AHC Agriculture, Horticulture and Conservation and Land Management Training Package

Release: 5.0
CONTENTS

AHC Agriculture, Horticulture and Conservation and Land Management Training Package

AHC10116 Certificate I in Conservation and Land Management .................................................. 63
AHC10216 Certificate I in AgriFood Operations ........................................................................ 67
AHC10316 Certificate I in Horticulture ....................................................................................... 71
AHC10416 Certificate I in Permaculture ...................................................................................... 73
AHC20116 Certificate II in Agriculture ....................................................................................... 75
AHC20316 Certificate II in Production Horticulture ................................................................. 82
AHC20416 Certificate II in Horticulture ...................................................................................... 87
AHC20520 Certificate II in Arboriculture .................................................................................... 92
AHC20616 Certificate II in Parks and Gardens .......................................................................... 94
AHC20716 Certificate II in Production Nursery ......................................................................... 97
AHC20816 Certificate II in Retail Nursery .................................................................................. 100
AHC20919 Certificate II in Sports Turf Management ............................................................... 103
AHC21016 Certificate II in Conservation and Land Management .......................................... 106
AHC21119 Certificate II in Irrigation ........................................................................................ 113
AHC21216 Certificate II in Rural Operations ............................................................................ 116
AHC21316 Certificate II in Shearing .......................................................................................... 118
AHC21416 Certificate II in Wool Handling ............................................................................... 120
AHC21516 Certificate II in Floriculture ...................................................................................... 122
AHC21616 Certificate II in Landscaping .................................................................................... 125
AHC21716 Certificate II in Permaculture ................................................................................... 128
AHC21819 Certificate II in Protected Horticulture ................................................................. 131
AHC30116 Certificate III in Agriculture .................................................................................... 136
AHC30216 Certificate III in Agriculture (Dairy Production) .................................................... 148
AHC30318 Certificate III in Rural and Environmental Pest Management ................................ 153
AHC30416 Certificate III in Pork Production ............................................................................ 158
AHC30516 Certificate III in Poultry Production ......................................................................... 164
AHC30616 Certificate III in Production Horticulture ............................................................... 169
AHC30716 Certificate III in Horticulture ................................................................................... 173
AHC30820 Certificate III in Arboriculture ................................................................................. 177
AHC30916 Certificate III in Landscape Construction ............................................................... 183
AHC31016 Certificate III in Parks and Gardens ....................................................................... 185
AHC31116 Certificate III in Production Nursery ....................................................................... 189
AHC31216 Certificate III in Retail Nursery ............................................................................... 193
AHC31319 Certificate III in Sports Turf Management .............................................................. 196
AHC31416 Certificate III in Conservation and Land Management ......................................... 199
AHC31516 Certificate III in Indigenous Land Management .................................................... 206
AHC31616 Certificate III in Lands, Parks and Wildlife ............................................................. 212
AHC31716 Certificate III in Natural Area Restoration .............................................................. 217
AHC31818 Certificate III in Beekeeping ................................................................................... 221
AHC31918 Certificate III in Rural Machinery Operations ......................................................... 224
AHC32116 Certificate III in Commercial Seed Processing ....................................................... 228
AHC32216 Certificate III in Commercial Composting .............................................................. 231
AHC32316 Certificate III in Conservation Earthworks .............................................................. 234
AHC32419 Certificate III in Irrigation Technology ................................................................. 237
AHC32516 Certificate III in Aboriginal Sites Work ................................................................. 242
AHC32716 Certificate III in Rural Merchandising ................................................................. 248
AHC32816 Certificate III in Rural Operations ......................................................................... 252
AHC32916 Certificate III in Shearing ................................................................. 254
AHC33016 Certificate III in Wool Clip Preparation ................................................. 257
AHC33116 Certificate III in Advanced Wool Handling ............................................. 259
AHC33216 Certificate III in Floriculture .............................................................. 262
AHC33316 Certificate III in Feedlot Operations ...................................................... 266
AHC33416 Certificate III in Seed Production ......................................................... 272
AHC33516 Certificate III in Seed Testing .............................................................. 276
AHC33719 Certificate III in Protected Horticulture ................................................. 279
AHC33816 Certificate III in Permaculture ............................................................ 285
AHC40116 Certificate IV in Agribusiness .............................................................. 289
AHC40219 Certificate IV in Protected Horticulture ................................................ 296
AHC40316 Certificate IV in Production Horticulture .............................................. 300
AHC40416 Certificate IV in Horticulture .............................................................. 304
AHC40516 Certificate IV in Parks and Gardens ..................................................... 308
AHC40616 Certificate IV in Production Nursery .................................................... 311
AHC40716 Certificate IV in Retail Nursery ........................................................... 314
AHC40916 Certificate IV in Conservation and Land Management ............................ 317
AHC41019 Certificate IV in Agribusiness ............................................................. 324
AHC41119 Certificate IV in Irrigation Management ............................................... 328
AHC41316 Certificate IV in Wool Classing ........................................................... 332
AHC41416 Certificate IV in Seed Production ....................................................... 334
AHC41516 Certificate IV in Seed Testing ............................................................. 337
AHC41616 Certificate IV in Organic Farming ....................................................... 340
AHC41716 Certificate IV in Pest Management ..................................................... 345
AHC42016 Certificate IV in Landscape ............................................................... 349
AHC42116 Certificate IV in Permaculture ............................................................ 353
AHC42216 Certificate IV in Shearing Contracting ................................................. 357
AHC50116 Diploma of Agriculture ....................................................................... 360
AHC50216 Diploma of Pork Production ............................................................... 367
AHC50316 Diploma of Production Horticulture ..................................................... 370
AHC50416 Diploma of Horticulture ..................................................................... 373
AHC50520 Diploma of Arboriculture ................................................................. 378
AHC50616 Diploma of Landscape Design ............................................................ 381
AHC50716 Diploma of Parks and Gardens Management ....................................... 384
AHC50816 Diploma of Production Nursery Management ....................................... 387
AHC50916 Diploma of Retail Nursery Management .............................................. 390
AHC51019 Diploma of Sports Turf Management .................................................. 393
AHC51116 Diploma of Conservation and Land Management ............................... 396
AHC51216 Diploma of Community Coordination and Facilitation ......................... 403
AHC51316 Diploma of Pest Management ............................................................. 408
AHC51419 Diploma of Agribusiness Management ................................................. 413
AHC51519 Diploma of Viticulture ....................................................................... 417
AHC51619 Diploma of Irrigation Design ............................................................... 420
AHC51816 Diploma of Organic Farming ............................................................... 423
AHC52016 Diploma of Landscape Project Management ......................................... 428
AHC52116 Diploma of Permaculture ................................................................... 430
AHC60216 Advanced Diploma of Horticulture ..................................................... 434
AHC60319 Advanced Diploma of Agribusiness Management ................................ 437
AHC60415 Advanced Diploma of Conservation and Land Management ............... 440
AHC60520 Advanced Diploma of Arboriculture ................................................... 443
AHC80120 Graduate Diploma of Arboriculture .................................................... 446
AHCAGB302 Keep production records for a primary production business ............... 449
Assessment Requirements for AHCAGB302 Keep production records for a primary production business ................................................................. 452
AHCAGB404 Plan and implement infrastructure improvements ................................................................. 454
Assessment Requirements for AHCAGB404 Plan and implement infrastructure improvements ................................. 457
AHCAGB405 Analyse and interpret production data .................................................................................... 459
Assessment Requirements for AHCAGB405 Analyse and interpret production data ............................... 462
AHCAGB406 Keep financial records for primary production business ......................................................... 464
Assessment Requirements for AHCAGB406 Keep financial records for primary production business ........... 467
AHCAGB501 Develop climate risk management strategies ......................................................................... 469
Assessment Requirements for AHCAGB501 Develop climate risk management strategies .......................... 472
AHCAGB504 Plan production for the whole business ................................................................................. 474
Assessment Requirements for AHCAGB504 Plan production for the whole business .............................. 478
AHCAGB512 Plan and manage infrastructure .............................................................................................. 480
Assessment Requirements for AHCAGB512 Plan and manage infrastructure ............................................ 484
AHCAGB513 Develop a farm plan .............................................................................................................. 486
Assessment Requirements for AHCAGB513 Develop a farm plan ............................................................. 490
AHCAGB514 Manage application of agents to crops or pastures ................................................................. 492
Assessment Requirements for AHCAGB514 Manage application of agents to crops or pastures ............... 496
AHCAGB515 Develop sustainable agricultural practices that utilise renewable energy and recycling systems ................................................................................................................................. 498
Assessment Requirements for AHCAGB515 Develop sustainable agricultural practices that utilise renewable energy and recycling systems ................................................................. 502
AHCAGB516 Select and implement a GIS for sustainable agricultural systems ........................................ 504
Assessment Requirements for AHCAGB516 Select and implement a GIS for sustainable agricultural systems ................................................................................................................................. 507
AHCAGB517 Develop and manage a plan for sustainable production ........................................................ 509
Assessment Requirements for AHCAGB517 Develop and manage a plan for sustainable production ............ 513
AHCAGB518 Develop climate risk management strategies ......................................................................... 515
Assessment Requirements for AHCAGB518 Develop climate risk management strategies .......................... 518
AHCAGB519 Plan and monitor production processes .................................................................................. 520
Assessment Requirements for AHCAGB519 Plan and monitor production processes ................................ 524
AHCAGB520 Plan production for the whole business .................................................................................. 526
Assessment Requirements for AHCAGB520 Plan production for the whole business .............................. 530
AHCAGB521 Select and use agricultural technology .................................................................................. 532
Assessment Requirements for AHCAGB521 Select and use agricultural technology ................................. 535
AHCAGB522 Implement the introduction of biotechnology into the production system ............................ 537
Assessment Requirements for AHCAGB522 Implement the introduction of biotechnology into the production system ................................................................................................................................. 541
AHCAGB607 Manage succession planning ............................................................................................... 543
Assessment Requirements for AHCAGB607 Manage succession planning .................................................. 546
AHCAGB608 Manage financial resources ............................................................................................... 548
Assessment Requirements for AHCAGB608 Manage financial resources .................................................. 551
AHCAGB609 Develop export markets for produce ..................................................................................... 553
Assessment Requirements for AHCAGB609 Develop export markets for produce ..................................... 556
AHCAGB610 Manage the production system ............................................................................................ 558
Assessment Requirements for AHCAGB610 Manage the production system ............................................ 561
AHCAGB611 Analyse business performance ............................................................................................. 563
Assessment Requirements for AHCAGB611 Analyse business performance .............................................. 566
AHCAGB612 Manage price risk through trading strategy ........................................................................... 568
Contents

Assessment Requirements for AHCAGB612 Manage price risk through trading strategy..........................571
Assessment Requirements for AHCAIS301 Collect semen........................................................................573
Assessment Requirements for AHCAIS301 Collect semen........................................................................575
Assessment Requirements for AHCARB201 Apply a range of treatments to trees........................................577
Assessment Requirements for AHCARB201 Apply a range of treatments to trees........................................580
AHCARB206 Operate and maintain stump grinding machines..................................................................583
Assessment Requirements for AHCARB206 Operate and maintain stump grinding machines..................587
AHCARB211 Apply treatments to trees.......................................................................................................592
Assessment Requirements for AHCARB211 Apply treatments to trees.......................................................595
AHCARB212 Operate and maintain stump grinding machines..................................................................598
Assessment Requirements for AHCARB212 Operate and maintain stump grinding machines..................602
AHCARB213 Perform ground-based rigging...............................................................................................605
Assessment Requirements for AHCARB213 Perform ground-based rigging.............................................608
AHCARB214 Recognise trees.....................................................................................................................612
Assessment Requirements for AHCARB214 Recognise trees.....................................................................615
AHCARB301 Implement a tree maintenance program..................................................................................618
Assessment Requirements for AHCARB301 Implement a tree maintenance program...............................621
AHCARB303 Perform pruning operations..................................................................................................624
Assessment Requirements for AHCARB303 Perform pruning operations.................................................628
AHCARB305 Dismantle trees.......................................................................................................................632
Assessment Requirements for AHCARB305 Dismantle trees.....................................................................636
AHCARB306 Undertake aerial rescue..........................................................................................................640
Assessment Requirements for AHCARB306 Undertake aerial rescue.......................................................644
AHCARB307 Use advanced climbing techniques......................................................................................648
Assessment Requirements for AHCARB307 Use advanced climbing techniques......................................651
AHCARB308 Install cable and bracing........................................................................................................655
Assessment Requirements for AHCARB308 Install cable and bracing....................................................658
AHCARB309 Implement a tree protection program.....................................................................................661
Assessment Requirements for AHCARB309 Implement a tree protection program....................................664
AHCARB311 Tie, dress, set and finish arborist knots..................................................................................667
Assessment Requirements for AHCARB311 Tie, dress, set and finish arborist knots.................................671
AHCARB312 Use standard climbing techniques to access trees...............................................................674
Assessment Requirements for AHCARB312 Use standard climbing techniques to access trees.............677
AHCARB314 Implement a tree maintenance program................................................................................681
Assessment Requirements for AHCARB314 Implement a tree maintenance program............................684
AHCARB315 Inspect trees for access and work..........................................................................................688
Assessment Requirements for AHCARB315 Inspect trees for access and work......................................691
AHCARB316 Perform pruning operations..................................................................................................695
Assessment Requirements for AHCARB316 Perform pruning operations.................................................699
AHCARB317 Dismantle trees......................................................................................................................703
Assessment Requirements for AHCARB317 Dismantle trees..................................................................707
AHCARB318 Undertake aerial rescue..........................................................................................................713
Assessment Requirements for AHCARB318 Undertake aerial rescue.....................................................717
AHCARB319 Use arborist climbing techniques.........................................................................................721
Assessment Requirements for AHCARB319 Use arborist climbing techniques......................................725
AHCARB320 Install tree support systems..................................................................................................731
Assessment Requirements for AHCARB320 Install tree support systems..............................................735
AHCARB321 Implement a tree protection program....................................................................................738
Assessment Requirements for AHCARB321 Implement a tree protection program.................................741
AHCARB322 Access trees for inspection....................................................................................................744

### Assessment Requirements

- **AHCPER303**: Maintain integrated plant and animal systems
- **AHCPER304**: Carry out animal care, maintenance and treatment programs in a permaculture system
- **AHCPER305**: Implement crop maintenance and harvesting programs for permaculture systems
- **AHCPER306**: Use weedy plants in a permaculture system
- **AHCPER307**: Establish a rural permaculture system
- **AHCPER308**: Establish an urban permaculture system
- **AHCPER309**: Install and maintain permaculture water systems
- **AHCPER310**: Install structures for permaculture systems
- **AHCPER311**: Kill and dress small livestock for domestic consumption
- **AHCPER312**: Plan organic garden and orchard systems
- **AHCPER313**: Coordinate preparation and storage of permaculture products
- **AHCPER314**: Read and interpret property maps and plans
- **AHCPER315**: Coordinate community projects
- **AHCPER316**: Select plant and animal species for permaculture systems
- **AHCPER317**: Build with earth, straw and reclaimed materials
- **AHCPER318**: Plan propagation activities for a permaculture system
- **AHCPER319**: Test, improve and maintain healthy soil in a permaculture system
- **AHCPER320**: Manage plant pests, diseases and disorders in a permaculture system
- **AHCPER321**: Demonstrate permaculture practices to small groups of learners
Assessment Requirements for AHCPER401 Provide advice on permaculture principles and practices.................................................................4254
AHCPER402 Design a rural permaculture system.................................................................4256
Assessment Requirements for AHCPER402 Design a rural permaculture system........4259
AHCPER403 Design an urban permaculture system.................................................................4262
Assessment Requirements for AHCPER403 Design an urban permaculture system....4265
AHCPER404 Plan and implement permaculture works.................................................................4268
Assessment Requirements for AHCPER404 Plan and implement permaculture works4271
AHCPER405 Select appropriate technology for a permaculture system.................................4273
Assessment Requirements for AHCPER405 Select appropriate technology for a permaculture system.................................................................4276
AHCPER406 Identify and analyse bioregional characteristics and resources ..................4278
Assessment Requirements for AHCPER406 Identify and analyse bioregional characteristics and resources .................................................................4281
AHCPER407 Design harvesting and storage systems for permaculture products........4283
Assessment Requirements for AHCPER407 Design harvesting and storage systems for permaculture products .................................................................4286
AHCPER408 Implement and monitor animal health and welfare programs for a permaculture system.................................................................4289
Assessment Requirements for AHCPER408 Implement and monitor animal health and welfare programs for a permaculture system.................................4292
AHCPER409 Manage a permaculture seed bank .................................................................4295
Assessment Requirements for AHCPER409 Manage a permaculture seed bank........4298
AHCPER410 Recommend approaches for sustainable community and bioregional development .................................................................4301
Assessment Requirements for AHCPER410 Recommend approaches for sustainable community and bioregional development.................................................................4304
AHCPER411 Operate within a sustainable community and bioregional development program.................................................................4306
Assessment Requirements for AHCPER411 Operate within a sustainable community and bioregional development program .................................................................4309
AHCPER412 Operate within a permaculture aid and development program ........4311
Assessment Requirements for AHCPER412 Operate within a permaculture aid and development program .................................................................4314
AHCPER413 Evaluate suitability of species as solutions for permaculture applications 4316
Assessment Requirements for AHCPER413 Evaluate suitability of species as solutions for permaculture applications .................................................................4319
AHCPER501 Carry out permaculture field research .................................................................4321
Assessment Requirements for AHCPER501 Carry out permaculture field research....4324
AHCPER502 Design an integrated permaculture system.................................................................4327
Assessment Requirements for AHCPER502 Design an integrated permaculture system4330
AHCPER503 Develop a strategic plan for a permaculture project or enterprise ....4333
Assessment Requirements for AHCPER503 Develop a strategic plan for a permaculture project or enterprise .................................................................4336
AHCPER504 Manage a permaculture project or enterprise .................................................................4340
Assessment Requirements for AHCPER504 Manage a permaculture project or enterprise4343
AHCPER505 Plan and supervise the implementation of permaculture project works..4346
Assessment Requirements for AHCPER505 Plan and supervise the implementation of permaculture project works.................................................................4349
AHCPER506 Develop a relocalisation or transition project .................................................................4352
Assessment Requirements for AHCPER506 Develop a relocalisation or transition project4355
AHCPER507 Research and interpret requirements for a permaculture project........4357
Assessment Requirements for AHCPER507 Research and interpret requirements for a
permaculture project..........................................................4360
AHCPER508 Manage a permaculture aid and development project..........................4362
Assessment Requirements for AHCPER508 Manage a permaculture aid and development
project..............................................................................4366
AHCPER509 Design permaculture structures and features .........................................4369
Assessment Requirements for AHCPER509 Design permaculture structures and features4372
AHCPER510 Prepare a sustainable community and bioregional development strategy4374
Assessment Requirements for AHCPER510 Prepare a sustainable community and
bioregional development strategy............................................4377
AHCPER511 Facilitate participatory planning and learning activities..........................4380
Assessment Requirements for AHCPER511 Facilitate participatory planning and learning
activities..............................................................................4383
AHCPER512 Plan community governance and decision-making processes..................4385
Assessment Requirements for AHCPER512 Plan community governance and
decision-making processes....................................................4388
AHCPGD101 Support gardening work ..................................................4390
Assessment Requirements for AHCPGD101 Support gardening work..........................4393

Assessment Requirements for AHCPGD205 Prepare a grave site...............................4413
AHCPGD206 Conduct visual inspection of park facilities .........................................4414
Assessment Requirements for AHCPGD206 Conduct visual inspection of park facilities4416
AHCPGD301 Implement a plant establishment program .........................................4418
Assessment Requirements for AHCPGD301 Implement a plant establishment program4421
AHCPGD302 Plan and maintain plant displays ..............................................4423
Assessment Requirements for AHCPGD302 Plan and maintain plant displays.............4426
AHCPGD303 Perform specialist amenity pruning ..............................................4428
Assessment Requirements for AHCPGD303 Perform specialist amenity pruning..........4430
AHCPGD304 Implement a landscape maintenance program .....................................4432
Assessment Requirements for AHCPGD304 Implement a landscape maintenance program4435
AHCPGD305 Conduct operational inspection of park facilities....................................4437
Assessment Requirements for AHCPGD305 Conduct operational inspection of park
facilities..................................................................................4439
AHCPGD306 Implement a maintenance program for an aquatic environment.............4441
Assessment Requirements for AHCPGD306 Implement a maintenance program for an
aquatic environment................................................................4444
AHCPGD401 Design plant displays......................................................4446
Assessment Requirements for AHCPGD401 Design plant displays.............................4448
AHCPGD402 Plan a plant establishment program ..............................................4450
Assessment Requirements for AHCPGD402 Plan a plant establishment program........4453
AHCPGD501 Manage plant cultural practices..................................................4455
Assessment Requirements for AHCPGD501 Manage plant cultural practices..............4458
AHCPGD502 Plan the restoration of parks and gardens ............................................4460
Assessment Requirements for AHCPGD502 Plan the restoration of parks and gardens4463
AHCPGD503 Manage parks and reserves....................................................4465
Assessment Requirements for AHCPGD503 Manage parks and reserves ........................................ 4469
AHCPGD504 Develop and implement a streetscape management plan ........................................ 4471
Assessment Requirements for AHCPGD504 Develop and implement a streetscape management plan ........................................ 4474
AHCPGD505 Conduct comprehensive inspection of park facilities ........................................ 4476
Assessment Requirements for AHCPGD505 Conduct comprehensive inspection of park facilities ........................................ 4479
AHCPHT101 Support horticultural production ............................................................................ 4481
Assessment Requirements for AHCPHT101 Support horticultural production ........................................ 4483
AHCPHT201 Plant horticultural crops ......................................................................................... 4485
Assessment Requirements for AHCPHT201 Plant horticultural crops ........................................ 4487
AHCPHT202 Carry out canopy maintenance .............................................................................. 4489
Assessment Requirements for AHCPHT202 Carry out canopy maintenance ........................................ 4491
AHCPHT204 Undertake field budding and grafting .................................................................... 4493
Assessment Requirements for AHCPHT204 Undertake field budding and grafting ........................................ 4495
AHCPHT205 Carry out post-harvest operations .......................................................................... 4497
Assessment Requirements for AHCPHT205 Carry out post-harvest operations ........................................ 4500
AHCPHT206 Handle and move mushroom boxes ................................................................. 4502
Assessment Requirements for AHCPHT206 Handle and move mushroom boxes ........................................ 4504
AHCPHT207 Perform mushroom substrate process tasks ......................................................... 4506
Assessment Requirements for AHCPHT207 Perform mushroom substrate process tasks ........................................ 4509
AHCPHT208 Water mushroom crops .................................................................................. 4511
Assessment Requirements for AHCPHT208 Water mushroom crops ........................................ 4513
AHCPHT209 Produce trellis dried grapes .............................................................................. 4515
Assessment Requirements for AHCPHT209 Produce trellis dried grapes ........................................ 4518
AHCPHT301 Carry out a crop regulation program ........................................................................ 4520
Assessment Requirements for AHCPHT301 Carry out a crop regulation program ........................................ 4522
AHCPHT303 Implement a post-harvest program ...................................................................... 4524
Assessment Requirements for AHCPHT303 Implement a post-harvest program ........................................ 4527
AHCPHT304 Harvest horticultural crops mechanically ............................................................ 4529
Assessment Requirements for AHCPHT304 Harvest horticultural crops mechanically ........................................ 4531
AHCPHT305 Regulate crops .................................................................................................. 4533
Assessment Requirements for AHCPHT305 Regulate crops .................................................... 4535
AHCPHT306 Establish horticultural crops ................................................................................ 4537
Assessment Requirements for AHCPHT306 Establish horticultural crops ........................................ 4539
AHCPHT307 Prepare raw materials and compost feedstock .................................................... 4541
Assessment Requirements for AHCPHT307 Prepare raw materials and compost feedstock ........................................ 4544
AHCPHT308 Prepare value added compost-based products .................................................... 4546
Assessment Requirements for AHCPHT308 Prepare value added compost-based products ........................................ 4548
AHCPHT309 Supervise mushroom substrate preparation ........................................................ 4550
Assessment Requirements for AHCPHT309 Supervise mushroom substrate preparation ........................................ 4552
AHCPHT310 Coordinate horticultural crop harvesting ............................................................ 4554
Assessment Requirements for AHCPHT310 Coordinate horticultural crop harvesting ........................................ 4557
AHCPHT401 Assess olive oil for style and quality ................................................................. 4559
Assessment Requirements for AHCPHT401 Assess olive oil for style and quality ........................................ 4561
AHCPHT402 Develop a crop regulation program ...................................................................... 4562
Assessment Requirements for AHCPHT402 Develop a crop regulation program ........................................ 4565
AHCPHT403 Develop harvesting and processing specifications to produce an olive oil ........................................ 4567
Assessment Requirements for AHCPHT403 Develop harvesting and processing specifications to produce an olive oil ........................................ 4569
AHCPHT404 Implement and monitor a horticultural crop harvesting program ........................................ 4571
Assessment Requirements for AHCPHT404 Implement and monitor a horticultural crop harvesting program ........................................ 4573
AHCPHT405 Manage mushroom substrate preparation

Assessment Requirements for AHCPHT405 Manage mushroom substrate preparation

AHCPHT406 Control Phase II mushroom substrate process

Assessment Requirements for AHCPHT406 Control Phase II mushroom substrate process

AHCPHT407 Manage mushroom crop development

Assessment Requirements for AHCPHT407 Manage mushroom crop development

AHCPHT408 Oversee vineyard practices

Assessment Requirements for AHCPHT408 Oversee vineyard practices

AHCPHT502 Develop a horticultural production plan

Assessment Requirements for AHCPHT502 Develop a horticultural production plan

AHCPHT503 Manage a controlled growing environment

Assessment Requirements for AHCPHT503 Manage a controlled growing environment

AHCPLY201 Collect store and handle eggs from breeder flocks

Assessment Requirements for AHCPLY201 Collect store and handle eggs from breeder flocks

AHCPLY202 Maintain health and welfare of poultry

Assessment Requirements for AHCPLY202 Maintain health and welfare of poultry

AHCPLY203 Set up shed for placement of day-old chickens

Assessment Requirements for AHCPLY203 Set up shed for placement of day-old chickens

AHCPLY204 Collect and pack eggs for human consumption

Assessment Requirements for AHCPLY204 Collect and pack eggs for human consumption

AHCPLY205 Grade and pack eggs for human consumption

Assessment Requirements for AHCPLY205 Grade and pack eggs for human consumption

AHCPLY206 Catch and load poultry

Assessment Requirements for AHCPLY206 Catch and load poultry

AHCPLY207 Identify and sex poultry

Assessment Requirements for AHCPLY207 Identify and sex poultry

AHCPLY301 Artificially inseminate poultry

Assessment Requirements for AHCPLY301 Artificially inseminate poultry

AHCPLY302 Brood poultry

Assessment Requirements for AHCPLY302 Brood poultry

AHCPLY304 Incubate eggs

Assessment Requirements for AHCPLY304 Incubate eggs

AHCPLY305 Beak tip poultry

Assessment Requirements for AHCPLY305 Beak tip poultry

AHCPLY306 Clean and disinfect poultry production sheds

Assessment Requirements for AHCPLY306 Clean and disinfect poultry production sheds

AHCPLY307 Implement and monitor biosecurity measures in poultry production

Assessment Requirements for AHCPLY307 Implement and monitor biosecurity measures in poultry production

AHCPMG201 Treat weeds

Assessment Requirements for AHCPMG201 Treat weeds

AHCPMG202 Treat plant pests, diseases and disorders

Assessment Requirements for AHCPMG202 Treat plant pests, diseases and disorders

AHCPMG203 Work effectively in a pest management environment

Assessment Requirements for AHCPMG203 Work effectively in a pest management environment

AHCPMG301 Control weeds

Assessment Requirements for AHCPMG301 Control weeds

AHCPMG302 Control plant pests, diseases and disorders

Assessment Requirements for AHCPMG302 Control plant pests, diseases and disorders

AHCPMG304 Use firearms to humanely destroy animals

Assessment Requirements for AHCPMG304 Use firearms to humanely destroy animals
Assessment Requirements for AHCPRK205 Use firearms to humanely destroy animals: 4705
AHCPRK205 Survey pests: 4708
Assessment Requirements for AHCPRK205 Survey pests: 4711
AHCPRK206 Determine pest control techniques: 4713
Assessment Requirements for AHCPRK206 Determine pest control techniques: 4716
AHCPRK207 Apply animal trapping techniques: 4718
Assessment Requirements for AHCPRK207 Apply animal trapping techniques: 4721
AHCPRK208 Implement pest management strategies: 4723
Assessment Requirements for AHCPRK208 Implement pest management strategies: 4725
AHCPRK209 Apply pest animal control techniques: 4728
Assessment Requirements for AHCPRK209 Apply pest animal control techniques: 4730
AHCPRK311 Use firearms for pest control activities from aircraft: 4732
Assessment Requirements for AHCPRK311 Use firearms for pest control activities from aircraft: 4733
AHCPRK312 Apply poison baits for vertebrate pest control in rural and environmental landscapes: 4742
Assessment Requirements for AHCPRK312 Apply poison baits for vertebrate pest control in rural and environmental landscapes: 4744
AHCPRK313 Prepare, monitor and maintain biological agents for weeds: 4745
Assessment Requirements for AHCPRK313 Prepare, monitor and maintain biological agents for weeds: 4747
AHCPRK409 Implement a pest management plan: 4756
Assessment Requirements for AHCPRK409 Implement a pest management plan: 4758
AHCPRK410 Implement the pest monitoring and evaluation plan: 4760
Assessment Requirements for AHCPRK410 Implement the pest monitoring and evaluation plan: 4762
AHCPRK411 Ensure compliance with pest legislation: 4764
Assessment Requirements for AHCPRK411 Ensure compliance with pest legislation: 4766
AHCPRK412 Develop a pest management plan: 4768
Assessment Requirements for AHCPRK412 Develop a pest management plan: 4770
AHCPRK413 Define the pest problem: 4772
Assessment Requirements for AHCPRK413 Define the pest problem: 4774
AHCPRK414 Apply predator trapping techniques: 4776
Assessment Requirements for AHCPRK414 Apply predator trapping techniques: 4778
AHCPRK506 Manage the implementation of legislation: 4780
Assessment Requirements for AHCPRK506 Manage the implementation of legislation: 4782
AHCPRK507 Develop a regional pest management plan: 4784
Assessment Requirements for AHCPRK507 Develop a regional pest management plan: 4786
AHCPRK508 Develop a system to monitor and evaluate the pest management plan: 4788
Assessment Requirements for AHCPRK508 Develop a system to monitor and evaluate the pest management plan: 4790
AHCPRK509 Investigate a pest control failure: 4792
Assessment Requirements for AHCPRK509 Investigate a pest control failure: 4794
AHCPRK510 Develop a pest survey strategy: 4800
Assessment Requirements for AHCPRK510 Develop a pest survey strategy: 4802
AHCPRK201 Care for health and welfare of pigs: 4804
Assessment Requirements for AHCPRK201 Care for health and welfare of pigs: 4806
AHCPRK203 Move and handle pigs: 4808
Assessment Requirements for AHCPRK203 Move and handle pigs: 4810
AHCPRK204 Care for weaner pigs: 4812
Assessment Requirements for AHCPRK204 Care for weaner pigs: 4814
AHCPRK205 Care for health and welfare of outdoor pigs: 4816
Assessment Requirements for AHCPRK205 Care for health and welfare of outdoor pigs: 4818
AHCPRK206 Determine pest control techniques: 4819
Assessment Requirements for AHCPRK206 Determine pest control techniques: 4821
AHCPRK207 Apply animal trapping techniques: 4822
Assessment Requirements for AHCPRK207 Apply animal trapping techniques: 4824
AHCPRK208 Implement pest management strategies: 4825
Assessment Requirements for AHCPRK208 Implement pest management strategies: 4827
AHCPRK209 Apply pest animal control techniques: 4828
Assessment Requirements for AHCPRK209 Apply pest animal control techniques: 4830
AHCPRK311 Use firearms for pest control activities from aircraft: 4831
Assessment Requirements for AHCPRK311 Use firearms for pest control activities from aircraft: 4832
AHCPRK312 Apply poison baits for vertebrate pest control in rural and environmental landscapes: 4833
AHCPRK206 Conduct outdoor pig operations .................................................4835
Assessment Requirements for AHCPRK206 Conduct outdoor pig operations ..........4838
AHCPRK301 Pregnancy test pigs .................................................................4840
Assessment Requirements for AHCPRK301 Pregnancy test pigs ......................4842
AHCPRK302 Treat rectal prolapse in pigs ....................................................4844
Assessment Requirements for AHCPRK302 Treat rectal prolapse in pigs ..........4846
AHCPRK303 Artificially inseminate pigs .....................................................4848
Assessment Requirements for AHCPRK303 Artificially inseminate pigs ..........4850
AHCPRK304 Mate pigs and monitor dry sow performance ................................4852
Assessment Requirements for AHCPRK304 Mate pigs and monitor dry sow production ....................................................4854
AHCPRK305 Care for grower and finisher pigs ..........................................4856
Assessment Requirements for AHCPRK305 Care for grower and finisher pigs ....4859
AHCPRK306 Monitor and maintain outdoor pig production ..........................4861
Assessment Requirements for AHCPRK306 Monitor and maintain outdoor pig production ....................................................4864
AHCPRK401 Implement a feeding strategy for pig production ........................4866
Assessment Requirements for AHCPRK401 Implement a feeding strategy for pig production ....................................................4869
AHCPRK402 Maintain outdoor pig production environment ..........................4871
Assessment Requirements for AHCPRK402 Maintain outdoor pig production environment ....................................................4874
AHCSAW201 Conduct erosion and sediment control activities ........................4876
Assessment Requirements for AHCSAW201 Conduct erosion and sediment control activities ....................................................4878
AHCSAW301 Construct conservation earthworks ......................................4880
Assessment Requirements for AHCSAW301 Construct conservation earthworks ..4883
AHCSAW302 Implement erosion and sediment control measures ..................4885
Assessment Requirements for AHCSAW302 Implement erosion and sediment control measures ....................................................4887
AHCSAW401 Set out conservation earthworks ...........................................4889
Assessment Requirements for AHCSAW401 Set out conservation earthworks .....4891
AHCSAW403 Supervise implementation of conservation earthworks plans ........4893
Assessment Requirements for AHCSAW403 Supervise implementation of conservation earthworks plans ....................................................4896
AHCSAW501 Design control measures and structures ..................................4898
Assessment Requirements for AHCSAW501 Design control measures and structures ....................................................4900
AHCSAW502 Plan erosion and sediment control measures ..........................4902
Assessment Requirements for AHCSAW502 Plan erosion and sediment control measures ....................................................4904
AHCSAW503 Plan conservation earthworks ..............................................4906
Assessment Requirements for AHCSAW503 Plan conservation earthworks ....4909
AHCSDP301 Undertake preparation of land for seed crop production ..............4911
Assessment Requirements for AHCSDP301 Undertake preparation of land for seed crop production ....................................................4914
AHCSDP302 Establish seed crops ...............................................................4916
Assessment Requirements for AHCSDP302 Establish seed crops .................4918
AHCSDP303 Maintain seed crops ...............................................................4920
Assessment Requirements for AHCSDP303 Maintain seed crops .................4923
AHCSDP304 Harvest seed crops ...............................................................4925
Assessment Requirements for AHCSDP304 Harvest seed crops .................4928
AHCSDP401 Plan a seed crop establishment program ..................................4930
Assessment Requirements for AHCSDP401 Plan a seed crop establishment program ....................................................4932
AHCSDP402 Supervise seed crop establishment .........................................4934
Assessment Requirements for AHCSDP402 Supervise seed crop establishment ..........4937
AHCSDP403 Plan and implement seed crop maintenance...........................................4939
Assessment Requirements for AHCSDP403 Plan and implement seed crop maintenance4941
AHCSDP404 Supervise seed crop harvesting ............................................................4943
Assessment Requirements for AHCSDP404 Supervise seed crop harvesting ........4946
AHCSDT301 Prepare a working sample ....................................................................4948
Assessment Requirements for AHCSDT301 Prepare a working sample ..............4950
AHCSDT302 Identify seeds ......................................................................................4952
Assessment Requirements for AHCSDT302 Identify seeds .....................................4954
AHCSDT303 Perform a fluorescence test on seeds ..................................................4955
Assessment Requirements for AHCSDT303 Perform a fluorescence test on seeds......4957
AHCSDT304 Perform a seed purity analysis ..............................................................4959
Assessment Requirements for AHCSDT304 Perform a seed purity analysis ..........4961
AHCSDT305 Perform a seed moisture test ..............................................................4963
Assessment Requirements for AHCSDT305 Perform a seed moisture test ..........4966
AHCSDT306 Perform a seed germination test .........................................................4968
Assessment Requirements for AHCSDT306 Perform a seed germination test .......4970
AHCSDT307 Perform a 'Determination of Other Seeds by Number' test ..............4972
Assessment Requirements for AHCSDT307 Perform a 'Determination of Other Seeds by Number' test .................................................................4974
AHCSDT401 Maintain a quarantine approved laboratory .......................................4976
Assessment Requirements for AHCSDT401 Maintain a quarantine approved laboratory 4979
AHCSDT402 Prepare and maintain a seed reference collection ..............................4981
Assessment Requirements for AHCSDT402 Prepare and maintain a seed reference collection .................................................................................................................4984
AHCSDT403 Perform an Anguina test on annual ryegrass seed ..............................4986
Assessment Requirements for AHCSDT403 Perform an Anguina test on annual ryegrass seed .................................................................4988
AHCSDT404 Develop and implement laboratory policy and procedures ..............4989
Assessment Requirements for AHCSDT404 Develop and implement laboratory policy and procedures .................................................................4992
AHCSDT405 Handle and store quarantinable seeds .................................................4994
Assessment Requirements for AHCSDT405 Handle and store quarantinable seeds ...4996
AHCSDT406 Undertake internal audits in a seed laboratory .....................................4997
Assessment Requirements for AHCSDT406 Undertake internal audits in a seed laboratory 5000
AHCSDT407 Perform an endophytic seed test .......................................................5002
Assessment Requirements for AHCSDT407 Perform an endophytic seed test .......5005
AHCSDT408 Perform an electrophoresis test on a seed sample ............................5006
Assessment Requirements for AHCSDT408 Perform an electrophoresis test on a seed sample ..............................................................................................................5009
AHCSDT409 Perform a tetrazolium test .................................................................5011
Assessment Requirements for AHCSDT409 Perform a tetrazolium test ..............5014
AHCSDT410 Perform a seed vigour test .................................................................5016
Assessment Requirements for AHCSDT410 Perform a seed vigour test ..............5019
AHCSDT411 Perform a 1000 seed weight test ......................................................5021
Assessment Requirements for AHCSDT411 Perform a 1000 seed weight test ......5023
AHCSHG201 Crutch sheep .......................................................................................5025
Assessment Requirements for AHCSHG201 Crutch sheep ....................................5028
AHCSHG202 Assist in preparing for shearing and crutching ...............................5030
Assessment Requirements for AHCSHG202 Assist in preparing for shearing and crutching ..............................................................................................................5032
AHCSHG203 Shear sheep to novice level ...............................................................5034
Assessment Requirements for AHCSHG203 Shear sheep to novice level ..........5037
AHCSHG204 Shear sheep to improver level ..........................................................5039
Assessment Requirements for AHCSOL502 Manage soils to enhance sustainability ................................................. 5042
AHCSOL205 Grind combs and cutters for machine shearing .......................................................................................... 5044
Assessment Requirements for AHCSOL205 Grind combs and cutters for machine shearing ............................................. 5046
AHCSOL206 Prepare handpiece and downtube for machine shearing ........................................................................ 5048
Assessment Requirements for AHCSOL206 Prepare handpiece and downtube for machine shearing ................................ 5051
AHCSLG207 Shear goats .................................................................................................................................................. 5053
Assessment Requirements for AHCSLG207 Shear goats ............................................................................................... 5056
AHCSLG208 Shear alpacas .............................................................................................................................................. 5058
Assessment Requirements for AHCSLG208 Shear alpacas ............................................................................................ 5061
AHCSLG209 Support alpaca shearing operations ............................................................................................................ 5063
Assessment Requirements for AHCSLG209 Support alpaca shearing operations ............................................................. 5066
AHCSLG210 Undertake basic shearing and crutching ...................................................................................................... 5068
Assessment Requirements for AHCSLG210 Undertake basic shearing and crutching ......................................................... 5070
AHCSLG301 Prepare livestock for shearing ..................................................................................................................... 5072
Assessment Requirements for AHCSLG301 Prepare livestock for shearing ................................................................. 5075
AHCSLG302 Prepare combs and cutters for machine shearing ....................................................................................... 5077
Assessment Requirements for AHCSLG302 Prepare combs and cutters for machine shearing ........................................ 5079
AHCSLG303 Maintain and service shearing handpieces .................................................................................................. 5081
Assessment Requirements for AHCSLG303 Maintain and service shearing handpieces ....................................................... 5083
AHCSLG304 Shear sheep to professional level .................................................................................................................. 5085
Assessment Requirements for AHCSLG304 Shear sheep to professional level ................................................................. 5088
AHCSLG305 Maintain consistent shearing performance .................................................................................................. 5090
Assessment Requirements for AHCSLG305 Maintain consistent shearing performance.................................................. 5092
AHCSLG306 Carry out post-shearing procedures ............................................................................................................. 5094
Assessment Requirements for AHCSLG306 Carry out post-shearing procedures ............................................................. 5096
AHCSLG307 Plan and prepare for alpaca shearing ........................................................................................................... 5098
Assessment Requirements for AHCSLG307 Plan and prepare for alpaca shearing ........................................................... 5101
AHCSLG401 Apply advanced shearing techniques .......................................................................................................... 5103
Assessment Requirements for AHCSLG401 Apply advanced shearing techniques ............................................................... 5106
AHCSLG402 Conduct equipment experting for machine shearing .................................................................................. 5108
Assessment Requirements for AHCSLG402 Conduct equipment experting for machine shearing .................................... 5110
AHCSLG403 Account for shearing shed supplies .............................................................................................................. 5112
Assessment Requirements for AHCSLG403 Account for shearing shed supplies .............................................................. 5114
AHCSLG405 Arrange employment for shearing operations .............................................................................................. 5116
Assessment Requirements for AHCSLG405 Arrange employment for shearing operations .............................................. 5118
AHCSOL202 Assist with soil or growing media sampling and testing ............................................................................. 5120
Assessment Requirements for AHCSOL202 Assist with soil or growing media sampling and testing .............................. 5122
AHCSOL203 Sample soils and interpret results ................................................................................................................ 5124
Assessment Requirements for AHCSOL203 Sample soils and interpret results ................................................................. 5127
AHCSOL204 Develop a soil use map for a property .......................................................................................................... 5129
Assessment Requirements for AHCSOL204 Develop a soil use map for a property .......................................................... 5132
AHCSOL304 Prepare acid sulphate soil management plans .......................................................................................... 5134
Assessment Requirements for AHCSOL304 Prepare acid sulphate soil management plans ............................................ 5137
AHCSOL304 Supervise acid sulphate soil remediation and management projects ...................................................... 5139
Assessment Requirements for AHCSOL304 Supervise acid sulphate soil remediation and management projects .......... 5141
AHCSOL502 Manage soils to enhance sustainability ................................................................................................. 5143
Assessment Requirements for AHCSOL502 Manage soils to enhance sustainability .................................................... 5147

Qualification Description

This qualification is an entry-level qualification aimed at individuals entering the agriculture, horticulture and conservation and land management industries. It allows individuals to develop basic skills and knowledge to prepare for work. They may undertake a range of simple tasks under close supervision. The range of technical skills and knowledge is limited.

The qualification is suited to VET in Schools programs or learners with no previous connection to the agriculture, horticulture or conservation and land management industries or relevant employment history.

There are no licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 6 units of competency:
  - 2 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select at least 2 units from the elective list
- 2 units may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course. The 2 units selected can be at AQF level 1 or AQF level 2
- Selected units must be relevant to job outcomes in AgriFood industries and must be chosen to ensure the integrity of the qualification outcome at AQF level 1.

Qualification Description

This qualification provides a general vocational outcome in agriculture. The qualification enables individuals to select a livestock production, cropping or livestock context as a job focus or, in the case of mixed farming enterprises, both cropping and livestock.

Individuals with this qualification carry out routine tasks under general supervision and exercise limited autonomy with some accountability for their own work. Job roles vary across different industry sectors and may include:

- Assistant animal attendant/stockperson
- Assistant farm or station hand
- Assistant farm or station worker
- Assistant farm or station labourer.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.
Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 18 units of competency:
  - 3 core units plus
  - 15 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 7 units from Group A
- 5 units from the remaining units in Group A, or from Group B
- up to 3 may be selected from the remaining units listed in this qualification or from any currently endorsed Training Package or Accredited Course.

Core Units

<table>

Qualification Description

The qualification enables individuals to select a tree cropping, vegetable or berry production, grape growing or mushroom production context as a job focus, or a mixture in the case of mixed enterprises.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 1 core unit plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 7 units from Group A or B
- 3 units may be selected from Group B or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 2

Qualification Description

This qualification underpins a range of work functions and job roles that can lead to a horticultural trade qualification.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 5 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 8 units from the electives listed below
- 2 units may be selected from the remaining electives list below and/or from this or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification describes the skills and knowledge for ground-based tree workers in the arboriculture industry.

Individuals with this qualification perform a range of ground-based arboriculture activities under supervision including, pruning of trees, felling of small trees, operation of chainsaws, and the operation of equipment required for processing and removal of tree material. The work may involve high risk operations in support of arborists. Work practices are undertaken within a strict safety regime to protect workers and the public.

This qualification is suitable as a pre-apprenticeship or school based program for introduction to the arboriculture industry.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some States and Territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 11 core units of competency

Qualification Description

This qualification provides an occupational outcome in retail nursery industry. The nursery industry expects this qualification to be achieved to meet job outcomes at this level.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 7 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 5 units from list below
- 3 units may be selected from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in retail nursery work and must be chosen to ensure the integrity of the qualification outcome at AQF level 2.

Qualification Description

This qualification describes the skills and knowledge for entry level workers and support roles within sports turf management. These workers mainly carry out routine and structured tasks under direct supervision, with limited judgement requirements.

This qualification is suitable as a pre-apprenticeship or school based program for introduction to the sports turf management industry.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 8 units of competency:
  - 5 core units plus
  - 3 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The 3 electives are to be chosen from the elective units listed below.

Qualification Description

This qualification provides an occupational outcome in conservation and land management. Work would be carried out under general guidance and supervision.

The qualification enables individuals to select an Indigenous land management, conservation earthworks, lands, parks and wildlife or natural area management context as a job focus or a mix of these.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 2 core units plus
  - 13 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 must be selected from Group A
- at least 6 must be selected from the remaining units in Group A or Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- a maximum of 3 units may be selected from qualifications packaged at Certificate II or III levels in this Training Package or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification describes the skills and knowledge for entry-level workers in the irrigation industry.

Individuals with this qualification work under routine supervision where the work is predictable and structured with limited judgement requirements.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

No legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 3 core unit plus
  - 13 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 4 must be from electives Group A
- 7 must be from electives Group A or B
- 2 from the remaining units listed in Groups A or B, or any other currently endorsed Training Package or accredited course packaged at Certificate II.

Qualification Description

This qualification provides an occupational outcome for industries and agencies in rural and regional Australia.

Depending on the units selected individuals can be employed not only in rural industries but also other rural and regional sectors, such as local government, tourism, hospitality, transport, construction, community services, information technology and metals.

Industry expects individuals with this qualification to carry out routine tasks under general supervision and exercise limited autonomy with some accountability for their own work.

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an entry level occupational outcome in shearing. It recognises the work of a novice shearer who is able to shear a minimum of 40 adult merino sheep or 50 adult crossbred sheep per day to an acceptable industry standard. The shearing industry expects this qualification to be achieved to meet job outcomes at this level.

This qualification is suitable for an Australian Apprenticeship.

Possible job titles relevant to this qualification include:

- Shearer - novice level

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an entry level occupational outcome in wool handling. The wool industry expects individuals with this qualification to carry out routine wool handling tasks under general supervision and exercise limited autonomy with some accountability for their own work.

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in landscaping. The landscaping industry expects this qualification to be achieved to meet job outcomes at this level.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 8 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from list below
- 3 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in landscaping and must be chosen to ensure the integrity of the qualification outcome at AQF level 2.

Core Units

| AHCLSC201 | Assist with landscape construction work |
AHC21616 Certificate II in Landscaping

AHCLSC202 Construct low-profile timber or modular retaining walls
AHCLSC203 Install aggregate paths
AHCLSC204 Lay paving
AHCMOM203 Operate basic machinery and equipment
AHCPGD201 Plant trees and shrubs
AHCPCM201 Recognise plants
AHCWHS201 Participate in work health and safety processes

**Elective Units**

AHCARB211 Apply treatments to trees
AHCHHM201 Apply chemicals under supervision
AHCINF203 Maintain properties and structures
AHCINF204 Fabricate and repair metal or plastic structures
AHCIRG219 Assist with low volume irrigation operations
AHCIRG221 Assist with pressurised irrigation operations
AHCLSC205 Install tree protection devices
AHCMOM202 Operate tractors
AHCMOM204 Undertake operational maintenance of machinery
AHCMOM205 Operate vehicles
AHCMOM213 Operate and maintain chainsaws
AHCPGD202 Prepare and maintain plant displays
AHCPGD203 Prune shrubs and small trees
AHCPGD204 Transplant small trees
AHCPMG201 Treat weeds
AHCPMG202 Treat plant pests, diseases and disorders
AHCSOL202  Assist with soil or growing media sampling and testing
AHCTRF205  Assist in the preparation of turf surfaces for play
AHCTRF206  Assist with turf construction
AHCTRF207  Renovate grassed areas
AHCTRF208  Support turf establishment
AHCWRK204  Work effectively in the industry
AHCWRK205  Participate in workplace communications
AHCWRK206  Observe enterprise quality assurance procedures
AHCWRK208  Provide information on products and services
AHCWRK209  Participate in environmentally sustainable work practices

Qualification Description

This qualification provides an occupational outcome in permaculture. Work would be carried out under general guidance and supervision.

The qualification is suited to VET in Schools, labour market and environmental skills programs. It provides a range of technical skills and knowledge in supporting food growing programs and community programs and is suited to learners with an interest in permaculture as a practical solution for sustainable living.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge for individuals who work in support roles in the protected horticulture industry undertaking routine tasks in the areas of picking, packing, crop and nursery work.

Individuals with this qualification work under supervision where the work is predictable and structured with limited judgement requirements.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 6 core units plus
  - 6 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. Any combination of electives that meets the packaging rules can be selected for the award of the Certificate II in Protected Horticulture.

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows:

- At least 2 electives must be selected from Group A for the award of the Certificate II in Protected Horticulture (Picking)
At least 2 electives must be selected from Group B for the award of the Certificate II in Protected Horticulture (Packing).

At least 2 electives must be selected from Group C for the award of the Certificate II in Protected Horticulture (Crop work)

At least 2 electives must be selected from Group D for the award of the Certificate II in Protected Horticulture (Nursery)

Plus 4 units from the remaining units listed in groups A, B, C, D or E, or any currently endorsed Training Package or accredited course.

Where a specialisation area is not sought, the electives are to be chosen as follows:

- 2 units must be selected from groups A, B, C, D or E
- the remaining 4 electives may be selected from groups A, B, C, D or E or any currently endorsed Training Package or accredited course.

Qualification Description

This qualification provides a general vocational outcome in agriculture. The qualification enables individuals to select a livestock production, cropping or livestock context as a job focus or, in the case of mixed farming enterprises, both cropping and livestock.

Individuals with this qualification perform tasks in a variety of contexts, which involve some judgement in selecting equipment and services. Job roles vary across different industry sectors and may include:

- Farm or station hand
- Farm or station worker
- Livestock transport driver.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
• 16 units of competency:
  • 2 core units plus
  • 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.

To provide the Certificate III in Agriculture, the electives are to be chosen as follows:

• 5 must be selected from the electives listed in Group A
• 5 must be selected from remaining electives in Group A, or from electives listed in Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
• 4 may be selected from the remaining electives listed in Groups A or B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification, or from any currently endorsed Training Package or Accredited Course packaged at Certificate II, III or IV levels.

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows:

• 10 electives must be selected from Group A, including at least 5 units beginning with the code AHCLSK and at least 5 units beginning with the code TLI for the award of the Certificate III in Agriculture (Livestock Transport).

Qualification Description

This qualification provides an occupational outcome in the dairy industry. The dairy industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a dairy farmhand.

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge required for pest management contractors, pest management field officers, vertebrate pest management field officers and weed management field officers in the pest management industry.

The qualification covers those who work in weed management as well as vertebrate pest management in conservation, land management, horticulture and agriculture settings. Individuals in these roles work under general direction and:

- participate in strategic invasive species management practices
- prepare for management programs
- complete and assess management programs
- carry out weed management programs that require chemical spraying
- maintain required records.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 6 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome.
For the award of Certificate III in Rural and Environmental Pest Management the electives are to be chosen as follows:

- 6 units must be selected from the elective groups A, B, C, D or E
- Up to 2 units from the remaining electives or any currently endorsed Training Package or accredited course packaged to reflect AQF Certificate II, III or IV outcomes.

Where appropriate, electives may be packaged to provide a qualification with a specialisation.

For the award of Certificate III in Rural and Environmental Pest Management (Pest animal controller) the electives are to be chosen as follows:

- 5 units must be selected from the elective group A
- 1 unit must be selected from the elective group C or E
- 2 units must be selected from remaining electives in group C and E or any currently endorsed Training Package or accredited course packaged to reflect AQF Certificate II, III or IV outcomes.

For the award of Certificate III in Rural and Environmental Pest Management (Weed Controller) the electives are to be chosen as follows:

- 2 units must be selected from the electives group B
- 1 unit, AHCBIO201 Inspect and clean machinery for plant, animal and soil material, must be selected
- 3 units must be selected from the elective group D or E
- 2 units must be selected from remaining group D or E or any currently endorsed Training Package or accredited course packaged to reflect AQF Certificate II, III or IV outcomes.

Qualification Description

This qualification provides an occupational outcome in the pork industry. The pork industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a piggery attendant.

The pork industry expects that graduates from this qualification will be able to perform tasks involving a broad range of skilled applications applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

Possible job roles relevant to this qualification include:

- Piggery attendant
- Stockperson

This qualification is suitable for an Australian Apprenticeship.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in the poultry industry. The poultry industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a poultry hand.

Job roles vary and may include:
- Poultry hand
- Poultry stockperson.

The poultry industry expects that graduates from this qualification will be able to perform tasks involving a broad range of skilled applications applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

This qualification is suitable for an Australian Apprenticeship.

No licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
- 16 units of competency:
  - 3 core units plus
  - 13 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 10 units from Group A
- Select 2 units from Group A or Group B
- 1 unit aligned to AQF levels 2, 3, or 4 may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in the Poultry sector and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

**Core Units**

**Biosecurity**

- AHCPLY307 Implement and monitor biosecurity measures in poultry production

**Livestock**

- AHCLSK331 Comply with industry animal welfare requirements

**Work health and safety**

- AHCWHS301 Contribute to work health and safety processes

**Elective Units**

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

**Group A**

**Livestock**

- AHCLSK301 Administer medication to livestock
- AHCLSK304 Carry out post-mortem examination of livestock
- AHCLSK306 Coordinate and monitor production performance
- AHCLSK307 Euthanase livestock
- AHCLSK309 Implement animal health control programs

Qualification Description

This qualification provides a vocational outcome in production horticulture. The qualification enables individuals to select a tree cropping, vegetable or berry production, grape growing or mushroom production context as a job focus, or a mixture in the case of mixed enterprises.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 1 core unit plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 7 units from Group A or B
- 3 units may be selected from Group B or from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification describes the skills and knowledge for trade level roles in the arboriculture industry, including, climbing arborist, EWP arborist, crane specialist, environmental arborist and an arborist works coordinator.

Individuals with this qualification perform a range of arboriculture activities including, shaping and canopy management, tree health and remediation, environmental and habitat development, to tree dismantling and removal. The work involves high risk operations either working at heights or conducting support works to individuals working above ground. Work practices operate within a strict safety regime to protect workers and public.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some States and Territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 18 units of competency:
  - 9 core units plus
  - 9 elective units.

Elective units must ensure the integrity of the qualification’s Australian Quality Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 7 units must be from groups A, B, C, D, E or F, with all the units from at least one specialisation selected from the specialisations listed below
- the remaining 2 units may be selected from units listed in groups A, B, C, D, E or F or any currently endorsed Training Package or accredited course.
No more than 3 of the 9 electives selected can be coded with an AQF indicator below level 3 or reflect outcomes below AQF level 3.

Electives are to be packaged to provide a qualification with one or more specialisations as follows:

- All 3 electives from Group A must be selected for the award of the **Certificate III in Arboriculture (Climbing Arborist)**
- All 4 electives from Group B must be selected for the award of the **Certificate III in Arboriculture (Crane Specialist)**
- All 4 electives from Group C must be selected for the award of the **Certificate III in Arboriculture (Elevated Work Platform – EWP Arborist)**
- All 4 electives from Group D must be selected for the award of the **Certificate III in Arboriculture (Environmental arborist)**
- All 3 electives from Group E must be selected for the award of the **Certificate III in Arboriculture (Works Coordinator)**
- Electives from Group G can only be selected where required as a prerequisite.

Note: If more than one specialisation is completed, award of the qualification would read (for example): Certificate III in Arboriculture (Climbing Arborist, Elevated Work Platform – EWP Arborist).

Note: Units listed in the Prerequisite requirement column that have their own prerequisite requirements are shown with an asterisk (*)

Qualification Description

This qualification describes the skills and knowledge for trade level roles carried out under general direction within sports turf management.

Individuals with this qualification perform tasks autonomously involving a broad range of skills that are applied in a wide variety of sports turf facilities and workplaces. They exercise discretion and judgement in planning tasks, selecting and operating equipment, coordinating resources and applying contingency measures during work.

Legislation related to the installation of irrigation and the storage, handling and application of chemicals applies in some states and territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 23 units of competency:
  - 18 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 3 units must be selected from the electives listed below
- the remaining 2 electives may be selected from the list below or currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification provides a general vocational outcome in the conservation and land management industry.

The qualification enables individuals to select an Indigenous land management, lands, parks and wildlife or natural area management context as a job focus or a mix of these.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
  - 14 elective units

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 must be selected Group A
- at least 6 units must be selected from the remaining units in Group A or Group B, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- a maximum of 4 units may be selected from the remaining units listed in this qualification or from units aligned to Certificate II, III or IV qualifications in this Training Package or from any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification provides a vocational outcome required for an Indigenous land worker operating within Aboriginal Communities, following Community protocols and using a mix of traditional and contemporary land management strategies.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 7 units from Group A or Group B
• A maximum of 3 units may be selected from the elective lists of Certificate II, III or IV of this or any other endorsed Training Package or Accredited Course. Selected units must be relevant to job outcomes in Indigenous land management and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Core Units

Qualification Description

This qualification reflects the roles of national parks and wildlife workers who are responsible for conducting a number of functions focusing on the maintenance of natural environments, park infrastructure and services, and stakeholder management. National parks workers will carry out a number of duties to protect, enhance and manage natural environments, recreational and cultural assets. National parks workers will work autonomously, as well as under supervision of a park ranger.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select at least 4 units from Group A
- Select at least 7 units from Group A or Group B
- A maximum of 3 units may be selected from the elective list of Certificates II, III or IV of this or any other endorsed Training Package or Accredited Course
  Selected units must be relevant to job outcomes in lands, parks and wildlife and must be chosen to ensure the integrity of the qualification outcome at AQF level 3

Qualification Description

This qualification describes the skills and knowledge of a honey bee (Apis) beekeeper, including the establishment of beehives and apiaries, the transport of live bees and the management of bees for honey production and/or provision of pollination services. Legislation, regulations and by-laws relating to beehive ownership and biosecurity codes of practice apply in some states and territories.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 18 units of competency:
  - 13 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 3 units must be selected from the electives listed below
- the remaining 2 units may be selected from the remaining electives listed below
- up to 2 units may be selected from any currently endorsed Training Package or accredited course packaged at AQF Certificate II, III or IV levels.

Core Units

<table>

</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge for job roles in the agricultural industry including: farm managers, farm workers, machinery operators, plant operators/contractors, local government/council workers, parks and gardens workers, and the sports turf industry.

Individuals with this qualification perform tasks involving a broad range of skills that are applied in a wide variety of contexts, which will involve discretion and judgement in selecting and operating equipment, services and applying contingency measures during work.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

Licensing or certification requirements apply to this qualification but vary according to state/territory jurisdictions. Users are advised to check with the relevant regulatory authority.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 7 core units plus
  - 9 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 6 must be from the electives listed below
- 3 from the remaining electives listed below, or any currently endorsed Training Package or accredited course.
A maximum of 4 elective units that are coded with an AQF indicator at AQF level 2 or below, or reflect outcomes at AQF level 2 or below, can be selected.

Qualification Description

This qualification reflects the roles of workers in commercial seed cleaning, grading and processing plants.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 9 units of competency:
  - 5 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from list below
- 1 unit may be selected from this or any other endorsed Training Package or Accredited Course
• Selected units must be relevant to job outcomes in commercial seed processing and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification provides a general vocational outcome for a person working in a commercial composting business. The composting industry expects this qualification to be achieved to meet job outcomes at this level.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 1 core unit plus
  - 9 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 5 units from Group A
- Select 2 units from Group A or B
- 2 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in commercial composting and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification describes the skills and knowledge for trade level roles carried out in the irrigation industry.

Individuals with this qualification perform tasks under broad supervision involving a broad range of skills that are applied in a wide variety of contexts, which will involve discretion and judgement in selecting and operating equipment, coordinating resources and applying contingency measures during work.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 22 units of competency:
  - 9 core units plus
  - 13 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 7 must be from Group A electives
- 2 must be from Group A or B electives
- 4 from the remaining units listed in Groups A or B, or any other endorsed Training Package or accredited course packaged at Certificate III.
Core Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Qualification Description

The qualification enables individuals to undertake work associated with inspecting, documenting and maintaining Aboriginal cultural and heritage sites.

The qualification enables individuals to operate under recognised, appropriate cultural supervision to undertake work associated with inspecting, documenting and maintaining Aboriginal cultural and heritage sites.

There are no entry requirements for this qualification, although it is recommended that participants undertaking this qualification seek the endorsement of their local Aboriginal Community and local Aboriginal leadership when enrolling in this qualification.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides a vocational outcome in rural merchandising.

Industry expects individuals with this qualification to perform tasks involving a broad range of skills applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

This qualification is suitable for an Australian Apprenticeship.

Job roles vary across different industry sectors and include:

- Rural merchandiser
- Rural sales assistant

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides an occupational outcome in agriculture, horticulture and conservation land management and at least one and up to four other related industries.

Individuals with this qualification perform tasks in a variety of contexts, which involve some judgement in selecting equipment and services. Depending on the units selected individuals will be able to seek employment not only in rural industries but also other industry sectors, such as local government, tourism, hospitality, transport, construction, information technology and metals.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 2 core units plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
• select at least 6 units from Certificate III qualifications in the AHC endorsed Training Package
• up to 8 units aligned to AQF levels 2, 3, or 4 qualifications may be selected from up to 4 currently endorsed Training Packages or Accredited Courses.

Qualification Description

This qualification covers occupational outcomes for shearing at the professional level. This requires a high standard of workmanship at a rate of at least 120 adult merino sheep or 140 adult crossbred sheep per day. The shearing industry expects this qualification to be achieved to meet job outcomes at this level.

This qualification is suitable for an Australian Apprenticeship.

Job titles relevant to this qualification include:
- Shearer - professional level

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

To be eligible to enrol in this qualification applicants must be able to demonstrate shearing skills and knowledge at Certificate II in Shearing level by completion of that certificate or by Recognition of Prior Learning.

Qualification Description

This qualification focuses on a specialist wool handling role and allows individuals who are already working in the wool handling industry to develop further skills and knowledge in order to fulfil specialist roles in the organisation. The wool industry expects individuals with this qualification to perform tasks involving a broad range of skilled applications applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

This qualification is suitable for an Australian Apprenticeship.

Job roles and titles vary across different industry sectors. Possible job titles relevant to this qualification include:
- Shearing shed hands
- Wool handlers

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification provides a vocational outcome in floriculture. The floriculture industry expects this qualification to be achieved to meet job outcomes at this level.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 15 units of competency:
  - 1 core unit plus
  - 14 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 7 units from Group A or B
- 3 units may be selected from Group B or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in floriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification provides an occupational outcome in beef cattle feedlot operations. Electives must be chosen to cover a feedlot maintenance, pen riding, or feeding and milling stream.

The testamur issued for this qualification is to be titled AHC33316 Certificate III in Feedlot Operations. An additional descriptor may be added by the RTO to reflect unit selection. This includes:

- AHC33316 Certificate III in Feedlot Operations (Feedlot Maintenance)
- AHC33316 Certificate III in Feedlot Operations (Feeding and Milling)
- AHC33316 Certificate III in Feedlot Operations (Pen Riding)

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification reflects the roles of workers on commercial seed production properties who grow crops within strict certification guidelines.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 6 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 7 units from the list below
- 3 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in seed production and must be chosen to ensure the integrity of the qualification outcome at AQF level 3.

Qualification Description

This qualification describes the skills and knowledge for individuals who work in the protected horticulture industry undertaking skilled work in the areas of picking, packing, crop and nursery work.

Individuals with this qualification perform tasks involving a broad range of skills that are applied in a wide variety of contexts, which will involve discretion and judgement in selecting and operating equipment, coordinating resources and apply contingency measures during work.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 17 units of competency:
  - 6 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. Any combination of electives that meets the packaging rules can be selected for the award of the Certificate III in Protected Horticulture.

Where appropriate, electives may be packaged to provide a qualification with a specialisation area as follows:
At least 3 electives must be selected from Group A electives must be selected for the award of the Certificate III in Protected Horticulture (Picking).

At least 3 electives must be selected from Group B for the award of the Certificate III in Protected Horticulture (Packing).

At least 3 electives must be selected from Group C for the award of the Certificate III in Protected Horticulture (Crop Work).

At least 3 electives must be selected from Group D for the award of the Certificate III in Protected Horticulture (Nursery).

Plus 8 units with up to 3 from any currently endorsed Training Package or accredited course.

Where a specialisation area is not sought, the electives are to be chosen as follows:

- 8 units must be selected from groups A, B, C, D or E
- the remaining 3 electives may be selected from groups A, B, C, D or E or any currently endorsed Training Package or accredited course.

Qualification Description

This qualification relates to those individuals who work either independently or in teams to establish and maintain permaculture systems for private clients, organisations or community entities. They perform tasks involving a broad range of skilled applications in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, elements in a design or contingency measures.

The qualification is suited to learners who wish to work at the skilled tradesman level within permaculture projects and enterprises, and may involve supervision of others and working with people of diverse backgrounds and abilities.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the agriculture industry. It is designed to meet the needs of supervisors or team leaders in the agriculture industry.

Individuals with this qualification will take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems. Job roles vary across different industry sectors and include:

- Farm team leader
- Farm supervisor.

No licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:
AHC40116 Certificate IV in Agriculture

- 12 units of competency:
  - 1 core unit plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 4 units must be selected from Group A electives listed below
- 5 units must be selected from either the remaining Group A electives or from the Group B electives, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- up to 2 units may be selected from the remaining electives listed below, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- up to 2 units may be selected from any currently endorsed Training Package or Accredited Course packaged in qualifications at AQF levels 3, 4 or 5.

**Core Units**

| AHCWHS401 | Maintain work health and safety processes |

**Elective Units**

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

**Group A**

<p>| AHCBA401 | Manage pastures for livestock production |
| AHCBA402 | Plan a pasture establishment program |
| AHCBA403 | Supervise agricultural crop establishment |
| AHCBA404 | Plan and implement agricultural crop maintenance |
| AHCBA405 | Supervise agricultural crop harvesting |
| AHCBA406 | Maintain grain quality in storage |
| AHCBA407 | Save, prepare and store agricultural seed |
| AHCBA408 | Plan and implement a farm or enterprise biosecurity plan |
| AHCBA409 | Plan and implement a chemical use program |
| AHCBA410 | Manage milking shed routines |</p>

Qualification Description

This qualification describes the skills and knowledge for supervisory and coordinating roles in the protected horticulture industry.

Individuals with this qualification perform tasks involving technical skills, problem solving and supervisory skills to operate, monitor and improve performance of protected horticulture systems, processes and team members.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 16 units of competency:
  - 5 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 6 must be from electives group A
- 5 from the remaining units listed in groups A or B, or any currently endorsed Training Package or accredited course packaged at Certificate III, Certificate IV or Diploma.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the production horticulture industry. It is designed to meet the needs of supervisors or team leaders in the production horticulture industry.

The qualification enables individuals to select a tree cropping, vegetable, berry or flower production, grape growing or mushroom production context as a job focus, or a mixture in the case of mixed enterprises.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select 3 units from Group A
- Select 5 units from Group A or B
- 3 units may be selected from Group B or from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge across a broad coverage of the industry prior to undertaking higher level roles in the industry.

No licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 7 units from elective list below
- 4 units aligned to AQF level 3, 4 or 5 may be selected from electives below or from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become a senior or head gardener. The parks and gardens industry expect this qualification to be achieved to meet job outcomes at this level.

No occupational licensing, legislative or certification requirements known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 7 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 4 units from the list below
- 3 units may be selected from the list below or this or any other endorsed Training Package or Accredited Course.
Selected units must be relevant to job outcomes in parks and gardens and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the production nursery industry. The nursery industry expects this qualification to be achieved to meet job outcomes at this level.

Job roles and titles covered by this qualification may include:

- production nursery supervisor

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 7 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 4 units from list below
- 3 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in nursery production and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the conservation and land management industry.

This qualification enables a selection of units from indigenous land management, natural area restoration, conservation earthworks or lands, parks and wildlife to create a general qualification as a job focus.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core unit plus
  - 11 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- up to 11 units may be selected from the electives listed in this qualification, or from the Prerequisite Requirements list if a unit is a required for packaging the qualification
- up to 4 units, aligned to Certificate III, IV or Diploma qualifications, may be selected from this or any other currently endorsed Training Package or Accredited Course.

### Core Units

- AHCWHS401 Maintain work health and safety processes

### Elective Units

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

#### Biosecurity

- AHCBER401 Plan and supervise control activities on infected premises
- AHCBER402 Carry out field surveillance for a specific emergency disease or plant pest
- AHCNRM401 Plan and implement a biosecurity program

#### Business

- AHCBUS407 Cost a project
- AHCBUS408 Operate within a budget framework
- BSBRES411 Analyse and present research information
- TLIR4002 Source goods/services and evaluate contractors

#### Chemicals

- AHCCHM404 Develop procedures to minimise risks in the use of chemicals
- AHCCHM405 Plan and implement a chemical use program
### Community coordination and facilitation

Qualification Description

This qualification reflects the role of workers who are responsible for the administration and day to day business operations of an agricultural or horticultural production enterprise.

At this level, workers may be required to supervise and lead other workers or teams and be involved in some decision-making. Work may take place in a range of industry sectors and in complex, regularly changing environments.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 3 core units plus
  - 9 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 7 units from the elective list
- up to 2 units from this or any other endorsed Training Package or Accredited Course.

Qualification Description

This qualification describes the skills and knowledge for supervisory and management job roles in the irrigation industry.

Individuals with this qualification perform tasks involving technical skills, problem solving and supervisory skills to operate, monitor and improve performance of irrigation systems and supervise the installation of irrigation systems.

Work must comply with work health and safety and environmental regulations and legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 8 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 2 must be from the electives list below
- 2 from the remaining electives listed below or any other currently endorsed Training Package or accredited course.

### Units

- **AHCWRK403**: Supervise work routines and staff performance
- **AHCWRK405**: Implement and monitor environmentally sustainable work practices
- **BSBHRM405**: Support the recruitment, selection and induction of staff
- **BSBLDR403**: Lead team effectiveness
- **BSBMGT402**: Implement operational plan
- **BSBRES411**: Analyse and present research information
- **BSBRKG304**: Maintain business records
- **BSBRKG403**: Set up a business or records system for a small business
- **BSBSMB421**: Manage small business finances
- **BSBWOR404**: Develop work priorities
- **BSBWRT401**: Write complex documents
- **ICTICT402**: Determine project specifications and secure client agreement
- **NWPIRR033**: Coordinate and monitor the operation of irrigation delivery systems
- **NWPTRT062**: Operate and control reclaimed water irrigation
- **TAEASS301**: Contribute to assessment
- **TADEDEL301**: Provide work skill instruction

Qualification Description

This qualification allows individuals to develop higher level skills and knowledge in the seed production industry. It is designed to meet the needs of supervisors or team leaders in the seed production industry.

No licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 5 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 5 units from list below
2 units may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in seed production and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification reflects the roles of senior seed analysts who perform a range of advanced tests on seed in seed laboratories and may supervise the work of seed analysts.

No occupational licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

Entrants into the Certificate IV in Seed Testing must hold the following units of competency or their equivalent:

- AHCSDT301 Prepare a working sample
- AHCSDT302 Identify seeds
- AHCSDT304 Perform a seed purity analysis
- AHCSDT305 Perform a seed moisture test
- AHCSDT306 Perform a seed germination test
- AHCSDT307 Perform a 'Determination of Other Seeds by Number' test
- AHCWHS301 Contribute to work health and safety processes
- AHCWRK306 Comply with industry quality assurance requirements
- AHCWRK309 Apply environmentally sustainable work practices

Packaging Rules

Total number of units = 18

Qualification Description

This qualification allows individuals to develop skills and knowledge within the organic farming and general agriculture industry. It is designed to meet the needs of supervisors or team leaders working in the organic agriculture industry.

This qualification is suitable for people currently working or who wish to find employment on an organic farming enterprise.

Job roles and titles will vary. Possible job titles relevant to this Qualification include:

- Organic farm team leader
- Organic farm supervisor
- Organic farmer.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
• 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
• Select 4 units from Group A
• Select 5 units from Group A or Group B
• 2 units aligned to AQF levels 3, 4, or 5 may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course
• Selected units must be relevant to job outcomes in agriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification provides occupation outcomes for supervisors and senior field officers in the pest management sector. The qualification covers those who work in weed management as well as vertebrate pest management in a range of settings including conservation, land management, agriculture, horticulture and parks and gardens.

Supervisors and senior field officers may undertake the following job functions:

- preparing and carrying out pest management programs
- participating in strategic invasive species management practices
- completing and assessing pest management programs.

Some job functions covered by this qualification may require licencing or certification. Specific determination should be sought through the relevant State or Territory agency.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 4 core units plus
- 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 3 units from Group A
- Select 3 units from Group A or Group B
- A maximum of 2 units may be selected from the elective lists of Certificate III or above of this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in pest management and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification allows individuals to develop post-trade skills and knowledge to become specialists within the landscape industry. It is designed to meet the needs of supervisors or team leaders.

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 1 core units plus
  - 11 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- select 8 units listed from the either Group A or Group B below
- 3 units may be selected from either Group A or Group B or from this or any other endorsed Training Package or Accredited Course.
Selected units must be relevant to job outcomes in the landscape industry and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification relates to individuals who work as project supervisors and designers for private clients or organisations. They require high level permaculture design skills, and knowledge in a broad range of areas in keeping with permaculture’s multi-disciplinary nature. They may be involved in supervising individuals and teams of people on urban and rural work sites and in community projects.

The qualification is suited to learners who wish to work at the supervisory level within permaculture design projects, and may involve the supervision of others and working with people of diverse backgrounds and abilities.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 5 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select 1 unit from Group A
- Select 4 units from Group B
- Select 2 units from Group B or C or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in Permaculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 4.

Qualification Description

This qualification focuses on the skills and knowledge required to run a shearing contracting business. Industry expects that individuals with this qualification will take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

Job roles and titles will vary. Possible job title relevant to this Qualification include:

- Shearing contractor

No occupational licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Qualification Description

This qualification reflects the role of personnel working on farms and stations who manage enterprise production units and employees and sole operators of agribusinesses who provide crop production advice and services to production enterprises.

Industry expects individuals with this qualification will take personal responsibility and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities.

Job roles vary across different industry sectors. Possible job titles relevant to this qualification include:

- Farm production manager
- Production unit manager
- Agronomist
- Station/property manager.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.
Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 5 units from Group A
- Select 3 units from Group A or Group B
- 2 units aligned to AQF level 4 or above may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in agriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification provides an occupational outcome for personnel working on piggeries who manage enterprise production units. The pork industry expects that graduates from this qualification will be able to perform a range of tasks associated with a person performing the job role of a piggery manager.

Possible job roles relevant to this qualification include:

- Production unit manager

The pork industry expects that graduates from this qualification will be able to perform tasks involving the analysis and synthesis of information, design and communication of solutions to complex problems, organise the work of self and others, and take broad responsibility for the quality of the work of others (teams).

No licensing, legislative or certification requirements are known to apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 2 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select at least 6 units from the elective list
- 2 units aligned to AQF level 4 or above may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in pork production and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

The Diploma of Production Horticulture reflects the role of personnel working on production horticulture farms.

The qualification can be contextualised for a tree cropping, vegetable, berry or flower production or mushroom production context as a job focus or, in the case of mixed enterprises, both.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 3 units from Group A
- Select 5 units from Group A or B
- 2 units aligned to AQF level 4 or above may be selected from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in production horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

The Diploma of Horticulture reflects the role of those who manage amenity horticultural enterprises where a range of skills and knowledge across the breadth of the industry is required or personnel working in horticulture at a level requiring higher technical skills.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- 8 units must be selected from the electives listed below
- 2 units may be selected from the remaining elective units listed below
- 2 units, packaged in qualifications aligned to AQF level 4 or above, may be selected from this or any other currently endorsed Training Package or Accredited Course.

Qualification Description

This qualification describes the skills and knowledge for consulting arborists and tree managers.

Graduates with this qualification assess trees and produce reports and documentation attesting to the health and risks related to trees. They diagnose tree disorders and defects, document and communicate recommendations for tree establishment, canopy management, tree remediation, environmental and habitat development and tree removals, within a legislative and regulatory framework.

Legislation, regulations and by-laws relating to the establishment, treatment and removal of trees apply in some States and Territories.

Entry Requirements

To commence this qualification an individual must have achieved the following units of competency or their equivalent:

- AHCARB314 Implement a tree maintenance program
- AHCARB316 Perform pruning operations
- AHCARB323 Identify trees.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 8 core units plus
  - 2 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least one unit from the elective list
one additional unit may be selected from the elective list, or from this or any other endorsed Training Package or Accredited Course that reflect outcomes at AQF level 4 or above.

**Core Units**

Qualification Description
This is a specialist qualification for landscape designers. No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements
There are no entry requirements for this qualification.

Packaging Rules
To achieve this qualification, competency must be demonstrated in:
- 12 units of competency:
  - 4 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- Select 5 units from list below
- 3 units aligned to AQF level 4 or above may be selected from this or any other endorsed Training Package or Accredited Course.

Selected units must be relevant to job outcomes in landscape design and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with AHC Agriculture, Horticulture and Land Management Training Package Version 4.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge for management roles in sports turf. Job roles include senior curators/arena managers, golf course superintendents, sports turf managers, racetrack managers, senior bowling greenkeepers and turf consultants.

It applies to individuals who are responsible for the management of sports turf facilities and who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in specific technical areas. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

To commence this qualification an individual must have:

- completed a Certificate III in Sports Turf Management or an equivalent turf management trade level qualification

or

- a certificate III level qualification in amenity horticulture combined with two years current work experience in a trade level role at a sports turf facility.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 14 units of competency:
  - 10 core units plus
  - 4 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- 2 units must be selected from the electives listed below
- up to 2 units may be selected from the remaining elective listed below or
- up to 2 units may be selected that reflect AQF level 4, 5 or 6 outcomes from this or any other currently endorsed Training Package or Accredited Course.

Qualification Description

The Diploma of Conservation and Land Management reflects the role of personnel working in management positions with technical level skills in conservation and land management roles. No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 units from Group A
- at least 4 units from the remaining units listed in Group A or from Group B, or from the Prerequisite Requirements list if a unit is required for packaging the qualification
• up to 2 units, packaged in qualifications aligned to AQF level 4 or above, may be selected from this or any other currently endorsed Training Package or Accredited Course.

**Elective Units**

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Qualification Description

This qualification reflects the role of personnel working in community coordination and facilitation, which focuses on fostering, promoting and supporting community development, particularly in rural communities that are engaged in land management activities.

Job roles and titles vary across different industry sectors. Possible job titles relevant to this qualification include:

- Volunteer
- Project manager
- Community group leader/coordinator
- Regional coordinator.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
  - 10 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select a minimum of 4 units from Group A
- Select a minimum of 4 units from Group A or Group B
- A maximum of 2 units may be selected from the elective list of any Certificate IV or above of this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in community coordination and facilitation and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification provides occupation outcomes for senior officers and managers in the pest management sector. These roles include functions such as planning, coordinating, managing and completing small to large scale pest management programs and may include participating in emergency operations such as disease outbreak or natural disasters.

The qualification is applicable to individuals who work in weed management as well as vertebrate pest management in a range of contexts, including conservation, land management, agriculture, horticulture, and parks and gardens.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 0 core units plus
• 10 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

• Select at least 5 Units from Group A
• Select at least 3 Units from Group A or Group B
• A maximum of 2 units may be selected from the elective list of a Certificate IV or above of this or any other endorsed Training Package or Accredited Course
• Selected units must be relevant to job outcomes in Conservation and Land Management and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Elective Units

Group A

Natural area restoration

| AHCNAR502 | Conduct biological surveys |

Natural resource management

| AHCNRM602 | Develop a monitoring, evaluation and reporting program |
| AHCNRM603 | Implement a monitoring, evaluation and reporting program |

Pest management

| AHC PMG506 | Manage the implementation of legislation |
| AHC PMG507 | Develop a regional pest management plan |
| AHC PMG508 | Develop a system to monitor and evaluate the pest management plan |
| AHC PMG509 | Investigate a pest control failure |
| AHC PMG510 | Develop a pest survey strategy |

Work health and safety

| AHCWHS502 | Manage work health and safety processes |

Qualification Description

This qualification reflects the role of those working in decision-making and supervisory roles on farms, stations and related rural businesses.

At this level, workers take personal responsibility and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 3 core units plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 4 units from the elective list
- up to 3 units from this or any other endorsed Training Package or Accredited Course.

**Qualification Description**

This qualification reflects the role of personnel working within an organic farming enterprise who manage enterprise production units, manage the certification and continued compliance with organic standards and develop and maintain organic produce supply chains. It is designed to meet the needs of owners and managers of organic farming enterprises.

This qualification is suitable for people currently working or who wish to find employment on an organic farming enterprise or who own an organic farming enterprise.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

**Entry Requirements**

There are no entry requirements for this qualification.

**Packaging Rules**

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 2 core units plus
  - 8 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 2 units from Group A
- Select 5 units from Group A or Group B
- 1 unit aligned to AQF level 4 or above may be selected from the elective list, or this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in agriculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification provides occupation outcomes for individuals to work in a leadership capacity for organisations, groups or enterprises. They require a whole system approach to planning, designing, managing and implementing integrated permaculture projects and programs, permaculture community programs, and the operation of permaculture enterprises.

The qualification is suited to learners who wish to work within organisations and enterprises where skills in strategic planning and project management, natural system and land use planning, and specialist permaculture design are required. Work is likely to involve working with teams of people at the strategic level as well as working with people of diverse backgrounds and abilities.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 12 units of competency:
  - 5 core units plus
  - 7 elective units.
Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 4 units from Group A
- Select 1 unit from Group A or B
- 2 units may be selected from Group B or from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in Permaculture and must be chosen to ensure the integrity of the qualification outcome at AQF level 5.

Qualification Description

This qualification reflects the roles of individuals working in management roles in horticulture.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 8 units of competency:
  - 0 core units plus
  - 8 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- Select 6 units from the elective list below
- 2 units may be selected from this or any other endorsed Training Package or Accredited Course
- Selected units must be relevant to job outcomes in horticulture and must be chosen to ensure the integrity of the qualification outcome at AQF level 6.

Qualification Description

This qualification reflects the role of individuals working in a range of agribusiness leadership or consulting roles. The role reflects the need for agribusiness specific expertise in planning and analysis, managing supply chains, financial and human resource management together with an emphasis on return on investment.

At this level, workers utilise significant theoretical agribusiness knowledge and provide leadership and strategic direction across multiple enterprises.

Agribusiness leaders and consultants analyse, design and execute judgements using wide-ranging technical, conceptual and managerial competencies. Their knowledge base may be highly specialised or broad within the agribusiness field. These individuals are often accountable for group outcomes and for the overall performance of agricultural or horticultural production enterprises.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 8 units of competency:
  - 1 core unit plus
  - 7 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:

- at least 6 units from the elective list
- up to 1 unit from this or any other endorsed Training Package or Accredited Course.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge for specialist consulting arborists, senior consulting arborists, and senior tree managers.

It applies to individuals who apply advanced and paraprofessional knowledge and skills to manage trees in the context of society and infrastructure, including:

- integration of design, planning and tree diagnostics
- urban forest performance and operational management
- development of strategies and policy for arboriculture within a legislative and regulatory framework.

Legislation, regulations and by-laws relating to the establishment, treatment and removal of trees apply in all States and Territories.

Entry Requirements

Prior to commencing the qualification, an individual must have:

- a diploma of arboriculture

or

- a diploma or higher qualification in a field related to arboriculture plus 2 years current work experience as a consulting arborist or a municipal tree manager.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 10 units of competency:
  - 4 core units plus
  - 6 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
- up to 4 units selected from electives listed below
- up to 2 units may be selected from electives listed below or this or any other endorsed Training Package or accredited course

No more than 3 of the 6 electives selected can be coded with an AQF indicator below level 6 or reflect outcomes below AQF level 6.

Note: Units listed in the Prerequisite requirement column that have their own prerequisite requirements are shown with an asterisk (*)

</tr>
</tbody>
</table>

Qualification Description

This qualification describes the skills and knowledge for specialist consulting arborist, senior consulting arborist, senior tree manager, senior technical arborist and research arborist.

Graduates with this qualification apply a highly technical body of knowledge and skills to undertake professional skilled work, including the use of technical investigative equipment and techniques to design, implement and evaluate scientific experiments for sectors for the arboriculture industry. Graduates may specialise in arboriculture disciplines of urban forestry, biological organisms and tree health, tree biomechanics, and interactions of trees in their environment.

Legislation, regulations and by-laws relating to the establishment, treatment and removal of trees apply in all States and Territories.

Entry Requirements

Prior to commencing the qualification, an individual must have:

- an advanced diploma of arboriculture

or

- an advanced diploma or higher qualification in a field related to arboriculture plus 3 years current work experience as a consulting arborist or a municipal tree manager.

Packaging Rules

To achieve this qualification, competency must be demonstrated in:

- 5 units of competency:
  - 0 core units plus
  - 5 elective units.

Elective units must ensure the integrity of the qualification’s Australian Qualification Framework (AQF) alignment and contribute to a valid, industry-supported vocational outcome. The electives are to be chosen as follows:
• Select 2 units from Group A
• An additional 3 units may be selected from Group A or B or C
• Elective Group C can only be selected if required as a prerequisite

No more than 2 of the 5 electives selected can be coded with an AQF indicator below level 8 or reflect outcomes below AQF level 8.

**Elective Units**

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met when packaging the qualification. Please refer to the Prerequisite requirements table for details.

Application

This unit of competency describes the skills and knowledge required to keep production business records, such as paddock and livestock activity, in accordance with workplace requirements for decision-making and auditing.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has collected and maintained accurate, accessible and systematic records for a primary production business for at least three of the following purposes, utilising data that covers a full production cycle:

- livestock breeding records
- crop and pasture usage
- farm vehicle and machinery use and maintenance
- property maintenance
- stored produce
- relevant local climatic activity
- procurement
- staff leave.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the organisation’s policies and procedures applying to production records
- relevant legislation and codes, relating to the operation of a business and to the tasks undertaken
- relevant sections of Industrial Relations legislation and regulations
- recording processes to meet quality assurance requirements
- the organisation’s software and technology used to record and analyse production information.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • digital technology and software used to record information relevant to a primary production business
  • production records that cover a full production cycle.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned, and safely and effectively implemented, at least one property improvement that includes one of the following physical assets:

- buildings
- dairy sheds
- shearing sheds
- shelters
- stock yards
- stock handling structures
- fences
- water supply systems
- roads and tracks
- soil conservation works
- irrigation and drainage channels
- grain and/or produce storage

In doing the above, there must also be evidence of:

- developing and monitoring an improvement plan and schedules
- determining, costing and ordering material requirements
- communicating effectively with stakeholders on infrastructure improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- preparing sites for property improvements
• function and requirements of the physical assets on the property
• sustainable land and water use principles and practices applicable in the region
• environmental controls and codes of practice applicable to the business and to the improvement works
• whole of property plan and property planning cycles
• legislation, regulations and codes of practice relating to soil and water degradation issues, animal health and welfare, chemical use, building construction and workplace health and safety.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • resources, equipment and materials relevant to the property improvement
• relationships:
  • communication with stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively collected, analysed, interpreted and presented production data with conclusions for one of the following:

- animal production
- livestock products
- crop production
- horticulture production.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- current legislation, industry and enterprise codes of practice and quality assurance procedures that impact on production, such as biosecurity, vegetation and cultural heritage
- enterprise record keeping and data storage practices
- enterprise policies and procedures relating to collection, analysis and maintenance of production data
- methods to collect and analyse data, relevant to the enterprise
- data management systems and methods
- principles of effective report writing
- presentation skills and aids used to report data analysis and conclusions.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

resources, equipment and materials:
- computer-based technology and software used to record data in a primary production business

relationships:
- interaction with work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has kept accurate financial records for at least one primary production business, over a period of at least three months, including:

- collected relevant documentation for purchases
- entered data to track financial records
- reconciled electronic transactions
- prepared at least one cash flow statement
- prepared and reconciled invoices
- copied and stored invoices and other related documents for taxation and auditing purposes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the organisation's policies and procedures applying to financial documentation and records
- current legislation and codes of practice, relating to keeping financial records for a primary production business
- procedures for handling financial transactions including online banking activities
- manual and computerised financial recording systems
- methods of calculating and presenting financial data
- financial accounting software package, relevant to the business
- the organisation's software and technology used to record and transmit financial information.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • computer-based technology and software used to keep financial records for a primary production business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- research, analyse and interpret climate and enterprise data
- prepare risk management strategies
- integrate climate risk with opportunities and management strategies at a business management level
- implement enterprise sustainability policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- current forecasting techniques and phenomena, such as El Nino, ENSO, Southern Oscillation Index (SOI) and Pacific and Indian Ocean SST patterns
- impact of weather and climate on business activities
- causes of general patterns of weather and climate over Australia
- climate variability and climate change
- direct and indirect impacts of climate variability on land management and sustainability
- property and enterprise management decisions affected by the variable climate
- recognition of climate risks and opportunities
- seasonal climate forecasting systems and related indicators
- natural disaster planning
- climate and weather issues pertaining to sustainable agriculture
- potential impacts of greenhouse warming on land and natural resource management
- strategic options and planning in response to climate variability for a range of seasons (normal, drier or wetter than normal), and other risks and opportunities
• calculating financial returns for different strategic options
• computer applications and Internet to access, record and analyse data
• principles of decision-making based on the variable climate and seasonal climate forecasts.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- review strategic plans and production goals
- prepare enterprise budgets and calculate financial returns of the business
- develop financial management and marketing plans for the business
- review the natural resource base of the enterprise and incorporating principles of sustainability
- incorporate into production planning the personal aims and priorities of management and, the availability, productivity and training needs of labour
- assess the skills and expertise of self and colleagues
- facilitate group decision making within the business
- plan production processes
- assess environmental impacts and implement impact reduction techniques
- implement enterprise sustainability policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- holistic business planning and benchmarking
- marketplace in which the organisation operates
- land use planning including sustainable land use principles and practices
- soil nutrient cycling potential and limitations
- chemical and biological methods for pest control
- property planning, financial management and enterprise budgeting systems and procedures
• relevant State or Territory legislation, regulations and codes of practice which impact on rural production businesses
• monitoring strategies for financial, production, land use, and human resource development plans
• methods for assessing skills and expertise
• reasons for and methods of succession planning
• value and methods of risk assessment.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has planned and managed infrastructure requirements for at least one agricultural or horticultural production enterprise, including:

- identified infrastructure requirements for the enterprise
- planned and sourced requirements for at least one infrastructure improvement
- developed an infrastructure maintenance program including scheduling and responsibilities
- recognised potential opportunities to use or install more environmentally efficient systems or equipment
- established a recording system for infrastructure improvement, purchase, construction and maintenance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- systems for managing maintenance schedules and continuous improvement of infrastructure
- property planning, financial management and enterprise budgeting systems and procedures
- environmental controls and codes of practice relevant to the organisation
- management practices and processes to minimise noise odours and debris from production processes
- current legislation and regulations relating to infrastructure management and workplace health and safety.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer-based technology and software used to record information relevant to a primary production business
- specifications:
  - access to relevant regulations and guidelines for infrastructure management and workplace health and safety.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit of competency describes the skills and knowledge required to develop a farm plan. It includes auditing and managing the natural resources (water, soil, biodiversity including vegetation and wildlife), integrating the management of natural resources with business objectives and production plans.

This unit applies to farm managers whose role is to manage a property's natural resources alongside business objectives and production plans. They usually work autonomously and exercise judgement to complete a range of advanced skilled activities.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed a farm plan for one property, including:

- audited, recorded and mapped the natural resources, infrastructure and at-risk areas of the property
- monitored legal requirements that impact on the management of the property
- developed management strategies to maintain natural resources
- integrated business objectives and production plans, with sustainable land management practices, in a whole farm plan
- reviewed and evaluated farm plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- processes used to analyse strengths, weaknesses, opportunities and threats
- sustainable land management practices to maintain natural resources and stimulate biodiversity
- property planning processes and approaches
- farm management planning tools
- land usage/capability for local area
- water, vegetation, soil, fire and wildlife management strategies
- legal requirements that impact on agricultural businesses
- risk associated with agricultural businesses and use of natural resources.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
- skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - designated land/farm site
  - digital finance and farm management tools
- specifications:
  - access to land management information, legislation, regulations and codes of practice relevant to business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency specifies the skills and knowledge required to provide information or manage the application of chemical, biological or organic agents to crops or pastures, utilising application technology.

This unit of competency applies to work in a range of agricultural or support enterprises, such as agronomists and rural merchants. Work is usually undertaken without supervision. Responsibility for, and organisation of, the work of others involved in the program may be required.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed the application of a chemical, biological or organic agent to at least one designated crop or pasture, including:

- determined the need for the agent
- developed an application plan that includes addressing environmental and work health and safety issues
- programmed application technology
- monitored the effectiveness of the application.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- technology to manage application of agents to crops and pastures
- Geographic Information Systems (GIS) and Global Positioning Systems (GPS) and how data from these systems is used in farm management
- types of data used to define field parameters, including aspect and slope
- characteristics of pest, weed and disease species including their life cycles and reproduction capability
- principles of integrated pest and weed management
- range and classes of fertilisers, herbicides, insecticides and fungicides available and their basic chemistry
- growth stages of weeds and plant morphology
- the effects on crops of weeds, pests, diseases and/or lack of soil fertility
- mode of action of chemical or biological control agents and long term effects of these agents with respect to plant back periods and resistance
- range and effect of different nozzles, pressures, spray patterns, droplet sizes and basic physics of droplets and fluids
- work health and safety hazards and controls
• environmental impact of agents used
• best management practices and processes to minimise the impact of agents
• Commonwealth, state and local government legislation and regulations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • designated crop or pasture
  • chemical, biological or organic agents
  • spray equipment

• specifications:
  • manufacturer instructions for agents and spray equipment
  • legislation, regulations and codes of practice applicable to chemicals and land-based businesses.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge to develop planning strategies to address sustainability issues, using renewable energy and opportunities to recycle products, and reduce the impact of waste from the production system.

This unit applies to those who manage land-based businesses and are required to consult with external experts such as alternative energy consultants and suppliers of alternative energy equipment, planning authorities, and government departments who administer subsidies and provide advice.

The work involves applying sustainable renewable energy systems to rural, regional and local conditions. All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed sustainable agricultural practices that utilise renewable energy and recycling systems, including:

- identified key parts of the enterprise operation that may be converted to renewable energy sources, reducing greenhouse emissions and recycling opportunities using key principles of sustainability
- calculated the savings for at least one improvement
- implemented at least one improvement
- evaluated the improvement outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the effect of greenhouse gas emissions on the environment
- key principles of sustainability associated with using of renewable energy and recycling systems
- legislation, regulatory and licensing requirements associated with renewable energy and recycling
- subsidies available for adopting renewable energy systems
- environmental and work health and safety risk management strategies.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
Assessment Requirements for AHCAGB515 Develop sustainable agricultural practices that utilise renewable energy and recycling systems

- skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - access to an agricultural production site
- specifications:
  - access to information about sustainable work practices in agriculture, renewable energy sources and options for recycling.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge to identify, select and implement a Geographic Information System (GIS) into a land based production business.

This unit applies to land based production managers who make decisions about production systems and applications, and who need to integrate GIS and Global Positioning Systems (GPS) technology and into land-based, agricultural activities.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has selected and implemented a Geographic Information Systems (GIS) management system to aid at least one farm management activity, including:

- stored and modelled data for specific site
- analysed maps and models to determine appropriate farm management activity
- implemented one GIS based activity to manage either:
  - yield
  - soil health
  - erosion
  - pests
  - weeds
  - or other crop related factors.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- applications of GIS based technology to assist with managing soil, salinity, erosion, weeds farming systems and biodiversity
- uses of Global Positioning Systems (GPS) equipment and technology associated with GIS
- sources of digital mapping data for local area
- financial management and strategic planning benefits from the implementation of a GIS
- mapping principles of GIS
- spatial calculations using GIS
- relevant machinery and equipment for use in agricultural systems.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - GIS and GPS technology
  - designated site for land-based production.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

Performance criteria describe the performance needed to demonstrate achievement of the element.

| Elements | 1.3 Investigate sources of information and support for improved practices  
| 1.4 Estimate timelines for, and costs for improved practices  |
| 2. Audit the existing and natural resources on the property | 2.1 Draw a property map to include land classes using classification terminology, fences and water systems, natural property features and infrastructure  
| 2.2 Conduct a risk assessment of previous land use and an inventory of chemicals applied or evidence of application on the site  
| 2.3 Identify areas at risk of soil degradation and develop strategies to protect the area  
| 2.4 Develop and implement strategies to improve the health and the regeneration of remnant vegetation to support a diversity of living systems  
| 2.5 Assess potential problem pests and weeds and use strategies to implement an eradication program  |
| 3. Develop and implement grazing and cropping strategies to improve sustainable outcomes | 3.1 Use soil test results to make recommendations for soil improvement with appropriate organic fertilisers and soil conditioners to ensure a mineral-balanced and healthy soil  
| 3.2 Develop and implement an annual grazing program and strategies to optimise pasture growth and animal production  
| 3.3 Develop and implement a strategy for the recycling of farm waste and effluent  
| 3.4 Assess soil biological activity and apply suitable preparations and grazing strategies to improve the soil biota and soil organic matter  
| 3.5 Identify suitability of mulching and composting systems  
| 3.6 Design and implement a plan using crop rotations to optimise soil fertility  
| 3.7 Research the principles and application of biodynamic preparations  |
| 4. Manage livestock health and welfare for improved, sustainable production | 4.1 Plan strategies to preserve livestock health including allowable treatments and grazing management in the short term and genetic improvement in the long term  
| 4.2 Maintain livestock records to identify treated animals, including a record of all treatments including homeopathic remedies  
| 4.3 Sustain the animal enterprise with pasture and suitable fodder and  |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed and managed a plan to improve practices for one land based business to utilise sustainable farming principles, including:

- researched information on production changes and methods to manage herd, crop or pasture
- analysed benefits to the family and farm from adopting the philosophy
- assessed risks involved with conversion
- developed a comprehensive plan to transition production processes and improve sustainability.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- sustainable land management practices including regenerative farming principles
- credible sources of information relating to sustainable farming principles and practices
- property planning process
- water, vegetation, livestock, pasture, soil, fire and wildlife management strategies for sustainable farming
- risk management strategies for land based production processes
- supply chain for the sustainable farming sector and own position in the chain
- methods to manage grazing including feed budgeting and varied grazing strategies
- animal health and options for maintaining health based on pathogen life cycles and the use of suitable preparations
- how to maintain biodiversity to complement a sustainable farming philosophy.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

- resources, equipment and materials:
  - access to information about sustainable farming principles
  - land based production site

- specifications:
  - legislation, regulations and codes of practice for sustainable farming.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed climate risk management strategies for at least one site or property, including:

- researched, analysed and interpreted climate and site data
- recognised climate risks and opportunities presented for the business
- presented strategies to stakeholders, identifying how risks associated with variable climate could be managed.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and sources of data used to record weather patterns
- qualitative and quantitative techniques to analyse risks
- impact of weather and climate on business activities
- difference between weather and climate
- causes of general patterns of weather and climate over Australia
- climate variability and climate change impacts for local region
- property and enterprise management decisions affected by the current and predicted climatic variability
- recognition of climate risks and opportunities
- seasonal climate forecasting systems and related indicators
- contingency planning including natural disaster planning for site
- a definition of risk management, including the identification, assessment, and prioritisation of risks followed by coordinated and economical application of resources to minimise, monitor and control the probability and/or impact of events
- potential impacts of climate change on land and natural resource management
- strategic options and planning in response to climate variability for a range of seasons (normal, drier or wetter than normal)
• how to calculate financial returns for different strategic options
• computer applications to access, record, analyse and model data
• principles for decision-making, based on the variable climate and seasonal climate forecasts.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • digital technology and software used to research information relevant to climate
  • access to information and data relevant to a specific site/plot of land.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has planned and monitored at least one production cycle, including:

- identified production processes required to achieve targeted production
- established production targets for each product, crop, herd, or flock
- scheduled production processes with monitoring points and performance indicators
- documented the production plan
- evaluated production processes and made modifications where required
- created and maintained records as described in the production plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental controls and codes of practice relevant to the production process
- management practices to minimise noise, odours, waste, erosion, relevant to production process
- sustainable land use principles and practices applicable in the region
- production planning processes
- biosecurity and quality assurance requirements for product
- legislation and regulations relevant to product and production processes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • production records relevant to process
• specifications:
  • access to relevant legislation and guidelines for productions processes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to plan production for a whole, land-based business, including reviewing strategic plans and production goals, developing financial and marketing plans, developing workforce skills and managing land usage.

This unit applies to agribusiness managers whose role is to review and confirm the organisation's business goals and vision, its land-use, human resource development and financial plans. They analyse information from a range of sources and exercise judgement to complete a range of advanced skilled activities.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| goals and vision | 1.2 Compare the values and community expectations of the organisation against actual business activities  
1.3 Review the organisation operating environment to identify potential opportunities and threats  
1.4 Analyse the strengths and weaknesses of the organisation to identify potential areas for development  
1.5 Access and discuss information about innovations suitable for the enterprise, with colleagues  
1.6 Document the organisation goals and vision to provide a basis for future planning |
| 2. Prepare workforce plans | 2.1 Identify the values, attributes and skills of the team  
2.2 Recognise specific areas of expertise in the business  
2.3 Determine future skill requirements of the business  
2.4 Assign specific areas of responsibility to team members, based on identified skills and expertise  
2.5 Identify staff members skill development and training requirements  
2.6 Obtain commitment to ongoing skill development from the management team  
2.7 Determine succession planning processes with team  
2.8 Establish communication strategies to foster a collaborative environment |
| 3. Prepare a plan to manage land use | 3.1 Survey land to identify natural resources, soil characteristics, water resources, and cultural heritage sites  
3.2 Determine land use capacity from land condition tests and history of yields  
3.3 Determine land use for individual paddocks, based on land use capacity, products being produced, and the organisation goals and vision  
3.4 Develop a plan to improve the management and use of land on the property, based on property resources, sustainable practices and the organisation goals and vision  
3.5 Develop organisational policy to determine environmental management of the land, based on land use, prevalent pests and diseases, and the organisation goals and vision |
Elements | Performance Criteria
--- | ---
*Elements describe the essential outcomes.* | *Performance criteria describe the performance needed to demonstrate achievement of the element.*

4. Develop financial goals and risk management strategies

4.1 Identify key financial performance indicators of each enterprise in the business from analysis of cash flow, profitability and net worth

4.2 Assess financial performance of each enterprise in the business from analysis of key financial performance indicators and their impacts on business performance

4.3 Identify financial goals for each enterprise in the business from financial performance assessment and the organisation goals and vision

4.4 Identify areas of risk in the organisation from analysis of the operating environment, production strategies, workplace health and safety records and staff skills

4.5 Identify and implement risk management strategies

5. Prepare and communicate the organisation vision, goals and plan

5.1 Integrate the organisation goals and vision, human resource development, land-use, production and financial plans to reflect the decisions taken in each area

5.2 Articulate the organisation goals, vision and plans to stakeholders and staff

5.3 Establish a schedule to regularly review the organisation vision, goals and plans

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has planned production for one whole land-based business, including:

- reviewed strategic plans and production goals
- prepared enterprise budgets and calculated financial returns of the business
- developed financial management and marketing plans for the business
- reviewed the natural resource base of the enterprise and incorporated sustainable land management practices
- incorporated the enterprise principles and goals into land use planning
- assessed the skills and expertise of the work team and planned training to cover identified gaps.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- marketplace in which the organisation operates
- land use planning principles, including sustainable land use principles and practices
- soil nutrient cycling potential and limitations
- chemical and biological methods used for pest control
- property planning, financial management and enterprise budgeting systems and procedures
- current legislation, regulations and codes of practice that impact on rural production businesses
- monitoring strategies for financial, production, land use, and human resource development plans
- methods for assessing staff skills and expertise
- reasons for and methods of succession planning
- value of, and methods used to assess and manage risks in agribusiness.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - past production and land usage records
  - business activity records
- **specifications:**
  - legislation, regulations and codes of practice relevant to land-based production.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to select and apply modern agricultural technology in production systems. It covers the recording and reporting of farm activities, mapping, farm and production planning, data collection and analysis.

Applications in agricultural science range from spatial information tools to the precision application of production inputs and growth models for the improvement of production.

This unit is applicable for land managers or advisors who have a role in managing or operating a land based production business or providing expert advice.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has selected and used at least two technological products for agricultural production, including:

- identified a range of technologies and explained how they can be applied in an agricultural production system
- obtained and processed production data using technology
- identified and managed issues that have arisen in the use of the technology
- completed a cost and benefits analysis of using the technological product.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- trends and developments in technology relevant to agriculture
- sources of information related to agricultural technology
- basic principles of cost-benefit analysis
- context in which particular organisations operate and how this may impact on the selection and use of technology
- potential barriers to learning to use technological applications, and strategies to address these
- range of technology options available to support organisational activities
- strategies that can be used to evaluate technology use
- training and technical support options available to the organisation to develop skills in the use of technology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
• skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • sources of information about agricultural technology
  • computer-based technology and software relevant to the agricultural production business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to evaluate the implications of introducing biotechnology and genetically modified organisms into the current production system. This unit requires the ability of producers to identify potential risks and benefits, responsibly manage all aspects of risks to the neighbours, local community, and to the environment, relevant to the existing and new production system.

This unit applies to producers who manage, or provide advice to, land based production businesses. Work will likely require consultation with external experts, such as extension officers from state Agricultural Departments, agribusiness representatives, agronomists and regulators and insurance agencies.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has introduced biotechnology into a land based production system on at least one occasion, including:

- researched implications of introducing biotechnology into one business
- recognised potential opportunities of introducing biotechnology
- developed a plan to introduce biotechnology
- conducted an audit before and after the introduction of biotechnology products to identify if risk management strategies are appropriate
- completed and maintained appropriate quality assurance documentation
- implemented and evaluated biotechnology plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- benefits and risks of introducing biotechnology into a production system, including those arising from climate change, pressure on global food supplies and the management of pests and diseases
- principles of sustainability
- state/territory legislation, regulations and codes of practice relevant to biotechnology and the development and use of genetically modified organisms in Australia
- methods of risk assessment for the production system
- implementing, monitoring and maintenance of a quality management system
- issues presented to other farmers and community when using biotechnology in a production system.

Assessment Conditions

Assessment of skills must take place under the following conditions:
Assessment Requirements for AHCAGB522 Implement the introduction of biotechnology into the production system

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed succession planning for at least one agricultural business, including:

- identified estate planning requirements
- clarified estate planning arrangements
- clarified and mediated apparent inequities in estate distribution with relevant parties
- documented agreements and contracts
- identified and assessed investment, financial and retirement options.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- effective interpersonal communication techniques
- conflict resolution, negotiation and mediation techniques
- solve problems relating to estate management
- goal setting strategies
- financial information including estate structures, retirement options, wills and estate planning procedures
- legislation and regulations relevant to taxation, contracts and agreements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
- access to a family agricultural business and family members
- specifications:
  - legislation, regulations and guidelines relevant to estate planning.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to manage the financial resources of the business, including reviewing the mix of liabilities, monitoring equity and return on equity.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities. They work in contexts that are subject to change and adapt a range of fundamental principles accordingly.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed the capital of one or more enterprises, including:

- assessed capital finance needs
- assessed appropriate equity levels for a business
- established and maintained appropriate financing arrangements
- reviewed the mix of liabilities
- assessed key indicators against financial returns for the business.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how to interpret and analyse financial reports
- how various macroeconomic factors affect the business
- sources of finance for the business
- negotiation techniques
- accounting terms and principles, including concept of equity, return on assets (ROA), return on equity (ROE), internal rate of return (IRR), forecasting
- bank and lending institution policies and requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
• access to business financial records.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed an export market for at least one product, including:

- researched and analysed product knowledge
- analysed a market and established market potential
- developed and implemented an export market strategy.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- export requirements for identified product
- Australian and international export and import regulations
- international regulations, pricing structures, import and export factors, production times, quality assurance factors, and production and marketing arrangements, relevant to product
- requirements of standards, codes of practice, quality assurance (QA) processes and procedures, relevant to product
- marketing plan formats
- cash flow budgeting techniques
- sensitivity analysis and investment evaluation
- communication and negotiation skills to deal with international export arrangements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • product for export
  • access to information about international market relevant to product
  • communications technology to interact with potential overseas customers
• specifications:
  • legislation, regulations and guidelines for the export of goods from Australia.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| 1.2 Determine types of interactions and the impacts on resources and production system performance over time |
| 1.3 Assess beneficial interactions and any potential additional benefits for further improvements to the system's efficiency |
| 1.4 Assess detrimental interactions and adjust the production system to minimise potential losses |
| 1.5 Obtain and discuss information on innovations for use in the organisation and integrate with operational plans |

2. Develop and implement risk management strategies

| 2.1 Analyse the business to identify its strengths and weaknesses as well as any threats to, or opportunities to improve, the organisation's sustainability and profitability |
| 2.2 Consider potential results of threats in terms of natural resources, business assets and infrastructure |
| 2.3 Develop preventative and reactive contingency plans to minimise threats and maximise opportunities |
| 2.4 Ensure contingency plans aim to ensure business stability and profitability while protecting and preserving natural resources and business assets |

3. Analyse the overall performance of the production system

| 3.1 Undertake whole-business physical and financial analyses to determine the long-term sustainability and profitability of the production system |
| 3.2 Prepare and discuss results of analyses with colleagues and stakeholders for input to future planning processes |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has integrated production plans for one organisation or enterprise, including:

- aligned relevant production systems with the enterprise strategic plan
- adjusted production systems to meet the overarching sustainability requirements of the enterprise
- adopted a systemised approach to the incorporation of productions systems into the business plan
- managed change and implemented innovations and improvements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- marketplace in which the organisation operates
- property planning, financial management and enterprise budgeting systems and procedures
- legislation, regulations and codes of practice that impact on the management of the enterprise
- methods of measuring and implementing business and environmental sustainability
- financial analysis tools and techniques for land based businesses
- strategies to analyse information and data to inform decisions
- decision making processes
- sources of information to assist in analysis of operational plans, resourcing and financial analysis
- monitoring strategies for a range of operational plans
- value and methods of risk assessment.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - access to production plans for a land based production site
- **specifications:**
  - legislation, regulations and codes of practice for land based production.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed price risk for one business, including:

- determined the cost of production
- allocated overhead costs against enterprises within the business
- assessed risk to financial returns through market or currency movements
- analysed trends and evaluated forecasts
- monitored and assessed price movements
- implemented a trading strategy for price risk management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- supply, demand and price relationships
- price trends and sources of market information/forecasts
- cost of production
- overhead costs for the business
- financial risk assessment and attitudes to taking financial risk
- selling options for the relevant commodity or product
- operation of futures markets, forward selling arrangements, put options
- foreign exchange rates in relation to trade
- contract law as it applies to trade
- legislation, regulations and guidelines for taxation and trading on the share market
- cash flow and taxation planning for the business
- contingency planning as it applies to price and trade.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - financial records for a business
- specifications:
  - access to legislation and regulations relevant to trade.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to routinely collect semen for artificial insemination of livestock.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

Working with entire male animals is an inherently dangerous activity. Individuals who work at this level must be thoroughly competent in all aspects of handling entire male animals.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

  1.5 Collect semen from the nominated sire using appropriate techniques  
  1.6 Transfer semen to the processing and storage area  
  1.7 Follow enterprise policies on testing of semen, blood and/or other biological samples for diseases which can be transmitted from male animals to female animals |
| 2. Complete collection procedures | 2.1 Carry out post-collection procedures  
  2.2 Dispose of waste in line with enterprise environmental policies  
  2.3 Clean work area and equipment appropriately  
  2.4 Return animals to the designated area |
| 3. Document and record data | 3.1 Complete required documentation and records accurately and promptly  
  3.2 Supply information to relevant authorities to promote research and improvements in industry practice |

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCAIS301A Collect semen.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare animals for collecting semen
- prepare for and undertake hygienic collection of semen
- collect semen using industry approved collection techniques
- transfer semen safely to the preparation and storage area
- handle animals in a humane, stress free, and safe manner
- clean up work areas and equipment and record data.
- follow enterprise work health and safety, biosecurity and animal welfare policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- types, uses and maintenance of personal protective equipment
- resource and manpower requirements, biosecurity and animal welfare requirements, industry standards, codes of practice and procedures for artificial insemination of the livestock species
- types, uses, maintenance, servicing and storage of equipment
- requirements and features of semen collection work areas
- requirements, methods and techniques for processing and storage of semen
- techniques and methods for humane handling and restraint of the livestock species
- relevant animal welfare practices for the conduct of artificial insemination in the livestock species
- methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
- types of diseases transmissible from male to female animals through artificial insemination/semen, and methods of testing, control and prevention
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• relevant work health and safety policies
• relevant environmental requirements, and procedures for disposal and management of wastes and debris
• requirements and procedures for cleaning and maintaining work areas
• relevant documentation and records that are required.

Assessment Conditions
Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to remedy common tree problems by applying treatments including alleviating tree stress and improving soil condition. Treating trees also requires consideration of the environmental implications of treatment methods, techniques and procedures.

This unit applies to individuals who undertake defined activities, work in a structured context, apply knowledge and skills to demonstrate autonomy and limited judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCCHM201 Apply chemicals under supervision

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- locating trees on streets using maps
- recognising trees requiring treatment
- identifying site hazards, assessing risks and reporting to supervisor
- confirming work zone with work crew and monitoring site
- selecting and use personal protective equipment
- selecting, preparing, and carrying out pre-operational and safety checks, on tools, equipment and machinery
- confirming first aid personnel, equipment and procedures applicable to tree work
- communicating with work team during operations
- reading packaging labels to maintain awareness of work hazards
- cleaning or sterilising tools and equipment
- avoiding disease transfer and biosecurity issues
- recording and implementing work health, safety, site, environmental and traffic control measures
- removing competing plants to ensure maintenance of adequate space, light, water and nutrient requirements of tree
- applying nutrient additives at specified rates and locations
- amelioration of soil structure in relation to aeration and drainage
- amelioration of soil condition with plant-based mulch application
- determining benefit and limits of decompaction methods
- calibrating application equipment
- applying treatment with due regard for environmental implications
- applying chemicals under supervision
• maintaining awareness of effect on environment of own work practices
• cleaning and storing personal protective equipment
• clearing and cleaning sites
• awareness of work health and safety in the context of own work.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• methods of locating trees on streets and maps
• tree recognition
• methods of identifying site hazards, assessing risks and reporting to supervisors
• risk assessment systems
• confirmation of work zones
• how trees react to stress
• personal protective equipment
• pre-operational and safety checks, on tools, equipment and machinery
• first aid
• first aid personnel, equipment, and first aid plan procedures
• communication systems using voice, hand and whistle signals
• application of packaging instructions
• methods of cleaning and sterilising tools and equipment
• methods of disease transfer
• biosecurity principles and practices
• work health, safety, site, environmental and traffic control measures
• plant removal methods
• soil nutrition
• rates of nutrient application
• soil amelioration techniques
• soil structure, aeration and drainage
• mulch
• compaction and decompaction
• correct preparation prior to applying treatment to trees
• calibration techniques of application equipment
• chemical application techniques, usage restrictions and risk controls
• environmental implications of chemical use in own work practices.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.
Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - spray application equipment
  - spill kit
  - measuring and weighing equipment
  - signage - chemical use
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage - work zone
  - trees
- **materials:**
  - tree recognition form
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - work communications form
  - chemical and treatment application form
  - tree maintenance form
  - soil assessment form
  - work site operations form
  - work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be observed removing stumps using a motorised stump grinder using low-risk work procedures. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining site location and details and clarifying with supervisor
- determining the depth below ground of stump grinding works
- determining and confirm location and depth of above-and-below-ground services
- unload stump grinder machine
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- checking maintenance log complete and up to date
- checking belts appropriately tensioned and in good order
- checking teeth are sharp
- checking no teeth are missing or loose
- checking tyre pressure is correct or tracks are appropriately tensioned
- checking levels of oils and fluids
- checking hoses
- checking brakes are operational
- checking cutter head rotates freely and is not obstructed
- checking guards for belt, power take-off (PTO) and grinder head are in place
- checking kill switch clearly identifiable and working
- checking that dead-man is working if fitted
- checking debris curtain present and in good order
- checking dust suppression system is working if fitted
- selecting and use appropriate personal protective equipment
- confirming first aid and emergency personnel, equipment and procedures
- exposing stump surrounds manually and check for and remove foreign bodies
- moistening surrounds as required
recording and implementing work health, safety, site, environmental and traffic control measures

determining exclusion zone for work operations

isolating exclusion zone with barriers and signs

positioning machine level within recommended ranges to avoid rollover

avoiding holes with machine wheels

positioning machine to minimise impact from flying debris

positioning operator in low risk position

positioning operator to provide a clear view of the stump

locating safety screens as required

communicating with work team during operations using voice, hand and whistle signals

confirming work zone cleared prior to starting cutter head

planning to complete a series of passes across the stump

starting cutter head

stopping work if exclusion zone is breached and disengage cutter head if required

positioning cutter head over stump

engaging cutter head into stump surface

maintaining engine speed in revolutions-per-minute (rpm)

ensuring grinding process is accurate, smooth and ergonomic

grinding stump to recommended depth of cut on each cutting pass

ensuring the cut size of each pass is not excessively deep causing the machine to labour excessively or to stall

ground stump to predetermined spread and depth

operating equipment without damaging underground services and surrounding areas

repositioning machine away from ground stump

disengaging cutter head if risk of making unwanted contact

waiting and remaining clear of cutter head until cutter head stops moving

removing build-up of grindings

making check in calls at prearranged times

inspecting grinder as required between stumps and when refueling

shutting down immediately if abnormal vibration and/or noise develops

stopping the engine before refueling and allow engine to cool as required

following safe work method statement instructions for refueling

replacing and securing fuel cap before restarting

disengaging cutter head and ensure a complete stop before moving to a new stump

back-filling stump hole to original ground level

maintaining clean and safe work area throughout work and upon completion

collecting waste material and dispose of or recycle in a manner causing minimal environmental damage

cleaning, maintaining and storing tools and equipment

performing basic maintenance, including sharpening grinder and replacing teeth as required

loading grinder in accordance with safe work method statement
- securing grinder for transport
- updating records of operator usage in log record
- updating records of maintenance and replacement items.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

- site hazard identification methods
- site risk assessment systems
- control measures for work health, safety, site, environmental and traffic control
- personal protective equipment
- communication systems using voice, hand and whistle signals
- first aid
- emergency procedures
- methods of locating services
- pre-operational checks of stump grinders including:
  - logs
  - belts
  - teeth
  - tyre pressure
  - oils and fluids
  - hoses
  - brakes
  - cutter head
  - guards
- safety checks of stump grinders including:
  - guards for belt, power take-off (PTO) and grinder head
  - kill switch
  - dead man
  - debris curtain
  - dust suppression
- exclusion zones
- operation of stump grinders
- cutter head engagement and disengagement
- positioning of stump grinders and operator
- work zone
- methods of determining spread and depth of cut
- recommended depths of cut
- cutting plan
- engine speed (rpm)
- abnormal vibration
• methods of back-filling
• environmental implications of removal activities
• appropriate methods of collecting waste material and disposal or recycling methods
• basic maintenance of stump grinders
• methods of sharpening stump grinders
• methods of teeth replacement of stump grinders
• records of operator usage in log record
• methods of maintaining records for basic maintenance and replacement items.

Assessment Conditions

It is an industry requirement for competency in this unit that assessment includes a log record, verifying ten (10) hours of operating a stump grinder, and five (5) hours of unloading and loading, setup and pre-operational and safety checks, preparatory work, backfilling and cleaning up, sharpening and basic maintenance, performed by the candidate.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • stump grinder
  • sharpening equipment
  • refuelling kit
  • spill kit
  • emergency communication system
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
  • signage – work zone
  • tree stumps
• materials:
  • stump grinder operations form
  • hazard identification and risk control form
  • pre-operational and safety check form
  • emergency preparation form
Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to remedy common tree problems by applying treatments including alleviating tree stress and improving soil condition, application of fertilisers and soil amelioration in consideration of the environmental implications of treatment methods, techniques and procedures.

The unit applies to individuals working in a broad range of arboriculture contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

The arboriculture industry requires that all arboriculture work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

**Foundation Skills**

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.
### Skill Description

**Reading**
- Interpret textual information from supervisor instructions, manufacturer instruction and procedures to identify relevant and key information for performance tasks, operator safety and procedural processes

**Writing**
- Complete reports and records using clear language, concepts and industry terminology to ensure clarity of meaning

**Numeracy**
- Perform basic calculations to determine areas, volumes and ratios for application of chemicals and soil additives

**Navigates the world of work**
- Comply with explicit biosecurity and environmental procedures, and implement application rates and safety measures on chemical labels, seeking clarification where unsure

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied treatments to trees on at least one occasion according to work activity instructions for the following four situations:

- control weeds
- apply soil additives and ameliorants to the tree root system
- apply plant-based mulch
- implement soil de-compaction procedures using tools and equipment.

There must also be evidence that the individual has:

- confirmed target trees and treatments required with supervisor
- identified site hazards, assessed risks and confirmed controls with supervisor, including:
  - selected, checked and used personal protective equipment
  - confirmed availability of first aid equipment and emergency procedures
- selected, prepared, calibrated and conducted pre-operational checks on tools, equipment and machinery according to operational and biosecurity procedures
- identified and prepared chemical treatments according to manufacturer label instructions
- carried out cleaning and maintenance tasks on site and equipment, including disposal of unused materials and waste safely according to environmental procedures
- maintained records and reported according to workplace procedures.

All arboriculture work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- practices and procedures for treating trees, including:
• using maps for locating trees
• tree recognition
• site hazard and risk assessment for tree treatments, including:
  • methods for assessing risk
  • control strategies for managing risk attributed to treating trees
  • first aid personnel, equipment, emergency plans
  • personal protective equipment
• common tree disorders and treatments, including:
  • weed plants and competition for growing conditions
  • nutrient disorders and the role of fertilisers
  • soil conditions and effect on tree growth
  • pests and diseases
• basic control strategies for tree disorders, including:
  • fertiliser application methods
  • ameliorants and effect on pH, soil compaction and condition
  • mulch, moisture retention and nutrient tie down
  • managing the growing environment
  • chemical treatments
  • biological treatments
  • integrated pest control
  • methods of weed control
• tools, equipment and machinery used in the treatment of trees, including:
  • soil de-compaction equipment
  • chemical sprayers and applicators
  • tree injection systems
  • fertiliser and ameliorant spreaders and applicators
• pre-operational and safety checks on tools, equipment and machinery
• chemicals and chemical applications, including:
  • interpretation and use of chemical label instructions
  • material safety data sheets
  • measurements and calculations for weighing and mixing chemicals
  • rates of application
  • dealing with chemical spills
• methods of cleaning and sanitising tools and equipment, including:
  • methods of disease transfer
  • biosecurity principles and hygiene practices
  • calibration techniques of application equipment
  • chemical application techniques, usage restrictions and risk controls
• environmental implications of tree treatments
• waste disposal, including:
• environmental protection
• biosecurity and hygiene practices
• records and record keeping requirements of tree treatments, including legislative and regulatory requirements.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • living trees requiring treatments or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • tree treatment equipment, including sprayers
  • measuring and weighing equipment
  • chemical spill kit
  • personal protective equipment
  • safety signage
• specifications:
  • workplace and manufacturer instructions for tree treatment equipment
  • procedures for application of treatments to trees
  • materials safety data sheets
  • product labels, including chemicals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to operate motorised stump grinding machines to safely remove tree stumps.

The unit applies to individuals who operate stump grinders in a broad range of arboriculture contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely operated a stump grinding machine to remove at least one stump no less than 60cm in diameter, including:

- unloaded and loaded the grinder on a transport vehicle
- carried out set-up and pre-operational and safety checks
- prepared the site ready for stump grinding work
- cleaned, sharpened and maintained the stump grinder.

There must also be evidence that the individual has:

- confirmed work instructions and stumps to be removed, and assessed the size and scale of the works
- confirmed hazards and controls from job safety analysis (JSA) including:
  - located services
  - selected, checked and used appropriate personal protective equipment
  - confirmed the availability of first aid and emergency equipment, personnel and procedures
  - implemented workplace health, safety, environmental and traffic control measures
- reviewed the maintenance log for outstanding performance issues, and reported inconsistencies
- assessed stump surrounds for impediments to stump grinding operations and planned and positioned stump grinding machine according to site conditions and operating procedures
- implemented start-up procedure and operated stump grinder including monitored ongoing performance and undertook adjustments and corrective action where performance was lacking
- shut down machine according to operator instructions and cleaned stump grinder disposing of waste material according to environmental and biosecurity procedures
- maintained records and reported grinding operations according to workplace procedures.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- site hazards, risk assessment and documenting controls in JSA, including:
  - control measures for workplace health, safety, site, environmental and traffic control
  - personal protective equipment
  - first aid kits and access
  - emergency procedures
  - methods and purpose for locating above and below ground services
  - exclusion zones, barriers and fencing
- pre-operational checks of stump grinders, including:
  - maintenance logs and their purpose
  - belts and pulleys, wear and replacement
  - cutter head and teeth adjustments and sharpening
  - tyre pressure
  - oil and fluid levels
  - preparing and adding fuel
  - hydraulic hoses
  - brakes
  - engine types and fuels
- safety checks of stump grinders, including:
  - guards for belt, power take-off (PTO) and grinder head
  - kill switch
  - dead man
  - debris curtain
- operation of stump grinders, including:
  - impediments to stump grinding operations
  - cutter head engagement and disengagement
  - positioning of stump grinders and operator
  - methods for determining spread and depth of cut
  - engine speed (rpm)
  - common faults, their signs and symptoms
- environmental implications of stump grinding operations, including methods of collecting waste material and disposal and recycling
- basic maintenance of stump grinding machines, including:
  - sharpening teeth
  - teeth replacement
  - belt replacement
  - records of operator usage in log record
• methods of maintaining records for maintenance and replacement items.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • access to stumps ready for grinding

• resources, equipment and materials:
  • stump grinder
  • tooth sharpening equipment
  • tools and equipment for conducting basic maintenance practices
  • cutter teeth
  • fuel and spill kit
  • personal protective equipment
  • first aid, emergency and traffic management kit

• specifications:
  • workplace procedures for stump grinding
  • manufacturer instructions for safe operation, cleaning and storage of stump grinding equipment
  • arboriculture hygiene and biosecurity standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to select, check and install rigging systems to support aerial tree work for the controlled descent of loads to drop zone. This unit does not cover crane operations.

The unit applies to individuals working in a broad range of arboriculture contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

The arboriculture industry requires that all ground-based tree rigging work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed rigging equipment and controlled at least six loads from an aerial location to the drop zone using ropes, knots and rigging system appropriate for the load dimensions and mass.

There must also be evidence that the individual has:

- confirmed work instructions and location of worksite
- identified site hazards, assessed risks and confirmed controls with supervisor including:
  - selected, checked and used appropriate personal protective equipment
  - confirmed the availability of first aid and emergency equipment, personnel and procedures
  - implemented workplace health, safety, environmental and traffic control measures
  - contributed to tree assessment process by assessing trees for defects
  - checked and removed defective equipment from service
  - monitored rigging system, work team movements and environmental conditions for safe work conditions
  - communicated with work team and discussed and confirmed rigging method and rigging equipment during operations using agreed communications methods
- tied, dressed, set and finished arborist knots according to rigging task, including demonstrating the following knots:
  - alpine butterfly knot
  - bowline on the bight
  - cow hitch with better half
  - clove hitch and two half hitches
  - half hitch pre-knot
  - klemheist friction knot
  - marline pre-knot
Assessment Requirements for AHCARB213 Perform ground-based rigging

- marline spike hitch
- riggers knot and two half hitches
- running bowline
- sheet bend
- slippery sheet bend
- timber hitch
- zeppelin bend
- controlled load to drop zone, adjusting rigging according to aerial worker instructions and disconnected load from rigging system
- returned rigging components to aerial work team after checking components for defects
- confirmed completion of rigging operation with aerial work team and removed and dismantled rigging system including:
  - cleaned, checked and stored tools and equipment from worksite
  - reported and tagged defective tools and equipment
- recorded and reported rigging outcomes according to workplace procedures.

All ground-based tree rigging work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- current industry practices (as outlined in the Companion Volume) for ground-based tree rigging work and tree dismantling
- safe operations in ground-based rigging, including:
  - first aid, emergency personnel, equipment and procedures
  - workplace health, safety, site, environmental and traffic control measures
  - identification of ground-based hazards
  - above ground hazards and risk
  - personal protective equipment
  - monitoring the safety of working conditions
- procedures for tree assessment before rigging operations, including tree examination for tree defects
- ground-based rigging procedures and practices, including:
  - rigging equipment and its performance
  - rigging methods and rigging systems
  - examination of rigging equipment for defects, and procedures to manage defective equipment
  - assembling and installing rigging equipment
  - checking rigging equipment
  - tying, dressing, setting and finishing arborist knots for rigging
• communications strategies used in arboriculture, including:
  • voice
  • hand
  • whistle signals
  • electronic communications
  • communications specific to the rigging task
• techniques for controlling, raising, lowering and redirecting loads, including balancing load on centre of gravity
• cleaning, storing and maintaining tools and equipment
• records and reporting procedures for rigging operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • worksite with aerial tree operations or environment that accurately represents workplace conditions
• resources, equipment and materials:
  • rigging equipment
  • static and dynamic rope systems
  • harnesses
  • lowering and friction devices
  • high decibel whistle
  • personal protective equipment
  • first aid and emergency kit
  • rescue kit
• specifications:
  • access to current preferred industry practices (as outlined in the Companion Volume) for ground-based tree rigging work and tree dismantling
  • workplace and manufacturer instructions for safe operation of rigging equipment
• relationships:
  • supervisor and aerial work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recognised at least a minimum of 35 different trees local to the region, and has:

- confirmed the location and range of trees to recognise with supervisor
- examined and recorded the characteristics of tree, including:
  - form, structures and local environment of tree
  - shape, colour and size of leaves
  - features of buds, branches and bark
  - flower type, colour and shape
  - features of fruit
  - tactile and sensory characteristics
  - general condition of health and vigour and signs and symptoms of tree disorders
  - ecological habitat for local biota
- used reference materials to assist tree recognition to common name and botanical name and confirmed with work team
- recognised ecological, environmental and social benefits provided by tree
- informed client of tree recognition outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- methods of recognising trees
- botanical features of trees and their morphological and sensory characteristics, including:
  - form, structures and local environment of tree
  - shape, colour and size of leaves
  - features of buds, branches and bark
Assessment Requirements for AHCARB214 Recognise trees

- flower type, colour and shape
- features of fruit if present
- use of sensory methods in tree recognition
- general health and condition of trees and their indicative features for recognising tree species, including:
  - signs and symptoms of diseases
  - presence or absence of pests
  - other indicative disorders that assist in recognition of trees
- methods of collecting and recording information and data relevant to tree recognition
- methods of collecting and using botanical samples for tree recognition, including:
  - photographs and images
  - fresh or dried botanical specimens
- reference materials used in the identification of tree species, including:
  - field guides
  - photographs that assist in tree recognition
- basics of plant taxonomy, including:
  - common names
  - botanical name
- trees and their social and environmental benefits, including:
  - habitat
  - aesthetic
  - functional use
  - food
- workplace procedures and processes for communicating results to client.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - 35 different trees stipulated in the performance evidence
- resources, equipment and materials:
  - live tree specimens
  - specialist tools and equipment necessary for tree observations
  - botanical reference materials, tree databases
  - camera or image capture device
- specifications:
  - workplace procedures and processes for recording tree data and preparing reports
  - workplace instructions
- relationships:
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to implement a tree maintenance program. It also describes the skills and knowledge required to apply a range of tree maintenance techniques; and monitor and review the maintenance program over the course of a year.

The work requires application of extensive arboricultural knowledge and a broad range of arboricultural skills. This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCCHM303 Prepare and apply chemicals
AHCCHM304 Transport, handle and store chemicals

Unit Sector

Arboriculture (ARB)

Performance Evidence

The candidate must be observed applying physical and chemical treatments to a range of trees in accordance with a full one-year treatment program. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- performing a site assessment to identify conditions which may impact upon the health of trees on site
- recognising stress inducing factors in accordance with characteristics of species
- recognising a wide range of common diseases, pests and nutritional deficiencies in trees
- assessing abiotic issues affecting health of trees, or impact on growth
- researching species characteristics on tree health
- collecting specimens of stressed material
- recording and report results of site assessment and tests
- accessing and read treatment program and confirm activities with management
- selecting, using and maintaining suitable personal protective equipment
- selecting appropriate treatment methods and equipment
- identifying environmental implications of undertaking treatment program,
- assessing likely outcomes of treatment programs and taking appropriate action
- determining annual maintenance requirements for trees
- contributing to preparation of a comprehensive full-year maintenance program
- recording and implementing work health, safety, site, environmental and traffic control measures
- preparing and using equipment
- applying physical or chemical treatments with due regard for environmental implications
- maintaining growing environment in accordance with species needs
• monitoring and reviewing maintenance program over season of one year
• disposing of infected plant material and chemical waste appropriately
• sterilising equipment
• following up physical or chemical treatments to ensure effectiveness
• determining timetables for follow up treatments and communicating to work team
• maintaining records and documenting a report for that year
• use of appropriate treatment methods and equipment
• communicating within the work team
• complying with relevant Australian Standards
• use of industry standard terminology to describe arboriculture and work environment
• applying work health and safety requirements in the context of own work.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• site-specific risk assessment methods
• treatments and treatment methods commonly used on trees
• comprehensive full-year maintenance programs
• recognition of a wide range of common diseases, pests and nutritional deficiencies in trees
• the abiotic issues that could affect the health of tree species
• methods of recording, storing and processing data
• how to interpret a treatment program
• the appropriate personal protective equipment
• methods of collecting and storing specimens for identification
• methods of testing collected specimens of stressed material
• worksite traffic control
• stress inducing factors for a variety of tree species
• methods for treating tree pests and diseases
• methods of analysing nutritional status of trees
• health characteristics of tree species.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:
• equipment:
  • sprayers/application equipment
  • measuring and weighing equipment
  • spill kit
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
  • signage - chemical use
  • signage - work zone
  • trees
• materials:
  • tree inspection form
  • tree maintenance form
  • site assessment form
  • hazard identification and risk control form
  • equipment and PPE check form
  • emergency preparation form
  • chemical and treatment application form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to perform corrective and remedial pruning operations. The application of this unit of competency can occur on the ground or in aerial locations, once the candidate is situated in position to perform work. This unit of competency is independent of where the pruning occurs and the method of accessing the work location.

This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, materials and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable current versions of Australian Standards such as AS 4373 Pruning of amenity trees.

Pre-requisite Unit

FWPCOT2237 Maintain chainsaws
FWPCOT2239 Trim and cut felled trees
OR
FWPCOT3238 Operate a pole saw

Performance Evidence

The candidate must perform the remedial and corrective pruning operations involved in branch pruning, reduction pruning and stem pruning. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- receiving pruning instructions from supervisor and clarifying prior to undertaking work
- communicating with work team during operations using voice, hand and whistle signals
- confirming first aid, rescue equipment and rescue procedures applicable to tree work
- identifying location of tree to be pruned
- inspecting trees for access and work
- determining type extent and limit of pruning work in accordance with the specifications, scope of works or client brief
- maintaining awareness of power line proximity, safe approach distances and clearances
- selecting appropriate tools and equipment for pruning
- considering access and impact value of secateurs, handsaws, chainsaws and polesaws
- selecting, preparing, and carrying out pre-operational and safety checks, on tools, equipment and machinery
- selecting and using personal protective equipment
- sterilising pruning equipment in between work on individual trees in accordance with hygiene and biosecurity considerations
- recording and implementing work health, safety, site, environmental and traffic control measures
• investigating stem bark ridge, old cuts, dead branches and occluded and occluding branches
• determining the separate parts to be a branch or co-dominant stem in relation to the tree anatomy and branch attachment
• determining the part requiring removal to be a branch or a co-dominant stem
• using sharp pruning tools to make clean cuts
• operating chainsaws and polesaws
• implementing pruning cuts to the standards required by AS 4373
• applying compartmentalisation of decay in tree (CODIT) principles
• pre-cutting or undercutting branches to avoid splitting or tearing
• removing remaining stub with final cut
• observing final cut procedure for branch removal for cutting as close as possible to the branch collar without cutting into the branch collar or leaving a protruding stub.
• using branch bark ridge to determine angle of cut when removing a branch in the absence of a visible collar
• ensuring bark at edge of all branch pruning cuts remains firmly attached
• using the branch bark ridge as a guide to the angle and position of the final cut when making reduction cuts
• ensuring the lateral branch to which the final cut is made, is at least one third of the diameter of the branch being reduced at the point of the final cut.
• using the stem bark ridge to determine the angle of cut when removing a co-dominant stem
• being guided to the position and angle of the final cut, by positions and angles of joins between tissue of declining or dead stems and those of healthy stems elsewhere in tree
• ensuring bark at edge of all stem pruning cuts remains firmly attached
• inspecting past pruning cuts to determine tree response
• using tree response to assess the quality of past pruning cuts
• seeking feedback on pruning from other arborists
• identifying and rectifying incorrect pruning cuts
• modifying future pruning cuts based on tree responses and feedback from others
• dropping pruning material into designated drop zone
• cleaning, maintaining and storing tools and equipment
• collecting and disposing of, or recycling pruned material in a manner that causes minimal environmental damage
• maintaining workplace records
• use of industry-standard terminology to describe arboriculture and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• risk assessment
• visual tree assessment
• tree health, growth habit, structure, stability and growing environment
- first aid
- operation of chainsaws and polesaws
- tree and branch anatomy and attachments: lateral branch collars, branch bark ridges, stem bark ridges
- pruning cuts to the standards required by AS 4373
- reduction cuts
- tree response to pruning
- correct and incorrect pruning cuts
- rectifying cuts
- pruning hygiene
- biosecurity
- communications using voice, hand and whistle signals
- power line proximity, safe approach distances and clearances
- rescue personnel, equipment and procedures applicable to tree work
- interpreting specifications
- maintaining workplace records
- disposal of plant debris in environmentally aware and sensitive manner
- work health and safety procedures for pruning operations.

**Assessment Conditions**

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment; however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - chainsaws - climbing saw
  - pole saw
  - pruning handsaws
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage - work zone
  - trees and tree parts
- materials:
● pruning operations form
● hazard identification and risk control form
● equipment and PPE check form
● emergency preparation form
● work communications form
● work site operations form
● work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

● arboriculture vocational competencies at least to the level being assessed
● current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to dismantle trees in confined spaces and in difficult or hazardous circumstances.

This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, materials and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Discretion and judgement is required. The work requires the application of extensive arboricultural knowledge. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

The prerequisite units of competency for this unit are:
- AHCARB310 Perform aerial rigging
- AHCARB307 Use advanced climbing techniques
  OR
  TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)
- FWPFGM3212 Fall trees manually (intermediate).

Note the following chain of prerequisites that also applies to this unit of competency.
### Unit of competency

| AHCARB310 Perform aerial rigging | AHCARB207 Perform ground based rigging*  
|                                 | AHCARB307 Use advanced climbing techniques* |
| AHCARB207 Perform ground based rigging | AHCARB311 Tie, dress, set and finish arborist knots |
| AHCARB307 Use advanced climbing techniques | AHCARB312 Use standard climbing techniques to access trees* |
| AHCARB312 Use standard climbing techniques to access trees | AHCARB311 Tie, dress, set and finish arborist knots |

Performance Evidence

The candidate must be observed removing a tree in a confined space using directional felling and removing a tree in a confined space using a dismantling process. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- inspecting trees to determine appropriate removal methods
- confirming appropriateness of selected risk controls
- determining access to site and gaining approval by owner or site management
- confirming site preparations, including notification of local residents and authorities where necessary
- recording and implementing work health, safety, site, environmental and traffic control measures
- determining drop zone and communicate to all personnel
- protecting, relocating and securing assets, property and vegetation related to work zone activities from potential damage during tree removal
- selecting, preparing, checking and using tools, equipment and machinery
- selecting and using personal protective equipment
- selecting and using safety equipment
- calculating mass of tree section
- confirming mass of tree section does not exceed the safe working limit of equipment
- dismantling branches and trunk sections using the 'cut and drop' method, and
- cutting and lowering sections by ropes and other lowering devices
• using dismantling techniques to ensure branches and trunk sections fall or are lowered safely into determined drop zone, with no damage to property and equipment or injury to personnel
• using directional felling techniques to ensure trunk of dismantled tree falls safely into determined drop zone with no damage to property and equipment or injury to personnel
• using and controlling friction devices where required
• using and controlling elevated work platforms as required
• reducing dismantled tree section to manoeuvrable lengths without injury to operator
• removing plant material and debris from site
• recording completion of tree removal and reporting to owner or site manager
• use of advanced rigging techniques
• calculating tree dimensions, mass of tree section and balance of load
• erecting signage, barriers, warning devices and traffic management equipment
• coordinating and sequencing work team activities
• use of industry standard terminology to describe arboriculture and work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• site and tree hazards that might be encountered
• selection of low risk tree removal methods
• advanced climbing techniques and rope handling
• selecting and tying, dressing, setting and finishing arborist knots
• operation of lowering devices where required
• types of lowering devices that might be required, including friction devices, and methods for using them
• how to estimate density of tree sections
• the impact of force, breaking strength, safety factors and cycles to failure
• how to identify and evaluate structural defects in trees
• how to determine the density of tree sections
• safe working limits on all relevant rigging and lowering equipment
• methods of estimating mass and balance of load
• first aid and rescue personnel, equipment and procedures applicable to tree work
• methods of minimising environmental impact
• legislation and local regulations governing tree removal.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.
Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - rigging equipment
  - single rope technique (SRT) climbing kit
  - static and dynamic rope kit
  - harness
  - lowering and friction devices
  - gaffs/spurs
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - signage – work zone
  - trees

- **materials:**
  - dismantling operations form
  - chainsaw operations form
  - pruning operations form
  - knot identification form
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - rescue form - aerial
  - work communications form
  - work site operations form
  - work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to perform an aerial rescue where an injured or unconscious person is safely brought to the ground from a tree or elevated work platform (EWP).

The unit applies to Arborists preparing and planning for the coordination and execution of rescue operations and the implementation of safety and first aid requirements.

Aerial rescue is likely to be undertaken in emergency situations with little or no supervision. It involves working closely with other members of a team to ensure the safety of all personnel and the public during a rescue operation. This unit applies to individuals who have a range of skills to select and apply a specialised range of methods, tools, materials and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

The prerequisite units of competency for this unit are:

- HLTAID003 Provide first aid
- AHCARB310 Perform aerial rigging.

Note the following chain of prerequisites that also applies to this unit of competency.

<table>

Performance Evidence

The candidate must be observed planning and implementing a rescue operation and undertaking an aerial rescue. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming emergency communication system is working
- confirming emergency services contact numbers are documented
- selecting, preparing and checking first aid equipment and rescue kit
- positioning rescue and first aid equipment for easy access
- clarifying own role in rescue situations
- confirming first aid, rescue personnel, equipment and rescue plan procedures with work team prior to undertaking work
- selecting and using personal protective equipment
- communicating with work team during operations using voice, hand and whistle signals
- attempting communication with casualty
- activating emergency plan and requesting assistance from work team and public in accordance with rescue plan
- identifying hazards associated with rescue, assessing risks and implementing suitable controls
• determining presence of live electrical wires or apparatus that will interfere with ability to access casualty and take appropriate action
• applying ‘safe approach distance’ measures to live electrical situations
• using appropriate access equipment to carry out rescue in accordance with rescue plan
• maintaining communication with casualty
• securing rescuer safely
• securing casualty
• assessing injuries to determine whether or not to move casualty based on first aid procedures and risk assessment
• applying first aid that can be performed above ground, as required
• supporting, but do not move, a casualty with possible neck or spinal injuries and awaiting expert medical treatment
• maintaining communications with ground crew
• informing casualty of lowering procedure
• preparing casualty for descent in accordance with first aid, rescue plan and risk assessments
• descending tree safely in a controlled manner
• lowering casualty safely to ground with support of ground crew
• applying first aid on ground as needed
• obtaining emergency assistance as required
• isolating equipment involved in accident for potential investigation and prevent reuse until checked
• removing all equipment in a controlled manner
• cleaning and storing equipment
• cleaning and storing personal protective equipment
• maintaining records of aerial rescue in appropriate format
• using industry standard terminology to describe aerial rescues and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• emergency procedures to assist in ground-based rescues of EWP and climbing workers
• hazard identification methods
• risk assessment systems
• Safe Approach Distances
• recognition of live electrical wires or apparatus
• electrical wires and apparatus safety
• first aid procedures
• contents of a first aid kit
• use of a first aid kit
• emergency services communication systems
• emergency services contact numbers
• emergency plans
• appropriate placement of rescue equipment
• use of rescue kits
• rescue personnel, equipment and rescue plan procedures
• how to control risk to rescuer, victim and others
• types of reporting required after rescue
• personal protective equipment
• how to deal with an emergency
• lowering mechanisms for an aerial rescue
• work health and safety records with regards to incident reporting.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • rescue kit
  • rescue dummy
  • emergency communication system
  • rigging equipment
  • single rope technique (SRT) climbing kit
  • static and dynamic rope kit
  • harnesses
  • lowering and friction devices
  • high decibel whistle
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit
  • signage – work zone
  • trees

• materials:
  • rescue form - aerial
  • hazard identification and risk control form
  • equipment and PPE check form
Assessment Requirements for AHCARB306 Undertake aerial rescue

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to climb trees with ropes, harnesses and specialist equipment using advanced techniques for the purpose of mobility around the required sections of trees for work positioning.

This unit applies to individuals who have a range of cognitive, technical and communication skills to select and apply a specialised range of methods, ropes, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Discretion and judgement is required. The work requires the application of extensive arboricultural knowledge. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCARB312 Use standard climbing techniques to access trees

AHCARB311 Tie, dress, set and finish arborist knots

</table>
| 1. Prepare site and inspect equipment | 1.1 Determine appropriate method for accessing tree – climbing or using an elevated work platform (EWP) – through discussion with work team  
1.2 Determine location of above-and-below-ground services  
1.3 Undertake a site-specific risk assessment by identifying work health and safety hazards and assessing risk  
1.4 Confirm first aid and rescue personnel, equipment and procedures  
1.5 Ensure work team member present, capable, willing and equipped to assist or perform aerial rescue operations  
1.6 Prepare and carry out pre-operational and safety checks, on ropes, harnesses, tools and equipment  
1.7 Select and use personal protective equipment  
1.8 Record and implement work health, safety, site, environmental and traffic control measures |
| 2. Select climbing equipment | 2.1 Select harness and appropriate equipment for climbing  
2.2 Inspect tree to determine low risk access route through discussion with work team and seek feedback  
2.3 Estimate tree height and load in relation to safe working limits of ropes and equipment  
2.4 Determine the hold, release and grip attributes of rope  
2.5 Select and use static and dynamic rope as required  
2.6 Select and use triple locking carabiners  
2.7 Determine limits, relative advantages and disadvantages of friction hitches |
| 3. Prepare to access tree | 3.1 Tie, dress, set and finish climbing knots and hitches  
3.2 Communicate with work team during operations using voice, hand and whistle signals  
3.3 Maintain awareness of power line safe approach distances and vegetation clearances  
3.4 Select low risk anchor points in accordance with strength, suitability requirements and branch weight |
| 4. Prepare climbing spurs and gaffs for dismantling operations | 4.1 Prepare climbing spurs and gaffs for dismantling operations  
4.2 Check all components of climbing spurs for defects and wear  
4.3 Check gaff tip profile for correct dimensions using gaff gauge  
4.4 Sharpen gaff tip cutting edge with file at defined angle using gaff gauge |
Element | Performance criteria
--- | ---
4.5 Adjust climbing spurs to provide correct operator fit
4.6 Access and perform dismantling work using climbing spurs
4.7 Maintain separation of spurs
4.8 Maintain clearance distance between spurs and ropes

5. Access and ascend tree
5.1 Access and ascend tree using low risk access route with harness and lanyard
5.2 Ascend using single rope, double rope and selected friction hitch as required
5.3 Ascend using uni-ascenders, foot and hand ascenders, and other ascension devices as required
5.4 Use micrograbs, grigris and micro-pulleys as required for mobility and work positioning
5.5 Demonstrate ability to carry out change-overs as required
5.6 Set up redirects and belays using slings and anchors as required
5.7 Select multiple lines to climb trees and tree parts as required
5.8 Select multiple lines to perform tree operations as required

6. Descend from tree
6.1 Descend tree in a controlled manner
6.2 Remove all access equipment in a controlled manner
6.3 Check, clean and store access equipment
6.4 Clean and store personal protective equipment

Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be observed ascending and descending trees using advanced tree climbing practices.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts. The candidate must provide evidence for and demonstrate:

- appropriate method for accessing tree – climbing or using an EWP – through discussion with work team
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming first aid and rescue personnel, equipment and procedures
- ensuring work team member present, capable, willing and equipped to assist or perform aerial rescue operations
- preparing and carrying out pre-operational and safety checks, on ropes, harnesses, tools and equipment
- selecting and using personal protective equipment and safety equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- selecting harness and appropriate equipment for climbing
- inspecting tree to determine low risk access route through discussion with work team and seek feedback
- estimating tree height and load in relation to safe working limits of ropes and equipment
- determining the hold, release and grip attributes of rope
- selecting and using static and dynamic rope as required
- selecting and using triple locking carabiners
• determine limits, relative advantages and disadvantages of friction hitches including: Tautline, Blake’s, Prussik, Klemheist, Val detain, French Prussik and specialised variations
• tying, dressing, setting and finishing climbing knots and hitches
• communicating with work team during operations using voice, hand and whistle signals
• maintaining awareness of power line safe approach distances and vegetation clearances
• selecting low risk anchor points in accordance with strength, suitability requirements and branch weight
• accessing and ascending tree using low risk access route with harness and lanyard
• ascending using single rope, double rope and selected friction hitch as required
• ascending using uni-ascenders and foot ascenders as required
• using micrograbs, grigris and micro-pulleys as required for access and tree operations
• demonstrating ability to carry out change-overs
• setting up redirects and belays using slings and anchors
• selecting multiple lines to access trees and tree parts
• selecting multiple lines to perform tree operations
• descending tree in a controlled manner
• removing all access equipment in a controlled manner
• cleaning and storing climbing equipment
• cleaning and storing personal protective equipment
• use of industry standard-terminology to describe climbing and the work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

• appropriate method of tree access
• selection of climbing or EWP access
• determination of location of above-and-below-ground services
• site-specific risk assessment
• first aid personnel, equipment and procedures
• rescue personnel, equipment and procedures
• work health, safety, site, environmental and traffic control measures
• pre-operational and safety checks, on ropes, harnesses, tools and equipment
• personal protective equipment
• types of climbing ropes
• dynamic and static ropes
• rope characteristics
• uses of climbing ropes
• safe working limits of ropes
• safe working limits of equipment
• defects in ropes, tools and equipment
• climbing harnesses and lanyards
• climbing equipment
• triple action carabiners
• friction hitches including:
  • Tautline, Blake’s, Prussik, Klemheist, Valdetain, French Prussik and specialised variations
• arborist knots
• tying knots
• dressing knots
• setting knots
• checking knots
• finishing knots
• industry voice, hand and whistle signals
• low risk access routes
• estimation of tree height
• estimation of load
• safe working limits
• tree access techniques and equipment
• strength and suitability requirements
• single and double rope techniques
• uni-ascenders and foot ascenders
• micrograbs, grigris, micro-pulleys
• use of climbing spikes of various lengths
• change-overs
• redirects and belays using slings and anchors
• use of multiple lines to access trees and tree parts
• advanced climbing techniques
• low risk anchor points
• maintenance of awareness of power lines
• power line safe approach distances and vegetation clearances
• controlled descent operations
• controlled removal of access equipment
• cleaning of equipment
• storage of equipment.

**Assessment Conditions**

It is an industry requirement that delivery of training and assessment in this unit provides for the explicit conditions of work team capability for aerial rescue operations. It is an industry requirement for competency in this unit that assessment must include a log record of two hundred (200) hours of advanced climbing.
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit. Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - single rope technique (SRT) climbing kit
  - harness
  - chaps
  - climbing friction hitches
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - rescue kit
  - traffic management kit
  - trees

- **materials:**
  - climbing techniques form - advanced
  - climbing log record – advanced
  - tree inspection form
  - hazard identification and risk control form
  - equipment and PPE check form
  - knot identification form
  - work communications form
  - rescue form - aerial

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be observed installing cable and bracing according to a pruning program.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment
- determining cable and bracing requirements from client brief
- confirming first aid and rescue procedures applicable to tree work
- examining structural tree components
- examining vitality and structural integrity of branch attachments
- identifying work health and safety hazards and assessing risk
- recording and implementing site and traffic control measures
- use of tree climbing techniques or ability to work from an elevated work platform
- installing cable and bracing
- determining requirement for additional pruning
- checking and recording completed program for quality of work
- use of industry standard terminology to describe arboriculture and work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the effect of pruning on tree growth, habit and form
- tree anatomy and tree physiology
- tree pruning techniques appropriate to requirements of species
Assessment Requirements for AHCARB308 Install cable and bracing

- visual tree assessment
- selection of appropriate cable and bracing tools and equipment
- selection of suitable personal protective equipment
- the principles and methods of pruning (tree anatomy and physiology)
- identification of work health and safety hazards, risk assessment and risk control application
- quality of pruning work
- cable and bracing techniques appropriate to tree species
- cable and bracing theory
- Compartmentalisation of Decay in Trees (CODIT) principles
- implications of pruning cuts and the way trees respond
- sustainable growth requirements of trees
- natural habit and form of trees
- first aid and rescue personnel, equipment and procedures applicable to tree work
- local government tree protection and preservation regulations
- Australian Standard 4373–2007 relating to tree pruning.

Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - dynamic and static cable and bracing tools and products
  - high decibel whistle
  - personal protective equipment (PPE)
  - first aid and emergency kit
  - traffic management kit
  - signage – work zone
  - trees
- materials:
  - cable and bracing operations form
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
- work records form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to implement a tree protection program.

The work requires the application of a broad range of arboricultural and horticultural skills and knowledge. This unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Performance Evidence

The candidate must be observed determining the protection requirements of a tree, setting out a site according to the requirements of the protection program and constructing protective devices appropriate to the needs of the tree.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- identifying trees to be protected, reasons for protection and types of protection methods
- assessing and recording environmental impacts of the program
- determining, scheduling and allocating implementation tasks
- making allowances for contingencies
- marking location of protection areas on the site
- erect safety barriers and signage to ensure public and operator safety
- carrying out pre-operational and safety checks
- recording and implementing work health, safety, site, environmental and traffic control measures
- constructing or assembling tree protection devices appropriate for needs of tree
- installing tree protection devices
- inspecting completed protection devices for viability
- monitoring tree health
- reporting and repairing broken, damaged or ineffective protection devices
- dismantling and removing protection devices
- maintaining records
- recognising healthy, stressed and damaged trees
- use of industry standard terminology to describe arboriculture and the work environment.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

- methods of identifying and protecting trees
- tree protection systems, types and methods of protection
- methods of marking sites
- environmental impact assessment methods
- selection, use and maintenance of suitable personal protective equipment
- application of work health safety and environmental controls
- task scheduling and contingency management
- tree health (tree physiology)
- systems for use installation of safety barriers and signage
- tree protection plans
- techniques for assembling or constructing tree protection devices suitable to the requirements of tree species
- protection requirements of tree species
- remedial actions for tree health
- first aid and rescue personnel, equipment and procedures applicable to tree work
- specifications and construction methods for installing protection devices
- environmental factors affecting trees
- principles, regulations and practices for restricting access and traffic management.

**Assessment Conditions**

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - tree protection devices/equipment
  - construction tools
  - personal protective equipment (PPE)
  - first aid and emergency kit
• traffic management kit
• signage – work zone
• trees

materials:
• tree maintenance form
• hazard identification and risk control form
• equipment and PPE check form
• emergency preparation form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to tie, dress, set and finish arborist knots, hitches and bends.

This unit applies to ground based workers undertake defined activities with appropriate methods, tools and information, work in a structured context, apply knowledge and skills to demonstrate limited autonomy and judgement, and provide solutions to a limited range of predictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Ground-based Rigging applications must include knowledge of:

- Alpine butterfly knot
- Bowline on the bight
- Cows hitch with better half
- Clove hitch + two half hitches
- Half hitch pre knot
- Klemheist friction knot
- Marline pre knot
- Marline spike hitch
- Riggers knot + two half hitches
- Running bowline
- Sheet bend
- Slippery sheet bend
- Timber hitch
- Zeppelin bend

Above Ground applications must include knowledge of:

- Scaffold knot
- Double Fishermans Knot/Prusik loop
- Girth Hitch
- English Prusik Knot
- Marlin Spike
- Clove Hitch
- Double Overhand Stopper Knot
- Sheet bend
- Slippery Sheet Bend
- Bowline Knot
- Running Bowline Knot

Aerial Rigging applications must include knowledge of:

- Cows hitch
- Riggers knot + two half hitches
- Clove hitch + two half hitches
- Alpine butterfly knot
- Half hitch pre knot
- Marline pre knot
- Marline spike hitch
- Zeppelin bend
- Running bowline
- Bowline on the bight
- Rolling hitch
- Timber hitch
- Sheet bend
- Slippery sheet bend

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming first aid and emergency equipment and procedures applicable to tree work
- selecting and using appropriate personal protective equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- communicating with work team during operations using voice, hand and whistle signals
- determining work application for:
  - ground-based knots
  - aerial knots
  - rigging knots and
  - climbing knots
- determining appropriate knot for locking and non-locking attributes, strength, impact on rope strength, loosening and slippage
- determining loss of rope strength using selected knot
- determining appropriate rope for knot application
- determining requirements for secondary knots and stopper knots
- determining appropriate rope used for knot application
- tying knot to form intended knot
- leaving appropriate tail length approximately five times diameter of rope
- dressing knot to align all parts of knot
- setting knot to ‘tighten and load’ knot prior to use
- finishing knot with selected stopper knot as required
• inspecting completed knot
• checking knot for correctness of assembly
• confirming knot for correct work application
• maintaining effective communication with work team
• installing and using knot in work application
• untying knot at completion of work task
• clean and check ropes
• reporting and tagging faulty or worn ropes
• cleaning and storing personal protective equipment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• site-specific risk assessment
• first aid and emergency equipment and procedures
• personal protective equipment
• work health, safety, site, environmental and traffic control measures
• voice, hand and whistle signals
• work applications for knots
• knots for ground-based rigging tasks
• knots for aerial rigging tasks
• knots for climbing work tasks
• determination of appropriate knot by evaluation of knot attributes:
  • locking and non-locking attributes
  • impact on rope strength
  • loosening and
  • slippage
• determining loss of rope strength using selected knot
• determination of appropriate rope for knot application
• knot tying
• intended knot
• tail length
• diameter of rope
• alignment of knot parts
• knot setting
• knot tightening and loading
• stopper knot
• knot finishing
• correctness of assembly and use in application
• inspection, installation and use of knots
• effective work team communications
• tagging system
• checking and cleaning ropes.

Assessment Conditions

It is an industry requirement for the assessment of the knots appropriate to the work application as listed in the Range of Conditions section of this unit of competency.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • static and dynamic rope kit
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • traffic management kit

• materials:
  • knot identification form
  • hazard identification and risk control form
  • equipment and PPE check form
  • emergency preparation form
  • work communications form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to climb trees with ropes and harnesses using standard techniques for the purpose of accessing required sections of trees.

This unit applies to workers who have a range of cognitive, technical and communication skills to select and apply a specialised range of methods, ropes, equipment and information to complete routine activities and provide and transmit solutions to predictable and sometimes unpredictable problems. Work is implemented with low risk work procedures and to comply with Safe Work Method Statement documentation.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Performance Evidence

The candidate must be observed climbing trees using standard climbing techniques in a safe manner. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- appropriate method for accessing tree – climbing or using an EWP – through discussion with work team
- determining location of above-and-below-ground services
- undertaking a site-specific risk assessment by identifying work health and safety hazards and assessing risk
- confirming first aid and rescue personnel, equipment and procedures
- ensuring work team member present, capable, willing and equipped to assist or perform aerial rescue operations
- preparing and carrying out pre-operational and safety checks, on ropes, harnesses, tools and equipment
- selecting and using personal protective equipment and safety equipment
- recording and implementing work health, safety, site, environmental and traffic control measures
- selecting harness and appropriate equipment for climbing
- inspecting tree to determine low risk access route through discussion with work team and seek feedback
- estimating tree height and load in relation to safe working limits of ropes and equipment
- determining the hold, release and grip attributes of rope
- selecting and using dynamic rope
- selecting and using triple locking carabiners
- tying, dressing, setting and finishing climbing knots and hitches
- communicating with work team during operations using voice, hand and whistle signals
- maintaining awareness of power line clearances
Assessment Requirements for AHCARB312 Use standard climbing techniques to access trees

Date this document was generated: 3 September 2020

- selecting low risk anchor points in accordance with strength, suitability requirements and branch weight
- accessing and ascending tree using low risk access route with harness and lanyard
- ascending using double rope with prussik technique
- ascending using trunk walking technique and foot ascenders as required
- descending tree in a controlled manner
- removing all access equipment in a controlled manner
- cleaning and storing climbing equipment
- cleaning and storing personal protective equipment
- use of industry standard-terminology to describe climbing and the work environment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- appropriate method of tree access
- selection of climbing or EWP access
- determination of location of above-and-below-ground services
- site-specific risk assessment
- first aid personnel, equipment and procedures
- rescue personnel, equipment and procedures
- work health, safety, site, environmental and traffic control measures
- pre-operational and safety checks, on ropes, harnesses, tools and equipment
- personal protective equipment
- types of climbing ropes
- dynamic ropes
- rope characteristics
- uses of climbing ropes
- safe working limits of ropes
- safe working limits of equipment
- defects in ropes, tools and equipment
- climbing harnesses and lanyards
- climbing equipment
- triple locking carabiners
- arborist knots
- tying knots
- dressing knots
- setting knots
- checking knots
- finishing knots
- industry voice, hand and whistle signals
- low risk access routes
- estimation of tree height
• estimation of load
• safe working limits
• tree access techniques and equipment
• strength and suitability requirements
• double rope with prussik technique
• trunk walking and foot ascenders
• standard climbing technique
• low risk anchor points
• maintenance of awareness of power lines
• power line clearances
• controlled descent operations
• controlled removal of access equipment
• cleaning of equipment
• storage of equipment
• work health and safety measures relating to own work.

Assessment Conditions

It is an industry requirement that delivery of training and assessment in this unit provides for the explicit conditions of work team capability for aerial rescue operations. It is an industry requirement for competency in this unit that assessment must include a log record of two hundred (200) hours of standard climbing.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • standard climbing kit
  • harness
  • high decibel whistle
  • personal protective equipment (PPE)
  • first aid and emergency kit
  • rescue kit
  • traffic management kit
  • trees
Assessment Requirements for AICARB312 Use standard climbing techniques to access trees

September 2020

- materials:
  - climbing techniques form - standard
  - climbing log record - standard
  - hazard identification and risk control form
  - equipment and PPE check form
  - emergency preparation form
  - work communications form
  - knot identification form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to identify a tree species and assess the health and condition in order to develop, implement and schedule a tree maintenance program and treatments according to safety and environmental procedures.

The unit applies to individuals who work under broad direction in arboriculture and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all tree maintenance work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared, documented and implemented a tree maintenance program for at least three trees for a period of not less than 3 months in the following situations:

- a tree requiring tree treatments and reduction pruning
- a tree with structural defects and site targets
- a tree requiring health and soil based remediation.

There must also be evidence that the individual has:

- identified site-specific health and safety issues including personal protective equipment required
- assessed abiotic and biotic conditions affecting health of trees and discussed the conditions and factors with client
- documented a tree maintenance program and included in the program the following:
  - tree maintenance requirements
  - treatment methods and equipment
  - environmental implications of treatments
- maintained growing environment of tree in accordance with species needs and scheduled follow-up treatments
- cleaned and sanitised equipment and disposed of waste
- maintained records and reported work outcomes on completion of activities.

All tree maintenance work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- preferred industry practices (as outlined in the Companion Volume) for tree maintenance work
- purpose and process for completing job safety analysis (JSA)
- treatments and treatment methods commonly used on trees, including:
  - physical treatments
  - chemical treatments and materials safety data
  - environmental implications of different types of treatments
  - solutions to conflicting treatment options
  - calculations for measuring treatment applications
- structure and development of tree maintenance programs, scheduling and planning
- site assessment to identify conditions impacting the health of trees on site
- recognition and treatment of common tree disorders above and below ground, including:
  - pests and diseases
  - nutritional disorders, deficiencies and toxicities
  - stress-inducing factors for a variety of tree species
  - signs of stress characteristics
  - causes of stress in tree species
  - common structural faults and defects of trees
  - soil-based problems, including compaction
  - sampling procedures identifying pests, diseases and soil conditions
- abiotic issues that could affect the health of tree species, including:
  - temperature extremes
  - frost and sunburn
  - light intensity and duration
  - water, natural rainfall, hail, snow, including volume and distribution
  - wind direction and intensity
  - lightning
  - topography and aspect
  - compaction and drainage
  - pH, salinity and contamination
- biotic issues that could affect the health of tree species, including:
  - soil ecosystem; beneficial and pathogenic organisms
  - humans
  - animals
  - other plants, including vines and mistletoe
- identification and culture of trees, including:
  - techniques for identifying trees
• recognising and maintaining tree cultural requirements
• tree structure and function
• physiological processes affecting tree growth
• compartmentalisation of decay in trees (CODIT)
• tree growth and structure resulting from CODIT responses
• safety while undertaking tree treatments, including:
  • hazards associated with chemical treatments
  • personal protective equipment
  • traffic control
• effect of treatment materials on off-target species
• methods for identification and analysing for tree health, including:
  • methods of testing collected specimens of affected material
  • methods of analysing nutritional status of trees
  • health characteristics of tree species
• tree establishment and tree maintenance, including:
  • standards for selection of tree stock for landscape use - AS2303
  • standards for pruning of amenity trees – AS4373
  • planting and establishment requirements of tree stock
• waste disposal, including:
  • protection of the environment
  • biosecurity and hygiene practices
• safe operation, maintenance, cleaning and sanitation of tree treatment equipment
• record keeping and data management for tree maintenance.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • the trees growing in the conditions stipulated in the performance evidence
• resources, equipment and materials:
  • tree treatment application equipment
  • measuring and weighing equipment
  • chemical spill kit
  • personal protective equipment
  • first aid and emergency kit
• specifications:
  • preferred industry practices (as outlined in the Companion Volume) for tree maintenance work
  • workplace and manufacturer instructions for safe operation, cleaning and storing of treatment equipment
• procedures for application of treatments
• materials safety data sheets
• relationships:
  • work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to inspect a tree from the ground for the selection of access and tree work methods, and advise client of outcome.

The unit applies to individuals who work in arboriculture under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all tree inspection work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</tr>
</tbody>
</table>
### Elements

*Elements describe the essential outcomes.*

Performance criteria describe the performance needed to demonstrate achievement of the element.

- implement site-specific control measures according to workplace safety procedures
- 1.4 Identify above and below ground services and determine limits of approach
- 1.5 Confirm accessibility of first aid and emergency personnel, equipment and procedures
- 1.6 Select, check and use personal protective equipment

### 2. Inspect tree and surrounds

- 2.1 Inspect tree for access and tree work methods
- 2.2 Identify tree species and assess impact of tree characteristics on selection of access and work method
- 2.3 Conduct a hazard evaluation of the tree and surrounds
- 2.4 Conduct tests on tree components to determine integrity when visual inspection is insufficient
- 2.5 Identify and assess presence of fauna habitat and other ecological impediments to tree access

### 3. Determine method of access and work method

- 3.1 Select tree access and tree work methods according to tree inspection results
- 3.2 Review workplace health and safety hazards, risk assessment and planned controls for selected method of access and tree work method
- 3.3 Implement additional control measures and adjust tree access and work methods according to site requirements
- 3.4 Advise site work team of identified hazards and control measures to implement

### 4. Maintain records and advise stakeholders

- 4.1 Document control measures, tree access and work method according to workplace procedures
- 4.2 Advise stakeholders where tree work is altered or rescheduled according to workplace procedures

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*
<table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has inspected at least six trees, each with a client specified scope of works for access and tree work, and where:

- at least 1 tree is inside the safe approach distance of power lines
- at least 2 trees have defects and hazards that will require additional controls specified in the scope of works
- at least 2 trees have defects and hazards that require a change in the work method specified in the scope of works
- at least 1 tree is within the specifications for the scope of works.

There must also be evidence that the individual has for each of the six trees:

- confirmed access to site and identified tree and scope of works
- completed a job safety analysis documenting site-specific items including:
  - work health, safety and environmental hazards
  - risks that were not controlled by the organisational Safe Work Method Statement (SWMS)
  - risk control measures
  - identification of overhead and underground services and approach distances
  - use of personal protective equipment
- inspected tree for structural defects, disease, insects, fauna and other considerations in trunk, roots and branches that may impact tree access or work
- selected an appropriate tree access or tree work method, considering:
  - the scope of works required
  - site and tree hazards identified
  - limitations imposed by crew skill level and resources available
- informed work team of hazards and control measures to implement during access and tree work
• documented control measures, and tree access and work method according to workplace procedures
• advised stakeholders where tree works were altered or rescheduled according to workplace procedures.

All tree inspection work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• preferred industry practices (as outlined in the Companion Volume) for tree inspection work
• the use of organisational policies, procedures and documents to conduct a site-specific job safety analysis
• personal protective equipment when conducting tree inspections
• workplace health, safety, site, environmental and traffic control measures
• tree inspection methods and principles, including:
  • locating and identifying trees
  • tree inspection methodology
  • determination of location of above and below ground services
• methods of identifying tree species
• tree species and characteristics that impact on the selection of access to trees and undertaking tree works
• selection of tree access and tree work methods that are appropriate for:
  • the scope of works required
  • site and tree hazards identified
  • limitations imposed by crew skill level and resources available
• recognising limitations and identifying where risks will affect tree access and work methods, and prevent work
• preparation and use of job safety analysis and/or safe work method statement (SWMS) when managing safety risk and local traffic
• safety considerations and procedures when working near overhead power lines, including:
  • basics of electrocution
  • power line types and insulation
  • approach distances and safety zones, voltage and arcing
  • authorisations to work near power lines
  • tools, equipment, tree loads, personnel and power line contact
  • legal liability
• safety considerations and procedures when working near underground services, including:
  • underground power
  • gas lines
- wire and optical fibre
- water
- damage and legal liabilities
- safe work practices
- conducting a hazard evaluation of trees and their surrounds
- risk due to work site environment, including wind and weather conditions
- risk due to condition of tree surrounds, including:
  - soil disturbance
  - trip hazards
  - excavations
  - other trees
  - foot and vehicle traffic
- risk due to roots and trunk flare hazards, including:
  - movement
  - decay
  - mechanical damage
  - compromised structure
- risk due to tree trunk and canopy hazards, including:
  - structural defects
  - decay
  - disease
  - cavities
  - swellings
  - aggressive insects and wildlife
  - integrity of attachment of limbs
  - hangers
  - presence of allergic plants or vines
- ecological impediments to accessing trees, including:
  - insects and other fauna
  - habitat and hollows
- field tests on trees to investigate extent of hazards, including:
  - load testing
  - probing cavities
  - testing hollows by sounding
- documentation and reporting requirements relevant to tree inspections and communicating with clients.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • six trees as stipulated in the performance evidence
• resources, equipment and materials:
  • personal protective equipment used for tree inspections
• specifications:
  • legislation, regulations, codes of practice and standards relating to working near services and power lines
  • preferred industry practices (as outlined in the Companion Volume) for tree inspection work
  • documentation for planning and reporting tree inspection work
• relationships:
  • work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to perform corrective and remedial pruning operations to trees either from the ground or whilst working at height.

The unit applies to individuals who work in arboriculture under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all pruning operations work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

4.8 Ensure bark at edge of all pruning cuts remains firmly attached

### 5. Improve pruning quality

5.1 Review previous pruning cuts to determine tree response to pruning activities
5.2 Assess tree response to previous pruning methods and compare with current work practice
5.3 Seek advice from consulting arborists on quality of current pruning work practice
5.4 Identify substandard current pruning cuts and rectify according to advice

### 6. Complete pruning operations

6.1 Drop or lower pruned material into designated drop zone
6.2 Clean, maintain and store tools and equipment
6.3 Collect and dispose of pruned material according to environmental procedures
6.4 Maintain pruning records according to workplace procedures

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated pruning operations according to given specifications for at least 4 trees, including:

- 1 tree with a minimum height of at least 10 metres and a minimum 5 metre spread for which the pruning specifications must include:
  - removal of hazardous dead wood or branches from the tree canopy
  - reduction of the extent of the crown
  - selective pruning to remove branches to resolve specific problems
- 1 tree of less than 4 metres in height to be formatively pruned
- 2 mature trees of at least 10 metres in height, for which the predetermined specifications must include at least 3 of the following maintenance or modification activities:
  - reduced the extent of the crown
  - lifted the height of the crown
  - pruned trees for low voltage line clearance on a residential property
  - performed remedial pruning including removal of dead wood
  - removed dead fronds and fruit from palm trees
  - pollarded a tree.

There must also be evidence that the individual has:

- communicated with work team during operations using communication method agreed with work team
- determined type, extent and limit of pruning work according to the specifications, scope of works, relevant standards and client brief
- operated safely while undertaking work, including:
  - conducted a job safety analysis for the site before work
  - maintained safe approach distances and clearances to power lines
  - selected and used personal protective equipment
- inspected tree for safe access and work
- conducted tree pruning from a secure and safe position
- selected, prepared and checked and safely used tools and equipment and cleaned and maintained for all pruning operations
- determined crown maintenance and modifications required and identified pruning cut options according to Australian Standards AS 4373 including:
  - stem co-dominance
  - stem bark ridge
  - old cuts
  - dead branches
  - occluded and occluding branches
  - used pre-cuts and undercuts of branches to avoid splitting or tearing and ensured bark remained firmly attached
- performed final cuts that complied with principles of compartmentalisation of decay in trees (CODIT), including:
  - cut to the branch collar without leaving a protruding stub
  - used branch bark ridge to determine angle of cut where visible collar is absent
  - ensured lateral branch to which the final cut is made is the correct diameter for the branch being reduced
  - used stem bark ridge to determine the angle of cut when removing a co-dominant stem
  - positioned the final cut guided by positions and angles of joins between tissue of declining or dead stems and those of healthy stems elsewhere in tree
  - ensured bark at edge of cuts remained firmly attached
- conducted a review of pruning practices for tree response to pruning and advice from arborist and modified pruning methods to improve pruning quality
- dropped or lowered pruned material into designated drop zone and collected and removed pruned material according to workplace and environmental procedures
- maintained pruning records according to workplace procedures.

All pruning operations work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

**Knowledge Evidence**

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of pruning trees and the standards expected, including:
  - canopy maintenance and the principles of dead wooding, crown thinning, selective pruning, formative pruning
  - canopy modification and the principles of reduction pruning, crown lifting, pollarding, remedial pruning, line clearance
  - work health and safety procedures for pruning operations
- work site procedures for job safety analysis (JSA) for pruning and activities and control measures, including:
  - recognition of hazards
  - assessing the risks
  - identifying controls
  - documenting a JSA
  - personal protection
  - first aid
  - rescue procedures
- visual tree assessment, including health, growth habit, structure, stability and growing environment
- pruning equipment; advantages and disadvantages and use, including:
  - secateurs
  - chainsaws
  - pole saws
  - handsaws
  - equipment pre-start checks
- tree and branch anatomy and attachments related to pruning, including:
  - lateral branch collars
  - branch bark ridges
  - stem bark ridges
  - occluded and occluding branches
  - dominant and co-dominant stems
- preferred industry practices (as outlined in the Companion Volume) for pruning operations and Australian Standard AS 4373
- gauging the quality of pruning by assessing tree responses to pruning, including:
  - recognising correct and incorrect pruning cuts
  - rectifying poor pruning cuts
- hygiene and biosecurity procedures to minimise cross-infections from pruning activity
- safe communication during tree pruning work, including the impact of noise, environmental conditions, communications resources, and visibility
- communications strategies used in the arboriculture industry, including:
  - voice
  - hand
  - whistle signals
  - electronic communications
- safety considerations and procedures when working near overhead power lines, including:
  - basics of electrocution
  - power line types and insulation
  - approach distances and safety zones, voltage and arcing
  - authorisations to work near power lines
Assessment Requirements for AHCARB316 Perform pruning operations

- tools, equipment, tree loads, personnel and power line contact
- legal liability
- workplace records for pruning operations
- environmental procedures and site management and clean-up.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - the trees stipulated to be pruned in the performance evidence
- resources, equipment and materials:
  - chainsaws, including a climbing saw
  - pole saw
  - pruning handsaws
  - personal protective equipment
  - first aid and emergency kit
  - traffic management kit
  - signage – work zone
  - trees and tree parts
- specifications:
  - workplace procedures and instructions related to pruning trees
  - legislation, regulations, codes of practice, Australian Standard AS 4373 related to pruning trees
  - preferred industry practices (as outlined in the Companion Volume) for pruning operations
  - documentation for planning, obtaining permits
- relationships:
  - client and work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to dismantle trees in close proximity to structures and other assets and in difficult or hazardous circumstances using a specialised range of methods, tools, equipment and materials and requiring the application of extensive arboricultural knowledge.

The unit applies to individuals who work in arboriculture under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all tree dismantling work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has completely dismantled at least 2 trees in close proximity to structures or other assets. For each tree, the individual must have planned, communicated, prepared, conducted and completed each step of the dismantling process in the correct sequence within a timeframe expected by industry.

Each tree must be a minimum of 15 metres in height and have a minimum canopy spread of 10 metres. There must be a drop zone of no more than 4 square metres available with no access within the remaining drip line of the tree representing structures or other assets to be protected.

There must also be evidence that for each tree the individual has:

- controlled the process from start to finish
- devised a plan, communicated the plan and executed the plan
- selected and implemented an appropriate rigging strategy and sequence including:
  - balancing and lifting of lateral branches
  - negative rigging of timber and heads
- dismantled the tree safely and without damage to assets including:
  - selected appropriate tree components and attached rope correctly
  - made accurate and appropriate cuts from safe working positions
  - maintained constant communication with work team

There must also be evidence that the individual has:

- identified workplace health, safety and environmental hazard and risks and implemented controls for the site, including:
  - conducted and completed a job safety analysis (JSA) or safe work method statement (SWMS)
  - prepared and used personal protective equipment
  - protected site and environmental assets
- controlled vehicular and foot traffic, including erected signage, barriers, and warning devices
- identified above and below ground services
- identified site and tree hazards and risks, and adjusted work method or implemented control measures
- assessed size, characteristics and defects of tree and determined dismantling strategy
- confirmed access to emergency response resources and procedures
- selected, prepared, checked and used tools and equipment for rigging and dismantling work, including:
  - identified working load limits of equipment components
  - configured compatible equipment components into appropriate rigging systems
  - identified force that will be applied to components in configured system during planned rigging operations
  - estimated mass of load and ensured force applied during rigging operations did not exceed working load limit of equipment
  - adjusted rigging systems as required to limit force applied to rigging system and tree structure
  - cleaned, inspected, maintained and stored tools and equipment according to workplace procedures
- installed rigging equipment to industry standards including selected and tied the following knots:
  - bowline
  - bowline on a bight
  - clove hitch and two half hitches
  - cows hitch
  - Flemish bend
  - girth hitch
  - half hitch pre knot
  - marlinspike hitch
  - round turn and two half hitches
  - rolling hitch
  - running bowline
  - sheet bend
  - slippery sheet bend
  - timber hitch
  - twin bowline bend
  - zeppelin bend
- used at least one of the following methods to safely access the tree according to dismantling method and strategy:
  - climbing technique
  - elevated work platform (EWP)
• dismantled trees using rigging techniques to ensure no damage to assets, using all of the following methods:
  • cut and drop into designated drop zone
  • cut and lower using rigging and devices
  • step cut, hold and throw
  • directional felling techniques
  • tip lowering, butt lowering, lifting and balancing
  • negative rigging techniques for leaders and vertical timber
  • the use of multiple anchor points
  • floating anchor rigging (simple floating anchor or highline)
  • running anchor rigging (‘cradle’ rigging or speed line)
• made accurate cuts according to industry standards, including:
  • making cuts from a safe and secure work position
  • selecting appropriate cuts for the desired outcome
  • accurately cutting scarfs, step cuts and back cuts.

All tree dismantling work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• anatomy and physiology of tree species and tree removal strategies
• weather conditions and impact on planning and dismantling procedures, including the effect of wind direction and speed
• site and tree hazards that might be encountered, including:
  • identification and evaluation of structural defects in trees
  • above and below ground services and effect on tree removal procedures
• selection of tree removal methods for trees in close proximity to structures and other assets
• methods for accessing trees for dismantling, including:
  • climbing techniques
  • elevated work platform (EWP) for tree removal
• handling and using ropes for rigging and dismantling trees, including:
  • selecting, tying, dressing, setting and finishing arborist knots for rigging and dismantling trees
• common problems and hazards with rigging and their potential consequences and solutions
• dismantling techniques, including:
  • cut and drop
  • cut and lower
• step cuts
• directional felling
• rigging techniques, including:
  • butt lowering, tip lowering and balancing
  • negative rigging techniques for leaders and trunk sections
  • floating anchor techniques (highlines and floating anchors)
  • running anchor techniques (cradle rigging and speed lines)
  • applying friction at the point of cut
• rigging equipment selection configuration and use for tree dismantling work, including:
  • friction devices
  • pulleys, blocks, connectors and other hardware
  • dead-eye slings, looie slings and whoopie slings
  • ropes for rigging and dismantling (tag or pulling lines)
  • configuration of equipment into rigging systems
  • impact of force, breaking strength, safety factors and cycles to failure
  • safe working limits on rigging and lowering equipment
• calculation and estimation of tree dimensions and forces in rigging, including:
  • density of tree sections
  • methods of estimating mass of tree sections
  • estimation of force magnitude and direction applied during rigging operations
  • tree structural limitations and defects and impact on rigging and dismantling operations
  • ensuring force applied does not exceed working load limit of equipment components
  • mass dampening effect of rigging systems
• methods of minimising environmental impact
• preferred industry practices (as outlined in the Companion Volume) relating to dismantling of trees
• legislation, regulations and local government laws governing tree removal, including:
  • permits and approvals
  • stakeholder notifications
• site safety controls, including:
  • first aid and rescue personnel
  • equipment and procedures applicable to tree work
  • barriers and traffic control
  • signage and warning devices
  • responsibility for protecting property and assets in work areas and methods to prevent damage
• considerations in developing a tree dismantling process, including:
  • drop zones
  • lowering zones
- locating tools and equipment
- communication requirements for tree dismantling work, including:
  - communicating with clients, residents and authorities
  - communicating with team members
  - coordinating and scheduling work teams
- effective communication strategies during tree removal work, including the impact of:
  - noise
  - environmental conditions
  - communications resources
  - visibility
- tools, equipment and resources required for dismantling trees, including:
  - safe use and operation
  - care and maintenance
  - cleaning and storing
- inspecting equipment for signs of defects, including:
  - defective ropes and equipment
  - legal responsibility for maintaining equipment
  - tagging, replacing and reporting defective equipment
- workplace record keeping and reporting procedures.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - the two trees to be dismantled as stipulated in the performance evidence requirements
- resources, equipment and materials:
  - rigging equipment
  - height access equipment (climbing equipment or EWP)
  - personal protective equipment
  - chainsaws
  - first aid and emergency response equipment
  - traffic management kit and signage
- specifications:
  - workplace procedures and instructions related to dismantling trees
  - legislation, regulations, codes of practice and preferred industry practices (as outlined in the Companion Volume) relating to dismantling work
- relationships:
  - work team.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to perform an aerial rescue where an injured or trapped climber is safely brought to ground from the tree. It is likely to be undertaken in an emergency situation.

The unit applies to individuals who work in arboriculture under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that tree rescue work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

The prerequisite units of competency for this unit are:

- HLTAID003 Provide first aid
- AHCARB319 Use arborist climbing techniques.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted an aerial rescue for each of the following scenarios in a tree that is a minimum of 5 metres in height:

- a pole top rescue, where the casualty must be safely lowered to the ground without the assistance of other crew members and:
  - is attached within 0.5 metres of the top of the pole
  - is at least 5 metres from the ground

- a pick-off rescue without the assistance of other crew members in which the casualty must:
  - be lifted out of their compromised or non-functioning climbing system
  - be transferred to be lowered down on the rescuer's system or on another climbing system
  - be at least 8 metres from the ground
  - be lifted at least 1 metre prior to beginning descent

- a rescue where:
  - the casualty is away from the main trunk of the tree, toward the end of a branch or in a different stem from the primary anchor point
  - the rope angle between the casualty and the primary anchor point must be at least 30°
  - the rescuer must either control the movement of the casualty back under the primary anchor point, or redirect the casualty's line to bring the casualty directly to the ground.

There must also be evidence that the individual has:

- confirmed resources for emergency rescue, including:
  - communications for emergency services and work team
  - first aid equipment, personnel, equipment and procedures
  - emergency rescue and first aid equipment, protocols and procedures
- conducted a pre assessment of the rescue including:
• attempted communication with casualty
• assessed the tree and situation for hazards and risks and determined rescue plan
• sought assistance from emergency services where safe rescue could not be performed
• used tree climbing equipment to carry out rescue, including:
  • accessed tree safely
  • selected and installed anchor points
  • installed redirects to achieve safe rope angle according to rescue requirements
  • secured rescuer and casualty
• demonstrated the procedure for securing and assessing a severe casualty situation, including:
  • assessed casualty injuries
  • administered first aid above ground according to casualty condition
  • arranged for emergency services
• demonstrated the procedure for rescuing a casualty, including:
  • informed and prepared casualty decent
  • descended tree safely in a controlled manner
  • applied first aid on ground
• removed equipment used in rescue in a controlled manner and isolated and secured equipment for potential investigation
• cleaned and stored all equipment
• updated and maintained records of aerial rescue according to workplace and regulatory requirements.

Aerial rescue is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• preferred industry practices (as outlined in the Companion Volume) for aerial rescue
• emergency procedures for aerial rescues, including:
  • planning for the event of an emergency
  • dealing with emergencies
  • emergency protocol, including stop work, activate rescue plan, inspect site for tree hazards, delegate crew roles, access tree, install anchor points, reach casualty, lower casualty, and transfer to emergency services
  • accessing trees in emergency situations
  • accessing and utilising emergency services
• assessing site-specific safety in emergency situations, including:
  • methods for identifying risks
  • risk control measures
Assessment Requirements for AHCARB318 Undertake aerial rescue

- Safety and procedures when conducting a rescue near overhead power lines, including:
  - Basics of electrocution
  - Power line types and insulation
  - Approach distances and safety zones, voltage and arcing
  - Tools, equipment, personnel and power line contact
  - Personal protective equipment
- Administering first aid in an aerial rescue environment, including:
  - First aid procedures
  - Contents and use of a first aid kit
  - First aid in an aerial environment
  - Assessing neck and back injuries and procedures
  - First aid on the ground following rescue
  - Importance of communication and reassurance of casualty
- Communications in a rescue situation, including:
  - Emergency services communication systems
  - Emergency services contact numbers
  - Work team communication methods
- Tools, equipment and other resources required for aerial rescue, including:
  - Appropriate placement of rescue equipment
  - Components of and use of rescue kits
  - Rescue personnel, equipment and rescue plan procedures
- Controlling risk to rescuer, victim and others during an aerial rescue
- Climbing and rigging systems for aerial rescue, including:
  - Pole top rescue
  - Pick-off rescue
  - Lifting moving or transferring casualties to alternate climbing systems
  - Ropes, knots and equipment for rescue climbing and rigging systems
  - Lifting and lowering systems
  - Cleaning, storing and maintaining safety kits and equipment
- Workplace health and safety reporting procedures for accidents, incidents and rescue operations, including:
  - Site and equipment security for investigations
  - Mandatory records
  - Workplace records
  - Legislative responsibilities.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • the trees in which the types of rescue required for assessment can be demonstrated as stipulated in the performance evidence

• resources, equipment and materials:
  • full arborist climbing kit
  • emergency communications equipment
  • personal protective equipment
  • first aid and emergency response equipment

• specifications:
  • workplace and manufacturer instructions for safe operation, cleaning and storing of rescue equipment
  • preferred industry practices (as outlined in the Companion Volume) for aerial rescue

• relationships:
  • work team
  • worker or rescue dummy as stipulated in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence the individual has safely and efficiently climbed a tree of at least 18 metres in height and at least 10 metres in canopy spread using rope climbing equipment, without the aid of climbing spurs. The individual must have:

- reached at least five different designated outer extremities of the tree structure
- selected and performed a suitable, safe and efficient access method consistent with the tree structure and the designated working positions
- selected and used suitable, safe and efficient work positioning methods to reach each target, including the use of multiple lines, redirects and advanced climbing methods
- descended the tree safely and retrieved all climbing equipment.

The timeframe allowed to reach the designated targets must meet industry expectations for the size and shape of the tree being climbed.

There must be evidence the individual has safely and efficiently climbed to a height of 15 metres above the ground using climbing spurs in a tree to be removed. The tree must have at least five metres of clear trunk below the lowest branch. The individual must:

- ascend and descend a trunk by spur climbing the trunk without setting a line at the top
- transition around obstacles safely
- perform a self-arrest
- use branch walking techniques to access designated working positions
- descend the tree safely and retrieve all climbing equipment.

The timeframe allowed to reach the designated targets must meet industry expectations for the size and shape of the tree climbed.

There must also be evidence that the individual has:

- installed a throw line in a tree in a predetermined union representing a target of no larger than 600 mm in diameter and at least 20 metres above the throwing position within a timeframe of 15 minutes
• selected, checked and configured climbing equipment components to form safe and functional climbing systems appropriate for climbing tasks
• identified unsafe equipment, climbing system configuration and climbing techniques.

There must also be evidence that the individual has prepared to conduct climbing work, including:
• undertaken a job safety analysis (JSA) for the specific site and work activities and implemented control measures including:
  • confirmed availability of first aid and rescue personnel, equipment and procedures
  • conducted pre-operational and other safety checks, on ropes, harnesses, tools and equipment
  • selected and used personal protective equipment (PPE) and safety equipment
• performed a pre-climb inspection and identified climbing hazards and controlled risks, including:
  • correctly identified tree species
  • assessed tree for stability and tree defects
  • adjusted climbing plan and implemented control measures
• selected, prepared and fitted climbing equipment.

There must also be evidence that the individual has:
• selected an access system and method that is safe, efficient and suitable for the tree structure and work task
• installed climbing and access ropes to suitable tree anchor points within the tree structure, and used throwlines to install:
  • anchor points near the top of the tree
  • a stationary rope technique (SRT) canopy anchor
  • a SRT basal anchor
  • a moving rope technique (MRT) anchor point including the installation of a cambium saver
• safely ascended and descended tree, transitioned between points of attachment and used work positioning methods, including:
  • used MRT and trunk-walking, foot ascenders or footlocking
  • used SRT
  • installed a second point of attachment when in a working position
  • used multiple lines for climbing and tree operations for both MRT and SRT
  • used natural and artificial redirects
  • used climbing spurs for work positioning
• safely retrieving climbing equipment according to industry standards and manufacturer instructions
• tied, dressed, set and finished the following 19 climbing knots and hitches for rigging and climbing applications according to industry standards:
  • scaffold knot
  • double fisherman's bend/prusik loop
• girth hitch
• prusik hitch (English prusik)
• Blake's hitch
• marlinspike hitch
• clove hitch
• double-overhand stopper knot
• sheet bend
• slippery sheet bend
• bowline knot (with a tie-off or stopper knot)
• running bowline knot
• bowline on a bight
• alpine butterfly
• klemheist
• figure-8 loop
• munter hitch
• Flemish bend
• Zeppelin bend
• tied at least one of the following advanced climbing hitches:
  • Distel hitch
  • Valdôtain tresse (French prusik)
  • Schwabisch hitch
  • Knut
• communicated with work team during operations using agreed communication procedures.

All arborist tree climbing work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• preferred industry practices (as outlined in the Companion Volume) for arborist tree climbing work
• assessing and selecting methods for climbing trees and methods of tree access, including:
  • selecting a climb plan or work strategy to achieve a scope of works
  • selecting climbing systems that are safe, simple, efficient and ergonomic
  • identifying tree hazards and selecting low-risk work methods
• assessing work health, safety, site, environmental and traffic control measures, including:
  • completing JSAs for site-specific risks
  • purpose of first aid and rescue personnel, equipment and procedures
- pre-operational and safety checks, on ropes, harnesses, tools and equipment
- PPE used when climbing
- arborist climbing equipment, use and maintenance, including:
  - ropes and their materials, construction and characteristics
  - uses of climbing ropes and lanyards
  - types of climbing ropes
  - harnesses
  - triple locking carabiners and other connectors
  - climbing hardware, including ascenders, descenders, mechanical friction devices, false crotches and artificial redirects
  - climbing spurs and gaffs, their preparation and use for climbing trees
  - maintaining separation between spurs, rigging equipment and ropes
- purpose, function, selection, tying, dressing, setting and finishing of arborist knots used for climbing techniques
- safety when climbing trees, including:
  - safe working limits, ropes and equipment
  - defects in ropes, tools and equipment
  - controlled descent operations
  - controlled removal of access equipment
  - forces applied to anchor points during access and work positioning using MRT and SRT
  - forces applied at primary anchor points and at redirects
- hazards to avoid when climbing within the tree canopy, including:
  - power line safe approach distances and vegetation clearances
  - tree structural defects
  - animals or insects
  - hangers or suspended loads
  - deciding on low-risk access routes
- limits, advantages and disadvantages of friction hitches, including:
  - Blake’s hitch
  - Prusik hitch (English prusik)
  - klemheist
  - specialised variations, including Distel hitch, Valdôtain tresse (French prusik), Schwabisch hitch, Knut
- selecting appropriate knots suited for rigging or climbing applications and equipment, including:
  - loss of rope strength
  - appropriate knot for application
  - requirements for secondary knots and stopper knots
- arborist knots, including:
  - knot type and tying procedure
• dressing
• setting
• finishing

• communications strategies used in arboriculture, including:
  • voice
  • hand
  • whistle signals
  • electronic communications

• assessing tree access routes, techniques and equipment and evaluating risk, including:
  • moving rope technique (MRT) and stationary rope technique (SRT)
  • use of climbing spikes of various lengths
  • transitions between points of attachment
  • natural and artificial redirects
  • use of multiple lines to access trees and tree parts
  • low-risk anchor points

• inspecting, cleaning, maintaining and storing climbing equipment.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • trees as stipulated in performance evidence

• resources, equipment and materials:
  • full arborists climbing kit
  • climbing spikes
  • communications equipment agreed by work crew
  • PPE
  • first aid and emergency response equipment

• specifications:
  • workplace and manufacturer instructions for safe operation, cleaning and storage of the equipment specified in the assessment conditions
  • preferred industry practices (as outlined in the Companion Volume) for arborist tree climbing work

• relationships:
  • work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to install tree support systems including cable and bracing hardware into the structure of a tree.

The unit applies to individuals who work in arboriculture under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all tree support systems work is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

- 1.3 Undertake a site-specific job safety analysis (JSA), record and implement control measures according to workplace safety procedures
- 1.4 Select tree support system tools and equipment for tree support system activity
- 1.5 Select, check and use personal protective equipment
- 1.6 Confirm availability of first aid and emergency personnel, equipment and procedures
- 1.7 Assemble and position tools, equipment and materials for ease of access during installation

2. Prepare trees for tree support system

- 2.1 Locate tree stems and position of tree support system according to specifications
- 2.2 Assess structural integrity of tree and select low-risk access method for tree support system installation
- 2.3 Determine a safe procedure for installation and confirm approach with work team
- 2.4 Access tree safely and attain secure work positions to conduct installation
- 2.5 Maintain inspection of tree for above-ground hazards throughout installation activities
- 2.6 Examine stems to be braced for defects to ensure tree support system will comply with specifications
- 2.7 Undertake pruning activities prior to tree support system installation according to current industry standards

3. Install tree support system

- 3.1 Select and prepare tree support system materials according to specifications
- 3.2 Prepare the stems to be braced according to tree support system design
- 3.3 Install tree support system components according to arborist specifications and manufacturer instructions
- 3.4 Adjust cables and braces to specified tension
- 3.5 Dress tree support system components for neat finish
- 3.6 Remove tools, equipment and waste from canopy
- 3.7 Descend and remove equipment

4. Finalise tree support

- 4.1 Clean and sanitise tools and equipment according to workplace

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed three different types of tree support systems according to a specification, including:

- steel cable
- textile or synthetic cable
- bracing.

There must also be evidence that the individual has:

- interpreted plans and specifications and determined the materials, tools and equipment required for tree support system work
- identified health, safety and environmental hazard and risks and implemented controls for the installation, including:
  - conducted and completed a job safety analysis (JSA)
  - prepared and used personal protective equipment (PPE)
  - maintained awareness of above-ground hazards while performing work
- assembled tree support system ready for installation
- examined structural integrity of the tree
- determined and confirmed the safest access to location of the tree support system
- pruned tree to aid tree support system installation
- accessed the tree safely and secured into work position
- removed, checked, maintained, cleaned, sanitised and stored tools and equipment according to biosecurity procedures
- recorded and reported completed works.

All tree support systems work is required to be performed according to preferred industry practices (as outlined in the Companion Volume).
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- preferred industry practices (as outlined in the Companion Volume) for tree support systems
- the effect of pruning on tree growth, habit and form
- tree anatomy and tree physiology related to tree support systems, including:
  - pruning techniques appropriate to tree species and their response
  - natural habit and form of trees
  - visual tree assessment
  - tree defects and tree support system solutions
- tree support systems principles and techniques suited to tree species, including:
  - steel cabling
  - synthetic cabling
  - bracing
- impact of tree support system on trees, including:
  - the impact on the tree's natural range of movement
  - the impact on the tree's strategy of flexibility
  - the impact on the tree's formation of reactive growth
- tree support system materials, tools and equipment, including:
  - preparation of steel cabling systems and terminations, including eyes, swaging, wire whipping
  - components and preparation of synthetic cabling systems
  - hardware, including installation requirements for eye bolts, lag hooks, wire stops and grips
  - cable types and sizes, tensile strength and selection criteria as related to arborist specifications
  - preparation of bracing components, including types of rod, threading, terminations and tensile strength
  - cable tension and tensioning methods
  - finishing techniques of cables for aesthetics and function
  - finishing techniques of bracing for safety, aesthetics and function
  - checks and adjustments to installed systems over time
- identification of workplace health and safety hazards, risk assessment and risk control application
  - selection of suitable PPE
  - completing a job safety analysis (JSA)
  - first aid and rescue personnel, equipment and procedures applicable to tree work
  - monitoring and managing above-ground hazards
  - electrical safety
• principles of compartmentalisation of decay in trees (CODIT) in relation to the installation of cables and bracing
• hygiene practices and biosecurity when cable bracing, including:
  • reasons for managing hygiene
  • biosecurity principles and procedures
• record keeping and reporting procedures for cable bracing.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • trees with defects requiring cabling and bracing as stipulated in the performance evidence
• resources, equipment and materials:
  • equipment to access a working position for installation of cables and bracing
  • PPE
  • safety equipment, including first aid and emergency response equipment
  • tools and equipment for preparing wire and synthetic ropes, attaching cables to trees and installation of braces
• specifications:
  • workplace and manufacturer documentation for safe operation, cleaning and storage of tree support system equipment
  • preferred industry practices (as outlined in the Companion Volume) for tree support systems
  • arboriculture hygiene and biosecurity standards
  • specifications for the installation of tree support system for specific tree defects
• relationships:
  • work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated the ability to implement a tree protection program for at least two trees, including:

- received and interpreted a tree protection program and identified:
  - trees to be protected
  - protection methods to use
  - schedule required
  - equipment necessary to perform work
- assessed site-specific health and safety issues and completed a job safety analysis (JSA) and ensured first aid resources and emergency procedures were available
- scheduled and allocated tasks to work team
- surveyed and marked out the tree protection zone
- erected barriers and signage
- selected materials and equipment required for tree protection measures
- conducted pre-operational safety checks and post-operational maintenance of equipment and tools
- installed tree protection measures following specifications in plan
- inspected completed protection installations and rectified where out-of-specification
- monitored tree health during protection scheduled period and implemented remedial action where protection has been compromised
- dismantled and removed protection measures
- maintained records and reports of tree protection outcomes.

All tree protection work is required to be performed according to preferred industry practices (as outlined in the Companion Volume), including Australian Standard AS4970.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- preferred industry practices (as outlined in the Companion Volume) for tree protection work, including Australian Standard AS4970
- use and interpretation of tree protection plans and specifications, including:
  - tree protection systems, types and methods of protection
  - surveying and marking out tree protection zones (TPZ)
- application of workplace health, safety and environmental controls, including job safety analysis and personal protective equipment (PPE)
- first aid and rescue personnel, equipment and procedures applicable to tree work
- task scheduling and contingency planning for tree protection
- possible damage to tree physiology, and prevention requirements on development and construction sites, including:
  - barriers and signage
  - techniques for assembling or constructing tree protection measures suitable to the requirements of tree species
  - protection requirements of tree species
  - specifications and construction methods for installing protection measures
- environmental factors affecting trees on development and construction sites, including:
  - soil compaction and contamination
  - shading
  - impact on scaffolding
  - excavations and root damage
- principles, regulations, codes of practice and Australian standards for the protection of trees on development and construction sites
- methods used to protect trees on development sites, including:
  - fencing tree protection zones (TPZ) and signage
  - trunk and branch protection
  - soil within the TPZ and root zone protection
- tools, equipment and materials used in tree protection, including preparation, maintenance and biosecurity procedures
- record keeping and reporting procedures for tree protection.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - trees growing on development and construction sites or an environment that accurately represents workplace conditions
resources, equipment and materials:
  • tree protection materials and equipment
  • tools to construct or assemble tree protection measures
  • PPE
  • first aid and emergency response equipment
  • signage for tree protection zones

specifications:
  • workplace and manufacturer instructions for safe operation, cleaning and storage of equipment used for tree protection work
  • tree protection plans and specifications
  • preferred industry practices (as outlined in the Companion Volume) for tree protection work, including Australian Standard AS4970

relationships:
  • work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

  • arboriculture vocational competencies at least to the level being assessed
  • current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used climbing techniques to access at least 2 structurally different trees, including:

- confirmed access to site and scope of works
- identified workplace health, safety and environmental hazards and completed a job safety analysis (JSA) or safe work method statement (SWMS) for the site and activities
- confirmed availability of first aid and rescue personnel, equipment and procedures
- conducted pre-operational safety checks, on ropes, harnesses, tools and equipment
- selected and used personal protective equipment (PPE) and safety equipment during works
- inspected tree and discussed with work team to determine a safe and efficient access route
- selected and prepared climbing equipment for accessing tree
- ascended, navigated through and descended tree canopy using harness and lanyard and safe anchor points, following safe climbing techniques, including:
  - moving rope with prusik technique
  - trunk walking technique
  - use of foot ascenders
- tied, dressed, set and finished the following climbing knots and hitches, including:
  - alpine butterfly
  - blake's hitch
  - scaffold knot
  - double fisherman's bend/prusik loop
  - girth hitch
  - English prusik hitch
  - marlinspike hitch
  - munter hitch
• clove hitch
• double-overhand stopper knot
• bowline
• running bowline
• communicated with work team during operations using agreed communication procedures
• maintained safe clearances from power lines
• removed all access equipment in a controlled manner on descend from tree
• inspected, cleaned, maintained and stored climbing and personal protective equipment according to manufacturer instructions.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• assessing and selecting different methods for climbing trees
• workplace health, safety, site, environmental and traffic control measures, including:
  • completing JSAs and SWMS for site-specific risks
  • purpose of first aid and rescue personnel, equipment and procedures
  • pre-operational and safety checks, on ropes, harnesses, tools and equipment
  • PPE used when climbing
• inspection, use and maintenance of arborist climbing equipment, including:
  • ropes and their characteristics
  • rope type, construction and materials
  • rope inspection and failure conditions
  • uses of climbing ropes
  • triple-locking carabiners
  • climbing hardware
• purpose, function, selection, tying, dressing, setting, checking and finishing of arborist knots used for climbing techniques
• safety when climbing trees, including:
  • safe working limits of ropes and equipment
  • defects in ropes, tools and equipment
  • climbing harnesses and lanyards
• hazards to avoid when climbing within the tree canopy, including:
  • safe distances from electrical power lines
  • tree structural defects
  • the presence of insects or other animals
  • deciding on low-risk access routes
• environmental impacts of tree access methods, including:
  • potential impact on tree of various climbing methods
  • impact on animal habitat or food source
• communications strategies used when climbing with a work team, including:
  • voice
  • hand
  • electronic communications
• climbing techniques using ropes and harnesses, including:
  • moving rope with prusik technique
  • trunk walking
  • foot ascenders
  • safe transitions between points of attachment
  • low-risk anchor points
  • controlled descent operations
• controlled removal of access equipment
• procedures for inspecting, cleaning, maintaining and storing climbing equipment.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • two trees with different canopy structures as stipulated in the performance evidence
• resources, equipment and materials:
  • standard climbing kit
  • harness
  • arborist communications equipment
  • personal protective equipment
  • first aid and emergency response equipment
• specifications:
  • workplace and manufacturer instructions for safe operation, cleaning and storage of the equipment specified in the assessment conditions
• relationships:
  • work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

3. Identify tree

- 3.1 Source and use reference material to assist identification
- 3.2 Compare possible tree identification using images, samples and other plant identification resources
- 3.3 Use characteristics of plant specimens to classify tree to family level and lowest taxonomic ranking

4. Assess environmental and social benefits of tree

- 4.1 Examine tree for ecological habitat of localised biota
- 4.2 Identify localised ecological and environmental benefits provided by tree
- 4.3 Evaluate environmental and social benefits of tree
- 4.4 Assess the environmental and social value of tree to key stakeholders

5. Report on results

- 5.1 Record identification achieved
- 5.2 Highlight key identifying features observed in the process
- 5.3 Inform client of the results of the identification and benefits to stakeholders

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has correctly identified at least 80 botanically different trees relevant to the individual’s work environment, including the following for each tree:

- identified and recorded key characteristics of tree morphology
- inspected tree for health and assessed effect on characteristics indicative to identification
- used reference materials to compare characteristics with taxonomic classification
- compiled identification data and recorded the identification process according to workplace procedures
- examined tree as habitat for local biota
- identified, evaluated and documented the environmental and social benefits of tree
- recorded and reported outcomes of identification and social and environmental benefits to client and stakeholders according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- methods of identifying trees
- morphological and sensory characteristics in botanical terms, including:
  - leaf arrangement, shape, colour and size
  - tree shape and structure branchlets, branches and bark
  - flower, inflorescence and bud characteristics
  - fruit type and characteristics
  - smell, taste and touch
- local environment of trees and the characteristics of endemic environment that represent tree’s ideal growth conditions
• general health and structural condition of trees and their indicative features for identification, including signs and symptoms of diseases, pests or deficiencies and growth form of trees
• collecting and recording of information and data relevant to tree identification
• botanical samples for tree identification, including:
  • photographs and images
  • fresh or dried botanical specimens
• plant taxonomic classification to the level of genus and species
• plant taxonomic features of tree families common to the local area
• research and reference materials used in the identification of tree species, including:
  • field guides
  • basic taxonomic keys
  • journals and botanical references
• benefits and value of trees, including:
  • cultural or social
  • economic
  • conservation or environmental
  • aesthetic
• documenting and reporting procedures for identification and value of trees to key stakeholders, clients and community
• communications strategies for informing client and organisations of tree identification and value
• trees as a biological habitat for plants animals, insects, fungi and vegetation, including:
  • food source and supply
  • microclimate
  • hollows and nesting sites
  • modifier of the soil environment.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • 80 botanically different trees stipulated in the performance evidence
• resources, equipment and materials:
  • live tree specimens
  • tools and equipment necessary for tree observations
  • botanical reference materials, tree databases and taxonomic keys
  • camera or image capture devices
• specifications:
• workplace procedures, processes and documents for recording data and preparing reports related to tree identification
• workplace instructions, specifications or client briefs related to tree identification
• relationships:
  • client and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• vocational competencies at least to the level being assessed
• current industry skills directly relevant to the unit of competency being assessed.

</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to use cranes to access and dismantle trees in close proximity to assets and in difficult or hazardous circumstances.

The unit applies to individuals who work in arboriculture under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all tree work with a crane is undertaken according to preferred industry practices (as outlined in the Companion Volume).

Legislation, regulations and by-laws relating to the treatment and removal of trees, and the use of cranes, apply in some states and territories.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- CPCCDO3011A Perform dogging.

Note the following chain of prerequisites that also applies to this unit.

<table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has fully dismantled at least one tree of a minimum 15 metres in height and with a canopy spread of 10 metres or greater using a crane. The tree must be in close proximity to structures or other assets. The individual must take charge of the process from planning to completion, including the safeguarding of assets.

There must also be evidence that in dismantling the tree, the individual has:

- controlled the process from start to finish
- devised a plan, communicated the plan to work team and crane operator, and executed the plan
- selected and implemented appropriate rigging strategy and sequence for crane work
- planned and dismantled the tree without damage to the assets
- selected appropriate tree components and attached rigging to crane correctly
- performed accurate cuts appropriate to safe crane lifting operations
- maintained constant communication with work team and crane operator
- completed the work safely.

There must also be evidence that the individual has:

- identified work requirements and obtained relevant compliance approvals
- determined the site access, inspected site for safety hazards for crane set-up and dismantling works and confirmed working areas and set-up with crane operator and crew
- undertaken a site-specific job safety analysis and recorded and implemented control measures including:
  - confirmed the availability of emergency procedures, rescue personnel and equipment
  - appointed a spotter to ensure crane clearances from overhead services and obstructions
  - selected, checked and used personal protective equipment
  - selected and used safe access methods for crane dismantling work
  - carried out pre-operational and safety checks on arborist tools and equipment
• accessed tree and safe working positions and communicated with work team throughout dismantling operations
• performed dismantling operations including:
  • determined weight of tree section and communicated requirements to crane operator
  • attached tree section to crane with lifting gear according to load limits, centre of gravity and lifting operations
  • controlled and monitored tree section removal and directed crane operator throughout operation
  • applied arborist rigging and felling techniques
• adjusted work pace and methods to match ground crew processing operations
• confirmed completion of dismantling work with crane operator
• cleaned, checked and stored tools and equipment according to workplace procedures
• recorded completion of works and reported to stakeholders.

All tree dismantling work with a crane is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• requirements for crane access and safe operation and limitations when deciding on dismantling operations with cranes, including:
  • sizes and weight of cranes for purpose
  • types and methods for stabilising and impact on surfaces
  • surface structures, including: fill, storm water pipes, retention tanks, driveways
  • soil and ground stability and slope
  • clearances from buildings and structures
  • no-go zones above and near electrical conductors
  • clearances from other trees and potential root zone damage
  • distance of reach to weight
• regulatory requirements for use of cranes on sites, including:
  • local government roadside permits
  • energy authority permits
  • preferred industry practices (as outlined in the Companion Volume) for tree dismantling work
• selection criteria for using cranes for arboriculture work
• arborist requirements for crane set-up, including:
  • crane footprint and set-up area
  • working area
  • working radius
  • largest estimated lift
Assessment Requirements for AHCARB324 Use cranes to access and dismantle trees

Date this document was generated: 3 September 2020

- order of dismantle
- workplace health, safety, site, environmental and traffic control measures, including:
  - completing JSAs for site-specific risks
  - purpose of first aid and rescue personnel, equipment and procedures
  - pre-operational and safety checks, on ropes, harnesses, tools and equipment
  - personal protective equipment used when climbing
- work planning procedures and collaboration when working with crane operator, including:
  - preparing a dismantling strategy
  - tree access procedures and resources
- arborist climbing equipment and techniques to access and work in trees
- purpose, function, selection, tying, dressing, setting and finishing of arborist knots used for climbing techniques
- safety when climbing trees, including:
  - safe working limits, ropes and equipment
  - defects in ropes, tools and equipment
  - controlled descent operations
  - controlled removal of access equipment
  - forces applied to anchor points during access and work positioning using MRT and SRT
  - forces applied at primary anchor points and at redirects
- hazards to avoid when working within the tree canopy near cranes, including:
  - spatial awareness for crane and cabling components
  - power line, no-go zones, safe approach distances and vegetation clearances
  - tree structural defects
  - animals or insects
  - deciding on low-risk access routes
- access to tree canopy using cranes, including:
  - local state or territory legislation and regulations
  - attaching to the crane hook
  - safety implications
- communications strategies between ground crews, crane operators or crane crew, including:
  - hand and whistle signals
  - UHF or Bluetooth communications
  - crane industry standards for communication
- attaching tree components and loads to crane hooks, including:
  - crane attachment slings
  - chains and cables
  - dead-eye slings
  - estimating load and balance of tree components
• controlling tree sections during crane lift, including:
  • controlling balance
  • methods for controlling branches, leaders and trunk
• dismantle techniques for branches and trunk sections, including:
  • cut and drop method
  • directional felling
  • arborist rigging techniques
• records and reporting procedures for crane supported tree dismantling operations.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • a crane and a tree to be dismantled as stipulated in the performance evidence
• resources, equipment and materials:
  • rigging equipment
  • personal protective equipment
  • first aid and emergency response equipment
  • crane slings and rigging equipment
  • pruning and cutting tools and equipment
• specifications:
  • workplace procedures and instructions for dismantling trees with cranes
  • legislation, regulations, codes of practice and standards relating to crane use and dismantling of trees
  • preferred industry practices (as outlined in the Companion Volume) for tree dismantling work
  • documentation for planning, obtaining permits and reporting tree dismantling work with cranes
• relationships:
  • work team and crane operator.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit describes the skills and knowledge required to create and maintain habitat refuges in trees involving the installation of nesting boxes and the use of pruning techniques for habitat hollow and cavity creation in trees. It also involves the retention and positioning of materials from tree works for ground level habitat and refuges.

The unit applies to individuals who work in arboriculture under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

The arboriculture industry requires that all arboriculture work to create and maintain habitat refuges is undertaken according to preferred industry practices (as outlined in the Companion Volume).

No licensing, legislative or certification requirements are to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed vegetation to create and maintain habitat refuges in at least one tree not less than six metres tall with a stem diameter of at least 20cm at four metres above the ground, including:

- complied with all safety requirements including:
  - completed job safety analysis
  - used personal protective equipment
  - conducted pre-operational preparation and checks on ropes, harnesses, tools and equipment
- identified and implemented measures to prevent tree and environmental health issues including:
  - cleaned and sanitised chainsaws and equipment
  - cleaned up waste and used materials and equipment to protect the environment from residues
- accessed tree for habitat and hollow activities and fracture pruning either:
  - a mobile elevated work platform (MEWP)
  - or arborist climbing techniques
- selected vegetation and created habitats and hollows in trees including:
  - retained viable hollows and defects
  - used fracture pruning applying force using within the tree or hook poles or ropes from the ground
  - identified suitable points to retain or create new hollows
  - retained branch stubs and epicormic growth on tree limbs
- used pruning techniques for habitat creation on branches with a diameter of no less than 20cm, including:
  - natural fractures
• coronet cuts
• pruned and removed excess branches
• ensured overhang is retained to prevent water ingress
• prepared at least three habitat hollows or cavities in trees at least four metres above the ground with a tree diameter of no less than 20cm, including:
  • angled faceplate to prevent water ingress
  • removed internal wood
  • installed or repaired faceplate and entrance hole no closer than 30cm to branch bark ridge
  • installed faceplate through side or rear wall of cavity or through faceplate of sufficient thickness
  • prepared artificial habitat hollow to meet specified dimensions of target fauna for size of hollow, height, and entrance
  • removed an unsafe hollow branch and reinstalled back into a tree with same orientation and attitude
  • removed a branch containing a cavity and reinstalled and fixed cavity branch back into tree or another tree with same orientation and attitude
• installed the following types of nesting boxes:
  • two boxes using natural materials
  • two boxes using artificially constructed structures
• retained materials from tree works for ground habitat, refuges or burrows and restored the site.

All arboriculture work to create and maintain habitat refuges is required to be performed according to preferred industry practices (as outlined in the Companion Volume).

**Knowledge Evidence**

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• preferred industry practices (as outlined in the Companion Volume) for arboriculture work to create and maintain habitat refuges
• importance and impact of living and dead vegetation in the environment, including:
  • habitat and refuges
  • public safety and environmental hazard and removal
  • risk management
• common vegetation features providing an ecological habitat, including:
  • stubs, snags, tears and scars
  • fungi
  • dead wood volumes
  • hollows, cavities and small holes
  • animal/insect damage and food
• defective branch union
• bird damage
• extent and quality of fungus rot and colonising organisms
• tree response to infection and compartmentalisation of decay in trees (CODIT), including biosecurity and infection controls
• conservation values of a dead wood habitat and a live wood habitat
• removal or reduction of dead wood or living wood to prevent breakage, including:
  • natural fracture pruning from the ground using hook poles or ropes
  • natural fracture pruning aerially by applying direct force with hand or foot
  • coroNet cutting
  • retention of materials suitable for positioning in the landscape for ground burrows, habitat and refuges
  • leaving and rendering safe root plate of fallen trees for animal burrows, habitat and refuges
• different types of ground level refuges, including:
  • vegetation
  • soil
  • artificial
• the nature and role of habitat trees, including:
  • characteristics and essential components of plant and animal life cycles
  • features associated with ageing
  • value or potential value
  • hollows, cavities and roosting branches
  • removal and replacement of hollows or cavities
• nesting box designs and installation, including:
  • animal and bird species and nesting box design
  • natural materials repurposed for nesting structures
  • artificially constructed structures, materials, design and installation
• heritage or protected vegetation, environmental overlays and regulated vegetation, including:
  • historical and cultural aspects of vegetation
  • Aboriginal and Torres Strait Island mortuary and sacred/cultural trees
• pruning techniques for habitat development and possible consequence, including:
  • weakening branches to ensure pruning cut protrudes into the wood of not more than 30% of the diameter at the cut point
  • wood not weakened to break at the desired fracture point
  • cutting with a 15 degree opening on the compression side of the wood to allow the vegetation to fracture
  • use of ropes and pulleys to apply the sufficient force to assist the breakage
  • removal of excess branches and importance of leaving stub lengths of at least 20 cm
- pruning techniques to allow colonisation points for beneficial fungi, invertebrates and small animals
- pruning techniques for habitat hollow and cavity creation in vegetation for larger animals
- importance of retaining and creating variations in dead wood habitat niches
- natural fracture pruning techniques, including:
  - when to apply to branches < 20 cm in diameter
  - fibre separation, along the grain and splintering
  - fibre separation in various planes, linear, radial and circumferential
  - natural fracture points
  - appropriate use of hand saws and equipment
  - approved chainsaw use and bar oil to avoid contamination of pruning cuts
- relevant statutory and local authority requirements
- personal protective equipment, including:
  - chaps or chainsaw pants
  - hand tools such as shovels, saws, drills, screwdrivers, hammers
  - ear protection
  - full face helmet/visor or safety glasses
  - harness and full body for MEWP or work position harness for tree climber
  - gloves
  - safety helmet
  - steel-cap boots
- potential hazards when managing vegetation, including:
  - animal responses to interference
  - vegetation density
  - incorrect and unsafe pruning methods used by self and others
  - incorrect and unsafe approaches to staking severed trunks or limbs
  - power lines and utilities
  - unsafe tree climbing methods
  - unsafe use of MEWP
  - unstable ground for equipment
- structural integrity and defects within vegetation that pose a threat to infrastructure, persons in and using the immediate area, and tree health, including:
  - broken branches
  - cankers
  - cracks
  - dead wood
  - decay/fungi
  - poor branch unions
  - poor vegetation architecture
Assessment Requirements for AHCARB325 Manage trees to create and maintain habitat refuges

Date this document was generated: 3 September 2020

- root problems
- torsional fractures
- environmental and biodiversity values
- when to use natural fracture pruning, coronet cutting and habitat hollow and cavity creation, including alternatives to felling trees to render them safe and retain dead wood habitat.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a site with a range of vegetation requiring natural fracture pruning, coronet cutting, and habitat and cavity creation stipulated in the performance evidence
  - an appropriate site where branch habitat hollows and cavities in branches can be created, nesting boxes can be constructed and installed, and burrows and ground level refuges can be created
- resources, equipment and materials:
  - arborist climbing kit or MEWP for accessing trees
  - personal protection equipment
  - tools, equipment and materials for pruning, constructing and installing habitat, burrows and nesting boxes
- specifications:
  - workplace policies, procedures, operations manuals and instructions related to pruning vegetation to manage habitat
  - biosecurity procedures for managing environmental contamination
  - regulations and codes of practice that relate to pruning vegetation to manage habitat
  - preferred industry practices (as outlined in the Companion Volume) for arboriculture work to create and maintain habitat refuges
  - plans, diagrams and specifications for installing nesting boxes
  - specification for fauna habitat
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to verify specifications for pruning against tree conditions and national industry standards.

The unit applies to individuals who work in arboriculture and apply specialist skills to provide solutions to technical and unpredictable problems. They work autonomously, instruct and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has verified pruning specifications on at least nine trees for three different classes of pruning, with no more than one pruning class per tree, including:

- confirmed and identified tree species to be pruned and its size and characteristics
- assessed and documented site safety and implemented controls
- assessed the tree to be pruned for condition and growing environment and determined planned pruning operations and compensatory tree care
- reviewed and confirmed planned pruning operations complied with client brief, arborist specifications and industry standards
- documented planned pruning operations and confirmed with client and arborist
- prepared pruning specification and contract for approvals and provided specifications to work team
- assessed completed pruning works against specifications and implemented remedial action for non-compliance
- reviewed pruning operations and documented future improvements
- maintained records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work health, safety, site and environment, including:
  - preparing job safety analysis and safe work method statements for site-specific risks
  - personal protective equipment used when climbing
  - safety and procedures when working near overhead power lines
  - specifications and Australian Standard AS4373 for crown maintenance, including:
• dead wooding
• crown thinning
• selective pruning
• formative pruning
• specifications and Australian Standard AS4373 for crown modification, including:
  • reduction pruning
  • crown lifting
  • pollarding
  • remedial or restorative pruning
  • utilities line clearing
• current national recognised industry standards relating to tree pruning operations
• tree species identification standards, including:
  • botanical nomenclature
  • common names
• characteristics of trees and pruning operations, including:
  • approximating height and canopy size and spread
  • trunk dimensions as diameter-at-breast-height (DBH)
  • estimating total crown foliage
  • the location and distribution of branches
  • estimating extent of pruning as a percentage of canopy
  • specification of key reference points within a tree
• tree’s health, growth habit, structure, stability and growing environment
• post-pruning tree care, including:
  • impacts arising from pruning of live tissue
  • compensatory tree care activities
• minimising transmission of diseases with pruning equipment and materials, including:
  • biosecurity requirements
  • basic principles of hygiene when maintaining tools and equipment
• pruning procedures and methods, including:
  • maximum and average diameter of live branches
  • minimum clearance distances
  • branch pattern
  • direction of branch growth by selecting north, south, east or west
  • approximation of branch collar diameter
  • location of pruning point
• crown maintenance and modifications and pruning cut options, including:
  • stem co-dominance
  • stem bark ridge
  • old cuts
  • dead branches
• occluded and occluding branches
• basics of contracts and their purpose in arboriculture work, including:
  • client communication strategies
  • verbal contracts
  • documented contracts
  • legal requirements
• importance of gaining regulatory approvals
• specifying and documenting pruning work requirements
• record keeping and reporting procedures when verifying pruning specifications.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • nine different trees stipulated in the performance evidence
• resources, equipment and materials:
  • computer for accessing information and documenting outcomes
• specifications:
  • client or arborist specifications for pruning as stipulated in the performance evidence
  • workplace procedures and instructions, related to pruning operations
  • preferred industry practices (as outlined in the Companion Volume) relating to tree pruning operations, including AS4373
• relationships:
  • client and work team.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion demonstrated the ability to supervise and audit tree operations on an arboriculture work site with no less than 2 team members and has:

- confirmed tree operations specifications with client brief and arborist and communicated and verified understanding with work team
- conducted a safety audit and analysis of site, tree operations, work team, equipment and machinery against safety procedures
- assessed site access conditions for equipment and personnel and ensured pruning tools, equipment and machinery complied with specification
- monitored site establishment, reviewed tree assessment report and confirmed tree operational works against specifications and standards
- monitored work team activity and tree operations and provided appropriate feedback
- identified and resolved issues of poor performance and non-compliance
- estimated and recorded progress of tree operations against planned works and reviewed completed works against quality standards
- recorded and reported tree operation audit outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- site-specific hazards, risks and controls and the role of the JSA, including:
  - work health and safety hazards
  - work health, safety, site, environmental and traffic control measures
  - hazards and hazardous site conditions
  - safe use and operation of pruning tools, equipment and machinery
• preferred industry practices (as outlined in the Companion Volume) relating to tree operations
• basic safety auditing procedures for personal protection standards and recording and reporting procedures for breaches in safety
• documenting and interpretation of tree operations specifications, including:
  • compliance with Australian standards
  • compliance to specifications
  • types of tree work and expected standards
• supervising an arboriculture site establishment, including:
  • conformance to requirements
  • communications strategies for work teams and the role of toolbox meetings
  • tree evaluation and expected impact on worksite activities
• staff performance review procedures, including:
  • feedback process and the benefits of positive feedback
  • communicating and dealing with poor performance and the use of improvement notices
• work team performance improvement strategies, including professional development
• auditing quality of pruning works
• work team member performance management, including:
  • attendance and punctuality
  • conflict
  • breaches in safety procedures
  • dealing with drug and alcohol abuse
• record keeping and reporting procedures for tree operations, including:
  • digital images and role in recording performance and compliance
  • mandatory and workplace-specific documentation and reporting.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • access to active arboriculture work site with work team and tree operations, or environment that accurately represents workplace conditions
• resources, equipment and materials:
  • computer and software for accessing information and documenting outcomes
  • digital image capture device for recording outcomes
• specifications:
  • workplace procedures, instructions and arborist specifications for tree operations
  • preferred industry practices (as outlined in the Companion Volume) relating to tree operations
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to examine trees from the ground, assess and test them for defects, evaluate the potential risk of failure, secure the site and report the condition to specialist arborist for a tree risk assessment.

The unit applies to individuals who work in arboriculture and apply specialist skills to provide solutions to technical and unpredictable problems. They work autonomously, instruct and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a whole-of-tree defect evaluation from the ground for at least 20 individual trees with defects, from at least 10 different species.

There must also be evidence that the individual has:

- performed a site-specific job safety analysis (JSA) and recorded and implemented control measures
- determined tree hazard benchmarks for the project
- considered relationship between tree species, defects and potential risk
- examined trees for indicators of the following defects:
  - tree health
  - visible physical defects
  - damage from organisms
- assessed examination results to determine potential structural failure
- conducted tests to determine visual and concealed defects, including:
  - sounding accessible visual and concealed defects
  - probing accessible cavities
  - exposing and examining root crown
  - removing loose bark and examining for defects
- assessed test results for structural integrity against tree hazard benchmarks
- recorded details of tree under defect evaluation, including:
  - captured images of tree
  - identified tree to genus, species and common name
  - estimated approximate dimensions of tree
  - identified geographical location of tree
- recorded the following attributes of the defects:
  - image of the defect
• location within the tree canopy
• visual indicators of the defect
• estimated the dimensions of defect and affected tree component
• identified potential target from client brief and assessed consequences of tree defects on structural integrity and risk to target
• advised client on outcomes of tree defect evaluation
• implemented action to mitigate tree hazard according to client and workplace procedures
• documented actions taken to mitigate risk
• reviewed tree defect evaluation results and assessed possible options for controlling hazard
• identified and recommended action for client approval
• compiled all results, records and recommendations, and documented in tree defect evaluation report according to workplace procedures
• submitted tree defect evaluation report to client according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• work health, safety and environmental hazards, assessing risk and the role of a JSA
• preferred industry practices (as outlined in the Companion Volume) relating to tree defects and effect on structural integrity
• structure and function of client briefs and their interpretation, including:
  • targets and the role of targets in tree risk assessment
  • industry and client tree hazard benchmarks
• work health, safety and environmental hazards, assessing risk and the role of a JSA
• noting and specifying tree under evaluation, including recording:
  • plant naming conventions
  • estimating tree dimensions from the ground
  • specifying geographic location on maps, pictures and global positioning systems (GPS)
• tree examination procedures and methods from the ground, including:
  • signs and symptoms of health of trees
  • methods for determining tree health
  • tree anatomy and morphology relating to structural failures
• tools and equipment required to assist in tree examinations, including:
  • cameras and digital imaging
  • sounding mallet and probing tools
  • materials
• recognising visual indicators of tree defects, their causes and effect on structural failure, including:
  • visible and concealed defects, including cavities, cracks and included bark
common symptoms of diseases (e.g. rot, fungal growth, loose bark)
common signs of organisms (e.g. holes, frass, live organisms, loose bark)
testing procedures for confirming visual indicators of tree health and structural defects, including:
- sounding and probing techniques for defects
- loose bark removal and signs of defects
- exposure of root crown to identify root and crown defects
health and approximate dimensions of the tree and affected tree part and defect
documentation of the tree defect evaluation, including:
- digital imaging and photographs
- reports and reporting styles and industry best practice
assessing tree hazards and likelihood of failure, including:
- potential consequences
- measures to rectify
- types of potential target
- urgency for notifications and gauging imminent threat
- isolation of hazardous trees
- moving potential target
- size of tree and its defects
considerations for remedial action arising from defect evaluation, including:
- aerial inspection
- load testing
- role of a consulting arborist, and seeking further advice from consulting arborist
- laboratory testing
documenting and presenting reports to clients.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - 20 trees from 10 different species as stipulated in the performance evidence
- resources, equipment and materials:
  - cross-sectioned tree components representing visual indicators of tree defects
  - computer and computer software
  - digital image capture device
- specifications:
  - workplace procedures, instructions and client brief for trees requiring evaluation
  - preferred industry practices (as outlined in the Companion Volume) relating to tree defects and effect on structural integrity
- relationships:
client and consulting arborist.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to prepare for and conduct safety audits of arboriculture work teams, work procedures and practices. It includes the detection of faults in height safety equipment and determination of remedial action.

This unit applies to individuals designated as 'Height safety equipment inspectors'. Work is implemented with low-risk work procedures to comply with Australian Standards (AS1891). Individuals work autonomously, instruct and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted, recorded and reported three separate safety audits, including completion of the following for each audit:

- prepared for audit, including:
  - identified safety audit objectives, scope and focus
  - reviewed legislation, standards, codes of practice, manufacturer instructions and industry guidance required for audit
  - identified target operations and documentation required for audit
  - determined the audit process and sampling technique
  - determined the frequency and scheduling of audit events
  - prepared audit documentation for recording audit
  - communicated audit requirements with client and relevant stakeholders
- assessed, analysed and documented site safety and implemented control measures
- conducted site audits according to planned schedule against workplace and industry safety standards for the following:
  - testing and use of personal protective equipment
  - testing and inspection of tools and equipment for safety defects
  - inspection of height safety equipment for condition and suitability for intended use
  - inspection and operation of emergency and rescue equipment
  - maintenance of workplace safety documentation
  - confirmed currency of licencing requirements for specialised equipment
- identified and recorded non-conformances and issued notices for breaches in safety policies, procedures and standards
- presented auditing outcomes and recommendations and sought approvals, including:
  - recommended alternative equipment configurations and practices
  - removed from service and tagged unsafe tools and equipment
• recommended training to improve safety
• maintained inspection records and equipment data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• preferred industry practices (as outlined in the Companion Volume) relating to safe arboriculture work
• process and procedures of developing and conducting safety audits, including:
  • developing safety audit objectives
  • understanding and developing safety audit scope and focus
  • specifying the operational targets for audit
  • audit sampling technique
  • scheduling the frequency and timing of audit events
  • developing audit documentation and checklists
• communication strategies for informing key stakeholders of audit, and their purpose, including toolbox talks
• testing and observation of safety procedures and practices, including:
  • work function and operational safety
  • use and condition of personal protective equipment
• testing and observation of tools and equipment use on site, including:
  • defective components
  • correct safe operation
  • pre-start checks and shutdown procedures
  • use and maintenance of safety guards
  • restriction on equipment use
  • tagging tools and equipment
  • repair information and log books
  • application of Australian Standard AS1891 when testing fall arrest equipment
• testing and checking operation and availability of emergency resources, including:
  • rescue equipment kit
  • first aid kit
  • emergency response procedures
• testing and checking procedures used for:
  • arborist height safety equipment
  • rigging and climbing ropes
• manufacturer guidelines, industry standards and applicable regulations to determine suitable configurations and use of arborist height safety equipment
• purpose and use of safety documentation, including:
  • injury, accident and incident reports
• job safety analysis (JSA) and safe work method statements (SWMS)
• equipment tags and repairs log books
• availability of chemical and material safety data sheets
• audit requirements and safety procedures requiring certifications
• procedures for assessing work performance and activities against safety policies, procedures and industry standards
• managing non-conformance to safety standards, including:
  • non-conformance notices
  • professional development
  • changes to policies and procedures
  • recommendations for rectification of non-conformance
• safety audit reporting procedures and documentation.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • access to an active arboriculture work site, or environment that accurately represents workplace conditions
• resources, equipment and materials:
  • computer and word processing software
  • arborist equipment stipulated in the performance evidence
• specifications:
  • workplace safety policies and procedures
  • client brief and instruction for safety audit objectives
  • preferred industry practices (as outlined in the Companion Volume) relating to safe arboriculture work
  • Australian and international standards related to safety audits for arboriculture work including AS1891
  • manufacturer instructions for arborist equipment.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to inspect, identify, select and specify a range of trees for suitability for an intended purpose.

The unit has a wide range of applications in urban and regional areas for local government and legal contexts in the specification of trees in residential, commercial, public open spaces and amenity areas. The unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work, to analyse and synthesise information, and design and communicate solutions for complex problems. The role involves the self-directed application of knowledge with substantial depth in areas such as tree identification, tree selection criteria and tree functionality.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable current versions of Australian Standards such as AS 2303, AS 2223 and AS 3743.

Performance Evidence

The candidate must produce a report of the tree identification, selection and specification process that recommends tree species for a site and incorporates the tree selections into a database of tree specimens and characteristics. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- consulting client, developing a brief and gaining agreement
- undertaking site inspection according to the client brief
- determining legislative requirements, regulatory requirements and requirements of Australian Standards including AS 2303, AS 2223 and AS 3743
- determining functional life expectancy of site and plantings
- determining tree function for the precise location within the plan
- confirming that species and cultivar selection is appropriate for the aspect and site dimensions
- researching trees suitable for the intended purpose using multiple reference sources
- identifying trees suitable for the intended purpose using multiple reference sources and use of taxonomic keys
- giving consideration to tree morphology, physiology and ethnobotany in the identification of suitable trees
- estimating planting area dimensions for the tree species or cultivar
- confirming that soil volume is proportioned to the size of tree in consideration and assess soil for suitability as a growth medium
- considering environmental conditions including site hydrology for the functional characteristics of the tree and apply findings
- evaluating soils, soil mixes and growing media for density, organic content, nutrient status, and physical and chemical properties
- appraising a wide range of soils, soil mixes and growing media
• making recommendations for soil, soil mix and growth medium improvements by determining soil suitability for intended purpose
• evaluating trees from an extensive range of trees common in the region
• selecting trees in accordance with suitability for the intended purpose as quality criterion
• evaluating and document the rationale for tree selection
• recommending tree species or cultivars for replacement or new plantings
• documenting tree selections, selection criteria and notes on quality expectations as specifications
• incorporating determined criteria for size of stock selection into the specifications
• matching species and cultivars appropriately to the determined selection criteria for species-specific characteristics
• evaluating selection criteria for mature trees against capability for transplanted trees
• assessing final selections against the specified soil, site location and client brief and confirm the tree specification
• inspecting selected plants on site for structural quality, root health and quantities according to the specifications
• inspecting delivered materials, soils and growing media on site for quality assurance in accordance with the specifications
• recording quality checks on delivered plants and products
• compiling tree selections into a database of tree specimens and characteristics based on tree taxonomy and nomenclature, and suitability characteristics
• producing a report of the identification, selection and specification process and incorporate the correlated records
• presenting the client or organisation with the report.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• client consultation and client brief
• legislative requirements and regulatory requirements
• site inspections
• functional life expectancy of tree and site
• tree functionality for precise locations
• selection of tree species and cultivars
• appropriateness of species and cultivar selection for site aspect and dimensions
• how to research and use multiple sources of reference material
• concept of ‘suitability for a purpose’
• trees suitable for an intended purpose
• methods of determining the suitability of a tree for a purpose
• tree identification using multiple reference sources
• tree identification using taxonomic keys
• ethnobotany, morphology, physiology, taxonomy and nomenclature
• tree species-specific characteristics
- environmental conditions for the functional characteristics of the tree
- estimation of planting area dimensions
- soil volume proportions to the size of tree
- site hydrology
- evaluation of soils, soil mixes and growing media for characteristics of density, organic content, nutrient status, and physical and chemical properties
- appraisal of a wide range of soils, soil mixes and growing media
- recommendations for soil, soil mix and growth medium improvements
- soil suitability for intended purpose
- methods of assessment of soil for suitability as a growth medium
- evaluation of trees from an extensive range of trees common in the region
- tree selection methodology using quality criteria of suitability for purpose
- evaluation and documentation of rationale for tree selection
- recommendations of tree species or cultivars for replacement or new plantings
- documentation of tree selections, selection criteria and notes on quality expectations as specifications
- incorporation of criteria for size of stock selection into specifications
- methods of matching species and cultivars appropriately to the determined selection criteria for species-specific characteristics
- selection criteria for mature trees against capability for transplanted trees
- assessment of final selections against the specified soil, site location and client brief and confirmation of the tree specification
- inspection methods for structural quality, root health and quantities of plants on site
- inspection of delivered materials, soils and growing media on site for quality assurance in accordance with the specifications
- methods of quality control and quality assurance
- how to monitor quality and apply quality controls
- tree structural quality
- recording quality checks on delivered plants and products
- methods of data capture
- database construction
- characteristics of taxonomy and nomenclature required for database use
- characteristics of tree ‘suitability for a purpose’ required for database use
- compilation of tree selections into a database of tree specimens and characteristics based on tree taxonomy and nomenclature, and suitability characteristics
- report production of the identification, selection and specification process.
Assessment Conditions

It is an industry requirement for competency in this unit that assessment includes construction of a database that must contain a minimum of eighty (80) tree species with general characteristics of suitability for the intended purpose and key identifying features, and an additional twenty (20) intensive tree profiles detailing attributes of the location, taxonomic characteristics, edaphic and environmental preferences and limitations of the tree. The database must include woody monocots and gymnosperms.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- **equipment:**
  - computer
  - word processing software
  - internet connection
  - digital camera/phone camera
  - soil testing equipment
  - loupe
  - field guides
  - print and digital taxonomic keys
  - trees
  - soils, soil mixes and growing media

- **materials:**
  - tree profile and benefits form
  - tree selection and specification form
  - database of tree selections and suitability characteristics
  - report of the identification, selection and specification process

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to plan for and monitor the protection of trees at sites where there may be threats to the trees.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work, to analyse and synthesise information and design, and to communicate solutions to complex problems. The role involves the self-directed application of knowledge with substantial depth in some areas such as tree assessment techniques, the impact of development on trees and specialist tree protection techniques and reporting methods.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states and territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards such as the current AS 4970 Protection of trees on development sites.

Performance Evidence

The candidate must compile reports, plans and guidelines into an arboricultural impact assessment report and develop an evidentiary tree protection portfolio.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying and researching relevant legislation and Australian Standards
- determining specific requirements of statutory authorities in relation to trees on development site
- determining local government planning laws, tree protection and preservation regulations
- conducting a site assessment and identify conditions that impact tree protection program
- identifying work health and safety hazards that impact safety of staff and public, assess level of risk and apply controls
- identifying hazards, activities and circumstances that have potential to harm trees and assess the level of risk
- locating and confirming trees plotted on survey plan
- plotting trees not on plan onto survey plan
- collecting available relevant plans and documentation
- identifying and record tree genus and species by botanical and common name
- recording tree dimensions, height, crown spread and diameter-at-breast-height (DBH)
- determining age class and estimate life expectancy
- determining tree health in relation to tree physiology and pathology
- determining condition of tree structure in relation to tree anatomy
- considering heritage and cultural issues
- considering habitat, ecology and other matters relevant to the site
- considering location relative to existing and past site structures
Assessment Requirements for AHCARB504 Develop an arboricultural impact assessment report

Date this document was generated: 3 September 2020

- determining the retention value
- compiling all tree assessment data required for report
- recording all trees and groups of trees suitable for retention
- determining indicative tree protection zone for each tree
- plotting tree identifiers and indicative tree protection zone on survey plan
- documenting preliminary arboricultural report
- interpreting existing plans, working drawings, terms and symbols
- interpreting development and design language
- considering how development can result in mechanical and chemical damage and determine appropriate controls
- determining impact of proposed development on trees
- providing preliminary feedback to client on potential areas of improvement
- assessing development requirements for site access and logistics
- considering indicative tree protection zone
- determining extent of encroachment into indicative tree protection zone
- determining whether works will impact on structural root zone
- determining extent and area of structural root zone
- determining actual tree protection zone for trees to be retained
- defining and recording the actual tree protection zones
- determining level of encroachment
- assessing for a major encroachment: location and distribution of roots; potential loss of root mass; species tolerance to root loss; and age, health, size, lean and stability of tree
- considering impact of major encroachment on health, physiology and structural integrity of tree
- assessing soil characteristics and volume and presence of existing or past structures and design factors
- considering how site and design factors minimise impact of proposed encroachment on tree
- demonstrating that the tree would remain viable
- determining additional remedial measures required
- developing an evidentiary portfolio of tree protection devices, techniques, tree-sensitive design and construction measures and tree responses to development activities
- specifying protection devices, techniques and systems to minimise impact of development
- determining installation and construction methods for tree protection and produce working drawings for on-site personnel for implementation
- providing advice on tree removal and tree pruning program to client
- preparing draft arboricultural impact assessment report
- developing tree protection plan and tree protection plan (drawing)
- preparing and documenting tree management and monitoring guidelines with alternative strategies for possible problems
- consolidating relevant reports, plans and guidelines into final version of arboricultural impact assessment report in digital and print format and presenting to client.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation and Australian Standards
- specific requirements of statutory authorities in relation to trees on development site
- local government tree protection and preservation regulations
- site assessment and conditions that impact tree protection programs
- plotting trees/ tree identifiers onto survey plans
- tree genus and species by botanical and common name
- tree dimensions, height, crown spread and diameter-at-breast-height (DBH)
- age class and estimate life expectancy
- tree health in relation to tree physiology and pathology
- heritage and cultural issues
- habitat, ecology and other matters relevant to the site
- methods of calculation of retention value
- indicative tree protection zones
- preliminary arboricultural reports
- interpretation of existing plans, working drawings, terms and symbols
- development and design language
- principles and methods of mechanical and chemical damage control
- impact of proposed development on trees
- structural root zone
- actual tree protection zones
- level of encroachment
- assessment of a major encroachment: location and distribution of roots; potential loss of root mass; species tolerance to root loss; and age, health, size, lean and stability of tree
- soil assessment of characteristics and volume
- viability of a tree
- evidentiary portfolio of tree protection devices, techniques, tree-sensitive design and construction measures and tree responses to development activities
- principles and techniques of tree protection devices, methods and systems
- installation and construction methods for tree protection
- principles and methods relating to protecting trees from human activities
- working drawings for on-site personnel for implementation
- methods of documentation of tree management and monitoring guidelines
- draft arboricultural impact assessment report
- anatomy, physiology and pathology of trees
- interpretation of plans and working drawings
- tree protection plan and tree protection plan (drawing)
- documentation of tree management and monitoring guidelines
- final version of arboricultural impact assessment report
- digital and print formats.
Assessment Conditions

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - internet connection
  - personal protective equipment (PPE)
  - digital camera/phone camera
  - loupe
  - basic diagnostic tools including sounding hammer, trowel, probe, cordless drill
  - basic soil testing equipment
  - trees
- materials:
  - preliminary arboriculture report
  - arboricultural impact assessment report

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to review and audit all aspects of arboricultural operations.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work, to analyse and synthesise information, and design and communicate solutions to complex problems. The role involves the self-directed application of knowledge with substantial depth in areas such as auditing, conformance, tree assessment and an extensive range of tree operations.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Performance Evidence

The candidate must produce a tree work audit report that contains all findings, recommendations, non-conformance, notifications and an ongoing management plan. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying audit objectives, scope and focus
- identifying target operations and documentation
- determining audit process and sampling technique
- determining frequency and random timing of audit event
- preparing audit documentation
- conducting pre-audit communications with client and relevant stakeholders
- gathering relevant information, sample documentation, codes of practice and Australian Standards
- organising on-site inspections to conduct the audit process
- auditing the specific tree works operation being undertaken
- auditing any pruning, removal, transplanting, planting, tree protection techniques and arboricultural practices being undertaken
- inspecting and assessing arboricultural works that may impact on the tree physiology, anatomy, pathology and environment
- auditing works in relation to relevant documentation and legislation
- determining the extent of work with conformance to relevant documentation and legislation
- identifying and recording non-conformance
- assessing extent and manner of non-conformance
- documenting findings and relevant field notes
- inspecting and assessing non-arboricultural works that may impact on the tree or its environment
• determining impact of non-arboricultural works of clients, contractors and stakeholders
• providing feedback on non-arboricultural works to clients, contractors and stakeholders
• providing feedback on the findings of the inspections to clients, contractors and stakeholders
• providing advice for improvement, rectification and management of non-conformances
• prioritising required ongoing management
• documenting audit report and non-conformance notifications
• advising statutory authorities where required
• documenting an ongoing management plan specifying the tree management techniques and practices required to address the audit findings
• documenting a rectification plan specifying the required rectifications of non-conformances
• presenting reports and plans to client and relevant stakeholders.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• audit objectives, scope and focus
• auditing terminology
• audit processes
• audit sampling techniques
• frequency and random timing of audit events
• preparation of audit documentation
• pre-audit communications
• relevant audit information and sample documentation
• relevant codes of practice and Australian Standards
• relevant legislation and documentation
• on-site inspections
• targeting and documentation of specific tree works operations
• auditing of pruning, removal, transplanting, planting, tree protection techniques and arboricultural practices
• tree physiology, anatomy, pathology and environment
• inspection and assessment of tree physiology, anatomy, pathology and environment
• arboricultural works that may impact on the tree physiology, anatomy, pathology and environment
• non-arboricultural works that may impact on the tree or its environment
• determination of impact of non-arboricultural works
• documentation and legislation relevant to auditing works
• determination of extent of works with conformance to documentation and legislation
• identification of non-conformance
• assessment of extent and manner of non-conformance
• provision of feedback and findings of inspections to clients, contractors and stakeholders
• improvement, rectification and management of non-conformances
• notification of non-conformance
• provision of advice of non-conformance
• documentation of audit reports
• specification of tree management techniques and practices required to address audit findings
• methods of advising statutory authorities
• audit reporting methods
• documentation of an ongoing management plan
• specifications for required rectifications of non-conformances
• documentation of a rectification plan
• report and plan production and presentation.

Assessment Conditions
Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • computer
  • word processing software
  • internet connection
  • digital camera/phone camera
  • trees
• materials:
  • compliance and audit report form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to identify, select and specify a range of trees in a range of urban and regional applications for local government and legal contexts. It requires the documentation of specification of trees and their respective growing environment in residential, commercial, public open spaces and amenity areas.

The unit applies to individuals who work in arboriculture and analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others, and analyse, design and communicate solutions to a range of complex problems.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used reference materials to identify and select ten trees for three distinctly different sites (a total of 30 trees), taking into account the following:

- geographical location on the site
- taxonomic characteristics
- edaphic and environmental preferences
- limitations of the tree for the site
- rationale for tree selection

There must also be evidence that the individual has compiled and updated a database for at least 50 tree species, from the taxonomic groups of angiosperms (dicotyledons and woody monocotyledons) and gymnosperms with the following details:

- botanical and common name
- general size characteristics
- canopy characteristics
- distinguishing features
- general cultural requirements

There must also be evidence that the individual has:

- consulted with client and developed a tree selection brief for the size and type of the site, including:
  - identified site conditions and constraints
  - identified limitations for tree selection
  - determined functional life expectancy of site and plantings
  - assessed tree characteristics suitable for site and client requirements
  - assessed and determined the suitability of trees for site
- evaluated performance of trees common to a local region for suitability for planting site
- assessed the root zone profile for the tree planting site, including:
  - estimated the available root zone profile
  - verified the root zone profile is proportionate for proposed tree dimensions
  - assessed the hydrological and environmental conditions on tree selection
- tested root zone profiles for characteristics to aid tree selection for at least 5 distinct root zone profiles, including: 3 natural soils, 1 soil mix and 1 growing media. The tests must include:
  - field texture assessment
  - structure
  - compaction
  - bulk density
  - organic content
  - pH and electrical conductivity
  - infiltration rate and drainage
  - moisture holding capacity
- prepared specifications for tree selection according to industry standards including:
  - planting method appropriate to the species and the site
  - soil or media amendments from test results
- investigated the availability of potential tree stock and verified size and quantities against selection criteria and client brief
- checked and recorded quality and quantity of trees and root zone profile materials on site for quality and quantities according to specifications
- produced a report of the identification, selection and specification process and incorporated the correlated records and presented report according to client brief.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
- principles of consulting with clients and use and purpose of client brief
- legislative and regulatory requirements regarding tree selection, including:
  - environmental and ecological implications
  - declared and other weed restrictions
  - hazardous tree species
- assessing site characteristics for tree selection, including:
  - functional life expectancy of tree and site
  - tree functionality for specified locations
  - appropriateness of tree selection characteristics for site aspect and dimensions
- effect of site constraints on the tree selection process, including:
• verge width
• aerial power and telecommunications lines
• potential to impede visual references (roads and driveways, signage, traffic lights)
• potential to impede traffic flow and structures (footpaths, roadways, building, infrastructure)
• use of research techniques from reference materials, including:
  • plant taxonomic keys
  • electronic data
  • plant guides
• broad botanical concepts of tree selection for the following:
  • ethnobotany
  • tree morphology
  • tree physiology
  • taxonomy and nomenclature
  • environmental conditions for the functional characteristics of the tree
• basic calculations for estimating planting area and root zone profile
• root zone profile and characteristics as a determinant for tree selection, including:
  • type of root zone profile (natural soil, soil mix or growing media)
  • size and volume of root zone profile and proportion to the mature size of tree
  • site hydrolgy
  • specifying soils and growing media, including standards to apply
• testing and evaluating soils, soil mixes and growing media for physical and chemical properties and suitability for growing trees, including:
  • identifying soils and soil types
  • testing for pH, electrical conductivity (EC), nutrients
  • testing for wettability, moisture holding capacity, drainage, organic matter
  • amendments to improve soil, soil mix and growth media
  • growing media or soil selection and suitability for purpose
• tree selection methodology using quality criteria of suitability for purpose, including:
  • evaluation of trees common to a region
  • documenting and rationale for tree selection
  • selection of trees based on form and function
  • selection of trees for ecological and environmental purposes
  • recommendations of trees
  • matching species and cultivars appropriately to the selection criteria
  • transplanting issues for mature trees
• documenting tree specifications, including:
  • quality standards for tree stock
  • tree stock selection, type and size of plant, container or root ball
  • tree stock selection and growing media quality and specifications
• tree planting specifications
• quality control and quality assurance, including:
  • checking procedures for deliveries of plants and growing materials with the specifications
  • how to monitor quality and apply quality controls
  • tree structural quality
  • recording quality checks on delivered plants and products
  • impact of Australian Standards AS2303, AS2223 and AS3743 on growing media and quality assurance
• design and construction of plant databases, including:
  • field design for taxonomy and nomenclature
  • field design for characteristics of tree
  • entry of tree data
• reports and reporting procedures for identification, selection and specification process.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • a worksite requiring tree planting, or environment that accurately represents workplace conditions
• resources, equipment and materials:
  • computer with word processing software, and database software
  • digital image capture device
  • soil testing equipment
  • loupe
  • tree reference materials, including field guides, print and digital taxonomic keys
  • live tree specimens
  • soils, soil mixes and growing media
• specifications:
  • workplace safety policies and procedures related to tree identification and selection
  • client brief and instruction for tree requirements for a specific site
  • Australian Standards AS2303, AS2223 and AS3743
• relationships:
  • client.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to decide on the appropriateness for retaining trees and to assess, plan and monitor the protection of trees on construction and development sites where trees subject to retention are exposed to potential damage.

The unit applies to individuals who work in arboriculture and analyse information and exercise judgment to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has on at least one occasion developed an arboricultural impact assessment report for a development site and has:

- identified and researched the impact and specific requirements of legislation, Australian Standards, and local government laws for trees on development site
- conducted site assessment and identified conditions that impact tree protection program
- identified work health and safety hazards, assessed risk and applied controls for site
- identified hazards and assessed the risks that harm trees
- located, confirmed and plotted all trees on survey plan
- collected plans and documentation
- identified and recorded tree by botanical and common name and included a record of:
  - tree height, crown spread and diameter-at-breast-height (DBH), diameter at ground level and statutory dimensions
  - age class and estimated life expectancy
  - tree health in relation to tree physiology and pathology
  - condition of tree structure in relation to tree anatomy
- assessed the following values for trees:
  - heritage and cultural
  - habitat, ecological and environmental
  - location of tree to existing and past site structures
- determined the tree retention value
- compiled tree assessment data for report
- recorded all trees suitable for retention
- determined and plotted indicative tree protection zone (TPZ), tree identifiers for each tree on survey plan
- documented preliminary arboricultural report
• interpreted plans, designs, working drawings, terms, symbols and language for development
• assessed and determined controls for mechanical and chemical damage affecting trees
• provided client with preliminary feedback for potential improvements
• liaised with client on design development and assessed impact of construction on trees
• liaised with design team to develop tree sensitive design and construction methods
• assessed development requirements for site access and logistics
• reviewed indicative tree protection zone and determined:
  • extent of encroachment into indicative TPZ
  • impact of works on structural root zone (SRZ)
• determined extent of SRZ
• determined and recorded level of encroachment and actual TPZ for trees to be retained
• assessed the following factors affecting tree viability for a major encroachment:
  • location and distribution of roots
  • potential loss of root mass
  • species tolerance to root loss
  • age, health, size, lean and stability of tree
• assessed impact of encroachment on health, physiology and structural integrity of tree
• assessed impact on soil characteristics and volume from past, existing or planned structures
• considered site and design factors to minimise impact of proposed encroachment
• rationalised all factors to decide on the viability of the tree
• determined remedial measures to protect the tree
• investigated, specified and produced installation and construction drawings for tree protection devices and systems to mitigate tree damage
• provided advice to client on tree removal and tree pruning program
• prepared a draft arboricultural impact assessment report
• developed a tree protection plan and drawings
• prepared, documented tree management and monitoring, including strategies to handle problems
• consolidated reports, plans and guidelines into final arboricultural impact assessment report in both:
  • digital format
  • print format
• presented report to client.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• legislative and regulatory framework for trees on development sites, including:
  • role of Australian Standards AS2303, AS2223, AS3743, AS4970 and AS4373
• specific requirements of statutory authorities
• local government tree protection and preservation regulations
• construction drawings, plans and documentation, including:
  • types of drawings and plans
  • terms, symbols and language used in development
  • version control of drawings, including revision and issue dates
• working and communicating with clients and development design personnel
• conducting site assessment and conditions that impact tree protection programs, including:
  • development site safety and safe access procedures
  • plotting trees/tree identifiers onto survey plans
  • naming and recording tree by botanical and common name
  • methods for determining tree dimensions, height, crown spread and DBH
  • age class and estimated life expectancy
  • tree health in relation to tree physiology and pathology
  • assessing and determining the viability of a tree
  • soil volume and characteristics on development sites
• tree values and importance, including:
  • heritage and cultural values
  • habitat, ecological value
  • environmental values
  • methods of determining retention value
• the principles of TPZ, including:
  • methods of mechanical and chemical damage to trees on development sites
  • impact of proposed development on trees
  • SRZ
  • levels of tolerance to encroachment and potential loss of root mass
  • species tolerance to root loss
• type and structure of tree impact assessment reports, including:
  • purpose and structure of preliminary arboricultural report
  • purpose and structure of arboricultural assessment report
  • use and interpretation of development plans and documentation
  • drawing techniques for illustration in reports and plans, including digital images
  • tree protection plans and drawings
  • purpose and structure of tree management and monitoring guidelines
  • presenting reports in digital or paper-based formats
• tree protection devices, methods and systems, including:
  • designs and their purpose
  • tree response to tree protection systems
  • installation and construction methods for tree protection.
Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- Physical conditions:
  - A development worksite with existing trees, or an environment that accurately represents workplace conditions

- Resources, equipment and materials:
  - Computer with word processing and drawing software
  - Digital image capture device
  - Personal protective equipment
  - Basic diagnostic tools, including sounding hammer, trowel, probe, cordless drill
  - Basic soil testing equipment
  - Trees

- Specifications:
  - Client brief and instruction for safety audit objectives
  - Industry standards AS2303, AS2223, AS3743, AS4970 and AS4373

- Relationships:
  - Client

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- Arboriculture vocational competencies at least to the level being assessed
- Current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to review and audit arboriculture operations for tree establishment, restoration, repair, protection, tree pruning, tree support systems and removal works and produce specifications required to rectify identified non-compliance.

The unit applies to individuals who work in arboriculture and analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least two occasions, audited tree works and created a report with specifications for rectification.

For each of the two audits, there must be evidence that the individual has:

- identified audit objectives, scope and focus
- identified target operations and documentation
- determined audit process, sampling technique, frequency and schedule
- compiled and prepared audit documentation
- communicated audit preparations with client and stakeholders
- organised site inspections to conduct audit
- conducted audits of operational tree works for each of the following activities:
  - pruning, including root pruning
  - tree removal
  - transplanting and planting
  - tree protection on development sites
  - tree support systems
  - arboricultural practices
- inspected and assessed impact of works on tree health, structure, environment and development
- conducted the audit according to prepared documents and legislative requirements
- audited compliance of works to documented project outcomes
- recorded and assessed non-compliances against expected standards
- prepared records of audit and non-compliances
- inspected and assessed non-arboricultural works
- determined impact of non-arboricultural works of contractors and stakeholders
• provided feedback on the findings of inspections to stakeholders, including provided advice for:
  • improvements
  • rectification
  • management of non-conformances
• identified and specified ongoing management priorities
• discussed tree retention with stakeholder
• identified and assessed effect of remedial action on tree and stakeholder expectations and selected remedial action
• documented remedial action, which must include specifications for:
  • tree removal
  • tree transplanting
  • pruning, including root pruning work
  • tree support system
  • tree protection
• documented audit report and non-conformance notifications and advised stakeholders according to regulatory requirements
• documented ongoing management plan, which must include:
  • specifying the tree management techniques and ongoing maintenance
  • practices required to address the audit findings
• documented a rectification plan specifying rectification of non-conformances
• prepared and presented reports and plans to stakeholders.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• developing and planning for audits, including:
  • setting objectives, scope and focus
  • auditing terminology
  • audit processes
  • audit sampling techniques
  • setting frequency and timing of audit events
  • preparation of audit documentation
• communication in audit situations, including:
  • notifying and preparing stakeholders for audit
  • providing feedback after auditing
  • rectification notices and follow-up for non-compliance
  • negotiating rectification works and actions
  • reporting procedures of completed audit
• relevant audit information and sample documentation, including:
• codes of practice
• Australian Standards including, AS2303, AS2223, AS3743, AS4373 and AS4970
• arboriculture reports and specifications
• legislation and regulations governing audit procedures and topics, including:
  • responsibilities for safety and safe work practices
  • tree protection and removal
  • conservation and environmental protection
  • statutory reporting and documentation
• targeting, auditing and documenting specific tree work operations, including:
  • pruning, including root pruning
  • tree removal
  • planting and transplanting
  • tree protection techniques
  • arboricultural practices and construction and development activities
  • tree support systems
• inspection and assessment of tree works and impact on physiology, anatomy, pathology and environment
• inspections and assessment of non-arboricultural works that may impact on the tree or its environment
• reconciling actual works performed against documented planned works
• provision of feedback and findings of inspections to clients, contractors and stakeholders
• improvement, rectification and management of non-conformances
• documenting specified remedial action, including:
  • tree removal
  • pruning, crown maintenance and crown modifications
  • response of roots to wounding and treatment of severed roots
  • planting and transplanting
  • tree support systems
  • tree protection systems
  • tree management techniques and practices
  • rectifying and modifying work site practices and tree protection measures for trees on development sites
  • ongoing management and maintenance
• documentation for recording and reporting audit procedures, including reviewing and revising audit procedures.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
• an arboriculture work site with trees, or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • computer with word processing software
  • digital image capture device
• specifications:
  • workplace safety policies and procedures
  • client brief and instruction for safety audit objectives
  • codes of practice relevant to tree works and use of arboriculture equipment
  • industry standards AS2303, AS2223, AS3743, AS4373 and AS4970
  • legislation and regulations relevant to safe work practices, environmental safety and conservation and protection of trees
• relationships:
  • client and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to collect and analyse arboricultural information from a site and make determinations and recommendations for inclusion in arborist reports, using word processing software to meet the standard expected of arboricultural professionals.

The unit applies to individuals who work in arboriculture and analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

Legislation, regulations and by-laws relating to the treatment and removal of trees apply in some states and territories.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared at least one arborist report, including:

- reviewed client brief and determined report outcomes
- determined evidentiary data records
- determined statutory requirements for report
- established scope and assumptions for report
- determined arboricultural content and textual and visual content for report
- confirmed report parameters with client
- researched content and information for report
- assessed primary and secondary sources, and evaluated the validity and reliability of researched material
- inspected site and recorded details and observations, which must include:
  - location of site and trees under consideration
  - matters relevant to scope of report
- recorded visual evidence using image capture equipment
- obtained and recorded information from test results
- collated observations, test results, research material and inspection data into a body of evidentiary data
- stored and backed up data according to data management procedures
- prepared report format and layout according to workplace style guide and industry standards, which must include:
  - used a word processor and its tools and functions to produce the report
  - used custom templates and logos
  - obtained permission for copyrighted materials intended for the report
  - created and populated tables and charts
  - used images and graphics to enhance report presentation and content
• inserted document elements for titles, page numbers, table of content, glossary of terms, headers and footers, watermarks for drafts, endnotes or footnotes and acknowledged references
• incorporated information and evidentiary data into formatted report.

There must also be evidence that the individual has:
• assessed body of evidentiary data and determined value of conflicting evidence
• developed an informed decision from considered viewpoints
• formulated a conclusive determination and informed client
• developed recommendations based on determination
• prepared a draft document based on brief, method, observation, conclusion and recommendations
• sought feedback on report from at least two professional colleagues and edited report based on feedback
• drafted final sections of report
• reviewed and developed summary of report content
• reviewed and edited final report ready for distribution
• delivered final report to client and stakeholders according to client brief.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• consulting with clients and purpose of a client brief
• arborist reports and their development and context, including:
  • evidentiary data
  • statutory reporting
  • limits and assumptions of arborist reports
  • arboricultural content in reports
• investigation and researching valid data and information, including:
  • research design and methodology
  • valid and reliable data collection
  • sources of research material, including primary and secondary sources
  • methods of analysing data collected and compiling into logical data sets
  • balancing conflicting viewpoints
• site inspections and gathering primary data
• image capture equipment appropriate to arboricultural reports and visual evidence, including:
  • still photographic images
  • imaging equipment, including light detection and ranging (LiDAR) technology
  • video recording
- collation of observations, test results, research material and inspection data into a body of evidentiary data, including:
  - managing, storing and interrogating data
  - data collection procedures
  - storage, backup and retrieval systems for data
- report for statutory, client and organisation purposes, including:
  - formats and presentation
  - requirements for specific document content
  - layout and arboriculture industry conventions
  - copyright, intellectual property and referencing when preparing reports and using material as inclusions in reports
  - developing draft report structure
  - use of active and passive voice in reports and presentations
  - summarising the report
- computer software for preparing and organising data sets
- word processors and computer software used for creating and editing documents
- corporate style guides and their purpose for formal reports, including:
  - custom document templates
  - purpose and use of corporate logos
  - creating and formatting tables
  - generating charts and graphics
  - elements of reports, including, title, page numbers, table of contents, footers and headers and watermarks
- quality document outcomes, including:
  - correct use of language
  - logical organisation and development of content
  - spelling, grammar and punctuation
  - arborist terminology and jargon
  - industry expectations and standards
- decision-making processes, including:
  - consideration of different viewpoints in making informed decisions
  - formulating conclusions and determinations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - access to an arboriculture work site with trees, or an environment that accurately represents workplace conditions
  - resources, equipment and materials:
Assessment Requirements for AHCARB511 Prepare arborist reports

Date this document was generated: 3 September 2020

- computer with word processing software
- internet connection
- digital image capture device

specifications:
- client and/or project brief and instructions for report outcome
- codes of practice relevant to tree works and use of arboriculture equipment
- preferred industry practices (as outlined in the Companion Volume) related to project brief
- legislation and regulations relevant to arboriculture and project brief

relationships:
- clients and stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to generate tree plans using computer-aided design software.

The unit applies to individuals who work in arboriculture and analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced plans using computer-aided design software and calculated and plotted tree protection zones (TPZ) for at least 20 trees and 10 encroachments across two different sites.

There must also be evidence that the individual has:

- confirmed project requirements for drawings
- identified drawing requirements, purpose and scope, and confirmed with client
- prepared computer-aided design (CAD) software ready for drawing, including:
  - prepared the computer desktop user interface
  - determined the layering strategy for components
  - identified and selected component libraries
  - selected text and dimension styles according to workplace style guide
  - selected line types and weights
  - selected hatch patterns and types
  - set up title blocks for drawing sizes
  - set up reference schedules
- used two-dimensional (2D) CAD software program and functions to produce drawings using layers for different components. The tree protection CAD plan must contain:
  - TPZ
  - structural root zone (SRZ)
  - encroachments
  - imported digital text and drawing files from other software applications
  - scanned and saved documents in digital format for import into 2D CAD drawings
  - reviewed, edited and deleted incongruous elements
  - recorded notes to drawings
  - identified and applied dimensioning and scale to drawings
• identified and applied tree symbols with precision. Drawing must provide the following differentiations:
  • trees to be retained
  • trees to be removed
  • trees to be transplanted
• calculated areas of TPZ, SRZ and encroachments
• checked the drawing for accuracy and quality
• set page layout on printer, including:
  • scale
  • line weights
• set print parameters for the printer, including:
  • page size and paper quality
  • output print quality (fast, draft, best)
• created file storage directories according to workplace file management procedures
• named and saved drawing files to file directories according to workplace file management procedures and naming convention
• created drawing files and sent to external personnel for use in different software applications
• created exportable files for CAD software and document readers.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• interpretations and planning of drawing needs for arboriculture projects, including:
  • types of drawings used in arboriculture
  • content and purpose of drawings
  • use of drawings and importance of accuracy
  • planning the design and drawing project
• sources of information for drawing development, including:
  • project personnel
  • site visits and survey plans
  • digital images and aerial photography
• basic principles of 2D CAD drawing, including:
  • 2D CAD software programs available
  • CAD drawing tools
  • principles of layers and a layering strategy
  • CAD libraries and standard detail and components
  • selecting and using fonts and styles in business and drawings
  • selecting and setting dimension size and styles
Assessment Requirements for AHCARB512 Generate tree plans using computer-aided design software

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - line types, thickness and colour as a means to communicate and differentiate design elements
  - entering text and notations into CAD drawings
  - setting and maintaining accuracy in CAD drawings
  - basic tools and setup of a CAD drawing program, including:
    - preparing the CAD desktop and user interface
    - CAD drawing tools, their use and menu options
    - preparing page layout for drawing size
    - selecting hatch patterns, fill and colour
    - creating and using title blocks
    - use of style guides in maintaining quality and standards for organisations
  - adding, editing and changing CAD components in drawings, including:
    - drawing lines, shapes and polygons
    - editing and deleting lines, text and shapes
    - joining and breaking lines and shapes
    - adding and editing text
    - plotting and positioning trees and other symbols
    - entering and positioning dimensions
  - quality control check and document control
  - page layout and standard size paper, including:
    - International Organization for Standardization (ISO) and American National Standards Institute (ANSI) paper sizes and use in Australia
  - standard file formats for drawings and file exchange between CAD software
  - standard file formats for conversion of drawings for document sharing
  - saving computer files, file directories and storage media, including:
    - methods of saving files
    - file retrieval and backup
    - importing and exporting files
    - organisational standards for naming, filing and file security
  - scanning and importing documents and graphics into CAD software
  - plan printers, plan plotters and printing requirements, including:
    - print page size
    - media type
    - print quality
    - calculating and plotting TPZ, SRZ and encroachments.
Assessment Requirements for AHCARB512 Generate tree plans using computer-aided design software

Date this document was generated: 3 September 2020

- two arboriculture work sites with trees as stipulated in the performance evidence, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer with 2D CAD software, symbols libraries for architecture and arboriculture
  - digital scanner
  - plan printers and/or plotters
- specifications:
  - workplace safety policies and procedures for CAD drawing standards and file conventions
  - current drawing standards for page sizes and drawing conventions
- relationships:
  - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has examined and assessed at least two different trees, including:

- identified scope and purpose of assessment from client brief
- selected, checked and used personal protective equipment
- located tree and documented position
- identified and recorded tree species and determined implication on brief
- assessed and considered tree health and impact on brief
- estimated age of tree, tree parts and defects
- determined and recorded tree dimensions, which must include:
  - tree height
  - tree spread
  - diameter-at-breast-height (DBH)
  - trunk circumference
  - diameter at base
- investigated, assessed and recorded the following indicators of value:
  - habitat and ecological significance
  - historical and cultural significance
  - statutory controls
- selected and compared amenity tree for at least 2 different valuation methods
- collected unit values and data required by the valuation method selected
- calculated and recorded amenity value of at least 2 different trees
- compared results of different valuation methods and accounted for differences
- considered and communicated value of trees captured for valuation
- inspected tree for visual indicators of likely failure of tree or tree parts
- assessed relationship of tree to potential targets
• assessed likely impact of wind loading on potential for failure
• used basic diagnostic tools to confirm presence and extent of hazards
• assessed hazards and determined likelihood of failure
• selected tree risk assessment methods and determined their limitations
• determined target of concern and occupation rate
• determined tree components of concern and their likelihood of failure
• calculated and documented determinations and level of risk
• provided client with benchmarks and context for risk assessment
• determined and documented potential risk mitigation controls and estimated residual risk
• recommended timeframes for implementation of risk mitigation controls and follow-up inspections
• considered risk against value of tree
• produced a tree risk assessment report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• areas to address in a client brief and developing the scope of assessment, including:
  • purpose of assessment
  • owner/client and address
  • who requested the assessment
  • reasons for assessments to be requested
  • client risk thresholds
  • data capture procedures
  • requirements for assessment
  • tree assessment and measuring equipment
• trees and surveying their location on a site, including:
  • methods for locating trees on devices, drawings, plans or aerial images
  • techniques to position tree on site from boundaries and structures
• tree identification, biology and physiology
• assessing tree health, including:
  • signs and symptoms of disease
  • methods of detecting decay and structural defects in trees
  • use of basic diagnostic tools
  • testing equipment to detect decay, disease and scope of tree problems
  • factors affecting the likelihood of tree failure
  • use of diagnostic tools
• computations and estimating tree dimensions and their relevance to tree assessment, including:
- tree height and spread
- trunk circumference
- DBH
- diameter at ground level

assessing structure and symmetry of the canopy, including:
- symmetrical and asymmetrical canopy structure and consequences on tree stability and health
- trunk inclination and calculating the lean
- impact of wind loading on trees and tree structures
- estimating and calculating wind loading

relationship and responsiveness of form of crown to surrounding trees and structures

- tree age and health issues and their estimation, including:
  - uninodal and multinodal tree species as an indicator of age
  - growth increments, including bud scars, sympodial growth and flush marks
  - checking age estimations using documented images

valuation methods of amenity trees, including:
- a range of tree valuation methods and their application
- legal and statutory controls and protection of trees
- indicators of habitat use
- ecological value and significance
- cultural value and significance
- historical value and significance
- preservation orders and local environmental protection laws
- calculating amenity tree value of individual trees

visual tree assessment (VTA) techniques and procedures, including:
- visual indications and symptoms of disease and health issues
- tests and checking the extent of disease and health issues
- assessment of impact of tree disease and health issues on tree safety
- the purpose and use of basic diagnostic tools

methods of determining and mitigating levels of risk, including:
- a range of tree risk assessment methods and their application
- identification and extent of tree hazards
- causes of instability, decay, damage and stress in trees
- quantification and qualification of tree risk
- risk benchmarks from non-arboricultural activities
- controls available to mitigate risks
- remedial action of tree problems

determining the consequence of risk, including:
- why most likely outcomes are used and not worst case
- abbreviated injury indexSCALE
• possible targets associated with tree risk, including:
  • persons, property, interruptions to community activity, interruptions to services
  • occupation rates
• tree assessment reporting procedures, including images.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • an arboriculture site with the trees stipulated in the performance evidence
• resources, equipment and materials:
  • computer with software for word processing
  • digital imaging equipment
  • personal protective equipment
  • diagnostic tools, including sounding hammer, trowel, probe, cordless drill
  • measuring equipment for tree dimensions, locating trees on site
  • samples of cross-sectioned defects and diseases
  • field tree inspection equipment, including hand lenses, probes, binoculars, containers for sample collection
• specifications:
  • legislation and regulations relevant to arboriculture
  • client brief and specifications for tree assessment task
• relationships:
  • client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to diagnose tree diseases and develop a management program for their control. Diseases include pathogens, pests and other disorders of angiosperms, gymnosperms and woody monocotyledons.

The unit applies to individuals who work in arboriculture and analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that individual has identified and collated representative samples of at least 30 diseases of trees, including evidence of infection, into a referenced collection, including:

- 10 invertebrate pests, including insects and molluscs
- 10 pathogenic organisms
- 10 environmental and soil disorders.

Where biosecurity is a concern, the sample can be replaced by a high quality informative image.

There must also be evidence that the individual has:

- identified the affected tree and determined its origin and seasonal growth stages
- determined factors affecting tree health and growth, which must include:
  - current and past cultural practices
  - characteristics of growing environment
  - environmental and cultural factors that predispose trees to disease
  - assessed physical and chemical properties of the soil or growing media
- identified trees with diseases
- recognised natural defence systems for major disease types
- determined disease groups according to disease classification
- investigated trees for signs and symptoms of disease
- recorded symptoms and signs of disease using accepted nomenclature
- determined impact of disease type on tree parts and systems
- determined the nature and severity of the disease
- determined disease type
- researched and identified tree diseases
- prepared specimens of diseases for microscopic examination
• collected, packaged and prepared specimens for dispatch for specialist diagnosis or laboratory testing according to biosecurity procedures
• determined current health and vigour of the tree
• assessed severity and extent of the disease
• researched virulence of the disease on the specific host
• determined phenology of the host and the disease
• researched and considered the constraints for management options
• considered influences of environmental conditions on host, disease and management options
• documented prognosis according to workplace procedures
• investigated and recommended management options
• developed a disease management program
• recorded and documented tree diseases and management programs in a report
• monitored, reviewed and updated management plan.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• definition of disease and basic concepts of plant pathology, including:
  • plant pathogens, pests and disorders
  • macro organisms, microorganisms
  • disease classification guides
  • virulence, phenology, prognosis and disease severity and extent
  • economics and tree diseases
• trees species; their growing environment and relationship to diseases, including:
  • taxonomic identification
  • tree anatomy, physiology, pathology
  • life cycle stages and characteristics of trees and their vulnerabilities
  • primary cellular and anatomical structures of trees
  • critical systems in trees and relationship to plant health, including physiological and biochemical
  • natural defence mechanisms and systems of trees
  • implications of growing season, climate and regional characteristics on tree species and disease development
  • cultural practices, including mulching, irrigation, pruning
• impact of soil or media on tree health, including:
  • chemical and physical characteristics
  • test and test results indicating tree nutrient, and growth health issues
  • controlling soil and environmental problems
• identification of signs and symptoms of tree health problems, including:
• disease detection and identification methods
• patterns of host–disease interaction for each major disease type
• nomenclature of symptoms and signs of pathogens, pests and disorders
• describing the nature and severity of disease infection, including:
  • chronic and acute
  • passive and aggressive
  • seasonal and ongoing
  • localised and unconfined
• methods for managing pathogens, pests and disorders, including:
  • mechanical control practicalities
  • chemical use, toxicity and safety, compatibility and off-target considerations
  • managing the cultural factors, growing conditions and environment
  • managing soil fertility and amelioration
  • biological control and working with natural agents to control pathogens, pests and growing environment
  • importance and use of Integrated Pest Management strategies
  • biosecurity and basic principles of hygiene in arboricultural work
• constraints to disease management, including:
  • timing and scheduling treatments
  • cost and budgetary constraints
  • perceived and real value of infected tree
• tree diseases collection and diagnosis, including:
  • collecting, preserving, securing and storing specimens and examples of tree pathogens, pests and disorders
  • biosecurity risks and mitigation when collecting and storing specimens
  • preparation of specimens for diagnostics
  • microscopic and macroscopic examinations
  • microscope slide preparation
  • methods of providing a reasoned prognosis
• horticultural function, cultural and performance requirements and characteristics of the trees or other woody plants
• processes and principles of researching tree health problems, diagnoses and remedial treatment available
• industry standards and terminology to describe disease attributes
• recording and reporting tree disease prognosis and management strategies, including:
  • written documentation
  • oral presentations.
Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- **physical conditions:**
  - an arboriculture work site with the diseased trees stipulated in the performance evidence

- **resources, equipment and materials:**
  - computer with word processing software
  - digital imaging device
  - diagnostic tools, including sounding hammer, trowel, probe, cordless drill
  - soil testing equipment and materials
  - basic dissection microscope 10x – 100x
  - optical devices, including compound microscope, binoculars, hand lens
  - sampling equipment, secure storage containers, disinfectant
  - trees without diseases
  - trees with biotic diseases
  - trees with abiotic diseases
  - bio-secure samples of tree diseases
  - disinfection materials and equipment to minimise infections

- **specifications:**
  - codes of practice relevant to tree diagnostics work.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to examine and assess tree health, age, taxonomy, risk, amenity value and significance and compile a tree assessment report.

This unit applies to individuals with broad theoretical and technical knowledge of a specific area or a broad field of work and learning and cognitive, technical and communication skills to demonstrate autonomy, judgement and defined responsibility in undertaking complex work within broad parameters to provide specialist advice and functions.

The role involves the self-directed application of knowledge with substantial depth in areas such as tree identification, pathology and diagnostics, tree assessment and valuation techniques, tree risk assessment and reporting methods.

Licensing, legislative, regulatory, or certification requirements apply to this unit in some states & territories at the time of publication, and may differ according to jurisdiction. Specific determination should be sought through the relevant State or Territory. Works involving this unit of competency may be subject to local tree protection and preservation laws, and the relevant content of applicable Australian Standards.

Pre-requisite Unit

AHCARB403 Perform a ground-based tree defect evaluation*

AHCARB302 Inspect trees for access and work**

AHCARB313 Identify trees

Performance Evidence

The candidate must be observed inspecting and assessing a broad range of trees for identification, health, growth habit, structure, stability and indications of disease. The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying the scope of survey
- determining the client’s risk threshold
- documentation of the data capture procedures
- identifying, sourcing and recording all current data research relevant to survey requirements
- checking equipment for assessing trees and prepare for use
- selecting, checking and using personal protective equipment
- plotting tree locations on a device, drawing or plan of the site
- determining the tree dimensions and structure
- measuring the tree height, spread and diameter-at-breast height (DBH)
- examining and recording form of tree
- assessing tree for asymmetry of canopy
- assessing if tree has a lean and calculate the lean
- assessing how form of crown relates to or is responsive to surrounding trees and structures
- determining the potential impact of wind loading of the tree
- inspecting tree and record fruit type and characteristics
- describing leaf morphology for shape, colour and size
- examining and recording buds, branchlets, branches and bark
• inspecting for and describing trichomes on lamina, petiole and branchlets
• describing and recording floral characteristics of structure of inflorescence, location of the flower, flower colour, details of the flower parts present, absent or modified
• examining and record the canopy density and distribution
• assessing recorded leaf colour and size against a healthy specimen
• assessing for the presence of epicormic shoots
• assessing for dead tips or excessive numbers of dead branches
• examining roots, root crown, stem, branches and canopy for signs of biotic and abiotic disease
• evaluating and describing symptoms presenting on tree
• determining how presence of disease might be affecting tree
• recognising and recording wounds to the tree
• considering size, location and cause of wounds
• determining if species is uninode or multinodal
• recording the dimensions of the tree
• examining tree for evidence of growth increments including bud scars, sympodial growth and flush marks
• estimating average annual increase in diameter of sample of xylem stained as required
• researching historic images of tree or trees of same species in similar environments
• providing a reasoned estimate of age of tree, tree part or wound
• assessing tree for indicators of habitat use
• assessing tree for ecological significance
• assessing tree for cultural significance
• assessing tree for historical significance
• evaluating various amenity tree valuation methods
• considering strengths and weaknesses of each method
• determining amenity tree valuation method to be used
• collecting and collating appropriate unit values and data
• calculating and recording the amenity value of individual trees
• assessing trees to determine their structure and stability
• consideration of the tree's age, condition, habitat, wind loading, distribution of foliage, wound size and the potential impacts of proposed recommendations
• using testing equipment to detect decay, disease and scope of tree problems
• evaluating visual indications of disease and health issues in trees
• use of visual tree assessment (VTA) method to identify hazards
• use of basic diagnostic tools to confirm the presence and extent of hazards
• determining level of risk
• giving consideration to qualification and quantification of tree risk
• comparing the risk level against commonly published levels of risk from non-arboricultural activities and items
• determining controls required to mitigate risks in accordance with the client’s pre-determined threshold
• documenting risk controls and recommendations for monitoring and review of risks
• documenting diagnoses of tree problems with reference to the anatomy, physiology and pathology of the tree
• recording specific recommendations for remedial action for tree problems
• producing a tree assessment report that identifies a hazardous tree and contains recommendations for appropriate remedial actions and risk controls
• preparing an expert witness statement
• use of industry standard terminology to describe arboriculture and the work environment.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• risk thresholds
• data capture procedures
• survey requirements
• tree assessment equipment
• plotting methods on devices, drawings and plans
• tree morphology attributes: fruit type and characteristics, leaf morphology for shape, colour and size, trichomes on lamina, petiole and branchlets, floral characteristics of structure of inflorescence, location of the flower, flower colour, details of the flower parts present, absent or modified, buds, branchlets, branches and bark
• canopy density and distribution
• comparison of leaf colour and size against a healthy specimen
• epicormic shoots
• examination of roots, root crown, stem, branches and canopy for signs of biotic and abiotic disease
• disease symptoms
• effects of disease on tree
• tree dimensions and structure
• tree height, spread and diameter-at-breast height (DBH)
• form and morphology of tree
• symmetry and asymmetry of canopy
• calculation of tree lean
• relationship of form of crown to surrounding trees and structures
• responsiveness of form of crown to surrounding trees and structures
• determination the potential impact of wind loading of the tree
• tree wound recognition, size, location and cause
• uninodal and multinodal tree species
• growth increments including bud scars, sympodial growth and flush marks
• estimation average annual increase in tree diameter
• xylem staining
• research of historic images of tree or trees of same species in similar environments
• assessment of tree indicators of habitat use
• assessment of tree ecological significance
- assessment of tree cultural significance
- assessment of tree historical significance
- evaluation of methods of amenity tree valuation
- calculation of amenity tree value of individual trees
- tree structure and stability
- tree assessment attributes: tree's identification, age, health, condition, habitat, wind loading, distribution of foliage, wound size and the potential impacts of proposed recommendations
- testing equipment to detect decay, disease and scope of tree problems
- visual indications and symptoms of disease and health issues
- tree diseases
- visual tree assessment (VTA)
- methods of detecting decay and structural defects in trees
- causes of instability, decay, damage and stress in trees
- use of basic diagnostic tools
- identification and extent of tree hazards
- methods of determination of levels of risk
- quantification and qualification of tree risk
- commonly published levels of risk from non-arboricultural activities and items
- controls required to mitigate risks in accordance with the client’s pre-determined threshold
- diagnoses of tree problems
- tree anatomy, physiology and pathology
- remedial action of tree problems
- production of a tree assessment report that identifies hazardous trees, recommends appropriate remedial action, and determines appropriate risk controls
- preparation of an expert witness statement.

**Assessment Conditions**

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

- equipment:
  - computer
  - word processing software
  - internet connection
Assessment Requirements for AHCARB601 Examine and assess trees

- digital camera with macro
- personal protective equipment (PPE)
- diagnostic tools including sounding hammer, trowel, probe, cordless drill
- cross-sectioned defects and diseases
- soil testing equipment
- basic digital dissection microscope 10-100x
- compound microscope
- microtome, staining and slide mounting equipment
- slides and coverslips
- temporary/permanent mountant
- histochemical stains
- materials:
  - tree assessment report
  - tree profile and benefits form
  - disease profile form

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Performance Evidence

The candidate must be observed diagnosing and recording diseases of trees, and developing, monitoring and documenting a report on a tree disease management plan.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence for and demonstrate:

- identifying the tree and determining its region of origin
- determining seasonal growth stages of the tree
- ascertaining current and past cultural practices
- determining characteristics of the growing environment affecting the growth of a specific tree species
- identifying environmental and cultural factors that predispose the tree to disease
- determining and assessing the relevant physical and chemical properties of the soil or growing media
- determining impact of disease type on tree parts and systems
- use of industry standard terminology to describe disease aspects of tree anatomy, physiology, pathology and taxonomy
- developing a glossary of disease terminology
- considering natural defense systems of trees against major disease types
- determining disease groups according to a disease classification guide
- interpreting signs and symptoms of disease to identify which trees are diseased
- recording symptoms and signs of disease using accepted nomenclature
- collating samples and evidence into a reference collection
- determining disease type according to a disease classification guide
- determining identification of macrobiotic disease to family level
- preparing specimens for microscopic examination of microbiotic diseases
• collecting, package and dispatch specimens for specialist diagnosis or laboratory testing where required
• determining current health and energy reserves of the tree
• assessing severity and extent of the disease
• researching virulence of the disease on the specific host
• determining phenology of the host and the disease
• researching and considering lag time of management options
• considering influences of environmental conditions on host, disease and management options
• providing an informed prognosis in writing and verbally
• researching management options such as Integrated Pest Management (IPM) and recommending appropriate options
• developing a disease management program within IPM guidelines
• recording and documenting tree diseases and management programs in a report
• monitoring management plans and modifying or refining as needed
• compiling a disease reference collection
• use of industry standard terminology to describe disease aspects of tree anatomy, physiology, pathology and taxonomy.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• disease classification guides
• virulence, phenology, prognosis and disease severity and extent
• critical systems in the tree; physiologically, anatomically and biochemically
• patterns of host – disease interaction for each major disease type
• tree nutrition issues associated with the soil or media
• identification of signs and symptoms of tree health problems
• determination of possible and probable physiological, anatomical and biochemical impacts on the tree
• disease detection methods, taxonomic identification, life cycle stages and characteristics of the specific horticultural trees of the organisation
• natural defence systems of trees
• chemical use, toxicity and compatibility with target trees, soil and environmental characteristics of the horticultural region
• tree anatomy, physiology, pathology and taxonomy
• seasonal growth anatomy of the tree
• primary cellular and anatomical structures of the tree
• preparation of specimens of microbiotic diseases for microscopic examination
• horticultural function, cultural and performance requirements and characteristics of the trees or other woody plants being considered
• chemical, cultural and biological control methods as part of an Integrated Pest Management strategy
• methods of providing a reasoned prognosis
• the growing requirements and characteristics of trees
• the impact of the growing environment on tree health
• how to research information about tree health problems, diagnoses and remedial treatment available
• nomenclature of symptoms and disease signs
• industry standard terminology to describe disease attributes in relation to tree anatomy, physiology, pathology and taxonomy
• applicable legislative requirements.

Assessment Conditions

Performance must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome.

Assessment must be demonstrated consistently over time in a suitable range of contexts and have a productivity-based outcome. No single assessment event or report is sufficient to achieve competency in this unit.

Assessment may be conducted in a simulated or real work environment, however determination of competency requires the application of work practices under work conditions.

The mandatory equipment and materials used to gather evidence for assessment include:

• equipment:
  • computer
  • word processing software
  • internet connection
  • digital camera with macro
  • diagnostic tools including sounding hammer, trowel, probe, cordless drill
  • soil testing equipment
  • basic digital dissection microscope 10-100x
  • compound microscope
  • microtome, staining and slide mounting equipment
  • slides and coverslips
  • temporary/permanent mountant
  • histochemical stains
  • trees without diseases
  • trees with biotic diseases
  • trees with abiotic diseases
Assessment Requirements for AHCARB602 Diagnose tree diseases

- cross-sectioned defects and diseases
- materials:
  - disease management plan
  - disease reference collection
  - glossary of disease terminology

Assessors must satisfy current standards for RTOs in the assessment of arboriculture units of competency.

Assessment must be conducted only by persons who have:
- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed

Application

This unit of competency describes the skills and knowledge required to interpret diagnostic test results and evaluate and critique the testing methods and results. It requires knowledge and application of tree anatomy, physiology, pathology, tree dynamics and edaphic environment with substantial depth of understanding of diagnostics methods and analysis.

The unit applies to individuals with broad theoretical and technical knowledge of tree diagnostics. They have a broad range of cognitive, technical and communication skills and demonstrate autonomy and judgement for a defined area of responsibility, undertaking complex work with broad parameters to provide specialist advice and functions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has analysed and critiqued a minimum of five different diagnostic test results.

- For each of the five tests, there must also be evidence that the individual has:
  - compiled a portfolio of sample reports of diagnostic test results, including the following types of tests:
    - dynamic and static loading
    - drill resistance measurement device
    - sap flow measurements
    - electronic impedance
    - chlorophyll fluorescence
    - increment core
    - sonic tomography
    - radar imaging system
    - bulk density
    - soil and pH tests
  - compiled peer reviewed papers on the use of each diagnostic tool
  - reviewed diagnostic tool specifications and user manuals and researched output ranges for each diagnostic tool
  - identified key thresholds and benchmarks
  - determined suitability of tool selection for purpose of test
  - identified and evaluated testing methods
  - assessed relevance, benefits and limitations and determined assumptions of methodology
  - determined veracity of the equipment, software and systems
  - accessed available raw data and testing evidence and verified data relevance and accuracy
  - reviewed references cited in the report and identified inconsistencies
• evaluated test results and completed the following:
  • recorded discrepancies against standards
  • assessed the suitability of diagnostic tool for purpose
  • highlighted unsupported statements and factual errors
  • detailed significant omissions, errors and ambiguities
  • detailed inconsistencies and errors of logic
  • identified variances to specifications
• assessed the suitability of the testing process as fit for purpose
• analysed test results, compared test outcomes with original interpretation and considered and accounted for anomalies
• determined validity of outcomes of original report
• developed substantiated positions for critical analysis
• determined further testing required to verify results
• compiled the analysis and reviewed completeness and accuracy of analysis
• recorded analysis outcomes and rationale and documented the analytical processes
• provided alternate analysis and conclusion and documented critique in a report
• presented report according to agreed format and within agreed timelines.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• diagnostic tests and tools used in arboriculture and their purpose, including:
  • dynamic and static loading
  • drill resistance measurement device
  • sap flow measurements
  • electronic impedance
  • chlorophyll fluorescence
  • increment core
  • sonic tomography
  • radar imaging system
  • bulk density
  • soil and pH tests
• specifications of arboricultural diagnostic tools, including:
  • arboriculture terminology and language used in tree diagnostics
  • data output, interpretation and output ranges, key thresholds and benchmarks
  • diagnostic tool selection and testing methods
• developing an evidence-based critique of testing procedures and results, including:
  • reviewing and verifying cited references and data reports
  • data accuracy and relevance
  • testing diagnostic tools and methods against standards and quality assurance
• identifying non-conformances in documentation of results and reports, including:
  • unsupported statements and factual errors
  • significant omissions, errors and ambiguities
  • variances to specifications and standard procedures
  • incorrect use of arboricultural terminology
  • verification and falsification of results
• selecting and determining the suitability of diagnostics tools and testing procedures and
deciding best fit for purpose
• analysing test results and use of industry benchmarks and standards.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following
conditions:
• physical conditions:
  • an arboriculture work site or environment that accurately represents workplace
    conditions
• resources, equipment and materials:
  • computer with word processing software and statistical analysis software
• specifications:
  • test equipment manuals, standard procedures and quality standards
  • sample reports for the diagnostic test methods listed in the performance criteria.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational
education and training legislation, frameworks and/or standards. In particular, assessors must
have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being
  assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has measured and improved the performance of an urban forest, including:

- researched urban forest case studies and management reports
- reviewed best management practices in urban forest planning and management
- researched applications and functional tools measuring benefits of urban forests
- analysed and documented a preliminary report of social and environmental benefits of urban forests
- conducted sampling analysis of a specified urban forest
- determined sample size required to accurately assess total tree population
- determined the quantitative values of urban forest, energy savings, environmental and amenity benefits for the following:
  - canopy cover
  - total carbon storage and annual carbon dioxide sequestration
  - rainfall interception
  - air pollution removal
- identified base financial value for each functional benefit
- calculated financial values of functional and environmental benefits of tree population
- determined benefits of urban heat island modification
- documented a preliminary report on total asset valuation of urban forest
- analysed urban forest structure and function, covering the following in the analysis:
  - urban tree population half-life
  - vacant planting ratio
  - species distribution
  - population diversity
- estimated life expectancy of tree population
• compiled results of urban forest analysis
• identified urban forest issues within tree population sample area
• determined recommendations for tree species and diversity
• determined extent of current tree planting and replacement programs
• determined volume and rate of planting programs required for improvements to urban forest performance
• determined required modifications to planting practices
• determined targets for urban forest improvement
• documented a report on urban forest performance and provided recommendations for improvement.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• urban forests and their management, including:
  • sources of reports and case studies
  • best practices in urban forest planning and management
• measuring the performance of urban forests and their management
• applications and functional tools for measuring benefits of urban forests
• analysing the benefits of urban forests, including:
  • economic and political
  • physical and psychological on community
  • environmental and ecological
• evidence-based research, including what it is and how it is conducted
• sampling techniques and their analysis
• urban forests and their social, environmental and economic implications, including:
  • calculating canopy cover and estimating carbon storage and annual carbon dioxide sequestration
  • rainfall interception
  • air pollution removal
  • energy savings benefit
  • environmental benefits
  • amenity benefits
• valuing urban forests from an economic perspective, including:
  • financial value for functional benefits
  • calculations of financial values of functional and environmental benefits
  • concepts of urban heat island and its modification with urban forests
  • determining the total asset valuation
• the structure, function and faults of urban forests, including:
  • urban tree population life expectancy
Assessment Requirements for AHCARB609 Measure and improve the performance of urban forests Date this document was generated: 3 September 2020

- vacant planting ratio
- species distribution and population diversity
- urban forest analysis techniques
- identifying urban forest issues within tree populations
- defining problems and compiling recommendations for tree species and diversity, including:
  - tree planting and replacement programs
  - volume and rate of planting programs
  - modifications to planting practices
  - targets for urban forest improvement
- report writing and structure of urban forest documents and reports.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an urban forest
- resources, equipment and materials:
  - computer with word processing software and statistical analysis software
  - measurement and data collection tools
- specifications:
  - urban forest performance reports, research materials and case studies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least two occasions, provided consultation in a legal framework, including:

- determined legislation and cases applying to trees within specialist consulting areas of work
- reviewed and analysed legislation, statutory regulations and planning instruments
- applied legal and ethical standards to professional practice
- recognised and used legal terminology in professional practice
- analysed jurisdiction of tree matters to specific cases
- recognised the legal framework and courts system when managing client legal needs
- sought and reviewed precedents in law and published arboriculture related case studies
- determined statutes and supporting precedent cases
- provided arboricultural information based on the legal context
- determined course of action and discussed with client
- provided advice within the context of statutes and precedent cases
- analysed and reviewed policy documents according to legislation and relevant cases
- prepared policy documents based on legislation and relevant cases
- determined areas of uncertainty in policy documents
- sought legal advice and amended policy documents
- identified gaps in own arboriculture knowledge and developed and implemented professional development for improvements
- implemented statutory framework when providing advice as an expert
- ensured observations and test results were recorded with precision
- declared and clarified assumptions underpinning policy documents
- substantiated reported opinions using external authorities
- prepared and provided a detailed evidentiary report
- confirmed status as provider of expert evidence
Assessment Requirements for AHCARB610 Provide consultation in a legal framework

- read and complied with expert witness code of practice
- prepared presentation of evidence based on factual data, documented observations and results and complied with the rules of evidence
- delivered oral evidence and report to court according to legal proceedings, jurisdiction and client requirements
- assisted the court on matters relevant to expert testimony.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, statutory regulations, including planning instruments in state, territory and federal jurisdictions affecting the arboriculture industry, including:
  - environmental planning and management
  - interactions with people and property
- court systems including common law, statute law, civil law, law of torts
- precedents to strategies
- management of client needs
- professional practice and legal and ethical standards, including:
  - processes and practices of preparing and presenting in court
  - responsibilities and constraints of legal presentations
  - developing areas of expertise
- precedents in law and working with published case studies for arboriculture testimony
- accessing and developing professional and arboricultural knowledge, including:
  - benefits of accessing legal and arboricultural professional bodies
  - accessing and studying legal cases
  - maintaining professional standards
  - building and developing expertise and specialised arboriculture knowledge
- legal terms associated with professional practice in arboriculture, their meaning and common use in discourse
- preparation of policy documents based on legislation and relevant cases
- preparation of detailed evidentiary reports
- oral presentation skills and presenting in court.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - courts and court system used for arboriculture cases, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
Assessment Requirements for AHCARB610 Provide consultation in a legal framework  

Date this document was generated: 3 September 2020  

- computer  
- word processing software  
- specifications:  
  - procedures and processes used in the courts system  
  - court case studies related to arboriculture  
- relationships  
- client.  

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:  
- arboriculture vocational competencies at least to the level being assessed  
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to determine, collect and collate information required, and to develop and document an operational tree management plan for a specified geographical area.

The unit applies to individuals with a broad theoretical and technical knowledge of trees and their management. They have a broad range of cognitive, technical and communication skills and demonstrate autonomy and judgement for a defined area of responsibility, undertaking complex work with broad parameters to provide specialist advice and functions.

No licensing, legislative or certification requirements are to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed an operational tree management plan, which must take all of the following operational components into consideration:

- tree inspections and assessments
- tree selection and planting requirements
- tree management
- tree maintenance
- tree protection
- tree removal
- risk identification and mitigation
- infrastructure protection
- habitat protection
- power line clearance
- community and private trees
- pest and disease control
- significant trees
- trees of a selected geographic area.

There must also be evidence that the individual has:

- determined the strategic context for a specific operational area for management plan
- defined scope of operational management plan
- sourced policies that impact on the management plan
- specified geographical area for the management plan and determined the historical and cultural values within the area
- determined land use and ownership of the area
- established national, state and local government legislative and regulatory constraints for the management plan
- determined key stakeholders and community group influences
- determined core objectives for trees in area
- determined current and permissible usage of area
- identified, assessed and recorded trees to be managed, which must include:
  - botanical and vernacular names
  - diversity of species
  - distribution
- identified and performed assessments required, which must include:
  - tree health and hazards
  - site conditions
  - soil type and condition
- defined and collected data required for operational management
- located and mapped position of planting locations
- determined tree removal and tree replacement processes
- determined selection criteria for replacement trees
- established a tree inventory for the geographical area
- identified financial resources available for management plan implementation
- determined the requirements for tree management
- determined operational resources, priorities, schedules and estimated cost of works required for operational program
- identified existing third party management arrangements and incorporated in plan
- collated information for management plan and developed and documented operational procedures
- prepared a draft operational tree maintenance plan and circulated to key stakeholders and community groups for feedback
- reviewed feedback, amended draft and prepared final operational tree management plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- tree management plans, their purpose and structure, including:
  - operational areas for formulating an operational tree management plan
  - specifying the objectives, performance targets and intended outcomes for the plan
  - identifying key stakeholders who influence operational tree management plans
  - documenting and preparing draft management plans for feedback
  - preparing documentation and distribution for stakeholder feedback
  - using and assessing stakeholder feedback to finalise final versions
  - communications strategies for stakeholder engagement, including:
    - print media
    - public submissions
Assessment Requirements for AHCARB611 Develop an operational tree management plan

- public hearing and presentations
- developing and documenting tree management policies and procedures
- considerations for specific sites and trees their use and value, including:
  - historical and cultural heritage
  - land ownership and use
  - street trees and street tree planting
  - national, state and local government legislation and regulations governing arboriculture management policies, including:
    - zoning and planning controls
    - development and planning laws
    - disability discrimination
    - companion animals
- management and maintenance of trees within specific sites, including:
  - health, condition and maintenance requirements
  - the need and frequency of pruning cycles
  - tree assessments and maintaining an inventory
  - tree species, type, diversity and distribution
  - soils analysis and growing conditions
  - tree protection for development and construction sites
  - tree pruning operations
  - power line clearance
  - habitat protection
  - pest and disease controls and control strategies relevant to users
- tree removal and replacement strategies, including:
  - selection of planting locations
  - criteria for the selection of tree species
  - reasons for tree replacement
  - protecting infrastructure
- working with and managing third party obligations, including:
  - contractual arrangements and contractors
  - leasing arrangements
  - licensing obligations
- data collection methodologies and storage
- developing and documenting operational procedures and managing resources, including:
  - personnel
  - supplies and materials
  - equipment and machinery
- third party management and maintenance arrangements, including:
  - obligations affecting management plans
  - existing contracts for works or resources
leasing arrangements for equipment
licensing requirements.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an arboriculture work site with trees or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer with word processing and statistical software
- specifications:
  - tree inventory
  - operational tree management plan
  - federal, state and local government legislation and regulations relevant to trees
  - codes of practice and Australian standards relevant to arboricultural activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reviewed at least two strategic tree policies and has developed at least one strategic tree policy.

There must also be evidence that the individual has:

- identified, consulted with and established stakeholder needs
- researched historic and current tree policies
- analysed statutory and policy context of tree policies
- researched tree management activities
- analysed current industry tree policy models
- evaluated comparative tree methodologies and systems
- researched current policy and strategic information for policy development
- identified key management objectives and management metrics and established benchmarks
- analysed existing policies, procedures and systems for compliance with policy planning requirements
- evaluated stakeholder needs and analysed conflicts
- determined tree management strategies
- defined strategic organisational policy objectives
- defined strategic objectives of the tree policy
- developed and communicated change management strategies
- made recommendations for policy options
- determined legal parameters, statutes and local planning laws
- determined impact of statutory documents on tree policy
- sought legal advice on implications of tree policy
- determined parameters of policy
- determined and recorded soil characteristics relevant to policy
• compiled a database of at least 20 tree species, detailing intensive tree profiles and attributes affected under the policy. The database must include:
  • preferred and desired species highly suitable for local use to be included under the policy
  • the location of species
  • taxonomic characteristics of each species
  • edaphic and environmental preferences and limitations of the trees selected
  • a mix of local, indigenous and exotic tree species must be included
• determined extent and type of tree data to be included in policy documentation
• set goals for tree diversity for the policy
• developed tree policy to meet strategic objectives
• developed and communicated procedures to implement policy
• developed policy determinations for key elements of policy, which must include:
  • hazard identification and mitigation
  • significant trees
  • tree selection and tree replacement strategies
  • street tree planting
  • tree removal
  • tree inspections and assessments
  • tree pruning operations, including power line clearance
  • habitat protection
  • infrastructure protection
  • pest and disease control
• developed draft of strategic tree policy
• promoted tree policy and expected outcomes to key stakeholders
• sought feedback from stakeholders
• reviewed and amended policy
• developed tree policy documentation
• developed compliance programs in policy documentation
• implemented strategies for continuous improvement.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• organisational tree policies their use and structure, including:
  • value and purpose of reviewing historic and current tree policies
  • models for the design of tree policies
  • influences of current and historic tree management activities
  • setting management objectives for trees, including:
    • management metrics
- developing and working with industry benchmarks
- setting strategic objectives for trees for organisations and policies
- key stakeholders and their influences on tree policies, including:
  - identifying key stakeholders and their needs
  - assessing and evaluating stakeholder input and values
- analysing and developing tree management strategies
- tree policies and the legal framework, including:
  - legal parameters
  - impact of statutes on trees and policy development
  - local planning laws and their impact on tree policy development
  - compliance with policy planning requirements
  - legal implications of policies
  - seeking legal advice
  - policy design and styles
- local environment and tree selection for policy development, including:
  - edaphic and environmental preferences and limitations
  - rainfall infiltration and runoff
  - local and introduced tree species and their performance for inclusion in tree policies
  - regional implication of tree selection
  - taxonomic characteristics
- database development for tree species, including:
  - programs used for database design
  - structure and use of databases
  - data input of tree inventory and tree profiles
- key elements for policy determination, including:
  - hazard identification and mitigation
  - the significance of trees from an environmental, cultural or historic perspective
  - tree selection and use in the landscape
  - tree replacement strategy
  - street tree planting and effect on the urban landscape
  - tree removal and tree protection issues
  - tree inspections and assessments
  - tree pruning operations, infrastructure protection and power line clearance
  - environmental considerations and habitat protection
  - pest and diseases and their control
- communications strategies for seeking and providing feedback on draft policies
- developing, documenting and reviewing draft policies, including:
  - compiling and organising policy materials into a structure policy design
  - role and design of compliance programs
  - the continuous improvement process in policy development
- record keeping, reporting and policy development.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - access to an organisation requiring strategic tree policy development, or environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer with word processing, statistical and database software
- specifications:
  - procedures and processes used for the design of strategic tree policies
  - two strategic tree policies stipulated in the performance evidence
- relationships:
  - organisation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to identify and analyse aspects of tree biomechanics that affect the physical load and strength of trees, branches and anchorage in the ground. It requires the assessment of tree strength and the loads that occur, and the ability to assess factors that can weaken trees that increase the chance of failure.

The unit applies to individuals with highly specialised advanced theoretical and technical knowledge for professional work and research in arboriculture. They exercise advanced cognitive, technical and communication skills and demonstrate complete autonomy, judgement and adaptability in research and analysis for complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has analysed the structure and biodynamics of a minimum of five different trees, including performed the following:

- five static load tests, and
- five dynamic load analyses.

There must also be evidence that the individual has:

- determined existing physical loads affecting trees
- identified areas of high stress on trees and the factors that affect these areas of high stress
- assessed root plate environment for damage
- assessed history and effect of tree pruning operations on tree roots and stems
- determined presence and extent of tree defects
- assessed strength and material properties of tree structural components
- determined wind environment of tree
- determined surface area of structure exposed to wind
- determined crown surface area exposed to wind
- assessed aerodynamic drag factor of tree crown
- estimated primary loads occurring in seasonal climatic events
- determined wind-load of prevailing storms
- determined load associated with saturated foliage
- determined static load on trees for structural integrity testing as an estimate of a wind equivalent load
- calibrated static load testing instruments
- conducted static tests that must include:
  - loads to the tree
  - measures the trunk strength
  - assesses root plate anchorage
• monitored loads and forces using electronic equipment
• monitored trees to ensure loads are kept within safe limits to prevent damage
• maintained records of all data from static tests
• compared data against benchmarks from stable tree populations and prepared a report on structural integrity testing
• investigated tree biomechanics using dynamic methods of analysis
• reviewed complex models of tree dynamics analysis
• calculated mass of branches to determine degree of open-grown form of tree
• calculated vector of force on the tree
• determined tree dynamic response under defined wind loads
• investigated level of contribution of material properties in tree dynamics
• investigated the dynamic effect of branches on frequency and damping
• determined the level of contribution of form and morphology in tree dynamics
• reviewed suitability of invasive and non-invasive methods of testing
• evaluated and determined likelihood of structural failure
• confirmed level of anchoring potential of root system and stability of tree
• prepared a structural integrity report and provided to client.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• tree dynamics and impact of tree form and morphology
• tree stability and physical loads affecting trees, particularly in high stress environments
• root plate environment, including:
  • depth and consistency of soil
  • spatial limitations
  • site excavations and potential damage
• arboricultural activity and impact on tree structure and stability, including:
  • pruning operations to branches and roots
• presence and impact of defects on tree structure, including:
  • extent of decay and damage of trunk and root system
  • assessment of strength and material properties of structural wood
• biomechanical impact of wind on tree structure, including:
  • seasonal wind patterns, and tree exposure
  • surface area and tree structure
  • aerodynamic drag factor of tree crown in relation to trunk diameter and extent of hollowness
  • estimation of primary loads occurring in seasonal climatic events
  • severe wind-load due to storms and extreme weather conditions
  • load associated with rain and snow saturated foliage
• additional drag associated with saturated foliage
• open-grown form of tree
• testing principles for static load, including:
  • use and purpose of a static load on trees during structural integrity testing as an estimate of a wind equivalent load
  • calibrating static load testing instruments
  • limits of structural safety during a static testing
  • measurement of trunk strength
  • invasive and non-invasive methods of testing trees
• assessment of root plate anchorage in the ground
• methods and reasons for monitoring loads and forces on trees, including:
  • electronic monitoring
  • monitoring of tree to ensure loads are kept within safe limits
• value and purpose of benchmarks obtained from stable tree populations
• tree biomechanics studies using dynamic methods of analysis, including:
  • simple models of tree dynamics
  • complex models and finite element analyses
  • multimodal approaches representing dynamics of branches on trees
• calculations required for structural and biomechanical assessments of trees, including:
  • mass of branches
  • vector of force on trees
  • tree dynamic response
  • wind velocity and direction
  • statistical analysis and interpretation of test results
• dynamic effect of branch movement on tree stability and failure rate, including:
  • oscillation frequency
  • energy dissipation and damping effect of canopy structure
  • likelihood of structural failure
  • level of anchoring potential of root system
  • stability of tree
• records and reporting procedures for analysis of structural integrity testing.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an arboriculture work site that has the trees stipulated in the performance evidence
- resources, equipment and materials:
  - computer with word processing software
• wind environment statistics
• static load test equipment
• models of tree dynamics
• specifications:
  • test equipment manuals, standard procedures and quality standards for performing load tests
  • sample reports for the diagnostic test methods listed in the performance criteria.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:
• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to safely work within a laboratory environment, collect and identify wood decay fungi specimens from the field, prepare in-vitro cultures, and carry out primary experiments on fungi cultures. Work is performed using laboratory hygiene and safety procedures for sampling, sterilisation and cleaning of laboratory equipment and instruments.

The unit applies to individuals with highly specialised advanced theoretical and technical knowledge for professional work and research in arboriculture. They exercise advanced cognitive, technical and communication skills and demonstrate complete autonomy, judgement and adaptability in research and analysis for complex problems.

No licensing, legislative or certification requirements are to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed the following:

- conducted field identification of a minimum of ten wood decay fungi to generic level
- conducted field identification of a minimum of ten non-pathogenic fungi to generic level
- analysed the lifecycle, biology, ecology and effects of a minimum of ten saprotrophic wood decay fungi species on trees
- analysed the lifecycle, biology, ecology and effects of a minimum of ten pathogenic wood decay fungi species on trees
- collected, cultured, analysed and identified a minimum of five wood decay fungi to generic level.

There must also be evidence that the individual has:

- researched the role of microorganisms in the health of trees and forests
- researched the role and contribution of wood decay fungi to forest and tree health, and responses
- examined the taxonomy and evolutionary relationships of corticoid and polypore wood decay fungi
- investigated the role of fungal species on various hosts
- analysed lifecycle, biology, ecology and effects of wood decay fungi species
- examined relationships of fungal species with tree defects and failures
- analysed biosecurity implications of pathogenic fungal species
- reviewed state and federal biosecurity plans and procedures
- observed and evaluated signs and symptoms of fungi causing decay in trees
- maintained a record of the following for each mycological specimen:
  - location, size, and condition of wood decay fungi
  - presence of mycorrhizae
  - size, condition and extent of hollows and cavities
• documented details of environmental characteristics of fungal affected trees
• determined methods of dissemination and infection of adjacent trees and vegetation
• sampled wood decay fungi and mycoparasites from trees for in-vitro culture and identification
• selected, checked and fitted personal protective equipment and contamination prevention clothing
• decanted and prepared standard laboratory chemicals and materials
• prepared selective mycological culture media to grow and isolate field samples
• prepared field samples of fungi for culturing on media
• excised fungal specimens and applied to media
• maintained cultures and repeated excise procedures to isolate clean specimens
• prepared and maintained cultured samples for further testing
• updated records and securely stored evidence according to chain of evidence protocols
• prepared microscope slides of isolated cultures
• examined and identified cultured fungal samples to generic level
• recorded digital images of identified fungi
• performed laboratory assay tests to evaluate fungal characteristics
• documented experimental assay test results
• developed and maintained a mycology culture collection and submitted to government databases and culture collections according to procedures
• prepared a diagnostic report on a suspected emergency plant pest according to state and federal biosecurity procedures.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• microbiological organisms and their impact on the health of forests and trees, including:
  • bacteria
  • fungi
  • protozoa
  • algae
  • viruses
• fungi in the forest environment, including impact on:
  • biodiversity
  • tree nutrition
  • forest health
  • environmental biochemistry
  • pathology
• taxonomy and evolutionary relationships of corticoid and polypore wood decay fungi, including:
  • lifecycles, biology and ecology
• important pathogenic and saprophytic tree wood decaying fungi
• tree infections of tree components by fungal species and tree failure
• visual symptoms of decay and tree decline, including:
  • dieback
  • reduced growth rate and chlorosis
  • presence of basidiocarps
  • decayed wounds
  • hollows and cavities
• state and federal biosecurity plans and procedures, including:
  • biosecurity implications of known and threat fungal species
  • Australian Emergency Plant Pest Response Plan
• field identification of fungi and fungal infections of trees, including:
  • pathogenic fungi
  • non-pathogenic fungi
  • recording and describing location, size and condition of wood decay fungi
  • presence of mycoparasites
  • size, condition and extent of hollows and cavities
• environmental characteristics and growing conditions of trees affected by fungi, including:
  • site characteristics and site history
  • soil conditions
  • climate and microclimatic variables
  • proximity of adjacent trees and vegetation
  • movement of people and vehicles
  • potential impact on assets, property and landscape
• tree infection methods and introduction, establishment, spread, and susceptibility of trees
• collecting and sampling of fungi in the field, including:
  • field sampling techniques of wood decay fungi and mycoparasites
  • storage of collected samples
• standard laboratory techniques and safety when preparing, measuring and decanting chemicals and materials
• culturing fungi for identification in the laboratory environment, including:
  • species-specific media and growing environment for culturing fungi
  • techniques to prepare and extract field samples for culturing
  • methods of excising and inoculating media with specimens
  • isolating clean cultures from primary cultures
  • preparation and maintaining clean cultured samples
• laboratory assay tests for fungal species identification, including:
  • deoxyribonucleic (DNA) based assay techniques
  • growth rate
  • temperature range
• pathogenicity
• mycoparasitism
• documentation of assay test results
• laboratory identification of wood decay fungi, including:
  • procedures and techniques for the preparation of microscope slides of isolated cultures
  • identification of cultured fungal samples
  • use of guides, keys and reference materials for identifying fungi
• development and maintenance of culture collections
• the importance and procedures for chain of evidence protocols, including:
  • secure storage of digital and physical evidence
  • storing and recording field samples
  • maintaining accurate records for slides, cultures and DNA samples
  • digital imaging techniques and importance in evidence and record keeping
• maintaining fungi collections, including:
  • methods of submission to relevant government databases and culture collections
• record keeping, reports and documentation requirements, including:
  • state and federal biosecurity procedures
  • emergency plant pest (EPP) and PLANTPLAN guidelines.

Assessment Conditions
Assessment of the skills in this unit of competency must take place under the following conditions:
• physical conditions:
  • trees with fungal infections stipulated in the performance evidence
  • laboratory suitable for performing the tests stipulated in the performance evidence
• resources, equipment and materials:
  • computer with word processing software
  • digital imaging device
  • diagnostic tools, including sounding hammer, trowel, probe, cordless drill
  • soil testing equipment
  • digital dissection microscope 10x – 100x
  • compound microscope
  • laboratory equipment to perform aseptic techniques in a sterile environment
  • personal protective equipment and contamination prevention clothing
  • culture growing environment
• specifications:
  • access to standard procedures and quality standards for growing culture, performing tests and conducting assessments
  • access to reference materials for fungi identification.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to research an urban forest for its processes, benefits, values and impact on climate change, and produce a report on its performance.

The unit applies to individuals with advanced theoretical and technical knowledge and skills for professional or highly skilled work and/or further learning in one or more disciplines or areas of practice. This unit applies to individuals with advanced cognitive, technical and communication skills to provide specialist advice and analysis, and generate and transmit solutions to complex problems. They demonstrate autonomy, well-developed judgement, adaptability and responsibility as a practitioner or learner.

No licensing, legislative or certification requirements are to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has researched the performance of an urban forest, including:

- investigated urban forest processes, including:
  - elemental components of urban forests
  - role of urban forests as a component of urban ecosystems
  - threats and resilience of urban forests
  - impact of urban forests on hydrology and water quality
  - relationship of trees on soil biota and chemistry
- determined contribution of trees towards rhizosphere biodiversity, bioremediation and soil health
- investigated energy conservation and microclimate modification systems of trees and urban forests
- researched and analysed heat island effect of an urban area
- evaluated health, social and psychological benefits of urban forests
- prepared a preliminary report on benefits of urban forests
- researched methods and technologies for spatial mapping of urban forests
- analysed carbon sequestration process in urban forests
- analysed methods for sampling urban forests
- evaluated urban forest valuation methodologies
- prepared a preliminary report on valuation of an urban forest
- investigated contribution of urban forest to carbon cycles
- determined local climate, soil and management factors affecting forest growth and carbon sequestration
- investigated forest carbon sequestration to help mitigate climate change
- prepared a report evaluating the contribution of forest for mitigation of climate change
- prepared a report on social, environmental, economic and climatic values of urban forests
• determined challenges of increased urbanisation and urban densification on urban forests
• determined potential benefit of urban forest to help mitigate climate change
• compiled reports and investigations and prepared a final report on urban forest performance, which must include multi-disciplinary solutions to challenges of urbanisation on urban forests.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• principles and impact of urban forest on our ecological and social environment, including:
  • elemental components of urban forests
  • role of urban forests as a primary component of urban ecosystems
  • urban forests in cities, their threats and resilience
• trees and their impact on hydrology and water quality, including:
  • regulation of hydrological processes
  • retention of precipitation
  • mitigation of salinity
• trees and their impact on soils, including:
  • relationship of soil biological network
  • soil chemistry and structure
  • soil stabilisation and erosion control
• interactions of trees in their growing environment and urban setting, including:
  • contribution of trees towards rhizosphere biodiversity, bioremediation and soil health
  • energy conservation and microclimate modification systems of trees and urban forests
  • heat island analyses of an urban area
  • health, social and psychological benefits of urban forests
• capturing, recording and assessing urban forest data and values, including:
  • methods and technologies of spatial mapping of urban forests
  • the carbon cycle, urban forests and carbon economics
  • methods for sampling urban forests
  • urban forest valuation methods
  • contribution of urban forest to carbon cycles and mitigation of climate change
  • influences of climate, soil and management strategies affecting forest growth and carbon sequestration
  • evaluation of urban forest and benefits to climate change
• social, environmental, economic and climatic values of urban forests, including:
  • urbanisation and urban densification on urban forests development
  • solutions to challenges of urbanisation on urban forests.
Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - urban forest and urban environment
- resources, equipment and materials:
  - computer with word processing and statistical software
  - measurement and data collection tools
- specifications:
  - standard procedures and quality standards for performing tests and conducting assessments
  - urban forest valuation methods and techniques.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to conduct an entomology research project requiring the collection and documentation of insects affecting trees. Important research themes to be investigated include the interrelationships of insects on their environment, forests and trees and the impact they have on economics, health of trees and the control strategies employed to contain infestations.

The unit applies to individuals with highly specialised advanced theoretical and technical knowledge for professional work and research in arboriculture. They exercise advanced cognitive, technical and communication skills and demonstrate complete autonomy, judgement and adaptability in research and analysis for complex problems.

No licensing, legislative or certification requirements are to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted entomological research with a focus in any two of the following research themes:

- conception, design, and implementation of safe and efficacious control strategy
- research and development of alternative pest management strategies
- investigative study on the longevity, infectivity and virulence of tree pests
- monitoring and assessment of infestation levels of a pest outbreak
- design and implementation of biocontrol strategies using predators, parasitoids and entomopathogenic fungi
- design and implementation of methods for monitoring and assessing population dynamics and distribution of tree pest species
- implementation of a comparative ecological field study investigating efficacy and compatibility of pest insect control strategies
- research and test a management plan for a phytophagous insect
- research and test a breeding program for a beneficial insect
- research three model systems to examine tritrophic effects of tree susceptibility
- design, implement, investigate, evaluate and report on tritrophic interactions
- investigate preference and survivability of insects in a tree environment
- design projects investigating the subsequent risk analysis and tests required
- development of a tree pest survey strategy
- research and report on geographical or climatic distribution of insect pests
- coordination with an international and domestic multidisciplinary collaborative research initiative.

There must also be evidence that the individual has:

- investigated anatomical, morphological and taxonomical features of insects
- examined the interaction of insects with trees
- researched annualised population and generational behaviour of insects
• developed and documented a reference collection of a minimum of one hundred specimens of arboricultural related insects and vectors from at least four orders of insects, annotated with the following:
  • date of collection
  • location where insect was collected
  • host tree/plant on which it was collected/feeds
  • name of insect to at least the level of genera
• designed and developed a database to store information of tree pests and vectors
• compiled host climatic and geographic distribution data
• investigated and identified natural antagonists, predators and parasitoids of insects
• investigated phytophagous and damaging insect–tree dynamics
• investigated symbiotic/beneficial insect–tree dynamics
• investigated physiological responses of tree resistance to insects
• investigated host–pathogen and pathogen–vector interactions
• evaluated conditions affecting selection of host trees by subcortical feeding insects and factors associated with attack
• investigated and assessed insect transmission of disease
• evaluated multi-trophic interactions between host plant-pest-pathogen/parasitoids
• determined economic costs of insect damage to trees
• evaluated insects as environmental indicators of health and condition
• determined insect biological hazards
• investigated impact and effects of control strategies on target and non-target organisms
• investigated insect resistance to pesticides
• investigated and evaluate biological control agents of tree pest control
• researched and evaluated plant health management options to manage insect damage
• collected, tabulated and analysed data for publications
• determined relevance of results to arboriculture
• compiled and communicated research and results in a research paper according to standards expected of professional technical peer-reviewed journal
• submitted research paper for review
• reviewed feedback from reviewer and amended paper
• communicated key facts and conclusions to industry in an article or presentation.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• research skills and designing research projects, including:
  • investigative skills and monitoring techniques
  • defining the scope and purpose of research activity
  • data collection, management and storage
  • data processing, analysis and modelling
statistics and data interpretation
- design and development of formal research papers and the process of peer-reviewed publication
- design and development of industry papers and presentations for communication of research and findings
- entomology and the impact of insects on our environment, including:
  - anatomical, morphological and taxonomical features of different classes of insects
  - insect behaviour, ecology and nutrition and their interaction with trees
  - population and generational behaviour and phenology of insects and impact on plants and trees over time
  - host, climatic and geographic distribution of insects
  - insects as indicators of environmental health
- collecting, storing and documenting insect reference collections, including:
  - catching and preserving techniques
  - taxonomic and naming conventions for insects
  - tagging and labelling specimens
- design and construction of databases and data entry procedures
- insects and their economic impact on society and health of trees, including:
  - natural antagonists, predators and parasitoids of insects
  - phytophagous and damaging insects on tree dynamics
  - symbiotic and beneficial insects and impact on tree dynamics
  - natural responses of trees to insect invasion
  - host-pathogen and pathogen-vector interactions
  - subcortical feeding insects and conditions for selecting host trees
  - factors associated with successful attack
  - insect as a vector for transmission of disease
  - insects as biological hazards
- a systems approach to multi-trophic interactions between host plant-pest-pathogen or parasitoids
- pest insect control strategies, their advantages and disadvantages, including:
  - mechanical control
  - chemical control and pesticide resistance
  - biological control agents
  - managing the environment and tree health to offset infestations
  - integrated pest management (IPM)
- direct and indirect impact of chemical pesticides and biocontrol agents on target and off-target organisms.
Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - trees and forests with insect populations
- resources, equipment and materials:
  - computer with word processing, database and statistical analysis software
  - digital imaging device
  - diagnostic tools, including sounding hammer, trowel, probe, cordless drill
  - soil testing equipment
  - digital dissection microscope 10x – 100x
  - compound microscope
  - microtome, staining and slide mounting equipment
  - histochemical stains
- specifications:
  - standard procedures and quality standards for performing tests and analysis
  - reference materials and keys for insect identification.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contextualised diagnostic test results for each of the following five primary domains for trees:

- anatomy
- physiology
- pathology
- dynamics
- edaphic environment.

There must also be evidence that the individual has:

- conducted a literature review of peer-reviewed research and relevant case studies
- operated diagnostic testing equipment
- interpreted underpinning scientific principles of test processes
- determined the diagnostic assumptions and limitations of the testing process for the selected diagnostic tool
- analysed quantification, variance and tolerance requirements
- investigated and verified calibration baselines for diagnostic equipment
- verified calibration processes have been performed on test equipment
- selected testing processes for each of five primary tree domains
- selected diagnostic tools and contextualised the testing process for each domain
- defined research method to be used
- conduct a literature review for current research and science of each primary domain
- established efficacy of the test for each primary domain
- conducted a diagnostic test project
- analysed test results for performance metrics of selected diagnostic tools
- interpreted results against benchmark and anticipated ranges
- confirmed predictive responses in terms of post-treatment to pre-treatment results
- articulated meaning of results within context of primary domain
- provided an informed prognosis
- researched management options and lag time
- formulated a report documenting management plans.

**Knowledge Evidence**

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- conducting literature reviews for peer-reviewed documentation, scientific research and case studies
- diagnostic testing processes and test equipment, and their purpose and functional operation, used for tree domains, including:
  - limitations of the testing process
  - assumptions and limitations of tools used in diagnostics
  - standardising test equipment and determining baselines and calibration
  - verifying efficacy of testing methodologies
- primary tree domains and testing regimes and diagnostics used for each, including:
  - tree anatomy
  - tree physiology
  - tree pathology
  - tree dynamics
  - the edaphic environment of trees
- developing scientific research projects and selecting a research method, including:
  - setting goals and outcomes for research
  - hypothesis testing
  - observational research
  - measurement of functional relationships
  - establishing performance metrics and normal anticipated ranges of test result
- test results; their documentation and interpretation, including:
  - diagnostic test projects and processes
  - contextual understanding of results
  - statistical analysis of results
  - prognostics
  - use of diagnostic outcomes in the development of management plans.

**Assessment Conditions**

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
• trees and forests or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • computer with word processing and statistical analysis software
  • diagnostic tools for selected testing
  • access to diagnostic test equipment and operating instructions

• specifications:
  • standard procedures and quality standards of performing diagnostics tests and analysis
  • reference materials, reports and scientific literature for reviews.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed an urban forest management framework for a specified geographic location, including:

- investigated models of urban forest management
- established key performance metrics and outcomes from client brief
- determined data sets required for objectives of managing the resources according to stakeholder needs
- analysed urban forest for resources
- determined agents and conditions affecting urban forest health
- analysed species spatial geography using geographical information systems (GIS)
- determined canopy density targets
- determined objectives and outcomes of urban forest to community
- determined asset value of trees and forest according to client brief and industry benchmarks
- performed cost-benefit analysis of forest assets
- analysed variation in asset value within variables
- analysed and reviewed policy documents for meeting performance metrics and desired outcomes
- determined statutory, liability and risk affecting urban forests
- identified stakeholder requirements and perceptions
- evaluated extent of impact and outcomes of proposed policy documents
- recorded and reported policy determinations on tree assets
- documented an urban forest management policy
- developed a conceptual framework for urban forest management
- determined requirements for street tree master plans according to client brief
- set vision and objective statements
- determined quantifiable goals
established and maintained inventories and databases according to client brief
developed implementation and operational plans
developed and documented an urban forest management plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- urban forests and their benefits to community, including:
  - models of urban forest management
  - objectives, outcomes and performance metrics of urban forests
  - maintaining urban forest health
  - tree anatomy, physiology, pathology, tree dynamics and edaphic environment in relation to urban forest management
  - urban forest as a resource
- quantifying the urban forest as an asset, including:
  - measuring and data sets
  - spatial analysis of trees and forests, and the use of geographical information systems (GIS)
  - canopy density targets
  - asset value of single tree
  - asset value of forest
  - value criteria
  - relevant benchmarks
  - cost-benefit analysis
  - competing views of forest values
- community objectives and outcomes of urban forests, including:
  - social
  - environmental
  - public health
  - economic
  - aesthetic terms
- measuring the performance of urban forests, including:
  - performance metrics
  - stakeholder requirements and perceptions
- design and development of urban forest policies and management plans, including:
  - conceptual framework of managing urban forests
  - street tree master plans
  - vision statements and their role in management plans
  - setting and documenting achievable and quantifiable goals and objectives
- maintaining accurate and accessible tree inventories, including:
Assessment Requirements for AHCARB809 Develop an urban forest management framework

September 2020

- mapping and managing data
- data management software
- inventories and databases

- setting and planning the implementation of management plans, including:
  - urban forest operational plans
  - the urban forest management plans.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - an urban community with trees and forests or an environment that accurately represents workplace conditions

- resources, equipment and materials:
  - computer with word processing software

- specifications:
  - standard procedures and quality standards for developing urban forest plans
  - client brief.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to analyse the edaphic interactions of trees and structures through investigations into soil characteristics and effect on tree and structure stability, tree roots and interactions with structures, and their relationship resulting in potential tree and structural failure.

The unit applies to individuals with highly specialised advanced theoretical and technical knowledge for professional work and research in arboriculture. They exercise advanced cognitive, technical and communication skills and demonstrate complete autonomy, judgement and adaptability in research and analysis for complex problems.

No licensing, legislative or certification requirements are to this unit at the time of publication.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:
- AHCARB804 Analyse tree structure and biomechanics.

**Foundation Skills**

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.
Skill | Description
--- | ---
Reading | • Identify and interpret relevant information from complex texts, reports, maps and plans to formulate a detailed understanding of soil characteristics and impact on trees
Writing | • Create complex arborist reports, demonstrating control over a range of writing styles and using industry-specific language appropriate for target audience
Numeracy | • Interpret complex numerical data and use complex formulae to measure and calculate volumes and mass of soils and structures for impact on tree roots

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has analysed the edaphic interactions of trees and structures for a specific site and has prepared a minimum of two reports, which must include:

- a report on damage to structures by tree roots
- a report on the stability of tree with a defective or damaged root plate.

There must also be evidence that the individual has:

- investigated soil conditions that contribute to structure and tree stability, including:
  - angle of repose of soil materials
  - soil plasticity
  - impact of soil moisture on soil cohesion and plasticity
  - modes of soil liquefaction
- investigated and tested soils for properties affecting soil conditions, including:
  - measured soil moisture content and field capacity
  - determined soil texture
  - assessed level of soil cohesion
  - determined shear strength of the soil
  - investigated load bearing capacity of soil
  - calculated mass of the soil plate
- determined root morphology, division and distribution and amount of buttressing of tree
- determined species characteristics for development of tap root system
- determined anatomical features of tree roots and identified tree roots for a given tree
- conducted research tests to determine forces and pressures exerted by trees through the soil
- estimated and measured dimensions of roots exerting a force on a structure
- calculated total surface area of the roots exerting a force on a structure
- calculated force exerted by roots per unit of surface area of structure
• calculated total force exerted by roots of a given surface area
• measured and determined volume of structure
• researched and calculated mass of structures
• determined impact of gravity on mass
• determined effect of leverage on the forces exerted by tree roots on structure
• determined factors of root–soil matrix interactions
• investigated area of contact between root and soil
• investigated elasticity, tensile strength and breaking stress of roots
• investigated root cross-sectional morphology
• assessed root plate for damage, deficiencies or defects that may contribute to tree failure
• estimated impact of static and dynamic testing for root plate stability
• evaluated possible root failure by root breakage
• evaluated possible anchorage failure by soil breakage or slippage
• investigated and assessed:
  • effects of increasing mass
  • methods for, and effects of, increasing the modus of rupture
  • effects of use of curved structures
  • effects of soil mass and friction
  • effects of use of anchors, braces and props
• compiled investigations and assessments into reference portfolio
• created a report of potential tree damage to structure and provided design suggestions to mitigate damage
• reviewed root plate assessment, prepared final report on stability of tree and provided design advice to mitigate potential tree failure
• created an expert witness report on potential structure or tree stability
• discussed installation and protection measures with project personnel
• negotiated and resolved anomalies in installation and protection measures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• impact of soil on the stability and structural integrity of structures and trees, including:
  • angle of repose of soil
  • soil plasticity
  • soil moisture content
  • field capacity of soil
  • effects of soil moisture on soil cohesion and plasticity
  • modes of soil liquefaction
• testing soils for performance characteristics and soil stability, including:
  • soil texture
  • soil cohesion
• soil moisture and field capacity
• shear strength of soils
• load bearing capacity
• calculating mass of soil plate

• tree root structures and their impact on soils and stability, including:
  • root morphology
  • root division
  • root distribution
  • buttressing
  • species development of tap root systems
  • identification of tree roots based on anatomical features

• pressures exerted by tree roots, including:
  • experimental modelling of tree root damage
  • testing tree roots impact on structures and soils
  • direct and indirect forces and pressures exerted in soils by trees
  • techniques and methods of estimating and measuring dimensions of roots
  • factors of root–soil matrix interactions
  • area of contact between root and soil
  • elasticity of roots
  • tensile strength of roots
  • breaking stress of roots
  • root cross-sectional morphology

• calculations for determining forces exerted by tree roots, including:
  • total surface area of the roots exerting forces on structures
  • forces exerted by roots per unit of surface area of structure
  • total force exerted by roots of a given surface area
  • measurement of volume of structures
  • calculating the mass of structures and the impact of gravity on mass
  • effect of leverage on the forces exerted by tree roots onto structure

• tree root health and condition and impact on tree stability, including:
  • size of root plate and extent of root plate damage
  • extent of root plate deficiencies
  • extent of root plate defects
  • impact of static and dynamic testing for root plate stability
  • likelihood of root failure by root breakage and failure of root plate
  • likelihood of anchorage failure by soil breakage or slippage

• considerations of structural design and development, and tree support to mitigate potential tree or structure damage, including:
  • effects of increasing mass of structure
  • effects of structure design and curvature of shape on strength of structures
• effects of soil mass and friction
• effects of increasing the modus of rupture
• effects of use of tree support mechanisms
• Australian standards relevant to trees on development sites
• structure designs for mitigation of tree damage and failure
• tree protection measures
• creating reference portfolios of research and investigations, including annotations and calculations
• documenting and reporting procedures, report preparation and communicating results of analysis, including:
  • test results and assumptions
  • expert witness reports, their purpose and design
  • using the correct language in reports and reporting
• fundamentals of the concepts, basic science and technology of structural engineering, construction and architecture as relates to arboriculture and impact of trees on structures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

• physical conditions:
  • a construction or development site with trees and structures or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • computer with word processing software
  • digital imaging device
  • diagnostic tools, including sounding hammer, trowel, probe, cordless drill
  • soil testing equipment
  • digital dissection microscope 10x – 100x
  • compound microscope
  • microtome, staining and slide mounting equipment
• specifications:
  • standard procedures and quality standards for performing soil analysis, tests and analysis on roots and structures
  • reference materials, reports and literature relevant to investigations and research into engineering, construction and architectural interactions with trees.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

• arboriculture vocational competencies at least to the level being assessed
• current arboriculture industry skills directly relevant to the unit of competency being assessed.

Application

This unit of competency describes the skills and knowledge required to source information for weed, pest and disease control planning, determine long-term control strategies, provide input to other planning processes, determine scheduling and key responsibilities, monitor, adjust and evaluate control strategies and record results.

The unit applies to individuals who apply specialised skills and knowledge to the planning and management of long-term weed, pest and disease control in crops, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has planned and managed two long-term weed, pest and disease control in crops operations on at least two occasions and has:

- monitored information on pest and weed numbers, density and control
- analysed and extracted information from a range of sources and discussions
- planned and managed long-term weed, pest and disease control including developing a plan and amending the plan during the operations
- established processes or strategies, procedures and controls for long-term weed, pest and disease control
- considered the impacts and risks associated with long-term weed, pest and disease control methods
- demonstrated use of technology to improve efficiency
- assessed crop end use and agrochemical maximum residue limits (MRL) and selected appropriate agrochemical
- explained, and delivered instructions about the plans and scheduling of the weed, pest and disease control operations to both staff and contractors, as well as suppliers and customers
- recognised poor growth and lack of vigour caused by weeds, pests and disease rather than nutrient deficiency, with consideration to biosecurity
- evaluate and adjust appropriately to environmental implications and workplace health and safety hazards
- interpreted information on pest and weed numbers, density and control
- used records and observations to evaluate and report on weed, pest and disease control strategies
- planned land use incorporating long term weed, pest and disease control strategies
- followed workplace health and safety and biosecurity policies.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest and weed species, including their life cycles and reproduction or multiplication capability
- pest, weed and disease control strategies including integrated pest management
- effects on crops of weeds, pests or diseases including:
  - competitive effects on crop yield
  - threshold levels
  - effects of alternative methods of control
- role of technology in improving efficiency
- agrochemical MRL for domestic and export, primary and secondary product outcomes
- relevant legislation and regulations relating to:
  - workplace health and safety
  - environment and biosecurity
  - contractor engagement
  - chemical use and application
  - vehicle and plant use
- environmental controls and codes of practice applicable to the workplace, and to the weed, pest and disease control operations
- sound management practices and processes to minimise noise, odours, and debris from weed, pest and disease control operations
- workplace biosecurity policies.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
  - historical data and organisational records
  - information regarding the characteristics of the crop planned for, or under production
  - information regarding the local geography, soil and climatic conditions
  - information regarding pesticide or herbicide use, alternative methods and non-chemical preventative methods
- specifications:
  - pesticide or herbicide application machinery and equipment operation and maintenance manuals and manufacturer specifications
  - agrochemical MRL for domestic and export, primary and secondary product outcomes
  - legislative and regulatory requirements applicable to pesticide or herbicide application
- industry and workplace biosecurity procedures applicable to pesticide or herbicide application
- relationships:
  - managers, operators and contractors
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to cost a project.

All work must be carried out to comply with organisational requirements, work health and safety legislation and codes, sustainability practices and in consultation with the management team.

This unit applies to individuals who take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify resources for a project
- investigate options for material supplies, services, contractors and consultants
- research prices for required resources
- calculate costs for the project
- document a summary of project costs.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant State and Federal legislation, awards, enterprise agreements and management policies relating to the project
- project costing technology and software
- current pricing structures and options for material supplies, services, contractors and consultants.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to operate within a budget framework.

All work must be carried out to comply with organisational requirements, legislation and codes and in consultation with the management team.

This unit applies to individuals who take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify typical information to be included in a budget
- review budgeted income and expenditure and compare to actuals
- record transactions and allocate them to cost and income categories
- identify and report budget variations
- review production and expenditure plans to meet financial targets.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- income and expenditure categories
- budgeting procedures and templates
- taxation and accounting requirements for recording financial transactions
- costing and forecasting mechanisms
- cash flow analyses and records’
- recording systems
- records of receipts and expenditure
- work reports
- factors that impact upon the timing of sales and purchases, including taxation, GST, and market conditions.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.
Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has administered the finance, insurance and legal requirements of a business covering a period of at least six months, including:

- interpreted financial reports and business data
- maintained accounts
- administered the legal requirements of the business
- processed and maintained the insurance requirements for the business
- identified sources, types and cost of finance
- prepared and processed the application for finance or investment.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- obligations imposed by the choice of the business structure
- award and enterprise agreements
- insurance requirements, including:
  - workers' compensation
  - public liability
  - superannuation
  - life
  - personal accident and sickness
  - buildings
  - plant
- sources of finance, including:
  - banks
  - merchant banks
• building societies
• credit unions
• co-operatives
• finance companies
• solicitors
• accountants
• private treaty
• business and financial data, including:
  • balance sheets
  • profit and loss statements
  • production yields
  • sales
  • income
  • security
  • assets and liabilities
  • cash flow performance
• taxation and account keeping requirements.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • financial, insurance and legal business records covering a period of at least six months
  • access to legislation and information relevant to insurance and finance
  • office equipment and resources.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has costed at least one project for a business, including:

- identified resources for a project
- investigated options for material supplies, services, contractors and consultants
- researched prices for resources
- calculated costs for the project
- documented a summary of project costs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- state/territory and commonwealth legislation and management policies relating to the project
- project costing technology and software
- current pricing structures and options for material supplies, services, contractors and consultants relevant to work role.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer based technology to research goods and services
  - communications technology to request quotes for services.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated effectively within a budget framework for a period of at least three months (a financial quarter), using a software application or spreadsheet, including:

- identified information to be included in a budget
- reviewed budgeted income and expenditure and compared to actuals
- recorded transactions and allocated them to cost and income categories
- identified and reported budget variations
- reviewed production and expenditure plans to meet financial targets.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- income and expenditure categories
- budgeting procedures and templates
- taxation and accounting requirements for business
- costing and forecasting mechanisms
- cash flow analyses and records
- financial recording and reporting systems
- records of receipts and expenditure
- factors that impact upon the timing of sales and purchases, including taxation, goods and services tax (GST), and market conditions.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
• skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • access to business financial records that cover a period of at least three months.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has actively participated in an e-business supply chain for one business, including:

- effectively used e-business technology
- developed procedures and systems for an e-business process
- implemented an e-business process
- met timelines required by the e-business supply chain
- monitored and reviewed e-business systems.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- entire supply chain for a business, including from raw materials to producers, component suppliers, manufacturers, wholesalers, third-party service providers, retailers, customers and recyclers, plus freight, distribution and cash flow
- technology hardware and software requirements of the e-business supply chain
- protocols for electronic data access and interchange
- protocols for electronic funds transfer
- protocols for e-business legal and security issues.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
- e-business technology suitable to business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine work requirements
- develop and implement strategies to manage workforce performance
- prepare task descriptions
- arrange employment of workforce members
- implement work health and safety policies, procedures and priorities
- review labour productivity
- manage the performance of staff
- implement procedures for the administration of staff records
- manage industrial relations.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- task descriptions
- equal opportunity and equal employment opportunity legislation
- work health and safety legislation
- relevant industrial awards
- performance management approaches
- personnel management strategies
- employee induction programs
- contracts of employment
- unfair dismissal legislation
- job specifications
- interviewing procedures.
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research the details of the quoted service and clarify with the client
- identify requirements for estimate, quote or tender including format, specifications and deadline for submission
- identify and cost the resources and services required to fulfil the tender and check for availability
- investigate options for supplies, services, contractors and consultants with current pricing structures and availability
- develop a work schedule with timelines and expenditure
- consider potential problems and risks and develop contingency plans
- develop detailed costing sheets with the final quoted cost, including an estimated margin for risk
- submit the completed tender to the client with supporting information including details of organisations previous work and client feedback
- seek feedback from the client to ensure information supplied is sufficient.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant State and Federal legislation, awards, enterprise agreements and management policies relating to labour hire and employment terms
- current pricing structures and options for supplies, services, contractors and consultants
- enterprise and industry standards and practices for formatting, organising and presenting financial and quantitative information
- business ethics in relation to confidentiality and the tendering process.
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed enterprise staff requirements over a production cycle of at least six months, including:

- prepared job/task descriptions
- arranged employment of workforce members
- developed and implemented strategies to manage workforce performance
- implemented work health and safety policies, procedures and priorities
- reviewed labour productivity
- managed the performance of staff
- implemented procedures for the administration of staff records
- managed industrial relations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of job/task descriptions
- equal opportunity and equal employment opportunity legislation
- work health and safety legislation
- industrial awards relevant to enterprise activity
- performance management approaches
- personnel management strategies
- employee induction programs
- requirements for developing contracts of employment
- unfair dismissal legislation
- interviewing procedures.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- specifications:
  - access to legislation, regulations and guidelines for employment
- relationships:
  - access to employees and/or contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to develop and implement business structures and relationships for a family based primary production business.

This unit applies to individuals who participate in the establishment of a family based primary production business and communicate the roles and responsibilities of family members within that business. They take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

All work must be carried out to comply with organisational requirements, work health and safety legislation and codes, sustainability practices and in consultation with the management team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed and implemented family business structures and relationships for at least one rural, family business including:

- establishing goals for business structure and relationship
- assessing options to establish the business structure
- preparing a succession plan
- establishing roles and responsibilities
- preparing or updating wills
- developing conflict and stress management strategies
- reviewing performance about business goals and relationships.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation and regulations relevant to family business
- family business planning
- succession planning
- organisational policies, plans and procedures
- principles of effective communication, negotiation and conflict resolution
- principles and techniques that utilise feedback to achieve positive outcomes
- rural networks and support groups
- stressors in a rural, family business environment
- stress management strategies.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - access to a rural, family business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to market products and services, including analysing data, investigating alternative marketing strategies for a product or service, developing marketing plans and implementing a marketing strategy for an organisation.

This unit applies to those who market products and services, and who take personal responsibility and exercise autonomy in undertaking complex work. They analyse information and exercise judgement to complete a range of advanced skilled activities.

All work must be carried out to comply with organisational requirements, work health and safety legislation and codes, sustainability practices and in consultation with the management team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

4. Determine promotional strategies

- 4.1 Prepare and record detailed plans for promotional activities
- 4.2 Outline objectives, level of exposure and available markets
- 4.3 Ensure strategies take account of time management and scheduling issues, and resource constraints
- 4.4 Create promotional materials that enhance the product and commercial presentation
- 4.5 Record and communicate priorities, responsibilities, timelines and budgets for promotional activities

5. Implement marketing activities

- 5.1 Schedule planned marketing activities within appropriate timeframes
- 5.2 Develop measurable performance targets that meet business plan objectives
- 5.3 Organise distribution channels and ensure product and service information is accurate and readily available to clients
- 5.4 Implement marketing activities within budgetary constraints to meet legal, ethical and enterprise requirements

6. Evaluate marketing performance

- 6.1 Review the established marketing objectives to ensure they remain viable
- 6.2 Make an objective assessment of the marketing plan and its implementation by comparing current activity against the established objectives
- 6.3 Assess product, pricing and distribution policies in relation to market changes, marketing objectives and enterprise requirements
- 6.4 Identify areas of positive marketing performance and take corrective action to remedy poor marketing performance
- 6.5 Document and distribute information for continual analysis and effective planning management

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has marketed at least one product or service, including:

- collected, analysed and presented data about the product or service, in the internal and external business environment
- identified the marketable features of the product or service and potential markets
- assessed alternative marketing strategies and techniques to meet business plan objectives
- evaluated performance targets and recommend modifications or improvements
- implemented and evaluated the marketing strategy
- planned promotional activities
- monitored pricing and distribution policies to improve market performance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- markets specific to the product or service, such as wholesalers; retailers; exporters; local, national and/or international customers
- sales networks and distribution systems, customer trends and preferences, relevant to product or service
- financial management and budgeting practices
- price risk management
- performance evaluation measures for relevant product or service
- competitors’ strengths and weaknesses
- customer relations policies
- enterprise goals, objectives and directions
- sales and marketing principles and practices
- principles of trend analysis
• legal issues that affect marketing activities (trade practices, Fair Trading Acts, Sales of Goods Acts)
• demographic studies and their application in the development of a marketing plan.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • products or services to be marketed
  • access to relevant market information
• specifications:
  • legislation, regulations and guidelines for marketing and selling products and/or services.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has negotiated and monitored at least one contract with a person or entity external to the enterprise, including:

- established agreed terms and conditions with the person or entity
- negotiated to obtain fair outcomes
- documented the contract
- monitored the performance of the contract.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- contract and commercial law applicable to the type of agreement
- types of contracts used within the enterprise, including employment contracts and services contracts
- typical considerations taken into account when developing a contract, including:
  - current state/territory and Commonwealth legislation for employment and taxation
  - work health and safety in terms of duties of employers, employees, suppliers and contractors
  - hazardous substances and dangerous goods
  - environment protection
  - equal opportunity
  - equal employment opportunity
  - affirmative action standards
  - certification requirements
  - license, patent or copyright arrangements
  - quality assurance procedures
  - emergency procedures
• processes of formulation and negotiation of contracts
• enterprise business policies and procedures for maintenance of confidentiality.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • access to information about contracts and relevant contract/employment legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared an estimate, quote or tender for at least one project, including:

- clarified details of requirement with client
- investigated options for supplies, services, contractors and consultants with current pricing structures and availability
- developed a work schedule with timelines and expenditure
- developed detailed costing sheets with the final quoted cost, including an estimated margin for risk
- submitted the completed tender to the client with supporting information including details of organisation’s previous work and client feedback
- sought feedback from the client to ensure information supplied is sufficient.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- state/territory and Commonwealth legislation, awards, enterprise agreements relevant to project
- enterprise policies relating to labour hire and employment terms
- current pricing structures and options for supplies, services, contractors and consultants
- enterprise and industry standards and practices for formatting, organising and presenting financial and quantitative information
- ethical considerations in relation to confidentiality and the tendering process.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
• skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • access to information about, and costs of, supplies and services, relevant to project.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed and reviewed a business plan for at least one enterprise, including:

- set strategic goals, targets and directions for the enterprise
- determined clear and measurable indicators of operational performance
- identified and designed risk management strategies
- developed appropriate operational plans
- documented the business plan
- monitored the business plan to identify strengths, weaknesses and areas for improvement.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- profit and loss and cash flow systems
- forecasting trends in expenditure and production for an enterprise
- communication techniques typically used to negotiate business strategies and directions
- risk management strategies relevant to the enterprise
- marketing strategies relevant to the enterprise
- measures of operational performance
- financial and operational systems and resource considerations relevant to business planning
- logical and analytical methods to interpret and analyse financial reports
- industrial relations, taxation, corporate and industry legislation, environmental and work health and safety legislation as they relate to the enterprise
- capital investment analysis.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - access to business records for an enterprise.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored and reviewed the performance of at least one business, or part of, including:

- identified, gathered and analysed data relating to enterprise performance
- developed realistic performance indicators
- reviewed operations against performance indicators
- monitored resources
- assessed sustainability of resource use
- planned to improve business performance by addressing results of review.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- markets, relevant to enterprise
- financial analysis techniques, including:
  - benchmarking
  - cost benefit analysis
  - 'what if?' analyses
  - time series and trend
  - expenditure and revenue ratios
  - break-even analysis
  - accounting standards
  - cash flow schedules
- types of data analysed to indicate business performance, including:
  - financial indicators
  - non-financial indicators
organisational structures, including:
  - management processes
  - reporting arrangements
  - decision-making authorities
  - financial accounting procedures
- legislative requirements relevant to the operations of the enterprise
- environmental conditions, positive environmental practices and negative impact minimisation measures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:
- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - access to business records for an enterprise.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared and monitored the budget of at least one business activity and prepared a financial report that covers at least six months of business activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how budgets and financial reports are formulated and presented
- audience for financial reports, including:
  - taxation office
  - financing agencies
  - boards of management
  - committees
  - councils
  - executive management
- financial management systems used within the business
- budget analysis and reporting processes
- standards for organisational recordkeeping and audit requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
- access to financial records for a business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed the finance, insurance and legal requirements of at least one business, including:

- interpreted financial reports and business data
- maintained basic accounts for the business
- processed and maintained the insurance requirements for the business
- identified sources, types and cost of finance
- prepared an application for finance or investment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation and regulations relevant to business
- legal requirements related to insurance, including WorkCover
- risk assessment processes
- cost/benefit analysis processes
- opportunity cost calculation
- finance processes utilised within the business
- taxation and account keeping requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
• access to financial and insurance records for a business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed and reviewed an enterprise strategic plan for at least one business, including:

- determined the scope and desired business outcomes of the plan
- analysed the competitive environment
- documented performance measures to address all key aspects of enterprise performance
- evaluated opportunities and the viability and feasibility of the production, business and marketing plans
- documented the plan
- communicated the strategic direction to employees
- reviewed business activity and made adjustments to meet requirements of the plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the market in which the enterprise operates:
  - market forces
  - resource availability and accessibility
  - competitors
- business structures for similar enterprises
- business analysis and forecasting
- value-adding concepts, relevant to the enterprise
- enterprise planning methodologies
- data collection and analysis methods
- risk management techniques
- legislation and by-laws relevant to the organisation's operation and potential expansion
- organisational design and change processes.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - access to an enterprise, including business records, to conduct enterprise planning activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed significant risks for a land-based enterprise, including:

- determined the scope for risk management
- identified six potential risks, including:
  - three associated with financial, production and system, and
  - three associated with the environmental, political, social context
- planned and implemented strategies to minimise the impact of the six identified risks.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the wide range of risks faced by a land-based production business
- threats presented by climate change
- legislation, codes of practice and national standards, including:
  - duty of care
  - operation as a business entity
  - environmental protection
  - freedom of information
  - industrial relations
  - privacy and confidentiality
  - equal employment opportunity
- organisational policies and procedures, including:
  - risk management strategy
  - policies and procedures for risk management
- overall operations of land-based business
• risk insurance and insurance providers.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • access to a land-based production business.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence
An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed at least one capital works project, including:

- negotiated with contractors and suppliers, and internal and external clients
- developed a strategy to achieve project outcomes and client requirements
- monitored, evaluated and reported on progress of works
- resolved disagreements and disputes satisfactorily
- evaluated and reported on project achievements.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- human resource management and policies for the enterprise
- project management systems
- project management tools and techniques
- cost schedule control systems
- enterprise procurement guidelines
- enterprise project management policies
- risk management techniques
- business and commercial issues relevant to business/project
- basics of contract law
- physical resource management.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
• skills must be demonstrated in a workplace setting or an environment that accurately represents a capital works site
• resources, equipment and materials relevant to capital works project
• specifications:
  • capital works specifications and objectives
• relationships:
  • construction team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to review and assess effectiveness of land use, land management plans and strategies.

This unit applies to individuals who work at a strategic level, with capacity to devolve responsibilities to others. In this role, workers analyse, design and communicate solutions to a range of complex problems.

All work must be carried out to comply with organisational requirements, work health and safety legislation and codes, sustainability practices and in consultation with the management team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has reviewed land management plans and strategies of at least one designated plot of land, including:

- established clear criteria for reviewing land usage, land management plans and strategies
- analysed existing land usage, land management plans and strategies
- modified land management plans and strategies to match required outcomes
- implemented modified land management plans and strategies
- monitored land management plans to ensure required outcomes are achieved.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ecosystems including the interrelationship of geophysical, hydrological, biological and meteorological factors
- effects of climate change on the environment and on soil
- advantages of improved biodiversity above and below ground
- common land management practices that reduce greenhouse gas emissions, including:
  - crop stubble retention
  - no till cropping
  - mulching
  - improved water management
  - use of organic fertilisers
  - composting
  - protecting vegetation from stock grazing
  - reducing emissions from cattle and dairy cows through controlled grazing
  - monitoring parameters and techniques utilised in biological monitoring
  - threats, both natural and from human activity, to places of natural significance
• international, national and local standards and codes of practice for land management
• land management assessment and monitoring processes
• scientific processes for evaluating land management
• general understanding of a range of cultural issues.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • access to a plot of land.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to manage human resources in an agricultural, horticultural or land management enterprise.

This unit applies to individuals who take personal responsibility for their own work and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities in relation to managing human resources. They analyse, design and communicate solutions to a range of complex problems.

All work must be carried out to comply with organisational requirements, workplace health and safety legislation and codes, sustainability practices and in consultation with the management team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed human resources for at least one staff member in one enterprise, including:

- identified skill requirements and prepared at least one task description
- arranged employment of at least one permanent workforce member
- supported career and professional development of at least one workforce member
- implemented workplace health and safety priorities and procedures
- managed administration of staff records
- reviewed labour productivity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- process to develop job descriptions
- relevant industrial awards
- employee induction programs
- interviewing strategies and protocols
- legislation, regulations and codes of conduct relevant to employers, including:
  - WorkCover insurance
  - superannuation
  - taxation
  - equal employment opportunity
  - anti-discrimination and anti-harassment
  - workplace health and safety
  - privacy
  - unfair dismissal
• contracts of employment.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- **relationships:**
  - access to potential employees and contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed a monitoring, evaluation and reporting program for at least one enterprise, including:

- clarified the context and terms of reference
- identified key stages and outcomes
- assessed and defined data collection requirements
- collected and managed data
- designed and costed an evaluation strategy
- presented strategy, along with costings, to management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- program design considerations (cost, equality, technically valid, ethics)
- approaches to monitoring and evaluating business processes
- secure data storage
- data analysis processes
- quantitative and qualitative data collection methods for monitoring and evaluation
- data management.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
• access to an enterprise conducting activities to be monitored, evaluated and reported. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence
An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented a monitoring, evaluation and reporting program for at least one enterprise, or enterprise activity, including:

- collected and managed data
- analysed production or project data
- prepared reports and presented information to stakeholders
- evaluated the effectiveness, efficiency and appropriateness of investment in a project or program
- made recommendations for improvement
- reviewed the evaluation process.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- quantitative and qualitative methods for monitoring and evaluation
- communication and consultation skills to present findings and recommendations
- data management processes and systems
- policy and program management processes
- adaptive management and review cycles.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
Assessment Requirements for AHCBUS615 Implement a monitoring, evaluation and reporting program

- enterprise process or project to be monitored and evaluated.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify climate change as a factor in land management. It incorporates knowledge of climate, climate change and the impacts of a range of land management practices on the production of greenhouse gases.

The unit applies to individuals who participate in land management activities, who require knowledge and skills to make decisions around activities that reduce greenhouse gas emissions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| Identify the climate system and climate change as they relate to land management | 1.1 Identify the components of the climate system
1.2 Identify the role of the main greenhouse gases in the climate system |
### Elements

**Elements** describe the essential outcomes.

**Performance Criteria** describe the performance needed to demonstrate achievement of the element.

| 1.3 Identify and describe the natural factors that contribute to climate change |
| 1.4 Identify and describe the factors that contribute to human-induced climate change |
| 1.5 Identify the potential impacts of climate change on local natural and agricultural environments |
| 2. Identify the roles of vegetation, animals and carbon in greenhouse gas production |
| 2.1 Research the role of land, vegetation and animal management in greenhouse gas production |
| 2.2 Identify carbon cycle processes in relation to own work role |
| 2.3 Identify the forms of carbon in the carbon cycle and where they are stored |
| 2.4 Research the role of vegetation and soil carbon in the mitigation of carbon dioxide levels in the atmosphere |
| 3. Identify and contribute to land management practices that reduce greenhouse gas emissions |
| 3.1 Identify and contribute to land management practices to reduce methane production |
| 3.2 Identify and contribute to land management practices to reduce nitrous oxide production |
| 3.3 Identify and contribute to land management practices to reduce carbon dioxide production |

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified the impacts of climate change on land management and land management techniques that reduce greenhouse gas emissions, including:

- identified at least three effects that climate change has had on a designated site
- identified three land management practices that would reduce greenhouse gas emissions, for a designated site
- identified at least one environmental, one social and one economic benefit that implementing new land management practices could have on a designated site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the climate system
- the main greenhouse gases and their role in the climate system
- climate change both natural and human-induced
- factors that contribute to human-induced climate change
- common land and agricultural management practices that reduce greenhouse gas emissions, including:
  - vegetation methods: including regenerating native forests, protecting native forests by reducing land clearing, and planting trees to grow carbon stocks
  - savanna burning: including managing bushfires in Australia's savannas to avoid harmful, high-temperature fires
  - agricultural practices: including building soil carbon through changed farming practices such as crop stubble retention, no till cropping, mulching, improved water management, use of organic fertilisers, composting and use of soil conditioners including biochar
• other agricultural practices: including protecting vegetation from stock grazing, reducing emissions from cattle, controlled grazing practices, or other industry-specific practices
• Australia's commitment to global emissions reduction targets
• environmental benefits of changed land management practices, including improved biodiversity above and below ground, improved air, water and soil quality, reduced greenhouse gas emissions, improved movement of water across landscape, increased resilience to drought, and increased land versatility
• social benefits of changed land management practices, including potential for increased social capital, Indigenous community empowerment, and increased resilience to drought
• economic benefits of changed land management practices, including potential for diversified income streams and potential increased farm productivity.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• specifications:
  • access to information about climate, climate change and carbon farming practices
  • access to details and history of a designated site.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify the benefits of increasing soil organic carbon for soil condition or soil health, and to implement a project to increase soil carbon.

The unit applies to individuals who participate in farming and/or land management activities. It may lead to participation in an approved carbon farming project to generate carbon credits. No licensing, legislative or certification requirements apply to this unit at the time of publication.

1. Determine land management practices that store or sequester carbon
2. Identify other interactions of ecosystem processes in increasing soil organic carbon

### 2. Identify co-benefits of increasing soil organic carbon

1. Identify land management practices to increase soil organic carbon
2. Consider the social and cultural, environmental and economic benefits of increasing soil organic carbon

### 3. Plan project to increase soil organic carbon

1. Identify site for soil carbon project
2. Identify and select a strategy or method to increase soil organic carbon
3. Identify equipment and resources required
4. Carry out cost-benefit analysis of implementing the project
5. Plan strategy to measure soil organic matter in soil, and record results

### 4. Implement project

1. Measure and record soil carbon as baseline for project
2. Implement project in line with selected method and document results
3. Monitor and maintain soil to preserve soil health through changing conditions

### Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has increased carbon in soil for a designated plot of land, including:

- identified the benefits and co-benefits of increasing carbon in soil
- planned and implemented a project to increase soil organic matter in soil.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how land use and management practices impact on soil health
- physical, chemical and biological properties of healthy soil
- opportunities presented by degraded soil (or soil that has less soil carbon than normally expected under standard, normal or common land management practices for the local area)
- land management practices that have the potential to increase soil health and agricultural productivity, dependent on local climate and soil type, including:
  - no till or conservation tillage and controlled traffic
  - cover crops
  - pasture cropping
  - crop rotation (depending on rotation and crop)
  - perennial-based systems
  - integrated pest management and weed management
  - managed movement of water
- co-benefits of increased carbon in soil, including:
Assessment Requirements for AHCCP401 Increase soil organic carbon using land management practices

- environmental benefits: improved biodiversity above and below ground, improved air, water and soil quality, reduced greenhouse gas emissions, improved movement of water across landscape, reduced salinity/erosion/acidification/compaction, increased resilience to drought, and increased land versatility
- social benefits: including increased resilience to drought, more stable and diverse income, healthier people and communities, and improved succession planning
- economic benefits: including potential for diversified income streams, increased farm productivity, access to finance, increased land versatility, new skills and career development, and less income spent on supplements and fertilisers.
- reasons for measuring soil organic carbon, including as a measure of soil health and as an estimate of stocks of soil organic carbon for carbon trading
- informal methods for measuring soil carbon, including percentage tests across a paddock
- using baseline measurements to estimate potential additional soil carbon
- approved methods for soil-based carbon farming projects
- soil quality calculators at soilquality.org.au.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - designated plot of land that has potential for increasing soil organic carbon
  - equipment and resources relevant to method
  - access to information about soil land management methods and practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to comply with the reporting guidelines for measuring and modelling methods of land-based carbon farming projects. It covers the requirement to collect project data and information requirements.

The unit applies to farmers and land managers who intend to earn carbon credits by storing carbon or reducing greenhouse gas emissions. To be eligible, projects must comply with a project methodology (or method) approved for use under the carbon program or fund.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared to comply with the measuring and modelling requirements of one approved, carbon farming method, including:

- established the project area utilising geospatial data
- collected, inputted and analysed carbon data
- followed approved carbon farming method procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant carbon farming legislation, rules, method, technical guidance documentation and related procedures
- contemporary sources of geospatial data:
  - Global Positioning Systems (GPS) and Global Navigation Satellite System (GNSS)
  - field surveys and sampling
  - orthorectified aerial photographs
  - orthorectified satellite imagery
  - cadastral database
  - publicly available datasets
- criteria used to assess fitness for purpose of datasets
- approved methods to reduce emissions or increase carbon storage
- formats used to report to the regulator.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

- **resources:**
  - GPS tools, approved modelling tools and calculators

- **specifications:**
  - access to legislation, regulations and information about carbon farming methods and markets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has identified the benefits and risks associated with a carbon farming project for a designated site, utilising at least one land-based method. This includes:

- identifying appropriate method for land type
- conducting a feasibility assessment
- assessing financial viability
- documenting and developing a summary analysis

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- carbon farming project methods to store carbon or avoid emissions from agricultural or land management activities
- implementation costs of a land-based carbon farming project method, including equipment, technology, preparation of land, service providers such as soil testing services, legal advice, engineering services, carbon advisor or agent
- ownership/leasing arrangements for site (that may need to be in place for up to 25 years)
- key questions to ask a carbon farming advisor or agent
- markets for carbon credits, including the Emissions Reduction Fund (ERF).

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources:

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned a carbon farming project for one site, utilising one land-based method approved by the target market, including preparing a project plan that specifies:

- implementation costs
- anticipated return on investment
- project risks and risk management controls
- regulatory requirements of the fund in which to sell carbon credits.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation and regulations that guide the carbon fund
- latest version of the Native Title Act 1993
- dealing with multiple land interest holders (e.g. Indigenous groups, pastoralists and the Crown)
- carbon rights protocols for exclusive and non-exclusive native title holders
- consent rights for native title, Crown land and mining leases
- details of relevant approved carbon farming method including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- how to plan and implement large scale projects relevant to method
- requirements for measuring emissions from land-based sources relevant to the method
- formats for organising and presenting financial, qualitative and quantitative information
- personal and professional liability
- duty of care
• managing environmental risk
• tools to estimate carbon abatement
• certification requirements of auditors and technical advisors, as specified by method
• benefits of working with an agent or advisor who holds an Australian Financial Services Licence (AFSL).

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources:
  • approved modelling tools and calculators
• specifications:
  • access to legislation, regulations and information about carbon farming methods and markets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify the benefits of increasing carbon in the biosphere, using vegetation and agricultural methods, and to implement a project to reduce emissions or store carbon.

This unit does not cover increasing carbon in soil (refer to AHCCFP401 Increase soil organic carbon using land management practices).

The unit applies to individuals who participate in farming and/or land management activities. It may lead to participation in an approved carbon farming project to generate carbon credits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Elements

**Elements describe the essential outcomes.**

<table>
<thead>
<tr>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.3 Analyse the benefits of reducing greenhouse emissions</td>
</tr>
<tr>
<td>1.4 Determine vegetation and/or agricultural practices that increase carbon or reduce greenhouse emissions</td>
</tr>
<tr>
<td>1.5 Consider the associated social and cultural, environmental and economic benefits of increasing carbon</td>
</tr>
</tbody>
</table>

### 2. Identify co-benefits of increasing carbon in the biosphere

- 2.1 Identify land management practices to increase carbon using vegetation and agricultural methods
- 2.2 Consider the social and cultural, environmental and economic benefits of increasing carbon in the biosphere

### 3. Plan project to increase carbon

- 3.1 Identify appropriate site/s for project methodology
- 3.2 Choose strategy or method to increase carbon or reduce emissions
- 3.3 Identify equipment and resources required
- 3.4 Identify risks associated with undertaking the project
- 3.5 Carry out cost-benefit analysis of implementing the project
- 3.6 Plan strategy to measure or model carbon and record results

### 4. Implement and monitor project

- 4.1 Measure carbon as baseline for project and document
- 4.2 Implement project in line with selected method
- 4.3 Monitor project to maintain carbon storage or reduced emissions through changing conditions and document

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has increased carbon using vegetation and/or agricultural methods for a designated plot of land, including:

- identified the direct and associated benefits of increasing carbon
- identified method appropriate to plot of land
- assessed risks associated with project methodology
- calculated costs of carbon project
- planned and implemented a project to increase carbon or reduce greenhouse emissions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how land use and management practices impact on carbon
- land management vegetation practices that can increase carbon, such as avoiding clearing of native growth, farm forestry, plantations, controlled burning of savanna, and human-induced regeneration of native forest
- agricultural practices that can increase carbon and/or reduce emissions, such as changes to beef cattle herd management, destruction of methane, feeding dietary additives to cows, changed grazing regimes, and improved herd management
- co-benefits of increased carbon, including:
  - environmental benefits: improved biodiversity above and below ground, improved air, water and soil quality, reduced greenhouse gas emissions, improved movement of water across landscape, reduced salinity/erosion/acidification/compaction, increased resilience to drought, and increased land versatility
  - social benefits: including increased resilience to drought, more stable and diverse income, healthier people and communities, and improved succession planning
Assessment Requirements for AHCC/HP.005 Increase carbon using vegetation and/or agricultural methods

economic benefits: including diversified income streams, increased farm productivity, access to finance, increased land versatility, new skills and career development, and less income spent on supplements and fertilisers

informal methods for measuring carbon, including use of plots, and vegetation datasets

industry-specific carbon calculators

baseline measurements that allow scope for improvement

approved methods for vegetation and agriculture-based carbon farming projects

payments available for increasing carbon levels.

Assessment Conditions

Assessment of skills must take place under the following conditions:

physical conditions:

- skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

resources, equipment and materials:

- designated plot of land or animal group
- equipment and resources relevant to method
- access to information about vegetation or agricultural carbon farming methods and practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to provide advice on the processes involved in planning, implementing and monitoring carbon farming projects that utilise approved methods.

The unit applies to individuals who provide advice to land owners, eligible interest holder groups and land managers about implementing projects to earn carbon credits. This unit applies in the context of at least one approved carbon farming method to increase carbon storage or reduce emissions.

Note the term 'advice' referred to in this unit does not relate to financial advice which requires an Australian Financial Services License (AFSL). This unit does not address the skills or the generic knowledge requirements in 'ASIC Regulatory Guide 146 Licensing: Training of financial product advisors'.

Refer to FMSFMK512 Apply knowledge of emissions markets for skills and knowledge to engage with carbon funds.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| 1. Define requisites for planning a carbon farming project | 1.1 Explain to client advice provided does not cover financial advice that requires an ASFL  
1.2 Describe phases for planning an approved carbon farming project  
1.3 Define equipment, specialist services and service providers required to plan and implement a project  
1.4 Specify the means of determining the project area for carbon storage and emissions avoidance methods  
1.5 Determine the need for and use of relevant measuring and modelling tools  
1.6 Assess the impact of differing crediting and reporting periods on project planning and implementation  
1.7 Determine the steps required to calculate the baseline and project emissions  
1.8 Outline the responsibilities of owning and managing an approved project |
| 2. Determine requisites for implementing a project | 2.1 Detail the requirements and process for owning or managing a carbon project  
2.2 Define the requirements and process for applying for registration  
2.3 Outline methods of data collection for emissions avoidance and carbon storage projects  
2.4 Determine systems and procedures for accurately measuring and recording project emissions  
2.5 Specify procedures for maintaining records of procedures undertaken, and mitigation achieved  
2.6 Establish equipment maintenance and calibration requirements  
2.7 Detail project audit requirements and the providers of audit services |
| 3. Provide information on applying for carbon credits | 3.1 Outline requirements for completing a carbon mitigation or offsets report  
3.2 Define steps involved in commissioning an audit report  
3.3 Specify the process for applying for carbon credits  
3.4 Provide information on the circumstances under which the fund regulator will issue carbon credits and their maintenance on the register |
| 4. Provide information | 4.1 Explain project processes and administrative and compliance |
### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

- Performance criteria describe the performance needed to demonstrate achievement of the element.

4.2 Ensure responses to stakeholder enquiries are comprehensive, clear and delivered in the most appropriate form and within the agreed timeframe.

4.3 Ensure enquiries outside area of responsibility and knowledge are identified and assistance is sought, or the enquiry is referred onto a relevant expert.

4.4 Facilitate sourcing of AFSL approved advice.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has advised at least one potential client on carbon farming project planning and implementation, following the requirements of at least one approved carbon farming method. This includes:

- compliance requirements
- phases of project
- data collection requirements
- administrative requirements

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- requirements of approved methods, including:
  - project eligibility and scope
  - identifying the baseline scenario
  - project area
  - estimating abatement and/or carbon storage
  - data collection methods relevant to emissions avoidance and carbon storage
  - monitoring, record keeping and reporting
  - audit requirements
  - providers of audit services
  - commissioning audits
  - legal requirements, regulations relating to project proponent requirements and project requirements, including:
    - creating and using a carbon credit account
    - applying for project registration
Assessment Requirements for AHCCF P501 Advise on carbon farming project planning and implementation  

- implementing the project in accordance with the approved method  
- writing and submitting reports and arranging audit reports  
- applying for, and receiving, carbon credits  
- closing and/or withdrawing from a project  
- varying a project  
- relinquishing carbon credits if required  
- scheme oversight, institutions and governance  
- equipment, specialist services and service providers required to plan and implement the project  
- impact of differing crediting and reporting periods on project planning and implementation  
- stakeholder responsibilities of owning and managing a project  
- procedures for maintaining records  
- project audit requirements and the providers of audit services  
- role of carbon industry associations, carbon farming support networks and related codes of practice.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:  
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace

- resources:  
  - access to carbon fund website and approved modelling tools and calculators

- specifications:  
  - access to legislation, regulations and information about carbon farming methods and markets

- relationships:  
  - access to clients.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare and apply chemicals for the control of pests across a range of industry sectors.

This unit covers the use of general application equipment used across a variety of industries including: boom sprays, orchard air-blast sprayers, handheld spray equipment, wipers, dry chemical applicators, dips, pour-on, spot-on, vaccination and drenching equipment.

All work must be carried out to comply with workplace procedures, work hand safety and pesticide legislation and codes.

All work must be carried out to comply with chemical label instructions, Safety Data Sheets (SDS’s), the organisation’s application plan and relevant legislation.

This unit applies to individuals who work under broad direction and take responsibility for their own work and use discretion and judgement in the selection and use of available resources.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates should confirm the regulatory requirements that apply in their relevant State or Territory before undertaking this unit.
This unit may be deemed to have a time limit when used as part of an accreditation or licence process.

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
</tr>
</tbody>
</table>

**Equipment when finished task**

- 2.7 Follow label instructions in the event of a spill
- 2.8 Confirm that neighbours have been notified of chemical application as appropriate

**3. Calibrate application equipment**

- 3.1 Select application equipment to be used to minimise spray drift risk and maximise efficacy
- 3.2 Carry out pre-operational checks of application equipment
- 3.3 Calibrate equipment in accordance with manufacturers’ specifications and application/spray plan.
- 3.4 Safely load chemical mix wearing appropriate Personal Protective Equipment (PPE) and controlling risks to human health and the environment

**4. Apply chemicals**

- 4.1 Monitor meteorological conditions and forecasts prior to and during application to minimise spray drift and other off target movement of chemicals
- 4.2 Select and use appropriate PPE in accordance with chemical label and SDS’s
- 4.3 Apply chemical in accordance with the label and application/spray plan
- 4.4 Assess and minimise risks to others, product integrity and the environment
- 4.5 Follow chemical spill or accident procedures in the event of a spill

**5. Clean up equipment and complete records**

- 5.1 Dispose of excess chemicals and containers as per label and SDS instructions
- 5.2 Clean and decontaminate application equipment in appropriate location
- 5.3 Clean and store personal protective equipment in appropriate location
- 5.4 Report incidents
- 5.5 Complete all records
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine the need for chemical application
- develop an application/spray plan
- identify hazards and implement risk control procedures to ensure a safe workplace
- interpret and apply chemical label requirements included in the application or spray plan
- identify weather conditions that impact on spray drift risk and implement control measures
- conduct pre-operational checks of application equipment
- calibrate handheld and/or powered application equipment relevant to the industry sector
- mix and load chemicals in accordance with label requirements
- measure and record weather conditions before and during and after application
- apply chemicals safely in compliance with labels, legislation and codes of practice
- dispose of surplus chemicals and empty containers
- record relevant information including amount of chemical applied
- use appropriate personal protective equipment
- follow emergency procedures during an accident or spillage.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- options for pest control based on the Integrated Pest and Resistance Management Plan
- pest and/or disease resistance management
- various chemical labels and SDS formats
- impact of meteorological factors on the safe and effective application of chemicals
- factors that determine spray drift risk including droplet size, wind speed, temperature and temperature inversions and approaches to controlling spray drift risk
- risk factors including human and animal health, weather prior to, during and after application, spillage, residues in plants and animals consumed as food and environmental
- how to mix chemicals including mixing order, adjuvants and water quality
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- how to select, operate and use a variety of application equipment including boom sprays
- features, functions and calibration techniques for a range of powered and hand held application equipment relevant to the industry sector
- spray nozzle identification, selection, operation and use
- pests, weeds and/or diseases relevant to the industry sector
- legislation, regulations and licensing requirements in relation to chemical use
- APVMA policy on spray drift management.

Assessment Conditions

Competency is to be assessed in the workplace OR simulated environment that accurately reflects performance in a real workplace setting.

The candidate must be assessed at least once calibrating application equipment.

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have prepared and applied chemicals using hand held application equipment, including:

- determined the need for chemical application by assessing the specific infestation
- developed an application plan according to workplace procedures
- identified health and safety hazards, risk and implemented control procedures and used personal protective equipment (PPE) according to workplace procedures
- notified stakeholders of planned chemical application
- interpreted chemical labels and applied chemical according to manufacture requirements, safety data sheets (SDS) and application plan
- determined the chemical application parameters according to workplace and
- complied with manufacturer requirements, regulations and environmental factors
- monitored and assessed weather conditions for application
- selected and conducted pre-operational checks of equipment according to operator instructions
- completed at least one calibration activity for hand held application equipment
- mixed and loaded chemicals in accordance with label and application plan
- cleaned equipment, spills and disposed of waste according to procedures
- maintained records and reported incidents according to workplace procedures and regulations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• control options when selecting chemicals for pest, disease and weed control, including:
  • chemical
  • cultural
  • biological
  • Integrated Pest Management
• parameters affecting the selection of chemical and equipment for application, including:
  • common pests, weeds and diseases
  • rate of application
  • type of application equipment
  • set-up requirements
  • pest and disease resistance
• chemical labels, SDS reading and interpretation
• impact of weather factors on the safe and effective application of chemicals
• factors that determine off target contamination, including:
  • physical movement of chemicals (e.g. animals moving baits or soil movement)
  • chemical formulation
  • droplet size
  • wind speed
  • temperature
  • temperature inversions
  • controlling spray drift and air concentrations
• risk factors of chemical application, including:
  • human and animal health
  • spillage
  • residues in environment, plants and animals
  • withholding periods
• preparing chemicals including mixing order, compatibility, adjuvants and water quality
• requirements for disposal of excess chemicals, clearing spillages and equipment clean up
• selecting and operating suitable held application equipment, including:
  • operation and use
  • features, functions
  • calibration techniques
  • nozzle identification and selection
• legislation, regulations and licensing requirements in relation to chemical use
• stakeholders and required notifications including, neighbours, staff and statutory notifications
• health and safety in the workplace hazards, risks and controls including PPE
• regulatory and industry policies on off target management.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - chemicals
  - PPE
  - application equipment
  - chemical measuring and mixing equipment

- **specifications:**
  - specific workplace documents, including work instructions and procedures for chemical application
  - chemical labels and SDS
  - legislation and regulations about use of chemicals
  - manufacturers' operation and maintenance instructions for equipment
  - access to weather reports.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify learning opportunities which support personal goals or vision
- recognise and take advantage of learning opportunities in the workplace
- adapt to and apply workplace procedures and practices
- complete work tasks according to workplace requirements, standards and applicable regulations
- identify and interpret information on sectors in the targeted industry
- identify and interpret information on the range of products and services produced by the targeted industry
- recognise and adapt to cultural differences in the workplace
- discuss work concerns and questions with supervisor or key personnel
- complete work with required attention to detail without damage to goods, equipment or personnel
- follow industry and enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- current events, activities, products and services of the targeted industry
- workplace policies, procedures and guidelines
- time-management strategies
- appropriate workplace protocols
- workplace equipment, tools and other technologies used in the targeted industry, and where and how to obtain information and instructions on their safe use and basic care and servicing
Assessment Requirements for AHCMMN101 Adapt to work requirements in the agrifood industry

- sources of information on the industry sector and skills development activities

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret responsibilities and plan own work activities
- follow work health and safety policies
- apply relevant ethical practices and codes of practice in the course of work activities
- recognise simple numerical information relating to work activity
- communicate effectively in the course of work activities
- complete work activities in collaboration with others according to instructions, procedures and applicable regulations
- identify, report and address problems according to workplace procedures
- complete work activities with required attention to detail and without damage to goods, equipment or personnel
- use a range of workplace technologies
- use industry standard terminology

Knowledge Evidence

The candidate must demonstrate knowledge of:

- procedures for identifying and using relevant workplace technology
- systems and equipment used in the workplace and instructions, processes and precautions for their use
- typical problems in the workplace and appropriate action and solutions
- workplace procedures, policies and instructions
- workplace structures and roles and responsibilities of individuals, and team and group members
- basic principles of teamwork in the workplace
• verbal and non verbal communication techniques appropriate to receive and convey workplace information
• basic concepts of time management to meet daily planning and scheduled timelines
• industry and enterprise work health and safety policies

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to identify what ‘animal care’ means in a workplace and how one's own individual responsibilities contribute to animal care as a whole within a specific workplace or industry.

It may or may not include hands-on animal care but more importantly includes being part of a whole system that supports and contributes to animal care.

The unit also includes contributing to animal care through the use of an appropriate mix of technical skills, handling unexpected contingencies in relation to animal care, and reflecting on animal care procedures in order to make improvements to one's own work. All activities are carried out under supervision.

This unit is designed for use in a Pathway qualification or skills set. It should not be used in a qualification that has a direct job outcome.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.
