Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine plant health strategies
- determine scheduling and key responsibilities
- develop plant health management strategies
- evaluate plant health management strategies and record results
- provide input to other planning processes
- monitor and adjust plant health management strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant health management
  - environmental controls and codes of practice applicable to the business and to plant health management operations
  - environmental controls and codes of practice applicable to the enterprise
  - Integrated Pest Management (IPM)
  - management of weed, pest and disease infestations
  - management practices and processes to minimise plant health management control operations
  - planning water budgets and irrigation strategies
  - plant growth and development and growth regulators
  - plant growth processes such as photosynthesis, respiration, nutrient uptake, solute transport and metabolism, water balance and osmotic pressure
  - strategic aspects of managing plant quality, performance and nutrition
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to follow workplace directions and instructions while observing permaculture principles and practices.

Permaculture work can be carried out in the community, home, school and permaculture or community gardens and farms.

This unit applies to individuals who work alongside a supervisor in most situations and exercise limited autonomy within established and well known parameters. They identify and seek help with simple problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Permaculture (PER)

</tr>
</tbody>
</table>
Element | Performance criteria
--- | ---
1. Prepare to work in a permaculture environment | 1.1 Meet with supervisor, observe conditions and receive work tasks for the day  
1.2 Identify required materials, tools and equipment  
1.3 Check materials, tools and equipment and tell supervisor if there are insufficient or faulty items  
1.4 Use correct manual handling techniques when loading and unloading materials  
1.5 Identify hazards and tell supervisor  
1.6 Use suitable personal protective equipment (PPE) and ensure correct fit
2. Identify permaculture work practices | 2.1 Identify good environmentally sustainable practices, and seek clarification when necessary  
2.2 Adopt work practices which maximise productivity and time efficiency and minimise waste and resource use  
2.3 Follow instructions and directions and ask for clarification when necessary
3. Contribute to improved permaculture practices | 3.1 Gather information about permaculture and support the development of improved permaculture practices  
3.2 Discuss environmental issues, community issues and their relationship to permaculture practices with supervisor and colleagues  
3.3 Contribute to the review of permaculture practices in a permaculture environment

Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- communicate with supervisors and workplace colleagues
- recognise basic environmental influences
- contribute to improved permaculture work practices

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture
  - ethics – earth care, people care, fair share
  - principles – at this level, limited to the trainer/supervisor’s interpretation and simplification of those contained in the two seminal permaculture text books (Mollison 1988 and Holmgren 2002)
- good practice approaches to minimising environmental hazards and risks
  - producing no waste
  - thinking globally and acting locally
  - observing nature and learning from her patterns
  - responding to change creatively and with consideration for the needs of all users of and/or elements in the system
  - learning from mistakes and developing successes
- factors to improve environmental performance in regard to water catchments, ecosystems, habitat, efficient use of resources, sustainability and waste minimisation
- factors to improve community issues, especially in regard to caring for people, sharing surpluses and setting limits to growth
Assessment Requirements for AHPER101 Observe permaculture principles and work practices

- environmental issues and their potential impacts
  - sustainability of land use and agricultural work practices
  - reduction and disposal of waste
  - improvements to water quality
  - improvements to air quality
  - energy efficiency
  - biodiversity and habitat protection
  - conservation of natural resources
  - wild-fire management and mitigation
  - food, water and energy security
  - human rights and right livelihood

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- cooperate with team members
- store and stockpile materials
- clean up on completion of work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices
- tools and equipment used
- principles of resource conservation including:
  - reduce, reuse, recycle, repair, repurpose, restore
  - minimal impact living
  - sustainable food production
  - energy efficiency
  - the following types of appropriate energy: solar and wind power
  - the following types of appropriate technology: composting toilets, grey water re-use
  - water catchment, storage and re-use
  - seed collection and seed banking
  - mulching and soil conservation
  - revegetation
- community and social interaction and support, such as:
  - resource banking
• seed banking
• co-operatives
• Local Energy Trading Systems (LETS)
• Skill-Share
• techniques used in resource conservation, such as:
  • stock piling resources
  • the following types of processing requirements for resources which cannot be stock-piled: composting, fermentation, drying
  • water storage and treatment
  • capture and storage of energy (heat capture in mass, basic turbine function)
• making connections between everyday living and sustainable use of resources

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Identify common features of permaculture Zone 1 gardens
- Identify and check the required materials, tools and equipment
- Prepare a garden area for planting plants, seeds or seedlings
- Determine the appropriate watering regime and nutrient requirements for the plantings
- Harvest plant yields
- Store the plant yields

Knowledge Evidence

The candidate must demonstrate knowledge of:

- The characteristics of permaculture Zone 1 gardens
  - How permaculture gardens differ from conventional gardens
  - Functions and yields of plants in a Zone 1 garden
  - Observing nature and learning from it
- Principles of planting in permaculture systems, such as:
  - Aspect
  - Planting patterns
  - Companion planting
  - The soil-water-plant relationship
- Plant care techniques and plant nutrition, such as:
  - The role of composts, worm castings, green manures, animal manures and support species in permaculture plant care
  - When to leave weeds, chop-and-drop and mulching
- simple pest protection (cages, rings, stakes and nets)
- simple climate protection (sun/frost/wind)
- how to reuse and recycle excess products of plant care

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III qualification (or higher) in Permaculture and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply problem solving skills to use available resources and prioritise daily tasks
- collect yields from animals including waste materials for composting or worm farms
- clean up on completion of work
- identify basic indicators of animal health

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of animal care in permaculture systems, such as:
  - grazing systems
  - animal tractor systems
  - organic feed and nutrition systems
  - housing and species combinations for welfare of all species
  - predator protection, vermin control and weather protection
- principles of integrating animals into permaculture systems, such as:
  - zone and sector planning in relation to appropriate animal species
  - needs, functions and yields for animals within integrated systems
- the following components of animal care: feed, water, shelter, perch space, bedding, symptoms of ill health or stress
- animal handling techniques
- tools and equipment
- repair and maintenance of animal housing and containment
Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III qualification (or higher) in Permaculture and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

## Element | Performance criteria
---|---
2. Observe requirements of a permaculture workplace | 2.1 Ensure work practices comply with enterprise work requirements  
2.2 Recognise faults and abnormalities in workplace practices and take remedial action  
2.3 Observe punctuality in work attendance  
2.4 Complete work routines and specific instructions to meet workplace expectations

3. Work effectively in a permaculture workplace | 3.1 Plan work tasks in consultation with team members and supervisor  
3.2 Follow instructions from supervisor  
3.3 Cooperate with others as part of a team with consideration of special needs of co-workers and others  
3.4 Accept responsibility for quality of own work

4. Contribute to a productive permaculture workplace | 4.1 Fulfil commitments to undertake work or assist co-workers  
4.2 Share knowledge and skills with co-workers through conversations and demonstrations  
4.3 Recognise and seek out contributions from individuals of different gender and social and cultural backgrounds, if appropriate  
4.4 Ensure work is consistent with workplace standards relating to anti-discrimination and workplace harassment  
4.5 Recognise and resolve conflict through personal communication if possible and reference to supervisor for support  
4.6 Undertake responsibilities and duties so as to promote cooperation and good workplace relationships

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

### Unit Mapping Information
New unit - equivalent to QLD842PPP01B.

</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and collect information about permaculture
- interpret workplace schedules
- accept responsibility for own work
- promote workplace cooperation
- contribute to a productive workplace environment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture
  - different sectors within a permaculture system
  - relationships between sectors and the whole
  - permaculture services available in the area as listed in available references including:
    - media reports
    - reference books
    - industry journals
    - internet sites
    - libraries
  - observation of nature
  - personal observation and experience
  - relationships between the permaculture enterprise and other industries
  - legislation that affects permaculture enterprises
- unions and industry associations
- career opportunities within permaculture
- work ethic required to work in permaculture enterprises
- ethics of permaculture
  - care for the earth
  - care for all people
  - sharing the surplus
  - setting limits to growth
- permaculture practices and procedures, such as:
  - cooperation over competition
  - respecting and celebrating all ethnicities, religions, ages, genders and abilities
- wwoofing and other labour exchange programs
- lifestyle as a conserver
- workplace expectations and communication channels

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare to harvest seed
- harvest seed
- treat and store seed

Knowledge Evidence

The candidate must demonstrate knowledge of:

- seed harvesting techniques
- characteristics of mature healthy seed
- diseases and pests likely to affect the seed
- the following types of seed extraction:
  - hand selection
  - winnowing
  - sieving
  - vibration
  - flotation and fermentation
  - drying
  - heat-assisted dehiscing
  - crumbling of husks
- the following permaculture practices relating to seed harvesting and storage:
  - appropriate containers including re-used jars, boxes and packets
  - cool, dry location
- freezer or refrigerator
- pest deterrent mechanisms
- light exclusion mechanisms
- non-chemical protection against pathogens
- the following data included in seed saving:
  - genus, species, family, variety and cultivar information
  - provenance – where the seed came from
  - weight or number
  - date collected
  - place collected
  - collector
  - cultural advice or growing conditions
  - seed pre-treatment advice
  - longevity information
  - growing-out trial information
  - storage location information or record locator

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- collect information about the local bioregion
- review the information
- document the information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- designated areas and features of a bioregion, such as:
  - a bioregion, as a land and water territory whose limits are defined not by political boundaries, but by the geographical limits of human communities and ecological systems.
  - water catchment, as one of the key identifiers of the bioregion
  - the vegetation on the catchment, as also an essential feature of a bioregion
- local and common names for plants and animals
- ecological concepts, such as:
  - niche
  - habitat
  - community
  - ecosystem
  - energy flows
  - food webs/chains
  - water cycles
  - species and species relationships
Assessment Requirements for AHCPER203 Record information about the local bioregion

- plant and animal succession
- Permaculture perspectives, such as:
  - seeing connections between elements in a system
  - supporting ecological and community co-existence
  - valuing renewable resources and energy
- alternative strategies of trade such as barter and local exchange trading systems (LETS)
- community resources including local skills, public transport options, contractors and facilities

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare to set up a permaculture water system
- set up water systems
- monitor water flows
- place system components in a way that gives most effect and greatest yield
- inspect earthworks for passive water catchment, storage and movement

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices in relation to water systems
- behaviour of water in the natural environment
- reading natural water flows
- operation of permaculture water systems, such as:
  - irrigation systems
  - water collection and storage containers (tanks, dams)
  - recycling
  - waste-water systems
  - water conservation approaches
  - swales
  - contour banks
  - mulch pit and path systems
  - dams
Assessment Requirements for AHCPER204 Check and operate permaculture water systems

- chinampas
- free-flowing water (streams, rivers)
- aquaculture systems
- aquaponics systems
- productive water bodies (lakes, the sea)
- earthworks for passive water catchment, storage and yield
- components of a water system and their cleaning and storage requirements
- water conservation and management principles and practices including working with passive systems, swales, terraces, dams and other earthworks
- passive harvesting, movement and nutrient adding systems including appropriate earthworks
- biological filtering of water into and out of a permaculture water system

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- handle products and their containers safely
- maintain containers in good condition
- maintain product storage areas and containers
- grade and label products
- pack and store products
- check stored products for damage, repacking or other treatments

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices in relation to product preparation and storage, such as:
  - the range of products produced by permaculture enterprises and their yields
  - parts of products stored
  - preserving the harvest
- correct handling, preparation and treatment techniques for a range of products, such as:
  - observation and identification of harvest readiness
  - storage methods for different products
  - pests and diseases likely to affect storage
  - hygiene issues in the handling and storage of permaculture products
Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- select plant material, tools and equipment for planting
- prepare site for planting
- plant according to permaculture planting plan or pattern
- support, train, guard or protect plants
- follow plans and schedules
- water plantings
- apply treatments to soil

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to planting operations, such as:
  - planting in natural groupings or guilds
  - utilising plant partnerships such as vines on corn crops
  - planting mixed species and interplanting with companion species
  - avoiding soil compaction or disturbance
  - utilising chickens to plough and prepare ground for planting
  - avoiding water, seed or weed leakages from the system
- principles of sustainable horticultural practices
- planting techniques
- basic plant nutrition
- soil improvement and nutrient maintenance, such as:
  - minerals, including rock dusts
Assessment Requirements for AHCPER206 Plant and maintain permaculture crops

- organic matter
- manures, appropriate fertilisers and composts
- foliar feeds or fertigation
- vermicompost and worm castings
- planting of a temporary green manure or cover crop
- legume plantings or interplantings
- sheet mulches
- companion planting
- plant growth and development
- methods of waste disposal causing minimal impact on the environment

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Application

This unit of competency describes the skills and knowledge required to care for the health and welfare of animals in a permaculture system through providing the optimal environment for them, caring for animals common in permaculture systems, animal behaviour and handling and maintaining basic records. This unit is applicable to both farm animals and companion animals.

All work is carried out to comply with workplace procedures, including animal welfare, quarantine and work health and safety policies and procedures.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess animal health and welfare
- provide an optimal environment for animals
- feed and water animals
- handle animals safely and humanely
- move animals to different housing or pastures when necessary
- implement and record animal health and welfare control strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to animal care in a permaculture system
- animals common to permaculture systems in a given region or system
- role or niche of animals in system and interrelationship with other animals, plants or systems
- principles of animal feeding and nutrition
- principles of animal health, welfare and care
- symptoms of ill-health in animals
- legislation and regulations relating to animal health and welfare
- signs of animal fear, aggression and stress
- handling of animals
- safe handling of sick and dead animals
Assessment Requirements for AHCPER207 Care for animals in a permaculture system

Date this document was generated: 3 September 2020

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Application

This unit provides the skills and knowledge required to harvest permaculture crops. It requires knowledge of common crops used in permaculture systems, recognition of the maturity parameters of crops, grading characteristics, maintaining quality of produce, and the effect of adverse weather conditions.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess plants for harvest
- prepare for harvest
- carry out harvest operations
- maintain harvesting equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles related to harvesting
- principles of sustainable horticultural practices
- crops common in permaculture systems
- harvesting techniques, such as:
  - selective picking or hand picking ripe from unripe
  - tree shaking
  - picking leaves rather than whole plants
  - cutting plants and allowing to regrow (e.g., leeks, spring onions)
  - thinning or removing weak or diseased plants from among healthy ones
  - end of season crop extension harvesting (such as hanging tomato plants to ripen indoors)
- equipment and machinery used in harvesting
- sorting and grading, such as:
  - removing out-of-type plants
  - removing physically damaged, unhealthy, rotten or immature fruit and vegetables
• grading of the crop according to variety, size, length, colour, maturity, blemishes, bud count and quality, being subject to seasonal and market forces
• storage, transportation and grading of crops
• methods of waste disposal causing minimal impact on the environment

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- recognise animals and plants
- name animals and plants by common name
- read a permaculture plan
- identify plants and animals commonly encountered in a permaculture system
- identify plants with useful properties (food, fuel, fibre, medicinal, dyes, shade, habitat etc)
- describe animals with functions in the system
- produce a simple report

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to integrated plant and animal systems, such as:
  - practices which conserve energy and resources
  - protecting water, soil and other resources
  - obtaining a yield
  - preserving heritage or heirloom varieties (biodiversity)
  - re-using or adapting materials for other functions
  - making use of vertical space
  - creating multiple functions for the same thing
  - using nature as the model
  - seed-saving
- animals and plants common to permaculture systems in a given region or bioregion
Assessment Requirements for AHCPER209 Recognise characteristics of integrated plant and animal systems

- the role or niche of animals in system and interrelationship with other animals, plants or systems, such as:
  - native or wild animals and plants
  - pest and feral plants and animals
  - insects, fish, birds and reptiles, both friend and foe
  - principles relating to integrated plant and animal systems

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- gather information about a community and community projects, including major characteristics, features and impacts of community projects
- research the community
- assist in project preparation
- work within a community project

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to community work
- issues important to communities, such as:
  - health
  - housing
  - land rights
  - schooling and education levels
  - economics
  - town planning
  - transport
  - leisure activities
  - employment
- communities and social structures and characteristics, such as:
  - living arrangements
Assessment Requirements for AHCPER210 Operate within community projects

- patterns of daily life
- roles of men, women and children, class structures
- predominant language used
- main economic activities
- main transport systems used
- main information systems used
- predominant religion or spiritual beliefs
- main system of law and order
- main type of government
- main social upheavals experienced over specified periods of time
- main problems experienced by the society over specified periods of time
- cultural customs and heritage of indigenous or other minority groups
- cultural protocols, such as:
  - recognition of authority
  - taboos
  - religious or other belief sensitivities
  - economic sensitivities
  - issues of trust
- project plans and programs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- recognise plant pests, diseases and disorders
- identify interrelationships between weedy plants, pests, diseases or disorders and weather or environmental conditions
- recognise treatment or response methods, or opportunities
- prepare and apply treatments or responses to threats

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices in regard to plant protection, such as:
  - creative solutions to common problems in a permaculture system
  - design for improved predator-pest balance
  - integrated plant and animal systems
  - guilds of planting for mutual support
  - mineral contribution of weeds to soil (bioaccumulation)
  - using pest-weed cycles to advantage (breaking the insect reproductive cycle for example)
- common weedy plants, plant pests, diseases and disorders
- common environmental impacts on permaculture systems
- fire, flood, storm and tsunami behaviours and precautions relevant to permaculture design
- different types of treatments or system modifications and their principles, such as:
  - non-chemical controls including sprays with organic or natural ingredients
  - cultural control methods
Assessment Requirements for AHPER211 Recognise threats and create opportunities in a permaculture system

- animal systems to control plants or plant residues (chicken or pig tractors)
- shade used as a control
- biodynamic treatments and control measures
- sheet mulching
- composting of residues
- follow-up strategies including spot mulching, seedling disturbance, animals
- environmental considerations when applying treatments

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

| 1. Assess and measure slope using simple tools | 1.1 Identify issues with slope such as erosion gullies, plant growth, water pooling  
1.2 Use a plumb bob and 3-4-5 triangle or similar to calculate fall  
1.3 Record slope profile and fall in several places across a wide slope |
| 2. Peg out contours | 2.1 Step an A frame across the slope to find and peg the contour  
2.2 Use an A-frame and water level to check contour pegging  
2.3 Label or flag contour pegs to avoid confusion |
| 3. Prepare to shape earth | 3.1 Select tools and equipment for earth shaping work  
3.2 Hire small machinery if necessary or if the job is a big one  
3.3 Hire a contractor if the job demands and follow any legislative requirements  
3.4 Check weather forecasts and condition of soil before digging |
| 4. Shape earth for nutrient capture and storage | 4.1 Use manual or mechanical digging system to shape the earth  
4.2 Avoid damage to underground structures, services, roots of trees and building foundations  
4.3 Follow the design requirements and clarify any anomalies |
| 5. Test earth shaping work | 5.1 Confirm that earth shaping holds water (or drains, as required)  
5.2 Confirm that earth shaping of berms, swales or terraces will not erode or pool water  
5.3 Rake, sweep or compact to even any discrepancies  
5.4 Test earth shaped structure by watering or opening valves and adjust as required |
| 6. Complete earth shaping work | 6.1 Line earth shaped swales or ponds according to design  
6.2 Plant contour banks or terraces according to design  
6.3 Mulch any exposed soil or surfaces or fill, depending on climate and permaculture design requirements  
6.4 Clean up any surplus or waste materials from the earth shaping work in an environmentally safe manner  
6.5 Return tools, equipment and storable materials to storage |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify issues with slope
- measure slope using simple tools
- peg out contours
- shape earth for nutrient capture and storage
- test earth shaping work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices in relation to nutrient capture and storage in earthworks
- behaviour of water in the natural environment
- natural water flows
- earth shaping components common in permaculture systems, such as:
  - swales
  - berms
  - dams
  - terraces
  - grey water reed bed systems
  - ponds
- manual digging techniques
- operation of small earth-moving equipment
- soil testing for earthworks
Assessment Requirements for AHCPER213 Assist with basic earth shaping for nutrient capture and storage

- working with slopes and contours

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Application

This unit of competency describes the skills and knowledge required to propagate plants for a permaculture garden system including small scale nurseries, school nurseries and systems where sales and profit are not the main drivers. It requires knowledge of propagation techniques, basic plant nutrition and potting media suitable for the home propagation system.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

### Element | Performance criteria
---|---
1. Prepare to propagate plants | 1.1 Collect and wash containers and trays  
1.2 Prepare containers with suitable potting mix for the propagation process being undertaken  
1.3 Have tools, water and labelling materials on hand
2. Propagate plants using garden techniques | 2.1 Take cuttings, sow seed or divide plants as required  
2.2 Place new plants into prepared containers to required level and give water, cutting treatment or fertiliser as needed  
2.3 Label the new plant accurately  
2.4 Place containers in trays or in propagation area to grow on
3. Maintain health of plants during propagation | 3.1 Monitor new plants and take remedial action as needed  
3.2 Check for disease or pests and treat according to permaculture principles  
3.3 Check for root growth and pot into larger container if required  
3.4 Water, shelter or shade depending on prevailing weather conditions, size of container and needs of species  
3.5 Harden off in a sheltered area before planting out
4. Maintain garden propagation system year round | 4.1 Check propagation area between seasonal propagation activities and clean or tidy to avoid disease  
4.2 Maintain health of mother plants for propagation purposes  
4.3 Maintain stocks of containers, labels, stakes and ties for future use  
4.4 Maintain stocks of potting materials and nutrient additives  
4.5 Keep propagation system clean and weed free at all times

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare for plant propagation
- propagate plants using garden techniques
- maintain healthy new plants and mother plants

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to propagation, such as:
  - using reclaimed or reused containers (suitably cleaned to avoid cross-contamination)
  - labelling systems using reclaimed materials
  - maintaining rare and unusual varieties
  - using edges and valuing marginal or unusual plants in micro-climates
  - sharing and swapping to increase biodiversity and mutual wellbeing
  - preserving provenance of locally indigenous species
  - testing and trialling for new plants or resistant varieties
  - global food plant preservation including seed saving
  - principles of sustainable horticultural practices
- propagation techniques, such as:
  - soft wood cuttings
  - hard wood cuttings
  - tip and root cuttings
  - layering and division
Assessment Requirements for AIHCPER214 Propagate plants for a permaculture garden system

Date this document was generated: 3 September 2020

- grafting (whip and tongue, saddle and wedge)
- seed sowing
- basic plant nutrition
- potting mixes suitable for propagation in a garden setting, such as:
  - compost and worm casting mixes
  - sieved and graded sands
  - blends used for different purposes or different times of year
  - sphagnum moss
- basic plant growth and development
- small-scale glass, shade or poly house structures
- methods of waste disposal causing minimal impact on the environment

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- undertake simple soil assessment tests
- add organic or allowable nutrients to improve soil
- Protect soil to maintain moisture and overall soil health

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to soil health and plant nutrition, such as:
  - working with natural soils rather than importing soil
  - soil as an ecosystem
  - soil as biomass and carbon capture and storage
- principles of sustainable horticultural practices
- soil testing techniques, such as:
  - jar test for texture
  - ribbon test and ball test
  - pH testing
  - surface evaporation test
  - worm count
- basic plant nutrition
- allowable additives to improve soils, such as:
  - compost and worm castings
  - compost teas
• rock dust
• gypsum
• green manures
• manures/animal bedding materials
• leaf mould
• plantings – green manures, nurse plants
• companion planting
• dynamic accumulators
• chop and drop
• nutrient trapping systems
• greywater use
• organically certified products
• methods of waste disposal causing minimal impact on the environment

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture to assess this unit of competency and/or have completed a Permaculture Design Course (PDC) and/or have completed the Permaculture Demonstrator Skill Set.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research general information on permaculture
- identify differences between permaculture and other land management or land use practices
- share general information with others on permaculture

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices
- similarities and differences between other land use and management practices and permaculture, such as:
  - conventional broad-acre farming
  - battery chicken farms
  - intensive meat production facilities (e.g. feedlots, piggeries)
  - fish farming
  - biodynamic agriculture
  - organic mixed farms
- culturally appropriate speech and behaviour
- basic research techniques
- using primary data sources, such as:
  - original data gathered by the researcher
  - measurements
Assessment Requirements for AHCPE301 Research and communicate information on permaculture principles and practices

- photographs
- maps or sketches
- soil tests
- observations of light, shade, sun angle
- flora and fauna present at the site
- slope and contour information
- observation of site and adjoining landscape features (e.g. sector analysis)
- weather observations
- using secondary data sources, such as:
  - data provided by government departments and agencies, local groups (such as Landcare) or individuals (such as neighbours)
  - survey documents, maps and plans
  - official weather data
  - photographs, such as Google Earth
- communication techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Assessment Requirements for AHCPE R302 Develop recommendations for integrated plant and animal systems

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>TP Version</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify client needs and the nature of the job
- determine options for developing an integrated plant and animal system
- communicate with clients, work team members, supervisors, suppliers, contractors and consultants
- identify plants
- provide information on the characteristics, needs and functions of plants and animals in integrated systems
- interpret site designs, maps, ground plans and specifications
- prepare drawings and tables showing how the systems integrate

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles related to integrated plant and animal systems
- permaculture practices, such as:
  - minimising effort for maximum effect
  - multiple uses for each element in the system
  - more than one way of providing important functions
  - re-using and valuing resources and energy
  - encouraging productivity of the system
  - seeing solutions not problems
  - using vertical space and other edges and connections
  - preventing waste and loss of resources from the system
• methods of design, such as planning spatially and allowing for overhead and 
  underground structures, shadow, slope and sun angle
• an understanding of the place of permaculture topics sometimes relevant to integrated 
  plant and animal systems, such as:
  • pattern understanding
  • ecological principles
  • climate and weather
  • water
  • soils
  • earthworks
  • aquaculture
  • species identification and selection information
  • plants in integrated systems
  • animals in integrated systems
• local plant suppliers, animal suppliers, consultants, services, products and contractors and 
  availability of local resources
• patterns in permaculture design, such as:
  • patterns in space, such as planting patterns, naturally occurring patterns in nature 
    (radial and bilateral symmetry, spirals, circles, dendritic and mandala patterns)
  • patterns in time, such as succession planting, breeding cycles, seasonality
  • patterns in human culture, such as gardening systems
  • nature as the model for design, such as stacking or layering as with a natural forest
  • gravity as a force for design, such as using contours in design
  • nutrient, water and energy capture, storage and re-use according to the inputs, outputs 
    and intrinsic features of the system

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally 
accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design 
Course (PDC) is not sufficient at this level.

AHCPER303 Maintain integrated plant and animal systems

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>TP Version</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to maintain integrated plant and animal systems, undertake maintenance, and maintain records of activities. Maintaining integrated plant and animal systems requires a knowledge of permaculture activities appropriate to climate and soil types, plants and animals commonly found on permaculture properties, permaculture principles and practices and typical permaculture solutions for water catchment and storage and soil maintenance and improvement for plant and animal systems.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- plan maintenance activities for integrated plant and animal systems
- undertake maintenance
- record and report on completion of activities

Knowledge Evidence

The candidate must demonstrate knowledge of:
- Integrated plant and animal systems, such as:
  - gardens, orchards, organic farms, woodlots and forests that include animals in free range or rotational systems
  - balanced ecosystems where the needs of all species are met
  - systems where poultry provide fertility, pest control and other services to plants, such as:
    - chicken-orchard systems
    - duck-rice systems
    - poultry used as tractor
  - frogs, birds and other wild creatures attracted to the garden to maintain ecological balance
  - patterns seen in nature, such as stacking and layering of plants in a forest, used in deliberate design
  - plants and animals commonly found on permaculture properties
  - plant groups and vegetation structures
  - permaculture practices, such as:
- composting of weeds
- chop and drop practices
- feeding weeds to animals
- soil support and enhancement strategies
- animal husbandry strategies
- permaculture design information, such as:
  - permaculture site plan
  - components of integrated plant and animal systems
- the role of animals in improving soil, recycling nutrients, managing ‘weedy’ plants and controlling pests and diseases
- plants as indicators and improvers
- typical permaculture solutions to water catchment and storage for integrated plant and animal systems
- recycling of materials and waste

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is NOT sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- monitor animal housing, enclosures and fencing and act to ensure good care and hygiene
- assess and provide appropriate animal nutrition and watering provision
- manage and reuse manures and other animal ‘wastes’ safely and hygienically
- diagnose parasitic infestations, diseases and injuries
- select and apply appropriate means to treat parasites, diseases and injuries

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles
- animal care, maintenance and treatment programs, such as:
  - maintenance of animal housing, enclosures and fencing, covering hygiene and welfare
  - ensuring availability of suitable forage, fodder and supplementary feedstuffs, and adjusting stocking rates, ranging and rotation schedules to suit
  - coordinating integration of animal ranging and maintenance with plant production systems (ranging in orchard to manure trees, reduce weeds, pests, eat windfall fruit, tracting systems, compost manures and housing litter, maintain firebreaks)
  - researching, assessing, sourcing and preparing supplementary stock feed requirements, feeding quantities and schedules
  - researching and applying organic alternatives for treating stock in compliance with organic certification authorities, which may include herbal and homoeopathic treatments, mineral and vitamin supplements and permitted medications
Assessment Requirements for AHCPER304 Carry out animal care, maintenance and treatment programs in a permaculture system

- developing appropriate handling procedures to reduce stress
- harvesting, sourcing and handling useable products (such as milking and collecting eggs)
- requirements for animal housing, enclosures and fencing
- animal health and nutrition requirements
- information documented in animal care, maintenance and treatment records, such as
  - stocking rates
  - rotation schedules
  - pasture condition
  - feeding details
  - harvest records
  - details of equipment and materials used
  - the performance of equipment, faults and malfunctions
  - number of treated livestock and details of treatment, including spur docking for roosters, hoof trimming and other mechanical, non-chemical treatments
  - any testing carried out and results
  - expiry of withholding periods
  - evaluation of treatment effectiveness
  - observed abnormalities or behaviour in livestock
- methods for harvesting, sourcing and handling useable products (e.g. milking, collecting eggs)
- types of parasite infestation, their symptoms and seasonal incidence
- types of health promotion practices, including allowable organic methods
  - assessing the requirements of the particular animals for shelter, enclosure, rotation, food and medicinal plants
  - dosage and rates of treatments appropriate to the identified type of animal, its body weight and severity of infestation, infection or injury
- relevant Codes of Practice with regard to the safe use and handling of hazardous substances
- withholding periods for treated animals

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to implement crop maintenance and harvesting programs for permaculture systems. Crop maintenance methods may include, thinning, spacing, selective harvesting, training, summer and winter pruning, hedging, skirting, topping and trimming. Crop harvesting methods may include manual and machine-assisted harvesting.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

1. Plan for maintenance and harvesting of permaculture crops

- 1.1 Identify requirements of the site and crop maintenance program
- 1.2 Select materials, tools, equipment and machinery
- 1.3 Carry out pre-operational and safety checks on tools, equipment and machinery
- 1.4 Identify work health and safety hazards, assess risks, implement controls and take appropriate action
- 1.5 Select, use and maintain appropriate safety and personal protective equipment

2. Maintain permaculture crops

- 2.1 Implement maintenance tasks in sequence to the crop maintenance program
- 2.2 Instruct personnel or work team members to undertake required maintenance operations
- 2.3 Ensure tasks are undertaken according to work health and safety requirements and environmental considerations
- 2.4 Monitor maintenance of crop and take corrective action where required
- 2.5 Maintain a clean and safe work area throughout maintenance operations

3. Harvest permaculture crops

- 3.1 Implement harvesting tasks in sequence to the crop maintenance program
- 3.2 Instruct personnel or work team members to undertake harvesting operations
- 3.3 Ensure compliance with work health and safety requirements and observe environmental considerations
- 3.4 Monitor harvesting of crop and take corrective action to ensure standards are met
- 3.5 Maintain a clean and safe work area throughout harvesting operations

4. Complete maintenance and harvesting activities

- 4.1 Re-use or dispose of waste material
- 4.2 Clean, maintain and store tools, equipment and machinery appropriately
- 4.3 Record harvesting outcomes

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret site plans and crop maintenance and harvesting schedules
- harvest or maintain crops correctly and without damaging produce
- coordinate work group, contractors and own activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to obtaining a yield
- principles of maintaining crops and the methods used to maximise crop yields
- maintenance techniques for a range of crops, such as:
  - manual thinning
  - selective harvesting
  - training
  - summer and winter pruning
  - hedging
  - skirting
  - topping
  - trimming
  - picking
  - bagging
  - trellising
- maturity or ripeness properties of crops when ready for harvest
- effects of maintenance operations on plant growth, habit and production levels of maintenance operations
- maintenance of soil health and impact on production
- enterprise quality procedures and characteristics of a crop relative to varying market requirements

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- recognise a range of weedy plants and associated organisms within a particular permaculture enterprise
- identify uses of weedy plants in a permaculture system
- identify control methods used in permaculture weedy plant management plan
- implement a permaculture weedy plant management plan
- assess progress and effectiveness of the permaculture weedy plant management plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices in relation to the management of weedy plants
- weedy plant recognition
- strategies used in weedy plant management plans, such as:
  - organic chemical, biological and cultural control methods and treatments available to the enterprise within the parameters of a permaculture weedy plant management plan
  - range and use of tools, equipment and machinery available to the enterprise for implementing a permaculture weedy plant management plan
  - animal systems to use the weedy plant as a food source
  - plants and planting strategies to out-compete weedy plants or to be used as a follow up to successful treatment
  - site monitoring and analysis techniques that may be used to implement a permaculture weedy plant management plan
  - roles that weeds play within an ecological system, such as:
- soil stabilisers
- fodder for wild and domestic animals
- nutrient traps
- nutrient mining from subsoil
- identification of a range of edible weedy plants
- uses for weedy plants including commercial uses, such as:
  - animal fodder
  - basket making
  - compost teas
  - food and medicinal products, such as nettles as cheese wraps or herbal teas

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Certificate is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with work team members, supervisors, contractors and consultants
- utilise recording, reporting, analysis and work procedure documents
- read and interpret the permaculture design
- prepare the area for installation of elements of design
- install elements progressively over an appropriate period of time to establish the rural permaculture system

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of permaculture and practices in a rural context
  - rural permaculture system design for a farm or small holding where permaculture is practiced
- zone and sector analysis, for example:
  - consideration of the frequency of use and intensity of need of elements in the system
  - consideration of the spatial requirements of elements in the system
  - mutual benefit and connections between zones
  - consideration of the specific needs of the location of the system in terms of climate, access, slope, potential for wild fire, flood, tsunami or other catastrophic force
  - Consideration of the neighbouring or local environment, its need, products and intrinsic features
- Establishment of permaculture elements:
  - Elements which together form a system
Assessment Requirements for AHCPER307 Establish a rural permaculture system  

- species chosen for their functions in the overall system including plants, animals and objects
- elements chosen for mutual benefit
- elements which address important functions such as energy, water, food and fuel
- elements which support the needs of the system within the overall design
- the objectives of the plant system establishment program, including finished plant system forms, site appearance, end use and time constraints
- the interactions between plants and animals and how to maximise the benefits
- cultural requirements, planting procedures and follow-up care for plants
- environment and habitat requirements of animal species
- the identification of pests, diseases, parasites, and deficiencies that are likely to affect plants and animals and the use of appropriate treatments
- soils and appropriate soil amelioration techniques
- the ecology of the native species, and their value in a permaculture system

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- Communicate with work team members, supervisors, contractors and consultants
- utilise recording, reporting, analysis and work procedure documents
- interpret the permaculture design
- install elements progressively to establish the urban permaculture system (over an appropriate period of time)

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of permaculture and practices in an urban context
- Urban permaculture systems, such as:
  - houses and gardens where permaculture is practiced, or a productive section of it
  - community gardens or city farms where permaculture is practised
  - school gardens where permaculture is practised, or productive sections of them
  - Chicken, rabbit, guinea pig or other tractor systems
  - continuous worm farm systems
  - chicken dome pattern systems
  - tyre pond and mandala aquaculture systems appropriate to an urban permaculture system
  - aquaponics systems
  - duck and rice systems and other integrated systems appropriate to an urban permaculture system which utilise an animal, fish or bird species to generate a yield in association with plant species
• Zone and sector analysis
  • Consideration of the frequency of use and intensity of need of elements in the system
  • Consideration of the spatial requirements of elements in the system
  • Mutual benefit and connections between zones
  • Consideration of the specific needs of the location of the system in terms of climate, access, slope, potential for wild fire, flood, tsunami or other catastrophic force
  • Consideration of the neighbouring or local environment, its needs, products and intrinsic features

• Elements in permaculture elements
  • Elements which together form a system
  • species chosen for their functions in the system, including plants, animals and objects (built or existing)
  • elements which are chosen for mutual benefit
  • each important function (energy, water, food, fuel etc.) is supported by many elements
  • elements support the needs of the system within the overall design
  • the interactions between plants and animals and how to maximise the benefits
  • plant and animal species and their cultivars or breeds and what they contribute to the system
  • cultural requirements, planting procedures and follow-up care for plants
  • environment and habitat requirements of animal species
  • the identification of pests, diseases, parasites, and deficiencies that are likely to affect plants and animals and the use of appropriate treatments
  • soils and appropriate soil amelioration techniques
  • the ecology of the native species, and their value in a permaculture system
  • site retrofitting for urban permaculture systems:
    • constructing soil retainers
    • installing irrigation and drainage systems including swales, diversion drains, mulch-pit paths
    • establishing integrated plant and animal systems
    • collection and storage of nutrients or water
    • solar passive modifications to structures

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

</tbody>
</table>

2. Set out and prepare site    | 2.1 Measure and mark out permaculture water system lines or lay out in accordance with the permaculture plan                                                                                                          |
|                               | 2.2 Dig trenches, where required, at the specified depth without damage to services, facilities, features and established plants                                                                                      |
|                               | 2.3 Ensure that equipment operation and work practices conform with OHS requirements                                                                                                                               |
|                               | 2.4 Observe any regulations and legislative requirements relevant to the situation                                                                                                                                |
|                               | 2.5 Consider the needs of other stakeholders while setting out and preparing the site for permaculture water systems                                                                                              |

3. Install permaculture water systems  | 3.1 Interpret the permaculture plan and, where applicable, supervise and monitor work by contractor                                                                                                               |
|                               | 3.2 Assemble and connect parts of irrigation systems, where used, according to manufacturer’s specifications and the permaculture plan                                                                             |
|                               | 3.3 Install and adjust pump fittings and valves, where used according to manufacturer’s specifications and the permaculture plan                                                                                     |
|                               | 3.4 Maintain a clean and safe work area while installation work is carried out                                                                                                                                    |
|                               | 3.5 Check that works can be carried out without a licensed plumber and direct work to licensed individuals where required.                                                                                           |

4. Complete installation work  | 4.1 Finish off earthworks to permaculture plan specifications                                                                                                                                                     |
<p>|                               | 4.2 Check the system configuration and capacity matches the installation plan                                                                                                                                     |
|                               | 4.3 Remove or dispose of waste material from the site, and restore site to original state in an environmentally aware and safe manner                                                                               |
|                               | 4.4 Clean, maintain and store tools, equipment and machinery                                                                                                                                                      |</p>

</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- organise resources for installation work
- set out and prepare site
- install permaculture water systems materials and components, excluding works requiring a licensed plumber.
- commission a permaculture water system
- monitor and maintain permaculture water systems
- communicate with work team members, supervisors, contractors and consultants

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture practices regarding water including natural flows, rainwater and wastewater, storage, movement and retention of water in the system
- permaculture water systems, such as:
  - swales
  - contour banks
  - terraces
  - mulch-pit paths
  - diversion channels and other passive installations
  - mains pressure systems
  - low pressure or gravity systems
  - below-ground systems
  - above-ground systems
- spray, dripper and capillary irrigation systems
- water tanks
- guttering and first-flush diversion system
- water supply components, such as:
  - mains
  - dam
  - bore
  - windmill
  - tank
  - channel
- understanding of contours
- installation methods and techniques for permaculture water systems
- components of permaculture water systems
- characteristics and operation of joints, valves and sprinkler components
- operation of pumps and water flow rates
- behaviour of water on varying terrain and soil types
- soil water retention testing techniques
- water quality and water filtration techniques
- calculations for installing permaculture water systems
- soil characteristics
- regulations and legislative requirements, such as:
  - permits for pruning or removal of large trees
  - connecting to water systems
  - licences for operating specialised machinery, such as chainsaws, skid steer loaders and forklifts
  - setting up traffic and pedestrian barriers
  - digging near services (phone, gas, power, water, sewerage and drains)
  - installing dams or diverting water in catchments
  - installing tanks
  - planning acts and codes
  - earth movement and digging guidelines and legislation
  - environmental legislation
  - land restoration codes
  - water conservation guidelines and legislation
  - soil movement regulations
  - habitat and wildlife protection legislation
Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to install permaculture structures and features. These structures and features may include fences, trellises, animal housing, sheds, pergolas, appropriate technologies and other constructed features.

All work is carried out to comply with workplace procedures. Manufacturer’s specifications are observed and operating instructions are followed when using tools and equipment.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret permaculture design drawings and specifications
- measure and mark lengths of materials accurately
- join and cut materials using different techniques and methods
- install and check permaculture structure

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles regarding structures and the built environment
- Permaculture design drawings and specifications, such as:
  - Permaculture design including construction detail drawings
  - measured drawing of structure in accordance with permaculture principles
- measuring principles and techniques
- typical permaculture structures, such as:
  - garden structures and features
  - fences and trellising
  - animal housing and shelters
  - netting structures and protective devices for plants
  - paving and landscaping
  - composting and worm-farming structures
  - retaining walls, observing relevant regulatory conditions
  - sheds or small outbuildings, observing relevant regulatory conditions)
components of houses or other buildings, observing relevant regulatory conditions
the correct use of hand and power tools and other work health and safety requirements associated with installing structures and features
comparative environmental implications associated with excavation and construction activity
safe lifting and transporting techniques
appropriate use of personal protective clothing and equipment (PPE)
appropriate use and installation of safety signs and barriers
site access points
implication of alteration to water flow during and after construction

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit provides the skills and knowledge required to identify and select small livestock for slaughter, preparing killing equipment, conducting safe and humane slaughter of small livestock, dressing and protecting meat, appropriately storing meat and ensuring meat is suited to end-use requirements. Competency also requires the application of skills and knowledge to hygienically clean equipment and slaughter areas and dispose of waste materials.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify and select small animals for slaughter
- humanely and hygienically kill small livestock
- dress and butcher small livestock carcasses
- clean facilities and equipment
- prepare and store meat
- dispose of wastes in an environmentally responsible manner

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture practices with regard to killing small livestock, such as:
  - need to supply meat for domestic human or animal consumption
  - need to cull pest animals such as rabbits
  - need to cull animals in excess
  - need to destroy old or sick small livestock
- health restrictions and laws applying to the slaughter of livestock for sale, including not offering for sale small livestock slaughtered for domestic consumption, except where these laws are well understood and adhered to
- relevant legislative work health and safety requirements, especially where they relate to livestock and slaughter, and animal handling techniques
- animal welfare legislation, such as:
  - meat industry health and safety guidelines
  - Australian standard for hygienic production of meat for human consumption
• ANZFA food standards code
• state and territory regulations regarding meat slaughter handling and consumption
• industry and enterprise quality assurance standards
• withholding periods
• animal welfare legislation
• disease control legislation and requirements
• withholding periods
• usable products other than meat, such as:
  • feathers
  • skins
  • chicken feet and combs
• usable offal and offal disposal regulations, such as:
  • select cuts, such as poultry offal or rabbit kidneys, that are fit for human consumption
  • handling offal safely and hygienically
• human health and hygiene
• health issues affecting both humans and small livestock
• end uses for animal carcasses, such as:
  • meat for human consumption
  • disposal of culled old or sick small livestock
  • maximising useful meat cuts and other products of slaughter
• storage or treatment of products from animal slaughter, such as:
  • cool room, refrigerator and freezer
  • smoke-house or curing facilities
  • salting barrel
  • cauldron or large boiler for cooked treatments
  • containers for storage
• poultry and small animal carcass hanging methods, such as:
  • dressing to avoid cuts to carcass or pelt
  • preparing skin for drying, storage or disposal
  • protecting from dust, heat, flies, wild birds or wild animals with appropriate gauze or bags or shelters until process is complete
  • cold room or cool room
  • refrigerator or freezer

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to plan organic garden and orchard systems. It requires the application of horticultural and permaculture knowledge including permaculture principles, plant types, conditions and requirements to establish orchards for optimum production.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess site for planting
- test soil and analyse the results
- select plants
- identify zones and sectors of site to ascertain best planting locations
- identify structures and services and how these may impact on the plan
- develop planting plan to include at least 5 fruit trees or shrubs

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and ethics
- permaculture site planning
  - boundaries of sites drawn at an appropriate scale
  - direction of North (or sunward)
  - location of plants
- other information relevant to a permaculture garden and orchard system drawn in clear and accurate graphic style
- planting schedules and timelines, including Gantt charts
- zone and sector planning, such as:
  - zones for garden and orchard systems (Zones 1 and 2)
  - sector information such as prevailing winds, fire aspect, winter and summer sun angles, best locations for sun-loving and shade-tolerant species
  - microclimate information
• zone and sector plans drawn as overlays to a site plan
• garden and orchard systems, such as:
  • an orchard with 5 to 10 or more assorted fruit trees or shrubs
  • integrated plant and animal systems
  • consideration of and design for plant ecosystem relationships
• soil structure, types and function, including soil tests for agricultural purposes
• soil maintenance and improvement techniques
• aims and purposes of building organic garden and orchard systems
• design principles for organic garden and orchard systems
• features and characteristics of plants used in organic garden and orchard systems
• growing requirements of plants used in organic garden and orchard systems
• biosecurity policies and principles

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit provides the skills and knowledge of permaculture product preservation techniques; planning for the preparation of permaculture products; handling and storage requirements of permaculture products and their treatment, storage and presentation requirements.

All work is carried out to comply with workplace procedures. Individuals observe manufacturer’s specifications and follow operating instructions when using tools and equipment.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| 1. Plan for preparation of permaculture products | 1.1 Identify permaculture products to be prepared  
1.2 Select materials, tools, equipment and machinery  
1.3 Carry out pre-operational and safety checks on tools, equipment and machinery in accordance with manufacturer’s specifications  
1.4 Select, use and maintain suitable safety and personal protective equipment (PPE) |
| 2. Co-ordinate preparation of permaculture products | 2.1 Prepare permaculture products in sequence according to the product preparation plan  
2.2 Ensure that all assistants are familiar with the plan  
2.3 Maintain clean, safe and hygienic work area throughout and on completion of work |
| 3. Treat permaculture products | 3.1 Grade and label products in accordance with the product preparation plan  
3.2 Identify and dispose of products that do not meet specifications, according to best environmental practice  
3.3 Select treatments according to product requirements and the product preparation plan  
3.4 Treat permaculture products in an economical, methodical, and efficient manner that minimises damage to products |
| 4. Pack and present permaculture products | 4.1 Implement packing and presentation requirements as specified in the product preparation plan  
4.2 Label and date products as required  
4.3 Monitor packing and presentation of products and take corrective action to ensure that packing and presentation meet required standards |
| 5. Store permaculture products | 5.1 Identify available storage area so that product can be moved there quickly and efficiently  
5.2 Adhere to storage requirements specified in the product preparation plan  
5.3 Monitor storage processes and facilities and take corrective action, when required, to maintain product quality |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan for preparation of permaculture products
- process and preserve permaculture products
- pack, present and store permaculture products
- coordinate the work of others in the preparation and storage process

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles related to product preservation and storage
- seasonal availability cycles
- products suitable for storage
- the following plant products:
  - fruits
  - vegetables
  - seeds
  - herbs
  - flowers
  - foliage
  - grains
  - bulbs
  - tubers
  - nuts
• mushrooms
• wild harvest plants
• oils
• firewood
• bamboo
• timber
• legumes and pulses
• mulch
• straw
• hay
• sawdust
• sap
• the following animal products:
  • meat
  • eggs
  • milk and dairy products
  • honey and bee products
  • young animals
  • fish fingerlings
  • feathers
  • wool
  • manure
  • bones
• storage methods appropriate to particular products
• treatment methods appropriate to particular products:
  • removal of dirt and foreign material
  • stripping excess leaves and/or trimming
  • brushing
  • washing/hydration
  • drying
  • applying preservatives
  • dipping
  • observing quarantine requirements
  • storing in a controlled environment
  • comply with organic standards, if appropriate
• the importance of maintaining the quality of products including handling and storage requirements
• correct storage conditions for products:
  • specifications for storage facilities
  • environmental conditions such as temperature, humidity and light
- length of storage
- position in the storage facility: shed, cellar, root cellar, pantry, barn, refrigerator, freezer, drying room
- cleaning processes to ensure a level of hygiene that protects the quality and health status of the stored products
- hygiene issues in the handling and storage of biological products

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- define maps and plans
- determine distances and areas
- identify topographical features
- identify site boundaries and site structures
- use maps to take-off information
- use maps in field situations

Knowledge Evidence

The candidate must demonstrate knowledge of:

- maps and plans
  - paper
  - electronic
  - 3D models of sites, including sand-box models
  - contour models
  - elevations and cross-sections
  - aerial photographs
- the following mapping conventions: symbols, distance and scale, direction, coordinate systems, line and area symbols, true North, grid North and magnetic North
- land survey systems, map projections, colour and symbol systems
- contours, slopes and slope profiles
- keyline and key point locations, as described in *Water for Every Farm* by P.J. Yeomans
- topographic features
Assessment Requirements for AHCPER314 Read and interpret property maps and plans

- curved planes on flat surface distortions
- means of locating current position in the field, such as:
  - GPS
  - other positioning systems such as the sun, moon and stars
  - compass bearings

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- read and interpret documentation associated with community projects
- organise field staff and volunteers
- represent and support community organisations
- calculate material and resource requirements
- coordinate project activities
- document and report results

Knowledge Evidence

The candidate must demonstrate knowledge of:

- community projects, such as:
  - small or short-term projects
  - projects that form part of larger projects
  - arranging social events
  - carrying out fundraising and sponsorship
  - representing a community group or project
- environmental awareness associated with undertaking project works to ensure minimal impact on the environment
- work schedule programming
- hiring and subcontracting of labour
- attracting volunteers
- possible causes of disruption to work activities and contingency situations, such as:
  - delay in delivery and/or breakdowns with equipment and machinery
- poor weather conditions
- poor quality materials
- unforeseen problems
- provision for providing other work on the site or away from the site while problems are fixed
- delaying a project if possible and necessary
- responsibilities and requirements for obtaining external agency permits as necessary
- the range, use and availability of materials, equipment and resources required for a project
- work health and safety issues, legislative requirements and Codes of Practice
- community consultation
- project coordination principles
- meeting and committee protocols
- project reporting
  - the project name
  - author name and date
  - project description
  - progress of activities
  - promotions and publicity
  - OHS issues
  - expenditure
  - future project-related activities that require planning

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess permaculture system needs
- research plants and animals to inform the new permaculture system design
- select plant and animal species for a permaculture system
- monitor plant and animal systems during the establishment phase

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to species selection
- permaculture needs analysis
- bioregional analysis
- plant and animal species and their interactions and interrelationships, such as:
  - permaculture combinations – guilds, companions, nurse plants and animal companions
  - EVCs (Ecological Vegetation Classes)
  - indigenous animals and plants
  - what grows or thrives locally – plants, animals, birds, insects, fish, frogs, reptiles
  - food, fodder and medicinal plant species suitable for chosen animals
  - integrated plant and animal systems such as chicken tractors, cell grazing, aquaculture systems
- basic research techniques
- using primary data sources, such as:
  - original data gathered by the researcher
  - local wisdom
- weather observations
- flora and fauna observations
- using secondary data sources, such as:
  - data provided by government departments and agencies
  - publications
  - reference books, websites and journals
  - official weather data
- communication techniques

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research building methods
- prepare for the building project
- build with earth, straw and/or reclaimed materials
- limit and re-use surplus and waste materials
- ensure the standard of the finished built structure is appropriate to the permaculture design

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles regarding structures and the built environment
- Building methods, such as
  - mud brick
  - straw bale
  - cobb & light earth
  - rammed earth (Pise)
  - wattle and daub
  - stabilised/compressed earth brick
  - earth ship
  - aerated concrete
  - compressed paper and timber fibres
  - wool brick
  - air dried timber
• structural issues
• planning issues
• properties of materials and suitability of local soils and timbers for building uses
• environmental, logistical and safety factors, such as:
  • issues related to harvesting and milling of local timbers
  • possible contaminants in or on materials
  • weight and size of materials and their transport to the site
• reclaimed materials, such as:
  • commercial timber off-cuts and wastes
  • demolition materials (timbers, windows and doors, plumbing fittings, roofing materials, bricks and other masonry items)
  • railway sleepers, telegraph poles, bridge timbers and other heavy reclaimed timbers
  • metal mesh and grill-work (fridge and oven shelves, wire baskets, fence panels, bed frames and bases, chicken wire, aviary mesh, pig/dog wire and other wire mesh products in small or large quantities)
  • reinforcing mesh and rods, trench mesh
  • pallets and packaging crates
  • shipping containers, ex-transport carriages, old cars, trailers and caravans
  • mirrors
  • bottles (glass and plastic)
  • ceramics and flower pots
  • car & truck tyres, windscreens, panels and seats
  • machinery parts
  • drums and cans
  • palings and weatherboards
  • reclaimed concrete
• typical permaculture structures, such as
  • garden structures and features
  • fences and trellising
  • animal housing and shelters
  • seating and garden walls
  • retaining walls and small dam walls (including observing all regulatory conditions)
  • sheds or small outbuildings (including observing all regulatory conditions)
  • components of houses or other buildings ((including observing all regulatory conditions and work with professionals on larger structures)
• the correct use of hand and power tools and other work health and safety requirements associated with installing structures and features
• techniques for working with reclaimed materials such as de-nailing, stripping old paint, dressing timber
• WHS considerations associated with recycled materials such as identification of lead paint, broken glass, rusty metal, chemically treated materials
• comparative environmental implications associated with excavation and construction activity
• safe lifting and transporting techniques
• appropriate use of personal protective clothing and equipment (PPE)
• appropriate use and installation of safety signs and barriers
• site access points
• implication of alteration to water flow during and after construction

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to plan propagation activities for a permaculture system. It requires the application of permaculture principles, seasonal propagation opportunities, organic principles and plant growth science.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| **1. Research propagation requirements for the permaculture system** | 1.1 Assess propagation needs according to garden needs or permaculture design  
1.2 Consider opportunities for propagation from local area, such as seed banks, tree or shrub prunings, unusual varieties to be traded or varieties purchased for propagation  
1.3 Determine numbers of new plants to be produced for the needs of the system and/or for swapping, selling or community needs |
| **2. Develop the propagation plan** | 2.1 Prepare a propagation plan according to research undertaken  
2.2 Ascertain best methods for species to be propagated and include them in the propagation plan  
2.3 Construct a seasonal or monthly timeline or calendar to keep track of propagation requirements  
2.4 Maintain the propagation plan as an active document through the seasons |
| **3. Implementing the propagation plan** | 3.1 Consult the propagation plan when planning monthly activities  
3.2 Clear space in the propagating area for the activity to be undertaken  
3.3 Set up materials and equipment for propagation work  
3.4 Organise propagules and apply pre-treatments if required  
3.5 Create new plants in prepared containers or the garden area according to the propagation plan  
3.6 Water, fertilise, label, mulch, stake and tie new plants as required |
| **4. Maintaining propagated plants to end use** | 4.1 Maintain new plants by watering, sheltering and checking for pest or disease attack  
4.2 Remove any new plants that have failed to thrive to avoid cross-contamination  
4.3 Apply allowable organic treatments to new plants if required  
4.4 Harden off new plants in a protected place before planting, selling or swapping |
| **5. Maintain a healthy and orderly propagation area** | 5.1 Maintain tidiness and orderliness of propagating area  
5.2 Store propagating materials, potting media and containers for future use  
5.3 Remove any weed or moss growth regularly to ensure basic...

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research propagation requirements for the permaculture system
- develop a propagation plan
- implement a propagation plan
- maintain propagated plants to maturity or end use.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to propagation:
  - using reclaimed or reused containers (suitably cleaned to avoid cross-contamination)
  - labelling systems using reclaimed materials
  - maintaining rare and unusual varieties
  - using edges and valuing the marginal – unusual plants in micro-climates
  - sharing and swapping to increase biodiversity and mutual wellbeing
  - preserving provenance of locally indigenous species
  - testing and trialling for new plants or resistant varieties
  - global food plant preservation, including seed saving
- propagation plan including such considerations as:
  - seasonal activities
  - seed saving
Assessment Requirements for AHCPER318 Plan propagation activities for a permaculture system

- needs of the system for plants
- mother plant location and frequency of use
- schedules and timelines
- principles of sustainable horticultural practices
- propagation techniques, such as:
  - cuttings – softwood, hardwood, semi-hardwood, root and tip
  - layering – stool, aerial and runner
  - division
  - grafting – whip and tongue, saddle, wedge, approach and bench
  - budding – shield and patch
  - seed sowing
  - potting media suitable for propagation in a garden setting, such as:
    - compost and worm casting mixes
    - sieved and graded sands
    - blends used for different purposes or different times of the year
    - sphagnum moss
    - water (hydroponics or aquaponics)
- plant growth, development and nutrition
- botany and physiology
- maintaining moisture levels in simple systems without causing disease
- systems for protecting new plants and seedlings, such as:
  - polyhouse or shade-house systems, including hoop systems on garden beds
  - systems using reclaimed materials, such as bag-and-frame cloches, bottle protectors for seedlings, tyre stacks, birdcages and wire baskets
  - glass houses
  - shade houses
  - naturally occurring or planned microclimates
- minimal environmental impact waste disposal and composting systems which destroy pathogens.

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

| 1. Take soil samples from a number of places in the permaculture system | 1.1 Obtain samples from several places over a site  
1.2 Prepare the samples for testing  
1.3 Label containers accurately with location identifier, date, soil test and tester |
| 2. Test soil for range of plant and structural needs | 2.1 Carry out soil tests for texture, organic matter, structure, pH, water infiltration and compaction  
2.2 Have samples tested by a laboratory for nutrient levels and deficiencies if concerned or if particular requirements exist for the crops and livestock in the permaculture system  
2.3 Re-test in a different season or soil temperature |
| 3. Analyse soil improvement requirements | 3.1 Determine requirements for soil improvement from tests carried out  
3.2 Determine requirements for soil improvement from the laboratory test results, if taken  
3.3 Identify soil biota in soil and ascertain how to optimise biodiversity  
3.4 Research soil improvement options, including discussing with neighbours and experienced practitioners appropriate options for soil improvement |
| 4. Implementing soil improvement plan | 4.1 Develop a plan for soil improvement over time and vary it depending on the location on the site and the crop or livestock being grown  
4.2 Calculate required quantities of allowable additives and supplements to improve soil health  
4.3 Use products at recommended rates and according to any existing certification system applying to the land  
4.4 Protect soil biota present in soil, including using appropriate mulches for perennial and annual plants |
| 5. Maintain health of soil according to organic guidelines | 5.1 Observe changes over time and record using tables and photographic records  
5.2 Avoid practices that can cause deterioration in soil health such as over- or under-watering, over-grazing, over-cultivating and off-contour ploughing  
5.3 Follow organic and permaculture guidelines to increase soil carbon |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- take soil samples
- test soils
- analyse soil improvement requirements
- implement soil improvement plan according to permaculture guidelines
- maintain soil health

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices related to soil health and plant nutrition
  - working with natural soils rather than importing soil
  - soil as an ecosystem
  - soil as biomass and carbon capture and storage
- principles of sustainable horticultural practices
- how to read a laboratory soil test
- soil testing techniques, such as:
  - jar test for soil structure
  - ribbon test and ball test for soil texture
  - infiltration or permeability test
  - pH testing
  - compaction test
  - non-wetting soil test
• air-filled porosity test
• worm count
• microscopic biota in soils
• plant nutrient uptake and mineral action
• soil chemistry
• science of composting
• fungal and bacterial action and mulches appropriate to different plants
• additives to improve soils, such as
  • compost and worm castings compost teas
  • biochar
  • green manures
  • organic mulch
  • manures/animal bedding materials
  • leaf mould
  • plantings – green manures, nurse plants
  • companion planting
  • chop and drop
  • nutrient trapping systems
  • greywater use
  • organically certified products
  • amendments that may include rock dust, gypsum, dolomite, lime, zircon, sulphur and other minerals
• plant growth and development
• soil life, including microscopic life
• methods of waste disposal causing minimal impact on the environment
• the effects of conventional agricultural chemicals on soils and soil ecosystems

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to manage plant pests, diseases and disorders in a permaculture system. It requires knowledge of healthy permaculture systems and the pests, diseases and disorders that might need management. It includes focusing on solutions in an integrated design, rather than reacting to infestations.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| 1. Identify existing and potential pests, diseases and disorders in the permaculture system | 1.1 Using observation of plants in the permaculture system, identify existing or potential for pest attack, disease or disorders  
1.2 Using climatic data and weather observations, identify existing or potential for pest attack, disease or disorders  
1.3 Monitor balances within the system such as pest and predator balances  
1.4 Maintain a record of observations  
2. Research pest, disease and disorder prevention methods | 2.1 Research pests, diseases and disorders using both primary and secondary sources  
2.2 Consult widely and use both electronic and conventional reference material  
2.3 Establish prevention methods for maintaining a healthy balance  
2.4 Research possible negative effects of treatments on other elements of the permaculture system  
3. Develop a pest and disease management program | 3.1 Develop a plan based on the research conducted and the observations made  
3.2 Include information about weather conditions, time of year, cycle of pests or disease vectors in the management program  
4. Implement the pest and disease management program | 4.1 Provide solutions that address the interactions of many elements in the system rather than spot treating outbreaks  
4.2 Avoid practices that spread disease, such as propagating using diseased plants, or using un-sanitised tools when pruning orchard trees  
4.3 Provide habitat and microclimate conditions for useful insects, plants, birds and animals  
4.4 Carry out permaculture practices that minimise the risk of pest and disease problems  
4.5 Update the management program regularly so that it is active and useful to the permaculture system  
5. Monitor and record the management of plant pests, diseases and disorders over time | 5.1 Keep records of pest and disease control operations, noting weather conditions and times of year  
5.2 Use records to enable predictions of or responses to possible disease and pest recurrences in similar weather or times of the year  
5.3 Maintain records over time to build a history of the permaculture system |
Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify existing and potential pests, diseases and disorders in the system
- research methods of managing pests, diseases and disorders in a permaculture system
- develop a pest and disease management plan
- implement a pest and disease management plan
- monitor pest and disease managements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to managing plant pests, diseases and disorders
- principles of maintaining healthy permaculture crops, such as:
  - companion planting
  - increasing diversity
  - providing habitat and food for pests’ natural predators
  - healthy, balanced soil
  - minimal use of soluble fertilisers
- allowable control methods in organic systems, such as
  - deterrent organic sprays
  - pheromone traps and lures
  - predatory and/or parasitic insects, mites and other organisms as part of biological control
  - nutrient additives
• crop rotation
• covers and netting
• BT (Bacillus thuringiensis) and other action-specific micro-organisms
• symptoms of disease and disorders in plants
• care needed to avoid transferring infections (such as through grafting and pruning practices)
• stages of development of pest organisms and signs of pest presence on plants and animals
• planting for insectivorous birds, lizards, frogs and microbats
• fungal, bacterial and viral infestations and their symptoms
• disease vectors and plants that harbor them
• companion planting
• succession planting

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to demonstrate permaculture practices to small groups of learners. Demonstration of techniques related to animals, plants, structures, energy, resources and community development are covered in a non-threatening and experiential setting. It is intended for school teachers and those who demonstrate permaculture skills to small groups of learners in different situations and contexts.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify audience for demonstration
- identify topic/s for demonstration
- prepare resources for demonstration
- conduct demonstration
- collect and use feedback to address immediate issues or for future demonstration planning

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and ethics
- Permaculture practices, such as:
  - minimising effort for maximum effect
  - multiple uses for each element in the system
  - using more than one way to provide important functions
  - re-using and valuing resources and energy
  - encouraging productivity of a permaculture system
  - seeing solutions, not problems
  - using vertical space and other edges and connections
  - preventing waste and loss of resources from a permaculture system
- participatory planning and learning activities for topics such as:
  - methods of design
  - pattern understanding and integrated systems
- animal and plant species selection methods
- ecological principles
- climatic and geological influences
- water in the system
- soils
- earthworks for capturing nutrients
- permaculture structures and features
- different appropriate technologies that can be used
- resource use and reuse
- energy

### Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate III (or higher) in Permaculture. Completion of a Permaculture Design Course (PDC) is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify client needs and requirements for information and advice
- propose a selection of permaculture practices and strategies that best suit the needs and resources of the client and the potential of the site
- provide information on permaculture principles
- provide advice on permaculture practices and strategies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of permaculture based on 12 principles in David Holmgren Principles and Pathways Beyond Sustainability and the work of Mollison and Slay
- ethics of permaculture: care for the earth, care for all people, fair share of surpluses, setting limits to biophysical growth (population, resource use and waste)
- permaculture practices and strategies, such as
  - personal, household, community and bioregional strategies
  - sustainable agriculture, horticulture, aquaculture and organic gardening
  - economic alternatives that support sustainable living
  - low energy and low embodied energy building and manufacturing
  - appropriate technology
  - restoration ecology and maintenance of biodiversity
  - sustainable community development, bioregional development and relocalisation
  - Reuse and return of products in manufacturing cycle and waste utilisation, waste water, grey water, sewage and resource treatment for re-use and recycling
Assessment Requirements for AHCPER401 Provide advice on permaculture principles and practices

Date this document was generated: 3 September 2020

- Sustainability education
- elements of permaculture systems
- functions of permaculture systems
- permaculture design techniques
- innovation in plant, animal and technology selection, use and performance
- recent practice in bioregional community development and local energy descent planning
- client communication techniques, record keeping and listening techniques
- preparation of reports and presentations for clients
- uses of Statements of Limitation in the giving of advice

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to design a rural permaculture system. It requires the ability to negotiate with clients to develop a permaculture design brief, undertake a site analysis, develop design concepts and produce final design documentation.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| 1. Develop a design brief for a rural permaculture system | 1.1 Initiate or respond to contact with the client  
1.2 Consult with the client to establish purpose, needs and requirements of design  
1.3 Develop a design brief in consultation  
1.4 Negotiate cost structures and timelines |
| 2. Undertake design analysis | 2.1 Obtain existing maps, geospatial data and aerial photographs of property  
2.2 Survey area included in Zones 1, 2 and 3 using suitable survey tools and equipment  
2.3 Prepare a base plan  
2.4 Record site assessment data on the base plan  
2.5 Carry out bioregional analysis of the site  
2.6 Carry out research into potential permaculture design elements  
2.7 Choose permaculture design elements  
2.8 Revise brief with client in relation to completed research and analysis |
| 3. Prepare a design concept | 3.1 Evaluate and determine a permaculture system concept  
3.2 Prepare conceptual design drawings to illustrate conceptual themes and patterns informing the location and layout of proposed design elements  
3.3 Develop and compile a bill of quantities  
3.4 Prepare a list of plant and animal species and varieties suitable for the chosen concept  
3.5 Prepare a preliminary budget for the conceptual design  
3.6 Present the concept plan in a graphic style  
3.7 Consult the client and agree on options and approaches for design development  
3.8 Review and revise concepts, elements and the design brief after taking feedback from the client |
| 4. Produce final design | 4.1 Design the rural permaculture system in accordance with the design brief, research, analysis, chosen elements and concepts  
4.2 Produce detailed rural permaculture design documents  
4.3 Present design plans, drawings and documents to the client  
4.4 Take feedback from the client and revise or modify the design as required |
Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a design brief for a rural permaculture system
- draw permaculture and landscape plans
- identify rural permaculture design solutions
- develop permaculture system concepts
- develop planting schedules, budget and bills of quantity
- develop a final design
- present design to client

Knowledge Evidence

The candidate must demonstrate knowledge of:

- elements of rural permaculture design
  - representation of up to 5 zones
  - detailed representation of Zones 1 to 3
  - sector analysis
  - bioregional analysis
  - superimposing of design over commercial aerial photograph or other geospatial representation
- principles of permaculture
- strategies in rural permaculture design, such as:
  - land shaping including contour ploughing, swaling, keyline dam systems, berms and terraces
  - integrated plant and animal systems that suit the bioregion and the land
• natural system preservation and incorporation into overall design
• soil and water preservation
• forest ecology and recharge plantings for maximum water and nutrient cycling
• innovative agricultural systems such as cell grazing, inter-cropping, commons and food forests
• preservation of old and rare breeds of animals
• biodiversity and habitat preservation and enhancement strategies
• design brief
  • statement of scope of design
  • statement of client needs and requirements
  • listing of project elements
  • listing of assessable tasks
  • options for dealing with client needs and requirements
• design analysis and research
  • investigation of permaculture books and publications, online material, audio and video material, maps, plans, charts and tables
  • searches in libraries and databases
  • viewing maps
  • searching geospatial data
  • talking to people in the local area or neighbours
• plan interpretation and map reading
• site analysis
  • initial on-site estimations of soil type, pH, texture
  • topography
  • aspect
  • zone and sectors planning
  • existing vegetation
  • climatic factors
  • indicator species or other landscape-reading notes
• site surveying methods and tools
  • surveying instruments for taking vertical measurements on site
  • surveying instruments for measuring angles on site
  • surveying instruments for measuring distance and horizontal measurements on site
• design concept, such as:
  • preliminary conceptual sketches
  • bubble diagrams
  • preliminary plan, section and elevation design drawings
  • use of design drawing and drafting conventions
  • presentable and legible design drawings for client use
• rural permaculture design
• integration of brief requirements, analytical information and conceptual planning
• rational justification for placement of design elements
• integration of elements to produce an efficient and functional rural permaculture system
• conventional design symbols and those to convey permaculture elements
• design drafting and drawing conventions
• plant and animal selection
• final design
  • rendered plan, elevation and section drawings to scale
  • use of design drawing and drafting conventions
  • use of consistent graphic style
  • supporting legends and keys of elements
  • supporting materials lists, tables, bills of quantity, timelines, installation plans and management plans
  • construction detail drawings
• methods of design
  • zone and sector planning
  • slope planning
  • patterns in space and time

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- draw permaculture and landscape plans
- identify urban permaculture design solutions
- analyse zones and sectors of site
- develop design concepts
- develop detail and construction drawings
- develop planting schedules, budget and bill of quantities
- develop a final design
- present a design to a client

Knowledge Evidence

The candidate must demonstrate knowledge of:

- elements of urban permaculture design
  - Zones 1 and 2, as the furthest areas represented on the plan (otherwise it is a rural design)
  - needs supplied by other zones, even if they are supplied off site
  - sector analysis
  - bioregional analysis
  - design which may utilise existing architects’ drawings or local maps and plans
- principles of permaculture
- strategies in urban permaculture design
- edible landscapes and aesthetics in design
- public landscapes and community garden design
Assessment Requirements for AHCPER403 Design an urban permaculture system

Date this document was generated: 3 September 2020

- design brief
  - statement of scope of design
  - statement of client needs and requirements
  - list of project elements
  - list of assessable tasks
  - options for dealing with client needs and requirements
- design analysis and research techniques
- plan interpretation and map reading
- site analysis
  - onsite measurement of site boundaries
  - mapping of boundaries to scale to a plan drawing
  - mapping of contour lines to a scale plan drawing
  - measurement and location of existing infrastructure and features on site
  - mapping of existing infrastructure and features to a scale plan drawing
  - measuring and plotting location of services (power, water, sewer, gas)
  - measuring and plotting location of meters or access points
- site surveying methods and tools
  - surveying instruments for taking vertical measurements on site
  - surveying instruments for measuring angles on site
  - surveying instruments for measuring distance and horizontal measurements on site
- design concepts
  - preliminary conceptual sketches
  - bubble diagrams
  - preliminary plans, sections and elevation design drawings
  - use of design drawing and drafting conventions
- presentable and legible design drawings for client use, such as:
  - domestic systems for urban and suburban properties
  - rooftop, balcony and courtyard gardens
  - public landscapes such as streets, parks, car parks, commercial premises, industrial estates and community centres
  - school gardens and learnscapes
  - community gardens and city farms
  - Community Supported Agriculture systems, urban market gardens and peri-urban small holdings
  - urban forestry
  - conventional design symbols and those to convey permaculture elements
  - design drafting and drawing conventions
  - plant and animal selection
  - final design
    - rendered plan, elevation and section drawings to scale
• use of design drawing and drafting conventions
• use of consistent graphic style
• supporting legends and keys of elements
• supporting materials lists, tables, bills of quantity, timelines, installation plans and management plans
• construction detail drawing
• methods of design
  • zone and sector planning
  • slope planning
  • patterns in space and time

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also hold a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

**essential outcomes.** | demonstrate achievement of the element.

#### 1. Prepare for permaculture works
1.1 Confirm and verify client preferences and contract requirements
1.2 Verify scope of works
1.3 Verify specific statutory obligations
1.4 Conduct a site visit to confirm details of permaculture works plan
1.5 Identify safety hazards and work health and safety obligations associated with the permaculture works
1.6 Verify the availability, quantity and costs of plants and other materials listed in the project schedules
1.7 Verify resources and tools and equipment required for permaculture works
1.8 Confirm availability with suppliers, contractors and appropriate personnel
1.9 Verify site access and establishment issues and follow plan for environmental impacts

#### 2. Follow a permaculture works plan
2.1 Follow safety plan for permaculture works
2.2 List tools and materials required, including amounts and their sources
2.3 Follow the staged program of works to provide a sequential allocation of material resources and works tasks with specifications to meet determined project timelines
2.4 Determine the establishment period and maintenance period of works
2.5 Incorporate seasonal factors and impacts in the staging strategy to allow for planting supply and care, wet day access, machinery use, fire hazards and establishment period

#### 3. Implement the permaculture works
3.1 Take delivery of materials and equipment
3.2 Assemble human resources on site and allocate team leaders
3.3 Undertake works briefing and safety briefing
3.4 Supervise permaculture works
3.5 Complete permaculture works according to the permaculture works plan

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- write reports for supervisors, clients and contractors
- assess a site for opportunities and constraints associated with implementation of permaculture works
- implement a staged permaculture works plan
- determine tools and equipment required
- calculate amounts of materials required

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices
- permaculture works, such as
  - implementing permaculture designs
  - following a permaculture works plan as part of a permaculture project
  - constructing permaculture structures and features
  - implementing permaculture earthworks
- practical understanding of the environmental issues associated with undertaking permaculture works, such as:
  - use of materials that come from sustainable sources
  - duty of care in conserving site’s natural values
  - work practices
  - the use and movement of machinery, storage of materials, removal of weeds and movement of soil and other materials into, across and beyond the site
principles of ecology, including specific plant and animal relationships and habitat requirements

statutory compliance and obligations, such as:
- compliance with legislation, ordinances, regulations or bylaws relating to the works or the work site
- Site responsibilities include OHS, industrial relations and equal opportunity and employment

site evaluation techniques including methods of analysing soils, waterways and their condition

practical understanding of the advantages and disadvantages of a range of permaculture procedures

selection and use of appropriate combinations of machinery and tools

work health and safety hazards associated with undertaking permaculture works and the controls necessary to remove or minimise risks associated with them

contract documentation including specifications, plans of permaculture works, services, supplies and surveyors documents

scope of works determination

works’ breakdown into tasks

scheduling and time line generation

task specifications and evaluation

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- investigate appropriate technologies for permaculture systems
- evaluate permaculture systems capabilities in relation to the use of new technologies
- evaluate suitability of new technology solutions to the permaculture application
- communicate information and options

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and ethics
- appropriate technologies, such as:
  - technologies involving solar, wind, wood, biomass and water driven equipment for generating power, performing pumping duties, heating hot water and biochar production
  - alternative and resource conserving technologies such as rainwater collection, waste water treatment, composting toilets, cooking stoves, cob ovens, space heating and cooling, household appliances, pedal-powered appliances, enterprise plant and equipment
  - building technology such as natural and resource conserving building materials and techniques including passive solar design strategies and features
  - tools and implements employed in gardening and farming operations such as electric fencing, hand vs. power tools, shredders, mulching machines and use of animal power
  - lifestyle choices and behavioural adjustments to conserve energy and resources to meet sustainability objectives
• smaller scale and lower cost solutions such as maintaining and riding a bicycle, using a refillable pen, using a razor with replaceable blades and substituting other non-disposable items where disposables are normally used
• low energy devices
• ingenuity applied to complex problems to develop simple solutions such as solar powered street lighting
• criteria for determining appropriateness of energy and resource conservation technologies
• principles of passive solar design, embodied energy and carbon emission reduction
• innovations in energy and resource conservation technologies
• role of appropriate technology in energy descent planning and greenhouse gas emission reduction
• types of appropriate technology systems commonly available and applied to the design of energy and resource conscious houses, farms, offices and community projects
• the benefits from combining a number of different appropriate technologies and the limitations of each different technology
• design of systems integrating appropriate technologies

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to research, extract and provide information on bioregional characteristics and resources. It requires the ability to process a request for information on bioregional characteristics and resources, identify information sources, organise self and others, ensure information meets request, prepare and finalise reports.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

The candidate must provide evidence that they can:
- identify sources of information on bioregional characteristics and resources
- organise self or others to extract information on bioregional characteristics and resources
- ensure information meets requests
- employ appropriate media to present a report
- prepare, finalise and present a report

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and ethics
- bioregional characteristics and resources, such as:
  - a bioregion as a land and water territory whose limits are defined not by political boundaries, but by the geographical limits of human communities and ecological systems
  - a town or a segment of a city as typical as the main node of a bioregion, as was the pattern of most settlement and economic development until the 20th century
  - water catchment as one of the key identifiers of the bioregion, with the water catchment, storage, use/treatment of effluent and the water quality of rivers and creeks as essential to permaculture design
  - The Ecological Vegetation Class (EVC) of the area or the population of endemic species, as well as the suitability of any other species to grow or breed in the area
  - history, social make-up, land use and population information that go towards understanding an area
Assessment Requirements for AHCPER406 Identify and analyse bioregional characteristics and resources

- bioregional resources, including the human and social capital or culture of an area, its capacity to produce its own needs and supply surplus to others and its resilience in responding to change or catastrophe
- the natural (biophysical), built, social and cultural elements of the area, including water supply and catchment management systems, transport systems, local exchange trading systems (LETS) and cooperatives, food supply systems, fuel and fibre supply systems
- data held by local councils, community groups, historical societies, individuals and organisations that adds value to a study of the bioregion
- the following bioregional issues: transition initiatives, local food and water security and bioregional self-reliance regarding other components of daily life from local sources as opposed to importing basic needs from long distances at a high cost to the environment
- embodied energy, including how to measure it and compare it with energy output over the life of the item, and consideration of the waste disposal of an item as part of its energy ‘cost’
- types of information sources
- methods and means of accessing data
- methods of presenting and formatting information
- means of validating information

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to design harvesting and storage systems for products to meet year round supply of fresh and stored produce. It requires the ability to determine harvesting and storage system requirements, identify requirements for maintaining optimum condition of permaculture products and preparing a harvesting and storage plan.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine harvesting, post-harvest and storage system requirements
- identify requirements for maintaining optimum condition of products from a permaculture system
- prepare a harvesting and storage plan
- communicate harvesting and storage plan to clients and others

Knowledge Evidence

The candidate must demonstrate knowledge of:

- products from a permaculture system commonly harvested and stored, such as:
  - vegetables where the whole plant is harvested
  - vegetables where part of the plant is harvested
  - perennial plants where fruit/nuts are harvested
  - forests where timber, fuel and fibre crops are selectively removed
  - forests where a range of other medicinal and craft crops are harvested
  - harvest from wild systems (e.g. fruit, nuts, fungi and seeds), where a clear abundance of product has been identified
  - animal products such as eggs, feathers, hides, bone, milk and meat
  - Products may also include those derived from insects (such as honey)
  - fish (such as roe), and other organisms, such as fungi, algae and moss
- design systems for meeting year-round supplies of fresh and stored produce, such as:
  - growing requirements and crop regulation strategies calendar or seasonal chart with planting times of crops
Assessment Requirements for AHCPE407 Design harvesting and storage systems for permaculture products

Date this document was generated: 3 September 2020

- selection of early, mid- and late season varieties to extend harvest
- number of plants and area to be planted
- crop regulation and maintenance program involving tipping, mounding, thinning, staking
- sequential planting and/or harvesting schedules
- climatic conditions for harvesting crop such as appropriate time of day
- harvest and post-harvest factors influencing plant metabolism and quality
- post-harvest treatment and preparation techniques, such as:
  - flow chart of harvest, treatment, preservation and storage process
  - harvest and post-harvest treatment timelines and schedules
  - design or plans of processing and storage area
  - design of processing technology or equipment such as solar food dryer
  - lists of materials, tools, equipment and ingredients
  - manuals and operating instructions for equipment
  - recipes and instructions
  - anticipated shelf-life of product
  - labelling and recording systems
  - work health and safety, food safety, hygiene and other relevant enterprise and work practices
- preservation methods and processes for products from a permaculture system, such as:
  - drying and dehydrating
  - bottling
  - cheese-making
  - extraction (honey, cold-pressed and distilled oils)
  - culturing or fermenting
  - preserving with vinegar, oil, brine, sugar, salt and other natural agents
  - air exclusion (sealing with fats, wax, vacuum seal)
  - cellaring and root-cellaring
  - other processes that use minimal fossil fuel energy while maintaining the integrity of the harvested crop
- technologies used in crop processing, treatment, preservation and storage systems
- design of storage areas, such as:
  - buildings such as sheds
  - cupboards
  - shelving and racks
  - work benches
  - store rooms
  - pantry
  - cool store
  - cellar
Assessment Requirements for AHCPE407 Design harvesting and storage systems for permaculture products

- root cellar
- bins and containers
- developing planting and harvesting schedules for products from a permaculture system
- identifying training needs for harvest and storage workers, such as:
  - work health and safety, and other relevant enterprise and work practices
  - food safety and hygiene standards
  - appropriate clothing and personal protective equipment (PPE)
  - harvest and post-harvest handling, processing and storage practices
  - food preserving techniques
  - operation and maintenance of tools and equipment
  - reporting, recording and labelling procedures
- preparing plans and reports
- food safety, health and hygiene requirements for preservation and storage of products for human consumption

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- provide information to clients, workers or animal owners about animal health and welfare
- implement animal health and welfare procedures
- monitor animal health and welfare procedures performed by others
- maintain animal health and welfare records
- provide training in understanding and using records for the health and welfare of animals in a permaculture system

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles, ethics and practices relating to integrated animal systems, such as:
  - minimising effort for maximum effect
  - multiple uses for each element in the system
  - using more than one way to provide important functions
  - re-using and valuing resources and energy
  - animal welfare and freedom from cruelty as part of care for the earth
  - encouraging productivity of the system
  - seeing solutions not problems
  - preventing waste and loss of resources from the system
- animal health and welfare requirements, practices and procedures, such as:
  - maintenance of animal housing, enclosures and fencing, covering hygiene and welfare
• ensuring availability of suitable forage, fodder and supplementary feedstuffs, and adjusting stocking rates, ranging and rotation schedules to suit
• Coordinating the following integration of animal ranging and maintenance with plant production systems: ranging in orchard to manure trees, reducing weeds, controlling pests, eating windfall fruit,tractoring systems, composting manures and housing litter and maintaining firebreaks
• researching, assessing, implementing and monitoring supplementary stock feed requirements, feeding quantities and schedules
• researching and applying organic alternatives for treating stock in compliance with organic certification authorities, which may include herbal and homoeopathic treatments, mineral and vitamin supplements and permitted medications
• developing appropriate handling procedures to reduce stress
• harvesting, sourcing and handling the following useable products: milking, collecting eggs
• providing range areas for shade and shelter from climatic extremes through appropriate planting, including forage and fodder plants.
• equipment, including feeders and waterers, and back-up systems and alarms in case of equipment failure.
• lighting
• ventilation including fresh air, dust filters, humidity, and noxious gases.
• temperature, including cooling and heating, extreme weather conditions
• protection from predators, vermin, fires and floods.
• food with diet containing adequate nutrients
• water, including sufficient drinkable water to meet livestock requirements and monitoring water quality.
• health and distress, with signs of ill-health or distress in animals (as evidenced by behavioural changes) including reduced food and water intake, reduced production, changes in the nature and level of their activity, abnormal condition or changed physical features.
• prevention of infectious disease and internal and external parasitism.
• transport of growing and adult livestock
• animal physiology
• animal emergencies, such as:
  • injury
  • disease
  • failure of feeding or watering systems
  • poisoning
  • tick fever
  • birthing difficulties
  • escapement from housing or enclosures
  • predator attack
  • natural disasters such as bushfire, flooding, severe storm, other extreme weather event
• relevant animal welfare legislation and codes of practice
  • animal health and welfare records, such as:
    • farm livestock records
    • daily harvest/yield records (eggs, milk)
    • feeding schedules and rosters
    • rotation schedules and successional grazing regimes
    • accident and emergency reports
    • entries into database or other management software
    • worker records and reports
    • emergency reports
    • animal morbidity
    • work procedures and practices
    • seasonal factors and weather records
    • questioning client and/or workers
    • observations from inspecting animal systems
    • operational practices such as bedding change rotation, cell grazing, alternating flocks
  • industry animal health requirements
  • legislative requirements, such as:
    • compliance with council ordinances
    • planning approval
    • licence from government agency
    • animal welfare legislation
    • workplace legislation and awards

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan seed collection
- implement a seed collection program
- maintain a seed collection

Knowledge Evidence

The candidate must demonstrate knowledge of:

- flowering biology of the target species
- biological signs which indicate that the seed crop is ready to be collected
- seed banks, such as:
  - community seed banks and networks
  - private seed collections
  - organic food production enterprises such as market gardens
  - community supported agriculture seed sources
  - community garden and city farm seed banks
  - supply of vegetative propagation for perennial plants
  - heritage and non-hybrid seed distributors
  - heritage and non-hybrid seed producers
  - permaculture plant and seed nurseries
  - community seed swaps
- methods of seed collection, such as:
  - hand-picking seeds or seed capsules
- harvesting whole plant
- collecting and ripening fruit
- collecting after felling
- using ladders
- climbing
- shaking
- high-powered rifles (licensed operators only)
- elevated platforms
- extraction of the seed from the collected material
- handling of the seed crop after picking
- storage of seed, such as:
  - bags or envelopes
  - appropriate containers
  - cool, dry location
  - dehumidifying agents (silica gel, wood ash)
  - oxygen exclusion techniques
  - freezer or refrigerator
  - pest deterrent mechanisms
  - light exclusion mechanisms
- documentation of the extracted seed, such as:
  - information on provenance
  - botanical name: family, genus, species, variety and/or cultivar
  - common names
  - brief plant description
  - identity of collector
  - date collected or use by date
  - quantity (by weight or number of seeds)
  - viability test results
  - organic certification of grower
  - growing instructions such as recommended season and spacing
- provenances of seed, such as:
  - location and growing conditions of parent plant
  - sub-catchment identification of seed from endemic native plant populations
  - species and/or varieties adapted to local conditions
- collecting ethics, protocols and legislative parameters, such as:
  - limits on quantity allowed for collection
  - limits on time period for collection
  - particular use or destination for seed
  - indigenous plant regulatory conditions
Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to recommend approaches for sustainable community and bioregional development. It requires the ability to identify the potential for sustainable community and bioregional development, develop processes to consult and to communicate with stakeholders.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify and modify procedures and processes
- write materials appropriate to audience
- identify cultural protocols
- consult with community groups

Knowledge Evidence

The candidate must demonstrate knowledge of:

- sustainable community and bioregional development, such as:
  - local food security initiatives
  - community gardens and city farms
  - climate action and energy descent initiatives
  - transition towns programs
  - community education and outreach
  - local economy and trade including complementary currencies
  - sustainable enterprise and business development
  - social wellbeing and welfare services
  - renewable energy production
  - landcare and environment programs
  - sustainable agriculture and land use
  - sustainable forestry and reforestation
Assessment Requirements for AHCPER410 Recommend approaches for sustainable community and bioregional development

- catchment and water resources management
- sustainable development and housing
- waste reduction and recycling
- principles governing sustainable community and bioregional development
- sources of relevant materials and verbal information
- cultural protocols and perspectives, such as:
  - beliefs, religion & taboos
  - world views (mythological, political, social, biological)
  - acceptable modes of communication/language
  - body language
  - concepts of family and community
  - community leadership
  - relationships between community members, ages and sexes
  - acceptable modes of dress
- relevant legislation and guidelines
- principles of equal opportunity and affirmative action
- community governance, financial systems, legal and health systems
- current relationships between culturally diverse groups in the area
- understanding of the role of various sections of the community in historical and relationship terms

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to operate within a sustainable community and bioregional development program. It requires knowledge of community energy descent planning, group dynamics, community and bioregional issues. It requires the ability to communicate with a diverse group of people and to think sympathetically and laterally to support change in the community.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

| 1. Research the community and the bioregion | 1.1 Obtain information about the community by reading and discussion  
1.2 Obtain information about the bioregion and make connections between this and the community  
1.3 Listen sympathetically and think laterally to understand the issues that could affect the program |
| 2. Work within the community or bioregional development program | 2.1 Become familiar with issues being tackled by the program  
2.2 Become familiar with policies, procedures and strategies already adopted by the program  
2.3 Work collaboratively within the program guidelines to support or effect change as needed  
2.4 Communicate with all members of the community |
| 3. Participate in the growth of the community or bioregional development program | 3.1 Use permaculture design skills and lateral thinking processes to support ongoing development of the program  
3.2 Forge links with like-minded organisations and groups within the bioregion according to the energy descent action plan, or the policies of the program  
3.3 Maintain contacts and communications and solve conflicts in a spirit of cooperation and not competition  
3.4 Maintain records according to program guidelines |

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research a community and a bioregion
- work within an existing sustainable community or bioregional development program
- participate in ongoing development of the sustainable community or bioregional development program.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices related to sustainable community and bioregional development
- sustainable community and bioregional development programs, including:
  - Transition Towns group activities or programs
  - climate change programs
  - peak oil or peak resource programs
  - alternative economic systems, such as local exchange trading systems
  - environmental, water catchment and natural resource conservation projects
  - social and cultural programs
  - housing and community development programs
  - community supported agriculture, organic and sustainable primary production and consumer networks and programs
  - energy descent action planning
Assessment Requirements for AHCPER411 Operate within a sustainable community and bioregional development program

- local food and water security projects
- renewable energy and appropriate technology projects
- greenhouse emission reduction and sequestration projects
- community profile development
- community consultation and facilitation methodologies, including:
  - team and community building activities
  - community forums and discussion
  - open space events
  - cultural mapping processes
  - creative problem solving processes
  - visualisation and experiential processes
  - information gathering processes
- group dynamics and conflict resolution strategies.

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Certificate IV or Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to operate within a permaculture aid and development program. It requires knowledge of aid organisations and issues, working with other cultures and communities, group dynamics and communications.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- formulate and justify research questions
- design a field research plan
- conduct research and evaluate information
- enter, analyse and organise data quantitatively and qualitatively in charts, tables and graphs
- produce written reports on research outcomes and provide conclusions based on appropriate evidence and reasoned arguments

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, practices and ethics, such as:
  - topics for field research
  - people or groups of people participating in or related to permaculture projects
  - people or groups of people participating in or related to other topics which themselves relate to permaculture
  - systems and/or technical elements of permaculture systems
  - animals-related studies (including insects, reptiles, birds and fish)
  - plant-related studies
  - studies of integrated plant and animal systems
  - appropriate technologies or technological solutions
  - appropriate energy generation, storage and capture
  - water treatment, catchment and storage systems
Assessment Requirements for AHCPE501 Carry out permaculture field research

- natural systems
- environmental issues
- product comparisons
- field research methods, such as:
  - group and individual interviews
  - dialogue and storytelling
  - use of communications technology
  - records and testimonials
  - electronic recordings
  - questionnaires
  - statistical sampling
  - observation
  - surveys
- research methodologies, such as:
  - action research
  - needs studies
  - case studies
  - statistical sampling
- field research plan design – a staged sequence of steps and accompanying methodologies for obtaining answers to research questions
- permaculture systems implementation and management techniques and practices
- growth habits, physiological properties and taxonomic specification of animals and plants involved in permaculture
- participants and stakeholders of permaculture systems and projects, such as:
  - those who will use the research to influence decision making and policy
  - those who will benefit from the research
  - the researchers
  - ethics committees
  - anyone who is researched
- scientific and mathematical research approaches, data collection, processing and analytical techniques and procedures
- auditing and reporting procedures
- research planning and budgeting

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to design integrated permaculture systems in a range of contexts including developing a design brief, undertaking a site analysis, developing conceptual designs and producing a final design. It includes knowledge of landscape, building and settlement design and working with specialists and professionals. It includes drawing plans and projections by hand as well as using computer aided drafting and design.

The preparation of an integrated permaculture system design requires detailed knowledge of permaculture design principles, the ability to transfer concepts to novel permaculture situations, strong evaluation and planning skills, landscape design skills and research capacities.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- demonstrate drafting and drawing techniques
- negotiate with clients
- undertake a site analysis and site survey
- provide urban and rural permaculture design solutions
- analyse zones and sectors of a site
- develop concepts
- develop planting schedules and bills of quantity
- develop a design budget
- develop final design drawings including elevations and projections
- design presentations

Knowledge Evidence

The candidate must demonstrate knowledge of:

- elements of integrated permaculture design
- principles of integrated permaculture design
- strategies for urban and rural permaculture design
- strategies for building design and working with builders and architects
- strategies for settlement design and working with planning authorities
- design brief elements
  - statement of scope of design
  - statement of client needs and requirements
  - food production
• system efficiency
• system production
• fibre, energy and building material production
• water harvesting
• waste treatment
• energy planning and design
• biodiversity habitat
• soil carbon building
• soil fertility
• establishment of financial budget
• establishment of time budget
• maintenance of financial budget
• maintenance of time budget
• design of establishment documents
• maintenance planning
• sustainable commercial enterprises
• social amenities
• cultural considerations
• list of project elements
• list of assessable tasks
• design analysis and research techniques
• plan interpretation and map reading
• site surveying methods and tools
  • onsite measurement of site boundaries
  • mapping of boundaries to scale to a plan drawing
  • onsite layout of 1m contour
  • mapping of contour lines to a scale plan drawing
  • measurement and location of existing infrastructure and natural features on site
  • mapping of existing infrastructure and natural features to a scale plan drawing
  • dumpy level or equivalent surveying instrument for taking vertical measurements on site
  • dumpy level or equivalent surveying instrument for measuring angles on site
  • GPS, satnav
  • measuring tapes for measuring distance on site.
• design concepts and detailed design drawings
  • property boundaries, scale and north point
  • authors of plans, contact details
  • address of site
  • date plan drawn
  • existing infrastructure and natural features
Assessment Requirements for AHCPer502 Design an integrated permaculture system

Date this document was generated: 3 September 2020

- drawing to scale
- relevant overlays and drawing numbers
- large format planning (at least A1 or A2)
- overlays such as fire, flora and fauna, soil and geology, local planning ordinances, buffer and riparian zones, use zones
- contour lines or other appropriate indication of slope direction and gradients
- drainage features
- Lot, DP, landowner address and contact details
- permaculture design methods
- conventional design symbols
- design drafting and drawing conventions
- computer-aided drafting and design
- plant and animal selection

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is NOT sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to develop a strategic plan for a permaculture project or enterprise. It requires the ability to prepare a strategic plan brief, research and analyse planning information, develop strategic plan stages, document a strategic plan, and review a strategic plan against desired outcomes. Developing a strategic plan for a permaculture project requires knowledge of permaculture principles and practices, climate change and peak oil impacts, sustainable community development practices, research methods and strategic planning methodologies.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a strategic plan brief
- acquire project resources
- undertake stakeholder consultation
- document a strategic plan
- evaluate the vision statement
- interpret feedback on the strategic plan
- demonstrate group leadership

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices
  - The two main summaries of permaculture principles are found in Bill Mollison and Reny Mia Slay *Introduction to Permaculture* (1991) and David Holmgren *Permaculture: Principles & Pathways Beyond Sustainability* (2002)
  - sustainable agriculture
  - garden agriculture
  - sustainable horticulture
  - sustainable aquaculture
  - soil restoration
  - bush regeneration
  - biodiversity regeneration
  - sustainable community development
• sustainable project and enterprise development
• bioregional development
• relocalisation
• sustainable design
• sustainability education
• earth care
• people care
• return of surpluses and setting limits to growth
• permaculture values
  • environmental restoration
  • sustainable food production
  • sustainability education
  • environmentally sustainable human habitation
  • sustainable community development
  • sustainable community transition
  • right livelihood
  • social justice
  • ecological economics
  • universal human rights
  • cultural recognition
• permaculture projects or enterprises
  • community gardens
  • permaculture workshops, training and education
  • sustainable agricultural systems
  • urban permaculture systems
  • community sustainable transition initiatives
  • climate change initiatives
  • conservation organisations
  • sustainability not-for-profits, NGOs, businesses, companies, trusts and incorporated community associations
  • permaculture design consultancies
  • permaculture system implementation services
  • alternative community finance and economic systems
  • permaculture information and communication services
• strategic planning
  • vision statement
    • statements of where project or enterprise would like to be in future
    • imagined futures
    • statements of possible futures for world outside of project
  • project or enterprise goals
• environmental targets
• community development targets
• food production
• design criteria
• happiness indicators
• sustainability indicators

• strategies
• human resource management
• financial planning
• purchases and acquisitions
• cost cutting
• income generation
• promotion and marketing
• organisational restructuring
• project or enterprise start up
• mentoring and education
• new project or enterprise initiatives
• political lobbying
• grant applications
• community consultation
• research and development

• action plans - sequences of smaller steps necessary to achieve strategies
• timelines
• benchmarks, such as
  • verifiable stage completion criteria
  • numerical indicators
  • qualitative indicators
  • observable outcomes

• community development
• project management
• feasibility study methodology
• contract law
• budgetary frameworks

**Assessment Conditions**

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out strategic planning assessment of a permaculture project or enterprise
- acquire project resources
- develop project pricing and costing
- consult with stakeholders
- manage project activities
- evaluate and report on project
- manage human resources
- demonstrate group leadership

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices
- permaculture projects
  - initiatives with a defined sustainability purpose and time horizon
  - sustainable community development projects
  - bioregional initiatives
  - not-for-profit projects
  - projects on public land
  - community gardens
  - community supported agriculture systems
  - land restoration and conservation works
  - alternative technology programs
• sustainability education
• social and economic development activities
• community carbon reduction and sequestration strategies
• energy descent or transition projects
• disaster preparedness, response and recovery

• permaculture enterprises
  • ethical for-profit businesses where surpluses are returned to earth care and people care
  • initiatives with a focus on right livelihood with plans for ongoing operation and/or growth
  • sustainable farming
  • community food distribution businesses
  • permaculture design and consultancies
  • energy descent planning services
  • climate change planning services
  • permaculture works implementation businesses
  • community and bioregional sustainability planning services
  • community economic and enterprise systems
  • integrated social, housing and community development programs
  • community supported agriculture
  • organic and sustainable primary production
  • local food and water security enterprises
  • greenhouse emission reduction and sequestration enterprises
  • sustainable regional transport networks and systems

• strategic planning
• project management
  • human resource management
  • financial planning
  • purchases and acquisitions
  • costing and pricing
  • income generation including issues of right livelihood

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine and review project scope of work
- assess a site for opportunities and constraints associated with implementation of permaculture works
- prepare schedules for implementation of permaculture works
- prepare a staged permaculture works plan
- complete a work health and safety briefing
- prepare a Statement of Environmental Effects
- supervise permaculture project works

Knowledge Evidence

The candidate must demonstrate knowledge of:
- permaculture principles and practices
- Permaculture project works, such as:
  - food gardens
  - community gardens
  - urban permaculture systems
  - rural permaculture systems
  - aquaculture systems
  - horticultural systems
  - forest systems
  - grazing and pasture systems
  - animal systems and tractors
Assessment Requirements for AHCPE R505 Plan and supervise the implementation of permaculture project works

- integrated food, fibre and energy systems
- permaculture structures
- soil treatments
- preparation of soil surfaces
- installation of irrigation and/or drainage systems including earthworks
- planting methods such as hand sowing, direct seeding, tube planting, hand or machine assisted planting of seedlings, planting of divisions and transplanting
- natural area regeneration
- fencing of stock and pest animals
- the cultural or biological control of weeds and feral animals
- protection of plants by staking, tying and guarding
- permaculture design techniques including zone and sector planning
- biophysical factors of a site, such as:
  - location of the site
  - site boundaries
  - environmental considerations
  - access issues
  - potential hazards
  - utility service
  - availability and locations
  - adjacent landholder considerations
  - security issues
  - aspect of the site
  - rainfall
  - humidity
  - wind and sunlight intensity
  - soil types
  - nutrients and deficiencies
  - slope
  - natural and artificial watercourses
  - outcrops of rock
  - presence of indigenous or other significant vegetation, indigenous or otherwise
  - plants that may become a weed problem
  - animals that may become a management issue, feral species or otherwise
- practical understanding of the environmental issues associated with undertaking permaculture works, such as:
  - use of materials that come from sustainable sources
  - duty of care in conserving sites natural values
  - work practices
Assessment Requirements for AHCPE R505 Plan and supervise the implementation of permaculture project works

- the use and movement of machinery, storage of materials, removal of weeds and movement of soil and other materials into, across and beyond the site
- principles of ecology including specific plant and animal relationships and habitat requirements
- statutory compliance and obligations, such as
  - compliance with legislation, ordinances, regulations or by laws relating to the works or the work site
  - site responsibilities, including OHS, industrial relations and equal opportunity and employment
- site evaluation techniques including methods of analysing soils, waterways and their condition
- control techniques against unwanted plant and animal species
- soil conservation, erosion control and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
- selection and use of appropriate combinations of machinery and tools
- work health and safety hazards and the controls necessary to remove or minimise risks associated with them
- contract documentation including specifications, plans of permaculture works, services, supplies and surveyors documents
- scope of works determination
- works breakdown into tasks
- scheduling and time line generation
- task specifications and evaluation

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify key issues in the transition community
- work with community to develop energy descent action strategies
- develop an energy descent action strategy or an Energy Descent Action Plan (EDAP)
- consult with the community on the strategy or EDAP
- support actions from the strategy or plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles, ethics and practices
- relocalisation of essential services and community functions
- Climate Change strategies
- transition Towns
- Energy Descent Action Planning
- positive action strategies for:
  - food production and supply
  - infrastructure – urban and rural
  - water and waste water
  - energy production and supply
  - housing and settlement design
  - communications
  - education and upskilling
  - employment
• economics and alternative economics
• health and wellbeing
• community governance and decision making systems
• land ownership and stewardship
• emergency preparedness and critical supply strategies
• strategic planning
• community development
• feasibility study methods

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

<tr>
<th>Release</th>
<th>TP Version</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to gather and validate information in order to advise on planned permaculture projects. Researching and interpreting requirements for a permaculture project requires knowledge of permaculture principles and practices, research methodologies, consultation models, feasibility studies, information systems, report presentation, cultural analysis of information, cultural implications of research methods and legislative requirements.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</tr>
</tbody>
</table>
| 1. Select appropriate research strategies | 1.1 Select and justify appropriate research methods for the requirements of the permaculture project and the available resources  
1.2 Develop and justify a research question or hypothesis  
1.3 Select a combination of research methods to promote the validity of the outcomes  
1.4 Negotiate the selection of research strategies with key people |
| 2. Gather information | 2.1 Identify relevant information sources and review relevant and credible literature related to the research topic  
2.2 Assess and analyse legislative requirements impacting on the project  
2.3 Identify government departments and agencies with a potential interest in the permaculture project  
2.4 Collect and catalogue information from a wide range of sources |
| 3. Consult with key people | 3.1 Identify and consult a representative range of people and groups with an interest in the issues relating to the permaculture project  
3.2 Review information, check for accuracy and identify the need for further information and follow-up  
3.3 Liaise with key people, where required  
3.4 Undertake community consultations following agreed practices and protocols |
| 4. Organise and analyse information | 4.1 Organise data generated by the research  
4.2 Check the results against other available research  
4.3 Look for patterns, observations and explanations and interpret them against the context  
4.4 Clearly explain the concepts being analysed to key people and continue with community consultations |
| 5. Report the findings of the research | 5.1 Report complete and accurate details of the research methodology, information and analysis  
5.2 Provide opportunities for the validation of the research findings using a range of different processes  
5.3 Report the research findings in an accessible and useable style and format  
5.4 Make the research available to all key people and those who have an interest in the project |
Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and justify appropriate research strategies
- gather information
- assess practical from impractical solutions
- consult with key people with an interest in the issues relating to the permaculture project
- organise and analyse information
- report the findings of the research

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices and their role in sustainable development and design
- climate change science and mitigation strategies
- research methods, such as:
  - group and individual interviews
  - dialogue and storytelling
  - libraries – digital and conventional
  - electronic recordings
  - questionnaires
  - statistical sampling
  - observation
  - surveys
- research methodologies, such as:
Assessment Requirements for AHPER507 Research and interpret requirements for a permaculture project

- action research
- needs studies
- literature searches and correct referencing
- case studies
- consultation models
- feasibility study methodologies
- information systems (conventional and electronic)
- report presentation
- cultural analysis of information
- cultural implications of research methods

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to manage a permaculture aid and development project in a remote community. It requires good management, communication and financial management skills. It requires knowledge of the aid and development industry, organisational structures, government and non-government functions, legal issues covering charities and working with vulnerable communities, disaster planning, relief and response issues.

For indigenous contexts, the delivery and assessment against this competency standard must comply with community protocols and guidelines and be supported by elders and custodians of country.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Application

This unit of competency describes the skills and knowledge required to design permaculture structures and features. It requires the ability to develop a design brief, undertake a site analysis, develop a concept design, produce a final plan and prepare bill of quantities and estimates. Designing permaculture structures and features requires knowledge of permaculture design process, construction and engineering principles, drafting techniques, cost estimating, and calculations of materials, labour, machinery and equipment.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

Application

This unit of competency describes the skills and knowledge required to facilitate participatory planning and learning activities. It requires the ability to devise strategies for facilitating participatory planning and learning and to carry out, report on and review participatory planning and learning. Facilitating participatory planning and learning activities requires knowledge of permaculture principles and practices, a range of participatory planning and learning activities, codes of conduct and ethical behaviour and group presentation methodology.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- devise strategies for facilitating participatory planning and learning
- facilitate group processes in an engaging and inclusive way
- conduct participatory planning and learning activities
- communicate with people of a wide diversity of ages and socio-economic or cultural groups
- review and report on participatory planning and learning
- coordinate and brief team members
- problem-solve and build group dynamics

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices
- learning styles and methodologies, including accelerated and experiential learning
- strategies for facilitation of participatory planning and learning
- participatory planning and learning activities and processes, such as:
  - team building – ice breakers, trust games, creative and social activities, goal-setting, celebration and cultural activities
  - creative expression – wild design, mime, performing and visual arts, story telling
  - problem solving – brainstorming, mind mapping, random-input processes, PMI, SWOT, Six Thinking Hats, theming and chunking, affinity matrix, modelling
  - experiential – visualisation, affirmation, role play, cultural mapping, 6 senses, modelling, simulations, educational and experiential games
Assessment Requirements for AHPER511 Facilitate participatory planning and learning activities

Date this document was generated: 3 September 2020

- information gathering – group and individual research and observation activities, sharing information, questioning, resource and skills mapping, surveys, field trips
- Negotiation – open forum, active listening, prioritisation, consensus building, win-win.
- Dynamic Groups, Dynamic Learning™ facilitation skills and methodology (Robin Clayfield)
- conflict resolution and strategies to deal with strong personalities
- codes of conduct and ethical behaviour
- group presentation methodology

Assessment Conditions

Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Application

This unit of competency describes the skills and knowledge required to plan community governance and decision-making processes. It requires the ability to assess future needs and, for existing groups, current community governance and decision-making processes. It requires the ability to develop options for community governance and decision-making frameworks and processes and report on preferred options for implementation. Planning community governance and decision-making processes requires knowledge of strategic planning, legal frameworks, advanced negotiation techniques, organisational change and development, group and individual goal setting techniques, risk management processes and techniques, action planning methods and information technology.

All work is carried out to comply with workplace procedures.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate broad knowledge in an area of work with depth in areas of specialisation. They undertake functions with initiative and judgement and take personal responsibility and exercise autonomy in undertaking complex work. They have accountability for the work of others (teams) within broad parameters, analyse and synthesise information as well as analyse, design and communicate solutions to a range of complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

<td>Elements describe the essential outcomes.</td>
<td><em>Performance criteria describe the performance needed to demonstrate achievement of the element.</em></td>
</tr>
</tbody>
</table>
| 1. Assess current community governance and decision-making processes | 1.1 Identify responsibilities and duties of individuals and community groups  
1.2 Investigate and define proposed or existing community governance and decision-making processes  
1.3 Collate information on proposed or existing governance issues and arrangements |
| 2. Develop options for community governance and decision-making processes | 2.1 Identify opportunities and constraints for development of community governance and decision-making process options  
2.2 Consult with community on options for community governance and decision-making processes  
2.3 Evaluate options in consultation with community through detailing advantages and disadvantages for each |
| 3. Report on preferred options for implementation | 3.1 Select preferred options for implementation based on comparative advantages  
3.2 Base options for community governance and decision-making processes on sufficient, valid and reliable information and analysis  
3.3 Ensure options for community governance and decision-making processes are consistent with legal frameworks and community and group values, policies, needs, guidelines and procedures  
3.4 Implement options for community governance and decision-making processes, and provide for decisions to be made in and actioned in the appropriate timeframe |

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess current community governance and decision-making processes
- assess community needs and plan around these needs
- demonstrate high level communication skills
- develop options for community governance and decision-making processes
- report on preferred options for implementation.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- permaculture principles and practices
- community governance and decision-making processes, such as:
  - governance of community resources, enterprises and activities
  - meeting facilitation, negotiation and mediation
  - conflict resolution procedures
  - decision-making methodologies
  - consensus processes
  - qualified decision-making processes
  - protocols
  - codes of conduct
- recording and sorting decisions, such as Many Baskets process (Robin Clayfield)
• strategic planning
• community needs analysis techniques, such as:
  • SWOT analysis
  • 6 thinking hats (de Bono)
  • PMI (de Bono)
  • T.O.A.S.T. processes (Robin Clayfield)
  • L.O.V.E. processes (Robin Clayfield)
• opportunities and constraints for community development, such as:
  • seeing solutions rather than problems
  • viewing the negative in a positive light
  • modifications or extensions of existing systems to solve inherent problems
  • applying old or simple technology to new or complex problems
  • behaviour change, including organisational change and transformation
  • willingness or unwillingness to participate
  • legal framework requirements
  • vested interests and hidden agendas
• advanced negotiation techniques
• organisational change and development
• group and individual goal setting techniques
• risk management processes and techniques
• action planning methods
• information technology
• legal frameworks obligations and responsibilities.

Assessment Conditions
Assessors must satisfy current standards for RTOs. Assessors must also have a nationally accredited Diploma of Permaculture. Completion of a Permaculture Design Course (PDC) or non-accredited Permaculture Diploma is not sufficient at this level.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare for planting operations
- apply root treatments
- excavate planting holes
- inspect root ball condition
- install plants
- use tools and equipment for planting

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for planting trees and shrubs
- basic plant structure and the physical and nutritional requirements of plants
- botany and plant physiology as it applies to planting trees and shrubs
- factors affecting the timing and method of tree or shrub planting
- initial establishment needs of young plants
- mulches and fertilisers
- planting techniques relating to specific species
- soil amelioration techniques
- the effect of adverse outdoor climatic conditions
- the impact of planting activities on the surrounding environment

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- identify and report site and tree hazards
- prepare for tree or shrub removal
- prepare crown, root ball and earthworks
- prune roots where appropriate
- use tools and equipment in a safe and effective manner
- remove tree or shrub from original site
- transplant tree or shrub in selected site
- maintain transplanted specimen
- install support devices

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of transplanting trees
  - causes of damage or drying-out of trees and shrubs, and prevention methods
  - factors affecting the timing and method of lifting trees and shrubs
  - techniques of securing and anchoring transplanted trees and shrubs
  - the effect of adverse outdoor climatic conditions, such as rain, hail, or very high ultraviolet radiation, which may prevent or impede transplanting operations
  - transference of soil or root-borne diseases
  - transplanting practices associated with different soil types and relationships to plant care
  - trees and shrubs that are most suited to transplanting
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- prepare site for excavation
- assist with the site excavation
- shore up sides of grave as required
- backfill and enhance the gravesite following burial

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of grave site preparation
  - safe work practices working in and around confined spaces
  - the environmental implications of pumping sludge water from an excavation site and the effects it may have on surrounding gravesites
  - work health and safety responsibilities of employees

Assessment Conditions

Assessors must satisfy current standards for RTO’s.

Application

This unit of competency describes the skills and knowledge required to carry out routine visual inspections of park and recreational facilities to identify visible hazards and existing and potential risks.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare for visual inspection of park facility
- carry out a visual inspection of park facility
- determine the extent of problems
- evaluate serious issues that may be present
- identify environmental risks and impacts from site facilities
- rate the condition of facilities
- rate the hazards and associated environmental implications of malfunctioning facilities, equipment and services
- report urgent situations
- complete and submit inspection activity checklist and report

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of park facility visual inspection
  - cleaning, servicing and hygiene requirements of public conveniences
  - hazards investigation and risk assessment
  - effective maintenance and repair work particularly in relation to end use of the facilities and equipment, and the safety of users
  - recognition of the range of park facilities, equipment and services relevant to the enterprise
  - reporting requirements, procedures and materials for use in park inspection
  - terminology used to describe different components of the range of facilities, equipment and services relevant to the enterprise
• the effect of adverse outdoor climatic conditions, such as rain, hail, wind, or very high ultraviolet radiation, on park facilities inspection activities

• hazards that are likely to be encountered by visitors using the park facilities and equipment

• the practical application of site plans, checklist descriptions and presentation standards to locate and effectively assess facilities and equipment against the required parameters

• the relevant Australian Standards

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare to establish a planting area
- interpret site plans and plant establishment specifications
- measure quantities, calculate material requirements, area, volume, ratios and application rates
- carry out planting operations
- ensure planting methods comply with plant species and cultivar growing requirements
- prune plants to ensure they develop a sound framework for their growth and habit
- inspect and determine plant quality and health
- record and report work outcomes

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant establishment
  - soils and soil amelioration techniques
  - the identification of pests and diseases, plant symptoms of infections, treatment threshold levels, recommended treatments, methods of application and environmental implications
- the objectives of the plant establishment program, including finished plant forms, site appearance, end use and time constraints
- the physiology of required plant species and cultivars, culture and planting procedures, including growth rates, main nutrient and water requirements, deficiency symptoms, recommended treatments and associated environmental implications
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- prepare design plans and specifications
- determine spatial measurements of display site
- calculate number of plants and materials
- select plants according to the display that comply with quality specifications and the ability to survive for the length of the display.
- place the plants according to the display plan and pattern
- complete plant display in a timely manner
- maintain the plant display

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant display maintenance
  - aim and purpose of building plant displays
  - common problems occurring with display plants
  - design principles for plant displays
  - features and characteristics of a range of plants used for display purposes
  - growing requirements of a range of common plants used in plant displays
  - remedial action required for display plants displaying health problems

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- determine maintenance requirements
- implement maintenance operations
- treat diseased plants
- repair and renovate landscape structures and features
- identify any items requiring further action
- evaluate and record results of maintenance works

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of landscape maintenance
  - actions permitted in the event of variations to maintenance programs or contracts
  - horticultural practices for heritage and cultural areas
  - characteristics of a range of plants
  - common problems occurring in a range of plants
  - landscape maintenance programs or contracts
  - optimal growing conditions for a range of plants
  - principles and applications of an integrated pest management (IPM) program

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- determine the purpose of the inspection and the facilities and equipment to be inspected and tested
- carry out pre-operational and safety checks on tools and equipment
- clarify specific terminology used in checklists with the supervisor
- identify workplace health and safety hazard, assess risks and implement controls
- interpret design symbols and terminology
- compare actual measurements of inspected components with legal, workplace health and safety and/or enterprise standards and specifications
- determine the degree of urgency to report serious situations
- evaluate the condition of facilities
- use proforma reporting and work procedure documents

Knowledge Evidence

The candidate must demonstrate knowledge of:

- different modes of non-conformity that may be identified in reference to relevant Australian Standards and work health and safety requirements
- identification, assessment and control of hazards
- inspection procedures and techniques, and legal and enterprise reporting requirements for maintenance, repair and replacement recommendations
- principles and practices of park facility operational inspections
- terminology used to describe different components of park or recreational facilities and equipment
- operational expectations and enterprise standards for the presentation and working order of a range of park or recreational facilities and equipment
the range, use and safety parameters of park or recreational facilities and equipment, their material construction and maintenance requirements
• work health and safety legislative requirements and codes of practice associated with public use of park facilities

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to implement a maintenance program for an aquatic environment in a park or garden setting.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Parks and gardens (PGD)

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- interpret site plans and maintenance program requirements, and use proforma reporting, recording, analysis and work procedure documents
- measure materials and aquatic site dimensions
- schedule and implement monitoring activities correctly and record, interpret and apply monitoring data

Knowledge Evidence
The candidate must demonstrate knowledge of:
- principles and practices of aquatic environment maintenance
  - aquatic systems ecology
  - correct safety procedures working from boats or adjacent to large bodies of water
  - enterprise systems and procedures for the safe operation and maintenance of machinery and equipment in aquatic environments
  - food chain and nutrient cycling in aquatic systems
  - recognition, physiology and biological characteristics of animals and/or plants specific to the aquatic environment
  - regulations and industry standards for water quality requirements in association with specified use
  - relevant legislation regarding water pollution and management
  - safe systems and procedures for handling, transporting and storing chemicals and hazardous substances taking into account toxicity levels and environmental impacts
  - wildlife habitats associated with the aquatic environment
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to design plant displays in a wide range of locations and situations, buildings and structures. It applies to permanent, semi-permanent and temporary displays of plant life under a range of gardening, exhibition, visual merchandising, marketing and commercial leasing and hiring activities.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- develop maintenance programs
- evaluate sites or locations to determine the effect of aesthetic, environmental and physical attributes on nature of display
- research and analyse information about plant and materials specifications, cultural requirements and environmental requirements
- consult with clients

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of plant display design
- characteristics of a range of plants used in plant displays
- growth and maintenance requirements of plants in natural and artificial environments
- horticultural conventions for design plans
- plant selection
- principles of design
- processes and techniques for preparing, costing and documenting plans for plant displays
- plants commonly used in plant displays

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- plan a plant establishment program
- consult with clients
- document plans, specifications and work procedures
- comply with legislative requirements
- write plans and reports that staff, clients and contractors can understand
- calculate the cost and spatial and logistical requirements of components of the plant establishment program.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- identification, propagation and establishment techniques of specific plant species and cultivars
- the advantages and disadvantages of a range of plant establishment procedures
- maintenance requirements and practices for specific plant species and cultivars, prior to and after initial establishment
- processes and techniques for preparing, costing and documenting plans for and scheduling plant establishment activities
- processes and techniques for scheduling plant establishment activities.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- determine requirements of the restoration work
- consult with clients
- select restoration procedures that are consistent with the agreed concept plan, appropriate to the site and account for historical and cultural values, available resources and relevant environmental factors
- calculate the cost and spatial and logistical requirements of components of the restoration works
- comply with legislative requirements
- research and evaluate information
- prepare and document the restoration plan and specifications
- prepare a site plan that can be understood by on-site personnel

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of park and garden restoration
  - construction procedures, plant selection and cultural practices for historically or culturally significant parks and gardens
  - growth habits and cultural requirements of specific plants under a range of soil and environmental conditions
  - historic parks and gardens management principles and guidelines
  - legislation and regulations relating to heritage sites and restoration works
  - maintenance requirements and practices for specific plants prior to and after initial establishment
- principles of the Australian Natural Heritage Charter, the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
- role of project briefs and client consultation processes in planning restoration works
- site evaluation techniques, including methods of analysing the condition of soils, plants and waterways for restoration activities

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage parks and reserves.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- assess environmental impacts on the immediate and related environments and impact reduction techniques
- assess financial systems, prepare and monitor budgets and liaise effectively with consultants and other industry contacts on the spatial and logistical aspects of management systems and on-ground operations
- assign work, receive and interpret staff feedback and consultants’ reports, and respond effectively to achieve management objectives
- interpret business, financial, marketing and human resource management plans
- research and consult to obtain the information required for effective maintenance and development of the park or reserve.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of park and reserve management:
  - asset and resource management
  - budgeting, monitoring systems and allocation of monetary resources
  - legislative and regulatory requirements relevant to parks and reserve land use applications and management activities including OHS, HAZCHEM, dangerous goods, duty of care and Australian Standards as they apply to Parks and Gardens - AS/NZS 4486.1:1997
  - management information systems
  - performance management and benchmarking
• policies applying across all levels of government and within the specific region, including those under catchment plans
• principles of the Australian Natural Heritage Charter and the Draft Guidelines for the Protection, Management and Use of Aboriginal and Torres Strait Islander Cultural Heritage Places and the Burra Charter
• sports and recreational land use applications and associated environmental implications
• staff training and development principles, practices and techniques
• technologically assisted management tools such as computing systems, software and hardware, and telecommunications equipment.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- define the need for a management plan
- undertake preliminary planning activities
- analyse site information and description
- identify management strategies
- prepare the management plan
- prepare a site description
- implement the management plan

Knowledge Evidence

The candidate must explain:

- principles and practices for streetscape management planning
  - basic civil design
  - community consultation processes
  - horticultural, landscape and arboricultural practices used in streetscape management
  - landscape assessment, survey and analysis techniques
  - management planning principles and issues
  - soil, plant and water testing processes and procedures, interpretation and application of results

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- prepare for a comprehensive inspection of park facilities
- carry out a comprehensive inspection of park facilities
- interpret design symbols and terminology
- interpret standards, specifications and legal requirements
- determine age and calculate effective lifespan of existing park facilities
- estimate costs of repair or replacement

Knowledge Evidence
The candidate must demonstrate knowledge of:
- principles and practices of park facility inspection
  - different modes of non-conformity that may be identified in relation to specific park facilities and equipment
  - hazard identification, assessment and control
  - information management systems such as AS4456
  - hazards associated with conducting a comprehensive inspection of park facilities and equipment, and the controls necessary to remove or minimise associated risks
  - park facilities and equipment including installation methods, intended use, intended users and safety parameters
  - practical understanding of inspection and auditing procedures and techniques, and legal and enterprise reporting requirements for recommendations on maintenance, repair and replacement of park facilities
  - practical understanding of the terminology used to describe different components of park facilities and equipment
• relevant national industry standards such as AS486.1, AS4422, AS1924.1 and AS1924.2)
• work health and safety legislative requirements and Codes of Practice

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply agricultural chemicals under supervision
- apply enterprise quality standards
- estimate spacing and planting patterns
- follow safety procedures
- identify workplace hazards
- measure quantities of plant materials and treatments
- operate machinery to manufacturers specifications and low risk operating procedures
- select planting material
- use and maintain planting equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for planting horticultural crops
  - basic plant physiology
  - basic preparation of soil and growing media
  - environmental impacts and risks of planting horticultural crops
  - growing requirements of plants
  - importance of correct timing and procedures for crop planting
  - importance of field hygiene and quality control in regard to crop planting
  - nutritional, water and other requirements of the crop
  - principles of pest, weed and disease control
  - pre-planting soil and plant treatments and their importance

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret instructions correctly
- communicate with team members and supervisor
- calculate hours and personal production rate
- participate in teams and contribute to team objectives
- use and maintain basic hand and power tools and equipment
- dispose of pruning waste in an environmentally aware and sensitive manner

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of canopy maintenance
- basic canopy maintenance techniques and their importance in relation to the desired quality of fruit the enterprise is aiming to produce
- the difference between fruiting and non-fruiting wood
- the effect of different climatic conditions on canopy maintenance requirements
- the importance of hygiene and quality control when performing basic canopy maintenance activities
- work health and safety responsibilities of employees when maintaining a canopy

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to bud and graft trees, shrubs, vines and other plant types in nurseries or in-field situations.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Production horticulture (PHT)

| 1. Prepare parent material for budding and grafting | 1.1 Follow workplace hygiene practices to ensure tools and equipment are clean  
1.2 Prepare plant material and use a suitable method of taking budding or grafting material  
1.3 Select and use appropriate tools |
## Element

### 2. Prepare budding and grafting materials

- 2.1 Select budding/grafting material for propagation
- 2.2 Use appropriate storage methods to maintain viability of materials
- 2.3 Dispose of discarded material
- 2.4 Prepare stock according to species guidelines
- 2.5 Handle budding/grafting materials and stock in a way that prevents damage

### 3. Bud/graft scion

- 3.1 Select budding/grafting method according to species guidelines
- 3.2 Seal bud/graft is sealed according to instructions
- 3.3 Affix labels and identification
- 3.4 Complete records accurately and timely
- 3.5 Identify, rectify or report out-of-specification process and equipment performance

### 4. Complete budding/grafting activities

- 4.1 Clean tools and equipment
- 4.2 Dispose of or store unused grafting material
- 4.3 Collect, treat, dispose of or recycle waste generated by both the grafting and cleaning procedures

## Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

## Unit Mapping Information

This unit is equivalent to AHCPHT204A Undertake field budding and grafting.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and prepare stock for budding and grafting
- demonstrate a range of budding and grafting techniques
- maintain labels and records of the budding and grafting operation
- store unused grafting material
- treat plants after budding/grafting

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for field budding and grafting
  - cleaning requirements of work area and equipment
  - common problems and corrective action required
  - environmental issues and controls
  - importance of selection and use of rootstock
  - maintenance requirements of equipment
  - operation, components and purpose of budding/grafting and equipment
  - plant features and processes relevant to budding and grafting
  - procedures and responsibilities for reporting problem
  - recording requirements and procedures
  - root stocks and scion stock
  - stages of the budding/grafting procedure and their purpose
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify post-harvest treatments and operations to be performed
- label produce accurately and correctly
- maintain records of post-harvest operations to allow traceability
- minimise handling damage to produce
- transport, grade, treat, pack and store harvested produce according to market requirements and industry and enterprise standards
- use a range of equipment for handling and transporting produce

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of post-harvest operations
  - attributes of enterprise produce in relation to desired quality of produce to be presented to client
  - characteristics and procedures for the use of cool rooms
  - cool chain principles and practices
  - correct storage temperatures for a range of enterprise produce
  - disposal of waste materials to minimise damage to external environment
  - environmental effects of post-harvest treatments
  - humidity levels and its effect on quality of enterprise produce
  - hygiene issues in the handling and storage of plant produce
  - industry standards for packaging
  - produce handling and cooling requirements
- relationship between quality attributes of produce and packing techniques and packaging
- storage methods for different enterprise produce

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out an inventory of mushroom boxes
- collect filled boxes to ensure continued smooth flow of picking and packing work
- estimate quantities of boxes
- estimate rate of packing for collection
- record cool room air and mushroom pulp temperatures
- supply appropriate quantities of empty boxes to mushroom pickers in a number of picking rooms

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for handling and moving mushroom boxes
  - collection and packing procedures
  - quality requirements
  - safe manual handling techniques
  - storage requirements for mushrooms

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare to use watering equipment
- deliver water to the mushroom crop at required rate and pressure
- estimate flow rate of water by the range of watering equipment in use
- measure correct doses of additives for water
- record water use

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for watering mushroom crops
  - effect on mushrooms of under-watering, overwatering, insufficient evaporation, late watering and moisture imbalance
  - effects of water on casing structure, mycelium, yields and quality
  - factors affecting effective operation of watering tree or other equipment used
  - how panning occurs
  - 'light', 'medium' and 'heavy' water and when each type is used
  - safe and effective use of fungicides and other water additives

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- summer prune vines according to enterprise requirements
- select, fit and use appropriate personal protective equipment (PPE)
- handle and use trellis drying tools, equipment and machinery safely
- identify parts of the vine
- carry out post-harvest drying

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for producing trellis dried grapes
  - crown and cordon bunch picking or removal requirements and procedures
  - environmental impact issues
  - hazard identification and control
  - processor quality standards and requirements
  - summer pruning requirements and procedures
  - year-round preparation required for trellis drying

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCPHT301 Carry out a crop regulation program

Modification History
Not applicable.

Application
This unit of competency describes the skills and knowledge required to carry out a crop regulation program in which thinning and pruning of flower, fruit or vegetable crops is undertaken to control yield and quality.

Unit Sector
Production horticulture (PHT)

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate evidence of their ability to satisfy holistically all of the requirements of unit. Performance should be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess the effects on plant growth, habit and production levels of thinning and pruning operations
- co-ordinate work groups
- prepare for crop regulation activities
- carry-out crop thinning procedures as required
- use a range of methods to achieve crop regulation goals
- record or report activities
- store and maintain equipment and materials

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of crop regulation
  - effects on plant growth, habit and production levels of thinning and pruning operations in relation to the market goals of the enterprise
  - enterprise quality procedures and characteristics of a crop relative to varying market requirements
  - environmental impacts of crop regulation and disposal of waste
  - principles of thinning and pruning and the methods used to achieve crop regulation goals
  - safe work procedures for use of machinery and equipment
  - types of crop regulation materials
  -
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to implement a post-harvest program for horticultural crops.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify post-harvest operations to be performed
- coordinate post-harvest operations
- dispose of hazardous waste materials in line with guidelines and enterprise requirements
- implement post-harvest treatments and packing, presentation and storage requirements according to market specifications.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices post-harvest treatments and processes
- attributes of produce in relation to the desired quality of produce to be presented to the client
- characteristics and procedures for the use of cool rooms
- cool chain principles and practices
- correct storage temperatures for a range of produce
- enterprise confined spaces policy and safety procedures
- environmental effects of post-harvest treatments and hazardous waste disposal methodologies, application and purpose
- humidity levels and their effect on the quality of produce
- hygiene issues in the handling and storage of plant produce
- industry standards for packaging
- integrated pest management principles and enterprise policy
• relationship between the quality attributes of produce and packing techniques and packaging
• storage methods for a range of produce
• the importance of maintaining the quality of produce including handling and cooling requirements.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- attach and uncouple associated equipment
- conduct pre- and post-operational checks
- operate horticultural harvesting machinery and equipment in a safe, efficient and controlled manner
- perform operator maintenance tasks
- record work activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for operating crop harvesting machinery
  - basic diagnostic techniques
  - components and controls features and functions
  - crop quality assurance and hygiene requirements
  - equipment characteristics, technical capabilities and limitations
  - manufacturer and workplace requirements for pre-operational checks, machinery operation techniques, operator level servicing and shutdown and emergency procedures

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- carry out ground preparation and apply pre-planting treatments
- prepare and service machinery and equipment
- carry out sowing/planting operations and fertiliser application
- monitor the environmental impacts of establishing the crop
- clean, secure and store machinery and equipment
- keep records of the sowing/planting operation

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for establishing crops
  - crop types, preparation of seeds/plants, seeding/planting methods and application techniques
  - effects of weather conditions on seeding/planting and fertilising applications
  - enterprise policies for seeding/planting operations and recording and reporting routines
  - fertiliser types, rates of application and crop nutrient requirements
  - operating principles and operating methods for machinery and equipment
  - positive environmental practices, negative environmental impacts and minimisation measures associated with seeding operations
  - personal protective equipment (PPE) and when and how it should be used
  - pre-operational and safety checks, servicing and maintenance procedures for seeding/planting machinery and equipment
  - principles of weight distribution with regard to load shifting and vehicle movement
• procedures for cleaning, securing and storing machinery, equipment and materials
• relevant legislation, regulations and codes of practice with regard to workplace health and safety and the use and control of hazardous substances
• sustainable land management and soil conservation techniques

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- conduct and interpret basic field test results to confirm effective processing and define intervention required to rectify composting processes
- establish and maintain appropriate compost batch documentation accurately and promptly
- prepare batches for composting according to defined compost recipes
- prepare raw materials for composting according to enterprise product requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for preparing composting raw materials
  - Australian composting standards
  - batch documentation techniques
  - characteristics of a range of raw materials
  - compost production cycle
  - compost quality standards
  - fundamental characteristics of compost quality
  - key process control stages critical to consistent compost production
  - overview of systems and technologies used in compost production
  - principles of commercial compost production
  - range and characteristics of categories of compost product
  - steps in pre-processing compost materials
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify value-added product requirements
- interpret batch sheets and follow enterprise production procedures
- prepare batches of value-added product according to defined batch recipes and methods
- recognise value-added products and their characteristics
- recognise, quantify and handle products

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for preparing value added compost based products
  - Australian standards for products
  - common product contaminants
  - enterprise product specifications and standards
  - environmental license requirements, aspects and management measures associated with operation of machinery and equipment
  - hazards in handling materials and additives and appropriate risk control measures
  - identification of contaminants
  - legislation, regulations and codes of practice with regard to licensing, roads and traffic requirements
  - legislation, regulations and codes of practice with regard to workplace health and safety and use and control of hazardous substances
  - operating principles and methods for plant and machinery
  - potential risks and hazards associated with operation of machinery and equipment
Assessment Requirements for AHCPHT08 Prepare value added compost-based products

- procedures for cleaning, securing and storing machinery, equipment and materials
- product types and characteristics
- raw materials, compost and additives commonly used to manufacture value-added products
- value-added product types and characteristics

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to supervise the achievement of farm quality standards and processes associated with mushroom substrate preparation (Phase II), either in a general mushroom farming enterprise or in a specialist substrate preparation enterprise.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Production horticulture (PHT)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- observe and report non-compliance with farm quality standards
- organise the process of mushroom substrate preparation
- coordinate work activities so that standards relating to productivity, workflow requirements, farm procedures and quality are met
- record and report production information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for supervising mushroom substrate preparation
  - casing function, application, required depth and required surface structure
  - impact on mushroom production cycle of deviations of mushroom substrate quality from farm standards for substrate
  - overview of mushroom production cycle
  - overview of Phase I and Phase II substrate production
  - relevant legislation and industry codes of practice
  - site quarantine protocols
  - standards and procedures for workplace health and safety, food safety, HACCP, quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- coordinate a work group
- maintain harvest requirements
- monitor crop quality
- prepare for crop harvesting activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for
  - effect of adverse climatic conditions (e.g., rain, hail, extreme wind, or very high ultraviolet radiation), which may prevent or impede crop harvesting operations, or severely influence the time taken to complete the tasks necessary to fulfill the operation
  - enterprise quality procedures and characteristics of a crop relative to varying market requirements
  - grading characteristics of each crop
  - importance of maintaining quality of produce including cooling requirements and quick transport from field to processing areas
  - industry wage rates and conditions, contractors services, conditions and rates
  - licensing requirements for use of forklifts, trucks and machinery
  - recognition of the maturity parameters of a range of crops
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess and select cost-effective techniques, resources and equipment for the regulation of horticultural crops
- develop a crop regulation program to achieve the yield and quality specified in the enterprise production plan
- document a crop regulation plan, specifications and quotation
- document detailed schedules and work procedures
- prepare a cost-benefit analysis on available crop regulation methods
- review the crop regulation program
- implement appropriate courses of action in response to identified shortcomings

Knowledge Evidence

The candidate must demonstrate knowledge of:

- crop regulation published data on the species and cultivars
- principles and practices for developing a crop regulation program
- processes and techniques for preparing, costing and documenting plans for scheduling crop regulation activities
- site evaluation techniques, including analysis of the condition of soils, plants and the site for production activities
- specific crop physiology and timing of regulation
- the characteristics of soil and other growth media types and the use of additives to enhance the available nutrition for specific plant species and cultivars
- the relationship between enterprise crop regulation methods, such as thinning, pruning and RDI, and the yield and quality of specific crops
Assessment Conditions

Assessors must satisfy current standards for RTOs.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- coordinate equipment
- document a crop harvesting report
- establish strategies for pre-harvest and harvest
- estimate crop quality and yield
- evaluate harvest operations and outcomes
- implement treatments for control and eradication of pests
- implementing safe workplace and positive environmental practices
- organise resources for the harvest

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for crop harvesting
  - crop measurement techniques and parameters
  - customer requirements
  - environmental controls and codes of practice applicable to harvesting operations
  - functions and limitations of harvesting equipment
  - location and relative skills and abilities of available staff, contractors or casual staff
  - market information and sources
  - relevant legislation and regulations relating to workplace health and safety, contractor engagement, chemical use and application, and vehicle and plant use
  - required productivity rates
  - weather or other conditions that may affect harvest
• where relevant to enterprise's production: food safety and Hazard Analysis Critical Control Point (HACCP) requirements, and requirements for export markets

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage mushroom substrate preparation.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Production horticulture (PHT)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- establish and review farm procedures for mushroom substrate preparation
- monitor and manipulate all interactions between inputs, conditions and outputs for each stage of substrate process
- set and monitor productivity standards for mushroom substrate and rest of production cycle
- record and analyse production data

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for managing mushroom casing production
  - casing function, application, required depth and required surface structure
  - detailed knowledge of all stages in Phase II substrate preparation process
  - farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
  - how mushrooms are grown, with a focus on interaction between compost, environmental factors (such as temperature, water, relative humidity, carbon dioxide and ammonia) and mushroom growth
  - industry and workplace awards and conditions
  - key parameters to be recorded and monitored and appropriate ranges in relation to temperature, ammonia, relative humidity, moisture content, carbon dioxide and time
  - overview of mushroom production cycle and possible impact of deviations from farm standards on substrate and rest of production cycle
• overview of Phase I compost production
• relevant legislation and industry codes of practice and quality

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess room or tunnel layout and determine most appropriate locations for taking substrate and air measurements
- carry out effective troubleshooting during Phase II process
- differentiate between Phase I substrate and substrate ready for spawning and describe desired parameters of each stage
- monitor and manage Phase II process for at least eight crops

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for controlling Phase II processes
  - concept of compost selectivity and biological indicators of compost quality
  - correct probe placement and calibration
  - factors influencing air quantity and distribution
  - farm standards and procedures, including those relating to workplace health and safety, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure
  - interpretation of chemical test results
  - how different systems (shelf, tray and tunnel) impact on temperature zones in substrate
  - key parameters to be recorded and monitored relating to temperature, ammonia and moisture content
  - objectives and desired parameters of each sub-stage of Phase II substrate preparation
  - overview of Phase I compost production and how it impacts on Phase II process
Assessment Requirements for AHCPHT406 Control Phase II

- relevant legislation and industry codes of practice
- site quarantine protocols

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop work schedules
- maintain environment within parameters for production
- monitor and manage growing room conditions, watering and flush development of mushroom crops
- identify stages of growth and development, and factors impacting on yields and mushroom quality
- identify the interdependency of stages of growth and impact of early stages of production cycle on production results

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of mushroom crop development
  - available options of additives to irrigation water to promote mushroom quality and the main considerations of their use
  - basic understanding of air conditioning principles, particularly relative humidity
  - casing function, application and depth and surface structure requirements
  - desirable physical, biological and chemical characteristics of casing
  - farm standards and procedures, including those relating to OHS, food safety, Hazard Analysis Critical Control Point (HACCP), quality systems, emergency procedures, organisational structure and workplace communication channels and protocols
  - goals and sub-stages of Phase II substrate preparation and impact of Phase II on yields and quality
• growth phases of a mushroom crop and interactions that occur between the compost, casing, environmental factors (such as temperature, water, relative humidity and carbon dioxide) and growth of the mushroom
• how nature of casing and the appearance and quantity of mycelium growth in casing affect the number, distribution and quality of fruit bodies formed
• impact of mushroom numbers and size on picking and quality
• industry and workplace awards and conditions
• management impacts of supplementing at spawning or casing
• management requirements of casing - Compost Added at Casing (CAC) and/or Casing Inoculums (CI)
• OHS and environmental legislation, industry codes of practice and enterprise procedures
• overview of Phase I substrate production and its impact on yields and quality
• site quarantine protocols

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a horticultural production plan that reflects client preferences and requirements
- design and incorporate infrastructure into planning
- document and cost the production plan
- establish product specifications
- research site factors and land use issues
- select and source plants or plant material for seeding or propagation
- develop a monitoring program to cover the horticultural operation from sowing to sale

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for developing a horticultural production plan
  - advantages and limitations of sustainable horticulture systems
  - establishment and maintenance of a range of enterprise horticultural products in relation to client needs and the standards required by the marketplace
  - establishment procedures, plant selection and cultural practices for a range of enterprise horticultural products
  - processes and techniques for preparing, costing and documenting plans for and scheduling horticultural production
  - role of business and marketing plans and client consultation processes in planning horticultural production
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage controlled growing environments.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a management plan to cover staff training, budgets, operating procedures and remedial actions
- develop environmental monitoring procedures
- evaluate and document the achievements towards management objectives
- identify the growing requirements of the crop
- prepare specifications for controlled growing infrastructure

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for managing controlled growing environments
  - controlled environmental conditions in regard to crop plant physiology, growth stages, and product quality and quantity
  - legislation and regulations relating to the controlled environment systems
  - market requirements for crop quantity and quality
  - monitoring, analysis and recording systems
  - plant physiology and biochemistry
  - quality production methods and techniques for a range of controlled environment plants
  - staff training requirements
  - techniques and methods of implementing optimal growing conditions for a range of horticultural crops
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow personal hygiene requirements
- check nest boxes and egg belts are free of obstructions
- match egg collection equipment flow rate to handling rate
- collect nest and floor eggs and keep separate
- ensure that practices to minimise floor eggs are implemented
- assess and sort eggs into settable and non settable and categories within each
- place eggs on trays pointed end down
- pack, label and store eggs correctly
- complete hygiene and administration activities
- operate egg washing equipment at correct temperature and sanitiser/detergent levels
- clean and sanitise equipment, egg washing equipment, cool rooms and work areas
- monitor pest and vermin presence and implement control measures
- identify work health and safety hazards, assess risks and implement suitable controls
- follow biosecurity requirements
- follow enterprise animal welfare procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:

- industry standards, codes of practice, and enterprise procedures for collecting, handling, sorting, packing and storing settable eggs
- commonly used methods of pest and vermin control
- types, uses, cleaning and maintenance of machinery and equipment
• relevant documentation, records and reports that are required
• criteria for sorting and determining eggs that are unfit for setting and disposal methods
• procedures for egg handling, collection, washing, sorting, packing, labelling, storage and fumigation
• temperature, humidity, cleaning and operation for cool rooms and egg washing machines
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• procedures for taking and handling samples for testing
• enterprise environmental and sustainability requirements, and procedures for disposal and management of wastes, debris and run-offs
• enterprise work health and safety, biosecurity and animal welfare policies and procedures

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- monitor and assess poultry health and welfare
- provide an optimal environment for poultry
- administer medicines or other chemicals
- collect samples for analysis
- remove non-viable poultry
- report and complete records
- follow enterprise work health and safety policies
- follow biosecurity protocols
- follow enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity and quarantine
- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for animal welfare of poultry
- signs of health, signs of ill health, and methods for assessing poultry health and welfare
- common diseases of poultry, treatment regimes, prevention and management strategies
- criteria for determining birds to be culled
- relevant documentation, records and reports that are required
- types, functions and characteristics of housing, housing infrastructure and housing equipment for poultry, and the criteria and methods for determining that they are in working condition
• types, uses, handling, storage and routes of administration of commonly used veterinary medicines and chemicals
• procedures for taking, handling, labelling, packing and transporting swab samples
• procedures for assisting a post-mortem examination
• effects and impacts of individual bird health and welfare on flock health status and vice versa
• relevant work health and safety requirements and environmental policies

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- make preparations to work in poultry sheds
- check cleanliness of shed and equipment
- check and maintain shed and equipment
- check pest and vermin controls are in place
- prepare shed (spread litter or place paper, setup feeders, drinkers, adjust time clocks)
- place day old chicks
- check chick behaviour
- complete hygiene and administration activities
- follow enterprise work health and safety policies
- follow biosecurity procedures
- follow enterprise animal welfare and environmental policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity
- relevant animal welfare requirements and practices for poultry and day old chicks
- types, uses, cleaning and maintenance of suitable equipment, tools, machinery and personal protective equipment
- types, characteristics, cleaning and maintenance of poultry sheds
Assessment Requirements for AHCPLY203 Set up shed for placement of day-old chickens

- commonly used methods of pest and vermin control
- types, characteristics and maintenance of bird wires and rodent barriers
- lighting systems, time switches, alarm systems, brooders, watering systems, feeding systems, ventilation systems and fogging systems, and methods for determining that they are in working condition
- requirements of day old chicks to ensure their health and welfare
- behavioural signs of health and methods for assessing health and welfare in day old chicks
- types, characteristics, uses and maintenance of litter for poultry
- biosecurity requirements for brooding and rearing chickens
- relevant environmental and sustainability requirements, and procedures for disposal and management of wastes
- relevant documentation and records that are required
- relevant work health and safety requirements.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- apply personal hygiene requirements
- check nest boxes and egg belts are free of obstructions
- match egg collection equipment flow rate to handling rate
- collect eggs
- assess and sort eggs
- pack and store eggs
- clean and sanitise equipment, cool rooms and work area
- check equipment is working correctly
- follow enterprise work health and safety policies
- follow biosecurity requirements
- follow animal welfare policies
- follow enterprise environmental management requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- industry standards, codes of practice, and enterprise procedures for collecting, handling, sorting, packing and storing eggs
- commonly used methods of pest and vermin control
- relevant documentation and records that are required
- types, uses, cleaning, maintenance and servicing of equipment and machines
- criteria for sorting and determining eggs that are unfit for sale and disposal methods
- temperature, humidity, cleaning and operation for cool rooms
Assessment Requirements for AHCPLY204 Collect and pack eggs for human consumption

- procedures for taking and handling egg samples for testing
- relevant environmental and sustainability requirements, and procedures for disposal and management of wastes, debris and run-offs
- relevant work health and safety, biosecurity and animal welfare requirements

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to grade and pack eggs for human consumption.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow personal hygiene requirements
- match egg feed rate to grading equipment flow rate
- assess and grade eggs
- pack and store eggs
- clean and sanitise equipment, cool rooms and work area
- check equipment is working correctly
- follow enterprise work health and safety policies and biosecurity requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- industry standards, codes of practice, and enterprise procedures for sorting, canding, grading, washing, oiling, packing and storing eggs
- commonly used methods of pest and vermin control
- egg labelling requirements
- relevant documentation and records that are required
- types, uses, cleaning and maintenance of equipment and machines
- criteria for determining non-conforming eggs and disposal methods
- temperature, humidity, cleaning and operation for cool rooms
- temperatures, cleaning and sanitising and operation of the egg washing process
- procedures for handling, measurement and usage of egg washing and cleaning chemicals, and sanitisers
- procedures for taking and handling egg samples for testing
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes, debris and run-offs
• relevant work health and safety and biosecurity requirements

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- check and confirm that shed or section is ready for brooding
- place hatchlings
- carry out brooding operations
- monitor chick behaviour and sensors and adjust temperature and ventilation appropriately
- monitor body weight and beak tipping where applied regularly
- complete cleaning, maintenance and administration activities
- implement work health and safety policies
- follow biosecurity procedures
- follow enterprise animal welfare policies
- apply enterprise environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- the effects and impacts of brooding operations on enterprise production processes
- the types, uses, maintenance and storage of relevant tools, machinery and equipment
- relevant work health and safety requirements
- the requirements, industry standards, codes of practice and procedures for welfare and health of poultry during brooding
- the effects and impacts of temperature and shed climate on chick behaviour and how temperature and shed conditions are checked
- the range, effects and impacts of stocking density and overcrowding on poultry behaviour, health and welfare
- the relevant lighting and lighting programs for chickens and pullets and effects on welfare and performance
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes
• the requirements and procedures for cleaning and maintaining work areas
• relevant records and reports that are required
• describe relevant animal welfare and biosecurity requirements

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to incubate eggs.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

Candidates should confirm the regulatory requirements in regard to the use of fumigants that apply in their relevant State or Territory before undertaking this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- receive and store eggs
- monitor and operate setter
- transfer eggs to hatcher
- fumigate setter or hatcher
- monitor and operate hatcher
- complete hygiene and administration activities
- implement enterprise work health and safety policies
- implement enterprise biosecurity procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:
- requirements, methods and procedures for handling, unloading, storing, transferring and turning eggs
- types, uses, cleaning, maintenance and storage of machinery, equipment and tools used in incubating operations
- range, effects and impacts of environmental parameters on incubating eggs
- types, handling, use and disposal of fumigating agents, work health and safety and environmental practices for these agents
- relevant environmental and sustainability requirements, and procedures for disposal and management of wastes and debris
- requirements and procedures for cleaning and maintaining work areas
- relevant documentation and records that are required
- enterprise work health and safety policies
- relevant biosecurity requirements
Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to tip the beaks of poultry.

This unit applies to beak treatment of day old chicks and beak trimming of poultry of various ages. Poultry include all poultry species and breeds used for meat or egg production.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCLSK307 Euthanase livestock.

Unit Sector

Poultry (PLY)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- make preparations for beak tipping poultry
- carry out beak tipping
- complete beak tipping and post-operation procedures
- carry out euthanasia of cull birds in line with enterprise policies
- implement enterprise work health and safety policies
- implement enterprise biosecurity procedures
- implement animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, industry standards, codes of practice and enterprise biosecurity principles and enterprise requirements for poultry production
- relevant work health and safety requirements for beak tipping operations
- relevant animal welfare principles and practices for beak tipping operations
- signs of health, signs of ill health and methods of assessing health and welfare of poultry
- beak treatment and beak trimming procedures and the effects and impacts (negative and positive) of such procedures on the health and welfare of poultry
- relevant regulatory requirements, codes of practice, industry standards, methods and procedures for euthanasia of poultry
- types, uses, cleaning, maintenance and servicing of beak treatment and beak trimming equipment and tools
- site preparation procedures for beak tipping operations
- criteria for determining birds to be culled before and after beak tipping operations
• types and uses of documentation, records and reports that are required for beak tipping operations

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- make preparations to clean sheds
- raise or remove equipment including feeders and drinkers
- clean equipment, sheds and surrounds
- maintain sheds, silos, feeders, drinkers and all equipment
- clean silos safely
- prepare sheds and equipment for cleaning
- sanitise, disinfect or fumigate sheds and equipment safely and in line with legislative requirements
- apply insecticide both in and outside shed
- dry clean and effectively cover electrical equipment
- complete hygiene and administration tasks
- implement enterprise work health and safety procedures
- apply biosecurity requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- types of sheds, machinery and equipment found in sheds
- how to handle, raise or remove equipment in sheds
- methods of sealing or covering electrical or sensitive equipment to prevent entry of water
- methods for litter and manure removal
- methods for dry cleaning electrical equipment
- procedure for dry or wet cleaning sheds and equipment
Assessment Requirements for AHICPLY306 Clean and disinfect poultry production sheds

Environmental impacts of shed cleaning operation, and measures to mitigate these impacts
- equipment and machinery used for shed cleaning and disinfection, its operation, maintenance and storage
- methods of disposal of effluent and waste
- cleaning, maintenance and servicing of filters, drinker lines, tanks and silos
- handling and application of insecticides, sanitisers, disinfectants and fumigants and the relevant legislative requirements
- types, handling, use and disposal of cleaning agents
- types of documentation and records that need to be completed after the cleaning operations
- relevant work health and safety requirements
- relevant biosecurity requirements
- environmental impacts and controls of cleaning and fumigating sheds
- chemical spillage management and safety equipment and clothing

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply biosecurity procedures for site entry and between sections
- implement biosecurity procedures
- implement biosecurity procedures as instructed on detection of disease, pest or weed where relevant
- identify abnormal signs in a flock
- implement wild bird, pest and weed control measures
- monitor application of biosecurity procedures
- implement enterprise work health and safety policies
- implement enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant statutory requirements, codes of practice, industry standards and procedures for biosecurity
- types, characteristics, methods of spread, signs, prevention, control and treatment of diseases, pests or weeds relevant to the enterprise
- requirements for maintaining an enterprise as a biosecure zone including perimeter fencing, lockable gates, vehicle access, enterprise boundaries, production area boundaries, dirty and clean production areas, poultry housing and pasture boundaries and appropriate signage
- specific biosecurity procedures applicable to an enterprise and enterprise work routines, including personnel, visitors, vehicles, equipment, machinery, introduced poultry, pests, wild birds and health program
• requirements, procedures and resources for entry to enterprise, production areas, facilities or sites
• normal signs of a healthy flock
• relevant work health and safety requirements
• methods and procedures for cleaning and disinfection of facilities, sheds, feeding and watering equipment and other shed equipment
• requirements, methods and procedures for treatment and sanitisation of drinking, cooling and washing down water supplies as appropriate to an enterprise
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• relevant environmental and sustainability requirements, methods and procedures for disposal and management of effluent, organic and inorganic waste and debris
• essential principles and key aspects of Commonwealth and State disease control emergency plans, including AUSVETPLAN
• types and maintenance of relevant documentation and records
• requirements and methods for reporting, reviewing, revising and communicating biosecurity procedures

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to recognise common weed species and apply a range of weed treatments and control options.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that they have treated weeds using at least two different techniques, including:

- recognised and recorded target weeds and confirmed with supervisor
- discussed and selected control options with supervisor
- prepared control options and treatments following required procedures
- identified health, safety and environmental hazards and risks and applied controls according to workplace procedures
- identified, selected, fitted and used personal protective equipment
- applied treatments safely ensuring off-target species were unaffected
- shut down, cleaned and stored personal protective equipment and application equipment according to environmental procedures
- disposed of waste according to workplace procedures and environmental procedures
- maintained records according to workplace procedures and legislative and regulatory requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common weeds identification and naming conventions
- weeds and dispersal methods common to work area
- common weed treatment options, including:
  - cultural
  - chemical
  - mechanical
  - biological
Assessment Requirements for AHCPRMG201 Treat weeds

- Integrated Pest Management
- Basic environmental considerations when using chemicals for treating weeds, including:
  - spray drift and off target damage
  - inversion
  - re-entry period
  - residues
  - chemical handling
- Regulatory requirements and responsibilities when applying weed treatments
- Weed control equipment, capabilities and limitations
- Health and safety in the workplace including personal protective equipment required for controlling weeds
- Principles and methods for securing treatment sites including, caution or hazard signs and signals
- Purpose and use of chemical labels and safety data sheets (SDS)
- Environmental considerations when controlling and disposing of weeds and waste materials
- Record keeping methods and requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:
- Physical conditions:
  - Skills must be demonstrated on a site with weed infestation or an environment that accurately represents workplace conditions
- Resources, equipment and materials:
  - Weeds to be identified and controlled
  - Tools and equipment suitable for control options and treatments
  - Personal protective equipment
  - Treatment materials
- Specifications:
  - Workplace documents including treatment and control procedures and processes and forms for recording treatments
  - Use of manufacturers' operating instructions for specific equipment, machinery used for weed control
  - SDS for treatment materials
  - Specific regulations
- Relationships:
  - Supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to recognise plant pests, diseases and disorders, determine the treatment options and apply treatments under supervision.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Application

This unit of competency describes the skills and knowledge required to interpret and apply industry and workplace procedures and standards to daily work activities when working in the pest management sector. It requires the ability to identify and follow legislative and procedural requirements while under supervision.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</tbody>
</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they can work effectively in a pest management environment, including:

- recognised common pests and identified the characteristics and impact on community
- identified and monitored effectiveness of pest management plans for pests recognised for impact on workplace performance
- identified, selected and safely used equipment required to implement pest management program
- identified and took corrective action for equipment faults
- recognised and implemented workplace strategies for controlling pests
- applied health and safety in the workplace and environmental practices and procedures ethically according to legislative requirements
- identified permissions, licences and necessary permits required prior to entering properties
- followed safe waste disposal procedures
- prepared and used communication and navigational equipment relevant to workplace requirements
- assisted with identifying key stakeholders and contributed to stakeholder engagement
- used communication strategies to engage with supervisor and stakeholders
- complied with designated timelines
- maintained pest management records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
Assessment Requirements for AHCPM203 Work effectively in a pest management environment

- common pest management methods, strategies and monitoring techniques for specific pest species
- standard operating procedures and codes of practice applicable to pest control
- invasive pest species common to field of work and their harmful impact, including:
  - signs and symptoms of active pests
  - effect of pests on work environment
- basic environmental considerations when controlling pests, including:
  - spray drift and off target damage
  - inversion
  - re-entry period
  - residues
  - chemical handling
- pest control strategies, including:
  - cultural
  - chemical
  - mechanical
  - biological
  - Integrated Pest Management
- risk factors, including human, health and environmental associated with the pest management activity
- record keeping and reporting processes and procedures, including:
  - databases
  - paper based
  - mandatory reporting
- licenses, permits and permissions when entering properties
- common equipment used for, controlling pests, navigating and communicating on properties, including:
  - calibration requirements
  - basic operation principles
  - maintenance and repairs
- health and safety in the workplace procedures and legislative requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live pests for identification and control
  - tools and equipment for pest control, navigation and communications
• personal protective equipment

• specifications:
  • workplace documents including policies, procedures, processes, instructions, records and forms
  • manufacturers' operating instructions for specific equipment, machinery
  • relevant legislation, regulations and codes of practice

• relationships:
  • industry stakeholders
  • supervisor

• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to plan and coordinate weed control activities using appropriate strategies to provide effective, economic control while minimising environmental damage.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated on at least one occasion that they have controlled weeds, including:

- identified, recorded and assessed weeds and their impact on the target area
- investigated the suitability of weed control approaches and effect on site environment and non-target entities
- planned and coordinate weed control activities
- identified tolerable levels of weed infestation for the target site
- conducted a site hazard, risk assessment and identified controls for weed control
- ensured personal safety by using appropriate personal protective equipment
- selected and applied weed management methods appropriate to the target site
- maintained records of weed management activities
- monitored, recorded and reported the effectiveness of methods
- ensured control measures had minimal effect on non-target species and environment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- weeds and their tolerable levels and impact on target area, including:
  - economic, aesthetic, health, fire hazard and environmental thresholds of common weeds
  - non-target entities common to the area
  - effect of weed infestation on required plant health and growth
• basic weed biology, including:
  • lifecycle and ecology of a range of weeds
  • cyclical nature of weeds and control programs
  • weed characteristics, morphology and dispersal
• weed management strategies and their selection criteria, including:
  • cultural
  • chemical
  • mechanical
  • biological
  • Integrated Pest Management
• risk factors including human, animal health and environmental associated with control measures
• factors that affect the efficacy of weed management strategies, including:
  • prevailing weather and atmospheric conditions
  • impact of off target damage on non-target entities
  • residues and maximum residue levels
• weed control activities and disturbance to other plant or animal species
• signs of adverse impact of control measures and ways to minimise their effect on non-target entities, including:
  • humans
  • animals
  • non-target plants
  • environment
• site-monitoring techniques that may be used to implement the weed control plan
• hazard and risks assessment and control methodologies
• equipment including personal protective equipment appropriate to control measure
• health and safety in the workplace requirements
• pest management planning and survey strategies
• legislative requirements relevant to weed control.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in the field or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live weeds
  • tools and equipment used for weed control program
  • personal protective equipment
• specifications:
• workplace documents including policies, procedures, processes and forms for record keeping
• manufacturers' operating instructions for specific equipment and machinery
• safety data sheets
• workplace instructions and client briefs
• specific regulations and codes of practice
• relationships:
  • clients.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify and assess the effect to plants of plant pests, diseases and disorders and plan and coordinate control measures.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that on at least one occasion they can control pests, disease and disorders, including:

- identified and recorded pests, diseases and disorders, beneficial organisms on host plants in target area
- assessed damage, threat and threshold of pests diseases or disorders on host plants according to client, market or environment requirements
- selected and implemented pest, disease and disorder control measures according to workplace, environmental and safe work practices
- identified and selected tools equipment and resources necessary to implement the control measure
- identified and assessed health and safety hazards and risks and incorporate and implemented in controls strategies according to health and safety procedures
- identified, fitted and used personal protective equipment according to workplace procedures
- monitored the effectiveness of pest and disease control
- adjusted control measure on crop and off-target entities where outcomes were below expectation
- maintained records of pest and disease control activities according to regulatory and workplace requirements
- coordinated the control strategy with others according to planned outcomes.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest, disease and disorder and symptom recognition of host stress
- economic, aesthetic or environmental thresholds for a range of plant pests, diseases and disorders
- control strategies for pests diseases and disorders, including:
  - chemical
  - biological
  - cultural methods
  - treatments available
  - Integrated Pest Management
  - industry best practice
- tools, equipment and machinery for implementing the control strategies and the importance of calibration
- site monitoring and analysis techniques used to implement a control strategy
- implications of control strategies for:
  - target and off-target
  - site limitations
  - environmental implications
  - end market and production
  - environmental objectives
- health and safety in the workplace responsibilities for employees and employers
- correct use, maintenance and storage of personal protective equipment
- health and safety in the workplace and environmental regulatory requirements including hazardous substances regulations
- basic communications skills
- workplace and mandatory record keeping requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pests, diseases and disorders
  - tools and equipment for control program
  - personal protective equipment
- specifications:
• workplace documents including policies, procedures, processes and forms for record keeping
• manufacturers' operating instructions for specific equipment and machinery
• safety data sheets
• workplace instructions and client briefs
• specific legislation/codes of practice

• relationships:
  • clients
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to euthanise animals using firearms and techniques appropriate for the type and mobility of the animal.

The unit applies to individuals who hold a valid firearms license and work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions. Destruction of pest animals must comply with state animal cruelty legislation.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated the skills to use a firearm to euthanise animals, including:

- planned the shoot within the boundaries and location of the target animal its range and habitat according to the timeframe, pest management plan and monitoring program
- ensured licences and permits were valid and applicable and environmental and public safety risks were mitigated
- identified target animal and its anatomical vulnerabilities for a clean kill
- operated a firearm safely in accordance with statutory requirements
- zeroed and test fired the firearm safely at a range under supervision at a distance that is commensurate with the target animals to be destroyed
- selected and checked serviceability of transport, equipment, firearms and ammunition, and stowed the firearm and ammunition safely for transport
- cleaned, maintained and stored equipment, firearms and ammunition safely and in accordance with statutory requirements
- checked target animal was dead, and euthanised immediately, if signs of life, according to relevant animal welfare codes of practice
- used personal protective equipment (PPE) to handle carcases to ensure health and safety in the workplace
- identified health and safety in the workplace hazards and risks and applied control measures and used PPE according to health and safety in the workplace procedures
- applied biosecurity measures when handling, transporting or disposing of carcases
- maintained records and reporting procedures.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest management plan and their purpose
- environmental hazards and risks associated with the use of firearms
- safety hazards and risk management strategies associated with shooting
- checking and preparing a firearm and ammunition
- checking target animal for life after discharging the firearm
- anatomy and physical features and vulnerable organs, or humane points on target animals
- procedures for the safe handling of carcases required for research or commercial use
- procedures for the safe disposal of animal carcases not required for other purposes
- reporting and recording procedures required by the pest management plan
- location and boundaries for the shoot
- habitats, habits and range of movement of target animals
- PPE required for the shoot
- firearm’s licensing requirements
- firearm and ammunition types recommended for the target animal
- State and territory gun control laws, acts and regulatory requirements including firearms agreements and codes of practice, relating to the use of firearms for euthanising animals
- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- prevention of cruelty to animals legislation applicable to destruction of animals
- basic requirements for biosecurity in the context of destruction of animals.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an outdoor field environment with pest animals or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pest animals, carcases or targets
  - firearms
  - PPE
- specifications:
  - workplace documents including procedures for firearm use
  - operating instructions for firearms
  - licences and permissions to discharge firearms
  - specific legislation and codes of practice for firearm use and animal welfare
- timeframes:
  - checked animal for signs of life after discharge of firearm.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit:

- must possess firearms licences
- appropriate experience in using firearms for pest control.

Application

This unit of competency describes the skills and knowledge required to survey pest abundance for plants, vertebrate or invertebrate animals. This will be carried out using a range of observation techniques in conjunction with workplace pest management plan, survey strategy and a monitoring program according to established standards and protocols.

The unit applies to individuals who work under broad direction and take responsibility for their own work use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have surveyed pests, including:

- organised and completed a pest survey according to the organisation’s pest management plan and survey strategy
- recognised signs or evidence of common pests
- counted, calculated and recorded observations
- operated equipment safely and according to workplace and environmental procedures
- cleaned and stored the equipment at the conclusion of the job
- took appropriate safety and environmental precautions for all pest survey activities
- applied appropriate animal welfare practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- survey techniques and equipment appropriate to the geography and type of pest being surveyed
- health and safety considerations with survey techniques including aerial observation
- the basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- relevant parts of the organisation’s pest management plan and survey strategy
- permits and permissions required for survey work
- pest survey plans and their application
- pest behaviour and habitats including areas that have a high probability of infestation
- direct evidence requirements of range of pests included in pest management plan
- survey recording methods and procedures
Assessment Requirements for AHPMG305 Survey pests

- map reading techniques for survey work.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated on a site with pests to be surveyed or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live pests to be surveyed
  - survey tools and equipment
  - personal protective equipment
- specifications:
  - workplace documents including survey plans, procedures, survey records and forms
  - manufacturers' operating instructions for specific equipment
  - workplace instructions or briefs
  - specific animal welfare codes of practice
- relationships:
  - team member, supervisor or key stakeholder.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Assess targeted pest

1.1 Identify the biology and characteristics of the target pest

1.2 Observe and confirm the location and extent of the pest problem

1.3 Observe and confirm target pest behaviour and movement patterns
### Elements

*Elements describe the essential outcomes.*

<table>
<thead>
<tr>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.4 Assess the impact of the pest on assets</td>
</tr>
</tbody>
</table>

#### 2. Assess pest control techniques

| 2.1 Identify purpose of control program and determine desired outcomes |
| 2.2 Discuss suitable pest control strategy with supervisor according to planned outcomes |
| 2.3 Identify biosecurity risks associated with control methods |
| 2.4 Determine legislative, economic or social constraints on pest control techniques |
| 2.5 Identify non-target species and constraints that they may impose |
| 2.6 Assess the impact that urban areas will have on the planning of pest control techniques |

#### 3. Plan the pest control

| 3.1 Source information on techniques applicable to the type of pest |
| 3.2 Identify permits, licenses or clearances required to carry out pest control activities |
| 3.3 Assess the relative humaneness of pest control techniques, where target pests include animals |
| 3.4 Determine control measures to address identified constraints |
| 3.5 Identify safety hazards associated with control measures and apply relevant health and safety in the workplace policies and procedures to manage risks |
| 3.6 Discuss and confirm the most appropriate technique for the situation with the stakeholder, and the desired outcome |
| 3.7 Determine monitoring techniques according to workplace practices |

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have determined pest control techniques, including:

- assessed the impact of pests on assets
- identified the target pest and its characteristics
- determined the desired outcomes, constraints and measures for pest control techniques
- planned and discussed appropriate humane pest control techniques with supervisor and stakeholder
- used a variety of monitoring techniques to determine pest numbers
- identified non-target species and biosecurity risks affected during a control program
- identified pest control permissions and licences required for pest control techniques
- determined the legal, economic and social constraints affecting pest control techniques
- included health and safety in the workplace policies and procedures when planning pest control techniques.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest lifecycles and behaviours, including modes of dispersal, biology and reproduction
- features of target and non-target species
- habitats of target and non-target pest animals
- impacts pest control activities can have on native species
- licenses, permits and clearances that may need to be obtained
- the impact pest control can have on nearby urban areas and off target species
- pest control techniques appropriate for different contexts
• key conditions for the survival of pests and methods for eliminating or controlling those conditions
• basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice, where target pests are vertebrate animals
• pests and their impact on assets, including the environment and their acceptable population densities
• types of constraints that apply to pest control techniques
• legislation applicable to pest control including declared species.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in the field or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live pests
• specifications:
  • workplace documents including survey plans, procedures, records and forms
  • workplace instructions or briefs
  • specific animal welfare codes of practice
  • technical information and resources applicable to pest.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to trap and hold live animals for release, transportation or destruction. Trapped animals can be native animals, domestic animals, animals determined to be pests or feral animals.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have applied animal trapping techniques, including:

- determined objectives for trapping and confirmed target animal characteristics and trapping location and size
- estimated trapping period and identified, selected and prepared baits, equipment, traps and transport for trapping activities
- set and trapped animals humanely and released or destroyed animals according to workplace procedures and animal welfare code of practice
- identified presence of target and non-target animals
- identified environmental, health and safety in the workplace hazards, risks and applied controls according to workplace and environmental procedures
- checked method of transport, equipment and materials for serviceability and cleaned equipment before and after trapping activities
- selected, prepared and restored trapping site during trapping activities
- positioned, set, calibrated and checking trapping equipment according to workplace procedures
- applied lures or baits according to trapping plan
- selected, used and stored baits or toxins according to workplace procedures
- inspected traps in a timely manner and handled and euthanised captured animals in accordance with workplace procedures and animal welfare practices
- maintained records using global positioning system data
- summarised and presented trapping data and reports according to workplace procedures
- cleaned and stored equipment and carcases using approved chemicals according to safety data sheets (SDS) and workplace procedures to minimise biosecurity risks.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- purpose for trapping the animal
- target animals and non-target animals
- target animal’s range, movement patterns and behaviour and how to apply knowledge of these to selecting trapping location and equipment
- reproductive cycle of the target animal to determine appropriate timing of trapping activities
- food preferences, both general and local, of target animals
- capture and kill points for target animals
- traps and techniques for target animals
- permissions that may be required to undertake trapping
- principles relating to property, stock and duty of care when trapping
- precautions that need to be taken to minimise trapping of non-target animals
- trap camouflage materials and techniques
- trap types, setting and operating release to render them inactive
- health and safety in the workplace procedures that relate to trapping animals
- recording and reporting requirements
- use of decoys and lures
- baits or toxins types and preparation
- applicable state or territory legislation on the use and storage of baits or toxins
- applicable legislation on the capture and handling of animals
- suitable personal protective equipment
- transportation methods for captured animals.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live animals in the field
  - traps appropriate to trapping technique required
  - baits, lures or poisons relevant to trapping context
  - methods of transport relevant to trapping context
  - cleaning products
- specifications:
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit if firearms are used to destroy animals:

- must possess firearms licences
- appropriate experience in using firearms for pest control.

Application

This unit of competency describes the skills and knowledge required to assist in the implementation of a pest management plan for weeds, vertebrate or invertebrate pests.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</tbody>
</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that they have implemented a pest management strategy, including:

- accessed and interpreted pest management plan and discussed requirements
- identified declared species
- identified stakeholders, resources, health and safety in the workplace requirements and budgetary constraints of pest management plan
- assessed the target pest status, control technique and impact
- implemented the pest management plan using appropriate techniques ensuring safety of non-target species and environment
- applied the techniques to achieve long term outcomes
- applied standard monitoring techniques
- reviewed pest management plan and presented recommendations on improvements
- disposed of waste and cleaned, stored and maintained equipment according to workplace and legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- appropriate legislative requirements with regards to declared species
- basic sustainability principles, including the ecological role provided by some pests
- federal and state legislation relating to property, animal welfare and duty of care
- risk management approaches
- stakeholder engagement and consultation strategies
Assessment Requirements for AHCPMG308 Implement pest management strategies

- pest physiological and biological characteristics that influence on pest management, particularly with regard to pest populations and the ability of pests to rapidly recolonise
- pest management control methods and techniques and how they fit into an integrated pest management strategy
- standard monitoring techniques
- pest status in the context of location, land use, benefits and damage caused
- types of follow up techniques that may be required to minimise the possibility of reinestation
- information sources used for identifying and managing pests
- animal welfare requirements for vertebrate pest control
- legislative requirements for the destruction, movement and propagation of a declared species
- biosecurity principles, including prevention of pest spread
- requirements for ensuring the welfare of animals described in the relevant Codes of Practice
- conflicting and cross purpose land use resolution processes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live pests
  - vehicle, tools and equipment and resources appropriate to the control methods
  - personal protective equipment
- specifications:
  - workplace documents including procedures, processes, forms
  - manufacturers' operating instructions for specific equipment and machinery
  - safety data sheets where chemicals have been used
  - workplace instructions, job specifications or client briefs
  - specific legislation/codes of practice
  - financial budget for project
- relationships:
  - clients
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Application**

This unit of competency describes the skills and knowledge required to apply control techniques for pest animals, in compliance with a pest management plan. This includes involving the use of vertebrate pesticides, traps (except leg hold traps), cages, lures and firearms with the animal humanely destroyed according to industry guidelines or protocols.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

1. Identify health and safety hazards and risks in the workplace that could adversely impact on the environment, off-target animals and public and apply controls.

1.3 Select and check materials, equipment and vehicles according to pest management plan.

1.5 Clean, calibrate and prepare equipment according to workplace procedures.

1.6 Obtain permits, permissions and licences for affected properties and follow appropriate notification plan for stakeholders.

1.7 Prepare timeline for pest control operation according to industry best practice or protocols.

2. Implement pest control

2.1 Identify target and non-target animals according to workplace procedures.

2.2 Select site to maximise impact of control methods on target animals and minimise impact on non-target animals.

2.3 Check planned control technique applies to current target pest, site, current conditions and timing.

2.4 Install notification and warning signage according to control plan and health and safety in the workplace procedures.

2.5 Carry out control activities according to control plan and health and safety in the workplace procedures.

2.6 Follow control timelines for control technique.

2.7 Maintain records of control plan activities and outcomes according to workplace procedures.

2.8 Monitor site according to control plan and local conditions.

2.9 Euthanise animals according to pest control plan and workplace procedures.

3. Complete the pest control work

3.1 Ensure equipment and unused resources are reconciled against plan and removed from site according to pest control plan and workplace procedures.

3.2 Dispose of waste and animal carcasses and restore site according to pest control plan, workplace and environmental procedures.

3.3 Clean, maintain and store equipment and materials according to workplace procedures.
### Elements

Elements describe the essential outcomes.

### Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element.

3.4 Report results of control activities according to workplace procedures and legislative and regulatory requirements

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have applied a pest animal control technique, including:

- identified the control techniques and selected equipment and resources required
- identified target and non-target animals
- obtained permits and licences and notified stakeholders of intended works
- checked vehicles, selected equipment and materials for serviceability and cleaned equipment before and after implementation
- prepared timeline and selected and prepared the site for control activity and restored it on completion
- prepared, installed and checked, safety warning signs, control equipment, materials according to plan
- applied controls according to timelines and control plan
- reconciled controls against plan within specified timeframes
- recorded details of control activities to comply with enterprise and legislative requirements
- reported results of control
- reconciled, cleaned and maintained equipment and disposed of waste according to workplace and environmental procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• requirements for ensuring the welfare of animals described in the relevant Codes of Practice and standard operating procedures
• the purpose and scope of the animal control program
• suitable control techniques and timing of control activities based on:
  • the target animal’s range, movement patterns, behaviour and habitats
  • the reproductive cycle of the target animal
  • target animal behaviours and biology relevant to control technique
  • food preferences, both general and local, of target animals
  • scent station and other animal tracks and traces
  • target pests and non-target native animals found in the area
  • the environment and terrain of the target area
• appropriate calibre of firearm required to euthanise animals
• euthanasia procedures, including capture and kill points for animals
• licencing, permissions and notification protocols
• precautions that need to be taken to minimise harm to non-target animals
• health and safety in the workplace procedures that relate to animal control activities including personal protective equipment
• recording and reporting requirements
• procedures for using, recording and reconciling baits and poisons
• relevant legislation for pest animal control activities
• transportation methods for captured animals or carcases
• land reparation works, waste disposal and the environment.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in the field or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live pest animals
  • tools and equipment used for pest animal control program
  • personal protective equipment
• specifications:
  • workplace documents including policies, procedures, processes and forms for record keeping
  • use of manufacturers’ operating instructions for specific equipment, machinery
  • safety data sheets
  • workplace instructions and client briefs
  • specific legislation and codes of practice.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit if firearms are used to destroy animals:

- must possess firearms licences
- appropriate experience in using firearms for pest control.

Application

This unit of competency describes the skills and knowledge required to conduct pest control activities from the air using firearms.

The unit applies to individuals who hold a valid firearms license and work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have used a firearm to control pest animals from an aircraft, including:

- obtained and complied with approvals, permits and conditions for planned activity
- confirmed flight plan, emergency procedures and search and rescue operations with pilot
- checked, sighted and used a firearm safety to shoot pest animal targets from an aircraft
- applied air safety practices when entering and occupying aircraft
- stored firearms safely in an aircraft
- applied health and safety in the workplace practices
- checked accurate location, carried out pest control and ensured all animals were humanely destroyed according to animal welfare codes of practice and workplace procedures
- cleaned maintained and stored firearms and equipment and disposed of waste according to workplace procedures
- maintained records of pest numbers and reported outcomes according to workplace procedures.

Knowledge Evidence

- An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
  - requirements for ensuring the welfare of animals described in relevant codes of practice and workplace procedures
  - map reading and plotting position
  - air safety principles and emergency procedures appropriate to firearms
  - approvals required for carrying firearms airside
  - firearms’ licensing requirements
Assessment Requirements for AHCPM311 Use firearms for pest control activities from aircraft  Date this document was generated: 3 September 2020

- health and safety in the workplace procedures
- environmental, animal welfare, prevention of cruelty to animals, and pest control legislation
- appropriate personal protective equipment (PPE)
- principles and methods of using firearms from an aircraft.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an aircraft suitable for pest animal control activities or an environment that accurately represents these conditions
- resources, equipment and materials:
  - live pest animals
  - appropriate firearms for pest animal management
  - suitable PPE for the individuals task
- specifications:
  - workplace and Civil Aviation Safety Authority documents such as policies, procedures, processes, forms and instructions
  - operating instructions for firearms
  - licences and permissions to discharge firearms from an aircraft
  - legislation, regulations and codes of practice for animal welfare and firearm use from aircraft
- relationships:
  - pilot and supervisors
- timeframes:
  - according to the specified flight plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit:

- the assessment team must include assessors with firearms licences and appropriate experience in using firearms from aircraft for pest control.

Application

This unit of competency describes the skills and knowledge required to prepare pest animal baiting programs. This includes the safe preparation and distribution of poison baits for the control of vertebrate pest animals affecting the rural and natural environment according to legislative and regulatory requirements.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion demonstrated the ability to apply poison baits for vertebrate pest animals in a rural or natural environmental landscape ensuring they have:

- identified pest animal species and abundance
- identified and assessed the availability, mode of action of poison and their application for control of vertebrate pest animal species
- identified and selected the poison and baits required for the target pest and calculated the requirements for bait size according to poison label and regulatory requirements
- determined the timing for undertaking a baiting program in consideration of target animal ecology, behaviour, location and landscape
- identified the various approaches to baiting for pest animal species and selects most appropriate form of baiting for target pest animal species and environment
- assessed environmental and off target hazards and risks
- developed a poison baiting program and monitoring protocol suitable for pest control objectives for target vertebrate pest and location
- identified and accessed legislative and regulatory forms and made application for approvals to access and implement a poison baiting program
- confirmed approvals and notified stakeholders of poison baiting program
- assessed health and safety in the workplace hazards, risks and implemented control procedures for applying and handling poison baits according to poison label, safety data sheets (SDS), legislative and regulatory requirements, and workplace procedures
- used personal protective equipment for all poison bait activities
- prepared baits for target species in a suitable location
- prepared bait for storage and stored the bait safely ready for distribution according to poison label and workplace procedures
- monitored and assessed weather to ensure effective baiting conditions according to workplace procedures and poison label
- transported baits according to legislative requirements
• installed signage and distributed baits ensuring effective target access and minimising off target risks according to baiting program
• monitored bait stations in a timely manner according to poison label and baiting program
• cleaned equipment, spills, and disposed of waste and baits according to workplace and environmental procedures, SDS and poison labels
• maintained records and reported incidents according to workplace procedures and legislative and regulatory requirements.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• vertebrate pests and their impact on the rural and environmental landscape
• vertebrate pesticides, toxins or poisons to control and manage pest animal species, including:
  • types
  • origin
  • mode of action
  • application
• application and use of pesticides in vertebrate animal baiting program
• baiting techniques for the delivery of vertebrate pesticide toxins or poisons to target species in a baiting program
• regulatory conditions for the use of vertebrate pesticides in pest animal baiting programs, including:
  • legal implications
  • requirements of poisons labels
  • role of SDS
  • regulated poisons includingSchedule 7
• federal, state or territory guidelines and codes of practice for the preparation and use of poison baits for pest animals
• types and characteristics of vertebrate pests and their impact on the human and natural environment, including:
  • life cycle
  • effect on farms and farmland
  • effect on natural ecosystem and landscape
  • effect on the urban environment
• options for controlling vertebrate pests for a control program, including:
  • poison baiting
  • fumigation
  • habitat destruction
  • concussive (explosive) force
  • trapping
Assessment Requirements for AHCPMG312 Apply poison baits for vertebrate pest control in rural and environmental landscapes

Date this document was generated: 3 September 2020

- shooting
- fencing
- Integrated Pest Management
- guard animals
- aversions

- bait techniques and technologies, including:
  - grains
  - meat
  - fruits and vegetables
  - bait stations
  - baiting trails
  - replacement baiting programs
  - canid pest ejectors
  - aerial baiting

- legislation, regulations and licensing requirements in relation to access and use of poisons and poison baits, including:
  - application processes for permits and licensing
  - roles and responsibilities of land owners, pest controllers and government agencies for using poison baits
  - stakeholders and required notifications including, neighbours, staff and statutory notifications

- bait distribution techniques and considerations, including:
  - impact of weather
  - pest species and their habits
  - breeding cycle
  - feeding and caching (storing) behaviours
  - watering behaviours

- predation risk to rural and environmental assets being protected

- building baiting program into farm or park management activities

- factors that contribute to off target risks, including:
  - proximity to urban and peri urban environment
  - domestic animal behaviours
  - pest animal interactions
  - native birds and animal activities

- hazards of poisons and their application, including:
  - human and animal health
  - environmental contamination
  - residues in environment, plants and animals
  - timing for checking bait stations/sites

- safety requirements when handling, treating and distributing poisonous baits, including:
• procedures
• personal protective equipment
• signage
• preparing poisonous baits, including:
  • bait types
  • sizes
  • preparation before and after treatment
  • equipment and methods of treating baits
• safe handling, transport and storage of treated baits and poison concentrates
• requirements for disposal of waste poison and baits, clearing spillages and equipment clean up.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • poison baits
  • personal protective equipment
• specifications:
  • workplace documents including work instructions and procedures for bait distribution and planning
  • poison labels and SDS
  • legislation and regulations relevant to the use of poisons and poison baits
  • access to weather forecasts or means to measure local weather.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare, monitor and maintain biological control agents for weed control prior to release in an experimental or field situation. Biological agents must be maintained and stored in an effective way to optimise their potency on targeted weed species.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have prepared, monitored and maintained biological agents for weed control, including:

- prepared and propagated biological agents according to laboratory policies and procedures
- procured and transferred cultures to growing environment according to laboratory policies and procedures
- maintained, harvested and stored biological agents according to laboratory policies and procedures
- monitored and kept records of observations and details of any abnormalities according to laboratory policies and procedures.
- applied health and safety in the workplace procedures, environmental sustainability and biosecurity practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- context of biological agents used for weed control
- laboratory procedures for biological agents
- media available for culture maintenance
- culture and media preparation techniques
- available biological control agents and their use
- the range of pest species that are to be targeted with biological agents
- biosecurity and quarantine requirements
- health and safety in the workplace for laboratories and biological agents, including:
  - use of personal protection equipment (PPE)
  - environmental sustainability and biosecurity practices when using biological agents.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a laboratory suitable for handling biological agents or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live biological agents
  - laboratory tools, equipment and materials to produce and store media
  - PPE
- specifications:
  - workplace and laboratory policies, procedures and processes
  - safety data sheets
  - workplace instructions and specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to implement pest management plans for weeds, vertebrate or invertebrate pests.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They use discretion and judgment in the selection, allocation and use of available resources.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they can implement a pest management plan, including:

- determined all operational parameters and objectives and identified the budgetary allocations, health and safety in the workplace, biosecurity, human and operational resources required for the pest management plan
- supervised others to meet health and safety in the workplace, legislative and regulatory requirements in their work
- procured and ensured machinery, equipment tools and materials met operational and statutory requirements
- communicated with stakeholders and personnel on pest management activities
- supervised others to carry out pest management work according to the pest management plan and provided feedback, advice and coaching
- informed and advise personnel on duties and expected standards
- reviewed and rescheduled works and notified stakeholders of changed schedules
- reviewed and compiled outcomes of pest management plan and prepared reports to stakeholders on progress.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pest management plans their structure and implementation
- factors affecting the selection of pest control methods and techniques, including:
  - pest biology and lifecycle
  - potential diseases and toxicity
Assessment Requirements for AHCPM-G409 Implement a pest management plan

- principles of sustainability
- herbicide resistance and the alternatives that are available
- pest status in the context of location, land use, benefits and damage caused
- pest management control programs and how to use them in an integrated manner, including:
  - key concepts of integrated pest management as a strategy
- contingency management principles
- risk assessment and management processes
- legal responsibilities of stakeholders including landowners
- local, regional, state and national pest management strategies
- federal, state or territory legislation and regulations relating to pest management activities
- the basic concepts and underpinning principles of the strategic approach to invasive pest management and how to manage damage caused by pests
- the basic principles and importance of monitoring and evaluating the effectiveness of invasive pest management and how to plan and implement an appropriate monitoring program for a pest management plan
- common causes of failure in pest management
- requirements for ensuring the welfare of animals described in relevant codes of practice
- relevant environmental and pesticides legislation as they apply to the workplace
- developing operational parameters and objectives, timelines and milestones
- reporting and recording requirements for the various stakeholders
- scheduling workload and developing work plans.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live pest animals
  - tools and equipment required to implement the plan
  - personal protective equipment
  - baits and poisons
- specifications:
  - workplace documents including policies, procedures, processes
  - pest management plan
  - manufacturers' operating instructions for specific equipment and machinery
  - specific safety data sheets
  - workplace instructions and job specifications
  - specific legislation/codes of practice
- relationships:
Assessment Requirements for AHCPMG-009 Implement a pest management plan

- clients
- team member(s)/work crew
- supervisors/management
- timeframes:
  - schedules and planned completion dates for a pest management plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to implement the pest monitoring plan and evaluate and report on performance of pest management.

Pests may be weeds, vertebrate or invertebrate pests or a combination of these.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- implement a pest monitoring and evaluation plan to organisational requirements
- collate data as required in the pest monitoring and evaluation plan
- conduct a site inspection
- consult with stakeholders about the plan
- measure responses to the organisation's pest control procedures
- analyse data against objectives and performance criteria
- produce a report on the results of monitoring operations and a report with evaluation results
- apply all monitoring techniques stipulated in the monitoring and evaluation plan
- apply work health and safety policies and procedures in all monitoring activities

Knowledge Evidence

The candidate must demonstrate knowledge of:

- how to compare data with objectives and performance criteria
- how to compare actual costs with budgeted costs
- environmental and economic impacts of pests on land management and production processes
- the organisation's pest management plan
- monitoring and evaluation principles and how they work in the pest management plan
- land management and production purposes
- range of pests identified in the pest management plan, their lifecycles, threshold levels and the effects of control methods upon them
Assessment Requirements for AHCPMG-410 Implement the pest monitoring and evaluation plan

- relevant local, regional, State or Territory and national pest management strategies
- Federal, State or Territory legislation and regulations relating to pest management activities
- principles of integrated pest management

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed meeting with a stakeholder. All work must be carried out in accordance with relevant Federal, State or Territory legislation regarding pest management activities and the destruction and movement of declared pests.

The candidate must provide evidence that they can:
- identify a non-compliance issue
- provide advice to stakeholders of a non-compliance issue according to authority guidelines and in a manner and language appropriate to the situation
- provide advice and support to stakeholder to manage the issue in accordance with authority guidelines
- follow right of entry requirements
- investigate and collect evidence of breaches
- report findings of non-compliance and compliance according to legislative requirements
- issue relevant notices
- complete recording and reporting requirements to authority and workplace standards

Knowledge Evidence

The candidate must demonstrate a knowledge of:
- relevant Federal, State, Territory and local government legislation regarding pest management and the destruction and movement of declared species
- the legislative status of particular pests and how to identify whether a pest is a declared species
- the types of breaches that generally occur in the locality and the appropriate control options
- conflict avoidance and resolution techniques
- property owners’ rights
- delegations under the relevant Acts and Certificates of Authority
- control measures appropriate to the pests and environment in the area

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have developed a pest management plan, including:

- developed the scope, goals and time frames for a pest management plan
- consulted with stakeholders in the development of the plan
- defined and documented the objectives, roles and responsibilities for the plan
- identified and documented the activities and developed a schedule of critical control points
- conducted a risk assessment for management of community, environment production and health and safety in the workplace and developed contingency plans
- determined and developed operational procedures and methods for monitoring the plan, control methods to be used, site clean-up strategy, and biosecurity
- identified resources and estimated cost of pest management plan
- prioritised activities according to budgetary constraints
- incorporated health and safety in the workplace, environmental and biosecurity procedures and regulations into pest management plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- project planning and management processes
- factors that impact on selection of pest management activities, including:
  - pests in the context of weeds, vertebrate and invertebrate animals and diseases
  - pest behaviour
  - pest population dynamics and economic and environmental thresholds
• target pest biology and lifecycles
• potential diseases or toxicity risks
• relevant local, regional, state or territory and national pest management strategies
• the principles that underpin the strategic approach to managing pests
• land management and production processes of targeted area
• Federal, state or territory legislation and regulations relating to pest management activities including animal welfare
• chemical, biological, physical and habitat control techniques for pest management
• pest control methods and techniques
• critical control points in the target pests’ life cycle, land management and production activity cycles
• develop objectives for specific, measurable, achievable, realistic and time-based outcomes.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • technology and resources for documenting plans
• specifications:
  • workplace documents including policies, procedures, processes
  • pest management planning tools
  • workplace instructions and job specifications
  • specific legislation and codes of practice
• relationships:
  • clients
  • team member(s)/work crew
  • supervisors/management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to apply a strategic pest management approach to define a weed, vertebrate or invertebrate pest problem for a target area.

The unit applies to individuals who use consultation and analysis to define the pest problem. They exercise autonomy in undertaking complex work and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

</tbody>
</table>
| 1. Define desired environmental management and production outcomes | 1.3 Define desired environmental management and production outcomes  
1.4 Collect and record information about management or production processes relating to pest problem  
1.5 Determine non-target species populations in target area according to ecological data |
| 2. Analyse the target pest problem in the area | 2.1 Establish and document stakeholder views on the distribution of target pest within affected area  
2.2 Source and analyse information to validate stakeholder views for target pest population, damage, and distribution  
2.3 Identify environmental and pest biology factors which influence the target pest population and distribution  
2.4 Document the target pest lifecycle, optimum times, locations and behaviours that impact program effectiveness  
2.5 Identify non-target species populations and distribution  
2.6 Identify hazards, risks and controls for non-target species, environment, ecology and production in target area  
2.7 Identify potential ecological role of target pest |
| 3. Determine critical control points for management of the target pest problem | 3.1 Determine timing of control activities for periods of least risk to off target activities and conditions  
3.2 Identify periods of significant vulnerability during target pest lifecycle  
3.3 Determine appropriate time period for pest management activity |
| 4. Define and document the impacts of the target pest | 4.1 Estimate economic losses and environmental impacts of the pest presence  
4.2 Conduct a cost-benefit analysis of managing pest in accordance with workplace plans  
4.3 Prepare a report on outcomes of investigation for stakeholders according to workplace procedures  
4.4 Assess whether the pest problem warrants the need for a pest management plan |
**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

<table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have produced a written report that details the pest problem in a target area, including:

- identified and consulted with stakeholders
- collected information on pest impact and defined the pest problem in consultation with stakeholders
- determined the target pest population and distribution and factors impacting population and distribution
- determined non-target species populations and distribution in area
- accessed and analysed information to validate pest impact
- identified appropriate times for pest control activities and identified and documented pests’ characteristics that impact on program effectiveness
- conducted a cost-benefit analysis for managing target pest
- prepared a report and assessed the viability for a pest management plan for pest population
- identified environmental impact of pest presence and pest management activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- impact of pests on environment, land use, land management and production processes
- behaviour of target pests, particularly those behaviours that impact pest susceptibility to being effectively managed
- animal welfare and related codes of practice and workplace procedures
Assessment Requirements for AHCPMG413 Define the pest problem

- pest biology and lifecycles of target pests
- principles that underpin the strategic approach to managing pests
- land management and production processes of targeted area
- ecology of targeted area
- performance criteria for measuring land management and production outcomes
- techniques used to validate the target pest population and distribution data supplied by stakeholders and sources of relevant data
- measuring or estimating economic implication and environmental impacts of pests
- potential ecological role some pests provide
- potential disease or toxicity risks
- relevant parts of local, regional, state or territory and national pest management strategies
- factors that influence pest population and distribution
- periods of vulnerability in the lifecycle of pests
- critical control points for management of pest problem
- range of pests, non-target species, plant pests and diseases.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - site with pests to evaluate
  - technology and resources for documenting reports and cost benefit analysis
- specifications:
  - workplace documents including policies, procedures, processes
  - research materials and data for pests
  - workplace instructions and job specifications
  - specific legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to effectively use leg hold traps to capture predator species, to release the animal unharmed as part of research programs or to humanely euthanase in accordance with pest management programs.

This unit primarily deals with the use of leg or foothold traps to capture predator pest species including dogs, foxes and cats. Animals may be native animals, domestic animals, animals determined to be pests or feral animals. Trapping techniques call for the use of a variety of equipment and may include the use of lures or attractants baits.

Trapping must be carried out in accordance with an approved pest management plan or research project plan.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

Some forms of traps are strictly regulated in some States and Territories in Australia. Specific determination should be sought through the relevant State or Territory authority.

Where feral animals are trapped they may need to be euthanased with a firearm. Firearms licensing conditions apply to this unit, in particular the use of either Cat A, B or C firearms. Specific approval should be sought through the relevant State or Territory Firearms licensing agency.

Appropriate firearms licences and training are also required for those involved in training and assessment against this unit.
In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- humbly trap animals and release or destroy the animals as required
- identify target and non-target animals in the field
- check vehicles, equipment and materials for serviceability and clean equipment before starting and on completing the job
- select and prepare the trapping site and restore it on completion of the job
- position, set, calibrate and regularly check trapping equipment
- manufacture and apply lures or attractants, if required
- handle and euthanase captured animals in accordance with animal welfare guidelines
- identify signs of target animals, using scent stations and other animal tracks and traces
- summarise and present trapping data to supervisor
- use appropriate data sheets or other recording instruments to record details of trap sets and lures as well as target and non-target capture
- apply work health and safety practices in the context of own work
- apply appropriate animal welfare practices in trapping and handling trapped animals

Knowledge Evidence

The candidate must demonstrate knowledge of:

- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice and Standard Operating Procedures
- the purpose of the animal capture
- the target animal's range, movement patterns and behaviour and how to apply knowledge of these to selecting trapping location and equipment
• Factors affecting choices around equipment and resources and timing of trapping activities, including:
  • the reproductive cycle of the target animal
  • food preferences, both general and local, of target animals
  • biology of non-target animals that may be impacted by trapping program in the area
  • permissions and permits that may be required
  • suitable traps for the target animal
  • precautions that need to be taken to minimise trapping non-target animals
  • capture and humane killing methods for target animals
  • principles relating to property, stock and duty of care
  • how to camouflage traps
  • how to safely set off traps to render them inactive
  • work health and safety procedures that relate to trapping animals
  • recording and reporting requirements
  • how to use decoys and lures
  • how to prepare toxins
  • applicable State or Territory legislation on the use and storage of toxins
  • applicable legislation on the capture and handling of pest animals
  • suitable personal protective equipment
  • transportation methods for captured animals

**Assessment Conditions**

Assessment must be conducted in a real work environment trapping live animals.

The assessment team must include assessors with firearms licences.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must demonstrate that they can:

- develop procedures to identify infestations in accordance with relevant legislation
- interact with landholders to explain the ramifications of legislation
- provide pest management advice to landholders which is consistent with organisational guidelines and legislative requirements
- explain policies detailing right of entry to relevant workers
- if required, serve penalty notices
- collate evidence and findings for presentation in a court or to legal representatives
- write ministerial briefs and responses to correspondence

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Commonwealth and State/Territory legislation and regulation relevant to pest management
- relevant legislation regarding identification, destruction, movement, and propagation of declared species
- legislation relating to gathering and presenting evidence
- appropriate record-keeping systems
- environmental protection processes
- land management and production principles
- policy and procedure development techniques
- how to present evidence for court proceedings
- principles that underpin a strategic approach to managing pests
Assessment Requirements for AHCPMG506 Manage the implementation of legislation

- pest control treatments relating to pests dealt with under legislation
- monitoring points in the pest management plan and evidence of infestations
- potential diseases and toxicity
- relevant local, regional, State/Territory and national pest management strategies

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop a pest management plan that applies to a large or regional level. It also describes the skills and knowledge required to gain agreement and commitment from stakeholders to implement the plan.

Pest management plans are used by land managers who practice sustainable land management principles and require a collaborative approach with neighbouring landholders.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They demonstrate deep knowledge in specific technical areas, are able to analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- produce a pest management plan that contains objectives and management options which comply with relevant legislation and best practice principles of pest management
- consult with stakeholders to reach agreed upon outcomes from identified objectives
- scope geographical area, landscape and land uses within area and with stakeholders
- develop pest management plan according to defined pest problem
- align pest management plan to biosecurity plans or legislation
- develop pest management plan in accordance with sustainable land use principles, economic feasibility, environmental acceptability and statutory requirements for pest control
- develop, evaluate and document all management options to control, eradicate or prevent pest populations
- achieve approval of the plan by key stakeholders
- conduct risk assessments and cost-benefit analyses of the range of management options available in order to select the best option for the specific context
- apply work health and safety policies and procedures in the context of own work
- include appropriate animal welfare Code of Practice and Standard Operating Procedures in the plan
- apply appropriate sustainability practices in the plan

Knowledge Evidence

The candidate must demonstrate knowledge of:
- planning techniques
• concepts of the strategic approach to pest management, the importance of monitoring and the effectiveness of management evaluation
• relevant local, regional, State/Territory and national pest management strategies
• Federal, State or Territory legislation and regulations relating to pest management activities
• principles of integrated pest management
• types of monitoring technology available
• land use processes, ecological systems and production systems
• pest management options and strategies
• techniques used to validate target pest population and distribution data supplied by stakeholders, and methods of obtaining other relevant data
• how to measure or estimate economic losses and environmental impacts from pest presence
• Federal and State or Territory legislation and regulations relating to property, stock and duty of care
• target pest biology and lifecycles
• potential diseases or toxicity risks
• pest population dynamics and economic and environmental thresholds
• wildlife issues and how to minimise risks to non-target species as well as deal with pest behaviour
• environmental protection legislation
• basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice

Assessment Conditions
Assessors must satisfy current standards for RTOs.

| 1. Research and identify pest monitoring and evaluation requirements | 1.1 Determine monitoring and evaluation requirements  
1.2 Assess attitudes, and land management practices, of stakeholders for their relevance and usefulness to the monitoring and evaluation program  
1.3 Document how results from monitoring and evaluation will be used |
| 2. Develop procedures for monitoring and evaluation | 2.1 Identify target pests and select monitoring sites  
2.2 Specify timing of sampling, observation systems, level of accuracy required and sample size  
2.3 Identify economic and environmental impacts to be monitored  
2.4 Identify factors that would trigger an emergency response  
2.5 Define how reporting will be carried out and how results of sampling will be verified and analysed  
2.6 Develop procedures for monitoring and recording the economic and environmental impacts of pests  
2.7 Develop procedures for monitoring and recording pest abundance  
2.8 Confirm monitoring program includes a schedule that is aligned to milestones in the pest management plan |
| 3. Document the monitoring program                 | 3.1 Design recording documents and forms  
3.2 Document all procedures and recording systems and make accessible to relevant personnel  
3.3 Ensure pest monitoring program aligns with relevant local, regional, state and national pest management strategies |

### Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit has resulted from the merging of AHCPMG403A Develop monitoring procedures for the local pest management strategy and AHCPMG504A Develop a system for monitoring the pest management strategy and is not equivalent to either of these units.

Links

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a pest monitoring and evaluation program, in accordance with the local, regional, State or Territory and national pest management strategies
- consult with stakeholders to assess attitudes and land management practices, where relevant
- research and identify required operational and performance monitoring
- develop procedures for monitoring and evaluation, including how to access relevant techniques and adapt them for the pest management plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- procedures for monitoring and recording
- pest biology, behaviour and lifecycles and how they influence monitoring procedures
- pest population dynamics and economic and environmental thresholds
- relevant local, regional, State, Territory and national pest management strategies
- Federal, State or Territory legislation and regulations relating to pest management activities
- key concepts in the Integrated Pest Management strategy
- monitoring and evaluation principles and how they should be included in the management program
- reporting and recording procedures, including knowing how to appropriately package information in the correct format and at the appropriate level for the various target groups
- how to monitor and record pest abundance and the damage caused by the target pest
- target pests and monitoring points
Assessment Requirements for AHCPM G508 Develop a system to monitor and evaluate the pest management plan

- non-target species in the area
- potential economic and environmental impacts of pest population
- factors that would trigger an emergency response
- aims, objectives and milestones in the pest management plan
- requirements for ensuring the welfare of animals described in the relevant Codes of Practice, where monitoring plan involves pest animals
- potential diseases and toxicity relevant to the area and pests

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to investigate causes of pest control failure after the implementation of a pest management plan.

Pests may be weeds, vertebrate or invertebrate pests or a combination of these.

Treatment may be any measure used to decrease the pest population and the damage caused by it.

This unit applies to regional pest control officers and managers who take personal responsibility for their own work and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

Individuals operating in this field are required to hold current chemical handling certification and a first aid certificate. Other licensing conditions may also apply to this unit. Specific determination should be sought through the relevant State or Territory.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- investigate and assess a pest treatment failure
- find solutions to the failure
- analyse pre-treatment and post-treatment pest infestation levels
- assess planning techniques used
- evaluate solutions to the failure

Knowledge Evidence

The candidate must demonstrate knowledge of:
- how to survey pest populations to determine infestation levels
- monitoring techniques
- how to assess whether the definition of the pest problem is correct
- range of pest treatments appropriate to context
- a deep understanding of a variety of pest control measures
- the principles that underpin the strategic approach to managing pests
- Federal, State or Territory legislation and regulations relating to pest management activities
- chemical, biological, physical and habitat techniques for pest management

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop a plant pest survey strategy to determine the presence, distribution and prevalence of a pest. Pests may be weeds, vertebrate or invertebrate pests or a combination of these.

The work may be conducted as part of an emergency response to an incursion or as part of routine surveillance, and must be conducted in accordance with established standards and protocols.

This unit applies to individuals who have been appointed or engaged to undertake a role within a pest incursion response. They may also be involved with planning responses to emergency animal diseases and aquatic animal diseases. Individuals take personal responsibility and exercise autonomy in undertaking complex work. They are accountable for the work of others within broad parameters and analyse information and exercise judgement to complete a range of advanced skilled activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- produce a pest survey strategy in accordance with local, regional, State/Territory and national pest management strategies
- write work instructions for survey teams
- work with other technical experts
- analyse biological information for survey design
- develop survey methodology appropriate for target pest, environment and terrain
- prepare plans to workplace and authority standards
- develop review processes according to workplace requirements
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate detailed knowledge of:

- biometric principles to biological survey design
- the biology of groups of pests and pathogens relevant to the survey
- the types and distribution of hosts relevant to the survey
- requirements for ensuring the welfare of animals described in the relevant Codes of Practice
The candidate must demonstrate knowledge of:

- pest biology, behaviour and lifecycles
- diagnostic tests for use in confirming pest presence in samples
- resources required for survey activities

**Assessment Conditions**

Assessment must take place in a functioning control centre, or a control centre established for a pest response simulation exercise.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- check and assess pig health and welfare
- provide an optimal environment for pigs
- establish and maintain hygiene
- administer medication to pigs
- remove dead or non-viable pigs
- report and complete records
- follow work health and safety policies
- follow biosecurity policies
- follow animal welfare policies
- follow environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity
- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for animal welfare of pigs
- signs of health, signs of ill health, and methods for assessing pig health and welfare
- techniques and methods for humane handling and restraint of pigs
- common diseases of pigs, treatment regimes, prevention and management strategies
- criteria for handling compromised pigs
- relevant documentation, records and reports that are required
• types, functions and characteristics of housing, housing infrastructure and housing equipment for pigs, and the criteria and methods for determining that they are in working condition
• types, uses, handling, storage and routes of administration of commonly used vaccines, veterinary medicines and chemicals
• requirements, methods and procedures for removing and disposing of waste and debris
• procedures for conducting post-mortem examinations
• effects and impacts of individual pig health and welfare on herd health status and vice versa
• relevant work health and safety requirements and environmental practices

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- check and assess pig health and welfare
- provide an optimal environment for pigs
- establish and maintain hygiene
- administer medication to pigs
- remove dead or non-viable pigs
- report and complete records
- follow work health and safety procedures
- follow biosecurity procedures
- follow animal welfare policies
- follow environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for biosecurity and quarantine
- relevant regulatory requirements, codes of practice, industry standards and enterprise procedures for animal welfare of pigs
- signs of health, signs of ill health, and methods for assessing pig health and welfare
- techniques and methods for humane handling and restraint of pigs
- common diseases of pigs, treatment regimes, prevention and management strategies
- criteria for handling compromised pigs
- relevant documentation, records and reports that are required
• the types, functions and characteristics of housing, housing infrastructure and housing equipment for outdoor pigs, and the criteria and methods for determining that they are in working condition
• types, uses, handling, storage and routes of administration of commonly used vaccines, veterinary medicines and chemicals
• requirements, methods and procedures for removing and disposal of waste and debris
• procedures for conducting a post-mortem examination
• effects and impacts of individual pig health and welfare on herd health status and vice versa
• relevant work health and safety requirements and environmental practices

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to conduct outdoor pig operations.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare housing
- provide for care and welfare of pigs
- carry out operational tasks
- check pigs
- complete records
- follow work health and safety policies
- follow biosecurity policies
- follow animal welfare policies
- follow environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation, codes of practice, industry standards and guidelines for outdoor pig production
- types, functions, characteristics, cleaning and maintenance of outdoor pigs
- requirements and components of enterprise work routines for outdoor pigs
- types, functions, characteristics, cleaning and maintenance of relevant outdoor pig housing and production installations and equipment, such as feeders and drinkers
- techniques and methods for humane handling and restraint of pigs in outdoor production environments
- requirements, methods and procedures for weaning piglets
- requirements, methods and procedures for formation of viable groups, and the impacts of a viable group on individual pig health and production
• signs of health, signs of ill health, and methods for assessing pig health, welfare and behaviour
• nutritional requirements and methods and procedures for feeding and watering outdoor pigs
• criteria and methods of assessing optimal stocking densities of pigs
• requirements, methods and procedures for removal and disposal of pig carcasses
• types, uses and procedures of relevant veterinary and preventive treatments of pigs
• types, handling, use and disposal of cleaning agents and disinfectants, work health and safety and environmental practices for these chemicals
• types of documentation and records that are required for pig operations
• requirements and maintenance of outdoor pig production environment
• relevant work health and safety and biosecurity requirements and environmental practices

Assessment Conditions

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AIICPRK304 Mate pigs and monitor sows performance

- methods and procedures for pregnancy diagnosis in sows
- relevant documentation and records that are required
- relevant work health and safety and biosecurity requirements

Assessment Conditions

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to care for grower pigs.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Pork (PRK)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare accommodation for growers
- carry out grower and finisher pig operations
- identify and select sale pigs
- follow work health and safety policies
- follow biosecurity policies
- follow animal welfare policies
- follow environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types, characteristics, requirements and care of grower and finisher pigs
- types, functions, characteristics, cleaning and maintenance of relevant pig accommodation and production installations and equipment, such as feeders and drinkers
- range, effects and impacts of ventilation, temperature, humidity and other environmental parameters on grower pig health and welfare
- optimal range of values for ventilation, temperature, humidity and other environmental parameters for grower pigs and methods for measuring these values
- requirements and components of enterprise work routines for grower pigs
- techniques and methods for humane handling and restraint of pigs
- requirements, methods and procedures for formation of viable grower groups, and the impacts of a viable group on individual pig health and production
- signs of health, signs of ill health, and methods for assessing pig health, welfare and behaviour
- nutritional requirements and methods and procedures for feeding and watering grower pigs
- criteria and methods of assessing optimal stocking densities of grower pigs
- requirements, methods and procedures for removal and disposal of pig carcasses
- types, uses and procedures of relevant veterinary and preventive treatments of grower pigs
- types, handling, use and disposal of cleaning agents and disinfectants, work health and safety and environmental practices for these chemicals
- types of documentation and records that are required
- criteria, methods and procedures for assessing suitability of pigs for transport and loading
- features and requirements of property banding and PigPass
- relevant work health and safety and biosecurity requirements and environmental practices

**Assessment Conditions**

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for work in the production area
- coordinate work activities
- monitor daily operations
- monitor herd health
- monitor production environment
- complete records and documentation
- follow work health and safety policies
- follow biosecurity policies
- follow animal welfare policies
- follow environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation, codes of practice, industry standards and guidelines for outdoor pig production
- features and uses of enterprise production plans, enterprise work programs, environmental management plan and nutrient management plan
- requirements, maintenance, mitigation and protection measures for nutrients, soils, ground and surface water
- significance, effects and control measures for chemicals, gaseous emissions and odours that impact on the production environment and surrounding community
- relevant regulatory, industry and enterprise work health and safety requirements, codes of practice and standards
• use and maintenance of personal protective equipment
• types, functions, cleaning and maintenance of relevant tools and equipment
• types, requirements for and methods for determining allocation of enterprise resources
• strategies for communicating with and providing feedback to staff, contractors and management
• effects and impacts of weather elements on enterprise work programs and outdoor production environments, and preparations and adjustments to mitigate such impacts
• types, functions, characteristics, cleaning and maintenance of relevant outdoor pig housing and production installations and equipment, such as fencing, feeders and drinkers
• requirements, methods and procedures for manure and litter removal and treatment
• types, characteristics, functions, operation and maintenance of effluent storage and treatment systems
• requirements, methods and procedures for waste removal and disposal
• common diseases signs of health, signs of ill health, and methods for assessing individual pig and herd health and condition
• requirements, methods and procedures for conducting post mortem examination of pigs
• relevant regulatory, industry and enterprise biosecurity requirements, codes of practice and standards
• relevant regulatory, industry and enterprise environmental and sustainability requirements, codes of practice and standards
• criteria, methods and procedures for monitoring environmental health and condition
• relevant documentation, records and reports that are required
• relevant animal welfare requirements

**Assessment Conditions**

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine feed rations and schedules
- manage storage of feed
- supervise feeding
- implement work health and safety policies
- implement biosecurity policies
- implement animal welfare policies
- implement environmental policies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles of nutrition, feeding strategies and feeding management of pigs
- types, characteristics and quality assessments of feed ingredients, and the methods for assessing their nutritional value in meeting the needs of pigs
- types, forms and characteristics of pig feeds
- correlation and application of nutritional test results in formulating feeding strategies and feeding plans
- criteria, requirements, types of and principal considerations for feed storage
- features, criteria and requirements for formulating a feeding plan
- requirements, methods and procedures for collecting, preparing and transporting feed samples for testing
- types, calibration and use of measuring equipment
- relevant work health and safety requirements and selection, use and maintenance of personal protective equipment
Assessment Requirements for AHCPRK401 Implement a feeding strategy for pig production

- requirements, types and maintenance of potable water supplies to pigs
- signs of health, ill health, good condition and poor condition in livestock, and methods for assessing pig health and condition in relation to nutrition and feeding
- possible production changes in relation to changes in nutrition, feeds and feeding strategies
- types of and disposal methods for organic and non-organic waste
- relevant documentation and records that are required
- relevant animal welfare and biosecurity requirements and environmental practices

Assessment Conditions

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to control erosion and sediment using earthworks construction and other land forming activities.

Construction is often carried out using a single earthmoving machine in varied conditions and terrains that requires the plant operator to develop skills that are unique to this sector.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work, they undertake defined routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

</table>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- conduct erosion and sediment control activities as instructed by a supervisor
- identify hazards and follow safe operating procedures
- identify erosion and sediment control structures, measures and practices
- carry out routine work with control measures and structures
- identify areas at risk of erosion
- operate or use machinery tools and equipment required for the tasks involved safely and efficiently

Knowledge Evidence

The candidate must demonstrate knowledge of:
- the need for erosion and sediment control, including:
- the cost of erosion and sedimentation to the community
- the effect of loss of habitat
- how water quality is affected
- how soil erosion can cause loss of production, assets and amenities
- re-occurring maintenance, repair and monitoring requirements for controls
- agents and processes of erosion and sedimentation and ways to control them
- types of erosion and sediment control structures and techniques for constructing them
- role of vegetation in erosion control
- basic catchment issues
- characteristics of soils with an emphasis on erodible soils
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to use specialised earthmoving techniques to achieve fine tolerances in the construction of conservation earthworks.

Construction is often carried out using a single earthmoving machine in varied conditions and terrains that requires the plant operator to develop skills that are unique to this sector.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others.

Special vehicle licenses may apply to this unit, dependent on the type of machinery being used. Specific determination should be sought through the relevant State or Territory.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and implement safe operating procedures
- prepare for construction according to construction plans and enterprise requirements
- carry out planned earthworks, minimising damage to natural areas
- apply finishing techniques
- read maps and plans to identify and peg out construction sites
- identify work site, site indicators and survey pegs
- determine soil properties and types
- use specialist earthmoving equipment relevant to the task
- follow work health and safety policies and procedures in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- erosion and sediment control standards
- soils and soil formation
- principles of conservation earthwork construction and erosion and sediment control including:
  - catchment management and soils
  - earthmoving principles
  - levels and levelling
  - natural area protection (including topsoil) and rehabilitation
  - design
  - natural area protection (particularly topsoil) and rehabilitation principles
- types and application of personal protective equipment
• application of legislation and regulations relating to own role in conservation earthwork construction
• enterprise work health and safety procedures
• risk factors including human health and environmental damage
• environmental impacts and controls for constructing conservation earthworks

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- construct, install and maintain a range of erosion and sediment control measures
- identify hazards and implement safe work procedures
- prepare for implementation and construction
- read and follow plans to carry out implementation and construction
- identify survey pegs and site indicators on site and on the plans
- carry out repairs and maintenance procedures to enterprise standards
- select equipment and materials appropriate for the task
- operate equipment and machinery according to safe work practices and manufacturer instructions
- clean and store equipment, machinery and tools according to organisational requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- materials cartage pollution control
- sequence of working and timing/duration
- work health and safety issues relating to the equipment and the site
- equipment used
- materials suitable for constructing erosion and sediment control measures and where to source them on site
- limitations of structures including timing of maintenance, structure life cycle, specifications and standards
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- set out conservation earthworks
- identify hazards and ensure the safety of self, field operators and any other person on site
- interpret plans and specifications
- relate plan to site
- measure out site dimensions precisely and peg project
- protect site

Knowledge Evidence

The candidate must demonstrate knowledge of:

- different types of survey equipment
- civil engineering and survey techniques applicable to conservation earthworks
- erosion control and design principles
- principles of native topsoil conservation and protection
- interpretation of plans and general and technical specification

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- supervise the implementation of conservation earthworks
- identify hazards and implement safe systems of work
- plan efficient implementation of works
- protect natural areas from damage
- direct the implementation of planned works
- monitor job specifications
- identify and address risks to achieving planned outcomes
- provide information to the media, community and special interest groups about work undertaken
- providing on the job training to staff where required
- ensure work health and safety policies and procedures are adhered to by all personnel and contractors on site
- monitor application of biosecurity measures and sustainability practices in work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- erosion and sediment control standards and principles
- natural area topsoil protection and rehabilitation principles
- supervision techniques
- erosion control and design principles
- sediment control principles
- earthmoving principles
• principles for machine operation
• work sequence knowledge
• equipment most suitable to the constructing of erosion and sediment control works
• quality assurance systems, processes and practices
• staff deployment, supervision and training
• application of work health and safety and environmental legislation, codes of practice and enterprise requirements to work site

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- produce a design for erosion and sediment control measures and structures
- identify measures to be designed
- apply design procedures
- prepare specification schedule
- cost the project and provide recommendations in line with budget constraints
- use computer design programs
- determine design specifications using methods that meet industry standards
- develop design plan to meet client, organisational and regulatory requirements
- consult with management or client to confirm design meets requirements
- identify how the design applies sustainability principles

Knowledge Evidence

The candidate must demonstrate knowledge of:
- erosion control and design principles:
  - soils and soil formation
  - levels and levelling
  - earthmoving principles
  - total catchment issues
  - managing peak water flows
- subsurface and surface drainage principles and systems
- environmental issues related to the design
- the limitations of design aids provided for industry
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a plan for erosion and sediment control measures that meets regulatory requirements and industry standards
- establish suitability of development proposal to location and environment
- prepare reports on erosion and sediment control plans to enterprise standards
- develop erosion and sediment control measures consistent with industry principles and selection criteria
- prepare an erosion and sediment control plan to industry standards and to comply with relevant regulatory planning authority

Knowledge Evidence

The candidate must demonstrate knowledge of:

- application of relevant environmental, planning and groundwater legislation in erosion and sediment control work
- planning process for erosion and sediment control
- erosion control and design principles:
  - soils and soil formation
  - levels and levelling
  - earthmoving principles
  - total catchment issues
  - how to manage peak water flows
  - subsurface and surface drainage principles and systems
Assessment Requirements for AHCSAW502 Plan erosion and sediment control measures

- permits or consents potentially required for developing erosion and sediment control structures
- environmental issues related to erosion and sediment
- awareness of the limitations of design aids provided for industry
- work health and safety implications of implementing plans

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop a conservation earthworks plan to control runoff to prevent soil erosion, safely store and distribute water, and rehabilitate eroded or disturbed areas.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. This includes analysing, designing and communicating solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Soil and Water Conservation (SAW)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- produce a plan of conservation earthworks that meets client needs, conforms to industry standards and complies with legislation and policy requirements
- establish client needs through consultation
- carry out site investigations using surveys, aerial photographs and maps
- negotiate agreed project outcomes
- explain legislation and policies that may impact on the project to the landholder
- develop a strategy to protect natural areas consistent with industry principles and that comply with regulatory requirements
- develop the strategy to utilise earthworks consistent with industry principles and that comply with regulatory requirements
- prepare detailed project costing that meets client’s budget
- prepare a detailed works plan
- communicate design requirements to designer to achieve desired outcomes

Knowledge Evidence

The candidate must demonstrate knowledge of:

- how relevant environmental, planning and groundwater legislation impacts on the development of conservation earthworks planning
- environmental, planning and earthwork construction standards and Codes of Practice relevant to planning conservation earthworks projects
- earthwork structures
- erosion control and design principles
- natural areas (particularly topsoil) protection and rehabilitation principles
• soils and soil formation
• levels and levelling survey plans and titles
• earthmoving principles
• total catchment issues
• land use and land development strategies
• environmental issues
• how to manage peak water flows
• subsurface and surface drainage principles and systems
• limitations of design aids provided for industry

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for cultivation
- complete pre- and post-operational checks on tools, vehicles and equipment
- interpret production or planting plans
- produce standards, quality specifications and work procedure documents
- measure materials and site plan specifications
- cultivate soil in accordance with paddock cultivation plans
- service, operate, adjust and calibrate cultivation equipment safely
- complete records and documentation accurately and promptly

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for preparing land for seed crop production
  - pre-planting treatments, their purpose and method of application
  - environmental issues of cultivating soil for planting, such as drainage and irrigation systems, soil amelioration and waste disposal procedures
- methods of cultivating a range of soil types
- operation and maintenance of planting equipment
- procedures and standards for certified seed
- work health and safety guidelines, procedures and principles, including manual handling and exposure to hazardous substances
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out sowing operation and fertiliser application
- carry out tillage and apply pre-planting treatments
- clean, secure and store machinery and equipment
- keep records of the sowing operation
- monitoring the environmental impacts of establishing the crop
- prepare and service machinery and equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of seed crop establishment
- effects of weather conditions (normal and adverse) on seeding and fertilising applications
- enterprise policies with regard to seeding operations, and recording and reporting routines
- fertiliser types, rates of application and crop nutrient requirements
- operating principles and operating methods for machinery and equipment
- positive environmental practices, negative environmental impacts and minimisation measures associated with seeding operations
- personal protective equipment (PPE) and when and how it should be used
- pre-operational and safety checks, servicing and maintenance procedures for seeding machinery and equipment
- principles of weight distribution with regard to load shifting and vehicle movement
- procedures for cleaning, securing and storing machinery, equipment and materials
• record keeping for certified seed
• relevant state/territory legislation and regulations with regard to licensing requirements and the use and control of machinery and equipment
• relevant state/territory legislation, regulations and codes of practice with regard to workplace health and safety and the use and control of hazardous substances
• seed crop types, preparation of seeds, seeding methods and application techniques
• sustainable land management and soil conservation techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- complete pre and post operational checks on tools, harvesting machinery and equipment
- handle and manoeuvre harvesting equipment
- monitor efficiency of harvesting equipment and make adjustments to height and other settings
- perform routine safety, service and maintenance procedures on tools, harvesting machinery and equipment
- sample crops to assess moisture content and maturity/ripeness of the crop
- transport, clean and store harvesting equipment
- complete records and documentation accurately and promptly

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of seed crop harvesting
  - appropriate legislative requirements, manufacturer’s instructions and organisation procedures/instructions
  - certified seed procedures
  - environmental impacts associated with the operation of machinery and equipment in a harvesting context
  - fire prevention strategies
  - general machine maintenance procedures
  - hygiene procedures for harvesting machinery and equipment
  - machinery operating principles and operating methods
• organisation moisture and hygiene requirements for the crop and equipment that comes into contact with the crop such as bins, augers, trucks and harvesters
• organisation recording and reporting procedures
• pests and signs of pest infestation in the crop
• potential hazards and safe operating procedures for basic tools and equipment
• pre-operational and safety checks, servicing and maintenance procedures for tools and equipment
• requirements for harvesting machinery and equipment transport
• safe operating procedures and standards for harvesting and ancillary equipment
• seed quality and the impact of harvesting practices (such as on lucerne seed)

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to plan a seed crop establishment program. It applies to workers on properties where commercial seed production is undertaken.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess site factors
- determine resources and equipment for planting and post-planting care
- identify threats to pasture establishment including weeds, pests and diseases
- select suitable pasture species and cultivars

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for planning seed crop establishment
  - environmental impacts of seed crop establishment
  - establishment techniques of specific seed crop species and cultivars
  - maintenance requirements and practices for specific seed crop species and cultivars after initial establishment
  - planning process, including costing and scheduling of works
  - plant identification of seed crops and weed species
  - role of crops in sustainable land use
  - seed crop varieties and their characteristics, requirements and production potential
  - seed production contracts
  - the advantages and disadvantages of seed crop establishment procedures

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine planting scheduling for planting and the key responsibilities for preparatory and implementation processes
- carry out pest, weed and disease control either pre- or post-planting if required
- identify the seasonal conditions which affect crop establishment
- plan the planting operation including timing and resources required
- supervise staff and monitor the planting operation
- monitor the planting operation
- adjust the planting plan

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for supervising seed crop production
  - crop establishment requirements
  - environmental controls and codes of practice applicable to the enterprise
  - equipment servicing requirements
  - integrated pest and weed management techniques
  - legislation, codes of practice and enterprise procedures for workplace health and safety and environmental management
  - management practices and processes to minimise environmental impacts such as noise, soil degradation and debris from planting operations
  - Plant Breeder’s Rights and open market seed
- the equipment that is required for a range of tillage methods, and pest and weed control prior to planting

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess crop needs
- carry out crop cultural practices and treatments
- determine time of harvest with specialist advice
- determine water requirements from survey advice and weather forecasts
- measure soil moisture and interpret data
- monitor and assess crop maturity

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of seed crop maintenance
  - chemical use if applicable
  - crop growth requirements compared to soil nutrient status
  - crop growth stages and keys
  - factors leading to development of chemical resistance
  - fertiliser and soil ameliorant types and application times, methods and rates
  - integrated pest management strategies
  - legislation and codes of practice with regard to environmental protection
  - life-cycles of pest, diseases and weeds
  - relevant codes of practice with regard to the use and control of hazardous substances
  - work health and safety legislative requirements
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- arrange storage and delivery requirements
- assess crop maturity and quality in readiness for harvesting
- establish strategies, procedures and controls for crop harvesting, including fire prevention and control plans
- estimate crop yields
- maintain budgetary controls
- negotiate and arrange contracts and agreements
- segregate grain for quality and monitor for moisture content

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of seed crop harvesting
- crop maturity and yield potential
- crop measurement techniques and parameters
- environmental controls and codes of practice applicable to harvesting operations
- functions and limitations of harvesting equipment
- grain or seed quality
- hygiene requirements for certified seed
- location and relative skills and abilities of available contractors
- market information and sources
- relevant legislation, codes of practice and enterprise requirements for work health and safety, contractor engagement, environment and pesticides
• supervisor responsibilities in managing the safety of a workplace
• weather conditions which may affect the harvest

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for a fluorescence test
- assess seedlings using ultra violet light
- count and record test results
- prepare replicates from working sample
- test to determine the presence of seeds of annual ryegrass species in perennial ryegrass seedlots
- maintain a safe work environment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- enterprise and/or legal traceability requirements
- enterprise standard operating procedures (SOPs)
- fluorescence testing procedures
- relevant work health, safety and environment requirements
- seed biology
- the role of the International Seed Testing Association (ISTA) and the ISTA Rules for Seed Testing

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to test the analytical purity of seed in a working sample to infer the composition of a seed lot. It applies to seed analysts working within enterprise requirements and procedures.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Seed testing (SDT)

</table>
| 2. Assess working samples | 2.1 Separate the working sample into its component parts using appropriate equipment  
2.2 Separate pure seed using visual characteristics, mechanical or pressure aids appropriate to the type of seed  
2.3 Handle seeds carefully so as not impair their capacity for germination  
2.4 Weigh separated component parts and matter to the number of decimal places required by enterprise guidelines  
2.5 Identify contaminant seeds |
| 3. Process and interpret data | 3.1 Add and compare weights of all components’ parts with original working sample weight  
3.2 Undertake a retest if required  
3.3 Refer to a supervisor seeds that cannot be identified  
3.4 Calculate the percentage weight of various component parts to one decimal place  
3.5 Add percentages of all fractions together and round to 100%  
3.6 Report results of test |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify galls on ryegrass seed
- inspect seed samples using a diaphanoscope
- plan and delegate testing tasks
- use a microscope to detect nematode gall (*Anguina spp.*)

Knowledge Evidence

The candidate must demonstrate knowledge of:
- basic nematode identification
- enterprise standard operating procedures (SOPs)
- recording and reporting protocols
- relevant health, safety and environment requirements
- seed biology

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop and implement workplace policies and procedures in a seed testing laboratory, including modifying policy to suit changed circumstances.

It applies to senior seed analysts who analyse information and exercise judgement to complete a range of advanced skilled activities and who demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

</table>
Element | Performance criteria
---|---
policy and procedures | 1.2 Identify and consult stakeholders as a key component of the development process
| 1.3 Review operational strategies relevant to all stages of work covered by the policy
| 1.4 Propose recommendations for policy and procedures options based on likely effectiveness, timeframes and cost
| 1.5 Reflect the organisation's purpose and operational goals in the policy and procedures
| 1.6 Seek agreement on implementation strategy

2. Communicate the policy | 2.1 Promote the policy and procedures and the expected outcome to key stakeholders
| 2.2 Assign the expected outcomes, activities to be undertaken and responsibilities and inform those involved in implementing the policy and procedures

3. Implement the policy | 3.1 Develop and communicate processes to help implement the policy and procedures
| 3.2 Establish record system for tracking adoption of policy and procedures

4. Review policy implementation | 4.1 Provide outcomes and feedback to key personnel and stakeholders
| 4.2 Identify issues and non-conformances that may require remedial action
| 4.3 Investigate success or otherwise of policy and procedures
| 4.4 Modify policy and/or procedures as required

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Application

This unit of competency describes the skills and knowledge required to test for seed vigour to provide information about planting value in a wide range of environments and/or storage potential of seed lots.

It applies to senior seed analysts who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</table>
| 2. Receive and prepare samples | 2.1 Log samples using standard operating procedures (SOPs)  
2.2 Record sample description, compare with specification and report discrepancies  
2.3 Prepare samples in accordance with testing method requirements  
2.4 Maintain traceability of samples from receipt to reporting of results  
2.5 Ensure control samples are prepared to enterprise guidelines if they are being used |
| 3. Check equipment before use | 3.1 Set up equipment and instruments in accordance with test method requirements  
3.2 Perform pre-use and safety checks  
3.3 Identify and report faulty or unsafe components and equipment  
3.4 Check equipment calibration using specified standards and procedures  
3.5 Quarantine out of calibration equipment and instruments  
3.6 Ensure reagents required for the test are available and meet quality requirements |
| 4. Conduct test | 4.1 Determine the test method to be used according to the type of seed or as requested by the person requesting the test  
4.2 Clean equipment and maintain in a clean state  
4.3 Prepare a working sample and replicates using mixing and dividing processes  
4.4 Prepare, place and/or treat seed to suit test method requirements  
4.5 Measure or count and record results as determined by test method |
| 5. Evaluate test results | 5.1 Count the number of seeds or seedlings with required characteristics in each replicate  
5.2 Calculate the percentage of seed or seedlings with required characteristics in each replicate and determine average percentage across all replicates  
5.3 Report result of seed vigour test |
| 6. Process and interpret data | 6.1 Record test data noting atypical observations  
6.2 Record and report results  
6.3 Interpret trends in data or results and report out of specification or atypical results  
6.4 Determine if obvious procedure or equipment problems have led to atypical data or results |
<p>| 7. Maintain a safe work | 7.1 Use established safe work practices and personal protective |</p>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare and conduct a seed vigour test
- interpret and present results
- provide information about seeds’ planting value
- provide information about the storage potential of seed lots
- record test results

Knowledge Evidence

The candidate must demonstrate knowledge of:

- calculations, tolerances and rounding results
- enterprise and/or legal traceability requirements
- enterprise standard operating procedures (SOPs)
- materials and apparatus used in seed vigour testing
- range of seed vigour testing procedures
- relevant health, safety and environment requirements
- role of the International Seed Testing Association (ISTA) and the ISTA Rules for Seed Testing
- seed biology
- seed identification

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify potential and existing hazards to the supervisor
- select and use equipment and materials appropriate for crutching sheep
- avoid contamination, second cuts and damage to wool, animals and people
- catch and release sheep safely
- demonstrate safe and responsible workplace practices
- provide due care and handle sheep humanely
- clean and maintain crutching equipment, site and facilities
- communicate problems, faults and workplace hazards to the owner or overseer
- tally crutched sheep count
- apply enterprise work health and safety policies in the context of own work
- apply enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- types of shearing sheds, boards and catching pens
- shearing machinery required and their relative functions
- industry agreed shearing techniques and positions, and method of shearing
- safe handling techniques for catching, dragging, shearing and releasing sheep
- basic anatomy of male and female sheep as it relates to the safe humane removal of wool
- common sheep diseases as they relate to work health and safety and humane treatment of animals
- the impacts of sheep behaviour on moving, handling and shearing sheep
- personal protective clothing and equipment, and when and how it should be used
- Federal and/or State shearing awards and agreements associated with shearing sheep
- Enterprise biosecurity policies applying to the job role
- Work health and safety legislation and codes of practice applying to the job role
- Animal welfare legislation and codes of practice applying to the job role

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed shearing a minimum of 40 adult merino sheep or 50 adult crossbred sheep per day to industry standards.

The candidate must provide evidence that they can:

- follow safe work practices
- select and use equipment and materials appropriate for shearing sheep
- load a handpiece correctly
- avoid contamination, second cuts
- shear sufficient sheep within eight hours to match novice skill level
- use appropriate suturing for cuts to sheep
- catch and release sheep safely
- provide due care and handle sheep humanely
- clean and maintain shearing equipment, site and facilities
- communicate problems, faults and workplace hazards to the owner or overseer
- tally shorn sheep count
- apply work health and safety policies in the context of own work
- apply enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of shearing sheds, boards and catching pens
- shearing machinery required and their relative functions
- industry agreed shearing techniques and positions, and method of shearing
• safe handling techniques for catching, dragging, shearing and releasing sheep
• basic anatomy of male and female sheep as it relates to the safe humane removal of wool
• common sheep diseases as they relate to work health and safety and humane treatment of animals
• the impacts of sheep behaviour on moving, handling and shearing sheep

- provide due care and handle sheep humanely
- clean and maintain shearing equipment, site and facilities
- communicate problems, faults and workplace hazards, and to comprehend instructions provided by the owner or overseer
- tally shorn sheep count
- apply enterprise work health and safety policies in the context of own work
- apply enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of shearing sheds, boards and catching pens
• shearing machinery required and their relative functions
• industry shearing techniques and positions and method of shearing
• aspects of safe handling techniques for catching, dragging, shearing and releasing sheep
• basic anatomy of male and female sheep as it relates to the safe humane removal of wool
• common sheep diseases
• the impacts of sheep behaviour on moving and handling sheep and shearing sheep
• personal protective clothing and equipment, and when and how it should be used
• Federal and/or State shearing awards and agreements associated with shearing sheep
• enterprise biosecurity policies applying to the job role
• work health and safety legislation and codes of practice applying to the job role
• animal welfare legislation and codes of practice applying to the job role

Assessment Conditions
Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to grind combs and cutters for machine shearing so that they are effective for the type of wool and shearing conditions.

All work must be carried out to comply with workplace procedures, work health and safety, biosecurity requirements and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Shearing (SHG)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed grinding combs and cutters for machine shearing.

The candidate must provide evidence that they can:

- identify hazards and apply safe work practices
- determine need for sharpening combs and cutters
- prepare grinder and pendulum for use
- carry out grinding to industry standards

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of combs and cutters
- terminology, techniques and procedures for grinding combs and cutters
- setting of, storage and caring for grinding papers
- tools and equipment used in grinding combs and cutters
- work health and safety legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify hazards and implement safe operating procedures
- select and load comb and cutter for shearing
- prepare combs, cutters, handpieces and downtubes for shearing
- lubricate and maintain handpiece and downtube
- carry out minor maintenance and repairs
- recognise and clearly report any work health and safety hazards to the appropriate person

Knowledge Evidence

The candidate must demonstrate knowledge of:
- components of a shearing handpiece
- components of a downtube
- terminology for handpieces and downtubes
- maintenance and lubrication procedures for shearing equipment and handpieces
- types of combs and cutters to use under different conditions
- work health and safety legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- follow safety directions
- select, prepare and use tools equipment and materials appropriate for shearing sheep work
- ensure health and fitness for shearing
- avoid contamination, second cuts and damage to wool, sheep and people
- catch and shear a sheep in line with organisational, animal welfare and work health safety standards
- demonstrate safe and responsible workplace practices
- clean and maintain shearing equipment, site and facilities
- communicate problems, faults and workplace hazards, and to comprehend instructions provided by the owner or overseer

Knowledge Evidence

The candidate must demonstrate knowledge of:
- types of shearing sheds, boards and catching pens
- shearing machinery required and their relative functions
- industry agreed shearing and crutching techniques, and positions and method of shearing
- features of safe handling techniques for catching, dragging, shearing and releasing sheep
- basic anatomy of male and female sheep as it relates to the safe, humane removal of wool
- common sheep diseases as they relate to work health and safety and humane treatment of animals
- the impacts of sheep behaviour on moving, handling and shearing sheep
Assessment Requirements for AHCShG210 Undertake basic shearing and crutching

- animal welfare requirements in relation to sheep
- personal protective clothing and equipment and when and how it should be used
- Federal and/or State shearing awards and agreements associated with shearing sheep
- work health and safety legislation and codes of practice apply to the job role
- animal welfare legislation and codes of practice apply to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed preparing livestock for shearing.

The candidate must provide evidence that they can:
- identify hazards and implement safe work procedures
- select equipment appropriate to crutching and shearing tasks
- organise crutching and shearing operations
- muster, move, draft and handle livestock in compliance with animal welfare requirements
- observe and monitor livestock health and condition and detect disease or nutritional disorders and treat appropriately
- organise feed and water supplies
- avoid and remove contamination of fleece
- demonstrate safe and environmentally responsible workplace practices
- communicate verbally with work team and manager
- calculate livestock numbers, keep mobs separate
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work
- follow enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- different types and purposes of shearing boards, yards and catching pens
- components and functions of shearing, cleaning and drenching equipment
- handling, mustering and movement techniques
• livestock breeds, nutritional and hygiene requirements
• possible fleece contaminants and types of pigmentation faults
• biosecurity legislation and codes of practice applying to the job role
• work health and safety legislation and codes of practice applying to the job role
• animal welfare legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed preparing combs and cutters for machine shearing.

The candidate must provide evidence that they can:
- identify hazards and apply safe operating procedures to grinding
- determine need for sharpening combs and cutters
- determine need for dressing combs
- prepare grinder and pendulum for use
- carry out grinding
- set, store and care for grinding papers
- dress combs, including selecting bevels, teeth thinning and polishing

Knowledge Evidence

The candidate must demonstrate knowledge of:
- different types of combs and cutters
- terminology, techniques and procedures for grinding combs and cutters
- tools and equipment used in grinding combs, and cutters and dressing combs
- hazard identification and risk control

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed shearing a minimum of 120 adult merino sheep or 140 adult crossbred sheep per day to industry standards.

The candidate must provide evidence that they can:

- identify hazards and work safely
- avoid contamination, second cuts and injury to animals
- shear sufficient sheep within eight hours to match skill level of a professional shearer
- analyse and increase on improver shearer level
- shear with the industry accepted pattern
- use appropriate suturing for cuts to sheep
- catch and release sheep safely
- demonstrate safe and responsible workplace practices
- provide due care and handle sheep humanely
- apply enterprise workplace health and safety policies in the context of own work
- apply enterprise biosecurity policies in the context of own work
- apply enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of shearing sheds, boards and catching pens
- shearing machinery required and their relative functions
- industry agreed shearing techniques and positions and method of shearing
- safe handling techniques for catching, dragging, shearing and releasing sheep
• the impacts of sheep behaviour on moving and handling sheep and shearing sheep
• Federal and/or State shearing awards and agreements associated with shearing sheep
• enterprise biosecurity policies applying to the job role
• work health and safety legislation and codes of practice applying to the job role
• animal welfare legislation and codes of practice applying to the job role

Assessment Conditions
Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed maintaining shearing control, coordination and rhythm over a working day.

The candidate must provide evidence that they can:

- identify hazards and implement risk controls
- maintain optimum shearing output by correct preparation and set up of equipment
- maintain application of improved techniques
- maintain speed and accuracy
- assess and monitor the shearing conditions and environment to maintain shearing performance
- maintain control, coordination, rhythm and output during shearing

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of shearing sheds, boards and catching pens
- shearing machinery required and their relative functions
- industry shearing techniques and positions and method of shearing
- aspects of safe handling techniques for catching, dragging, shearing and releasing sheep.
- basic anatomy of male and female sheep as it relates to the safe humane removal of wool.
- the impacts of sheep behaviour on moving and handling sheep and shearing sheep
- personal protective clothing and equipment, and when and how it should be used
- Federal and/or State shearing awards and agreements associated with shearing sheep
Assessment Requirements for AHCSHG305 Maintain consistent shearing performance

- work health and safety legislation and codes of practice applying to the job role
- animal welfare legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed caring for shorn livestock.

The candidate must provide evidence that they can:

- identify existing and potential hazards and implement control measures
- relate weather conditions to livestock requirements
- prepare contingency plan and anticipate emergency action
- handle livestock with due care
- weigh livestock and assess condition
- observe and monitor livestock behaviour, health and condition
- read and interpret weather information
- provide feed and water based on livestock numbers
- rug animals where required
- apply enterprise work health and safety policies in the context of own work
- apply enterprise animal welfare and biosecurity policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- impacts of adverse weather conditions on shorn livestock
- physiological conditions brought on by stress post shearing, and treatment of same
- types and constructs of livestock shelter
- livestock handling techniques in response to adverse weather
- condition scoring
- appropriate types of feed for stressed livestock
• enterprise biosecurity policies applying to the job role
• work health and safety legislation and codes of practice applying to the job role
• animal welfare legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

2.4 Review work plan with shearing team and note required improvements for future action |
| 3. Check shearing equipment | 3.1 Use work plan to identify and obtain all equipment and supplies necessary for shearing  
3.2 Check and prepare equipment required for shearing and ensure it is clean, set up and functioning correctly |
| 4. Ensure shed and yards are prepared for shearing | 4.1 Check and clean shearing shed prior to commencement of shearing  
4.2 Check and clean yards prior to commencement of shearing  
4.3 Remove sources of alpaca fibre contamination  
4.4 Report safety hazards to fibre grower or shed manager |
| 5. Pen up alpacas | 5.1 Move alpacas according to shearing sequence  
5.2 Pen alpacas by mobs, according to work plan  
5.3 Determine pen density to avoid crushing, trampling or soiling of alpaca fibre  
5.4 Secure gates to prevent mixing of mobs or escape of alpacas  
5.6 Monitor alpaca numbers in holding pens to ensure continuous supply to shearer  
5.7 Monitor pens to maintain alpaca in standing position to avoid soiling of alpaca fibre  
5.8 Apply enterprise animal welfare policies  
5.9 Apply enterprise biosecurity policies where required |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit is equivalent to AHCSHG307A Plan and prepare for alpaca shearing

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must produce a shearing work plan and ensure that all required planning and preparation for shearing has been completed.

The candidate must provide evidence that they can:

- carry out cleaning and decontamination of pens and shearing shed to industry standards
- move alpacas according to work health and safety, animal welfare and enterprise requirements
- muster and draft alpacas into pens according to enterprise and industry standards
- operate any necessary equipment to industry standards
- use industry-accepted alpaca handling techniques
- apply enterprise biosecurity policies in the context of own work
- apply enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Alpaca Industry Best Practice Standards for Harvesting of Alpaca Fibre
- elements of effective and appropriate alpaca shearing work plans
- equipment requirements for alpaca shearing
- how to clean and decontaminate sheds and pens
- industry-accepted alpaca handling and moving techniques
- relevant industry awards and conditions
- enterprise biosecurity policies applying to the job role
- work health and safety legislation and codes of practice applying to the job role
• animal welfare legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must be observed applying advanced shearing techniques while shearing.

The candidate must provide evidence that they can:

- identify potential and existing hazards, assess risks and implement control measures
- prepare and set up equipment to optimise shearing output
- assess and monitor a diverse range of shearing conditions and environments
- maintain control, co-ordination, rhythm, high quality performance and output during shearing
- support and encourage the performance of other shearers as part of a team and respond constructively while maintaining own output
- implement enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of shearing sheds, boards and catching pens
- shearing machinery required and their relative functions
- industry shearing techniques and positions and method of shearing
- aspects of safe handling techniques for catching, dragging, shearing and releasing sheep
- basic anatomy of male and female sheep as it relates to the safe humane removal of wool
- common sheep diseases
- the impacts of sheep behaviour on moving and handling sheep and shearing sheep
- personal protective clothing and equipment, and when and how it should be used
- Federal and/or State shearing awards and agreements associated with shearing sheep
• work health and safety legislation and codes of practice applying to the job role
• animal welfare legislation and codes of practice applying to the job role

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- collect soil and media samples
- perform basic descriptive tests for soil texture, salinity and pH
- describe soils or media using commonly used descriptive terms
- assist with the use of simple soil testing equipment for testing pH and salinity
- prepare records of soil sampling results as required

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for recognising soils or growing media properties
  - basic soil or media field tests
  - soil or media chemical properties
  - soil or media physical properties
  - soil or media plant relationships
  - soil sampling techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- analyse survey results
- determine soil characteristics
- identify adverse environmental impact of irrigation activities and take appropriate action
- interpret soil analyses results
- perform a soil survey
- plot topography and soil survey data on a property map

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for developing soil use maps
  - environmental impacts of irrigation, using water from any ground or underground source
  - methods and techniques of soil sampling
  - nutrient availability in soils
  - physical and chemical properties of soils
  - readily available water
  - soil analyses results
  - soil quality factors
  - soil types and profiles
  - soil water retention testing techniques
  - water table and salinity
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop management plans that address the relevant legislation and issues associated with land and ground water disturbing activities for acid sulphate soil (ASS).

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- collect and use field and test data to identify strategies to remediate and manage the site
- complete a desktop assessment of the land for actual and potential ASS risk based on current and proposed land use, site data and compliance issues
- document an ASS management plan and effectively communicate it to the landowner, relevant consent authority and contractors
- support implementation of ASS management plan by reports on materials management and remediation and site rehabilitation

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for preparing acid sulphate soil management plans
  - ASS assessment tools
  - earthmoving principles
  - environmental impact issues
  - environmental impacts of ASS
  - environmental plans, strategies and options for management and remediation
  - managing acid leachate water flows
  - planning process for remediation and management plans
  - principles of duty of care and due diligence
  - relevant environmental, planning and groundwater legislation
  - soils and soil chemistry
  - subsurface and surface drainage principles and systems
Assessment Requirements for AHCSOL403 Prepare acid sulphate soil management plans

- total catchment issues

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency standard covers the process of assessing soil characteristics, developing and implementing a plan to improve the health of soils, and monitoring and reviewing the results.

Soil chemistry, physical chemistry and biology are used in understanding the analysis of soil tests, and the importance of the role of soil biota in soil structure and plant nutrition. Strategies to combine improved production with improved soil biota are considered, and the opportunity to increase biodiversity by strategic use of unproductive land is covered.

Healthy soils are the basis of all sustainable land-based production systems. The principles of developing healthy soils involve improving soil structure, increasing soil macronutrients and micronutrients to optimum levels, balancing exchangeable cations, achieving optimum pH, eliminating toxic nutrient levels, and enhancing activity of soil biota.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to persons who have a role in managing a land based production business. This unit is likely to require consultation with external experts, such as pasture consultants, fertiliser representatives, contractors, extension officers from State Agricultural Departments, agronomists and producer groups.

No occupational licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research information on soils
- assess soil type, texture and structure in the paddock
- diagnose areas with soil problems or potential soil problems
- diagnose and interpret soil sample test results and determine priorities for improving soil health
- consider and select alternatives including organic products and methods for improving soil health
- calculate amounts of nutrients required and prepare a fertiliser program which reflects needs and priorities
- record and store information
- develop, implement and evaluate a plan to achieve healthy soils through application of soil science
- monitor soil health from the application of soil science.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- physical, chemical and biological properties of soils
- soil biota – types, role in cycling nutrients and improving soil structure
Assessment Requirements for AHC502 Manage soils to enhance sustainability

- basic chemistry concepts related to interpreting soil test analysis: symbols, elements and compounds; valency, anions, cations; reactions; EC (electrical conductivity), CEC (Cation Exchange Capacity); organic matter; pH and its importance in the availability of nutrients; role of macronutrients and micronutrients in plant nutrition. Concept of limiting factors for production
- basic biology: the chemical basis of plants and animals; basic plant structure and function; plant nutrition; water, proteins, sugar, nitrate, lignin content; extent and nature of soil microorganisms
- natural cycling of nutrients: carbon, nitrogen, phosphorous and the role of soil biota in the cycles.
- factors affecting soil biota: moisture, temperature, aeration, nutrient supply, pH, and organic matter
- possibility of problems with the use of conventional chemical fertilisers including acidification contamination of soil and associated water contamination and harm to soil biota
- alternative methods to improve soil fertility, including products and use of machinery for aeration and mulching.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the development and implementation of a plan to address existing erosion problems and to prevent further erosion and sediment problems. The development of the plan will address the relevant legislation and issues associated with land disturbing projects. It requires the ability to identify and establish suitable strategies to develop, implement and monitor an erosion and sediment strategy and manage the project from implementation through to completion to achieve required outcomes.

Planning and managing erosion and sediment control measures requires a knowledge of relevant environmental, planning and ground water legislation, erosion and sediment control techniques, setting work specifications and objectives for the property or catchment system.

This unit is applicable to persons who have a role in the managing of the following land based business:

- Agricultural related industries
- Production Horticulture
- Agro- Forestry
- Natural resource management
- Roadside management and civil construction
- Extractive mining industries

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit will require consultation with external experts such as land management consultants, planning authorities, Catchment Management Authority, Landcare, State and Federal Government Departments who provide advice, contractors, neighbours and other interested groups.
No occupational licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate erosion and sediment control strategy methods
- prepare plans and reports on erosion and sediment control plans
- develop an erosion and sediment control plan
- communicate and collaborate effectively with all stakeholders for planning and conflict resolution
- implement work health and safety control measures at site work operations
- monitor, evaluate and analyse effectiveness of erosion and sediment plan outcomes
- organise required resources and key stakeholders

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environment sustainability as a whole farm system approach
- environmental issues with regard to water catchment, ecosystems, habitats and waste minimisation
- relevant environmental, planning and groundwater legislation including licences and permits to implement erosion and sediment control activities
- erosion control and design principles
- planning processes for erosion and sediment control
- project and risk management techniques and tools for the management of erosion and sediment control
- soils and soil formation
- earthmoving principles
- work health and safety obligations and "Duty of Care"
- subsurface and surface drainage principles and systems

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the development and management of a plan to reclaim salt affected land for profitable, sustainable agricultural production. The plan will include the assessment of the area to determine the source of the salt, the level of salinity and the extent of the infestation as well as plan to reduce flooding and the effect of water logging on the soil. The plan will recommend strategies to be used to reclaim the land. The cost of the plan will be calculated. Plant and pasture establishment and management methods will be recommended for saline sites. Management of the reclaimed area is intended to increase production and profitability. The plan will include strategies for prevention of further salinity problems and for community involvement to reduce salinity in the area.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to a person who has a role in managing the farm. This unit is likely to require consultation with a range of external institutions, groups, government departments and individuals.

No occupational licensing, legislative, regulatory or certification requirements apply to this competency at the time of publication.

Pre-requisite Unit

**Performance Evidence**

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess land forms and soil types
- determine categories of saline land
- take soil and water samples for testing
- calculate optimum stocking rate
- identify indicator plant species
- assess the level of degradation and damage through salinity
- research the latest innovations and management techniques
- manage the crop and animal enterprise selected for the farm to utilize the saline area
- calculate the costs of the project
- calculate benefits of salinity reduction to the enterprise and the property
- work with producers and community groups

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

- salt tolerant plant and pasture species and the management of each
- range of methods for reclaiming saline land
- strategies to profit from the saline area
- value of using natural species and natural systems to improve farm production
- benefits of biodiversity on plant production and the animal enterprise
- strategic and responsible use of susceptible land
- consequences of poor management or removal of vegetation on the land
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

AHCSPO301 Operate a screen cleaner for seed processing

Application
This unit of competency describes the skills and knowledge required to operate screen cleaners to process seed. It applies to the operation of screen cleaners and aspirators for cleaning or processing commercial quantities of seed. Workers operate with some judgement and discretion and work would normally be carried out under minimal supervision within enterprise requirements and procedures.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit
Nil.

Unit Sector
Seed processing (SPO)

### Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

### Unit Mapping Information

This unit is equivalent to AHCSPO301A Operate a screen cleaner for seed processing.

### Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72
Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assemble and operate a screen cleaner
- assess the input and outputs of the screen cleaner
- complete and report on cleaning operation
- define the processing requirements of a seed processing job
- disassemble and clean a screen cleaner
- select and place screens and prepare machinery for use

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for operating a screen cleaner
  - ball trays and their purpose
  - documentation associated with seed cleaning
  - machinery safety
  - possible contamination points
  - required maintenance and usual wear points
  - screen types and designs
  - the adjustment and effect of airflow within each of the screen cleaner's chambers
  - the correct clean down procedure
  - the different types of screen cleaners available for the task
  - types of impurities and the machine's ability to handle impurities
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assess the product input and outputs of the gravity table
- make adjustments to the gravity table settings to maximise the output
- set up and prepare gravity table for use
- perform basic maintenance of gravity table
- report on gravity table operations
- disassemble and clean gravity table and associated components after operation

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for operating gravity tables
  - cleaning strategies
  - deck types and designs and their effects on operational effectiveness
  - machine capabilities and settings
  - machinery safety
  - seed biology and damage to seed by mechanical action
  - the adjustment and effect of airflow, oscillation and deck angle
  - the principles of gravity separation
  - types of available gravity tables

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify the need for a particular line of seed to be modified
- set up and prepare machinery for use
- operate seed modification machinery
- report on seed modification machinery and equipment operation

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for operating two kinds of seed modification machinery
  - safe machinery operation
  - seed biology: coleoptiles
  - damage caused to seed by modification machinery such as de-owners/clippers, scarifiers, rice huskers etc.
- the principles of operation and the expectations and limitations, maintenance and safety associated with seed modification machinery

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- set up and prepare seed treatment machinery for use
- calculate, calibrate and measure dose rates
- formulate a chemical mix to achieve the best treatment
- operate seed treatment machinery and equipment
- complete and report on seed treatment machinery and equipment operation

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for operating seed treatment machinery
  - basics of programmable logic controller/treatment control systems and electrical process
  - chemical types and classes
  - difference between coating and pelleting [<5% weight gain film coating (insecticide/fungicide) or >5% weight gain is pelleting]
- disposal of waste chemical
- hazards of chemicals
- labelling requirements associated with coated seed
- methods of applying chemical and basic recipe formula
- methods of applying powders
- personal protective equipment (PPE)
- procedures for drying, scalping and aspiration of treated seed
- rules and regulations for storage, transportation and bunding
• the expectations and limitations of different types of seed coating machines
• the interaction of biological components and their effect on other chemicals, powders, polymers and heat
• the use and differences in biological components in seed coatings
• types of seed treatment machinery and equipment

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- label and stencil seed bags
- move and store packaged seed
- operate a pallet wrapper to shrink wrap palletised seed
- operate bag and pallet transportation systems
- operate bulk seed transportation equipment
- operate industrial sewing machines
- operate label printers and label and apply stickers and labels
- operate packaging and labelling machinery
- operate palletising equipment
- perform basic machinery maintenance
- prepare packaging
- seal seed packages
- set up and prepare machinery for use

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for handling commercial quantities of seed
  - alternative methods of bag sealing
  - associated regulations and legislation that covers labelling of packaged seed
  - basic equipment maintenance
  - bulk seed storage
  - chemical warnings and the seed details that must be put on the bag
Assessment Requirements for AHCSPO307 Handle, package and store commercial quantities of seed

- enterprise labelling requirements
- enterprise storage plans
- machinery and workplace safety
- packaged product transport and storage
- seed packaging methods and equipment
- types of packaging

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to sample seed on arrival at a processing plant and after processing for quality and certification purposes. Workers operate with some judgement and discretion and work would normally be carried out under minimal supervision within enterprise requirements and procedures.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Seed processing (SPO)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out moisture testing, temperature and seed density tests in accordance with enterprise requirements
- complete relevant sampling documentation
- package and label seed samples
- prepare samples for despatch
- recognise common weed seeds and other seed contaminants
- record workplace information about seed samples
- sample graded and/or treated seed
- sample seed from a truck on arrival at a processing plant using appropriate sampling techniques
- sample seed in bulk containers and/or sacks using appropriate sampling techniques
- select and evaluate the sampling equipment to provide a representative sample within the guidelines of the relevant certification authority
- take seed samples for testing by other agencies
- use appropriate recording and labelling techniques
- use tools for sampling and prepare a sample for despatch

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of seed sampling
  - correct methods of sampling
  - personnel protective equipment used for sampling treated seed
• relevant workplace records and other documentation
• seed handling and the importance of seed moisture content at all stages of the cleaning process
• the controlling bodies of seed movement - Australian Quarantine and Inspection Service (AQIS), the Organisation for Economic Co-operation and Development (OECD), the Association of Official Seed Certifying Agencies (AOSCA) and other certification agencies
• seed types that require sampling

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the development and management of a plan to provide a reliable supply of quality water on a property. The plan will review trading rules and regulations and the costs associated with supply and use of all classes of water. Testing of water is undertaken to assess suitable quality for stock, domestic and irrigation purposes. The plan will include efficient use of minimum quantity of water and maintain the quality of the water in storage and the reticulation system. New farming practices can be improved by the selection and management of pastures and crops. Water is managed to protect sensitive areas from degradation. New and innovative methods of treatment and re-cycling are assessed. The quality of water leaving the farm and down-stream impact is monitored.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to persons who have a role in managing the farm. This unit is likely to require consultation with external experts, such as water authorities, shire council planning personnel, irrigation suppliers and State Government departments.

No occupational licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- analyse weather patterns, rainfall and variability
- take water samples for testing and interpret test results
- fence eroded areas, dams, streams and rivers to protect vegetation and water quality
- research and source a wide range of local indigenous plants specific to revegetation area
- select pasture and crop species
- construct drains and effluent collection sites
- calculate the total farm water requirement for the enterprise, natural areas, farmhouse and garden
- analyse financial return from purchased water
- irrigate crops and pastures efficiently
- map erosion, salt and problem areas
- compare pumps and other equipment for energy efficiency
- calculate the cost of production including purchased water, storage, transfer and application
- fill out applications and forms for licensing and registration

Knowledge Evidence

The candidate must demonstrate knowledge of:
- the variation and risk associated with weather patterns
- volume of water used for production and living
- the classes of water required for production
- the various sources of water and suitable storage
- methods of water quality testing
- water efficient pasture and native species
- crop cultivation methods for moisture retention and optimum production
- efficient irrigation practice
- methods of recycling water
- the water cycle
- the impact of water shortage on natural systems
- the causes and consequences of contaminated water
- the legal aspects of licensing, registration and trading of water
- methods of transferring water using renewable energy
- appropriate management when water and rain are limited
- water purchasing and water trading policies and procedures

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the development and management of a plan to improve the biodiversity on the property with the view to improving profitability and sustainability of the production system, as well as the long-term viability of the farming enterprise. The focus is to protect, enhance and manage natural areas in balance with the production enterprise. Improved biodiversity is considered a core part of the vision for the property, providing improved profitability, personal fulfilment, community benefits, and the long-term sustainability of soil, water, and local flora and fauna.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to a person who has a role in managing a farm. This unit is likely to require consultation with family members and a range of external institutions, groups, government departments and individuals.

No occupational licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess natural areas, vegetation type, species, health and value
- assess vegetation ground cover and the risk of erosion
- identify plants using a field guide and recognise endangered species
- identify weed species using a field guide
- take soil tests and water sample tests and interpret test results
- map natural areas and plan improvements on a whole farm plan
- calculate financial value of planned improvements
- calculate costs and prepare implementation plan for improvements
- record personal and family values and goals
- recognise saline areas
- identify bird, frog and macro-invertebrates and estimate populations by a field survey
- communicate and work co-operatively with Landcare and community groups

Knowledge Evidence

The candidate must demonstrate knowledge of:

- complex interdependence of plants and animals
- greater the biodiversity the greater the resilience to change
- need for maintaining biodiversity within a particular species, maintaining the number of different species, and maintaining the range of ecosystem types
- indigenous plants in revegetation projects
- how to manage pests, diseases and weeds in natural areas
- water cycle
Assessment Requirements for AHCUS502 Develop and manage a plan to improve biodiversity on a farm

- value of biodiversity on the pasture production and the animal enterprise
- consequences of contamination and pollution of water, air and soil
- methods of restoration and regeneration of vegetation
- benefit of natural areas for personal health, family activities and pleasure
- philosophy of working with nature to improve the environment for future generations
- value of natural areas in improving the aesthetic value of the farm

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- collect and analyse information
- develop water treatment system specifications
- identify adverse environmental impacts of water treatment activities and remedial action
- identify design requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of water treatment system design
  - automatic control and monitoring systems
  - budgeting, contractual development and obligations
  - cost/benefit analysis
  - design processes
  - developments in water treatment technology
  - enterprise policies and procedures
  - environmental impacts of water treatment
  - environmental protection agency regulations
  - waste management and environmental issues

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to work safely. It applies to new employees working under supervision, within established and well-known parameters and with limited autonomy.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) and occupational safety and health (OSH) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State and Territory OHS legislative requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Application

This unit of competency describes the skills and knowledge required to recognise and report hazards in the workplace. It also describes the skills and knowledge required to follow workplace safety procedures and directions.

This unit is applicable to supervised workers who are required to follow work health and safety policies and procedures.

All work must be carried out in accordance with enterprise procedures, recommended safe practices and the relevant legislation.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They identify and provide solutions to a limited range of predictable problems.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) and occupational safety and health (OSH) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State and Territory OHS legislative requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow workplace procedures for hazard identification and risk control
- read safety warning signs
- observe safety during work operations
- follow workplace procedures for dealing with accidents, fire and emergencies within the scope of responsibilities and competencies
- participate in arrangements for maintaining the health and safety of all people in the workplace
- recognise caution or hazard signs and symbols
- identify tasks or information from labels, manuals or written instructions
- record information accurately or verbally reporting information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant work health and safety legislation, codes of practice and enterprise policies
- employee and employer work health and safety responsibilities
- enterprise procedures relating to hazards, fires, emergencies, accidents and risk control
- relevant machinery and equipment operator manuals
- work health and safety signs and symbols relevant to area of work
- hazards and risks in the industry sector
Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to carry out enterprise work health and safety policies and procedures.

This unit is applicable to individuals. They typically work within clear reporting lines and procedures.

All work must be carried out to comply with workplace procedures and work health and safety and other relevant legislation and codes.

This unit applies to individuals who actively participate in the workplace safety system and work under broad direction and take responsibility for their own work. They work in a range of known contexts and complete routine activities.

NOTE: The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) and occupational safety and health (OSH) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State and Territory OHS legislative requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

### 1. Provide information about work health and safety

1.1 Explain, with accuracy and clarity, relevant provisions of work health and safety legislation and Codes of Practice to the work group

1.2 Provide information on enterprise work health and safety policies, procedures and programs in a readily accessible manner, and accurately and clearly explain the information to the work group

1.3 Regularly provide, and accurately and clearly explain, information about identified hazards, the outcomes of risk assessment and control procedures

### 2. Facilitate the participation of workers in work health and safety observance and decision-making

2.1 Implement and monitor enterprise procedures for consultation on work health and safety issues to ensure that all members of the work group have the opportunity to contribute

2.2 Describe, with clarity, procedures used by workers to report work health and safety hazards, assess risks, and take action to control risks, to the work group

2.3 Deal with and resolve issues raised through consultation or refer them to the appropriate personnel

2.4 Communicate, with promptness, the outcomes of consultation over work health and safety issues to the work group

### 3. Implement procedures for identifying hazards and assessing and controlling risks

3.1 Identify existing and potential hazards and report them to ensure the implementation of adequate risk assessment and effective control measures

3.2 Check that the work group implements procedures to control work health and safety risks and undertakes regular monitoring to ensure ongoing adherence and effectiveness of risk control

3.3 Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and report inadequacies to designated personnel

3.4 Identify and report inadequacies in allocation of resources to management to ensure safe work practice

3.5 Monitor and regularly report existing risk control measures in accordance with workplace procedures

### 4. Implement workplace procedures for dealing with emergencies and hazardous events

4.1 Implement workplace procedures for dealing with work health and safety emergencies, where necessary, to ensure prompt and effective control action

4.2 Report work health and safety emergencies in accordance with established enterprise procedures

4.3 Implement control measures based on the hierarchy of control to

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- facilitate the participation of workers in work health and safety observance and decision-making
- establish procedures to document the identification of hazards and assessment of risk covering the operations of the enterprise
- identify work health and safety hazards and conducting the risk assessment process
- implement enterprise emergency procedures and organise safety drills
- provide staff with work health and safety training in risk assessment, and other areas nominated by risk controls
- respond to emergencies and work health and safety issues in an appropriate and timely manner
- facilitate meetings and document actions to consider work health and safety issues in the workplace
- distribute information concerning work health and safety processes and requirements to staff
- maintain work health and safety records

Knowledge Evidence

The candidate must demonstrate knowledge of:

- hazards in the workplace
- relevant work health and safety legislation and Codes of Practice
- hazard identification and risk control processes
- the hierarchy of work health and safety risk control and its implementation for hazards in land-based industries
Assessment Requirements for AHCWHS401 Maintain work health and safety processes

- work health and safety training
- communication and engagement strategies with workers
- relevant enterprise management systems and procedures
- accident and incident investigation
- enterprise emergency procedures
- participative work practices

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- use safe work procedures
- prepare materials, tools and equipment for woolshed activities
- provide support to shearing and crutching
- move and pen animals
- assist with wool handling
- undertake woolshed activities as directed
- handle materials and equipment
- clean up on completion of woolshed activities
- communicate with supervisor and team members using industry standard terminology
- apply work health and safety procedures in the context of own work
- apply enterprise animal welfare practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of safe work practices
- characteristics of wool types and sheep breeds that relate to sorting wool
- features of shearing and wool preparation tools and equipment
- basic wool handling practices
- relevant sections of federal, state and territory industrial awards that relate to working conditions in the woolshed
- enterprise work health and safety, environmental protection and animal welfare policies and procedures
Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs

--- | ---
shearing supervisor | 1.2 Select and use suitable personal protective equipment
1.3 Apply animal welfare principles to the movement and penning of sheep
1.4 Pen sheep in their separate mobs as instructed
1.5 Secure gates to prevent sheep escaping on to the board
1.6 Monitor the speed of shearsers and arrange numbers of sheep in catching pens so that shearsers all complete shearing at or near mob cutout
1.7 Monitor sheep numbers in catching pens and fill pens as they empty to ensure continuous supply to shearsers
1.8 Refill other pens as required

2. Keep mobs separate | 2.1 Secure gates to prevent mixing of mobs
2.2 Fill pens with sheep from only one mob at any given time to avoid mixing mobs and wool types
2.3 Inform supervisor of mob cutout
2.4 Move sheep to other catching pens to ensure that mob cutout is simultaneous
2.5 Use safe workplace practices and observe animal welfare requirements with regard to livestock handling

3. Prevent contamination of wool | 3.1 Arrange pen density at optimum numbers
3.2 Monitor pens to maintain sheep in standing position to avoid crushing, trampling or soiling of wool
3.3 Minimise and remove potential contaminants within pens
3.4 Follow enterprise biosecurity policies where required

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards minimise risks and use safe work procedures
- accept and interpret advice from the shed supervisor
- observe differences between mobs of sheep
- monitor shearers workflow and estimate rates for refilling the catching pens and for mob cutout
- move sheep in a shed and pen them up
- use the accepted communications signals in the shed when shearing and sheep movement is in full force
- apply work health and safety in the context of own work
- follow enterprise biosecurity policies where required
- apply animal welfare practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of shearing sheds, boards and catching pens
- types of gates and catches in shearing sheds
- safe handling techniques for catching, dragging, and releasing sheep
- animal welfare requirements in relation to sheep
- features of sheep behaviour in the shearing sheds and yards
- hazards associated with handling livestock
- safety features of personal protective equipment and clothing, and when and how it should be used
- relevant industry awards and conditions that relate to working conditions in the wool industry
• relevant sections of State/Territory legislation, regulations and codes of practice with regard to work health and safety, animal welfare, and biosecurity as applied to working in the wool industry

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs

Application

This unit of competency describes the skills and knowledge required to handle wool from the board, throw fleeces and place wool into bins or press as directed.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They identify and provide solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and follow safety directions
- remove fleeces and sweep boards before the next sheep is dragged for shearing
- pick up and throw fleeces safely onto wool table
- remove non-fleece wools from the board and place in correct bins
- identify and accurately remove stains
- use correct technique for skirting and rolling fleece
- check quantities in bins
- sweep floors and remove contamination
- work rapidly within specified timeframes
- communicate with supervisor, the wool classer and the shearers
- apply work health and safety practices in the context of own work
- apply enterprise environmental sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of the parts of a fleece
- types of shearing shed layouts
- duties and responsibilities of a board person
- types and sources of contamination of the fleece and be able to explain the requirements of Code of Practice for the Preparation of Australian Wool Clips as it relates to the preparation of skirtings and oddments
- methods of handling fleece that minimise risk to own health, including safe lifting and bending techniques.

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- observe and report on work health and safety hazards and risks
- apply standard operating procedures for the press and equipment
- operate different types of wool presses under supervision
- operate the various types of scales and manual handling devices and supervision
- maintain uniform bale weights for each line
- brand bales clearly and accurately
- handle and stack wool bales efficiently and without risk to self, other people or machinery
- record bale information to be interpreted and used by other people
- communicate with wool classer/supervisor
- apply work health and safety practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:
- sources of contamination of the fleece
- the requirements of Code of Practice for the Preparation of Australian Wool Clips as it relates to wool pressing
- methods of handling fleece and bales that minimise risk to own health, including safe lifting and bending techniques
- features of industry standards for weight, length of bales, fastening methods and type of pack
- industry standards for bale branding
- features of the recording system for bale details in use in the organisation
• enterprise work health and safety policies

**Assessment Conditions**

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and follow safe work practices
- pick up and throw alpaca fleeces
- skirt of alpaca fleece to industry standards
- package fleece and skirtings to industry standards
- communicate faults, malfunctions and workplace hazards
- report on and maintain operational records
- communicate with supervisor and work team
- follow work health and safety policies
- follow enterprise biosecurity protocols
- follow enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of the parts of Huacaya and Suri alpaca fleeces
- types of shearing shed layouts
- duties and responsibilities of a board person
- types and sources of contamination of the alpaca fleece
- enterprise policies with regard to recording and reporting routines
- equipment and bag requirements for skirting and handling fleece to industry standards
- relevant state and territory legislation, regulations and codes of practice with regard to work health and safety, environment, biosecurity and animal welfare.
- features of the Alpaca Fleece classing Code of Practice
Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- source and prepare information on wool to be appraised for industry description (AWEX-ID)
- apply an industry description (AWEX-ID) to lines in a clip and record appraisal result
- use an industry description (AWEX-ID) to establish a market value for lines made
- review clip preparation strategies using industry standard terminology to communicate feedback to the grower

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of Code of Practice for the Preparation of Australian Wool Clips
- features of AWEX system for the appraisal and description of non-measured characteristics of greasy wool (AWEX-ID)
- features of the Australian Wool Exchange Wool Selling Rules
- interpretation of the wool sale catalogue
- interpretation of wool testing data
- relevant sources of wool sale lot information
- features of subjective assessment of style, colour, type of vegetable matter fault, degree of stain and faults, and defects.

Assessment Conditions

Competency is to be assessed in the work place or simulated environments that accurately reflect performance in a real workplace setting.
Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess key wool characteristics
- identify and separate wool faults
- identify and separate wool with impurities
- separate wool that does not meet Code of Practice requirements for uniform, predictable low risk lines of wool
- identify and separate wool from shedding sheep breeds
- identify and separate wools with a high pigmented fibre risk

Knowledge Evidence

The candidate must demonstrate knowledge of:

- characteristics of the breeds of sheep
- inherent wool characteristics - diameter, length and strength, colour, yield, VM type, curvature, and comfort factor and explain how these characteristics impact on processing and final wool product
- features of impurities in wool and explain their impact on processing and yield of clean fibre after processing
- types and sources of contamination and explain their impact on processing and final wool product
- features of the main wool faults and explain their impacts on processing
- techniques used to measure wool characteristics
- processing methods - woollen and worsted, stages of processing
- wool growth, skin and fibre biology, and discuss the effect of genetics and environment on fibre characteristics
Assessment Requirements for AHCWOL303 Prepare wool based on its characteristics

- requirements for handling shedding and pigmented fibres
- relevant aspects of the Code of Practice for the Preparation of Australian Wool Clips and other relevant quality standards that related to preparing wool.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environments that accurately reflect performance in a real workplace setting.

Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Application

This unit of competency describes the skills and knowledge required to prepare fleece wool for classing to comply with the requirements of the Code of Practice for the Preparation of Australian Wool Clips.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under broad direction of the wool classer and take responsibility for their own work and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| of greasy wool and relate to processor requirements | uniformity within the fleece  
1.2 Determine the portion of fleece to be removed to ensure uniformity of the fleece with the other fleeces from the mob |
| 2. Check fleeces for impurities | 2.1 Identify natural impurities of the wool and determine the portion of fleece to be removed  
2.2 Identify vegetable matter types and determine the portion of fleece to be removed  
2.3 Identify mineral impurities and relate to yield potential and determine the portion of fleece to be removed  
2.4 Identify and remove any contamination from the fleece  
2.5 Check work regularly with the wool classer and adjust procedures if required |
| 3. Check fleeces for presence of wool faults | 3.1 Identify hairy breeches and cotted wool and determine the portion of fleece to be removed  
3.2 Identify unscourable colour, water stain and dermatitis and handled as directed  
3.3 Remove skin pieces and place where directed  
3.4 Carry out work safely and at a rate appropriate to the enterprise |
| 4. Skirt and roll fleeces | 4.1 Skirt fleeces to remove those portions determined above that adversely affect the uniformity and value of the remaining fleece  
4.2 Double skirt fleeces containing clumpy vegetable matter or prepared as directed  
4.3 Assess necks and backs for soundness, dust and VM levels, and handled as directed  
4.4 Roll fleeces and present to classer  
4.5 Place skirtings in the nominated bins  
4.6 Remove waste and dispose of appropriately taking into account environmental implications |

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions
Classing must include the preparation of Fine/Superfine Merino, Medium/Strong Merino and Crossbred fleece wools
Unit Mapping Information

This unit is equivalent to AHCWOL304A Prepare fleece wool for classing

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assess fleece characteristics and prepare fleeces as directed by wool classer
- assess levels of vegetable matter and other impurities
- accurately skirt fleeces at commercial pace
- roll fleeces in preparation for classing
- communicate with wool classer and other team members using industry standard terminology
- follow enterprise work health and safety procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:
- characteristics wool and their impacts on processing
- principles and requirements of wool processing methods-woollen and worsted
- features of wool growth
- features of the parts of a fleece
- features of wool faults and impurities
- enterprise the work health and safety procedures
- requirements of Code of Practice for the Preparation of Australian Wool Clips as they relates to the preparation of fleece wool

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.
Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and implement safe work practices
- explain clip preparation requirements to shed staff and monitor their performance
- oversee shed staff to ensure quality clip preparation
- communicate preparation requirements with shed staff
- implement enterprise animal welfare policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of the parts of fleece
- procedures for handling skirtings, bellies, lambs wool, premature shorn wool, locks and crutchings, and stained wool and oddments
- responsibilities of board and table staff
- characteristics of different wool types and parts of the fleece
- premiums and discounts for wool characteristics
- pressing and branding requirements
- skirting technique and appropriate skirting ratios for different clip types
- personal protective clothing and equipment requirements for shed staff
- on job training techniques
- principles of staff supervision
- requirements of work health and safety legislation and animal welfare codes of practice
Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Application

This unit of competency describes the skills and knowledge required to prepare the documentation for a wool clip to meet the requirements of the Code of Practice for the Preparation of Australian Wool Clips, relevant legislation and the enterprise.

It includes instructing others in the use of the system, maintaining the records and advising the owner or manager of issues where appropriate.

The documentation of a wool clip contributes to the wool harvesting operation by optimising efficiency for the grower.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop the recording system for wool clips and bales
- communicate recording requirements clearly to wool handlers and pressers
- prepare and maintain records as required by the Code of Practice for the Preparation of Australian Wool Clips, legislation or enterprise
- observe, identify and react appropriately to work health and safety hazards
- observe the work and identify areas of the work or the facilities that could be improved
- communicate information and advice to the woolgrower on improvements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of the Code of Practice for the Preparation of Australian Wool Clips and other relevant quality standards
- features of quality assurance schemes used in the organisation and in the industry, and their documentation requirements
- requirements for the completion of a clip specification
- employment conditions and agreements for a range of workers in a wool harvesting and preparation team
- documentation requirements for wool clip preparation and shearing operations

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.
Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classifiers.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and implement safe work practices
- maintain contamination and hazard-free environment for shearing and wool handling
- recognise and remedy health and safety hazards
- carry out minor maintenance and repairs to equipment and facilities
- disposal of waste in an environmentally responsible manner
- pen sheep humanely in line with enterprise animal welfare policies
- communicate with shed staff and direct operations

Knowledge Evidence

The candidate must demonstrate knowledge of:

- maintenance and hygiene requirements of shearing sheds, boards and catching pens
- sources and types of contamination
- principles of moving and penning animals
- shearing requirements
- features of efficient shed and board layouts
- requirements of work health and safety legislation and animal welfare codes of practice as they relate to the shearing and wool preparation sector

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.
Assessors must satisfy current standards for RTOs.

### Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify work health and safety hazards and implement safe work practices
- operate different types of wool presses and carry out basic lubrication and maintenance according to manufacturer instructions
- operate the various types of scales and manual handling devices
- check woolpacks and wool to ensure freedom from contamination
- assess and monitor wool-flow and build-up in bins
- maintain uniform bale weights for each line
- brand bales clearly and accurately to meet the requirements of the Code of Practice for the Preparation of Australian Wool Clips
- handle and store wool bales efficiently and without risk to self, other people or machinery
- record bale information to be interpreted and used by other people
- communicate with wool classer
- work safely in compliance with enterprise work health and safety policies

### Knowledge Evidence

The candidate must demonstrate knowledge of:

- sources of contamination of wool
- the requirements of Code of Practice for the Preparation of Australian Wool Clips as it relates to wool pressing
- operating requirements for different types of wool presses
- methods of handling wool and bales that minimise risk to own health, including safe lifting and bending techniques
- industry standards for weight, length of bales, fastening methods and type of pack
- industry standards for bale branding
- features of the recording system for bale details in use in the organisation
- enterprise work health and safety policies

**Assessment Conditions**

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to perform shed duties covering the board and table and to provide mentoring to less experienced staff.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Wool (WOL)

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Perform board duties

1.1 Remove stained wool, black wool, and contamination on the shearing board
<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.2</td>
<td>Pick up belly wool and remove stained wool</td>
</tr>
<tr>
<td>1.3</td>
<td>Remove crutch wool and reposition the hind leg if necessary</td>
</tr>
<tr>
<td>1.4</td>
<td>Pick up fleece and throw or park and retrieve later if wool table is not clear</td>
</tr>
<tr>
<td>1.5</td>
<td>Monitor removal of wool and maintenance of the board and provide extra support when needed</td>
</tr>
<tr>
<td>1.6</td>
<td>Provide mentoring and demonstration of work skills to inexperienced board staff as required</td>
</tr>
<tr>
<td>1.7</td>
<td>Apply safe work practices at all times and use available safety equipment</td>
</tr>
<tr>
<td>1.8</td>
<td>Comply with enterprise animal welfare and biosecurity policies and procedures</td>
</tr>
</tbody>
</table>

2. Prepare wool

| 2.1    | Sweep up locks and keep board and table locks separate where directed |
| 2.2    | Remove shanks and jowls if directed and place in correct bin |
| 2.3    | Remove pizzle stain from bellies and placed in stains line |
| 2.4    | Remove brisket wool if directed by the wool classer |
| 2.5    | Sweep crutchings clear of the board, remove stain and dags and place in correct bins |
| 2.6    | Carry lambs wool and prematurely shorn wools to the wool table using boards or paddles if required |
| 2.7    | Provide mentoring and support in wool handling to inexperienced staff as part of the work team role |

3. Skirt fleeces

| 3.1    | Seek information on wool classer requirements for mob |
| 3.2    | Remove fribs and sweats and place in appropriate bins |
| 3.3    | Remove short crutch wool and wiggings and place with locks |
| 3.4    | Remove wool carrying clumpy vegetable matter if directed by the wool classer |
| 3.5    | Seek feedback on accuracy of skirting and fleece to skirtings ratio |
| 3.6    | Remove fleece wool which is defective or lacks uniformity if directed by the wool classer |

4. Maintain wool flow and minimise contamination risk

| 4.1    | Sweep the immediate shearing area after each sheep is shorn |
| 4.2    | Sweep shearing boards, wool room, and area beneath the wool table as regularly as necessary during the shearing operation |
| 4.3    | Keep the shearing boards and the wool room free of potential contamination |
| 4.4    | Remove waste and place appropriately in full consideration of environmental implications |
| 4.5    | Minimise the risk of mixing wool between lines through regular sweeping and maintenance of bins, other containers and the wool |
Element | Performance criteria
---|---
| area | 4.6 Complete all tasks and cover contingencies through a professional, team-based approach |
| 5. Carry out tasks to support the shearing operation | 5.1 Observe the rate of shearing and estimate the frequency of refilling the catching pens and for mob cutout 5.2 Keep different mobs of sheep separate 5.3 Implement directions from the wool classer and provide feedback on sheep supply and wool flow 5.4 Empty all butts and bins and press wool 5.5 Store bales as directed 5.6 Sweep wool working area clean 5.7 Store equipment at the end of shearing 5.8 Wash board down and disinfect after shearing cutout |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- remove fleeces and sweep boards before the next sheep is dragged for shearing
- pick up and throw fleeces safely
- remove non-fleece wools from the board and place in correct bins
- identify and accurately remove stain
- use correct technique for skirting and rolling fleece
- sweep floors and remove contamination
- work rapidly within specified timeframes
- interpret verbal and visual communication signals within the wool shed given by the supervisor, the wool classer and the shearers
- monitor sheep supply in pens and fill as necessary
- monitor wool flow and the wool working area to ensure risk of mixing between lines is minimised
- provide mentoring to less experienced staff
- deal with contingencies by supporting other staff in tasks as required
- observe and report on adverse environmental impacts
- apply work health and safety requirements in the context of own work
- apply enterprise animal welfare policies in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- maintenance and hygiene requirements of shearing sheds, boards and catching pens
- types of contamination and their sources
- properties of the parts of a fleece
- principles of moving and penning animals
• shearing requirements
• shearing shed and board layouts
• environmental codes of practice with regard to shearing
• relevant work health and safety and animal welfare legislation, codes of practice and enterprise requirements that apply to wool harvesting and pressing

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and apply safe work procedures
- arrange layout of bins and equipment for efficient operation
- handle and skirt fleeces to the required standards
- establish and maintain consistent methods of clip preparation
- class fibre to industry standards
- maintain clean working conditions for clip preparation and classing procedures
- accurately assess fibre quality and types
- measure goat fibre
- apply enterprise work health and safety in the context of own work
- apply enterprise animal welfare and biosecurity policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of the parts of a fleece
- fleece measurement criteria and appraisement types
- fleece handling procedures
- clip analysis reports and comparisons
- classing specifications
- features of the code of practice for Preparation of Australian Cashmere, Cashgora Fleece and Mohair
- sources of fleece contamination
- requirements of the code of practices for animal welfare
- enterprise work health and safety legislative requirements and biosecurity policies
Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and implement safe work practices
- arrange layout of bins and fleece table in a variety of sheds for optimum efficiency of fleece flow and pressing
- label bins and containers correctly
- assess pigmented fibre risk and separating fleece as required
- check fleece to ensure freedom from contamination and stain
- check fleece to ensure optimum and adequate skirting
- identify and appraise alpaca fleece characteristics
- identify fleece of higher and lower market value and ensuring lines are made that maximise return to grower
- class alpaca fleece according to the Alpaca Fleece Classing Code of Practice or as required by alternative selling methods
- seek feedback on classing outcomes and compliance with industry standards from owner or processor
- implement enterprise work health and safety polices
- implement enterprise biosecurity policies and animal welfare practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- classing requirements for the range of customers
- effect of genetics and environment on fibre characteristics
- fleece growth, skin and fibre biology
- fleece measurement criteria and techniques used to measure fleece characteristics
• inherent alpaca fleece characteristics (such as diameter, length and strength, colour, vegetable matter amount and type and yield
• interpretation of test results
• preparation of documentation of fleece clips
• Alpaca Fleece Classing Code of Practice
• principles of classing
• raw fleece characteristics and their effect on processing and final product
• features of shed layouts that promote efficient fleece flow and handling.
• requirements of work health and safety legislation, biosecurity and animal welfare codes of practice

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Evidence of competency must be demonstrated in Huacaya and Suri clips

Application

This unit of competency describes the skills and knowledge required to develop classing strategies to be used for classing a wool clip and communicating the strategy to shed staff and owner and/or manager, then evaluating the strategy for the clip.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop a classing strategy based on owners enterprise goals, research of past performance of the clip, current management, growing season, market and processor requirements which conforms with the Code of Practice for the Preparation of Australian Wool Clips
- establish and maintain consistent methods of clip preparation
- analyse classed clips and test alternative classing strategies for profitability
- review classing strategies based on broker and buyer feedback
- adapt classing strategies for buyer requirements, marketing systems and owner manager
- value lines of wool using industry descriptions and test results
- incorporate review of classing strategies into instructions for shed staff
- discuss clip test results, prices and alternative classing strategies with owner/shed manager
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- provide feedback to grower/manager on performance of clip preparation strategy adopted.
- communicate classing strategy to shed staff and owner/manager
- implement work health and safety policies and procedures into classing strategy
- implement animal welfare practices into classing strategy

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of the industry description system (AWEX-ID)
- requirements of the organisation's wool marketing and production plans
- implications of wool testing, broking and export organisations on clip preparation
• clip preparation and analysis processes for the major wool types
• requirements and standards of the national wool processing industry
• methods used for processing wool and their impact on clip preparation and marketing
• marketing alternatives and their implications for classing
• wool brokering services
• features of efficient wool room layout
• sale catalogue and market reports
• specifications for classers
• features of the Code of Practice for the Preparation of Australian Wool Clips and other relevant quality standards
• requirements of the relevant work health and safety legislation, environmental protection, biosecurity and animal welfare legislation and codes of practice

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- arrange shed or wool room layout for sampling efficient operation where required
- understand and interpret the individual fleece measurements
- class wool to standards in accordance with the Code of Practice for the Preparation of Australian Wool Clips, or as required by the enterprise classing strategy and marketing plan
- communicate specific and detailed requirements for wool preparation and classing to wool handling staff
- identify wool of higher and lower market value and make lines which maximise return to woolgrower
- implement enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features of wool room layouts which promote efficient wool flow and handling
- characteristics different breeds of sheep
- inherent wool characteristics, including fibre diameter, staple length and strength, colour, yield, VM type, curvature, comfort factor
- fleece measurement criteria - techniques used to measure wool characteristics
- interpretation of test results
- principles of classing, including mob/flock concept, variability for fibre diameter and staple length, soundness, defects
- classing scenarios requiring detail of clip break-ups
- clip analysis reports and comparisons
Assessment Requirements for AHCWOL402 Use individual fleece measurements to prepare wool for sale

Date this document was generated: 3 September 2020

- clips and other relevant quality standards
- requirements of work health and safety legislation, codes of practice and enterprise procedures

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classifiers.

Application

This unit of competency describes the skills and knowledge required to prepare for, implement and review wool harvesting, clip preparation and classing.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

</table>
| 1. Plan and implement wool harvesting and preparation operations | 1.1 Consult the flock owner or manager about their requirements and inform them of any planning issues taking into account weather and environmental issues  
1.2 Determine the order of mobs for wool harvesting and preparation  
1.3 Determine staffing needs by negotiation with owner or manager according to clip type, enterprise requirements, legislative requirements, employment agreements and awards  
1.4 Allocate staff duties and give staff directions where necessary  
1.5 Arrange the shed equipment and materials in line with shearing plan, work health and safety requirements and the quality management system  
1.6 Implement the wool harvesting and preparation plan and adjust as required |
| 2. Implement plan and monitor work flows | 2.1 Monitor sheep numbers, mob cut outs and shearing speeds to match wool preparation capacity  
2.2 Supervise shed staff to maintain a clear board and ensure fleeces are thrown correctly  
2.3 Direct shed staff to use appropriate skirting strategies and monitor fleece to skirting ratios  
2.4 Direct staff to close off bins and lines for mob cut outs  
2.5 Manage wool harvesting and preparation team to comply with quality management system requirements  
2.6 Monitor compliance with enterprise and legislative requirements including work health and safety, animal welfare, biosecurity, industrial, and environmental practices  
2.7 Manage staff performance and provide direction where necessary |
| 3. Supervise wool pressing | 3.1 Instruct presser on pressing strategies to reduce mixed bales while meeting code of practice requirements for uniformity in bales  
3.2 Inform presser of order for pressing and procedures to minimize contamination  
3.3 Monitor rate of build up in lines by consulting with wool presser  
3.4 Monitor bale weights to ensure efficiencies are achieved for the grower without creating overweight bales  
3.5 Brand bales appropriately  
3.6 Monitor wool book to ensure it is up to date, accurate and legible |
| 4. Provide feedback to grower on classing strategies, clip performance and wool harvesting and preparation operations | 4.1 Review staff performance in clip preparation  
4.2 Provide feedback on classing strategies, clip preparation in relation to mob characteristics, skirting ratios, bale weights and any workflow issues  
4.3 Provide feedback on possible improvements to wool handling |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan and implement wool harvesting and preparation operations
- organise and schedule staff and work tasks
- supervise staff and monitor productivity
- implement risk management strategies
- monitor environmental impacts and implement control measures
- implement relevant legislative requirements associated with the shearing industry including employment agreements and awards
- communicate using industry standard terminology written and oral information to team members and management
- review and evaluate operational performance and clip preparation standards
- provide feedback to grower on the shearing operation and the preparation and classing of the clip
- calculate resources and bale weights for mob cut outs
- implement and monitor work health and safety requirements for work team
- implement relevant enterprise biosecurity policies and procedures
- implement animal welfare practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- supervisory procedures with regard to operations and personnel
- principles staff management including team building and conflict resolution
- wool industry codes of practice and quality systems
• industry requirements with regard to hygiene and safety for wool harvesting and preparation facilities and equipment
• how weather conditions can impact on wool harvesting programs
• features of workplace documentation required for wool harvesting and preparation
• employment agreements, industrial awards, relevant to the wool harvesting sector
• the Code of Practice for the Preparation of Australian Wool Clips and other relevant quality standards
• requirements of work health and safety legislation, biosecurity and animal welfare codes of practice

**Assessment Conditions**

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- supervise and instruct staff to achieve work activities
- delegate and allocate tasks
- identify staff training needs and provide on job training, mentoring and coaching as required
- implement effective time management
- use problem solving techniques to address staffing and resource issues motivate and performance manage work team
- manage conflicts within work team
- communicate with team members
- implement and monitor work health and safety policies and procedures
- implement enterprise biosecurity policies and procedures
- implement and monitor enterprise animal welfare policies and procedures
- implement enterprise environmental policies and procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:

- shearing industry awards, agreements and personnel processes
- principles of team work, negotiation and time management
- principles of workplace instruction/training and coaching techniques
- principles of conflict management
- features of effective communication for feedback and motivation
- principles of staff performance management
Assessment Requirements for AHCWOL404 Establish work routines and manage wool harvesting and preparation staff

- features of the Code of Practice for the Preparation of Australian Wool Clips and other relevant quality standards
- requirements of the relevant work health and safety legislation, environmental protection, biosecurity and animal welfare legislation and codes of practice

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and apply safe work procedures
- arrange layout of bins and wool table for optimum efficient wool flow and pressing in a variety of sheds
- label bins and containers correctly
- monitor clip preparation and skirting
- assess pigmented fibre risk and separate wool as required
- identify and appraise wool characteristics
- class wool to standards in accordance with the Code of Practice for the Preparation of Australian Wool Clips or as required by alternative selling methods
- identify wool of higher and lower market value and lines made which maximise return to grower.
- separate wools of different processing or end user requirements
- identify and keep separate wet wool, stained, cotted and coloured wool and contamination
- communicate with team members in completing tasks associated with classing fleece wool.
- implement enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- shed layouts which promote safe, efficient wool flow and classing
- characteristics of the breeds of sheep
- types and sources of contamination
- impact of the wool production areas of Australia on clip characteristics
Assessment Requirements for AHCWOL405 Class fleece wool

- inherent wool characteristics - diameter, length and strength, colour, yield, VM type, curvature, and comfort factor and explain how these characteristics impact on classing
- techniques used to measure wool characteristics
- processing methods - woollen and worsted, and stages of processing
- effect of raw wool characteristics on wool processing and final product
- features of wool growth, skin and fibre biology, and discuss the effect of genetics and environment on fibre characteristics
- requirements for handling shedding and pigmented fibres
- interpretation of test results, clip feedback and reports
- principles of classing (mob/flock concept, variability for fibre diameter and staple length, soundness, defects)
- documentation requirements for wool clips
- features of the Code of Practice for the Preparation of Australian Wool Clips and other relevant quality standards
- requirements of work health and safety legislation in a wool preparation workplace

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Evidence of competency must be demonstrated in Fine/Superfine Merino, Medium/Strong Merino and Crossbred wool clips.

Assessors must satisfy current standards for RTOs and be currently registered with the Australian Wool Exchange as Australian Wool classers.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow safe work practices
- participate in teams and contribute to team objectives
- understand instructions
- read labels, site plan measurements and work health and safety symbols
- communicate effectively with team members and supervisor
- tally work hours, calibrating tools and equipment, measuring volumes to apply cleaning agents, measuring quantities of materials and estimating areas
- minimise noise, dust and water run-off to prevent nuisance-level environmental disturbance
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- enterprise standards for presentation of buildings, structures and surroundings
- the effect of outdoor climatic conditions (including rain, hail, extreme heat and wind, and very high ultraviolet radiation), which may prevent or impede maintenance activities, or influence the selection of tools, equipment and safety equipment to minimise the hazards presented
- the relationship between specific maintenance activities and the external environment, and reasons for procedures that help to minimise the impact that these activities may have on the environment
- workplace hazards and work health and safety symbols, signs and practices in the context of own work
• sustainability practices in the context of own work.

**Assessment Conditions**
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- monitor physical signs of weather in the context of available information
- relate forecasts to impact on current operations and activities
- communicate information on weather and situations that may be impacted
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- effects of wind and rain on wind chill
- effects of wind shear and wind chill exposure
- enterprise and industry policies for monitoring weather and climate conditions, and recording and reporting weather and climate conditions
- weather and climate conditions impact upon farming and grazing activities
- effects of wind chill on metabolism of animals
- effects of prolonged dry periods on pastures and animal production, and natural resources
- effects of extreme heat on animals, including during birthing, and effects of heat stress on neonates
- work health and safety requirements and practices, especially as they relate to weather and climate monitoring and preparations for hazardous weather
- sustainability practices in the context of own work.

Assessment Conditions

Assessors must satisfy current standards for RTOs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- communicate with supervisors and workplace colleagues
- recognise basic environmental hazards and threats
- follow workplace directions and instructions related to environment
- keep simple environmental records
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- relevant legislation from all levels of government on environmental issues
- relevant environmental policies and workplace and industry practices and procedures
- good practice approaches relevant to work area particularly in regard to minimising environment hazards and risks, and improving environmental performance
- environmental issues, especially in regard to water catchments, air, noise, ecosystems, habitat, efficient use of resources, sustainability and waste minimisation
- potential environmental threats and problems relevant to a given region and occupation
- general work place practices and their potential impact on the environment
- work health and safety in the context of own work.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- following simple spoken messages
- performing routine workplace duties following simple written instructions
- gathering and providing information in response to workplace requirements
- completing relevant work-related documents
- estimating, calculating and recording routine workplace measures
- using basic mathematical processes of addition, subtraction, division, multiplication, percentages, decimal points and ratios
- participating in workplace meetings and discussions
- use of industry standard terminology
- awareness of work health and safety in the context of own work
- appropriate sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- effective communication, including the role of body language
- different modes of communication (e.g. written and non-verbal)
- effective communication in a work team
- communication procedures and systems, and technology relevant to the organisation and the individual's work responsibilities.

Assessment Conditions

Assessors must satisfy current standards for RTOs

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify workplace environmental and resource efficiency issues
- identify and measure resources used in own work role
- record measurements of current usage and filing documentation using appropriate technology
- identify and report workplace environmental hazards to supervisor
- follow workplace procedures to ensure compliance
- report breaches or potential breaches to supervisor
- follow organisational plans to improve environmental practices and resource efficiency
- work as part of a team to identify possible areas for improvements
- use industry standard terminology
- apply work health and safety in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental and resource hazards and risks
- environmental or sustainability legislation, regulations and codes of practice applicable to own work role
- work health and safety issues and requirements applicable to own role
- organisational structure, and reporting channels and procedures
- relevant environmental and resource efficiency systems and procedures
- sustainability in the workplace
• terms and conditions of employment including policies and procedures, such as daily tasks, employee and employer rights, equal opportunity.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to collect samples as part of a rural production or horticulture monitoring program or while conducting post-mortem examination of livestock or other animals.

Samples collected will usually be analysed by laboratory staff, although collection staff may undertake some testing.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

| 1. Plan for collection of samples | 1.1 Confirm the purpose and scope of sample collection activity from discussion with supervisor or work instructions  
1.2 Confirm the sample collection schedule with supervisor  
1.3 Confirm the sampling site location and gain approval for site access where required  
1.4 Identify the samples to be collected and preserved with supervisor  
1.5 Assess the range of likely operating conditions, hazards and difficult or sensitive environments for impact on sampling and testing |
| 2. Prepare equipment and resources | 2.1 Source equipment required for sampling and preserving as outlined in sampling procedures  
2.2 Check equipment for availability and serviceability  
2.3 Select and use appropriate personal protective equipment  
2.4 Collect data or record sheets or books for use  
2.5 Move equipment, data sheets and personnel to sampling sites and prepare for use  
2.6 Apply safe work practices at all times |
| 3. Carry out sampling and preserving procedures | 3.1 Collect samples as outlined in sampling plan  
3.2 Preserve and record samples  
3.3 Prepare and package samples for external analysis in line with laboratory standards and send to laboratory  
3.4 Package and transport hazardous materials appropriately  
3.5 Make observations including information on the surrounding area and environmental conditions  
3.6 Report and deliver collection outcomes including presentation of samples |
| 4. Complete sample collection activities | 4.1 Clean, sanitise and store equipment and clothing  
4.2 Repair damaged or malfunctioning equipment on site or sent to manufacturer or specialist  
4.3 Record sampling results and observations on data sheets and forward to appropriate person  
4.4 Advise supervisor of changes in field conditions and equipment |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan for collection of samples and moving equipment to the site
- collect and preserve samples for a given site
- record sampling results and observations on data sheets
- carry out sampling procedures
- distinguish atypical circumstances
- prepare samples
- package samples for transport to laboratory
- use and operate relevant tools and equipment
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- hydrological cycle
- field procedures for sampling and preservation
- collecting equipment and methods
- preservation equipment and processes
- basic habitat assessment
- water quality issues
- fauna and flora recognition relevant to sampling activities
- topographical, climatic or environmental influence on material or sampling procedure.
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have monitored weather conditions, including:

- monitored and interpreted weather and climate information and considered the impact on work activities and current operations
- interpreted weather and climate conditions to determine preventative actions
- communicated warnings and concerns to others according to workplace procedures
- determined and implemented preventative actions to minimise impact of adverse weather conditions on workplace activities
- monitored ongoing changes to weather conditions and reviewed prevention actions
- reviewed personal currency of skills in weather forecasting and implemented a personal development plan
- recorded weather information according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- weather and climate conditions and its impact upon agriculture, horticulture and conservation activities, including:
  - humidity
  - temperature
  - sunlight
  - delta T (ΔT)
  - frosts
  - inversions
• dew point
• wind - force and direction
• rainfall - precipitation rate and frequency
• effect of adverse weather conditions on agriculture, horticulture and conservation activities
• strategies to mitigate effects of adverse weather and climatic conditions on agriculture, horticulture and conservation activities
• methods of monitoring and interpreting weather and climatic conditions, including:
  • bureau of meteorology
  • local weather stations
  • weather meters
• enterprise and industry procedures for monitoring weather and climate conditions and recording and reporting
• strategies for maintaining personal development in weather monitoring and forecasting skills.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in an agriculture or horticulture or conservation environment or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • weather stations or weather meter relevant to workplace
  • computer or similar technologies to access weather data
• specifications:
  • workplace procedures, instructions or job specifications relevant to assessing the effects of weather conditions
  • weather reports, warnings and climate data relevant to workplace
• relationships:
  • team members for dissemination of weather warning information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to recognise and respond to workplace emergencies.

Workplace emergencies may include such incidents as a small fire that can be controlled using a nearby fire extinguisher; or a chemical spill that can be controlled using personal protective clothing and equipment, and a small spill kit; or other workplace accident where there is no significant injury or damage.

Responding to emergencies may also include application of basic first aid to injured persons. A first aid certificate will be required.

All aspects of the unit must be undertaken in line with legislative requirements, workplace policies and procedures, and accepted safe practices.

This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| 1. Prepare for emergency situations | 1.1 Identify potential workplace emergency situations and appropriate responses, within the range of current skills and relevant workplace emergency procedures  
1.2 Identify relevant emergency resources and their location in the work area  
1.3 Carry out regular checks of the workplace to minimise potential hazards and report any issues  
1.4 Select, use and maintain personal protective equipment, safety equipment and other aids as required for emergencies and store properly after use  
1.5 Identify problems with the serviceability of the emergency resources and report to relevant people |
| 2. Identify and evaluate the emergency | 2.1 Recognise and assess the identified or potential emergency situation and evaluate the risks and effectiveness of initial response actions  
2.2 Seek advice in evaluating the emergency with appropriate personnel  
2.3 Determine emergency needs and priority, including any assistance that may be required  
2.4 Evaluate the potential for further development of the emergency and assess any hazards or risks to staff, clients or animals  
2.5 Maintain high standards of hygiene and infection control to reduce the risk of infection or cross infection where necessary |
| 3. Implement fire protection and control procedures | 3.1 Minimise the risk of fire hazards and any hazardous fuelling procedures in the workplace  
3.2 Use fire extinguishers and equipment appropriate to the fire situation and notify authorities  
3.3 Follow procedures for evacuation to nominated assembly points  
3.4 Carry out safety procedures for the handling and use of industrial gases |
| 4. Safely confine the emergency where possible | 4.1 Confine emergency to the immediate area using available resources within current skill limits  
4.2 Carry out emergency procedures and operate equipment using safe practices and as trained  
4.3 Coordinate use of equipment with other emergency actions  
4.4 Implement strategies for group control, including removal of staff, clients and animals from danger and monitor ongoing |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- evaluate the emergency
- avoid and controlling escalation of the emergency
- develop a plan of action decisively
- implement a plan of action
- render first aid care
- deal with contingencies
- operate emergency equipment according to manufacturer’s specifications and training
- use appropriate fire protection and control techniques relevant to the organisation and industry
- apply basic first aid to individuals across a range of incident situations applicable to the job role, organisation or sector
- use industry standard terminology
- apply work health and safety in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the use of safe working practices
- the emergency network and contacts
- enterprise plan and evacuation procedures
- work health and safety legislative requirements and Codes of Practice
- legal responsibilities and duty of care
- use of communications equipment
- organisational and legal policies and procedures in the event of an accident/incident
- local call out procedures to access emergency services personnel
- practical first aid skills using prepared and improvised materials
- the emergency evacuation procedure and assembly point/s
- techniques to emergency response network and procedures to access relevant emergency personnel
- legal responsibilities and duty of care for persons and animals as appropriate to industry and emergency situation
- the proper use and technique for handling industrial gases
- hazard identification and risk assessment techniques and tools relevant to the organisation and industry
- use of communications equipment and protocols in the event of an emergency
- procedures to minimise infection and cross infection
- procedures for dealing with major injury or death prepare for, evaluate and act appropriately in emergency situations.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- read and interpreting documentation associated with work site activities
- prepare and planning worksite activities
- calculate material and resource requirements
- schedule activities and allocating tasks and responsibilities
- coordinate a team to achieve optimum performance
- communicate with personnel at all levels
- monitor activities and recording costs and production levels
- document results clearly and concisely
- perform a work health and safety risk assessment
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental awareness associated with undertaking project works to ensure the impact on the environment is minimal
- work schedule programming
- possible causes of disruption to work activities and their effect on quality and time schedules
- responsibilities and requirements for obtaining external agency permits as necessary
- the range, use and availability of materials, equipment and machinery that may be required for the project
- work health and safety issues, legislative requirements and Codes of Practice.
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to comply with industry quality assurance requirements in the production of food, fibre, fuels and raw materials produced from agriculture and horticulture activities.

The unit applies to individuals who work under broad direction and take responsibility for their own work to complete tasks according to quality assurance for food safety, biosecurity, environmental management and/or animal welfare requirements. They use discretion and judgement in the selection and use of available resources and to solve problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated the ability to apply quality assurance procedures, including:

- identified elements of quality, food safety hazards and quality standards for an industry sector
- assessed work area for critical control points, safety hazards and risks
- identified and reported issues that impact on product quality
- implemented standard operating procedures for operations and corrective action
- recognised, responded and reported non-conformances and variations of product against quality standards
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry quality assurance requirements for a specified sector of industry
- work processes for specified field of work
- State and territory food safety requirements
- Hazard Analysis and Critical Control Point (HACCP) approach to quality assurance
- procedures, policies, guidelines and standard operating procedures for field of work
- reporting and record keeping requirements for quality assurance.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a primary production or a manufacturing setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - products or services relevant to the specific primary production sector
- specifications:
  - workplace policies and procedures related to quality assurance
  - workplace specifications and/or quality standards relevant to the industry sector
  - access to legislation/codes of practice relevant to quality including HACCP

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to develop and apply fertiliser and soil ameliorant product knowledge.

The unit applies to contractors and employees working in a number of roles within the fertiliser and soil ameliorant industry, including those involved in fertiliser and soil ameliorant spreading or application, warehousing, wholesale and retail sales and transport and the storage of fertilisers and soil ameliorants.

Work is carried out to comply with industry codes of practice, quality assurance requirements, environmental best practices and relevant legislative requirements.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify fertiliser and soil ameliorant products using information about their characteristics
- provide information to customers about fertiliser and soil ameliorant products
- refer customers to other appropriate sources of information about products
- work safely with products
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- characteristics and key label components (including product analysis, impurities and warnings) of the range of fertiliser and soil ameliorants sold or handled in the workplace
- key environmental, work health and safety and food safety risks associated with the use, spreading, storage, handling and transport of fertilisers and soil ameliorants.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they can handle bulk materials in storage, including:

- confirmed work instructions for tasks required and bulk materials to be handled according to workplace procedures
- identified work safety hazards and risks, selected and used appropriate personal protective equipment (PPE) and implemented control measures
- prepared and safely used equipment for bulk storage activities
- assessed work implications for the storage environment and determined actions and activity to address possible outcomes
- maintained records for bulk storage, handling and equipment maintenance according to procedures
- identified bulk materials legislative, regulatory and biosecurity implications and implemented appropriate protocols and procedures for compliance
- collected, prepared, labelled and despatched samples of bulk materials for testing according to workplace procedures
- selected appropriate storage type and equipment and moved bulk material in storage area according to required bulk material characteristics
- maintained quality and minimised infestations and contamination of the product
- cleaned, maintained, secured and stored machinery and equipment and related work facilities according to workplace procedures and maintenance requirements
- recognised, reported and rectified operational faults of storage facilities and equipment according to workplace procedures
- applied measures to ensure product flow was maintained.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of materials and their characteristics suitable for bulk storage
- sampling techniques, quality and classification
- common bulk material biological and product contamination and the problems they can cause for storage
- effect of product properties, including contaminants and desiccant dusts, on the flow of the product
- bulk storage legislative requirements, manufacturer’s instructions and workplace procedures
- storage operations and configuration
- work place safety requirements for equipment and facilities in a bulk storage environment
- organisation and industry guidelines for segregation of bulk materials and related quality assurance principles
- bulk storage tools and equipment and their operation including:
  - pre-start checks
  - safety checks
  - maintenance requirements
- cleaning and storage of machinery and equipment
- environmental impact associated with bulk storage operations
- safety hazards, and risks associated with bulk storage
- safety risk controls associated with bulk storage, including PPE
- work place recording and reporting procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a bulk storage facility or an environment that accurately represents workplace conditions for the relevant industry sector
- resources, equipment and materials:
  - access to bulk materials
  - tools, equipment and machinery used to handle bulk materials
  - PPE
- specifications:
  - workplace procedures for bulk storage environment operations
  - operating instructions for required tools, equipment and machinery
  - safety data sheets for cleaning products
  - workplace job specifications or client briefs
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify current procedures and practices related to environmental regulations
- identify current procedures and practices related to minimising impact of resource usage on environment
- make contributions to the review of environmental sustainability procedures and practices through research and development of tools or techniques
- use appropriate techniques and tools to assist in achieving resource efficiencies and environment targets
- use communication skills to:
  - convey proposed improvements
  - provide feedback on improvement processes
  - promote organisational improvement strategies
- apply life cycle management principles in strategies to improve resource usage, reduce waste, employ recycling, re-use, or re-purposing, and to minimise environmental risks and impacts
- use tools and technology to monitor effectiveness of improvement strategies, and incidents that breach sustainability policy and procedures
- record and report on progress against resource efficiency and environmental targets.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- basic environmental sustainability principles
- environmental legislation, regulations, standards, codes of practices as may be relevant to industry sector and workplace
- relevant internal and external sources of information that can be used to identify sustainability improvements
- common environmental and energy efficiency issues within the industry
- environmental hazards and risks associated with the relevant industry sector
- organisation’s sustainability work policies and procedures
- principles of resources efficiency and life cycle management
- practices for disposal or recycling of waste associated with relevant industry sector
- organisation’s recording and reporting systems.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs

2.1 Identify and prepare requirements for inspection
2.2 Plan methods for recording inspection and confirm forms are available for use
2.3 Evaluate the scope of proposed work and prepare field notes to checklist specific concerns
2.4 Evaluate environmental conditions in preparation for likely site conditions
2.5 Consider traffic management requirements where required

3. Conduct site inspection

3.1 Carry out site orientation and verify ownership and site boundaries
3.2 Identify site hazards for a site inspection, assess risks and implement appropriate control measures
3.3 Identify, estimate and record site dimensions and gradients
3.4 Identify soil types from soil identification reference chart guidelines
3.5 Test soil samples in the field and record detailed notes for analysis of potential problems
3.6 Inspect relevant vegetation to determine the identity, health, condition and location
3.7 Investigate observable signs of fauna
3.8 Identify and record existing on-site services and adjacent site features

4. Document information

4.1 Prepare a base plan of the site
4.2 Document site inspection information in an inspection or site inventory report or on the base plan if required
4.3 Complete documents and forward to client or supervisor

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit is equivalent to AHCWRK311A Conduct site inspections.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify a wide range of vegetation common to the region
- recognise plant health problems and defects
- perform hazard identification and risk control procedures
- conduct soil field tests
- estimate dimensions and gradients
- report findings to the client or supervisor
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- plan and map interpretation
- soil pH, texture, structure and type
- plant identification and plant physiology
- measuring and estimating methods
- current land use and environmental threats to site hazards associated with undertaking site inspections
- protocols of accessing and visiting a site
- relevant legislative and regulatory requirements including environmental protection legislation
- local government regulations relating to the proximity of trees to buildings, services and roads
- local tree protection and preservation regulations
• relevant Codes of Practice.

**Assessment Conditions**
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to plan, prepare for and work safely in isolated and remote situations.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have operated in an isolated and remote environment, including:

- planned and prepared for operating in remote environments in conjunction with supervisor
- conducted a risk assessment for health, safety and environmental hazards for remote location
- prepared and implemented procedures for emergency situations
- sourced and interpreted maps of the remote area
- conducted work activities safely in a remote environment
- implemented workplace communication procedures to notify location, activities and travel to appropriate personnel
- prepared and monitored provisions and resources for essential and emergency needs
- used bushcraft skills to modify the living environment and reduced risks
- maintained records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- planning and preparations required for working in isolated environments
- map reading and navigation skills, including:
  - direction finding; GPS, compass, astronavigation
  - local topography
  - habitation
  - geographic indicator
- basic survival and bushcraft skills to maintain human needs in survival situations, including:
  - making a fire
• cooking
• distress signalling
• basic rope skills and useful knots
• personal protective clothing requirements for adverse weather conditions
• basic first aid procedures for common injuries
• emergency vehicle and mechanical equipment repair
• communication procedures and operation and maintenance of communications equipment, including:
  • field communications by two-way radio
  • satellite telephony
  • HF radio
• work health and safety in the context of work in isolated and remote situations
• environmental impacts of work in isolated and remote situations including weather patterns and indicators.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in an isolated environment or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • provisions and resources required for an isolated worksite
  • tools and equipment for work activities
  • personal protective equipment for use in isolated working environments

• specifications:
  • workplace documents including policies, procedures, processes, instructions and job specifications
  • manufacturers' operating instructions for specific communications and navigational equipment

• relationships:
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- process a request for information
- access information to respond to a request
- collate information to deal specifically with the request
- prepare a response using chosen media
- maintain a record of the information provided and file for future reference
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- workplace policies and documentation on local, regional, state and national issues
- relevant workplace documentation on international treaties, agreements and charters
- types of information sources
- methods and means of accessing and extracting the required information
- methods of validating information
- types of reports and their uses.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- supervise and instruct staff to achieve work activities
- delegate and allocate tasks
- assess and evaluate staff capability
- identify and provide training requirements
- plan timesheets and timetables to meet deadlines
- demonstrate safe workplace and environmentally responsible practices
- solve staffing and resourcing problems
- evaluate performance, provide feedback and prepare reports and performance appraisals
- promote and maintain effective relationships between staff
- monitor productivity and maintain staff records as required
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- enterprise personnel processes
- enterprise organisational structure and responsibilities
- techniques for building trust and relationships
- principles of team work and negotiation
- leadership for the work team
- performance appraisal systems and procedures
- principles of time management
- conflict management techniques
• enterprise training requirements and processes
• relevant State and Territory legislation, regulations and Codes of Practice with regard to work health and safety, environmental protection and employment
• work health and safety hazard identification, risk assessment and development of risk controls.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify the environmental regulations applicable to the enterprise
- analyse information on environmental and resource efficiency systems and explain it to the work group
- measure and document current resource use
- analyse current work processes to identify areas for improvement
- set targets for improvement
- implement environmental improvement plans for own work group
- develop and use evaluation and monitoring tools
- apply supervisory skills to work effectively with a team
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant compliance requirements in own area of work
- hazards and risks associated with work area
- environmental and energy efficiency issues, systems and procedures specific to industry practice
- external benchmarks and support for particular benchmarks to be used within enterprise, including approaches to improving resource use for work area and expected outcomes
- work health and safety issues and requirements
- organisational structure and reporting channels and procedures
- quality assurance systems relevant to own work area
Assessment Requirements for AHCWRK405 Implement and monitor environmentally sustainable work practices

- strategies to maximise opportunities and to minimise impact relevant to own work area
- supply chain procedures
- terms and conditions of employment including policies and procedures, such as daily tasks, work area responsibilities, employee, supervisor and employer rights, equal opportunity.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify data requirements and establish sampling and data collection techniques
- collect and collate data using standardised recording sheets and systems
- review sampling and data collection techniques based on validity and reliability of the data
- manage data to facilitate retrieval and analysis
- analyse data using appropriate statistical and analytical techniques
- draw conclusions based on reasoned argument and appropriate evidence
- produce a report in required format with information and data presented to support decision making
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- data collection techniques and procedures
- data recording and evaluation techniques
- data analysis and interpretive techniques
- data storage and retrieval methods
- data reporting methods.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- critically evaluate information and research findings of relevance to enterprises and industry sector
- integrate research and development into enterprise planning
- evaluate the potential of research proposals with other producers, associates or colleagues
- document a report on new industry developments
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- appropriate avenues to disseminate industry sector information to a range of stakeholders
- correct names and terminology relevant to one's industry sector
- credible sources of information
- key industry development and promotion programs relevant to one's industry sector
- roles and responsibilities of stakeholders and organisation's relevant to own industry sector
- supply chain for industry sector enterprises.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine legislation and legal framework applicable to task
- research, interpret and apply appropriate legislation
- promote compliance with relevant legislation
- assess situations which may potentially present legal problems and issues
- maintain knowledge of legal frameworks and relevant legislation
- develop and implement strategies to manage compliance with appropriate legislation
- provide advice and documentation regarding applicable legislation, regulations, organisational procedures and codes of practice
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the provisions contained in key relevant legislation and other legally binding legal policies and protocols from all levels of government that affect the relevant industry
- relevant Australian Standards
- organisational policies and procedures relating to legislation in organisation's functional area
- penalties for non-compliance with legislative requirements
- auditing requirements
- work health and safety requirements applicable to own work and functional area
- the scope of legal practitioner and support role and own responsibilities and obligations to provide legal advice, complete or sign off on legal work and appear in court as described by relevant jurisdictions
- how to encourage and support own compliance and that of others in the workplace
• relevant conventions, treaties, agreements, guidelines, declarations, recommendations, laws and rules
• how to apply legal information to the workplace
• techniques to monitor compliance and identify illegal conduct
• where to find appropriate sources of information and specialist personnel when limits of own expertise are reached in determining applicable legislation
• accepted codes of practice relevant to the workplace including those relating to:
  • privacy and confidentiality
  • use of company property
  • duty of care
  • ethical behaviour
  • non-discriminatory practice
  • conflict of interest
  • compliance with reasonable direction
  • relevant general legal terminology.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to maintain technical currency for specialist knowledge and provide specialist advice to clients.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They demonstrate deep knowledge in a specific technical area and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop and maintain industry wide specialist knowledge
- provide a professional service to client enquiries and needs
- show discretion and judgement in stakeholder interaction
- implement professional practice in stakeholder consultation and report documentation
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- products, treatments services of the industry
- environmental sustainability and land use issues relevant to the industry
- enterprise policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- strategies for planning and monitoring activities
- consultation methods, techniques and protocols
- current enterprise, government and local council policy, legislation and regulations
- mechanisms to obtain and analyse customer feedback.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- participate in planning, development and implementation of organisational policy that complies with legislative requirements
- communicate with stakeholders to discuss approaches to policy development and implementation and contribute to the resolution of disputes that may arise due to different points of view
- develop and monitor policies for analysing data on enterprise resource consumption
- review policies and identify improvements while benchmarking against industry best practice
- implement new approaches as required
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- best practice approaches relevant to own work area
- environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and work health and safety implications of policy being developed
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational policies, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- establishing sound research parameters that enables achievable results
- conducting research consistent with recognised scientific practice
- calculate the cost and spatial and logistical requirements of components of the trial
- enter, analyse and organise data in a mathematically sound and accurately graphed, charted or tabled representation, consistent with the trial design
- comply with legislative requirements
- use of industry standard terminology
- awareness of workplace health and safety in the context of own work
- appropriate sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- growth habits, physiological properties and taxonomic specification of animals and plants involved in the trial
- physical and biochemical properties of products involved in the trial
- properties and current, best practice application of treatments involved in the trial
- scientific and mathematical trialling, data collection, processing and analytical techniques and procedures
- auditing and reporting procedures
- the enterprise business and marketing plans
- enterprise work team management guidelines
- bio-ethics (where animals are involved in the trial).
Assessment Conditions
Assessors must satisfy current standards for RTOs.

</table>

Application

This unit describes the skills and knowledge required to undertake the fundamentals of product/idea commercialisation. It describes the process from conception to launch to full production.

Competency requires developing the skills and knowledge to successfully research, analyse, cost and develop a business opportunity for a product/idea. This unit also describes the skills required to manage commercialisation and evaluate product success.

This unit applies to leaders or managers responsible for developing a commercialisation strategy for an innovative product or technique, which has been developed through research.

Leaders undertaking product commercialisation must investigate and negotiate the legal and partnership implications of commercialisation, undertake market testing and develop commercialisation strategies.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

</tr>
</tbody>
</table>

Performance Evidence

Candidates must undertake the fundamentals of product/idea commercialisation from conception to launch to full production.

Candidates must demonstrate ability to:

- analyse market trends
- budget, including forecasting, capacity and asset analysis, setting targets and compliance mechanisms
- negotiate licensing IP (in and out), contractual supply chain arrangement and partnerships
- use communication skills to:
  - maintain appropriate relationships with colleagues and others
  - value and be open to the opinions of others
  - work as part of a team
  - model collaborative communication and learning
  - use active listening and negotiation skills
  - present and negotiate proposals
  - seek opinions and feedback from a range of stakeholders
  - develop plain English texts dealing with complex ideas and concepts
- generate and evaluate ideas by analysing information and concepts at an abstract level
- provide strategic leadership during change and negotiation processes
- use problem-solving, initiative and enterprise skills to:
  - direct, motivate, consult and delegate appropriately
  - collect, analyse and interpret data using a range of methods
  - shape strategic thinking and inspire others with a shared vision
  - work with teams with diverse emotional intelligence and cognitive ability
- provide leadership in workplace health and safety practice, ethical standards and legislative requirements
• review own personal and professional competence against personal development objectives
• support and use participative arrangements aimed at establishing trust
• to develop, negotiate and structure an agreed commercialisation strategy
• to apply leadership style and approach appropriate to individuals involved, outcomes being sought and contextual factors

Knowledge Evidence
Candidates must demonstrate specialised and integrated technical and theoretical knowledge of:
• relevant legislation
• business strategies and legal requirements underpinning trademarks, copyright and patents
• legal requirements underpinning partnership arrangements, contracts and taxation
• commercial environmental analysis techniques, including Strengths, Weaknesses, Opportunities, Threats (SWOT)/TOWS
• market testing strategies and techniques
• strategies for analysing and assessing the upstream and downstream implications of an innovation
• risk assessment strategies and techniques
• team selection, management and support strategies
• environmental sustainability principles

Assessment Conditions
Competency must be demonstrated through sustained performance over time, at an appropriate level of responsibility and under typical operating and production conditions for the enterprise.

Assessment must ensure:
• access to an actual workplace or simulated environment
• assessment over a sufficient timeframe to allow holistic assessment of the candidate’s capacity to lead the development of a commercialisation strategy
• resources normally used in the workplace, including organisational policies and procedures, and relevant legislation
• access to stakeholders, potential partners and clients

Assessors must satisfy current standards for RTOs.

</table>
| Release 1 | Unit updated to reflect the new standards for Training Packages  
Replaces AUMGTW3001 Conduct basic welding, thermal cutting, heating and gouging operations |
| Release 2 | Updated for clarity and policy adherence |

Application

This unit describes the performance outcomes required to perform basic welding, thermal cutting, heating and gouging operations.

It applies to those in the automotive manufacturing industry and involves the application of skills and knowledge at a production worker level.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Unit Sector

Technical - Welding, Grinding, Machining and Soldering

AUMGTW001 Perform basic welding, thermal cutting, heating and gouging

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comment</th>
</tr>
</thead>
</table>
| Release 1 | Unit updated to reflect the new standards for Training Packages  
Replaces AUMGTW3001 Conduct basic welding, thermal cutting, heating and gouging operations |
| Release 2 | Updated for clarity and policy adherence |

Performance Evidence

Before competency can be determined, individuals must have competently demonstrated basic welding, thermal cutting, heating and gouging operations; each on a minimum of three occasions.

Individuals must demonstrate they can:

- apply workplace requirements, procedures and workplace health and safety (WHS) practices in relation to:
  - weld production
  - work quality
- perform gas metal arc welding (GMAW) and manual metal arc welding (MMAW) processes
- perform oxy-acetylene welding processes
- perform thermal cutting, heating and gouging processes
- use relevant tools and equipment for the process
- check completed work against job specifications
- collect and store materials that can be reused
- clean work area and maintain equipment complete workplace documentation relating to basic welding, thermal cutting, heating and gouging operations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- work health and safety (WHS) requirements in relation to basic welding, thermal cutting, heating and gouging work tasks, including personal protective equipment (PPE)
- types of welding rods and their application
- MMAW techniques
- GMAW techniques
- thermal cutting, heating and gouging techniques
- welding quality standards
- oxy-acetylene welding techniques

**Assessment Conditions**

Assessors must satisfy SNR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the vehicles or components on which they have performed basic welding, thermal cutting, heating and gouging, e.g. production work sheets.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive manufacturing workplace or simulated workplace
- vehicles or components that require basic welding, thermal cutting, heating and gouging operations
- WHS equipment, including PPE relating to basic welding, thermal cutting, heating and gouging
- workplace procedures, equipment and operating instructions relating to basic welding, thermal cutting, heating and gouging
- welding consumables and materials
- welding equipment and accompanying operating instructions, including:
  - gas metal arc welding (GMAW) equipment
  - manual metal arc welding (MMAW) equipment
  - oxy-acetylene plant and equipment
  - thermal cutting, heating and gouging equipment
- work sheets relating to basic welding, thermal cutting, heating and gouging operations.

</table>

Application

This unit describes the skills and knowledge required to determine and analyse existing and required resources, their effective application and the accountability for their use.

It applies to individuals with a broad knowledge of business resources who contribute well developed skills and knowledge to ensure adequate resources are available to perform the work of the organisation. They may have responsibility to provide guidance or to delegate aspects of these tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- monitor resource usage
- maintain records of resource requirements and usage
- calculate costs and expenditures in relation to use and maintenance of business resources
- acquire and allocate physical resources and services to team members
- consult and communicate with individuals and teams about acquiring and using resources
- monitor, review and report on resource use acquisition, allocation, use and procedures
- follow organisational policies and procedures in relation to business resource acquisition and monitoring.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe the functions of business equipment used in an organisation and identify common faults
- identify organisational policies, plans and procedures in relation to business resource acquisition and monitoring.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the general administration field of work and include access to:
- records relating to business resources
- policies and procedures relating to resources
• case studies, and where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- work with relevant personnel and stakeholders to identify administrative system improvements
- document necessary requirements or modifications
- provide training and support for staff to use the new or modified system
- monitor the new system and identify future improvements and staff training needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

summarise relevant legislative and organisational policies and procedures for reviewing administrative systems

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the general administration field of work and include access to:

- organisational policy and procedure manuals
- reference materials
- appropriate equipment.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:
- prepare and deliver presentations related to occupation or area of interest which demonstrate the use of:
  - effective presentation strategies and communication principles
  - aids and materials to support the presentation
- select and implement methods to review the effectiveness of own presentation and document any changes which would improve future presentations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify information collection methods that will support review and feedback of presentations
- identify regulatory and organisational obligations and requirements relevant to presentations
- describe the principles of effective communication
- describe the range of presentation aids and materials available to support presentations.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced by individuals using interpersonal communication skills in the workplace and include access to:
- equipment, materials and business software packages for making a presentation
- business technology
- interaction with others.
Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- access and interpret information on relevant Australian and international standards
- collaborate with others to clarify the purpose and scope of the compliance requirements
- plan the compliance requirements using a suitable project methodology
- consult relevant stakeholders about compliance requirements according to the approved plan
- prepare draft recommendations on compliance requirements based on information collected during consultations
- collaborate with others to conduct a validation process on the draft compliance requirements
- document the final compliance requirements according to organisational requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline relevant compliance requirements
- explain methods and techniques suitable for the development and creation of compliance requirements
- outline elements of compliance program/management systems including:
  - documentation of compliance requirements relevant to the organisation
  - specification of compliance management functions, accountabilities and responsibilities within the organisation
  - compliance related management information systems
  - record keeping systems required for compliance management
• liaison procedures with relevant internal and external personnel on compliance related matters
• breach management policies and processes including the identification, classification, investigation, rectification and reporting of breaches in compliance requirements
• compliance reporting procedures
• corporate induction and training processes related to compliance management
• processes for the internal and external sharing and promotion of information on compliance requirements and a compliance program management system
• compliance complaints handling systems
• continuous improvement processes for compliance including monitoring, evaluation and review
• strategies for developing a positive compliance culture within the organisation
• techniques and performance indicators for monitoring the operation of a compliance program/management system
• reporting processes on compliance management including reports on breaches and rectification action.
• explain relevant organisational policies and procedures including compliance plans in various compliance area and organisational standards for operations and ethics.

Assessment Conditions
Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the compliance field of work and include access to:
• organisational policies and procedures and documentation relevant to compliance requirements
• Australian and international standards relevant to compliance requirements
• interaction with others
• computer resources and business technology
• case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to identify customer needs, deliver and monitor customer service and identify improvements in the provision of customer service.

It applies to individuals who apply a broad range of competencies in various work contexts. In this role, individuals often exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over short or long term interactions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Service

Performance Evidence

Evidence of the ability to:

- use communication skills to establish rapport and build relationships with customers in accordance with organisational requirements
- identify customer needs using appropriate questioning and active listening skills
- provide customer service in accordance with organisational requirements
- respond to and record customer feedback and action taken according to organisational standards, policies and procedures
- produce a report which identifies and recommends ways to improve service delivery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise key provisions of relevant legislation from all levels of government that may affect aspects of business operations
- explain organisational policy and procedures for customer service, including handling customer complaints
- provide examples of verifiable evidence that could be used to review customer satisfaction
- outline the interpersonal skills needed for serving customers, including customers with specific needs.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:
- office equipment and technology
- workplace documents, organisational policies and procedures for customer service
- examples of customer complaints and feedback
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- develop and manage organisational systems for quality customer service
- develop and review plans, policies and procedures for delivering and monitoring quality customer service
- implement policies and procedures to ensure quality customer service
- solve complex customer complaints and system problems that lead to poor customer service
- monitor and assist teams to meet customer service requirements
- develop, procure and use human and physical resources to support quality customer service delivery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the legislative and regulatory context of the organisation relevant to customer service
- describe organisational policy and procedures for customer service including handling customer complaints
- identify service standards and best practice models
- summarise public relations and product promotion
- outline techniques for dealing with customers including customers with specific needs
• explain techniques for solving complaints including the principles and techniques involved in the management and organisation of:
  • customer behaviour
  • customer needs research
  • customer relations
  • ongoing product and/or service quality
  • problem identification and resolution
  • quality customer service delivery
  • record keeping and management methods
  • strategies for monitoring, managing and introducing ways to improve customer service relationships
  • strategies to obtain customer feedback.

Assessment Conditions
Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:
• legislation, regulations and codes of practice related to customer service
• business technology
• workplace documentation and resources
• complex customer complaints
• case studies and, where possible, real situations
• interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to source information on design history and theory, and to apply that information in the individual’s design work.

It applies to individuals who work in design and need to develop and maintain a general knowledge of design history and theory.

More complex research into design theory and design trends is covered by BSBDES602 Research global design trends and BSBDES801 Research and apply design theory.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Performance Evidence

Evidence of the ability to:

- show how the history and theory of design can be adapted and used in own professional practice
- maintain currency of theoretical and design knowledge.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise current design trends
- describe the evolution of design
- identify the organisational information practices and their application
- outline sources of information on design history and theory relevant to own design work.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to information sources on design history and theory.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to develop and extend skills as a practising designer.

It applies to individuals who work as a designer, in any industry context, either independently or employed by an organisation.

Designers must continually refine, develop and evaluate their own conceptual and technical skills. Research, experimentation and collaboration are key factors in this process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Performance Evidence

Evidence of the ability to:

- use strategies to develop or extend skills, ideas and a unique voice
- adjust work processes as a result of peer feedback and self-evaluation
- research work options, networking and promotional opportunities and incorporate information into own work and career development.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list current and emerging designers in the relevant design discipline
- discuss current and emerging trends and technologies in the relevant design discipline, and the opportunities and challenges they represent
- identify professional development information and resources available to designers
- summarise sources of information relating to work opportunities and career planning.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to materials, resources and equipment used in the development of technical and conceptual skills in the relevant design context.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Application

This unit describes the skills and knowledge required to take a design concept or solution to the implementation stage. The outcome of work could be a completed product, object, system or service, but is more likely to be a complete or partial prototype or model for the design. The focus of the unit is on a general knowledge of design techniques and processes, and practical application to a specific design context.

It applies to individuals who implement concepts and solutions in response to a design challenge in any industry context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Elements and Performance Criteria

<table>
<thead>

Performance Evidence
Evidence of the ability to:

- undertake critical analysis, testing and development of a model, prototype or aspect of a design solution to meet an identified need
- present model to key stakeholders using the most appropriate best practice methods.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence
To complete the unit requirements safely and effectively, the individual must:

- explain the elements and principles of design and their application in relevant design context
- describe key features of the wider industry, with the economic, social and historical context for the design solution
- discuss design trends and technologies including other designs and the work of other design practitioners in the relevant context
- summarise sources of information that support the development of technical and other knowledge
- describe the technical expertise, resources, materials, tools, equipment, techniques and industry processes required for the area the design solutions are being implemented in.

Assessment Conditions
Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to:

- other people to reflect the collaborative nature of the design process
• resources required to test a design solution in a given industry context including materials, tools, equipment and expertise.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to work proactively with a client or commissioning organisation to develop and negotiate a design brief.

It applies to individuals working in any industry or design context where the designer plays a key role in determining the scope and nature of work required. Establishment, negotiation and refinement of a design brief requires the integration of highly-developed creative thinking, communication and planning skills in a process that may not be linear. Adaptability and effective responses to change and new ideas are crucial.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Performance Evidence

Evidence of the ability to:
- develop and finalise at least TWO design briefs for a specific industry purpose
- demonstrate highly-developed interpersonal skills, self-evaluation techniques and the ability to seek expert advice when required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- discuss the legal issues that affect negotiations and contracts in the relevant work context
- explain the design process within the specific industry context/design discipline
- compare and contrast the scope, nature and potential variations that occur within design briefs relevant to a specific context
- identify sources of information to assist the development of design concepts within a specific industry context.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to:
- appropriate equipment and media to communicate and present ideas and concepts
- sources of information relevant to industry context
- interaction with others to reflect the collaborative nature of the work, and communication and negotiation skills required.
Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to maintain daily financial records such as reconciling debtors’ and creditors’ systems, preparing and maintaining a general ledger and trial balance and includes activities associated with monitoring cash control for accounting purposes.

It applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts and may exercise discretion and judgement using appropriate theoretical knowledge of financial records.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Finance – Financial Administration

Elements and Performance Criteria
