contracts and confidentiality agreements applicable to working with ceremonial secret sacred materials
• organisational procedures and guidelines for working with ceremonial secret sacred materials
• Burra Charter guidelines appropriate to working with Aboriginal secret sacred materials
• key concepts of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to working with ceremonial secret sacred materials.

Assessment Conditions
Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- discuss Aboriginal cultural landscapes in ecological and archaeological terms, Aboriginal cultural, language and spiritual terms and traditional Aboriginal economic terms
- relate Creation stories, oral histories, kinship and totemic relationships to the cultural landscape
- follow Community guidelines and Aboriginal cultural protocols when using information on sites, objects and cultural landscapes
- identify appropriate cultural authorities for a Community, site, story or Ceremony
- describe the range and interrelationship of Aboriginal cultural and ceremonial practices undertaken to maintain connection with the culture
- use Aboriginal names and archaeological terminology to describe landscapes and cultural connections.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the Community’s Aboriginal history and cultural values
- Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- designated cultural areas and features of Country, boundaries and extent of Country
- Aboriginal cultural values of landform types
- archaeological evidence of landform types
- types of land features that have high possibility of cultural heritage being present
- creation stories, oral histories, kinship and totemic relationships to the cultural landscape
• key principles, values and practices of Aboriginal cultural knowledge
• lore/laws, customs and speaking rights
• connection to Country through stories, song, dance and art
• protocols and customs relating to disclosure of knowledge about Country
• key concepts of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to own role
• key concepts of the Burra Charter.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to determine theoretical and practical concepts of cultural significance in relation to Aboriginal cultural sites and landscapes. It uses the Burra Charter as the industry benchmark in assessing significance for culture and heritage work.

This unit applies to those who are working on Country finding Aboriginal sites and working to assess significance in landscapes on Country. The unit applies to working with lore/law men and women either as an autonomous Sites worker or under the supervision and cultural authority of Traditional Owners and Elders for specific Country. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal-sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret cultural landscapes from an Aboriginal cultural and spiritual perspective
- identify details of plant and animal species on Country, their Aboriginal names and their roles and place in the cultural landscape
- collate information on Aboriginal culture and history for Country in culturally appropriate ways
- collect and use information according to Community guidelines and cultural protocols
- follow community lore/laws, customs on accessing and sharing cultural knowledge
- identify landscape features and sites on Country in accordance with their place and role in Dreaming, Aboriginal spirituality and local cultural practices and ceremony
- use Aboriginal names and standard industry terminology appropriate to the task
- apply work health and safety practices in the context of own work
- apply appropriate sustainability practices to minimise disturbance and degradation to park or reserve and surrounding environments.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Aboriginal history, cultural values and interpersonal and Community protocols associated with area
- Aboriginal cultural customs and heritage related to area
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- designated cultural areas and features of Country, boundaries and extent of Country
- key principles, values and practices of Aboriginal cultural knowledge
Assessment Requirements for AICASW309 Interpret Aboriginal cultural landscape

- connection to Country through stories, song, dance and art
- role of Community lore and customs in matters of land, family, marriage, kinship, totem, clan and obligation
- protocols and customs relating to disclosure of knowledge about Country
- when and how to relate and document information and when it is not appropriate according to cultural protocols
- Aboriginal names for plants, animals and landscape features
- cultural knowledge about plant and animals relating to a particular Community, group or region
- role and rights of Indigenous people in maintaining and controlling cultural knowledge
- individuals who are authorised to possess cultural knowledge.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Application

This unit of competency describes the skills and knowledge required to handle, pack and unpack Aboriginal cultural material for movement and storage.

This unit applies particularly to working around and with Aboriginal cultural materials and objects and focuses on the specific cultural and consultative requirements for sourcing, handling, and possibly interpreting Aboriginal cultural material. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols

Unit Sector

| **1. Source Aboriginal cultural material** | 1.1 Confirm traditional ownership of cultural material  
1.2 Consult with the appropriate traditional custodians and Community to determine suitable keeping places for cultural materials  
1.3 Work with cultural authorities to identify appropriate persons within Community who hold cultural knowledge relevant to establishing any restrictions on access to materials  
1.4 Seek permission and advice for being on site and using cultural material according to Aboriginal cultural protocols  
1.5 Locate and identify cultural material and objects and assess material’s suitability for moving  
1.6 Complete records according to cultural protocols  
1.7 Identify issues and follow protocols in relation to the return of cultural material to local Aboriginal Community |
| **2. Determine movement and storage requirements** | 2.1 Implement legislative and work health and safety requirements  
2.2 Assess and document the scope of work required for movement and storage of cultural material  
2.3 Identify and confirm organisational procedures and guidelines and specific requirements for moving and storing cultural material with relevant personnel  
2.4 Determine future storage requirements with relevant personnel  
2.5 Assess and arrange the need for specialist expertise |
| **3. Handle and transfer Aboriginal cultural material** | 3.1 Identify, move, store, maintain and return cultural material according to Aboriginal cultural requirements  
3.2 Record details of material requiring repair or attention and take action within scope of own job role or refer to relevant personnel as required  
3.3 Communicate specific Aboriginal cultural requirements to colleagues  
3.4 Select and use appropriate handling and moving equipment  
3.5 Handle cultural material in a manner that protects individual items and assists efficient loading and unloading processes  
3.6 Prepare transportation documentation  
3.7 Transfer Aboriginal cultural material to approved location  
3.8 Use techniques for moving material that minimise environmental disturbance and degradation, where appropriate |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate cultural authorities for a Community, place or site
- consult effectively with Traditional Owners, Cultural Managers and relevant Community representatives about the handling, access to and display of cultural material
- handle, move and store cultural materials according to cultural protocols
- seek permissions from cultural authorities for being on site and handling, moving, storing and recording cultural material, according to Community protocols
- observe Aboriginal cultural protocols, follow collection management practices and industry requirements when moving, storing, displaying and maintaining cultural material
- record details of transporting and storing of cultural material
- report damage or faults with cultural material to appropriate persons
- select and use handling, storage and transport equipment
- apply work health and safety practices in the context of own work
- apply appropriate sustainability practices to minimise environmental disturbance and degradation when moving cultural objects from Aboriginal sites.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- cultural authority for ceremony on the site
- ownership relationships for secret, sacred material
- record-keeping techniques
- organisational procedures and guidelines.
Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate cultural authorities for a Community, place or for a cultural site
- consult with appropriate cultural authorities and obtain informed approval for works and access of specific persons
- assess the level of work required to maintain the cultural place
- carry out maintenance activities in accordance with organisational, environmental sustainability and Aboriginal cultural requirements
- report deterioration or damage to place according to Community protocols and requirements
- report incidents of breaches of legislation including vandalism
- determine the cultural rights and responsibilities when using Community knowledge, information and material
- apply work health and safety practices in the context of own work
- ensure sustainability practices are applied by all workers and contractors on site to minimise environmental degradation and deterioration of site.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- workplace health and safety requirements and responsibilities of own role
- sustainable environmental practices applicable to maintaining site
- traditional and Western modern techniques of site protection appropriate to the site
- range of maintenance works undertaken on cultural sites
- enterprise procedures for reporting deterioration or damage to place or reporting incidents
- site recording systems used by the enterprise or Community
• relevant archaeological practices and procedures
• Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to maintenance of an Aboriginal site.

Assessment Conditions
Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate Aboriginal cultural authorities for a Community, place or site
- identify key stakeholders to be consulted in relation to owners and custodians of cultural and Community knowledge, information or material and cultural significance
- develop and implement consultation processes
- survey and assess Aboriginal cultural sites using appropriate techniques, tools and relevant archaeological practices
- incorporate the cultural significance, heritage values and conservation issues of an Aboriginal cultural site into report documentation
- identify threats and develop controls to mitigate and manage the risk of deterioration, damaging incidents or loss of cultural integrity
- prepare a site survey report to meet Community and enterprise needs
- complete submissions required to carry out a site survey
- observe Aboriginal cultural protocols in dealing with stakeholders and land managers.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- site survey techniques, procedures and processes
- archaeological and scientific research techniques relevant to survey Aboriginal cultural site
- monitoring of site including fabric deterioration, damage and likely causes of deterioration and damage
• cultural rights and responsibilities when using Community knowledge, information and material
• general understanding of impacts of natural resources, such as geological settings, ecological processes, and interaction between natural and cultural processes
• provisions in the Australian Natural Heritage Charter and the Burra Charter and Guidelines and how they relate to surveying and reporting on Aboriginal sites
• design and methodology of consultation processes
• policy analysis and development of impact statements
• the range of conservation strategies for cultural areas
• data submission systems and reporting requirements
• components of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to surveying Aboriginal cultural sites.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to provide support to others undertaking agricultural cropping activities.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work alongside a supervisor and undertake defined routine activities. They exercise limited autonomy and identify and seek help with simple problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare tools and equipment
- demonstrate crop support activities
- handle basic materials and equipment
- follow work instructions
- clean up after work activities
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work
- follow enterprise sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- safety procedures
- materials, tools and equipment for cropping work
- undertaking of work as directed
- handling of materials and equipment
- procedures for cleaning up on completion of work.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with supervisor and team members
- carry out ground preparation of the area for planting
- read and follow planting plan
- apply pre-planting soil treatments
- calibrate the planting equipment
- treat and plant seed
- apply fertiliser with seed at sowing or as a separate operation
- apply herbicides under supervision
- record all details of sowing
- operate a range of crop establishment machinery
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- importance of correct timing and procedures for crop planting
- field hygiene and quality control in regard to crop establishment
- a range of pre-planting soil treatments and their importance
- methods of waste disposal causing minimal impact on the environment
- hazards and follow safety directions
- communication with team members and supervisor
- equipment calibration
• measurement of quantities of treatment
• determination of spacing’s and planting patterns
• machinery operation to manufacturers specifications and enterprise procedures
• safe application of appropriate agricultural chemicals
• enterprise work health and safety and biosecurity polices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare machinery, equipment and tools to maintain crops
- conduct scheduled routine checks on machinery and vehicles for oil levels, tyre pressures, water levels and greasing points
- assist with cropping duties including weed control, pest and disease control, crop nutrition and paddock maintenance
- report the presence of weeds, pests and disease in crops
- record the details of crop maintenance
- identify hazards and follow safety directions at work
- read and interpret a range of workplace information
- calibrate equipment
- measure quantities of treatment
- operate machinery to manufacturer’s specifications and enterprise procedures
- safely apply under supervision appropriate agricultural chemicals in weed and pest control programs
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- operations of a range of cropping machinery
- importance of correct timing and procedures for crop maintenance
- weed control in crops
- pest and disease control
- crop nutrition
- methods of waste disposal causing minimal impact on the environment
- enterprise work health and safety and biosecurity polices.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and follow safe work procedures
- erect simple temporary bulk material storages
- check equipment and storage facilities, and identify current or impending faults
- perform pre-operational checks and routine safety, service and maintenance procedures on tools, equipment and machinery
- operate hand and independently powered tools and cleaning equipment to industry standards
- clean, secure and store machinery and equipment
- handle hazardous substances (fuels) safely
- read and interpret manufacturer's specifications, work and maintenance programs, and Safety Data Sheets (SDS)
- prepare the storage area for access by grain carriers
- prepare grain storages by removing all residues and checking structure
- work in confined spaces in accordance with State/Territory legislation, where required
- prepare and test grain handling machinery
- communicate with supervisor
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- range of construction methods, potential hazards, safety and structural requirements for storage
Assessment Requirements for AHCBA204 Prepare grain storages

- erection and dismantling for types of temporary storage used by organisation
- organisation and commodity quality requirements for grain storage
- grain storage hygiene requirements
- typical signs of structural damage to be documented and reported
- pre-operational and safety checks, servicing and maintenance procedures for tools and equipment
- machinery maintenance procedures and operating principles
- machinery and equipment cleaning, storage and protection methods
- appropriate action in contingency situations
- organisation requirements for protective equipment and safe practices in relation to work health and safety
- State/Territory legislation in respect to working in confined spaces
- potential hazards associated with the operation of basic tools and equipment
- regulations and codes of practice with regard to work health and safety, environment and the use and control of machinery and equipment
- personal protective clothing and equipment and when and how it should be used
- organisational recording and reporting procedures.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to conserve forage. This includes controlling risks associated with conservation of forage activities such as risk of fire from moisture content creating excessive temperature of hay stacks, potential contact with overhead power lines and exposure to noise and dust.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices. All machinery is operated to manufacturer’s specifications.

This unit applies to individuals who work under broad direction and take responsibility for own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

</tr>
</tbody>
</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare paddocks for forage conservation
- apply forage conservation methods
- harvest, prepare and store forage
- record work activities
- interpret and implement forage conservation requirements
- operate and maintain forage harvesting equipment
- assess risks and implement work health and safety procedures for forage conservation
- correct use of technology to improve efficiency
- perform harvesting operations
- follow enterprise workplace health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work
- follow enterprise sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- silage and hay conservation systems and methods
- factors affecting the quality of silage and hay
- dry matter content, quality and hygiene requirements
- range and functions of silage and haymaking machinery and equipment
- common weeds, pests and diseases associated with crops and pastures
- role of technology in improving efficiency
- types and application of personal protective equipment
• legislation and regulations including licensing requirements in relation to forage operations
• risks associated with conservation of forage activities including risk of fire from moisture content creating excessive temperature of hay stacks; potential contact with overhead power lines; and exposure to noise and dust
• risk factors including animal health and weather
• environmental risks and impacts of forage conservation.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to establish pastures and crops for livestock production.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under broad direction and take responsibility for own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- operate machinery and equipment
- calibrate boom spray and drill and fertiliser spreader
- identify pests and diseases
- identify pasture and crop species (both seed and seedlings)
- identify and control weeds
- handle chemicals safely
- mix and inoculate seed
- interpret and implement crop and pasture production plans
- assess existing pastures and crops to maximise livestock production
- sow and monitor new pastures and crops
- select pasture species, sowing method and application appropriate for optimal yield
- manage grazing systems including weed and stubble control
- control pests and weeds without damage to the crop or pasture
- demonstrate correct use of technology to improve efficiency
- follow enterprise work health and safety policies
- follow enterprise sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- types of grasses, legumes and crops
- types of seed inoculants and fertilizers
- seed and fertilizer placement for optimal germination and growth
• integrated weed control including chemical application, cultural practices and grazing management
• safe use of chemicals and machinery
• role of technology in improving efficiency
• advantages and disadvantages of pasture and crop establishment programs
• timing of pasture and crop establishment
• enterprise work health and safety policies
• procedures for minimising environmental impacts.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and assess risks in grain/seed receipt area
- operate and maintain grain/seed testing equipment
- inspect and clean receipt and storage areas and equipment
- source grower/supplier information
- identify grain/seed types
- use personal protective equipment
- identify defects such as split grains/seeds, undersize, chaff, weed seeds
- prepare the site and maintain hygiene
- prepare testing equipment
- liaise with growers and/or contractors
- maintain segregation of grains/seeds and arrange storage
- follow work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- grain/seed receipt processes and industry practice
- calibration requirements for testing equipment
- types of testing equipment such as protein, oil content, moisture etc
- requirements for segregation, traceability and hygiene
- impact of residues including chemical
- seed and grain industry grains receipt standards and quality assurance requirements
• legislation, regulations and policies for Work Health and Safety and biosecurity
• segregation strategies/methods
• conflict and dispute resolution.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify work health and safety hazards and implement safe operating procedures
- identify grain and seed types
- take consistent samples
- identify defects such as split grains and seeds, undersize, chaff, weed seeds, damage
- read and interpret commodity standards
- store and dispatch grains and seeds samples and maintain hygiene
- conduct sampling and initial testing
- operate electronic and non-electronic testing equipment
- record samples for further testing
- communicate with customers and maintain records
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- safe operating procedures for handling and storing grain
- grain/seed testing processes
- industry standards and codes of practice
- testing parameters for grains such as protein, weight, oil content, moisture, defects, sprouts etc
- testing parameters for seed such as genetic purity, cultivar, dead, abnormal and hard seed, germination potential, foreign matter
- analysis and consequence of test result
- segregation strategies/methods, traceability and hygiene
- impact of residues including chemical
- industry practice, standards and quality assurance requirements in relation to grains sampling and testing
- workplace health and safety, company, industry and regulatory requirements
- sampling and testing protocols
- enterprise biosecurity policies.

**Assessment Conditions**
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret production and planting plans, produce standards, quality specifications and work procedure documents
- measure materials and site plan specifications
- operate, adjust and calibrate cultivation equipment safely
- complete pre- and post-operational checks on tools, vehicles and equipment
- perform routine safety, service and maintenance procedures on tools, cultivator and equipment
- demonstrate correct use of technology to improve efficiency
- read and interpret manufacturer specifications, work and maintenance plans, and Safety Data Sheets (SDS)
- communicate effectively with supervisor
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work
- follow enterprise sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- methods of cultivating a range of soil types
- environmental issues of cultivating soil for planting, such as drainage and irrigation systems, soil amelioration and waste disposal procedures
- a range of pre-planting treatments, their purpose and method of application
- operation and maintenance of planting equipment
- role of technology in improving efficiency
• work health and safety guidelines, procedures and principles, including manual handling
  and exposure to hazardous substances
• enterprise biosecurity and sustainability policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately
reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and implement safe operating procedures
- sow seed and apply fertiliser at the required placement and rate
- identify types of weeds and insects harmful to crop establishment
- perform pre-operational and safety checks, servicing and maintenance on machinery and equipment
- calibrate, operate machinery and attach/detach equipment
- demonstrate emergency operating procedures in normal and adverse conditions
- recognise and report machinery damage, faults or malfunctions and perform minor repairs
- demonstrate safe, environmentally responsible and sustainable land management practices
- monitor and minimise impacts to the environment associated with sowing operations
- correct use of technology to improve efficiency
- read and interpret manufacturer specifications, work and maintenance plans, and MSDS
- obtain relevant licences and permits
- clean, secure and store machinery and equipment
- record and report equipment faults, workplace hazards and accidents
- assess and calculate the application of fertiliser/pesticide requirements and application rates
- calibrate equipment and calculate volumes, consumption and servicing requirements
- prepare and service machinery and equipment
- carry out tillage and apply pre-planting treatments
- carry out sowing operation and fertiliser application
- monitor the environmental impacts of establishing the crop
- clean, secure and store machinery and equipment
• keep records of the sowing operation
• follow enterprise work health and safety policies in the context of own work
• follow sustainability practices in the context of own work
• follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• crop types, preparation of seeds, seeding methods and application techniques
• fertiliser types, rates of application and crop nutrient requirements
• effects of weather conditions (normal and adverse) on seeding and fertilising applications
• operating principles and operating methods for machinery and equipment
• pre-operational and safety checks, servicing and maintenance procedures for seeding machinery and equipment
• principles of weight distribution with regard to load shifting and vehicle movement
• role of technology in improving efficiency
• sustainable land management and soil conservation techniques
• positive environmental practices, negative environmental impacts and minimisation measures associated with seeding operations
• procedures for cleaning, securing and storing machinery, equipment and materials
• enterprise policies with regard to seeding operations, and recording and reporting routines
• relevant state/territory legislation, regulations and codes of practice with regard to workplace health and safety and the use and control of pesticides and fertilizers
• Personal Protective Equipment and when and how it should be used
• relevant state/territory legislation and regulations with regard to licensing requirements and the use and control of machinery and equipment
• enterprise biosecurity and sustainability policies.

Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

1. Monitor & assess agricultural crop condition, growth and requirements

1.1 Monitor crop health regularly and record observations
1.2 Report deviation from expected growth and vigour
1.3 Identify, monitor and report weeds, pests and diseases
1.4 Follow directions to establish sites for regular measurement of soil moisture
1.5 Measure moisture levels and calculate soil water percentage using soil probe
1.6 Report observations of crop ripening to manager to determine the timing of harvest

2. Undertake crop health operations

2.1 Identify hazards and implement appropriate controls
2.2 Select, use and maintain appropriate personal protective equipment
2.3 Follow label instructions and any specialist advice
2.4 Apply specialist sprays appropriately for growth stages
2.5 Apply technology to ensure most efficient performance of operations
2.6 Conduct any required chipping or spot spraying
2.7 Assess, record and report crop growth stages and keys
2.8 Apply water as required
2.9 Consider adverse environmental impacts when performing all applications

3. Complete cleaning and hygiene operations

3.1 Clean and maintain equipment appropriately
3.2 Dispose of all containers, leftover fluids, waste and debris from the maintenance and servicing work according to enterprise policies and minimising the impact on the environment
3.3 Complete all required records and documentation appropriately

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCBAC307A Maintain agricultural crops.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- detect differences and variations in crop growth
- report/communicate such differences to the supervisor/farm owner
- observe and report on health and growth of the crop
- monitor pests and disease in crops
- assess crop maturity
- apply sprays and fertilizers as directed
- measure soil moisture and relate data to crop requirements
- apply technology to ensure most efficient performance of operations
- follow enterprise work health and safety policies in the context of own work
- follow sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- appropriate legislative requirements, manufacturer's instructions and organisation procedures/instructions
- potential hazards associated with the operation of basic tools and equipment
- general machine maintenance procedures
- machinery operating principles and safe operating methods
- environmental impacts associated with the operation of machinery and equipment in a harvesting context
- organisation recording and reporting procedures
- symptoms of crop lacking health and vigour
• signs of pest and disease infestation, moisture stress and nutrient deficiencies
• hygiene requirements for agricultural crops and equipment that comes into contact with the crop
• types and uses of herbicides, insecticides and other pesticides and alternative pest control methods (non-chemical)
• role of technology in improving efficiency
• work health and safety and pesticides legislative and enterprise policies.

Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to undertake agricultural crop harvesting activities.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

Operating machinery carries risk and candidates should observe all enterprise and manufacturer’s requirements.

This unit applies to individuals who work under broad direction and take responsibility for own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

### 1. Prepare to harvest agricultural crops

1.1 Determine requirements for the work to be undertaken, method and order of harvesting from the harvest strategy and confirm with supervisor
1.2 Identify work health and safety hazards in crop harvesting and assess risks
1.3 Select and maintain appropriate personal protective equipment
1.4 Identify environmental impacts of harvesting the crop and take required action
1.5 Complete windrowing or swathing appropriately
1.6 Sample crop for moisture content and report to supervisor to assess timing of harvest
1.7 Identify hygiene standards for the crop and the paddock from the harvest strategy or the crop storage plan

### 2. Prepare the harvesting equipment

2.1 Clean harvesting machinery and other equipment appropriately
2.2 Assess and service all machinery and equipment, replace required parts and adjust for harvesting conditions
2.3 Dispose of all containers, leftover fluids, waste and debris from the maintenance and servicing work appropriately
2.4 Record all maintenance and servicing activities appropriately

### 3. Harvest crops

3.1 Implement work health and safety controls for crop harvesting
3.2 Follow and complete the harvest strategy for each paddock, including implementing fire prevention measures
3.3 Operate harvesting machinery and ancillary equipment appropriately and to suit crop conditions
3.4 Apply technology to ensure most efficient performance of operations
3.5 Maintain the hygiene of all surfaces that come into contact with the crop
3.6 Check regularly and adjust harvester and ancillary equipment where required

### 4. Complete harvesting operations

4.1 Clean and store equipment, attachments and other ancillary equipment appropriately
4.2 Apply any required insecticides appropriately
4.3 Dispose of all containers, leftover fluids, waste and debris according to enterprise polices and minimising the impact on the environment
<table>
<thead>
<tr>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- handle and manoeuvre harvesting equipment
- operate crop harvesting machinery and equipment
- implement correct use of technology to improve efficiency
- implement procedures for seed handling and hygiene
- identify hazards and implement work health and safety procedures for all harvest tasks
- complete pre- and post-operational checks on tools, harvesting machinery and equipment
- perform routine, service and maintenance procedures on tools, harvesting machinery and equipment
- sample crops to assess moisture content and maturity/ripeness of the crop
- monitor efficiency of harvesting equipment and make adjustments to height and other settings
- transport, clean and store harvesting equipment
- use of industry standard terminology to describe agricultural harvesting activities
- follow work health and safety policies in the context of own work
- follow biosecurity policies in the context of own work
- follow sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- handling and manoeuvring of harvesting equipment
- operation of crop harvesting machinery and equipment
- role of technology in improving efficiency
Assessment Requirements for AHCBAC308 Undertake agricultural crop harvesting activities

- procedures for seed handling and hygiene
- hazards and work health and safety procedures for all harvest tasks

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- detect differences and variations in pasture and crop growth
- report/communicate such differences to the supervisor/farm owner
- observe and report on health, nutrition and growth of the pasture and crop
- monitor pests and disease in pastures and crops
- assess pastures and crop maturity
- apply sprays and fertilizers as directed
- measure soil moisture and relate data to crop requirements
- apply technology to ensure most efficient performance of operations
- monitor the productivity and feed intake of grazing livestock
- assess the impact of grazing on pasture and crop productivity
- follow enterprise work health and safety and animal welfare policies and procedures.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- potential hazards associated with the operation of basic tools, equipment and machinery
- general machine maintenance procedures
- machinery operating principles and safe operating methods
- role of technology in improving efficiency
- environmental impacts associated with the operation of machinery and equipment
- organisation recording and reporting procedures
- symptoms of pasture and crop lacking health and vigour
- signs of pest and disease infestation, moisture stress and nutrient deficiencies
- hygiene requirements for equipment that comes into contact with the pastures and crops
- types and uses of herbicides, insecticides and other pesticides and alternative pest control methods (non-chemical)
- work health and safety and pesticides, legislation
- different livestock grazing habits
- enterprise sustainability practices.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine fertiliser, soil ameliorants and biological inputs required to support production
- set objectives and milestones for pasture production
- calculate costs
- determine soil quality and land use capability
- monitor the productivity and feed intake of grazing livestock
- develop grazing strategies and plan infrastructure required
- assess the impact of grazing on pasture productivity and resilience
- identify pasture species and estimate dry matter production of pasture
- assess options to control weed infestation
- identify strategies for pest and disease control
- establish production targets for each pasture type in an enterprise
- develop a pasture management program to meet production targets and enterprise objectives
- carry out strategic grazing to reduce or eradicate areas of weed infestation
- monitor soil health and grazing management to ensure sustainable pasture and optimal livestock production levels
- monitor pasture yields and evaluate against forecast production levels
- correct use of technology to improve efficiency
- maintain relevant physical and financial records for pasture and livestock production
- implement work health and safety policies and procedures
- implement enterprise environmental management and sustainability practices.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- land and soil conditions
- pasture species and growing requirements
- pasture grazing strategies
- nutrient requirements and soil fertility
- environmental management strategies in land use
- safe handling processes for fertilisers
- infestation patterns for different types of weed
- role of technology in improving efficiency
- work health and safety legislative and enterprise requirements
- relevant environmental codes of practice, legislation and regulations relating to farm production.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine requirements of the pasture establishment program
- research suitable pasture species for the site and proposed land use
- prepare and document the pasture establishment program
- develop strategies for weed, pest and disease control
- assess pastures for production potential
- assess site factors
- select suitable pasture species and cultivars
- identify threats to pasture establishment including weeds, pests and diseases
- determine resources and equipment for planting and post-planting care
- prepare pasture establishment plans to meet livestock production plans and schedules
- demonstrate correct use of technology to improve efficiency
- implement enterprise work health and safety policies in the context of the work team
- implement sustainability practices in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- pasture varieties and their characteristics, requirements and production potential
- establishment techniques of specific pasture species and cultivars
- advantages and disadvantages of a range of pasture establishment procedures
- maintenance requirements and practices for specific pasture species and cultivars after initial establishment
- livestock production systems and their integration with pasture production
- planning process, including costing and scheduling of works
- plant identification of pasture and weed species
- role of pasture in sustainable land use
- role of technology in improving efficiency
- environmental impacts of pasture establishment.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and oversee safe operating procedures
- identify the seasonal conditions which affect crop establishment
- plan and schedule planting including amending plans during the operations
- recognise poor growth and lack of vigour caused by nutrient deficiency and incorrect planting depth
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- plan the planting operation including timing and resources required
- correct use of technology to improve efficiency
- carry out pest, weed and disease control either pre or post planting if required
- supervise staff and monitor the planting operation
- implement work health and safety policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- equipment that is required for a range of tillage methods, and pest and weed control prior to planting
- crop establishment requirements
- equipment servicing requirements
- role of technology in improving efficiency
- integrated pest and weed management techniques
- environmental controls and codes of practice applicable to the enterprise
Assessment Requirements for AHCBA403 Supervise agricultural crop establishment Date this document was generated: 18 March 2019

- legislation, codes of practice and enterprise procedures for work health and safety and environmental management
- management practices and processes to minimise environmental impacts such as noise, soil degradation, and debris from planting operations.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- refer to records of, and assess, soil health and nutrient status
- dispatch soil samples to laboratories
- carry out a soil health appraisal
- identify likely threats to crop from pests, weeds and diseases
- recognise damage to crop caused by weeds, pests or diseases
- recognise poor growth and lack of vigour in crop caused by nutrient deficiency
- record monitoring results
- plan and implement integrated control strategies to address nutrient deficiencies, disease outbreaks, pest and weed infestations
- accurately measure soil moisture and estimate irrigation needs if required
- apply pesticides or fertility treatments as required
- apply correct use of technology to improve efficiency
- communicate with industry, suppliers and other personnel
- read and interpret Safety Data Sheets (SDSs), production plans and analysis results
- estimate and measure pest control treatments
- assess crop needs accurately
- carry out crop cultural practices and treatments
- monitor and assess crop maturity
- ascertain water requirements from survey advice and weather forecasts
- measure soil moisture and interpret data accurately
- determine time of harvest with specialist advice
- implement work health and safety policies in the context of the work team
- implement enterprise sustainability practices.
Knowledge Evidence
The candidate must demonstrate knowledge of:

- crop growth stages and keys
- crop growth requirements compared to soil nutrient status
- fertiliser and soil ameliorant types and application times, methods and rates
- chemical use if applicable
- factors leading to development of chemical resistance
- role of technology in improving efficiency
- integrated pest management strategies
- life-cycles of pest, diseases and weeds
- work health and safety legislative requirements
- relevant codes of practice with regard to the use and control of agricultural chemicals
- legislation and codes of practice with regard to environmental protection.

Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- organise and schedule the maintenance of plant and equipment
- establish strategies, procedures and controls for crop harvesting
- negotiate and arrange contracts and agreements
- implement safe workplace and positive environmental practices
- deal with weather and other contingencies
- establish strategies, procedures and controls for crop harvesting, including fire prevention and control plans
- correct use of technology to improve efficiency
- negotiate and arrange contracts and agreements
- estimate crop yields
- maintain budgetary controls
- assess crop maturity and quality in readiness for harvesting
- arrange storage and delivery requirements
- segregate grain for quality and monitor for moisture content
- implement work health and safety policies in the context of the work team
- implement biosecurity policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- crop maturity and yield potential
- grain or seed quality
- functions and limitations of harvesting equipment
• role of technology in improving efficiency
• crop measurement techniques and parameters
• grain market information and sources
• location and relative skills and abilities of available contractors
• weather conditions which may affect the harvest
• relevant legislation, codes of practice and enterprise requirements for Work Health and Safety, contractor engagement, environment and pesticides
• environmental controls and codes of practice applicable to harvesting operations
• enterprise biosecurity policies.

Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- setup and operate fumigation and pesticide application equipment
- sample loads and grain in storage, and conduct a simple analysis
- create, maintain, use and keep clear and trackable records
- use a range of communication equipment, including in emergency situations
- inspect and test silos
- identify insects, pests and other factors that affect grain quality
- set up and operate inert atmosphere equipment
- handle and mix chemicals for baiting, fumigation, spraying, and other forms of application
- interpret monitored information on pests
- plan and schedule weed, pest and disease control including amending plans during the operations
- calculate mass and volumes of grain and grain storages
- implement pre-determined integrated pest management strategies
- monitor and maintain hygiene
- monitor and control pests and contaminators
- investigate and recommend options for technology, systems or practices that will improve grain quality
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:
Assessment Requirements for AHCBAC406 Maintain grain quality in storage

- types, levels and control methods for a range of pests and contaminants
- silo and temporary storage configuration and operation
- chemical handing and dangerous goods requirements
- range of applicable pesticides, their uses, application methods and handling requirements
- grain commodity types, varieties and grades, marketing requirements and options for grain growers
- handling requirements for gas cylinders
- insect life cycles and optimum conditions for development
- Integrated Pest Management (IPM) principles and the procedures used within the organisation
- legislative requirements, codes of practice and enterprise procedures relating to the purchase, transport, storage, use and disposal of pesticides and fumigants, work health and safety and environment
- client's sampling and classification requirements
- common grain pests and their general control methods
- equipment used in grain storage facilities
- site hazards and sound management practices and processes to minimise noise, odours, and debris from grain storage operations
- chemical handing and dangerous goods requirements
- developments and options available for maintaining or improving the quality of grain during storage
- enterprise biosecurity policies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select appropriate seed tests
- apply pre and post-harvest treatments for seed
- identify varieties from growth patterns
- identify weed seeds and contaminants
- identify pests in stored grain and initiate control measures
- calculate volumes, capacities, areas, ratios for seed, storages, and chemicals
- keep, update and maintain records relating to test results, provenance, varieties, pest control measures, and other relevant information about the seed
- calculate the quantity of seed required for the following season
- grade and test seed and interpret the results
- store the seed for use in the following season
- maintain grain in storage to ensure maximum quality and yield when used
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies in the context of the work team
- implement enterprise environmental sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- identification of varieties
- seed treatment and cleaning measures
- sources of purchased seed
- inoculation treatments and seed dressings used within the organisation
Assessment Requirements for AIHCBAC407 Save, prepare and store agricultural seed

- records and documentation required for tracking and handling of seed
- storage techniques and requirements for seed and grain
- environmental controls and codes of practice applicable to the enterprise
- relevant legislation and regulations relating to WHS, contractor engagement, chemical use and application, vehicle and plant use, and to the use, handling and sale of seed
- sound management practices and processes to minimise noise, odours, and debris from sowing operations
- enterprise biosecurity policies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage agricultural crop production.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who demonstrate deep knowledge in a specific technical area, take personal responsibility and exercise autonomy in undertaking complex work. They organise the work of self and others and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply environmental protection strategies in land use
- set objectives and milestones for a cropping program
- determine soil quality and land use capability
- determine crop nutrient requirements and fertiliser requirements
- measure and assess quantities of fertiliser to meet plant requirements
- predict patterns of weed infestation
- manage irrigation processes to avoid soil degradation if applicable
- demonstrate use of technology to improve efficiency
- prepare budgets
- develop a cropping program for an enterprise
- plan for crop establishment
- monitor growing crops, provide inputs and carry out cultural practices as required
- develop a plan for the crop harvest
- monitor crop yields and evaluate production performance
- implement work health and safety policies in the context of the work team
- implement enterprise environmental sustainability practices in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- land and soil conditions
- effects of soil characteristics on nutrient availability
Assessment Requirements for AHCBA408 Manage agricultural crop production

- role of technology in improving efficiency
- budgeting and financial analysis techniques
- environmental protection strategies
- cultivation requirements for different types of crop
- safe handling processes for fertilisers
- infestation patterns for different types of weed
- integrated strategies for the management of pests, weeds and diseases
- work health and safety legislative requirements
- environmental legislation and codes of practice, relating to farm production.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assess the need for and implications of forage conservation in the farming system
- select and implement a forage conservation system
- perform harvesting operations
- assess cost benefit and forage conservation options
- select appropriate forage conservation method
- select suitable forage conservation machinery
- apply correct use of technology to improve efficiency
- oversee harvest, forage preparation and storage
- record work activities
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies in the context of the work team
- implement enterprise environmentally sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- forage conservation options and cost benefit economic analysis
- silage and hay conservation systems
- factors affecting the quality of silage and hay
- dry matter content, quality and hygiene requirements
- range and functions of silage and haymaking machinery and equipment
- role of technology in improving efficiency
- common weeds, pests and diseases associated with crops and pastures
types and application of personal protective equipment
types and application of personal protective equipment
work health and safety legislation and regulations including licensing requirements in relation to forage operations
risk factors including human and animal health, weather, harvesting and environmental
enterprise biosecurity policies and environmental sustainability practices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- measure and assess quantities of fertiliser
- apply environmental protection strategies in land use
- set objectives and milestones
- determine soil quality and land use capability
- predict patterns of weed infestation
- design irrigation processes to avoid soil degradation
- apply correct use of technology to improve efficiency
- assess financial strategies and prepare budgets
- develop a pasture and crop program to meet production targets and enterprise objectives
- maintain the productivity of crops and pastures in a farming system
- monitor soil structure and erosion and make required changes to cultural practices and grazing management
- implement grazing strategies to optimise pasture and livestock production levels and support the cropping program
- evaluate grazing and cropping programs for efficiency and effectiveness
- use physical and financial records of production to evaluate production performance
- implement work health and safety policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- land and soil conditions
- effects of nutrients of soil types
• crop and pasture production financial analysis techniques
• environmental standards
• cultivation requirements for different types of crop
• safe handling processes for fertilisers
• role of technology in improving efficiency
• infestation patterns for different types of weed
• work health and safety legislation codes of practice and enterprise procedures.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- cost benefit analysis of grain storage
- establish procedures and controls for implementation by others
- plan, schedule, monitor and amend plans for operations
- administer and co-ordinate operations on a site
- explain, and deliver instructions about the plans and scheduling of the grain storage operations to both staff and contractors
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- plan for storage needs based on grain production estimates
- implement an integrated pest management (IPM) program for grain storage
- supervise procedures to manage work health and safety risk for the storage site
- schedule the storage and transport of grain
- supervise staff to monitor transport, storage, sampling and pest control procedures
- maintain records of grain storage to meet quality requirements
- implement work health and safety policies
- implement enterprise biosecurity policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- silo layout and operations, configuration, and maintenance procedures
- safe working practices, especially in confined spaces and at heights
• organisational priorities and policies in relation to production planning, work health and safety and chemical use
• organisational priorities and policies in relation to quality, personnel and operations
• pest control principles
• reporting and recording requirements within the organisation and as required by external authorities
• grain marketing and commodity prices
• use of technology in grain storage operations
• integrated pest and weed management techniques
• relevant legislation and regulations relating to work health and safety, contractor engagement, chemical use and application, site management, and vehicle and plant use
• sound management practices and processes to minimise noise, odours, and debris from grain storage operations
• enterprise biosecurity policies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

1.2 Research and collate information from other enterprises within the district  
1.3 Use information regarding the characteristics of the crop(s) planned for, or under production  
1.4 Research and collate information regarding the local geography, soil and climatic conditions  
1.5 Consider and document the environmental implications of pesticide or herbicide use, alternative methods and non-chemical preventative methods  
1.6 Assess technology to ensure most efficient performance of operations  
1.7 Assess information and determine potential key information for input to planning decisions |
| 2. Determine long-term weed, pest or disease control strategies | 2.1 Analyse information gathered for suitable methods  
2.2 Consider methods of control, including their impacts  
2.3 Determine strategies for weed, pest or disease control to integrate the most suitable control methods with the proposed crops and the existing geography  
2.4 Establish environmental controls and include in the plan  
2.5 Identify work health and safety hazards, assess risks and incorporate suitable controls into the plan |
| 3. Provide input to other planning processes | 3.1 Incorporate selected weed, pest or disease control strategies into other organisational planning processes  
3.2 Collect and use information regarding other planning processes in the weed, pest or disease control plan  
3.3 Communicate information appropriately about the range of planning processes |
| 4. Determine scheduling and key responsibilities | 4.1 Determine appropriate scheduling for weed, pest or disease control  
4.2 Determine key responsibilities for specific implementation processes  
4.3 Determine record keeping requirements are determined and implement appropriate procedures  
4.4 Document the plan, including scheduling and key responsibilities and ensure it includes the type, format, frequency and detail of any reporting required by both managers and operators |
<p>| 5. Monitor and adjust weed, pest or disease | 5.1 Evaluate the effectiveness of the weed, pest or disease control |</p>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret monitored information on pest and weed numbers, density and control
- interpret, analyse and extract information from a range of sources and discussions
- plan and manage long-term weed, pest or disease control including amending plans during the operations
- plan land use incorporating appropriate weed, pest or disease control measures
- establish processes or strategies, procedures and controls for long-term weed, pest or disease control
- demonstrate correct use of technology to improve efficiency
- negotiate and arrange contracts and agreements
- explain, and deliver instructions about the plans and scheduling of the weed, pest or disease control operations to both staff and contractors, as well as suppliers, customers, and neighbours
- recognise poor growth and lack of vigour caused by weeds, pests or disease rather than nutrient deficiency
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- interpret information on pest and weed numbers, density and control
- establish processes or strategies, procedures and controls for long-term weed, pest or disease control
- implement and monitor long-term weed, pest or disease control strategies
- use records and observations to evaluate weed, pest or disease control strategies
- plan land use incorporating long-term weed, pest or disease control strategies
- implement work health and safety policies
- implement enterprise biosecurity policies.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- pest and weed species, including their life cycles and reproduction or multiplication capability
- integrated pest and weed management
- effects on crops of weeds, pests or diseases including competitive effects on crop yield; threshold levels; and the effects of alternative methods of control
- role of technology in improving efficiency
- environmental controls and codes of practice applicable to the enterprise
- relevant legislation and regulations relating to work health and safety, contractor engagement, chemical use and application, and vehicle and plant use
- environmental controls and codes of practice applicable to the business, and to the weed, pest or disease control operations
- sound management practices and processes to minimise noise, odours, and debris from weed, pest or disease control operations
- enterprise biosecurity policies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage the harvest of crops.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

Harvesting crops carries risk of fire. All harvesting activities shall be conducted appropriate to relevant regulations, legislation and guidelines as determined by the relevant fire authority.

This unit applies to individuals who demonstrate deep knowledge in a specific technical area, take personal responsibility and exercise autonomy in undertaking complex work. They organise the work of self and others and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Determine crop quality
   - 1.1 Assess the potential crop yield using measurements made in the field
   - 1.2 Test and assess the potential quality of the crop using quality parameters before harvest
   - 1.3 Estimate the value of each crop using the measurements taken and assessments made before harvest

2. Determine crop readiness
   - 2.1 Refer pre-harvest samples to the laboratory or marketing agent to determine the potential quality of the crop
   - 2.2 Monitor weather patterns estimate the rate of ripening
   - 2.3 Monitor crop maturity and estimate when the crop will be at its optimum and harvest commencement
   - 2.4 Assess the incidence of pests and determine the requirement for, and the type of, pre-harvest treatment
   - 2.5 Select pre-harvest treatments to ensure that the crop meets market requirements
   - 2.6 Ensure adherence to all work health and safety and environmental requirements throughout the application of pre-harvest treatments

3. Assess the need for insurance
   - 3.1 Confirm any commitments to insure the crop
   - 3.2 Estimate the crop value
   - 3.3 Insure the crop, if appropriate
   - 3.4 Analyse, assess and implement appropriate strategies to manage financial risk

4. Plan harvest strategy
   - 4.1 Estimate the appropriate harvest commencement date and the time span
   - 4.2 Calculate equipment and labour resources required for harvest from the size of the crop and harvest time limitations
   - 4.3 Analyse equipment and labour resources required against those available within the enterprise, and determine the amount of labour and equipment to be contracted
   - 4.4 Assess technology to ensure most efficient performance of operations
   - 4.5 Plan for and order any equipment preparation required prior to harvest
   - 4.6 Plan application of required pre-harvest pest control treatments appropriately
   - 4.7 Determine and arrange required licenses, permits and notifications

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan and implement harvesting operations, including amendment of these during the operation itself
- organise and schedule the maintenance of plant and equipment
- establish processes or strategies, procedures and controls for crop harvesting
- demonstrate correct use of technology to improve efficiency
- interpret, analyse and extract information from a range of sources and discussions
- assess potential yields
- negotiate and arrange contracts and agreements
- explain, and deliver instructions about the plans and scheduling of the harvest operations to both staff and contractors, as well as suppliers, customers, and neighbours
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- estimate crop yield and value and monitor for harvest readiness
- plan for the resources that will be required for harvest
- negotiate insurance and equipment supply contracts
- develop risk management procedures for work health and safety, climate and fire risk
- organise for the logistics of the harvesting operation including harvesting, storage and delivery
- keep grain batches separate and monitor for pests or spoilage
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies
- implement enterprise environmental sustainability practices.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- capability and use of harvesting equipment
- role of technology in improving efficiency
- crop measurement techniques and parameters
- market information and sources
- contracting requirements for crop insurance
- management of the moisture content of crops, including drying and aeration
- storage options and local storage availability
- bushfire prevention and control legislation
- bushfire prevention and control strategies and equipment
- contact details for local fire services
- weather conditions which may affect the harvest
- relevant legislation and regulations relating to WHS, contractor engagement, chemical use and application, and vehicle and plant use
- environmental controls and codes of practice applicable to the business and to the harvesting operations
- sound management practices and processes to minimise noise, odours, and debris from the harvesting operations
- enterprise biosecurity policies and environmental sustainability practices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare budgets and gross margins
- source and interpret relevant benchmark information from consultants or peers
- assess proposed crop land areas for nutrient status by sampling and testing soils and plant tissue
- analyse past production records
- select crop species and variety
- source and interpret relevant benchmark information
- select crop species and variety and determine yield potential for crop
- demonstrate correct use of technology to improve efficiency
- prepare crop programs
- review, amend and document the production plan
- prepare budgets and gross margins
- source and interpret relevant benchmark information
- prepare individual paddock plans and a whole farm cropping plan
- assess work health and safety implications of the plan.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- determinants of crop yield
- cultural practices related to cropping
- role of technology in improving efficiency
- market prices, gross margins, cash flow budgets
- benchmark performance indicators
- disease and pest management for relevant crops
- machinery and equipment requirements for cropping
- record keeping systems.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the application of introductory plant biology (plant taxonomy, plant morphology and plant physiology) to a wide range of agronomic practices including crop/pasture establishment, fertiliser use, irrigation, Integrated Pest Management (IPM), crop harvesting, grazing management and the provision of specialist agronomic advice.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit applies to work as an agronomist. Work is normally undertaken without supervision.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- use appropriate authoritative references and resources for plant classification
- apply scientific concepts of plant biology to agronomic practices
- identify plants according to accepted taxonomic classifications.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- plant morphology
- plant taxonomy
- plant physiology
- plant nomenclature according to the rules and recommendations of the International Code of Botanical Nomenclature (ICBN) and the International Code of Nomenclature for Cultivated Plants (ICNCP)
- broad knowledge of agronomic practices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to open and reassemble a beehive to carry out routine bee husbandry and related tasks.

The unit applies to individuals that undertake routine beekeeping tasks. This includes identifying and providing solutions to a limited range of predictable problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

1. **Identify and select tools and equipment required according to workplace procedures**

2. **Check tools for serviceability and ensure faults are rectified or reported to supervisor**

3. **Assess weather conditions and nectar flow and adjust planned activities to minimise risk of robbing and stress to bees**

4. **Comply with site quarantine and biosecurity requirements according to workplace procedures**

5. **Use safe manual or mechanical handling techniques to minimise to prevent injuries and damage to hives**

### 2. Open the beehive

1. **Apply smoke to control bees throughout the process**

2. **Carry out work from a safe position in relation to beehive**

3. **Open beehive using hive tool and remove components according to workplace procedures**

4. **Place the components safely to ensure they remain clean and free from contaminants according to biosecurity and workplace procedures**

### 3. Reassemble the beehive

1. **Replace components according to workplace procedures and brood manipulation requirements**

2. **Reassemble the hive according to workplace procedures**

3. **Close the hive and secure according to workplace procedures**

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least two occasions the individual has demonstrated that they have safely opened and reassembled a hive, including:

- identified health and safety hazards and risks and applied appropriate controls
- selected, checked serviceability, fitted and used appropriate personal protective equipment (PPE)
- selected appropriate tools and equipment, and checked serviceability
- complied with hive quarantine and biosecurity requirements
- assessed the weather and other factors to minimise the risk of robbing and stress to bees
- worked from a safe position and used smoker, tools and equipment to move, open and dismantle a hive according to workplace procedures
- ensured hive components were kept clean and free from dirt
- replaced hive components and brood, reassembled the hive according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of opening and reassembling beehives
- bee behaviour when manipulating and dismantling a beehive
- the use of smoke to control bee behaviour
- hive components, location and purpose
- beekeeping tools and their application for dismantling a hive
- basic principles of hive hygiene, biosecurity and quarantine
- safety hazards, risks and controls when working bees including:
• PPE
• manual and mechanical handling techniques
• effect of weather and nectar flow on bee behaviour.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • an active apiary with live bees
• resources, equipment and materials:
  • live bees
  • hive tools
  • hive components
  • PPE
  • mechanical handling equipment
• specifications:
  • workplace procedures related to opening and reassembling beehives
  • access to specific bee related quarantine regulations and biosecurity codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to use a bee smoker when undertaking bee husbandry tasks.

The unit applies to individuals who operate a bee smoker. This includes identifying and providing solutions to a limited range of predictable problems.

State and territory regulations and local government by-laws apply in some jurisdictions to beehive ownership, biosecurity and the lighting of fires in the open.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have operated a bee smoker including:

- confirmed work activity with supervisor
- identified and confirmed that the conditions are appropriate for using a bee smoker
- checked bee smoker equipment is available and serviceable
- identified hazards and risks and used personal protective equipment (PPE) and safe work practices to minimise risk
- ensured fire prevention procedures were carried out
- anticipated defensive behaviour of bees and monitored and applied smoke to control bee behaviour
- selected and ignited suitable fuel for smoker keeping it alight and functioning while carrying out bee husbandry tasks
- used and shut down bee smoker safely after completing operations according to regulations and workplace fire prevention procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of using smoke on bees to pacify behaviour
- types of bee smokers and their use and advantages/disadvantages, including:
  - bellows (traditional)
  - electric fan operated
  - electric ignition
- types of smoke and the effect on bees and hive products
- suitable bee safe fuel and ignition procedures
• operation of bee smokers and the effect of weather and environmental conditions on the safe use of smoker including fire prevention activities
• fire restrictions and regulations that impact on use of bee smokers, including:
  • permits and exemptions
  • applications for exemptions
• health and safety hazards and risks and their controls when using smokers.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a functioning apiary with live bees or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • bee smoker and apiary tools for manipulating hives
  • access to live bees
  • PPE
• specifications:
  • access to specific regulations and permits relevant to the lighting and operating bee smokers within work area.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have assembled and maintained beekeeping components including:

- identified hive components for assembly or repair
- identified materials, equipment and tools required for assembly work
- identified health and safety hazards and risks and applied relevant actions
- checked components for suitability and biosecurity risk to the environment or apiculture products
- removed, repaired or replaced unsuitable materials from the store
- constructed and repaired hive components according to workplace procedures, including correct selection and safe use of tools
- applied biosecurity and preservation treatments according to product labels, safety data sheets and workplace procedures
- marked hive components according to legislative requirements
- disposed of waste materials according to workplace biosecurity and waste management procedures
- cleaned and maintained and stored equipment and unused materials after completion of work
- maintained workplace records and reporting procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, materials and properties of hive components
- principles and techniques for construction, repair and preservation of hive components
- tools and equipment used for assembly work, including:
  - safe use
  - appropriate personal protection equipment
• maintenance and storage
• biosecurity issues with used hive components and treatments including:
  • pests and diseases and treatment options
  • sanitising new and used components
• hive components preservation materials and techniques, including:
  • plastic components
  • timber components
  • paints
  • chemical dips
  • wax dips
• interpretation of chemical labels and safety data sheets for treatments and preservatives
• legislative requirements for identifying hive ownership
• mandatory and workplace record keeping systems.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • hand tools and equipment
  • new and used hive components
  • preservatives and treatments relevant to the type of materials used in the hive
  • use of appropriate personal protective equipment
• specifications:
  • workplace procedures relating to assembly and maintenance of beehives
  • manufacturer’s operating instructions for tools and equipment used in beehive construction, assembly and preservation
  • product labels and safety data sheets for preservatives and treatments
  • access to specific legislation/codes of practice for hive identification and bee biosecurity
  • construction plans showing hive components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have managed a honey bee swarm including:

- assessed swarm for condition and viable and safe options for collection, and determined resources and equipment required
- identified the hazards and risks and selected, fitted and used appropriate personal protective equipment
- identified and prepared equipment required for swarm collection
- interpreted behaviour and handling of bees and applied appropriate management strategies
- collected a swarm of honey bees using appropriate equipment and techniques while following quarantine and biosecurity requirements
- assessed captured swarm for health and need for re-queening
- selected and implemented control options to manage swarming behaviour in honey bees
- updated and maintained workplace and statutory records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of managing swarms, including:
  - causes and timing of honey bees swarm activity
  - why swarms are collected including environmental and social impacts
  - signs of colony swarming activity
  - management techniques that can be used to manage a colony showing signs of potential swarm activity
  - setting up swarm catch boxes to capture swarming bees
• biosecurity considerations, including:
  • pests and diseases that occur in honey bees
  • signs of pests and diseases in swarms
  • quarantine procedures to prevent cross contamination of apiaries
  • sampling procedures for pests and disease for confirmation
• signs and purpose for re-queening collected swarms
• swarm collecting and boxing techniques, including:
  • tools and equipment used for capturing swarms
  • hive components
• hazards and risks when collecting swarms and control strategies, including:
  • safety aspects of swarm collection and location
  • personal protective clothing
  • public safety
• workplace and statutory apiary records and notifications.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • an active apiary
  • access to bee swarm
• resources, equipment and materials:
  • live bees or hive preparing to swarm
  • safety equipment for handling bees
  • tools and equipment appropriate for managing swarms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have manipulated a honey bee brood including:

- established the purpose for manipulating brood and determined appropriate actions and sequencing of a honey bee brood to achieve a desired outcome
- identified hazards, assessed the risks and implemented safe work procedures for handling bees
- selected, checked serviceability, fitted and used appropriate personal protective equipment
- selected and used tools, materials and equipment for manipulating bee brood
- complied with apiary biosecurity and quarantine procedures during the activity
- opened hives, removed frames and set aside with minimal disturbance to brood and queen
- repositioned frames safely according to plan with minimal damage or unintended disturbance to brood
- monitored the hive after manipulation
- cleaned up work area and disposed of waste appropriately
- updated and maintained workplace and statutory records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of honeybee brood manipulation
- biosecurity and quarantine requirements when manipulating bees
- bee behaviour and handling techniques
- different types of manipulation that may be used to achieve desired results, including:
  - hive expansion
- splitting and nucleus development (nucs)
- pests and disease inspection and control
- increasing honey production
- swarm control
- re-queening and queen rearing
- seasonal preparations
- frame rotation
- tools and equipment and their safe use for opening hives and manipulating brood
- types of hive waste and processes for disposal
- workplace and statutory records and reporting.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary
- resources, equipment and materials:
  - hives with live bees with brood comb
  - specific hive tools
  - personal protective equipment
- specifications:
  - workplace procedures and instructions for manipulating brood
  - access to beekeeping legislation and biosecurity code of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated that they have re-queened a honey bee colony for at least one hive including:

- monitored colony performance, assessed the queen against specifications and determined the need and method for re-queening
- identified hazards and risks and implement control measures for re-queening operations
- selected, fitted and used suitable personal protective equipment
- selected and ensured serviceability of tools and equipment required for re-queening operations
- obtained, assessed the condition and stored the new queen according to workplace and biosecurity requirements
- monitored conditions to ensure optimum time for re-queening operations
- assessed the health and condition of the parent colony
- conducted hive operations to locate old queen and replace with new queen according to selected method
- monitored hives for colony acceptance of new queen and queen brood development performance
- updated and maintained apiary records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of re-queening honey bee hives
- common manipulations, methods and techniques used to re-queen colonies
tools and equipment required for hive operations and re-queening, including:
  • maintenance
  • safe operation
  • hygiene and biosecurity
natural processes for queen replacement and their signs, including:
  • supersEDURE
  • swarming
  • emergency queen replacement
hive monitoring techniques and assessing the performance of queen bee in the colony, including:
  • behaviour
  • colony traits
  • brood and egg laying
  • honey bee brood production
selection criteria for queen bees
assessing the health of queen bees
handling queen bees, including:
  • transport and storage requirements
  • handling cages
  • handling live queen bee
  • identifying, removing and destroying old queen
  • introducing new queen
sources of queen bees their advantages and disadvantages, including:
  • commercial suppliers
  • apiary breeding stock
  • supersEDURE
health and safety hazards and risks when handling bees and personal protection equipment
biosecurity considerations when selecting queen bees and suppliers
workplace and statutory records and reporting procedures for re-queening operations.

Assessment Conditions
Assessment of skills must take place under the following conditions:
  • physical conditions:
    • an active apiary
resources, equipment and materials:
  • live bees
  • live queen bee as supplied by commercial supplier or own apiary breeding program
  • tools for hive and queen bee manipulation
  • personal protective equipment
Specifications:
- workplace procedures related to re-queening a bee colony
- workplace queen bee specifications
- access to biosecurity code of practice

Timeframes:
- within a specific time period according to queen bee replacement method.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to separate bees from ripe honey comb and remove the full comb from the hive for transport to the extracting facility.

The unit applies to beekeepers who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

Harvesting honey is subject to state and territory food safety legislation and regulations.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated that they have removed a ripe honey crop from a hive including:

- selected and ensured serviceability of tools and equipment for harvesting a honey crop
- identified work safety hazards and risks and implemented control measures when working around bees
- selected and used appropriate personal protective equipment (PPE)
- performed honey harvest activities according to food safety, quarantine and biosecurity procedures
- determined the ripeness and volume of honey comb and its readiness for harvest
- checked treatment records and ensured honey is harvested according to treatment withholding periods
- determined the factors affecting quality and quantity of honey and planned the time and location to harvest
- handled comb filled with honey to prevent contamination and maintain quality
- selected and used appropriate method to remove ripe honey comb from hives and loaded and secured for transport
- used safe handling and loading techniques
- transported and stored ripe honey comb in a pest and bee secure environment protected from damage and contamination
- updated and maintained apiary records according to workplace procedures.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of removing honey filled frames from hives
- impact on colony, type of honey and apiary site on the quality of honey, planning and timing of removal
- methods of removing bees from ripe honey comb and supers, including:
  - fume boards
  - brushing
  - blowers
  - escape boards
- food safety and handling requirements of honey comb
- indicators of ripe honey and adequately filled comb
- honey quality and factors that impact on quality
- calculations for estimating volume of harvest
- hive medications and treatments and their effect on honey harvesting and withholding periods
- tools and equipment required for honey harvest operations, including:
  - maintenance
  - safe operation
  - hygiene and biosecurity
- potential contaminants of ripe honey and the effect on honey quality
- loading, securing, protecting, transporting and storing ripe honey comb to minimise contamination, and comply with biosecurity requirements
- biosecurity standards and practices, barrier system and traceability of hive components when harvesting ripe honey
- hazards and risks when harvesting honey and control measures to apply including PPE
- planning a harvest and factors and conditions that impact on timing and location
- records and record keeping systems when harvesting honey crop.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - bee hives with ripe honey
  - live bees
  - PPE
  - equipment, resources and tools used for removing bees from ripe honey comb
- specifications:
Assessment Requirements for AHCBEK304 Remove a honey crop from a hive

- workplace procedures for honey removal
- safety data sheets for fume boards used
- access to specific food safety regulations, biosecurity code of practice and transport regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have collected and stored propolis including:

- assessed safety hazards, risks and applied appropriate controls
- selected, fitted and used personal protective equipment (PPE) while handling and working safely around bees
- identified and prepared hives suitable for producing propolis
- determined a propolis production strategy and manipulated hive to stimulate propolis production
- applied quality assurance and food safety and quality procedures
- cleaned and sanitised tools and removed propolis from the hive
- remove propolis ensuring minimal colony disturbance
- used appropriate propolis extraction and storage methods.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- honey bees and their behaviours for propolis and its production including types of flora
- recognition of propolis and distinguishing features from other substances collected by honey bees
- propolis production and collection strategies and hive manipulations to increase propolis production
- suitable extraction methods, conditions and constraints when collecting propolis
- methods, procedures and conditions for storing propolis
- food safety requirements when collecting propolis and working with hives
- honey industry quality assurance and biosecurity requirements specific to propolis production.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - an active apiary or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - live honey bees
  - tools for manipulating a hive and collecting propolis
  - cleaning products that comply with food safety standards
  - PPE

- **specifications:**
  - workplace procedures for propolis production
  - safety data sheets for cleaning products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to manipulate a honey bee hive to encourage the production, collection and storage of royal jelly. The unit applies to beekeepers who work under broad direction to analyse information and complete a range of specialised beekeeping activities and who demonstrate a thorough understanding of the development of queens in hives and the production of royal jelly. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

State and Territory food safety legislation, regulations and standards apply to royal jelly that is used in food for human consumption.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated that they have manipulated a hive to produce and harvest royal jelly including:

- assessed safety hazards, risks and applied appropriate controls
- selected, fitted and used appropriate personal protective equipment (PPE)
- assessed the suitability of hives for the production of royal jelly
- introduced queen cells, grafted larvae and stimulated the colony for royal jelly production
- handled bees and hive components while preparing the hive
- prepared and sanitised equipment ready for royal jelly harvest
- maintained a hygienic environment according to food safety requirements
- removed and discarded larvae according to workplace procedures
- collected and stored royal jelly according to workplace and food safety procedures
- checked, cleaned and stored production equipment used in royal jelly harvesting
- maintained records of royal jelly production for food safety and quality assurance requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of royal jelly production in honey bee hives including biological processes and role of nurse bees
- queen bee cells and their development, larvae grafting techniques and methods of stimulating royal jelly production
- safety and safe practices when handling bees
- cleaning and sanitation methods and procedures for royal jelly production tools and equipment
Assessment Requirements for AHCBEK308 Produce and harvest royal jelly

- food safety requirements for collecting and storage of royal jelly
- quality assurance and record keeping requirements
- procedures and practices for removing and discarding larvae
- identification, use, maintenance and storage of tools and equipment required for production, harvesting, preparation and storage of royal jelly.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in hives suitable for royal jelly production or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live bees
  - tools and equipment required to prepare hives and harvest royal jelly
  - PPE
  - consumables and equipment required to store and preserve royal jelly
- specifications:
  - workplace procedures and specifications for royal jelly production
  - access to food safety and beekeeping legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

2. Collect pollen

| 2.1 Select and obtain suitable pollen trap equipment and use according to manufacturer instructions |
| 2.2 Adhere to personal hygiene requirements according to food safety and handling procedures |
| 2.3 Collect pollen at frequency according to workplace hive management procedures and quality standards |
| 2.4 Assess risk for pest attack or contamination of pollen and implement corrective action |
| 2.5 Assess risk of colony decline and implement corrective action according to hive management procedures |
| 2.6 Store pollen to be transported according to food safety and quality standards and workplace procedures |

3. Process pollen

| 3.1 Clean pollen according to workplace procedures |
| 3.2 Treat pollen to prevent fermentation and deterioration and store according to workplace procedures and food safety and quality standards |
| 3.3 Maintain appropriate records according to workplace procedures |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have trapped and stored pollen including:

- identified flora and assessed suitability of colonies for pollen collection
- selected a pollen trap and used according to manufacturer instructions
- assessed health and safety and food handling hazards and risks, and applied controls
- fitted and used appropriate personal protective equipment (PPE)
- collected, stored and processed pollen according to food safety and handling and workplace procedures
- assessed colony health, pests and contamination and rectified according to hive management procedures
- maintained records according to workplace procedures
- handled bees safely
- cleaned and sanitised equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of trapping and storing pollen
- pollen traps, their construction and operation
- colony pollen requirements and impact of harvesting on colony development including signs and symptoms of colony decline
- bee and hive handling techniques for collecting pollen
- flora resources and impact on pollen productivity
- quality assurance requirements for pollen collection including food safety and handling
- health and safety in the workplace and equipment requirements when working with hives
- commercial processing practices for pollen including, cleaning and treatments to prevent deterioration
- storage techniques for pollen for pre and post processing
• pests and contamination of pollen and corrective actions
• record keeping requirements.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • an active apiary
• resources, equipment and materials:
  • live bees
  • tools and equipment to trap and store pollen, including pollen traps
  • PPE
  • cleaning and sanitising products
• specifications:
  • workplace procedures and specifications for pollen capture and storage
  • manufacturer’s instructions for construction/operation of pollen traps
  • safety data sheets for cleaning and sanitising products
  • access to food safety and beekeeping legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to process raw wax using wax processing equipment into wax moulds.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has processed raw wax into moulds, on at least one occasion including:

- received and stored wax, ensuring no cross contamination with operational hive components
- prepared the raw wax for loading into processing equipment
- identified hazards and risks and implemented controls, including fitting and use of personal protective equipment (PPE) and safe work practices
- selected tools, equipment and moulds required for the wax processing
- ensured wax processing equipment is clean and ready for service, conducted pre start checks and identified, rectified or reported faults
- loaded raw wax into processing equipment, started equipment and monitored temperature, time and equipment operation during processing
- separated residual honey and slum gum from wax and transferred molten wax to moulds
- stored or disposed of residual honey and slum gum according to workplace, biosecurity and food safety and handling procedures
- removed wax from moulds, labelled and placed into storage according to workplace procedures
- shut down and cleaned processing equipment according to operating instructions
- cleaned work area and disposed of all waste material according to workplace waste management procedures and environmental procedures
- updated records and reports according to workplace, biosecurity and legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
- principles and practices of processing honey bee wax
- sources of raw wax used for processing and its preparation, including:
  - cappings from honey extraction
  - bur comb
  - damaged or rotated brood and honey comb
  - slum gum
- bees wax properties and impact on processing
- types and uses of residual materials in unprocessed and processed bees wax, including:
  - burned or cooked honey
  - slum gum
- wax processing equipment, their maintenance and operation, including:
  - types of wax processing equipment and their operation, solar, hot water, steam, direct heat
  - signs of faults in equipment operation and reporting procedures
  - repairs and maintenance requirements
  - cleaning procedures
- wax processing temperatures and timing
- types of moulds
- hygiene and biosecurity requirements and procedures for processing wax
- cleaning procedures and disposal of waste
- storage requirements for unprocessed and processed bees wax
- health and safety, hazards and risks and their controls when using wax processing equipment, including:
  - working with hot materials and equipment
  - PPE
  - manual handling
  - processing equipment safety
  - safe use of tools and equipment
- stock control records, labelling and mandatory records and reporting requirements for processing wax.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a wax processing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - raw bees wax
  - tools for processing wax
  - PPE
- specifications:
  - workplace procedures and specifications for processing raw wax
  - manufacturer’s operating instructions for wax processing equipment
  - access to specific biosecurity codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to prepare, load and transport live bee colonies (hives) by road transport between apiary sites.

The unit applies to beekeepers who operate apiaries under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership.

The transport, siting and cross border movement of livestock including bee hives and must comply with state and territory transport, quarantine and biosecurity legislation, regulations and codes of practice.

No vehicle licensing is required for individuals undertaking the work described in this unit. Where an individual is the nominated transport vehicle owner or driver, state and territory legislation, regulations, licencing and registration apply.

#### 1. Prepare hives for transport to new apiary site

- Vehicle capability, job specifications, welfare of bees and health and safety in the workplace procedures
- Calculate travel time and estimate time of arrival
- Identify environmental hazards and assess environmental risks that impact on hive health during transport
- Identify and assess health and safety risks for other road users
- Prepare a hive transport plan and management strategy to address identified environmental risks to bee health and safety of people that may contact bees on route
- Complete documentation for permits according to workplace procedures and regulations

#### 2. Prepare bee colonies for transport

- Assess each hive for health and suitability for transport according to biosecurity procedures
- Check hive structural stability in preparation for transport
- Secure hive components according to workplace procedures
- Secure the bees according to transport plan and hive management strategy
- Clean hives of soil and weed contaminants according to biosecurity procedures

#### 3. Prepare vehicle for transport

- Conduct vehicle operational checks according to workplace procedures
- Prepare vehicle for transport conditions according to terrain, route and workplace procedures
- Select and stow equipment and resources required for hive transport activities according to workplace procedures
- Conduct biosecurity activities on vehicle, tools and equipment according to workplace procedures

#### 4. Load and secure bee colonies

- Load the hives onto transport vehicle according to health and safety in the workplace requirements and hive handling procedures
- Orient the hive on vehicle according to transport plan and hive management strategy
- Secure the load according to workplace procedures and transport regulations

#### 5. Transport and

- Transport bee hives to new apiary site according to workplace procedures

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated that they have transported hives by road to an apiary site, including:

- prepared a hive transport plan, determined hazards to bees and people and prepared a hive management strategy for transporting bees to a new apiary site
- assessed suitability and condition of hives for road transport and secured hives and components ready for transport
- selected equipment and resources required for transit of bee hives and prepared vehicle according to workplace procedures and biosecurity requirements
- loaded and secured hives according to workplace procedures and transport regulations
- transported hives according to public safety and traffic regulations
- monitored load security and bee health during transport
- removed bee hives safely according to workplace procedures and positioned and reinstated hives according to apiary site plan
- completed documentation and permits and complied with biosecurity and regulatory requirements
- updated records, assessed, reviewed and reported on the transport plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic map reading and navigation skills to determine route parameters and transport plan, including:
  - road conditions
  - route efficiencies
  - journey duration and estimated time of arrival
- access to transport vehicle services e.g. fuel, water, air
- critical factors that affect hive health during transit, including:
  - weather and other environmental factors
  - travel time
  - road conditions
  - vibration
  - distance from previous apiary
- vehicle preparation for bee safety and vehicle operation, including:
  - tyre pressure for bee health, terrain and road conditions
  - exhaust fumes
  - pre-start checks
- transport methods for hives, including:
  - open hives
  - closed hives
  - covers and netting
  - barrier system
- transporting bee colonies and effect on health and biosecurity, including:
  - ventilation
  - water
  - loose frames
  - recognising bee disorders and distress during transport and remedial actions required
- techniques and equipment for securing hives for transport, including:
  - moving and handling hives for transport vehicle and safety
  - hive orientation on transport vehicle and impact on hive management
  - securing load techniques, load restraint procedures and transport regulations
  - vehicle load limits
  - unloading procedures
- managing live bee loads during stops, including:
  - fuel stops
  - mandatory rest periods
  - checking load movement and stability
- other road users safety when transporting live bees, including:
  - night road workers and work lights
  - police and road transport authority checks
  - weigh bridges
  - accidents and emergencies
  - emergency services
  - quarantine checkpoints
  - ferry crossings
  - urban areas
Assessment Requirements for AHCBEK311 Transport bee hives by road to new apiary site

- general public approaching the transporting vehicle
- strategies to mitigate safety concerns for other road users, including:
  - signage and placarding
  - accident emergency procedures
  - communication and notification procedures
- hive manipulations to prepare for transport and restore hives to operational conditions after arrival
- assessing and reviewing transport plan and hive management strategies
- permits and regulations for transporting live bees, including:
  - biosecurity requirements
  - health certification
- record keeping and reporting procedures for bee transport
- health and safety procedures and requirements for transporting and handling hives.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary with hives to be transported or an environment that accurately represents workplace conditions
  - an apiary site prepared and ready to receive hives
- resources, equipment and materials:
  - health and safety equipment for transporting and handling bees
  - hives with live bees
  - hive tools and equipment used for transporting hives
  - vehicle for loading and transporting bee hives
  - loading and unloading tools and equipment
  - resources to secure bee hive loads to vehicles
- specifications:
  - work procedures for transporting bee hives, including safe work practices, bee handling and management, environmental requirements
  - information on equipment and vehicle carrying capacity and operating parameters
  - specifications, control points and parameters for handling and assessing bee health
  - documentation and recording requirements and procedures
  - access to biosecurity codes of practice, quarantine and transport regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare comb and safely operate equipment used to extract honey fit for human consumption. The work may be carried out on hive, in a mobile processing facility or a purpose built fixed facility.

The unit applies to beekeepers who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

Honey extraction for human consumption is subject to state and territory food safety legislation and regulations.

### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

- **wax extraction or repair according to workplace, quarantine and biosecurity procedures**

#### 5. Handle extracted honey

- **5.1 Ensure extracted honey meets temperature specifications to assist removal of wax, air, pollen and detritus**
- **5.2 Test moisture content of honey and take action to maintain appropriate moisture according to workplace procedures**
- **5.3 Monitor conditions of honey fermentation and implement procedures to reduce risk**

#### 6. Store honey

- **6.1 Store cleaned honey in containers to meet quality assurance standards, food health regulations and customer requirements**
- **6.2 Obtain a reference sample of honey, label and store according to workplace procedures**
- **6.3 Clean, dry and sanitise all equipment and work area according to workplace procedures.**

#### 7. Collect and store cappings and raw comb for future wax processing

- **7.1 Identify comb suitable for future wax processing**
- **7.2 Extract residual honey from cappings and raw comb according to workplace procedures**
- **7.3 Consolidate wax cappings and raw comb and store according to workplace, quarantine and biosecurity procedures**

#### 8. Maintain records of honey production

- **8.1 Update records for honey production according to workplace procedures and legislative requirements**

### Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have extracted honey from mature honey comb, including:

- identified and selected appropriate extraction method for honey production process
- identified hazards and risks and implemented control measures and used equipment safely
- selected, fitted and used appropriate personal protective equipment (PPE) and complied with workplace personal hygiene practices
- identified, selected and prepared tools and equipment required for extraction process and ensured appropriate food hygiene procedures were performed on them
- identified, selected, prepared and stored unprocessed comb according to workplace product requirements
- identified and complied with quality assurance and food safety and handling requirements while extracting honey
- safely extracted honey using extraction equipment in compliance with quality assurance and food safety requirements
- prepared the comb for extraction avoiding brood comb according to the extraction method and equipment being used
- organised frames from the extraction process stored, returned to apiary or retained for repair or future wax processing in compliance with pest management, biosecurity and barrier system requirements
