Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply basic principles of animal ethics and welfare
- adapt and modify activities depending on differing workplace contexts and environment
- apply animal-observation skills
- apply relevant industrial or legislative requirements
- identify and use equipment, tools and other technology required to complete workplace tasks
- follow relevant work health and safety and environmental protection procedures and requirements
- identify species using common names
- interpret and follow a designated work plan or set of instructions for a job
- keep required records of workplace activities
- plan a daily routine to complete required workplace tasks
- applying technical skills in animal care including:
  - preparing and providing food and water
  - grooming
  - counting stock
  - recognising common animal behaviours and determining required response
  - recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with staff and others
  - recognise limitations, ask for help and seek clarification or information about work requirements and procedures
  - demonstrate appropriate initiative to deal with problems or refer them where appropriate to relevant person, and complete tasks
- apply time-management skills
• use basic interpersonal and communication skills, including listening, questioning and receiving feedback
• use routine capture and restraint procedures
• work cooperatively and collaboratively with others to complete tasks

Knowledge Evidence
The candidate must demonstrate knowledge of:
• basic principles of animal ethics and welfare
• codes of practice relating to work requirements
• diseases and pests, disease prevention and routine health care
• feeding and watering procedures
• hazards in the workplace
• health and safety requirements relating to care of animals
• capture and restraint procedures
• techniques for grooming animals
• common animal behaviours and appropriate responses
• quarantine requirements
• terminology relevant to animal care

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit covers the skills and knowledge needed to contribute to work activities that help to produce food. Food in this context refers to product from animal, seafood and plant sources. Producing food may involve hands-on activities, such as seeding, weeding, hoeing and feeding stock (fish or animals), as well as post-harvest activities. It includes being part of a whole system that supports and contributes to producing food.

This unit is designed for use in a Pathway qualification or skills set. It should not be used in a qualification that has a direct job outcome.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- adapt and modify activities depending on differing workplace contexts and environments
- apply relevant industrial or legislative requirements
- apply technical skills to support food production, including one or more of:
  - seeding
  - weeding
  - hoeing
  - feeding stock (fish or animals)
  - packing produce
- handle produce safely and according to workplace requirements
- follow enterprise requirements for market specification of products
- follow relevant food safety, work health and safety and environmental protection procedures and requirements
- grade, label and treat produce according to enterprise and customer specifications
- identify and use equipment, tools and other technology required to complete workplace tasks
- interpret and follow a designated work plan or set of instructions for a job
- maintain required records of workplace activities
- maintain work area housekeeping standards
- monitor environment of storage facility
- plan a daily routine to complete required workplace tasks
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with staff and others
- recognise limitations, ask for help and seek clarification or information about work requirements and procedures
- demonstrate appropriate initiative to deal with problems or refer them where appropriate to relevant person
- use appropriate techniques to solve or report problems identified when completing work tasks
- use basic interpersonal and communication skills, such as listening, questioning and receiving feedback
- use required machinery and equipment appropriately
- work cooperatively and collaboratively with others to complete tasks

Knowledge Evidence

The candidate must demonstrate knowledge of:

- handling requirements for produce
- enterprise storage facilities and their maintenance
- enterprise quality procedures
- food safety regulations
- humidity levels and their effect on quality of produce
- hygiene issues in handling and storing horticultural, agricultural and seafood products intended for human consumption
- industry standards for grading and labelling
- post-harvest treatments for various horticultural, agricultural and seafood products
- temperature settings within storage facilities
- relevant storage methods
- correct storage temperatures for a range of produce
- safe work practices relevant to work activities
- housekeeping standards and practices
- procedures for one or more of:
  - seeding
  - weeding
  - hoeing
  - feeding stock (fish or animals)
  - packing produce
- operating and cleaning procedures for required machinery, equipment and tools

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has maintained drainage systems on at least two occasions and has:

- inspected and maintained simple drainage system components
- inspected components for wear
- monitored and removed weeds and silt build up
- recorded and reported damage, blockages and leakages.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of drainage system maintenance, including:
  - drainage system cleaning procedures
  - equipment used to clean and maintain drainage systems
  - manual and mechanical weed removal methods
  - types of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - work instructions and workplace procedures applicable to maintaining drainage systems
  - drainage system maintenance tools and equipment
  - personal protective equipment applicable to maintaining drainage systems
• specifications:
  • work instructions
• relationships:
  • supervisor
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- install drainage system works
- interpret drainage system plans and drawings
- interpret site specifications, soil types and drainage system plans
- level and align earthworks
- measure materials required to install drainage systems
- prepare for installation activities
- set out drainage system works
- set out, survey, test and excavate the installation site
- test the drainage system
- use equipment, tools and machinery appropriate to the scope of works

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of drainage installation
- drain types, components and installation techniques
- soil characteristics and their impact on drainage systems
- purposes of drainage systems and the application of drainage system plans to the physical situation
- work health and safety
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has installed drainage systems on at least one occasion and has:

- applied workplace health and safety requirements
- prepared for installation activities
- selected materials, tools, equipment and machinery appropriate to the scope of works
- interpreted drainage system plans and drawings
- interpreted site specifications, soil types and drainage system plans
- measured materials required to install drainage systems
- set out drainage system works
- set out, surveyed, tested and excavated the installation site
- levelled and aligned earthworks
- installed drainage system works
- tested the drainage system
- restored site and removed and disposed of waste material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for installing drainage systems
- principles and practices of drainage installation
- drain types, components and installation techniques
- purposes of drainage systems and the application of drainage system plans
- soil characteristics and their impact on drainage systems.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions

Application

This unit of competency describes the skills and knowledge required to measure, record and report on soil moisture, salinity and water table depth to determine system performance and efficiency.

The unit applies to individuals who measure drainage system performance under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements | Performance Criteria
---|---
Elements describe the essential outcomes. | Performance criteria describe the performance needed to demonstrate achievement of the element.

1.5 Select, fit, use and maintain personal protective equipment applicable to the task

2. Assess drainage and collection systems

2.1 Determine damaged or broken components
2.2 Inspect areas for signs of water pooling and problems
2.3 Take measurements to determine drainage performance
2.4 Identify and record factors external to the system which may cause interference
2.5 Minimise environmental impacts of drainage system performance measurement activities

3. Record and report system performance status

3.1 Record water quality and quantity
3.2 Record water table depth, soil moisture and salinity
3.3 Document strategies that minimise the negative environmental impacts and maximise the positive impacts of the drainage system
3.4 Report system performance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has measured drainage system performance on at least one occasion and has:

- selected materials, tools, equipment and machinery appropriate to the scope of works
- applied workplace health and safety requirements
- identified and minimised adverse environmental impacts of drainage systems
- recorded and reported drainage system data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for measuring drainage system performance
- measuring and monitoring procedures for factors contributing to drainage system performance
- water quality monitoring methods and techniques
- how to measure a water table and salinity
- soil moisture measurement procedures
- positive and negative environmental impacts of drainage systems
- the environmental role of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
Assessment Requirements for AHCDRG306 Measure drainage system performance

- drainage system equipment
- drainage system performance measuring tools and equipment
- personal protective equipment applicable to measuring drainage system performance
- specifications:
  - workplace requirements applicable to health and safety in the workplace and measuring drainage system performance
  - measuring procedures
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has troubleshoot and repaired a drainage system on at least one occasion and has:

- identified a range of drainage system issues, including surface and sub-surface issues
- planned and prepared for the work
- inspected the site to determine access to drainage system
- completed a range of rectification works for drainage systems
- tested the system and cleaned up after rectifying identified issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- drainage system repair work instructions and procedures
- types and operational parameters of drainage systems
- types of drainage systems and issues common these systems
- principles and practices of drainage system troubleshooting
- components used in drainage systems
- safe working practices applicable to troubleshooting and repairing drainage systems
- environmental impacts of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
Assessment Requirements for AHCDDR30 Troubleshoot drainage systems

- drainage system repair work instructions and workplace procedures
- drainage system equipment
- drainage system repair tools, equipment and machinery
- personal protective equipment applicable to repairing drainage systems
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCDRG308 Maintain and repair irrigation drainage systems

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has maintained and repaired an irrigation drainage system on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- isolated appliances, fixtures, fittings and related assemblies
- identified and minimised adverse environmental impacts of drainage systems
- gained access and carried out repairs
- used manual and mechanical drain clearing equipment
- removed blockages
- levelled and aligned the site
- implemented and recorded a drainage and equipment maintenance program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for maintaining irrigation drainage systems
- principles and practices for maintaining irrigation drainage systems, including:
  - components used in irrigation drainage systems
  - isolation processes and procedures
  - levelling and alignment processes
  - types and operational parameters of irrigation drains
  - environmental impacts of drainage systems.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - irrigation drainage system maintenance and repair equipment and tools
  - personal protective equipment applicable to maintaining irrigation drainage systems
- **specifications:**
  - workplace requirements applicable to health and safety in the workplace and maintaining irrigation drainage systems
  - work instructions and workplace procedures applicable to maintaining irrigation drainage systems
  - irrigation drainage system principles and practices
  - recording procedures
- **relationships:**
  - appropriate people, supervisor
- **timeframes:**
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has coordinated and supervised the installation of an irrigation drainage system on at least one occasion and has:

- developed operational procedures
- conducted a workplace health and safety risk assessment
- interpreted irrigation designs
- documented requirements for structures
- estimated quantities and volumes of soil to be moved.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts and role of drainage systems
- regulatory requirements, codes of practice and relevant workplace service standards relating to blockage removal, disconnection and reconnection activities
- water authority standards and procedures
- principles and practices of irrigation drainage system installation, including:
  - components used in drainage systems
  - drainage appliances, fixtures and fittings
  - isolation processes and procedures
  - levelling and alignment processes
  - types and operational parameters of drains
- soil moisture measurement procedures
- water quality monitoring methods and techniques
- water table and salinity measures
- development of procedures
- supervision of task allocation, coordination of resources and induction procedures
• trench excavation and earth works procedures
• measuring and monitoring procedures for factors contributing to drainage system performance.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• specifications:
  • irrigation drainage system design specifications
  • workplace procedures applicable to health and safety in the workplace and installation of an irrigation drainage system
  • water authority standards and procedures
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 5.5 Rehabilitate drainage site according to current industry standards

### 6. Record and report system performance status

- 6.1 Record and report water quality
- 6.2 Record and report water table depth, soil moisture and salinity
- 6.3 Document strategies for dealing with and minimising environmental impacts and maximising positive impacts of the drainage system

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

<table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored and controlled an irrigation drainage system on at least one occasion and has:

- applied soil moisture testing techniques
- measured, recorded and reported water table depth, soil moisture and salinity
- calculated water volumes from rate and depth
- analysed drainage system data
- isolated drainage lines
- controlled and operated drainage system structures and processes
- applied workplace health and safety requirements
- identified and minimised adverse environmental impacts of drainage systems
- cleared and refilled drainage lines
- cleared blockages from drainage lines.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- measuring and monitoring procedures for factors contributing to drainage system performance
- water quality monitoring methods and techniques
- soil moisture measurement procedures
- principles and practices for monitoring irrigation drainage systems, including:
  - components used in drainage systems
  - isolation processes and procedures
  - levelling and alignment processes
  - types and operational parameters of drains
• safe working practices applicable to troubleshooting and clearing irrigation drainage systems and replacing blocked sections of irrigation drainage systems
• workplace requirements applicable to health and safety in the workplace for monitoring and controlling irrigation drainage systems
• environmental impacts of drainage systems.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • irrigation drainage system troubleshooting and clearing tools and equipment
  • personal protective equipment applicable to troubleshooting and clearing irrigation drainage systems
• specifications:
  • workplace requirements applicable to health and safety in the workplace and monitoring, controlling, troubleshooting and clearing an irrigation drainage systems
  • irrigation drainage plan
• timeframes:
  • according to the job requirements.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify design requirements, determine specifications, capital expense and operating expense budgets and design the drainage system.

The unit applies to individuals who apply specialised skills and knowledge to the design of drainage systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has designed at least one drainage system on at least one occasion and has:

- developed specifications for water transfer, recharge, reuse and harvesting systems
- identified design requirements
- completed hydrological calculations
- identified performance indicators for the drainage system
- predicted volumes and rates of surface run-off and system leakage
- identified adverse environmental impacts of drainage and appropriate remedial action
- assessed the requirements for pumping capacity in a drainage system and power requirements
- developed capital and operating budgets.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of drainage design, including:
  - developments in drainage technology
  - leachate interception and dewatering systems
  - leaching fractions and salt movements prediction
  - monitoring systems
  - the design processes
  - water transfer, recharge, reuse and harvesting systems
- local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to drainage system design
- budgeting, contract development and obligations
- cost/benefit analysis.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - regional geology and geography information
  - drainage system site
  - industry energy and water efficiency benchmarks
  - local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to drainage system design
  - drainage system water and soil testing equipment and procedures
- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify and select explosive products and suitable mixtures that can be used for blasting for agricultural or land management purposes.

This unit applies to individuals who work under broad direction and take responsibility for their own work. This includes using discretion and judgement in the selection and use of available resources.

Licensing conditions apply to this unit. Specific determination should be sought through the relevant State or Territory.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must demonstrate that they can identify and select appropriate explosive products for the task.

The candidate must provide evidence that they can that they can:
- establish the need to use explosives
- identify the risks and environmental implications of using explosives
- select explosives and initiator devices to match the application, site and identified hazards at the blasting site
- utilise safety fuses as required
- identify various components of explosive products
- estimate the likely effect of explosives on structures, personnel and livestock in the site vicinity
- apply work health and safety policies and procedures when working with explosives
- apply policies and procedures to ensure the safety of the public

Knowledge Evidence

The candidate must demonstrate knowledge of:
- uses of various explosive products
- performance of each explosive product used by the enterprise
- the behaviour of the substrate material when subject to blasting
- jobs that require the use of explosives in the context of own conservation and land management work
• particular properties of explosives/blasting agents and their suitability for particular purposes
• features that identify defective or damaged explosives
• key concepts of the Australian standards relating to the storage, transportation and use of explosives as they apply to own work role
• relevant State and Territory legislation

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to establish hydroponic crop nutrient requirements, supervise crop planting activities and monitor nutrient concentrations of hydroponic crops.

The unit applies to individuals who apply specialised skills and knowledge in the establishment and monitoring of hydroponic crops and have the responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established and monitored hydroponic crops on at least one occasion and has:

- documented hydroponic crop establishment and monitoring activities
- conducted plant health and quality inspection
- identified suitable irrigation strategy
- minimised environmental impacts associated with establishing and monitoring hydroponic crops
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- tested and analysed nutrient solution
- measured and calculated nutrient solution.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hydroponic crop nutrient solution techniques, including:
  - aeroponics
  - continuous-flow solution culture or nutrient film technique
  - deep water culture
  - drop irrigation
  - ebb and flow
  - fogponics
  - passive sub-irrigation
  - rotary
Assessment Requirements for AHCHYD401 Establish and monitor hydroponic crops

- run to waste
- static solution culture
- top-fed deep water culture
- types of hydroponic growing substrates, including:
  - clay aggregate
  - coconut coir
  - perlite
  - rockwool
  - vermiculite
- types of hydroponic nutrient solutions, including:
  - inorganic
  - organic
- plant health and quality inspection techniques
- irrigation strategies applicable to hydroponic crops
- workplace requirements applicable to health and safety in the workplace for establishing and monitoring hydroponic crops
- environmental impacts associated with establishing and monitoring hydroponic crops
- industry and workplace biosecurity procedures
- nutrient solution testing and analysis procedures and equipment, including:
  - colorimeters
  - electrical conductivity meters
  - litmus paper
  - pH indicator strips
  - pH meters
- nutrient solution measuring and calculation procedures, tools and equipment, including:
  - graduated cylinders
  - measuring spoons.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
- a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - hydroponic crop establishment and monitoring tools, equipment and materials
  - nutrient solution measuring, calculation, testing and analysing tools, equipment and procedures
  - personal protective equipment applicable to establishing and monitoring hydroponic crops
- specifications:
• workplace requirements applicable to health and safety in the workplace and establishing and monitoring hydroponic crops
• industry and workplace biosecurity procedures applicable to establishing and monitoring hydroponic crops
• relationships:
  • team members
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge to undertake routine irrigation work under direct supervision and to support the irrigation work of others.

The unit applies to individuals who support routine irrigation work while working alongside a supervisor, exercising limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supported irrigation work on at least two occasions, and has:

- prepared materials, tools and equipment for irrigation work
- applied safe work practices
- undertaken irrigation work as directed
- cleaned up on completion of work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for supporting irrigation work
- preparing for irrigation work and cleaning up on project completion
- irrigation tools and equipment
- safe work practices used in irrigation work
- basic construction techniques used in irrigation work
- repair and maintenance of irrigation fittings.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - work instructions and workplace procedures applicable to assisting supporting irrigation work
  - irrigation maintenance tools and equipment
- personal protective equipment applicable to supporting irrigation work
- relationships:
  - supervisor, staff and customers
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency covers the skills and knowledge required to assist with installing, operating and maintaining low volume irrigation systems. These systems use emitters such as drippers and generally use poly pipe.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- assemble and join irrigation system components
- carry out basic maintenance tasks
- carry out low volume irrigation operating tasks
- complete installation work
- fix identified faults
- follow directions to operate pumps, filters and valves
- install irrigation components
- look for leaks and faulty emitters
- prepare materials, tools and equipment
- recognise and report faults
- undertake site preparation tasks as directed

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practice of low volume irrigation operation
- characteristics and operation of joints, valves and emitter components
- components in low volume irrigation systems
- emitter spacing, coverage and pressure
- indicators of over and under watering
- installation techniques and procedures
- irrigation controllers
- irrigation pipes, types and sizes
• irrigation times to deliver sufficient volume without over watering
• methods and techniques of low volume irrigation installation
• operation of low volume irrigation system
• set out procedures
• system malfunctions and their likely causes
• use of recycled water and colour coding of pipes
• water requirements of relevant plants

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with at least one low volume irrigation operation on at least one occasion and has:

- applied workplace health and safety requirements
- selected, cleaned and maintained materials, tools, equipment and machinery appropriate to the scope of works
- prepared materials, tools and equipment
- undertaken site preparation tasks as directed
- assembled and joined irrigation system components
- installed irrigation components
- fixed identified faults
- recognised and reported irrigation component incorrect operation
- completed installation work
- carried out low volume irrigation operating tasks
- followed directions to operate pumps, filters and valves
- carried out basic maintenance tasks
- looked for leaks and faulty emitters.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with low volume irrigation operations
- characteristics and operation of joints, valves and emitter components
- components in low volume irrigation systems
- irrigation controllers
- irrigation pipes, types and sizes

© Commonwealth of Australia, 2020

Skills Impact
- system malfunctions and their likely causes
- installation techniques and procedures
- methods and techniques of low volume irrigation installation
- operation of low volume irrigation system
- principles and practice of low volume irrigation operation
- emitter spacing, coverage and pressure
- indicators of over and under watering.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - low volume irrigation system maintenance tools and equipment
  - personal protective equipment applicable to assisting with low volume irrigation operations
- specifications:
  - workplace requirements applicable to health and safety in the workplace and assisting with low volume irrigation operations
  - work instructions and workplace procedures applicable to assisting with low volume irrigation operations
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with surface irrigation operations on at least one occasion and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- carried out surface irrigation operating tasks as directed
- checked siphons for even water flow
- looked for uneven water distribution or drainage
- opened and closed check valves
- monitored required head and water levels in head ditch
- started and lifted siphons
- used mechanical equipment to build and repair banks and for weed removal
- recorded and reported maintenance activities and faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with surface irrigation operations
- principles and practices of surface irrigation
- channels, furrows, borders, fittings and outlets
- system cleaning procedures
- identification, characteristics and operation of surface irrigation structures and components
- damage and problems that occur with gravity-fed irrigation systems
- weed types encountered in gravity fed irrigation systems and their removal
- system malfunctions and their likely causes.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - surface irrigation system maintenance tools and equipment
  - personal protective equipment applicable to assisting with surface irrigation operations
- **specifications:**
  - workplace requirements applicable to health and safety in the workplace and assisting with surface irrigation operations
  - work instructions and workplace procedures applicable to assisting with surface irrigation operations
- **relationships:**
  - supervisor
- **timeframes:**
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with pressurised irrigation operations on at least one occasion and has:

- applied workplace health and safety requirements
- selected and prepared materials, tools, equipment and machinery appropriate to the scope of works
- undertaken site preparation tasks as directed
- assembled and joined irrigation system components
- completed installation work
- looked for leaks and faulty sprinklers
- recognised, recorded and reported maintenance activities and faults
- followed directions to operate pumps, filters and valves
- carried out basic maintenance tasks
- fixed identified faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with pressurised irrigation operations
- principles and practices of pressurised irrigation systems
- irrigation controllers
- irrigation pipes, types and sizes
- sprinkler irrigation components and their function
- set out procedures
- installation techniques and procedures
- operation of pressurised irrigation system
Assessment Requirements for AHCIRG221 Assist with pressurised irrigation operations

- sprinkler spacing, coverage and pressure
- system malfunctions and their likely causes
- types of sprinklers.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pressurised irrigation system maintenance tools and equipment
  - personal protective equipment applicable to assisting with pressurised irrigation operations
- specifications:
  - workplace requirements applicable to health and safety in the workplace and assisting with pressurised irrigation operations
  - work instructions and workplace procedures applicable to assisting with pressurised irrigation operations
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with pump and flow control device operations on at least one occasion and has:

- applied workplace health and safety requirements
- interpreted plans, charts and instructions
- selected and organised required tools, equipment and materials for installation and maintenance work, handle materials and use power and hand tools safely
- identified and responded to predictable operational problems
- recorded and reported installation and maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with pump and flow device operations
- capacity and limitations of equipment used on the site
- lock-out procedures for mechanical and electrical installations
- types of flow control devices and their purpose
- types of pumps and their function and use
- principles and practices of pump and control flow devices
- basic principles of hydraulics and the operation of flows
- layout and performance of pipes and fittings
- flow measurement principles and procedures
- function of control systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • pump and control flow device maintenance tools and equipment
  • personal protective equipment applicable to assisting with pump and control flow device operations
• specifications:
  • work instructions and workplace procedures applicable to assisting with pump and control flow device operations
• relationships:
  • supervisor
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>
| 1. Organise resources for installation work | 1.1 Interpret plan, including identifying potential hazards and risks and implementing safe working practices to manage risks  
1.2 Select and use required materials, tools equipment and machinery and check for safe operations  
1.3 Select, fit, use and maintain safety and personal protective equipment applicable to the task  
1.4 Check water supply is compatible with system specifications |
## Elements

*Elements describe the essential outcomes.*

## Performance Criteria

*Performance criteria describe the performance needed to demonstrate achievement of the element.*

### 2. Set out and prepare site

- 2.1 Measure and mark out structures and peg earthworks
- 2.2 Prepare and maintain beds, diversion and conveyancing structures
- 2.3 Install diversion and conveyancing structures, channels and beds
- 2.4 Prepare bed surface using roto-buck
- 2.5 Test structures for configuration, flow rates and capacity

### 3. Complete water measurement and tail-water works

- 3.1 Install water measurement structures
- 3.2 Install channels and tail water storages
- 3.3 Install pumping equipment, lines and filters
- 3.4 Confirm that the system configuration and capacity matches the installation plan
- 3.5 Complete earthworks and structures according to plan

### 4. Operate pumps and siphons

- 4.1 Prime pumps and open or close valves and controls
- 4.2 Position and set up pipes, system equipment and outlets
- 4.3 Prime and start siphons and other delivery mechanisms
- 4.4 Implement start up sequence and slowly build up water levels and pressure
- 4.5 Check pressure at the head-works and control valves
- 4.6 Distribute water evenly to the targeted areas with minimal wastage and run-off
- 4.7 Irrigate area and observe time lag between shut down and end of watering to minimise run-off and deep percolation

### 5. Measure and interpret water levels, flow rates and volume of water used

- 5.1 Monitor and maintain head water levels
- 5.2 Confirm that all water outlets are operating correctly
- 5.3 Replace or clear blocked inlets and outlets
- 5.4 Measure and record flow rates and water usage
- 5.5 Implement irrigation changes as required
## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed a gravity fed irrigation system on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- built and maintained irrigation structures, channels and beds
- prepared irrigation beds
- used roto-buck for bed preparation
- measured water usage
- installed pumps and pipelines
- performed system commissioning tasks
- adjusted and monitored check valves
- start and moved siphons and spiles and checked flow
- start up the system
- checked pressure at the head works and control valves
- identified variations in water flow and distribution.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for installing gravity fed irrigation systems
- machinery operation and maintenance manual
- calculations for installing surface irrigation systems
- behaviour of water on varying terrain and soil types
- soil characteristics applicable to water retention and infiltration
• soil water retention testing techniques
• water quality and water filtration techniques
• gravity fed irrigation system components and operation.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - gravity fed irrigation system materials, tools equipment and machinery
  - gravity fed irrigation pump system tools and equipment and manual
  - personal protective equipment applicable to installing gravity fed irrigation systems
- specifications:
  - work instructions and workplace procedures applicable to installing gravity fed irrigation systems
  - workplace requirements applicable to health and safety in the workplace and installing gravity fed irrigation systems
  - machinery operation and maintenance manual
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training, legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to measure pressure, flow and distribution uniformity of an irrigation system.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and prepare data records for both print-based and computer-based data
- apply measuring and testing techniques
- calculate pressure differentials, flow rates, crop yields, estimated water usage and actual water usage
- identify adverse environmental impacts of irrigation activities and take appropriate remedial action
- use computers to record and report data

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental impacts of irrigation, using water from any ground or underground source
- measuring and monitoring procedures for factors contributing to irrigation system delivery
- soil water retention testing techniques
- water authority standards and procedures

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to troubleshoot faults and blockages in irrigation systems.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:
- carry out operational tests
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- operate, maintain and repair irrigation systems
- shut down and isolate components

Knowledge Evidence

The candidate must demonstrate knowledge of:
- characteristics and operation of replaceable components of irrigation systems
- environmental impacts of irrigation using water from any ground or underground source
- isolation procedures
- purchasing procedures
- system malfunctions and their likely causes

Assessment Conditions

Assessors must satisfy current standards for RTOs.

• Interpret textual information from a range of sources to identify relevant and key information about workplace operations |
| Writing |  
• Complete records of readings and observations legibly and accurately using correct technical terminology |
| Oral communication |  
• Use clear language to report discrepancies or malfunctions |
| Numeracy |  
• Interpret the measurements of sample results  
• Make calculations to check the accuracy of program irrigation controllers and adjust electronic flow equipment |
| Navigate the world of work |  
• Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility |
Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Controllers must include at least 3 of the following:
- stand-alone
- Bluetooth
- wifi
- remote radio controllers
- multi-site central controllers.

Sensors must include at least 4 of the following:
- water meters
- soil moisture and temperature sensors
- air temperature sensors
- weather stations
- pump pressure sensors
- rainfall sensors.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated irrigation controller and sensor technology on at least two occasions, and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- maintained and checked irrigation controller and sensor equipment for accuracy
- operated irrigation controllers and sensors
- checked the accuracy of controller and sensor equipment, and adjusted
- recorded the results of sampling and testing
- recorded observations and data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating irrigation controller and sensor technology, including working with extra low voltage wiring according to Australian Standards
- basic electrical testing procedures and safety practices
- irrigation controller and sensor operating and testing procedures
- environmental procedures for use, storage and recycling of electronic equipment and batteries
- data recording procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:
Assessment Requirements for AHCIRG328 Operate irrigation controller and sensor technology

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigation controller and sensor installation and operating equipment
  - irrigation controllers and sensors
  - personal protective equipment applicable to installing and operating irrigation controller and sensor technology
- specifications:
  - work instructions and workplace procedures applicable to operating irrigation controller and sensor technology
  - workplace requirements applicable to health and safety in the workplace for operating irrigation controller and sensor technology
  - Australian Standards applicable to working with extra low voltage wiring
  - irrigation controller and sensor operating and testing procedures
  - data recording procedures
  - environmental procedures for use, storage and recycling of electronic equipment and batteries
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- calibrate testing and monitoring equipment
- commission irrigation system
- complete installation work
- organise resources for installation work
- set out and prepare the site.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the behaviour of water on varying terrain and soil types
- calculations for installing irrigation systems
- characteristics and operation of joints, valves and sprinkler components
- components of an irrigation system
- methods and techniques of installing irrigation
- operation of pumps and water flow rates
- soil characteristics
- soil water retention testing techniques
- water quality and water filtration techniques.
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess soil moisture levels
- carry out measurements for output and distribution
- measure and interpret flow rates and pressures
- monitor system effectiveness including:
  - application rates
  - depth of irrigation
  - emitter output
  - irrigation times
  - pressure variations and blockages
  - salinity levels and water quality
  - perform shut down procedures
  - read and follow operations manual and procedures
  - record data
  - start up the system and carrying out operational checks

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of pressurised irrigation system operation
- critical measures for moisture availability including:
  - evapotranspiration
  - field capacity
  - infiltration rates
• readily available water
• water holding capacity
• wilting point
• electrical hazards including:
  • contact with pumps, motors, other live components
  • short circuits
  • standing laterals to remove blockages
  • water spray onto power lines
• energy efficiency indicators and benchmarks for low volume irrigation
• environmental impacts of irrigation using water from any ground or underground source
• general irrigation methods for low volume systems
• main components of low volume and sprinkler irrigation systems
• principles of irrigation and the water cycle
• pump types used in irrigation systems and their operation
• shutdown sequence and flushing procedures
• soil characteristics
• soil, plant and water relationships
• water requirements of plants and crops consistent with sound environmental management

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and maintained a gravity fed irrigation system on at least one occasion, and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- adjusted and monitored check valves
- checked the serviceability of delivery mechanisms
- set up and started delivery systems
- checked pressure at the head-works and control valves
- identified variations in water flow and distribution
- measured water usage
- inspected irrigation systems
- carried out running repairs on irrigation delivery and drainage systems
- removed and replaced gates, slides and doors
- removed and replaced valves and filters
- undertaken minor repairs of equipment
- carried out shutdown procedures, cleaned equipment and disposed of waste
- recorded machinery service and repair.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating and maintaining gravity fed irrigation systems
- machinery operation and maintenance manual
- characteristics and operation of components of a gravity fed irrigation system
Assessment Requirements for AHCIRG336 Operate and maintain gravity fed irrigation systems

- common operational and maintenance problems
- routine and end of season maintenance requirements
- weed disposal methods.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - gravity fed irrigation system materials, tools, equipment and machinery
  - gravity fed irrigation pump system tools and equipment and procedures
  - personal protective equipment applicable to operating and maintaining gravity fed irrigation systems
- specifications:
  - work instructions and workplace procedures applicable to operating and maintaining gravity fed irrigation systems
  - workplace requirements applicable to health and safety in the workplace and operating and maintaining gravity fed irrigation systems
  - machinery operation and maintenance manual
  - recording procedures
  - environmental procedures for collection, treatment, disposal or recycling of waste
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training, legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to measure pressure, flow and distribution uniformity of an irrigation system, monitor supply of equipment and spare parts, and record system performance.

The unit applies to individuals who measure irrigation delivery system performance under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has measured irrigation delivery system performance on at least two occasions and has:

- applied measuring and testing techniques
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- accessed and prepared data records for both print-based and computer-based data
- used computers to record and report data
- calculated pressure differentials, flow rates, crop yields, estimated water usage and actual water usage
- used computers to record and report data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- measuring and monitoring procedures for factors contributing to irrigation system delivery
- soil water retention testing techniques
- water authority standards and procedures
- environmental impacts of irrigation, using water from any ground or underground source.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigation system equipment
• irrigation delivery system performance measuring tools and equipment
• computer and software for recording and reporting data
• specifications:
  • measuring and recording procedures
• relationships:
  • supervisor
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>
## Elements

*Elements describe the essential outcomes.*

### Performance Criteria

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. **Select, fit and use personal protective equipment applicable to the task**
2. **Carry out operational tests on components**
3. **Identify and document faulty components and blockages**

### 2. Shut down and isolate component

1. **Apply shut down sequence and isolation procedures according to irrigation equipment handbook**
2. **Verify safe shutdown or isolation**
3. **Install safety or security lock off devices and signage**

### 3. Replace faulty components and clear blockages

1. **Organise access to faulty components and blockages**
2. **Remove and repair or dispose of faulty components**
3. **Select and install replacement components**
4. **Clear blockages or replace blocked sections**

### 4. Return system to normal operating status

1. **Return isolated or shutdown components to service**
2. **Carry out operational tests**
3. **Return system to normal operational set-up**
4. **Report and record repair activities according to workplace requirements**

## Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has troubleshooted and repaired irrigation systems on at least two occasions and has:

- applied workplace health and safety requirements
- identified adverse environmental impacts of irrigation activities and appropriate remedial action
- carried out operational tests
- operated, maintained and repaired irrigation systems
- shut down and isolated components.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for troubleshooting and repairing irrigation systems
- environmental impacts of irrigation using water from any ground or underground source
- system malfunctions and their likely causes
- irrigation equipment handbooks
- characteristics and operation of replaceable components of irrigation systems
- isolation procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
• irrigation equipment handbooks
• irrigation system equipment
• irrigation system repair tools and equipment
• personal protective equipment applicable to repairing irrigation systems
• specifications:
  • work instructions and workplace procedures applicable to troubleshooting and repairing irrigation systems
  • workplace requirements applicable to health and safety in the workplace and troubleshooting and repairing irrigation systems
• relationships:
  • supervisor
• timeframes:
  • according to job requirements.
Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

1.5 Assess the infiltration rate for irrigated soil
1.6 Measure soil moisture levels
1.7 Assess the environmental impacts of cultivation and watering practices on the physical properties of soil

2. Monitor soil moisture properties
2.1 Identify soil moisture tension and its role in determining water availability to plants
2.2 Assess the field capacity of irrigated soil
2.3 Observe the wilting point for a plant species in irrigated soil
2.4 Calculate the readily available water (RAW) in irrigated soil

3. Monitor soil chemical properties
3.1 Interpret soil test results for salinity and sodicity levels in irrigated soil
3.2 Interpret pH tests and the potential impact of pH on soil structure and nutrient availability

4. Implement strategies to optimise the irrigation growing environment for plants
4.1 Assess the risk of erosion in irrigated soil
4.2 Implement and monitor a watering schedule
4.3 Adjust the frequency of watering based on available moisture, soil properties and plant response
4.4 Record and report soil and plant moisture status and irrigation requirements

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored soils under irrigation on at least one occasion and has:

- conducted soil structure and texture assessment
- used soil moisture monitoring equipment
- calculated moisture holding capacity of plants, including readily available water (RAW)
- applied the results of soil testing to assessing soil properties
- assessed the erosion potential of the irrigated soil
- adjusted watering practices to meet plant needs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- soil structure and texture
- effect of dispersible soils under irrigation
- critical measures for moisture availability
- adverse environmental impacts of irrigated plant production
- field capacity
- signs of moisture stress & nutrient deficiency in plants
- wilting point
- soil moisture definitions and calculations
- RAW calculations
- interpreting salinity, sodicity and pH tests
- soil moisture monitoring procedures
- types of erosion.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigated soil and water test results
  - irrigation system equipment
  - irrigation system performance measuring tools and equipment
- specifications:
  - measuring and recording procedures
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has installed irrigation pumps on at least one occasion, and has:

- followed drawings and specifications
- performed work-related calculations
- handled materials safely
- organised equipment and materials for installation work
- matched pump output and flow rate to pipe diameter
- set out and prepared the site
- positioned pumps and control devices
- used power tools and hand tools
- primed and operated pumps
- fixing and joining techniques
- identified and responded to operational problems
- monitored the performance of pumps
- adjusted and set pressure switches and air tanks to suit pump performance and site conditions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of hydraulics, flow versus pressure, energy loss due to friction
- discharge and flow rates
- installation procedures for irrigation pumps
- pump components and their principles of operation
- pump gauges and controls
- advantages and disadvantages of each pump type
• servicing requirements for pumps
• types of pumps and their application in irrigation, such as centrifugal, vertical turbine, submersible and propeller
• types of pumps suitable as booster and floating pumps
• characteristics and application of different valves, pipes and fittings, including fixing and joining techniques and methods
• impellers, rotors and stators
• types of valves
• properties of water, including pressure and flow rates
• pump performance and pressure testing
• automatic pump switches, including timers, pressure switches, constant flow switches and variable speed drives.

Assessment Requirements for AHCIRG340 Install irrigation pumps

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • work instructions and workplace procedures applicable to installing irrigation pumps
  • irrigation pump operation and maintenance manual
  • irrigation pump installation equipment
  • personal protective equipment applicable to installing irrigation pumps
• specifications:
  • irrigation pump installation tools and equipment and procedures
  • recording procedures
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated and maintained irrigation pumping equipment on at least two occasions and has:

- selected tools and equipment appropriate to the scope of works
- applied workplace health and safety requirements
- carried out the following operation and maintenance tasks:
  - inspected and cleaned pumps
  - adjusted pump settings
  - primed a pump
  - checked and cleared or replaced filters
  - replaced worn components, including pump seals, liners and impellers
  - tensioned fasteners and y-belts
  - monitored pressures and flows
  - used amperage testing equipment
  - replaced belts
  - set valves and checked for wear and leakages
  - cleared blockages
  - checked and topped-up fluids, including coolants, lubricants and hydraulic oils
  - checked oil quality and levels
  - lubricated pumps
  - performed start up and shutdown procedures
  - maintained clean work area and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
Assessment Requirements for AHCIRG341 Operate and maintain irrigation pumping systems

- workplace requirements applicable to health and safety in the workplace for operating and maintaining irrigation pumping systems
- advantages and disadvantages of each pump type
- pump performance and fault finding
- pumps and their application in irrigation, such as centrifugal, vertical turbine, submersible and propeller
- pumps that are suitable as booster and floating pumps
- automatic pump switches, including:
  - timers,
  - pressure switches,
  - irrigation controllers, and
  - flow switches
- properties of water including pressure and flow rates
- irrigation pump system operation and maintenance manual
- reading pump gauges and controls
- amperage testing equipment
- service and maintenance requirements of pumps
- basic principles of hydraulics, flow versus pressure
- discharge and flow rates
- impellers, rotors and stators
- pump components and their principles of operation
- valves and their uses.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigation pump system operation and maintenance manual
  - irrigation pump system equipment
  - irrigation pump system oil, lubricant, coolant and cleaning agents
  - amperage testing equipment
  - personal protective equipment applicable to operating and maintaining irrigation pumping systems
- specifications:
  - work instructions and workplace procedures applicable to operating and maintaining irrigation pumping systems
  - workplace requirements applicable to health and safety in the workplace and operating and maintaining irrigation pumping systems
  - irrigation pump system tools and equipment and procedures
  - servicing and maintenance recording procedures
- environmental procedures for collection, treatment, disposal or recycling of waste
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training, legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has interpreted irrigation plans and drawings on at least one occasion and has:

- interpreted symbols and abbreviations used on plans
- interpreted scale and specifications from plans and drawings
- recognised and marked out features on a site from a plan
- marked out boundaries and infrastructure position from a plan
- used basic industry calculations
- translated documented requirements into on-site activities and site and structural features from two-dimensional to three-dimensional formats.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonly used scales, symbols and abbreviations
- principles and practices of plan and drawing interpretation
- drawings and specifications relevant to the irrigation industry
- measurements, calculations and quantities
- tools, equipment and materials required from the drawings and specifications.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - compass
Assessment Requirements for AHCIRG342 Interpret irrigation plans and drawings

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated irrigation injection equipment on at least two occasions and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- selected and prepared injection materials
- completed relevant calculations such as dilution rates
- identified injection requirements
- implemented routine maintenance and minor repairs of the system
- reported and recorded corrective action
- taken corrective action in response to out-of-specification results or non-compliance
- handled hazardous chemicals safely
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- implemented routine system cleaning requirements
- monitored usage and dilution rates.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating irrigation injection equipment, including backflow prevention
- purpose and operation of equipment and instrumentation components
- chemicals, cleaning agents and fertilisers used for injection and their purpose
- safety data sheet (SDS) information for substances to be injected
- services required
- irrigation injection equipment operation and maintenance manual
• basic irrigation injection equipment operating principles and process control systems where relevant
• procedures for prevention of backflow
• process specifications, procedures and operating parameters
• control points and significance and methods of monitoring
• common causes of variation and corrective action required
• correct chemical handling techniques
• environmental issues and controls
• shutdown sequence
• lock-out and tag-out procedures
• irrigation injection equipment cleaning requirements and procedures
• recording requirements and procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • irrigation injection equipment operation and maintenance manual
  • irrigation injection equipment
  • injection chemicals, cleaning agents and fertilisers
  • personal protective equipment applicable to operating irrigation injection equipment
• specifications:
  • work instructions and workplace procedures applicable to operating irrigation injection equipment workplace requirements applicable to health and safety in the workplace and operating irrigation injection equipment
  • irrigation injection tools and equipment and procedures
  • SDS for substances being injected
  • recording procedures
  • environmental procedures for collection, treatment, disposal or recycling of waste
• relationships:
  • supervisor
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented an irrigation schedule on at least one occasion and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- accessed and interpreted the information in an irrigation schedule
- compared plant health and growth to benchmark requirements
- consulted with appropriate senior personnel or consultants
- instructed irrigation system operators
- implemented the irrigation schedule including consideration of:
  - application rates
  - interaction between different irrigation employees or shifts
  - maintenance programs and supplies
  - materials, chemicals, services
  - resources, including operators with appropriate skills
  - timing and length
  - liaised with other work areas
- identified irrigation requirements throughout the growing season by monitoring:
  - climatic conditions
  - crop stage and requirements if applicable
  - effective root depth
  - frost risk
  - plant varietal characteristics and requirements
  - signs of plant nutrient deficiencies
  - soil moisture levels
  - soil type and depth
  - symptoms of water stress
- water quality
- water table level
- monitored irrigation activities, including:
  - environmental impact of irrigation activities
  - identified emitter output consistency
  - identified soil moisture content and depth to which water will reach
  - reported and recorded problems and corrective action taken
  - taken corrective action in response to out-of-specification results or non-compliance
- applied sampling techniques
- conducted soil moisture tests
- identified, rectified and reported environmental non-compliance.

**Knowledge Evidence**

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for implementing an irrigation schedule
- resource requirements and availability
- irrigation strategies
- principles of soil moisture monitoring, including:
  - volumetric soil moisture content
  - percentage compared to soil moisture tension
- consultation requirements and procedures
- effect of irrigation techniques on plant growth
- visual symptoms of plant nutrient deficiencies, water stress and frost
- recording requirements and procedures
- sampling techniques and procedures
- testing techniques and procedures
- interpretation of routine soil moisture tests
- environmental impacts, hazards and controls for irrigation
- water budgeting tools.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigation equipment operation and maintenance manual
  - irrigation equipment
• soil and water sampling equipment
• personal protective equipment applicable to implementing an irrigation schedule
• specifications:
  • work instructions and workplace procedures applicable to implementing an irrigation schedule
  • irrigation technology tools and equipment and procedures
  • workplace requirements applicable to health and safety in the workplace and implementing the irrigation schedule
• soil and water testing equipment and procedures
• recording procedures
• relationships:
  • personnel
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has installed pressurised irrigation systems on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- organised resources for installation work
- set out and prepared the site
- completed installation work
- calibrated testing and monitoring equipment
- commissioned irrigation system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for installing pressurised irrigation systems
- water quality and water filtration techniques
- the behaviour of water on varying terrain and soil types
- soil characteristics
- soil water retention testing techniques
- calculations for installing pressurised irrigation systems
- characteristics and operation of joints, valves and sprinkler components
- components of a pressurised irrigation system
- methods and techniques of installing pressurised irrigation
- operation of pumps and water flow rates.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - pressurised irrigation system operation and maintenance manual
  - pressurised irrigation system installation equipment
  - personal protective equipment applicable to installing pressurised irrigation systems

- **specifications:**
  - work instructions and workplace procedures applicable to installing pressurised irrigation systems
  - workplace requirements applicable to health and safety in the workplace and installing pressurised irrigation systems
  - pressurised irrigation system installation tools and equipment and procedures
  - recording procedures

- **relationships:**
  - supervisor

- **timeframes:**
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<td></td>
<td>1.7 Carry out other pre-start system checks</td>
</tr>
</tbody>
</table>

2. Inspect and operate the system

| 2.1 | Implement start up sequence according to operation and maintenance procedures |
| 2.2 | Check emitter spacing against the irrigation plan |
| 2.3 | Adjust water pressure as required |
| 2.4 | Clear and replace filters as required |
| 2.5 | Correct or repair all malfunctions, leaks and blockages and report |

3. Monitor irrigation system performance

| 3.1 | Check emitters for output |
| 3.2 | Calculate application rate of water |
| 3.3 | Check the water distribution pattern in the irrigated area |
| 3.4 | Monitor moisture levels in the root zone |
| 3.5 | Minimise environmental impacts of the operation |

4. Shut down irrigation system

| 4.1 | Apply water for sufficient time to achieve required soil moisture levels and allow for weather conditions |
| 4.2 | Shut down system components and drain |
| 4.3 | Record and report irrigation activities according to workplace recording procedures |

### Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated a pressurised irrigation system on at least two occasions and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- read and followed operations manual and procedures
- started the system and carried out operational checks
- monitored system effectiveness, including:
  - application rates
  - depth of irrigation
  - emitter output
  - irrigation times
  - pressure variations and blockages
  - salinity levels and water quality
- carried out measurements for output and distribution
- measured and interpreted flow rates and pressures
- assessed soil moisture levels
- performed shut down procedures
- recorded data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating pressurised irrigation systems
- electrical hazards, including:
  - contact with pumps, motors, other live components
• short circuits
• standing laterals to remove blockages
• water spray onto power lines
• energy efficiency indicators and benchmarks for pressurised irrigation
• pressurised irrigation equipment operation and maintenance manual
• main components of pressurised irrigation systems
• pump types used in irrigation systems and their operation
• general irrigation methods for low volume systems
• principles of irrigation and the water cycle
• critical measures for moisture availability, including:
  • evapotranspiration
  • field capacity
  • infiltration rates
  • readily available water
  • water holding capacity
  • wilting point
• soil characteristics
• soil, plant and water relationships
• water requirements of plants and crops consistent with sound environmental management
• environmental impacts of irrigation using water from any ground or underground source
• shutdown sequence and flushing procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • pressurised irrigation system operation and maintenance manual
  • pressurised irrigation system equipment
  • personal protective equipment applicable to operating pressurised irrigation systems
• specifications:
  • work instructions and workplace procedures applicable to operating pressurised irrigation systems
  • pressurised irrigation system tools and equipment and procedures
  • workplace requirements applicable to health and safety in the workplace and operating pressurised irrigation systems
  • recording procedures
• relationships:
  • supervisor
• timeframes:
• according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

| 1. Interpret a pressurised irrigation maintenance program | 1.1 Determine the scope of maintenance  
1.2 Determine the frequency of maintenance works  
1.3 Establish irrigation maintenance standards  
1.4 Plan and prepare maintenance works  
1.5 Identify potential hazards and risks and implement safe working |
### Elements

**Elements**

Elements describe the essential outcomes.

- Practices to manage risks
  - 1.6 Minimise environmental impacts of irrigation maintenance activities
  - 1.7 Select, fit and use personal protective equipment applicable to the task

**Performance Criteria**

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. **2. Inspect an irrigation system**

   - 2.1 Create an inspection checklist and inspect the system regularly
   - 2.2 Identify remedial action required and undertake repairs to restore system to full effectiveness
   - 2.3 Undertake servicing of irrigation mechanical equipment according to operation and maintenance manual
   - 2.4 Assess the results of maintenance works and record to ensure repairs or maintenance standards have been achieved

2. **3. Carry out periodic system maintenance**

   - 3.1 Record damage and blockages with contaminants by damage type, location and the section of the system affected
   - 3.2 Record and report damaged or faulty components and computer control systems and take action to effect repairs
   - 3.3 Implement end of season maintenance procedures
   - 3.4 Implement routine and preventative maintenance procedures

3. **4. Complete and record maintenance activities**

   - 4.1 Restore site and clear materials and equipment from the site on completion of maintenance works
   - 4.2 Complete maintenance and servicing records according to workplace recording procedures
   - 4.3 Record parts removed or replaced
   - 4.4 Record and report faults and breakages

### Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has maintained a pressurised irrigation system on at least two occasions and has:

- interpreted and applied maintenance procedures
- applied workplace health and safety requirements
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- checked connections and controllers
- checked sprinkler/emitter output and function
- ensured proper operation of automatic flush valves
- removed, serviced and replaced valves and filters
- confirmed operational pressures
- tested irrigation equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for maintaining pressurised irrigation systems
- pressurised irrigation equipment operation and maintenance manual
- characteristics, operation and common operation and maintenance problems of pressurised irrigation system components, including:
  - pipes,
  - joints,
  - valves,
  - emitters, and
  - pumps.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - pressurised irrigation system operation and maintenance manual
  - personal protective equipment applicable to maintaining pressurised irrigation systems
- specifications:
  - work instructions and workplace procedures applicable to maintaining pressurised irrigation systems
  - pressurised irrigation system tools, equipment and procedures
  - workplace requirements applicable to health and safety in the workplace and maintaining pressurised irrigation systems
  - recording procedures
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated and maintained a moving irrigation system on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools and equipment appropriate to the scope of works
- checked all bolts for correct torques
- tensioned span pipes with V-jack trusses
- fitted control panel and wheels
- started-up system and carried out operational checks
- checked injection pump and safety equipment operation
- read and followed operations manuals and irrigation schedules
- used control systems
- monitored system effectiveness
- checked for malfunctioning sprinklers
- measured and interpreted flow rates and pressures
- operated pressure and flow testing equipment
- taken and recorded measurements of output and efficiency
- greased drive shafts on pump and motor
- inspected lift base and arms for any stress marks or cracks
- changed engine oil and filter
- completed regular and end of season maintenance tasks
- shut down, cleaned equipment and disposed of waste
- recorded and reported irrigation activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• workplace requirements applicable to health and safety in the workplace for operating and maintaining moving irrigation systems
• installation and maintenance requirements of moving sprinkler irrigation systems
• pumps used in moving sprinkler irrigation systems and their operation
• calibration and testing equipment operation and maintenance manual and manufacturer specifications
• behaviour of water on varying terrain and soil types
• monitoring soil compaction and drainage
• soil water retention testing techniques
• soil, plant and water relationships
• water quality and water filtration techniques
• water requirements of plants and crops consistent with sound environmental management
• shutdown sequence.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • moving irrigation system materials, tools and equipment
  • relevant moving irrigation systems equipment
  • personal protective equipment applicable to operating and maintaining moving irrigation systems
• specifications:
  • work instructions and workplace procedures applicable to operating and maintaining moving irrigation systems
  • workplace requirements applicable to health and safety in the workplace and operating and maintaining moving irrigation systems
  • calibration and testing equipment operation and maintenance manual and manufacturer specifications
  • recording procedures
• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training, legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to determine hydraulic parameters for an irrigation system.

It applies to individuals who analyze information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyze, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can:

- apply hydraulic principles to manual and computerised irrigation systems
- calculate pressures, flows, velocities and friction losses
- determine efficiency of the system with varying system components
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- read contour maps and interpret elevations and distances

Knowledge Evidence

The candidate must demonstrate knowledge of:

- calculate pressure loss due to irrigation components
- calculate pumping requirements
- hydraulic principles such as static and dynamic pressure, pressure loss, friction loss, flow rate and velocity, effect of gradient on flow rate, contact time and drainage
- irrigation system components
- types and pressure ratings for pipes, fittings and outlets

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- apply and comply with environmental requirements
- calculate stormwater control requirements
- explain and demonstrate the organisation’s environmental record systems and procedures
- identify adverse environmental impacts of irrigation activities and taking appropriate remedial action
- provide and explain information on the irrigation and drainage environmental plan

Knowledge Evidence

The candidate must demonstrate knowledge of:
- environmental impacts of irrigation, using water from any ground or underground source
- environmental legislation, regulations and guidelines
- work health and safety procedures relating to investigation of irrigation-related hazards and implementation of an environmental protection program

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply a measured amount of water
- assess the efficacy of irrigation and repeat cycles of irrigation
- incorporate data from in-field equipment and remote monitoring sources into scheduling systems that compute irrigation requirement
- monitor crop and plant water use
- plan for extremes of weather
- record irrigation and scheduling parameters
- use and maintain in-field equipment that monitors the plant environment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- in-field irrigation reticulation performance and its capacity limits
- inter-relationship between plant, soil and the aerial environments in the determination of water budgets
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- plant and crop response to moisture stress at different stages of growth
- possible adverse impacts on the crop and environment from inefficient scheduling or unpredictable weather effects
- recognition of moisture stress effects (sometimes desired) on plants
- relevant environmental policies and procedures
- water authority standards and procedures
- water quality monitoring methods and acceptable quality limits
• weather forecasting of extreme weather events such as heat waves, frosts and storms, and appropriate contingency tactics to minimise impacts

**Assessment Conditions**
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- conduct work health and safety risk assessment
- develop operational procedures
- implement employment procedures
- interpret irrigation designs
- supervise installation tasks such as:
  - assembling sprinklers, pressure regulators and hose directors
  - checking operating specifications for pressures and flow rates
  - completing installation work and testing components
  - installing irrigation components
  - installing power and pumping plant
  - laying and joining sprinkler lateral pipelines
  - laying and joining supply and distribution pipeline
  - pressure testing the system
  - setting out and preparing site
  - setting up irrigation controllers
  - undertaking start-up procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of irrigation system installation supervision
- behaviour of water on varying terrain and soil types
- calculations for installing low volume irrigation systems
Assessment Requirements for AHCIRG431 Supervise irrigation system installation

Date this document was generated: 3 September 2020

- characteristics and operation of joints, valves and sprinkler components
- commissioning procedures
- design interpretation
- distribution uniformity
- employment procedures
- licensing requirements for electrical work
- operating specifications for pressures and flow rates
- project management principles
- pump capacity
- safe work practices for construction
- setting up fertigation equipment
- setting up irrigation controllers
- soil water retention testing techniques
- start-up procedures
- types of pumps and water flow rates
- volume and pressure requirements
- water quality and water filtration techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop procedures and providing training to staff to:
- carry out running repairs on irrigation delivery and drainage systems
- carry out shut down procedures
- check pressure at the head works and control valves
- set up pipes, system equipment and outlets
- use siphons
- develop procedures for starting up, carrying out operational checks and shutting down
- identify and record variations in water flow and distribution
- identify adverse environmental impacts of irrigation activities and take appropriate remedial action
- implement and follow workplace health and safety and environmental requirements
- measure and recording water flow rates
- provide supervision and training

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of surface irrigation management
- calculating irrigation efficiency using records to review an irrigation system
- critical measures for moisture availability:
  - evapotranspiration
  - field capacity
  - infiltration rates
• readily available water
• water holding capacity
• wilting point
• environmental impacts of irrigation using water from any ground or underground source
• main components of surface irrigation systems
• physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
• pump types used in surface irrigation systems and their operating requirements
• pump types used in surface irrigation systems and their operation
• set up of headwater, tail water, channels and beds
• soil moisture testing techniques
• water in soils and plants
• water requirements of plants and crops consistent with sound environmental management

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has determined hydraulic parameters for an irrigation system on at least one occasion and has:

- read contour maps and interpreted elevations and distances
- applied hydraulic principles to manual and computerised irrigation systems
- calculated pressures, flows, velocities and friction losses
- determined efficiency of the system with varying system components.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- contour maps
- hydraulic principles such as static and dynamic pressure, pressure loss, friction loss, flow rate and velocity, effect of gradient on flow rate, contact time and drainage
- calculate pumping requirements
- irrigation system components
- types and pressure ratings for pipes, fittings and outlets
- calculate pressure loss due to irrigation components.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - contour maps
- specifications:
• irrigation system water delivery specifications
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to implement an irrigation related environmental protection program.

The unit applies to individuals who apply specialised skills and knowledge to the implementation of an irrigation related environmental protection program and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented an irrigation related environmental protection program on at least one occasion and has:

- provided and explained information on the irrigation and drainage environmental protection plan
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- explained and demonstrated the workplace environmental record system and procedures
- applied and complied with relevant environmental protection legislation, regulation, codes of practice, and workplace procedures
- calculated stormwater control requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts of irrigation, using water from any ground or underground source
- environmental protection legislation, regulation, codes of practice, and workplace procedures relevant to irrigation related environmental protection programs
- workplace health and safety procedures relating to investigation of irrigation related hazards and implementation of an environmental protection plan.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
Assessment Requirements for AHCIRG436 Implement an irrigation-related environmental protection program

- stormwater measuring equipment and procedures
- specifications:
  - irrigation and drainage environmental protection plan
  - relevant environmental protection legislation, regulation, codes of practice, and workplace procedures
- relationships:
  - property owner, manager and staff
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has scheduled irrigation on at least one occasion and has:

- monitored crop and plant water use
- applied a measured amount of water
- assessed the efficacy of irrigation and repeat cycles of irrigation
- used and maintained in-field equipment that monitors the plant environment
- incorporated data from in-field equipment and remote monitoring sources into scheduling systems that compute irrigation requirements
- recorded irrigation and scheduling parameters
- planned for extremes of weather.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- inter-relationship between plant, soil and the environment in the determination of water budgets
- plant and crop response to moisture stress at different stages of growth
- recognition of moisture stress effects on plants, including instances where stress may be required
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- water quality monitoring methods and acceptable quality limits
- in-field irrigation reticulation performance and capacity limits
- possible adverse impacts on the crop and environment from inefficient scheduling or unpredictable weather effects
- weather forecasting of extreme weather events such as heat waves, frosts and storms, and appropriate contingency strategy to minimise impacts.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - irrigation scheduling equipment
  - irrigation in-field measuring equipment and data
- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has selected and managed an irrigation pumping system on at least one occasion and has:

- identified irrigation system requirements from the irrigation design
- selected pump according to type, installation, range of flow rates, operating head and delivery distance
- calculated pumping requirements and pressure loss due to irrigation components
- supervised installation of pumps
- monitored the performance of pumps, valves and filters
- developed maintenance procedures for the pumping system
- carried out troubleshooting on the pumping system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- application of mechanical, hydraulic and electrical principles
- automatic pump switches, including:
  - flow switches
  - irrigation controllers
  - pressure switches
  - timers
- sources of information and the processes for the calculation of material requirements and flow rates
- advantages and disadvantages of each pump type
- selection factors for pumps, including:
  - source of water and lift
  - the required pumping flow rate and pressure
● the total dynamic head
● the total suction head
● types of pumps and application in irrigation, including:
  ● centrifugal
  ● propeller
  ● submersible
  ● vertical turbine
● types of pumps suitable as booster and floating pumps
● discharge and flow rates
● types of impellers and their use
● environmental procedures for installing and maintaining irrigation pumping systems
● pump installation factors, including:
  ● adequate space, head room, ventilation and lighting
  ● correct alignment procedures of pump and motor shafts with direct coupled units
  ● provision for adjustment and ease of dismantling
  ● levelling and alignment processes
  ● overhaul or repair operations
  ● properties of water including pressure and flow rates
  ● pump components and their principles of operation
  ● pump efficiency, performance and pressure testing
  ● pump positioning (driver alignment and suction length)
  ● access for routine preventative maintenance
● types of valves
● pump cavitation, cause and effect.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

● physical conditions:
  ● a workplace setting or an environment that accurately represents workplace conditions
● resources, equipment and materials:
  ● irrigation pumping system equipment and tools
  ● irrigation pumping system measuring, and recording equipment and procedures
● timeframes:
  ● according to the job requirements.

Assessors of this must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has interpreted and applied an irrigation design on at least one occasion and has:

- read contour maps and interpreted elevations and distances
- interpreted technical drawings and site plans
- documented and communicated as constructed drawings, safety procedures and material requirements
- marked out procedures
- interpreted pressures, flows, velocities and friction losses
- determined efficiency of the system with varying system components
- documented and communicated installation sequence of operations, activities, work duties and construction schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- erosion control and design principles
- principles and practices of irrigation design interpretation
- how to interpret plans, and general and technical specifications
- hydraulic calculations
- principles of native topsoil conservation and protection
- relevant work health and safety and environmental requirements
- levels and levelling
- pumps and pumping system components
- selection of water pumping and distribution components delivery based on specifications and requirements.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigation system site
  - site measuring, mark out and pegging tools and equipment
- specifications:
  - irrigation design, drawings, plans and specifications
- relationships:
  - designer, staff
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed a moving sprinkler irrigation system on at least two occasions and has:

- developed and supervised procedures for moving sprinkler irrigation system, including:
  - pre-start valve adjustment, and filter and emitter checking
  - start up
  - shutdown
  - isolation
  - system flushing
- removed and installed system components according to operation and maintenance manual and workplace environmental procedures
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- measured, interpreted and adjusted flow rates and pressures
- monitored and recorded system effectiveness, including:
  - application rates
  - depth of irrigation
  - infiltration and runoff
  - irrigation times
  - pressure variations and blockages
  - salinity levels and water quality
  - soil moisture levels
  - sprinkler coverage and output
- measured and recorded output and efficiency of an irrigation system
- used records to review an irrigation system.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- irrigation schedules
- general irrigation methods for moving sprinkler systems
- main components of moving sprinkler irrigation systems
- best practices for reducing environmental impacts of irrigation
- component specifications
- environmental hazards of runoff and compaction
- environmental impacts of irrigation using water from any ground or underground source
- moving sprinkler irrigation technologies
- moving sprinkler and travelling mechanism operation and maintenance manual servicing and maintenance procedures
- critical measures for moisture availability, including:
  - field capacity
  - readily available water
  - wilting point
- soil compaction and drainage monitoring
- soil moisture testing techniques
- soil, plant and water relationships
- water requirements of plants and crops consistent with sound environmental management
- pump types used in moving sprinkler irrigation systems and their output and efficiency ratings
- pump types used in moving sprinkler irrigation systems and their operation
- energy efficiency indicators and benchmarks for moving sprinkler irrigation, including:
  - application efficiency
  - average application rate
  - instantaneous application rate
- physical soil characteristics, including:
  - infiltration rate
  - water holding capacity
  - wetted volume in the root zone.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - moving sprinkler irrigation system equipment and tools
  - moving sprinkler irrigation system measuring, and recording equipment and manual
Assessment Requirements for AHCIRG440 Manage a moving sprinkler irrigation system

Date this document was generated: 3 September 2020

- specifications:
  - moving sprinkler and travelling mechanism operation and maintenance manual
  - environmental procedures applicable to moving sprinkler irrigation systems
  - industry energy and water efficiency benchmarks
- timeframes:
  - according to the job requirements
- relationships:
  - staff members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to determine irrigation water needs, assess water quality of water source, determine cost and availability of alternative water sources and complete water sourcing or acquisition arrangements.

The unit applies to individuals who apply specialised skills and knowledge to evaluate water supply for irrigation. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has evaluated water supply for irrigation on at least one occasion and has:

- estimated the irrigation requirements of plants
- calculated water losses in an irrigation system
- interpreted results for electrical conductivity of irrigation water
- taken water samples
- calculated capital and operating expenditure for a water supply system
- compared costs for different water sources.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- plant water requirements in terms of water quality and frequency of supply
- salinity and composition impacts on soil structure and plant growth
- soils and water, soil moisture retention and movement, plant root zones and development, infiltration and leaching
- climatic factors in irrigation development, rainfall, evaporation, evapotranspiration and hydrology
- irrigation drainage, seepage, surface and subsurface drainage systems
- irrigation scheduling, soil moisture measurement
- efficiency of irrigation systems and long-term viability
- management planning and operation of water allocations
- cost benefit analysis
- capital and operating expenditure calculations to source water
- operations and maintenance requirements
- legislation relevant to the supply of water for irrigation.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **Physical conditions:**
  - A workplace setting or an environment that accurately represents workplace conditions
- **Resources, equipment and materials:**
  - Water source sampling and testing equipment and procedures
  - Legislation relevant to the supply of water for irrigation
- **Timeframes:**
  - According to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supervised an irrigation system installation on at least one occasion and has:

- implemented employment procedures
- conducted work health and safety risk assessment
- developed irrigation system construction and installation procedures
- interpreted irrigation designs
- supervised installation tasks including:
  - assembling sprinklers, pressure regulators and hose directors
  - checking operating specifications for pressures and flow rates
  - completing installation work and testing components
  - installing irrigation components
  - installing power and pumping plant
  - laying and joining sprinkler lateral pipelines
  - laying and joining supply and distribution pipeline
  - pressure testing the system
  - setting out and preparing site
  - setting up irrigation controllers
  - undertaking start-up procedures
- developed irrigation system operating procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- employment procedures
- project management principles
- safe work practices for construction
- design interpretation
- volume and pressure requirements
- water quality and water filtration techniques
- behaviour of water on varying terrain and soil types
- calculations for installing low volume irrigation systems
- operating specifications for pressures and flow rates
- pump capacity
- types of pumps and water flow rates
- licensing requirements for electrical work
- equipment and machinery operation and maintenance manual
- principles and practices of irrigation system installation supervision
- characteristics and operation of joints, valves and sprinkler components
- setting up fertigation equipment
- distribution uniformity
- start-up procedures
- setting up irrigation controllers
- commissioning procedures
- soil water retention testing techniques.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - irrigation system testing and monitoring equipment and manual specifications:
  - workplace procedures applicable to health and safety in the workplace, environment and irrigation system installation
- **relationships**
  - client, authorities and agencies
- **timeframes:**
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supervised irrigation system maintenance on at least one occasion and has:

- developed workplace procedures for pre-season, irrigation and post-season maintenance
- carried out visual checks for blockages or signs of wear in components
- checked connections and controllers
- checked sprinkler output and function
- confirmed operational pressures
- ensured proper operation of automatic flush valves
- inspected irrigation systems
- serviced irrigation equipment
- pressure tested systems
- tested emitter output and function
- tested irrigation equipment
- maintained testing equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of irrigation system maintenance supervision
- operation and maintenance requirements
- workplace procedures for pre-season, irrigation and post-season maintenance
- pre and post-season maintenance procedures
- workplace health and safety hazards and safe work procedures
- environmental impacts of irrigation maintenance
- drainage systems
- system components
Assessment Requirements for AHCIRG443 Supervise irrigation system maintenance

- system inspection
- operating pressures and output
- pumping and distribution systems
- distribution uniformity
- visual checks for blockages or signs of wear in components

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed the operations of an irrigation system on at least two occasions and has:

- measured, interpreted and adjusted flow rates and pressures
- developed procedures for irrigation system start up, shutdown and operational checks
- accessed and prepared data records for both print-based and computer-based data
- calculated pressure differentials, flow rates, crop yields, estimated water usage and actual water usage
- monitored system effectiveness
- applied measuring and testing techniques
- measured output and efficiency of an irrigation system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of irrigation system management
- irrigation schedules
- irrigation technologies
- component specifications
- pump types used in irrigation systems and their output and efficiency ratings
- soil moisture testing techniques
- using records to review an irrigation system
- water in soils and plants.

Assessment Conditions

Assessment of skills must take place under the following conditions:
Assessment Requirements for AHCIRG444 Manage irrigation systems

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - irrigation system measuring, and recording equipment and manual specifications:
  - industry energy and water efficiency benchmarks
  - computer for record keeping and managing data
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare a surface irrigation system for operation, develop and implement start-up, shutdown and isolation procedures, trouble shoot for faults and blockages, and measure and review surface irrigation system performance.

The unit applies to individuals who apply specialised skills and knowledge to the management of surface irrigation systems and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed the operations of a surface irrigation system on at least two occasions and has:

- developed procedures and provided staff training to:
  - perform running repairs on irrigation delivery and drainage systems
  - carry out shut down procedures
  - check pressure at the head works and control valves
  - set up pipes, system equipment and outlets
  - use siphons
- developed procedures for surface irrigation system start up, shutdown and operational checks
- identified and recorded variations in water flow and distribution
- measured and recorded water flow rates.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of surface irrigation management
- main components of surface irrigation systems
- water in soils and plants
- pump types used in surface irrigation systems their operation and operating requirements
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- soil moisture testing techniques
- set up of headwater, tail water, channels and beds
- critical measures for moisture availability, including:
  - evapotranspiration
Assessment Requirements for AHCIRG445 Manage surface irrigation systems

- field capacity
- infiltration rates
- readily available water
- water holding capacity
- wilting point
- calculating irrigation efficiency using records to review an irrigation system.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - surface irrigation system equipment and tools
  - surface irrigation system measuring, and recording equipment and manual
- specifications:
  - industry energy and water efficiency benchmarks
- timeframes:
  - according to the job requirements
- relationships
  - staff interactions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- analyse and organise data
- identify adverse environmental impacts of irrigation system activities and recommend appropriate remedial action
- recommend relevant work health and safety and environmental procedures
- solve performance problems and recommend solutions
- use computer software for irrigation auditing

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental impacts of irrigation systems using water from any ground or underground source
- evaluation procedures
- irrigation system performance indicators
- relevant workplace health and safety legislation, codes of practice and enterprise requirements
- statistical data analysis procedures or software

Assessment Conditions

Assessors must satisfy current standards for RTOs.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- collect and analyse information
- compare costings
- develop budgets
- develop system specifications
- document outcomes
- identify adverse environmental impacts of irrigation, drainage, water treatment and storage activities and take appropriate remedial action
- identify system design requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- contractual development and obligations
- control and monitoring systems
- cost/benefit analysis
- design processes
- developments in irrigation, drainage, storage and treatment technology
- environmental impacts of irrigation, drainage and water treatment
- soil types and their impact on the systems
- work health and safety and environmental protection legislation and regulations, codes of practice and enterprise policies and procedures
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- compile and analyse complex information
- develop and implement relevant work health and safety and environmental procedures
- develop plans and reports
- identify adverse environmental impacts of irrigation system activities and recommend appropriate remedial action
- interpret statistical data and measurements
- use a range of irrigation and information management software

Knowledge Evidence

The candidate must demonstrate knowledge of:

- computerised irrigation systems
- enterprise policies and procedures
- environmental impacts of irrigation systems using water from any ground or underground source
- irrigation system options
- measuring and monitoring procedures
- methods and techniques of irrigation
- readily available water
- soil, plant and water relationships
- water table and salinity
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to identify design requirements, determine specifications, define pumping and power system requirements, determine capital expense and operating expense budgets, and design irrigation systems.

The unit applies to individuals who apply specialised skills and knowledge to the design of irrigation systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has designed an irrigation system on at least one occasion and has:

- collected and analysed information for the design
- compared costings
- developed system specifications
- documented outcomes
- identified system design requirements
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- developed budgets.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- developments in irrigation technology
- workplace health and safety and environmental protection legislation and regulations, codes of practice and workplace policies and procedures relevant for the irrigation system design
- soil types and their impact on the systems
- design processes
- environmental impacts of irrigation systems
- control and monitoring systems
- cost/benefit analysis.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • regional geology and geography information
  • irrigation system sites
• specifications:
  • irrigation system water and soil testing equipment and procedures
  • local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to irrigation system design
• relationships:
  • local authorities, appropriately experienced and qualified person
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has audited an irrigation system on at least two occasions and has:

- analysed and organised data
- identified adverse environmental impacts of irrigation system activities and recommended appropriate remedial action
- recommended relevant workplace health and safety and environmental procedures
- used computer software for irrigation auditing
- solved performance problems and recommended solutions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts of irrigation systems using water from any ground or underground source
- relevant workplace health and safety legislation, codes of practice and workplace requirements
- statistical data analysis procedures and software
- evaluation procedures
- irrigation system performance indicators.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
• irrigation system performance data related to irrigation system being audited
• system specifications and performance prediction information related to irrigation system being audited
• computer and statistical data analysis procedures and software

• relationships:
  • property owner or manager

• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed an irrigation and drainage management plan on at least one occasion and has:

- compiled and analysed complex information
- used a range of irrigation and information management software
- interpreted statistical data and measurements
- developed plans and reports
- developed and implemented relevant workplace health and safety and environmental procedures
- identified adverse environmental impacts of irrigation system activities and recommended appropriate remedial action.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures relevant to irrigation and drainage management planning
- measuring and monitoring procedures
- readily available water
- water table and salinity
- soil, plant and water relationships
- computerised irrigation systems
- methods and techniques of irrigation
- environmental impacts of irrigation systems using water from any ground or underground source
- irrigation system options.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computer and irrigation and information management software
- specifications:
  - workplace policies and procedures relevant to irrigation and drainage management planning
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to establish and maintain an irrigation-related environmental protection program.

The unit applies to individuals who apply specialised skills and knowledge to establish and maintain an irrigation-related environmental protection program, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has established and maintained an irrigation-related environmental protection program on at least one occasion and has:

- developed environmental protection program, plan, policies and procedures
- used technology to draft documents, develop environmental information and audit data bases
- developed and implemented relevant workplace health and safety and environmental procedures
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- applied and complied with environmental requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts of irrigation, using water from any ground or underground source
- environmental protection planning for irrigation and drainage
- external factors that may affect the system
- relevant workplace health and safety and environmental protection legislation, regulation, codes of practice and workplace procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
Assessment Requirements for AHCIRG510 Establish and maintain an irrigation-related environmental protection program

- workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace procedures applicable to establishing and maintaining an irrigation-related environmental protection program
- relationships:
  - property owner, manager, staff, environmental protection agency and local government authorities
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to carry out minor service of milking equipment.

This unit applies to technicians and dairy farm workers who service and repair milking machine components.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify faults in milking machines
- identify external faults
- carry out operational service and maintenance of milking machines
- apply enterprise work health and safety policies

Knowledge Evidence
The candidate must demonstrate knowledge of:

- types, functions, cleaning, monitoring and maintenance of milking machines and components
- criteria and methods for assessing optimal performance of milking machines and their components
- possible faults, problems and poor performance with milking machines and their components, impacts on milking operations and corrective actions for these faults and problems
- signs and methods for assessing livestock health and welfare relevant to milking operations
- recognition of possible faults with earthing systems, grids and electric motors of milking machines and refer faults to qualified electricians
- relevant work health and safety requirements
Assessment Conditions

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

- requirements and methods for determining the performance targets of a milking enterprise from the herd status and milking installations
- possible faults, problems and poor performance with milking machines and their components, impacts on milking operations and corrective actions for these faults and problems
- relevant work health and safety requirements
- key aspects and components of reports and recommendations to a milking enterprise
Assessment Conditions

Competency is to be assessed in the workplace OR workplace and simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to undertake work using a side by side utility vehicle used for general transport, carrying loads, towing small trailers and mustering stock.

All work must be carried out to comply with workplace procedures, work health and safety requirements manufacturer’s specifications and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Machinery operation and maintenance (MOM)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify hazards and risks associated with side by side utility vehicle use
- conduct pre and post operational checks
- operate side by side utility vehicles in a safe, efficient and controlled manner
- minimise environmental impacts of side by side utility vehicle use
- perform any required minor maintenance
- follow wash-down procedures in line with biosecurity guidelines
- follow enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:
- equipment characteristics, technical capabilities and limitations
- safe driving techniques in a range of surface conditions and terrain
- transporting the side by side utility vehicles on a trailer or transportation device
- manufacturer's specifications and workplace requirements for pre-start checks, machinery operation techniques, load carrying operator level servicing and shutdown emergency procedures
- components and controls, features and functions
- enterprise work health and safety policies
- relevant State /Territory legislation in regard to side utility vehicle use
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting. All evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Assessors must satisfy current standards for RTOs.

</table>

Application

This unit of competency describes the skills and knowledge required to operate and maintain quad bikes as well as load and unload them onto trailers or other vehicles used for their transport.

All work must be carried out to comply with workplace procedures, work health and safety requirements manufacturer’s specifications and operator manuals and sustainability practices.

Working with quad bikes is an inherently dangerous activity. Individuals who work at this level must be thoroughly instructed in all work health and safety aspects of operating quad bikes.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and provide solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Machinery operation and maintenance (MOM)
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

### 1. Prepare a quad bike for operation

1.1 Confirm the activity to be undertaken with supervisor, including potential hazards and implementation of safe working procedures
1.2 Select, fit correctly, use and maintain personal protective equipment including helmets
1.3 Conduct safety pre operational checks on quad bike and report faults or malfunctions for repair
1.4 Identify safe work areas and applications (loads and attachments) from workplace safety plan and operators manual
1.5 Unload quad bike safely from the trailer or transportation device

### 2. Operate a quad bike

2.1 Recognise and control risks to self and others
2.2 Steer, manoeuvre, position and stop quad bike in a smooth and controlled manner
2.3 Apply hand-eye coordination and transfer of body weight appropriately (active riding) to maintain bike stability
2.4 Identify and avoid riding surfaces, terrains and slopes that are dangerous to safe operation
2.5 Identify environmental implications associated with machinery operation and minimise impact
2.6 Identify and account for biosecurity implications associated with machinery operation

### 3. Complete and check quad bike operation

3.1 Conduct shut-down procedures
3.2 Perform routine operational servicing and minor maintenance
3.3 Identify and report malfunctions, faults, irregular performance or damage
3.4 Clean, secure and store quad bike
3.5 Follow wash-down procedures in line with biosecurity guidelines where required
3.6 Maintain quad bike use records for servicing purposes
3.7 Load and secure quad bike safely

## Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions
No passengers, no riders under 16 years of age, no towing, helmets must be worn at all times.

Candidates must NOT be under the influence of any alcohol or drugs. Candidates must NOT be taking any medication (prescribed or otherwise) that may impair judgement.

Unit Mapping Information
This unit is equivalent to AHCMOM212A Operate quad bikes.

Performance Evidence

The candidate must be observed operating a quad bike using safe work procedures.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify hazards and risks associated with quad bike use
- identify safe work areas
- select, fit correctly, use and maintain personal protective equipment including helmets
- operate quad bikes in a range of riding surface conditions and terrain conditions
- steer, manoeuvre, position and stop the quad bike in a smooth and controlled manner
- apply hand-eye coordination and correctly transfer body weight (active riding) to maintain bike stability including riding on uneven or steep terrain
- follow enterprise work health and safety procedures
- unload and load quad bike safely
- follow wash-down procedures in line with biosecurity guidelines

Knowledge Evidence

The candidate must demonstrate knowledge of:
- hazards and risks associated with quad bike use
- components, controls and features of quad bikes and their functions
- a range of quad bikes and functional applications
- operating principles and operating methods of quad bikes
- manufacturer’s instructions, including but not exclusive to the operating manual
- load limits and the principles of weight distribution with regard to load shifting and bike movement including riding on uneven or steep terrain
- loading and unloading safely from a trailer or other transportation device
• effects of different riding surfaces and terrain conditions on the operation of quad bikes

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting. All evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Assessment must be conducted in a range of riding surface conditions and in a range of terrains appropriate for the safe use of quad bikes.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop an organic management plan (OMP).

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes, and sustainability practices.

This unit applies to those producers who develop an OMP to convert an agricultural or horticultural farm to an organic, biological and ecological system. It requires the capability to set objectives to meet organic certification requirements of the National Standard for Organic and Biodynamic Produce.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters and use discretion and judgment in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify and develop required components of an OMP for a property
- understand and use interrelationships between soil, plant and animal health and farming system's resilience when developing plan
- identify options for prevention and treatment of risks
- apply appropriate regional catchment targets
- document the plan in compliance with certification requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles of organic agriculture, especially fundamental role of soil health
- principles of sustainable production
- requirements and components of an OMP
- systems approach to agriculture and horticulture
- organic and biodynamic certification requirements

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify requirements for organic certification and apply them to one's enterprise
- identify critical points in supply chain at which the organic integrity of one's product may be compromised
- implement and monitor effective risk management for those parts of supply chain under one's control
- identify practices and strategies to minimise the risk of contamination and non-conformance with organic standards
- develop an operational plan for conversion to organic production

Knowledge Evidence

The candidate must demonstrate knowledge of:

- certification process
- chain of custody
- HACCP (Hazard Analysis and Critical Control Points) principles and risk management
- health and food safety requirements and issues
- labelling requirements for domestic and export markets
- market for organic produce, including the organic movement and organic industry
- National Standard for Organic and Biodynamic Produce
- principles of organic agriculture
- procedures and responsibilities in the case of product recall
- procedures for conducting and documenting a risk assessment
- regulatory requirements and their domestic and international contexts
• requirements of an OMP, including record keeping
• role of quality management systems in organic industry including documentation requirements
• working knowledge of the regulated organic industry, including the role of the government, certification bodies and inspectors

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to locate and access assistance, and design an organic management plan (OMP) or biodynamic management plan (BMP), develop soil fertility plan and soil, weed, integrated pest and disease, animal health and environmental sub-plan's and integrate and finalise the OMP or BMP.

The unit applies to individuals who apply specialised skills and knowledge to the development of an OMP or BMP and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and demonstrate deep knowledge in a specific technical area. They analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare and legislative and regulatory requirements, organic standards, sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

8.3 Identify appropriate inputs according to the National Standards for Organic and Biodynamic Produce or agro-ecological principles  
8.4 Document sub-plan according to established format |

| 9. Integrate and finalise the OMP or BMP | 9.1 Integrate sub-plans for soil fertility and management, and weed, pest, disease, animal health, and environmental management  
9.2 Develop and implement record-keeping system to track various components of the plan as they are put into practice and reviewed  
9.3 Review and update OMP or BMP annually noting any changes to farm practices |

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| Reading | • Interpret information regarding the National Standard for Organic and Biodynamic Produce or agro-ecological principles, and planning requirements  
• Identify and interpret information regarding soil fertility and management, and weed, pest, disease and animal health status  
• Identify and interpret information on regional catchment targets for land, water and biodiversity applicable to property and sub-catchment |
| Oral communication | • Initiate discussions with work colleagues and others, using clear language to plan and communicate plan |
| Numeracy | • Access and analyse data for input to OMP or BMP  
• Document time scale and costs of implemented strategy |
| Navigate the world of work | • Identify and describe own workplace requirements associated with own role and area of responsibility |
Skill Description

Interact with others  • Use appropriate language and communication skills to disseminate information within work team

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed two biodynamic or organic management plans on at least two different occasions and has:

- identified and developed required components of an organic management plan (OMP) or biodynamic management plan (BMP) for a property
- identified and used interrelationships between soil, plant, animal health and environmental management and farming system's resilience when developing plan
- identified options for prevention and treatment of risks
- applied appropriate regional catchment targets
- documented the plan in compliance with certification standard requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of organic agriculture, especially fundamental role of soil health
- principles of sustainable production
- requirements and components of an OMP and BMP
- organic and biodynamic certification standard requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
  - industry publications relevant to OMP or BMP
  - OMP or BMP certifier information
• map of property
• farm production area soil fertility assessment
• specifications:
  • National Standard for Organic and Biodynamic Produce or agro-ecological principles
• relationships:
  • work colleagues
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to investigate and access information to support conversion to organic or biodynamic production, conduct a risk assessment, implement hazard analysis critical control point (HACCP) based procedures and manage customer feedback.

The unit applies to individuals who apply specialised skills and knowledge to prepare an enterprise for organic certification and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and demonstrate deep knowledge in a specific technical area. They analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare and legislative and regulatory requirements, organic standards, sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</table>
| 1. Investigate and access information sources and support for conversion to organic or biodynamic production | 1.1 Establish contact with other organic producers and marketers of organic products  
1.2 Identify and use other sources of support and advice including agricultural extension officers and training programs  
1.3 Assess literature, publications and internet sources of information to support decision-making for usefulness and reliability  
1.4 Obtain certification process requirements from certification bodies and select appropriate certifier  
1.5 Investigate roles and responsibilities of inspector, certifier and accreditation bodies, including role of government departments |
| 2. Conduct a risk assessment of the site | 2.1 Identify and document previous land use and chemicals applied on the site  
2.2 Undertake and document risk assessment for potential on-farm contaminants  
2.3 Assess potential contamination risk from off-farm land use and agricultural practices  
2.4 Incorporate risk management procedures to minimise potential contamination from internal and external sources into a certification preparation plan |
| 3. Develop and implement hazard analysis critical control point (HACCP) based procedures | 3.1 Identify and document production processes and activities, and those sections of supply chain under the businesses control, according to certification body requirements and the National Standard for Organic or Biodynamic Produce  
3.2 Identify, document and compare quality, organic and statutory product standards to be met to actual standards achieved by product and workplace  
3.3 Identify and document corrective actions or improvements to processes and activities  
3.4 Develop and implement procedures and processes for monitoring and annual review, including an internal review protocol where appropriate  
3.5 Integrate a food safety management program where required |
| 4. Manage customer feedback | 4.1 Develop and implement procedures to obtain, analyse and respond to customer feedback on quality and integrity of organic product  
4.2 Develop and monitor product recall procedures and communicate to relevant parties |
Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared an enterprise for organic or biodynamic certification on at least one occasion and has:

- identified requirements for organic certification and applied them to the workplace
- identified critical points in supply chain at which the organic or biodynamic integrity of the product may be compromised
- implemented and monitored effective risk management for those parts of supply chain under their control
- identified and documented practices and strategies to minimise the risk of contamination and non-conformance with organic or biodynamic standards
- developed an operational plan for conversion to organic or biodynamic production.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- certification process
- chain of custody
- Hazard Analysis and Critical Control Points (HACCP) principles and risk management
- health and food safety requirements and issues
- labelling requirements for domestic and export markets
- market for organic produce, including the organic movement and organic industry
- National Standard for Organic or Biodynamic Produce
- principles of organic or biodynamic agriculture
- procedures and responsibilities in the case of product recall
- procedures for conducting and documenting a risk assessment
- regulatory requirements and their domestic and international contexts
- role of quality management systems in organic industry including documentation and record keeping requirements
• working knowledge of the regulated organic industry, including the role of the government, certification bodies and inspectors.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represent workplace conditions
• resources, equipment and materials:
  • literature, publications and internet sources of information relevant to organic or biodynamic certification
  • certification process requirements
• specifications:
  • National Standard for Organic or Biodynamic Produce
• relationships:
  • work colleagues
• timeframes:
  • according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency covers the skills and knowledge required to implement an integrated pest management program.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

<td>1. Assess weed, pest and disease infestations</td>
<td>1.1 Identify symptoms of weed, pest and disease infestation in response to client needs</td>
</tr>
</tbody>
</table>
## Element | Performance criteria
---|---
1.  Define weed, pest and disease relationships and vectors as key factors in program development
1.  Assess size and scope of infestation
1.  Assess business implications and urgency of action according to published data and enterprise policy
1.  Report conditions likely to impact on business viability

2.  Plan appropriate integrated treatments for weeds, pests and diseases

2.1  Develop an integrated pest management (IPM) program, ensuring treatments selected include chemical or non-chemical products in line with enterprise practice
2.2  Outline integrated application of treatments in planning documentation
2.3  Choose treatments which provide a suitable response to infestations, having regard to cost of damage, cost of infestation, marketing requirements, withholding periods and sustainable horticultural practices
2.4  Seek professional assistance as required

3.  Implement weed, pest and disease control measures

3.1  Ensure control procedures reflect sound implementation of integrated pest management strategy, marketing objectives and business imperatives
3.2  Develop and implement monitoring procedures
3.3  Instruct and supervise others to carry out work according to the IPM plan
3.4  Monitor prevention program and undertake remedial action where necessary
3.5  Monitor control procedures and undertake remedial action where necessary

### Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

### Unit Mapping Information

No equivalent unit.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify symptoms of weed, pest and disease infestation
- develop an integrated pest management (IPM) program
- develop and implement monitoring procedures
- instruct and supervise others to carry out work according to the IPM plan
- oversee the implementation of an IPM pest management plan
- monitor costs of pest management plan to meet budget requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for integrated pest management
- application techniques for chemical and non-chemical treatments
- concept and principles of Integrated Pest Management
- cost/benefit analysis relevant to selection of weed, pest and disease control measures
- crop and plant scouting and monitoring
- ecological impacts of different control treatments
- integration of weed, pest and disease control measures
- lifecycles of hosts, predators and pests and diseases
- sustainable horticultural practices
- weeds and pests of specific horticultural enterprises
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- estimate the readiness of produce for picking
- harvest the crop using the correct technique
- select and grade produce at picking where required
- stack produce in containers without causing damage or losses
- transport produce from the field according to enterprise requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices for harvesting horticultural crops
  - enterprise quality procedures
  - grading characteristics of each crop
  - recognition of crop maturity of a range of crops
  - the effect of adverse climatic conditions such as rain, hail, extreme wind with dust, or very high ultraviolet radiation, which may downgrade the quality of affected crop, prevent or impede harvest operations or severely influence the time taken to complete the harvest program
  - the importance of maintaining quality of produce, including cooling requirements and quick transport from field to processing areas

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has sampled and tested protected crop water on at least two occasions and has:

- selected and used protected crop water sampling tools and material
- minimised environmental impacts associated with testing protected crop water
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- collected and described water samples using descriptive terms
- assisted with the use of simple water testing equipment
- recorded and reported water testing results
- disposed of waste material, including test water and testing material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- crop water sampling and testing tools operating instructions
- environmental impacts associated with testing protected crop water
- industry and workplace biosecurity procedures
- workplace requirements applicable to health and safety in the workplace for testing protected crop water
- principles and practices for recognising protected crop water properties, including:
  - basic water tests
  - water chemical properties
  - water physical properties
  - water and plant relationship
  - water sampling techniques.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - crop water sampling and testing tools and materials
  - personal protective equipment applicable to protected crop water sampling and testing
- **specifications:**
  - crop water sampling and testing tools operating instructions
  - workplace requirements applicable to health and safety in the workplace, and sampling and testing protected crop water
  - industry and workplace biosecurity procedures applicable to sampling and testing protected crop water
- **relationships:**
  - supervisor
- **timeframes:**
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained a crop on at least two occasions and has:

- selected, positioned, used and maintained crop maintenance tools and equipment
- minimised environmental impacts associated with maintenance of crops
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- evaluated crop growth and maintenance requirements
- applied plant training techniques, including:
  - twisting
  - layering where appropriate
  - de-leafing
- used the appropriate crop maintenance techniques
- recorded and reported crop maintenance activities and unserviceable tools and equipment
- removed and disposed of waste material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- crop maintenance tools and equipment operating instructions
- environmental impacts associated with maintenance of crops
- industry and workplace biosecurity procedures workplace requirements applicable to health and safety in the workplace for maintenance of crops
- crop evaluation and maintenance techniques
- plant training:
  - purpose
  - techniques
tools and equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - crop maintenance tools and equipment
  - personal protective equipment applicable to crop maintenance
- specifications:
  - crop maintenance equipment operating instructions
  - workplace requirements applicable to health and safety in the workplace and maintenance of crops
  - industry and workplace biosecurity procedures relevant to maintenance of crops
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to manually pollinate crops including preparing for pollination, pollination of crop and completion of pollination activities.

The unit applies to individuals who manually pollinate crops under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed plant blocking on, on at least three occasions and has:

- selected, positioned, used and maintained plant blocking on tools, equipment, substrate and materials
- minimised environmental impacts associated with plant blocking on
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- flooded block on substrate, checked plant health and adjusted water flow
- recorded and reported plant blocking on activities and unserviceable tools and equipment
- removed and disposed of waste material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of blocking on substrate, including:
  - clay aggregate
  - coco coir
  - perlite
  - rockwool
  - vermiculite
- plant blocking on tools and equipment operating instructions
- purpose and procedures for plant blocking on
- environmental impacts associated with blocking on plants
- industry and workplace biosecurity procedures
• workplace requirements applicable to health and safety in the workplace for blocking on plants.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - plant blocking on tools, equipment, substrate and materials
  - personal protective equipment applicable to plant blocking on
- **specifications:**
  - plant blocking on equipment operating instructions
  - workplace requirements applicable to health and safety in the workplace and blocking on of plants
  - industry and workplace biosecurity procedures applicable to blocking on of plants
- **relationships:**
  - supervisor
- **timeframes:**
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supported horticultural crop harvesting on at least two occasions and has:

- applied workplace health and safety requirements
- estimated the readiness of crop for picking
- harvested the crop using the correct procedure
- selected and graded produce at picking where required
- stacked produce in containers without causing damage or losses
- transported produce according to enterprise requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for harvesting horticultural crops
- workplace requirements applicable to health and safety in the workplace and horticultural crop harvesting
- the effect of adverse climatic conditions which may downgrade the quality of affected crop, prevent or impede harvest operations or severely influence the time taken to complete the harvest program, such as:
  - rain
  - hail
  - extreme wind with dust
  - very high ultraviolet radiation
- recognition of crop maturity and readiness for picking
- enterprise quality procedures
- grading characteristics of each crop
• the importance of maintaining quality of produce, including cooling requirements and quick transport to processing areas.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • horticultural crop harvesting tools, equipment and machinery
  • personal protective equipment applicable to horticultural crop harvesting

• specifications:
  • workplace requirements applicable to health and safety in the workplace and horticultural crop harvesting

• relationships:
  • supervisor

• timeframes:
  • according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed and maintained two different vertical hanging trellis on at least two occasions, and has:

- selected, positioned, used and maintained vertical hanging trellis tools equipment and materials
- applied workplace health and safety requirements
- minimised environmental impacts associated with installing and maintaining vertical hanging trellis
- followed industry and workplace biosecurity procedures
- evaluated vertical hanging trellis and plant growth maintenance requirements
- applied plant maintenance techniques, including:
  - clipping or twisting
  - lowering and leaning where appropriate
- removed and disposed of waste material
- recorded and reported installation and maintenance activities and unserviceable tools and equipment

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- vertical hanging trellis installation and maintenance tools and equipment and operating instructions
- workplace requirements applicable to health and safety in the workplace for installing and maintaining vertical hanging trellis
- environmental impacts associated with installing and maintaining vertical hanging trellis
- industry and workplace biosecurity procedures
Assessment Requirements for AHCPHT311 Install and maintain vertical hanging trellis

Date this document was generated: 3 September 2020

- vertical hanging trellis and plant maintenance:
  - purpose
  - techniques
  - tools, equipment and materials.

Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions

- resources, equipment and materials:
  - vertical hanging trellis installation and maintenance tools, equipment and materials
  - personal protective equipment applicable to vertical hanging trellis installation and maintenance

- specifications:
  - vertical hanging trellis equipment operating instructions
  - workplace requirements applicable to health and safety in the workplace and installing and maintaining vertical hanging trellis
  - industry and workplace biosecurity procedures applicable to installing and maintaining vertical hanging trellis

- relationships:
  - supervisor

- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to collect, process and evaluate grapes for production, monitor and evaluate vineyard, and analyse the effect of climate, site characteristics, grape varieties and viticultural practices on grape quality.

The unit applies to individuals who apply specialised skills and knowledge to the evaluation of grapes for production, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has evaluated grapes for production on at least two occasions and has:

- utilised vegetation indices where available
- researched, evaluated and recorded relevant information
- collected, processed and evaluated samples using standard sampling procedures
- evaluated juice using standard organoleptic procedures
- tasted and evaluated wines using standard organoleptic evaluation techniques
- recorded grape analysis results and evaluated results using quantitative parameters, including:
  - sugar content, soluble solids concentration (SSC)
  - titratable acidity (TA)
  - concentration of hydrogen ions in solution (pH)
- established and documented vineyard qualitative parameters, including:
  - berry colour and skin splitting
  - texture
  - aroma
  - aftertaste
  - rachis
  - berry dehydration
  - seed ripeness
- identified areas of concern and opportunities to change harvest plans to optimise grape quality outcomes prior to harvest, including unsuitable or special parcels of fruit
- identified and recommended improvements to vineyard management practices that will contribute to enhanced grape quality in the next season.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for evaluating grapes for production, including:
  - changes to the chemical characteristics of grapes during ripening, including SSC, TA and pH
  - changes to the physical characteristics of grapes during ripening, including size, hardness and colour
  - climatic and physical features of wine grape growing areas and wine styles produced
  - quantitative parameters of grape testing
  - sensory evaluation and qualitative parameters of grapes and wine
- sensory evaluation of wines
- grape end-use, including:
  - dried
  - table
  - wine
- grape standard sampling procedures
- vegetation indices, including:
  - plant cell density (PCD) maps
  - normalised difference vegetation index (NDVI)
- vineyard management practices and their impact on grapes, including:
  - plant moisture status management
  - irrigation management
  - canopy management
  - pruning levels
  - nutrition regimes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - grapes
  - vineyard
  - sample processing equipment
  - grape standard sampling procedures
- relationships:
  - clients or winemakers
- timeframes:
• according to the job requirements.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to carry out preliminary planning activities, determine grape production requirements, schedule production activities, plan monitoring of grape production plan and document grape production plan.

The unit applies to individuals who apply specialised skills and knowledge to the development of a grape production plan, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed a grape production plan on at least one occasion and has:

- researched, evaluated and recorded relevant information
- calculated production costs, including:
  - staff
  - resources
  - tools
  - equipment and machinery
  - logistical requirements required for production
- planned and scheduled grape production activities
- planned and scheduled marketing
- communicated and negotiated with the client
- documented plans, specifications and production work procedures
- prepared reports for staff, managers, clients and contractors
- produced a site plan which can be readily understood by on-site personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- trends and issues of the Australian viticulture industry
- principles and practices for developing a grape production plan, including:
  - establishment and management of grape production in relation to client specifications and the standards required by the marketplace
  - environmental growing conditions and sustainable land use strategies
  - establishment procedures, grape variety selection and cultural practices for grape production
• processes and techniques for preparing, costing and documenting plans for grape production and scheduling grape production
• the role of business and marketing plans and client consultation processes in planning grape production
• regulations and legislation relevant to grape production.

Assessment Conditions
Assessment of skills must take place under the following conditions:
- physical conditions:
  - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
  - industry publications and internet sources of information relevant to the development of a grape production plan
  - marketing strategy
- specifications:
  - market specifications
  - regulations and legislation relevant to grape production
- relationships:
  - customers
- timeframes:
  - according to the job requirements.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has evaluated wine on at least one occasion and has:

- researched, evaluated and recorded information for a wine
- performed chemical analyses necessary for the winemaking process
- determined wine characteristics and faults using organoleptic evaluation techniques
- evaluated a wine, following tasting
- determined the effect of winemaking techniques on wine
- identified and recommended improvements to vineyard management practices that will contribute to enhanced wine quality in the next season
- analysed current packaging methods, bottle closure methods and wine labelling laws.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for evaluating wine, including:
  - balance in relation to wine taste
  - changes to the chemical characteristics of grapes during ripening, including acid, sugar and flavour
  - changes to the physical characteristics of grapes during ripening, including size, hardness and colour
  - climatic and physical features of wine grape growing areas and wine styles produced
  - factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
  - food safety requirements
  - ideal Australian cellaring conditions
  - main export markets
  - packaging, regulations and relationship to product marketing and quality
- sensory evaluation of wines with potential for cellaring
- types and styles of wine produced in Australia
- varieties of wine grapes in Australia
- vintage ratings in Australia
- vineyard management practices and their impact on wine, including:
  - plant moisture status management
  - canopy management
  - pruning levels
  - nutrition regimes.

Assessment Conditions
Assessment of skills must take place under the following conditions:
- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - grapes, juice or wine
  - sampling equipment
  - viticultural production plan
- specifications:
  - wine labelling regulations
  - standard laboratory and organoleptic procedures
  - cellar operations procedures and instructions
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed a wine making process on at least one occasion and has:

- planned processes that may be used to maximise production of grapes that meet winery quality requirements
- acquired and processed grapes for wine production
- performed must handling processes
- operated the range of equipment required to process grapes from winery receiveal point to the fermentation tank
- initiated and managed the fermentation process
- made additions and finings as required
- identified, established, supervised and monitored daily cellar work practices
- performed chemical analyses necessary for the winemaking process
- organised and undertaken routine cellar operations
- operated the filtration and bottling processes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- changes to the chemical characteristics of grapes during ripening, including acid, sugar and flavour
- changes to the physical characteristics of grapes during ripening, including size, hardness and colour
- climatic and physical features of wine grape growing areas and wine styles produced
- types and styles of wine produced in Australia
- varieties of wine grapes in Australia
- principles and practices for managing a wine making process
- balance in relation to wine taste
- vineyard practices relevant to the production of grapes that meet the requirements of the winery
- processes involved in handling grapes from the vineyard to the winery in order to produce wine
- must and marc handling procedures
- routine winemaking and cellar operation procedures including maintenance of a clean, safe working environment
- ranges of equipment and using this equipment to process grapes and must in a winery
- factors involved in the initiation and management of primary, secondary and malolactic fermentation processes
- ideal Australian cellaring conditions
- equipment and processes for wine filtration.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
  - industry publications and internet sources of information on variety and characteristics of grapes, winemaking factors, consumer preferences, client requirements and industry trends
  - grapes, yeast and bacteria for production of wine
  - fermentation vessels
  - oak barrels
  - storage vessels
  - wine bottles and seals
- specifications:
  - yeast culture specifications
  - malolactic fermentation bacteria inoculation specifications
- relationships:
  - clients
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare, monitor and maintain biological control agents for weed control prior to release in an experimental or field situation. Biological agents must be maintained and stored in an effective way to optimise its potency on targeted weed species.

All work is carried out to comply with the organisation’s pest management plan.

The unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

| bioagent media | 1.2 Prepare required media  
| | 1.3 Apply laboratory policies and procedures for work health and safety, environmental sustainability and biosecurity |

2. Obtain bioagent cultures  
2.1 Procure cultures from established sources and maintain microclimate in transport to the laboratory  
2.2 Transfer cultures to growing environment  
2.3 Apply laboratory policies and procedures for work health and safety, environmental sustainability and biosecurity

3. Maintain and monitor cultures  
3.1 Check cultures regularly  
3.2 Maintain optimum environmental conditions to maximise culture growth and condition  
3.3 Record observations and report abnormalities to the appropriate authority  
3.4 Apply laboratory policies and procedures for work health and safety, environmental sustainability and biosecurity

4. Harvest and store cultures  
4.1 Use routine monitoring of culture growth to identify the need for harvest and agent release  
4.2 Determine harvesting program in line with program requirements  
4.3 Complete harvest operations and transfer cultures to storage  
4.4 Apply laboratory policies and procedures for work health and safety, environmental sustainability and biosecurity

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

**Unit Mapping Information**

This unit has resulted from the merging of AHCPMG303A Maintain biological cultures and AHCPMG405A Implement pest management action plans and is not equivalent to either of these units.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare and propagate biological agents according to laboratory policies and procedures
- transfer cultures to growing environment according to laboratory policies and procedures
- harvest and store biological agents according to laboratory policies and procedures
- monitor and keep records of observations and details of any abnormalities according to laboratory policies and procedures
- apply work health and safety policies and procedures in the context of own work
- apply appropriate sustainability and biosecurity practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- laboratory procedures
- the range of media available for culture maintenance
- culture and media preparation techniques
- available biological control agents and their use
- the range of pest species that are to be targeted with biological agents
- biosecurity and quarantine requirements

Assessment Conditions

Candidates must have access to bioagent media and cultures, appropriate equipment and resources for the purpose of assessment.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to undertake a field inspection and prepare a report on a commercial seed production crop. It applies to workers on properties where commercial seed production is undertaken.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Seed production (SPD)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for a field inspection
- visually analyse a commercial seed crop
- complete a crop inspection report
- classify seed to species and/or variety level
- update seed reference collection
- use taxonomic terms to describe seed
- carry out decontamination prior to leaving a site

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of seed crop inspection
  - concepts of disease pressure
  - concepts of pest pressure
  - crop sampling techniques and use of quadrats
  - crop/seed certification systems for example Organisation for Economic Co-operation and Development (OECD), Australian Seed Authority (ASA)
  - field inspectors reports
  - hygiene requirements for crop inspectors
  - plant breeders’ rights
  - relevant health, safety and environment requirements
  - requirements of Australian Quarantine Inspection service (AQIS) and AQIS Authorised Officers (AAO) phytosanitary reports
Assessment Conditions
Assessors must satisfy current standards for RTOs.

</tbody>
</table>

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared wages for three shearing team members from different employee categories, using manual or computer-based systems, and including:

- maintained staff records
- calculated earnings, deductions and net pay
- arranged electronic transfers for individual’s pay
- produced individual’s pay slips.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical and financial recording systems
- accounting system software programs
- how wages are calculated for different employment categories, such as piece work, daily, per run, per fleece
- types of records kept during shearing, including the number and types of sheep shorn, the number of bales produced, the size of the shed
- roles of a shearing team, including shearer, learner shearer, crutcher, shearing cook, shed hand, wool presser, shearing shed expert and wool classer
- additional allowances that can be claimed, such as for mess, travel, vehicle
- Commonwealth and/or state and territory awards relevant to the shearing industry
- maintenance of employment and payment records
- Australian Tax Office requirements including Goods and Services Tax, Pay As You Go withholding tax and Super Guarantee Charge
- legislative requirements for keeping records of contracts, wage payments and payment summaries
- Commonwealth or state/territory legislation relevant to hiring shearing contractors.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - information about shearing activity over a pay period
  - access to internet banking

- **specifications:**
  - access to relevant award for shearing operations, and ATO and superannuation requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected soil samples, including:

- determined the purpose for collecting and testing soil samples
- collected representative soil samples for testing and packaged and labelled them according to workplace and laboratory requirements
- collected samples of at least three different soil types, and:
  - conducted tests safely to determine soil physical and chemical properties according to industry standards
  - assessed test results and prepared soil improvement plan to meet the requirements and conditions required for the plant species to be cultivated.

There must also be evidence that, on at least one occasion, the individual has, according to workplace procedures:

- selected tools, materials and equipment required for implementing soil improvement plan
- calibrated equipment prior to application of soil improvement materials
- adjusted physical and chemical properties according to cultural requirements of the plants to be grown
- maintained records and reported soil test outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical properties of soils and media and methods for testing, including:
  - colour
  - organic matter
  - texture tests using field and sieve analysis techniques
Assessment Requirements for AHCSOL304 Implement soil improvements for garden and turf areas

Assessment Conditions

Assessment of skills must take place under the following conditions:

- structure
- air filled porosity
- moisture holding capacity
- soil bulk density
- infiltration rate and drainage properties, including hydraulic conductivity
- perched water tables
- wettability
- chemical properties of soils and media, and methods for testing, including:
  - pH using colorimetric and pH meters
  - salinity, total dissolved salts and electrical conductivity
  - types of nutrient tests and their purpose
- soil sampling, collecting and testing procedures, including:
  - tools and equipment required
  - procedures for testing
  - procedures for sampling, securing, packaging and labelling
- soil and media improvement strategies for physical and chemical characteristics, including:
  - products and processes for improving soil and media physical condition
  - soil ameliorants and improvement techniques
  - bio-stimulants
  - organic matter and effect on soil and media
  - water holding capacity and readily available water, including wetting agents and penetrants
  - soil biological organisms and their impact
  - effect of pH, salinity and fertilisers on availability of nutrients
  - soil profile both natural and constructed
  - Australian standards AS4454:2012 Composts, soil conditioners and mulches, and AS4419:2018 Soils for landscaping and garden use
- assessment and interpretation of soil test results for physical and chemical properties and their relationship to cultivated plants relevant to workplace
- basic mathematics for calculating rates of application of soil additives, water holding capacity, air filled porosity and measuring and weighing materials to perform accurate soil tests
- using test results to determine soil improvements
- safe field and laboratory practices when collecting and testing soils and media
- record keeping and reporting procedures for soil collecting, testing and planning procedures.
• physical conditions:
  • skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  • at least three separate soil sites or media for collecting and testing
• resources, equipment and materials:
  • soil testing equipment, including pH meter and pH colour test kit, conductivity meter, soil colour charts, NPK colour test kit
  • equipment for storing and handling samples
  • accurate measuring equipment for soil testing
  • personal protection and other safety equipment required for safe handling and testing of soils
• specifications:
  • workplace procedures and instructions related to soil testing and soil improvement
  • industry standards for testing and interpreting soil test results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare growing media for various plants, including preparing for work, confirming specifications for growing media and preparing and storing the media.

The unit applies to individuals who prepare growing media under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has prepared growing media on at least two occasions and has:

- applied workplace health and safety requirements
- collected and analysed data
- confirmed specifications of growing media
- analysed growing media chemical, physical and biological characteristics
- disposed of waste in an environmentally safe manner
- stored growing media.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for preparing growing media
- principles and practices for preparing growing media
- alternative pre-prepared growing media options, including coconut fibre bags
- alternative methods of incorporating ingredients into a growing media
- plant nutrition requirements for growing period
- ingredients used in the preparation of growing media
- physical, chemical and biological characteristics required of the media
- properties of the various ingredients used in the preparation of the growing media
- requirements of a growing media
- hygiene in the preparation and storage of the media
- volume and weight determination
- environmentally safe disposal of waste.
Assessment Conditions
Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - work instructions and workplace procedures applicable to growing media preparation
  - growing media tools and equipment
  - growing media ingredients
  - mixing and weighing equipment
  - personal protective equipment applicable to growing media preparation
- specifications:
  - growing media specifications
  - work instructions and workplace procedures for preparing growing media
- relationships:
  - supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or current standards.

Application

This unit of competency describes the skills and knowledge required to monitor and manage soils for production projects.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify particular soil properties that are relevant to the workplace and research for further enquiry
- apply information from soil testing to production and/or management plan
- develop and conduct soil improvement programs
- document the soil management plan or production plan
- interpret soil analytical data for the purposes of developing management or production plans
- review and analyse ongoing soil monitoring programs

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for managing soils for production
  - basic soil field tests
  - interpreting laboratory results
  - plant nutrition through soil management
  - soil chemical properties
  - soil conservation strategies and sustainable production techniques
  - soil physical properties
  - soil sampling techniques
  - soil types
  - techniques to ameliorate soil properties
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored and managed soils for at least one product project and has:

- interpreted soil analytical data for the purposes of developing management or production plans
- identified particular soil properties that are relevant to the workplace and researched for further enquiry
- applied information from soil testing to production or management plan
- documented the soil management plan or production plan
- developed soil improvement programs
- reviewed ongoing soil monitoring programs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for managing soils for production, including:
  - basic soil field tests
  - interpreting laboratory results
  - soil chemical properties
  - soil conservation strategies and sustainable production techniques
  - soil physical properties
  - soil sampling techniques
  - soil types
  - strategies to ameliorate soil properties.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
  - published data and records
  - production history
  - soil sampling equipment
  - soil test results
- specifications:
  - testing agency requirements
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, supported others in turf work according to workplace procedures, including:

- confirmed instructions and prepared materials, tools and equipment ready for turf work
- used tools and equipment and assisted with turf work according to supervisor instructions
- handled materials and equipment safely while completing turf activities
- cleaned up and stored equipment on completion of turf work
- disposed of waste materials according to workplace procedures
- reported work outcomes to their supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- safe operation and storage of turf machinery and equipment, including:
  - cylinder, rotary and electrical mowers and mowing patterns
  - mower settings for required turf surface
  - cultivation hand tools, including rakes and spades
  - whipper snippers
  - lawn edgers
  - wheelbarrow
  - level lawn and screed
  - powered blowers
  - self-propelled mowers
  - walk-behind mowers and rollers
  - marking out equipment, including string lines, tape measures, pegs and frames
- safe work practices required for turf work sites, including:
• personal protection
• machine operator safety
• materials handling
• hazard identification and reporting
• turf and facility maintenance requirements and practices, including:
  • mowing
• enterprise procedures for disposing of turf waste, including:
  • methods of disposal
  • impact of waste disposal on the environment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a sports turf facility or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • basic machinery including cylinder mowers, rotary mowers and rotary hoe
  • hand tools and equipment for turf cultivation
  • personal protective equipment
• specifications:
  • workplace procedures and instructions for turf work
• relationships:
  • team members and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to support workers in a team who are constructing soil profiles for the establishment of turf.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- clean, maintain and store turf construction machinery and equipment
- follow procedures and sequence work during the course of the construction
- use a range of turf construction machinery and equipment
- work in a team on a turf construction project

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of turf construction
  - different soil preparations for construction
  - effective and safe use of tools and machinery
  - influences on the selection of tools, machinery and safety equipment
  - irrigation and/or drainage installation procedures and operational techniques
  - purpose of turf construction in maintaining turf presentation
  - relationship between a well-constructed soil profile for the quality and appearance of the turf

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine the condition of the existing surface with advice from senior greenkeepers for subsequent routine preparations, treatments and turf cultural practices
- prepare a turf surface or sports playing field according to the rules of the game
- use turf surface preparation machinery and equipment safely according to manufacturer’s specifications to achieve the desired playing surface outcome

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of turf preparation for play
  - competition playing requirements affecting preparation of the turf surface
  - effect of adverse outdoor climatic conditions
  - effective and safe use of tools and machinery
  - high performance uses of turf surfaces
  - irrigation and drainage system design and operational techniques
  - potential public nature of turf renovation work sites
  - purpose of turf surface preparation in maintaining turf presentation
  - various requirements of turf species and their cultural requirements

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- establish the purpose of turf renovation programs in maintaining turf presentation, particularly in relation to the end use of the turf
- record turf maintenance activities as required by the enterprise
- transport, clean and store turf renovation machinery and equipment
- use turf renovation machinery and equipment to restore turf health and condition

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of grass area renovation
  - different soil preparations for renovation
  - effect of adverse outdoor climatic conditions
  - effective and safe use of tools and machinery
  - hazards and responsibilities working near public access
  - influences on the selection of tools, machinery and safety equipment
  - potential public nature of turf renovation work sites

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared turf surfaces for play on at least one of the following types of sports turf surface:

- a golf course
- a lawn bowling green
- a cricket ground
- a sporting field
- a horse race track.

There must also be evidence that the individual has:

- identified safety hazards and risks and implemented controls to ensure personal and users' safety when performing work
- selected, checked, adjusted, transported and operated equipment on the turf site safely
- assessed turf condition and confirmed preparation requirements against set-up plan, and reported changed conditions to supervisor
- prepared a consistent and uniform sports turf playing surface according to the rules and regulations of the game
- collected and disposed of waste
- selected, checked and used marking-out equipment, materials and procedures to accurately lay out a sports turf play surface
- reported work outcomes, faults and irregularities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf preparation for play, including:
• effect of adverse climatic conditions on turf preparation
• the use of turf in high performance sport environments
• purpose of turf surface preparation in maintaining turf presentation
• various cultural requirements of turf grass species
• biological factors of turf grass species affected by turf preparation activities, including:
  • moving golf holes
  • reasons for moving markers
  • height of cut for grass species and sport
  • effect of rollers on compaction and turf growth
  • effect of mower cutting type
• assessment of turf grass condition when reporting irregularities to supervisor prior, including:
  • colour and length of sward in relation to turf health
  • set-up equipment requirements and selection criteria
• conducting mowing operations, including:
  • ensuring uniform cut
  • maintaining a consistent pattern
  • implications of repetitive activity on equipment wear and tear and grain, and the need to vary direction of cut
• marking out sports turf surfaces for play, including:
  • preparation and use of tools and equipment for marking out
  • line marking methods for sports turf surfaces
  • basic calculations for line marking
  • rules and regulations for marking and layout of sports turf surfaces
• markers and other sports turf match play requirements, including:
  • holes
  • tee markers
  • out of bounds markers
• water and its effect on sports play, preparation activities, and how to rectify, including:
  • soil water requirements
  • turf surface water condition, including dew and rain
  • effect on play condition
  • water and dew removal techniques
• work health and safety hazards, risks and controls when preparing turf surfaces for play, including:
  • rapid risk assessment for safety of self, the community and the environment
  • safe transport of equipment to site
  • legal requirements when transporting equipment on public roads
• maintaining a safe work site, including:
  • safety barriers
• signage and notifications
• managing pedestrian user traffic flow
• obstacles affecting sports turf set-up, and methods for managing them during preparation activities, including:
  • permanent obstacles
  • temporary obstacles
  • identifying hazards to players and playing conditions
• adjustment and safe use of equipment commonly used for preparation of sports turf, including:
  • mowers and height adjustments
  • sports turf edgers
  • rollers
  • water soppers and blowers
  • line marking equipment
• equipment checks, including:
  • electrical cords
  • checking and testing procedures
  • identifying, tagging and reporting faulty equipment
  • pre-start checks
  • post-work checks
  • fault reporting procedures
• waste materials disposal procedures and environmental considerations
• record keeping requirements and their purpose.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a sports turf facility or an environment that accurately represents workplace conditions in which to demonstrate the preparation and layout of at least one type of sports turf surface specified in the performance evidence
• resources, equipment and materials:
  • turf set-up equipment, including cylinder and rotary mowers, edger, roller and marking-out materials and equipment
  • measuring and layout equipment, including tape measures and string lines
• specifications:
  • workplace procedures and instructions for turf preparation
  • set-up plan for a specific sports playing surface
• relationships:
  • supervisor
• timeframe:
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to assist in the construction of soil profiles for the establishment of a turf surface.

The unit applies to individuals who support turf construction and undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, assisted in the construction of a turf surface project using a construction plan, including:

- assisted in locating services and established construction site grades, levels and boundaries from the plan
- used basic survey equipment and assisted with the layout of construction grades, levels and boundaries
- selected and checked machinery and equipment required to perform levelling, grading, excavation and consolidation
- reported faults and defects in machinery and equipment
- safely used tools, equipment and machinery to perform levelling, grading, excavation and consolidation tasks
- safely cleaned, maintained and stored turf construction tools, equipment and machinery
- followed workplace procedures, including health, safety and environmental
- worked collaboratively and productively within a team
- reported work outcomes on completion.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf construction, including:
  - different soil preparations for construction
  - purpose of turf construction in maintaining turf presentation
  - relationship between a well-constructed soil profile and the quality and appearance of the turf
  - purpose, effect, methods and equipment used for compacting turf profiles
• materials used in developing a profile for turf
• selection, effective use and safe operation of tools and machinery
• basic irrigation and drainage installation techniques relevant to turf construction
• basic awareness of survey techniques and equipment required to support survey work, including:
  • principles of surveying, including laser levels, dumpy levels
  • purpose and use of surveyor staff and lenses
  • purpose and use of tape measures
• basic survey calculations used for determining levels, grades and boundaries, including:
  • 3,4,5 triangle for right angles
  • calculating grades
  • measurements and units of measure
• basic plan reading skills required for supporting turf construction operations and to identify:
  • services
  • measurements
  • levels and grades
• safe handling and disposal of construction waste materials
• workplace health and safety hazards, risks and control measures when constructing new turf, including:
  • site safety
  • personal safety
  • safe use and operation of tools, equipment and machinery
• reporting procedures relevant to turf construction.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • a sports turf facility or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • excavation and grading equipment
  • personal protection and other safety equipment
  • measuring and layout equipment including levels, tape measures, string lines
  • basic levelling tools
• specifications:
  • professionally drawn sports turf site and construction plans that include site layout, existing services, proposed services, excavation levels, fill materials, fill profiles and finished levels
  • workplace procedures and instructions for sports turf construction
• workplace health, safety and environmental procedures related to sports turf construction
• relationships:
  • work team and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to renovate sports turf surfaces.

The unit applies to individuals who renovate turf and undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, renovated a sports turf area according to a renovation plan, including:

- identified work site impediments and the required renovation activity in consultation with supervisor
- identified hazards and risks and implemented control measures for personal and site-specific safety
- prepared materials, equipment, machinery and turf propagation materials ready for implementation
- performed turf renovation activities safely using equipment, machinery and materials
- collected waste from renovation works and disposed of safely
- safely transported, cleaned and stored turf renovation machinery and equipment
- reported turf renovation activities, faults and issues to supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of grass area renovation activities, including:
  - purpose of turf renovation programs for maintaining turf presentation and use
  - soils and soil preparation for renovation
  - turf grass species and effect on mat, thatch and dethatching techniques
  - soil aeration and compaction, including core, solid tyne, and water injection
  - impact of soil compaction and thatch on irrigation and infiltration rate
  - turf grass improvements using topdressing, dusting, shaving, scarifying and grooming
  - effect of adverse weather conditions on renovation activities
  - levelling turf surfaces
- effective and safe use of equipment commonly used during sports turf renovation programs, including:
  - scarifier
  - sod cutter
  - corer
  - slicer
  - shaver
  - top dresser
  - drag mat
  - fertiliser spreader
  - transporter
  - loader, bobcat or similar
  - hand tools, tynes, shovels, spades, level lawns, and wheelbarrows
  - influences on the selection of tools, machinery and safety equipment
  - common pre-operational and post-operational checks of equipment
  - adjustments and settings for renovation equipment
- assessment of safety hazards and risks when renovating turf areas, including:
  - responsibilities of working near the public
  - barriers and exclusion zones
  - signage
  - personal protection and equipment
  - manual handling techniques for lifting or moving heavy loads and materials
- chemical amendments for renovations, including:
  - fertilisers
  - ameliorants
  - growth regulators
- turf repairs and regeneration procedures, including:
  - over sowing
  - sprigging
  - chaffing
  - plugging
  - rolled turf/turf replacement
  - divot replacement
- waste materials handling and disposal, including environmental considerations
- reporting procedures and requirements.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
• a facility that has sports turf requiring renovation or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • turf renovation machinery and equipment
  • turf renovation hand tools
  • fertiliser, ameliorants and growth regulators
  • top dressing sand/materials
  • turf propagation materials
• specifications:
  • sports turf area renovation plan
  • workplace procedures and instructions related to sports turf renovation, including health, safety and environment
• relationships:
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established a turf surface using at least three different propagation materials, including:

- seed (hand seed sowing, mechanical seed sowing, hydro-seeding, drilling)
- sod (turf rolls or sheets)
- and one of following:
  - sprigs (hand sprigging, hydro sprigging, mechanical sprigging)
  - plugs.

There must also be evidence that the individual has:

- interpreted site plans and turf establishment instructions to determine work site impediments and required turf establishment activities
- identified hazards and risks and implemented control measures for personal and site-specific safety
- prepared materials, equipment, machinery and turf propagation materials ready for implementation
- performed turf establishment activities safely using equipment, machinery and materials
- collected and disposed waste from turf establishment site
- safely transported, cleaned, maintained and stored turf establishment machinery and equipment
- reported turf renovation activities, faults and issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for supporting turf establishment, including:
• propagation methods for new turf, including seed, sod, sprigs and plugs
• distributing/laying/planting turf propagation materials to establish even coverage
• applications of propagation methods for sports turf
• sports turf grass species and their propagation and establishment
• handling and assessing turf propagation materials for defects
• irrigation requirements for establishment of newly propagated turf
• soil types and their preparation for establishing new turf, including:
  • basic checks to assess soil condition, including soil moisture, tilth, compactness, depth and organic matter
  • soil preparation additives, including fertilisers, ameliorants, moisture control materials and growth regulators
  • calculations for rates of application
  • methods for incorporation of soil additives
  • soil preparation requirements for turf propagation techniques
• tools and machinery used in preparing new turf surfaces, including:
  • sod cutter
  • rotary hoe
  • transporters
  • bobcat or loader
  • scarifier
  • self-propelled cylinder mower
  • ride-on mower
  • fertiliser application equipment
  • top-dresser
  • drag mat
  • hand tools, including shovels, spades, turf pluggers, buckets, level lawns
  • equipment pre-start checks
  • care and storage of tools, equipment and machinery
• post-turf propagation treatments, including:
  • protection for seed, sod, sprigs and plugs during first weeks of establishment
  • basic irrigation practices, and recognising turf establishment needs and problems
  • rolling and mowing practices for new turf
  • monitoring nutrient, pest, diseases and damage
  • top dressing
• workplace health and safety hazards, risks and control measures when constructing new turf, including:
  • site safety
  • personal safety
  • safe use and operation of tools, equipment and machinery
• reporting procedures relevant to turf construction.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a sports turf facility or an environment that accurately represents workplace conditions

- **resources, equipment and materials:**
  - soil preparation hand tools, equipment and machinery
  - personal protection safety equipment
  - soil amendments and treatment materials
  - turf grass species and propagation materials

- **specifications:**
  - turf establishment program and specifications
  - workplace procedures and instructions for turf establishment, including health, safety and environmental procedures

- **relationships:**
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to construct soil profiles for the establishment of high-performance sports and recreational turf surfaces.

It applies to the construction of turf playing surfaces in new projects and to the complete renovation of existing soil profiles in sporting, commercial and public recreational open spaces such as golf greens and tees, cricket pitches and other turfed sporting surfaces.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

</tbody>
</table>
| 1. Plan for construction activities | 1.1 Identify the construction site and the construction method  
1.2 Take representative samples for soil tests  
1.3 Locate services and utilities, check depths against the site plan and report discrepancies to the supervisor  
1.4 Consider the site history when planning construction details  
1.5 Determine likely consequences of site aspect, features and run-off from adjacent sites and incorporated in construction plans  
1.6 Identify work health and safety hazards, assess risks, implement controls  
1.7 Select, use and maintain suitable safety equipment and personal protective equipment (PPE) |
| 2. Survey and lay out the construction site | 2.1 Set up surveying equipment and establish and record existing levels and temporary benchmark  
2.2 Set new levels and place pegs according to specifications  
2.3 Determine the existing lay of the land and proposed contours  
2.4 Shape new contours into the proposed site |
| 3. Prepare for construction work | 3.1 Obtain or develop plans for the new construction profile  
3.2 Estimate and cost materials  
3.3 Schedule work in a logical, timely and effective manner |
| 4. Set out site for construction | 4.1 Check and verify boundaries and features against the actual site and existing features  
4.2 Check finishing levels, provision for drainage and irrigation to ensure nominated levels are workable  
4.3 Check all measurements against the construction plan, peg out the construction area and account for variances |
| 5. Excavate the construction site | 5.1 Remove and stockpile excess soil in a designated area  
5.2 Grade the base to the level and slope specified in the design  
5.3 Consolidate the base of the profile to achieve uniform compaction over the entire site  
5.4 Install sub-surface irrigation system components to the required depth and design specified in the plan |
| 6. Install drainage system | 6.1 Dig drainage trenches to the depth specified in the plan  
6.2 Lay drainage material on the base of the trench, install pipes and cover trenches |
| 7. Install soil profile | 7.1 Calculate quantities of material to be spread over the area  
7.2 Compact each profile layer to reflect the final contour  
7.3 Ensure the interface between profile layers is uniform and unbroken |

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine turf construction requirements from plans
- implement a turf construction project
- interpret existing site and construction plans and specifications
- organise work and use tools and equipment for turf construction project

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for constructing turf playing surfaces
  - environmental implications associated with construction and excavation activity, drainage and irrigation systems, soil amendments and waste disposal procedures
  - materials, tools, equipment and machinery available to the enterprise for construction of soil profiles, including soil amendments and base construction materials
  - practical understanding of surveying principles and techniques
  - range of construction methods that may be used to construct soil profiles for high performance turf surfaces, and the association of construction methods with site limitations, environmental implications, and end use of the turf surface
  - soil testing techniques and the application of results to the construction process

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to establish turf by sowing, turf laying, sprigging and chaffing or stolonization in sporting, public recreational open space, commercial and residential sites.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

1. Sample soil for testing
   1.1 Take and test site soil samples from a representative area
   1.2 Use test results to guide soil preparation for establishing turf

2. Plant turf
   2.1 Select tools and equipment for the task being undertaken and use safe working practices
<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
</table>
| 2.2 Prepare planting site and sow seed or roll out lawn  
2.3 Water and top-dress newly planted turf as required |
| 3. Maintain newly established turf | 3.1 Water and fertilise newly established turf  
3.2 Mow turf according to a specified pattern and height  
3.3 Monitor newly established turf, identify problems and report any changes  
3.4 Apply top dressing according to the establishment plan |
| 4. Report and repair areas of damaged turf | 4.1 Monitor turf condition for quality and repair as necessary  
4.2 Prepare work reports and recommendations |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

**Unit Mapping Information**

This unit is equivalent to AHCTRF302A Establish turf.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- demonstrate turf establishment by sowing, turf laying, sprigging and chaffing/stolonization
- determine turf establishment methods and requirements
- implement successful turf establishment works
- operate and store turf establishment machinery and equipment
- organise work and use tools, equipment and machinery for a turf establishment project

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for establishing turf:
  - common weeds, pests and diseases
  - fertiliser use and application
  - soils and turf nutrition
  - turf identification and growth characteristics
  - turf establishment methods
  - watering practices

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- conduct a risk assessment for work in a turfed area
- determine the maintenance requirements for a turfed area
- carry out weed control measures
- repair irrigation systems
- safely adjust and use turf maintenance machinery and equipment
- coordinate and report on grassed area maintenance activities
- write a report on the maintenance program activities

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of grassed area maintenance
  - growth rates and cultural requirements of specific turf types
  - methods and practices for maintaining grassed areas
  - range, use and availability of materials, equipment and machinery that may be required for the project
  - turf grass physiology as it applies to grassed area maintenance
- types of turf and specific maintenance requirements
- work schedule programming
- work health and safety issues
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess turf health
- identify deficiencies and diseases in turf
- inspect and report on the condition of turfed surfaces
- perform soil sampling and analyse results
- prepare turf maintenance recommendations according to the playing requirements and desired objectives of the enterprise

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of turf health
  - botany and turf physiology as it applies to turf health
  - main, simple and compound fertiliser products available to the enterprise including analysis, solubility, salt index, rates and cost
  - rates and regularity of recommended fertiliser and pesticide application to achieve optimum plant health objectives while minimising external environment impact through leaching, excessive spraying and overuse
  - role of trace elements and nutrients required by turf grass plants, and symptoms of toxicities and deficiencies
  - soil and plant tissue analysis as a monitoring and turf management tool, the main elements of analysis and their significance as indicators of nutritional deficiency and toxicity
  - turf grass diseases, including commonly occurring regional diseases, seasonality, site history and visual disease symptoms
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- conduct a site hazard identification and risk control assessment
- implement a sports turf renovation program
- prepare, check and calibrate turf renovation machinery and equipment
- record outcomes of renovation works
- renovate a sports turf for successful high performance use
- use turf renovation machinery and equipment to restore turf health and condition

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of turf renovation
  - field measurement techniques such as infiltration rate, organic fines, hardness, traction, surface smoothness, and turf sward height
  - nutrition and plant growth regulators
  - planting, care and renovation scheduling requirements of grass species and cultivars
  - specialist turf renovation practices to achieve high performance turf
  - standards for turf surface appearance and quality
  - structure of a sports turf soil profile

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared sports surfaces for play for at least three of the following:

- a single hole for a golf course with tee and surrounds, rough, fairway and green, and including moving the hole and location of tee markers
- a bowling green, including the assessment of the pace of green
- a cricket ground, including preparation of wicket surface, line marking of wicket and outfield and stump installation
- a ball sport surface selected from Australian Rules football, soccer or rugby, including outfield line marking
- a horse race track surface preparation, including line marking, and rail positioning installation
- a sports surface selected from lawn tennis, lacrosse, hockey, polo or croquet.

There must also be evidence that the individual has:

- determined the condition required for playing surface and planned the work requirements according to sport rules and regulations
- identified safety hazards, assessed risks and implemented controls to ensure personal and user safety when performing work
- selected, checked, adjusted and operated equipment and machinery on the sport site safely
- assessed sports surface condition and confirmed preparation requirements
- prepared a consistent and uniform sports playing surface
- collected and disposed of waste
- selected, checked and used marking-out equipment, materials and procedures to accurately lay out sports surfaces
- checked playing surface performance and potential hazards to players, and reported or rectified
- cleaned and stored tools, equipment and machinery
• prepared a report on sports surface preparation activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• principles and practices of turf preparation for play, including:
  • golf courses, lawn bowls, cricket, race courses, sports fields and tennis
  • effect of adverse climatic conditions on turf preparation
  • use of turf in high performance sport environments
  • purpose of turf surface preparation in maintaining turf presentation
  • cultural requirements of warm and cool turf grass species

• turf surface performance measurement equipment and benchmarks for play, including:
  • stimpmeter
  • bowling green speed
  • clegg hammer
  • traction meter
  • moisture sensor
  • bounce and ball roll/smoothness

• artificial surfaces and their preparation, including:
  • cleaning
  • grooming
  • watering
  • decompacting
  • sterilisation

• biological factors of turf grass species affected by turf preparation activities, including:
  • moving golf holes
  • reasons for moving markers
  • height of cut for grass species
  • effect of rollers on compaction and turf growth
  • effect of mower cutting type

• assessment of turf grass condition prior to setting up, including:
  • colour of sward
  • length of sward and cutting heights
  • set-up equipment requirements and selection criteria
  • moisture content

• conducting mowing operations, including:
  • ensuring uniform cut
  • maintaining a consistent pattern
• implications of repetitive activity on equipment wear, tear and grain, and the need to vary direction of cut
• marking out sports surfaces for play, including:
  • tools and equipment for marking out, and their preparation and use, including pegs, measuring equipment and string lines
  • line marking methods for sports surfaces
  • basic calculations and geometry relevant to layout and line marking
  • rules and regulations for marking and layout of sports surfaces
  • common terms for sport markers and line marking
• markers and other sports surface obstacles for match play requirements, including:
  • holes
  • tee markers
  • out of bounds markers
• water and its effect on sports play and preparation activities, including:
  • soil water requirements
  • turf surface water condition, dew and rain
  • water and dew removal techniques
  • turf covers, their application and consequences of use
• work health and safety hazards, risks and controls when preparing turf surfaces for play, including:
  • rapid risk assessment
  • safe transport of equipment to site
  • legal requirements when transporting equipment on public roads
• maintaining a safe work site, including:
  • safety barriers
  • signage and notifications
  • managing pedestrian traffic flow
• obstacles affecting sports surface set-up, and methods for managing them during preparation activities, including:
  • permanent obstacles
  • temporary obstacles
  • identifying and rectifying hazards to players and playing conditions
• calibration, adjustment and safe use of equipment commonly used for preparation of sports surfaces, including:
  • mowers and height adjustments
  • sports surface edgers
  • rollers
  • water soppers and blowers
  • line marking equipment
• pre-operational and post-operational machinery and equipment checks, including:
  • electrical cords
• checking and testing procedures
• identifying, tagging and reporting faulty equipment
• fault reporting procedures
• waste materials disposal procedures and environmental considerations
• record keeping and report preparation procedures and their purpose.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • a sports surface facility or an environment that accurately represents workplace conditions in which to demonstrate the preparation and layout of at least three sports stipulated in the performance evidence
• resources, equipment and materials:
  • turf set-up equipment, including cylinder and rotary ride-on mowers, edger, roller
  • marking-out materials and equipment
  • measuring and layout equipment, including tape measures and string lines
  • turf surface performance measuring equipment
• specifications:
  • turf preparation and set-up plan for at least three specific sports play surfaces stipulated in the performance evidence
  • workplace procedures and instructions for turf preparation for play
• timeframe:
  • sports play schedule.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to construct the soil profile for the establishment of high-performance sports and recreational turf for new or complete renovation projects in sporting, commercial and public recreational spaces.

The unit applies to individuals who construct turf playing surfaces under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has contributed to the completion of a sports turf construction project of a minimum of 100 square metres, individually or as part of a team, from concept to completion, including:

- developed a working plan and drawings to scale, including:
  - selected root zone materials
  - determined construction method according to industry standards
  - assessed the site layout
  - obtained, read and interpreted site and construction plans and specifications
  - selected the drainage system
  - estimated materials and costs for the project
- planned the construction of a turf profile, including:
  - conducted and interpreted soil tests
  - identified hazards and assessed the risks and implemented controls
  - used surveying equipment and techniques to accurately set out the site
- constructed the turf profile according to plans and specifications, including:
  - excavated to planned levels
  - installed sub-base to specification
  - installed drainage system to specification
  - installed and consolidated soil profile to specified grade and levels
- complied with local environmental requirements
- scheduled and organised construction work tasks according to construction project
- identified hazards and risks, and implemented control measures for personal, environmental and site-specific safety requirements
- operated, cleaned, maintained and stored tools and excavation and load shifting equipment.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- interpretation of plans and specifications for the scope of sports turf construction, including:
  - location of site
  - implication of impediments and services on construction activities, including irrigation pipes, overhead and underground power, drainage, telecommunications, gas, root system of trees
  - dimensions of construction for determining list of materials
- sports turf soil profile construction principles, methods and resources, including:
  - range of construction methods for specific applications (e.g. golf and bowling greens, cricket wickets, sports fields, race tracks, lawn tennis)
  - Australian and international standards for sports turf construction
  - United States Golf Association (USGA) greens construction profiles
  - Californian method
  - local construction methods
  - natural construction
  - push up greens
  - sand over clay
  - working with a perched water table
- drainage installation methods and materials, including:
  - pipes
  - drainage materials
  - root zone layer and uniformity in depth of horizons
- materials, tools, equipment and machinery for construction of soil profiles, including:
  - soil amendments
  - base construction materials
  - turf growing media and quality
- safe operation of machinery and equipment for constructing profiles, including:
  - excavating to known levels, including the cut and fill quantities
  - working to a consistent level and grade from sub-base to final level
  - methods of compacting and testing the compaction of the sub-base
- practical understanding of surveying principles and techniques, including:
  - using survey equipment to establish benchmarks and levels on a construction site
  - interpreting and constructing basic contour drawings
  - transferring and pegging out contours to a construction site
- soil testing techniques and the application of results to the construction process, including:
  - texture (particle size)
  - pH
- electrical conductivity
- infiltration rates
- site constraints and their impact on constructing turf surface, including:
  - aspect
  - site history
  - trees and other vegetation
  - location of services
  - water quality and reclaimed sources of water
- workplace health and safety hazards, risks and control measures when constructing new turf, including:
  - site safety
  - personal safety
  - safe use and operation of tools, equipment and machinery
- planning and scheduling construction works to ensure a logical, timely and effective process
- laying out a construction area from plans and drawings, including:
  - measuring techniques
  - finding and marking levels
  - types of markers, including paint, pegs, stringlines, flags
- calculations relevant to costing and estimating a turf construction project, including:
  - excavation volumes
  - volume of construction materials
  - labour time and costs
- environmental practices and procedures relevant to turf construction sites, including:
  - implications associated with construction and excavation activity
  - waste disposal procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a sports turf facility or an environment that accurately represents workplace conditions of a minimum of 100 square metres
- resources, equipment and materials:
  - personal protective equipment and other site safety equipment
  - surveying equipment
  - hand tools, excavation and load shifting equipment
  - soil testing equipment for pH, electrical conductivity, texture and infiltration rates
- specifications:
  - workplace procedures and instructions for construction of sports turf playing surfaces
• sports turf project construction drawings, plans and specifications
• workplace safety and environmental procedures related to construction of sports turf playing surfaces.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to establish turf by sowing, turf laying, sprigging and chaffing or stolonisation in sporting, public recreational open space, commercial and residential sites.

The unit applies to individuals who establish turf under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

### Elements

*Elements describe the essential outcomes.*

**Performance Criteria**

*Performance criteria describe the performance needed to demonstrate achievement of the element.*

1.4 Identify and select turf grass species and propagation method according to workplace or client planned outcomes
1.5 Assess the site for physical and cultural impediments to turf establishment and record results
1.6 Interpret results and prepare a turf establishment plan

2. Prepare to establish a new turf area

2.1 Select materials, tools, equipment and machinery for planting according to turf establishment plan
2.2 Carry out pre-operational and safety checks on tools, equipment and machinery
2.3 Identify workplace health, safety and environmental hazards, assess the risks and implement controls
2.4 Select, check, use and maintain personal protective equipment
2.5 Implement weed control strategy in preparation for turf establishment activities

3. Prepare soil and plant turf

3.1 Prepare planting site, incorporate soil additives and ensure soil moisture is within specification
3.2 Distribute turf propagation material on turf area according to turf establishment plan
3.3 Implement irrigation requirements to newly propagated turf
3.4 Collect and dispose of waste according to workplace and environmental procedures
3.5 Clean, store and maintain tools, equipment and machinery

4. Maintain turf establishment

4.1 Protect the site from disturbance and damage according to workplace procedures
4.2 Assess soil moisture condition and rectify according to workplace irrigation practices
4.3 Implement turf mowing practices during establishment according to workplace procedures and turf establishment plan
4.4 Apply top dressing to level the turf area according to turf establishment plan
4.5 Apply nutrients and amendments according to turf establishment plan
Elements | Performance Criteria
---|---
Elements describe the essential outcomes. | Performance criteria describe the performance needed to demonstrate achievement of the element.

5. Report and repair areas of damaged turf

5.1 Monitor turf condition for quality, and repair according to turf establishment plan
5.2 Record and report work outcomes according to workplace procedures

Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established a turf surface using:

- seed (hand seed sowing, mechanical seed sowing, hydro-seeding or drilling)
- sod (turf rolls or sheets)
- and one of the following methods:
  - sprigs (hand sprigging, hydro sprigging, mechanical sprigging)
  - plugs
  - chaffing or stolonisation.

There must also be evidence that the individual has:

- collected and prepared soil samples for testing and interpreted results
- identified impediments to turf establishment and recorded results
- determined turf establishment species, methods and requirements
- prepared an establishment plan to meet client or workplace requirements
- identified hazards and risks and implemented control measures for personal and site-specific safety
- prepared materials, equipment, machinery and turf propagation materials ready for implementation
- performed turf establishment activities safely using equipment, machinery and materials
- collected waste and disposed of it safely
- selected, safely used, cleaned, maintained and stored turf establishment machinery and equipment
- maintained turf establishment records and reported outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for establishing, turf, including:
• preparing a turf establishment plan
• turf grass identification, propagation and growth characteristics
• turf establishment methods, including seed, sod, sprigs, plugs, chaffing and stolonisation
• handling and assessing turf propagation materials for defects
• distributing, laying and planting turf propagation materials to establish even coverage
• fertiliser use and application
• soils and turf nutrition
• overseeding warm season grasses and allelopathy
• common weeds, pests and diseases, and control measures for establishing new turf, including field tests to identify problems
• physical and chemical properties of soils and effect on establishing new turf, including:
  • compaction
  • pH
  • salinity and nutrition
  • texture and soil type
  • soil sampling techniques and preparation for laboratory testing
  • field testing techniques for soils
• irrigation requirements for establishment of new and establishing turf
• soil types and their preparation for establishing new turf, including:
  • basic checks to assess soil condition, including soil moisture, tilth, compactness, depth and organic matter
  • soil preparation additives, including fertilisers, ameliorants, moisture control materials, pesticides and herbicides
  • methods for incorporation of soil additives
  • soil preparation requirements for different turf propagation techniques
• calculations to determine application rates of amendments, fertiliser and planting material, including distance, area, volume, percentage and ratio
• tools, equipment and machinery used in preparing new turf surfaces, including:
  • types of equipment and their effective and safe operation
  • pre-start checks
  • care and storage of tools, equipment and machinery
• turf propagation treatments for establishment, including:
  • protection for seed, sod, sprigs and plugs during first weeks of establishment
  • basic irrigation practices and recognising turf establishment needs and problems
  • rolling and mowing practices for new turf
  • monitoring and control of disorders
  • top dressing purpose and procedures
  • nutrients and amendments used for establishing turf
• workplace health and safety hazards, risks and control measures when constructing new turf, including:
• site safety
• personal safety
• safe use and operation of tools, equipment and machinery
• record keeping and reporting procedures relevant to turf establishment.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a sports turf facility or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • hand tools, stringlines, buckets, shovels, rakes, spades, level lawns and wheelbarrows
  • equipment, sod cutter, scarifier, transporter, roller, fertiliser and chemical application equipment
  • dry sand, propagation material and turf plugger
  • personal protection equipment
  • soil amendments and treatment materials
  • soil testing equipment
  • the two types of turf propagation materials and at least one of the propagation methods specified in the performance evidence
• specifications:
  • turf grass species specifications and requirements
  • workplace procedures and instructions for establishing turf.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to maintain general turf grass surfaces involving the general procedures for cutting and trimming grass, dethatching older grassed areas, applying fertilisers and treatments for managing grass health.

The unit applies to individuals who maintain turf surfaces under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, implemented a grassed area maintenance program, including:

- clarified the maintenance requirements for a grassed area with supervisor
- conducted a risk assessment and implemented controls for grassed area maintenance work
- identified fixed and temporary obstacles, and implemented procedures to avoid damage to obstacles
- identified and selected equipment and resources required for the maintenance activities
- prioritised and scheduled maintenance activities
- ensured workplace safety practices were implemented for all grassed area maintenance works
- selected, checked and used personal safety equipment
- selected, checked and adjusted equipment and machinery.

There must also be evidence that the individual has:

- operated equipment and machinery safely to maintain at least 100 square metres of grassed area and has performed the following tasks:
  - used mowers and trimmers to cut grass to a specified height
  - used coring or scarifying equipment to manage thatch
  - used mechanical spreader to apply fertilisers or amendments at a specified rate
  - used manual methods to control broad leaf and grass weeds
  - used manual or mechanical equipment to apply liquid treatments to control weeds at a specified rate
  - followed operating procedures for pre-start checks, start-up, operation and shut-down for all machinery and equipment used
  - reviewed grassed area maintenance activities and recommended changes to the maintenance plan with supervisor
  - recorded and reported grassed area maintenance activities.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maintenance and management of grassed areas, including:
  - recognising local turf grass species
  - growing conditions and cultural requirements of warm and cool climate turf grass species
  - purpose of grass and selection of mowing height
  - thatch and impact on grass health and vigour, and methods for reducing thatch
  - basic nutrient requirements of grass and commonly used fertilisers
  - fertiliser application methods and rates
  - turf grass physiology as it applies to grassed area maintenance
- methods of applying fertiliser and chemical treatments to grassed areas, including:
  - liquid treatments using drenches and sprayers and basic application equipment
  - broadcasting granular and powder applications by hand or mechanical means
- health, safety and environmental policies and procedures in a workplace, including:
  - identifying hazards, assessing and controlling risk
  - protecting the environment during operations and waste
  - personal protection and equipment
- methods and practices for mowing grassed areas, including:
  - setting the height of cut
  - obtaining uniform cut
  - maintaining consistent pattern
  - variation of cut direction to reduce wear and tear
- tools, equipment and machinery used for grass maintenance, including:
  - rotary and cylinder mowers and other grass cutting and trimming equipment
  - operation of coring or scarifying equipment, including the potential damage to irrigation and drainage infrastructure
  - mechanical spreaders
  - hand or motorised spray equipment
- equipment operation and maintenance, including:
  - pre-start checks, start-up and shut-down procedures
  - clean-up and storage
- impediments to safe maintenance activities and action to be taken, including:
  - people and animals
  - proximity to roadways, pathways and other public spaces
  - assets and other facilities that may be damaged
- weed species and control strategies in turf grasses, including:
Assessment Requirements for AHCTRF309 Implement a grassed area maintenance program

- broad leaf weeds
- grass weeds
- mosses and other invasive plant species
- record keeping and recording procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a grassed area of at least 100 square metres

- resources, equipment and materials:
  - rotary and cylinder mowers, coring and scarifying equipment or machines
  - fertiliser spreaders, and spray and drenching equipment
  - measuring equipment for treatments and fertilisers
  - fertilisers, amendments and weed treatments
  - fuel, oil, tools and equipment required to adjust and operate machinery

- specifications:
  - workplace procedures and instructions related to implementing grassed area maintenance programs, including safety and environmental procedures
  - operating instructions for machinery and equipment
  - specifications for rates of application of fertilisers and weed treatments

- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored the health of a warm and a cool season turf species and reported recommendations for turf health, including:

- established the scope and scheduling for monitoring turf health for a warm season turf grass species and the common health issues
- established the scope and scheduling for monitoring turf health for a cool season turf grass species and the common health issues
- identified turf health specialist advisors and their requirements to support monitoring procedures
- identified and selected tools and equipment required to monitor and sample turf health issues
- inspected and assessed turf grass for signs of common turf health problems and assessed the extent of the problems, including:
  - pests
  - diseases
  - nutritional
  - environmental causes
- conducted field tests to aid in diagnosing turf grass health issues, including:
  - pH
  - electrical conductivity (EC)
  - drainage and infiltration rate
  - soil temperature
- collected and despatched samples for laboratory testing and repaired sample sites
- assessed diagnosis from field and specialist advisor results and determined acceptable parameters
- prepared recommendations according to the sports play standards
- monitored turf grass during growing season.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- 15 turf grass species or cultivars, their common name, genus and species, and growth habit, including warm and cool grass species
- importance of plant physiology in plant health, including:
  - photosynthesis
  - transpiration
  - structural components of turf grasses and relation to turf grass health
  - basic metabolic and physiological processes for disease resistance in turf grass
  - nutrients, nutrient uptake and role in plant growth
  - basic physiology processes for insect and disease resistant turf
  - basic endophyte infection of turf
  - allelopathy in turf grass species
- specialist advisors, their purpose and method of engagement to support turf health diagnosis
- turf grass species selection for plant health management, including:
  - disease tolerance
  - mowing height
  - playing requirements
  - dormancy
  - salinity
  - resilience, wear and recovery
  - water requirements
- turf grass species and common regional health issues, including:
  - basic biology, symptoms and controls of pests
  - basic biology, symptoms and controls of diseases
  - symptoms and controls of disorders, including soil condition, nutrition
  - environmental disorders (e.g. frost, poor drainage, shade)
- tools, equipment and process for diagnosing turf health and disorders
- expectations and quality indicators for turf grass and sports turf standards
- rates and recommended treatments to achieve optimum turf grass health objectives, including:
  - simple and compound fertilisers used in the turf industry and their effect on turf health
  - fertiliser types and nutrient release rates
  - common pesticide types and methods of application
  - external environment impact of treatments through leaching, excessive spraying, off target damage and overuse
  - interpretation of labels and safety data sheets for treatments
  - use of growth regulators and concept of 'growing degree days'
- calculating nutrient application according to fertiliser rates
- role of trace elements and nutrients required by turf grass plants, and symptoms of toxicities and deficiencies
- soil and plant tissue analysis for monitoring and managing turf health, including:
  - main elements of analysis
  - significance as indicators of nutritional deficiency and toxicity.

### Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a sports turf facility or an environment that accurately represents workplace conditions
  - a sports play area with warm season turf grass species to monitor for health issues
  - a sports play area with cool season turf grass species to monitor for health issues

- **resources, equipment and materials:**
  - test equipment and resources for pH, soluble salts and soil moisture analysis
  - sampling equipment and materials for collecting, storing and despatching soil, plant, pest and disease test samples
  - examples of pests, diseases and disorders for identification purposes
  - turf health specialist advisory reports

- **specifications:**
  - workplace procedures and instructions related to monitoring turf health

- **relationships:**
  - specialist advisor

- **timeframe:**
  - a scheduled period of time for monitoring a turf grass area for health issues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to implement renovation or remediation of a sports turf area for minor projects and seasonal renovations in the turf industry.

The unit applies to individuals who renovate sports turf under general direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, renovated a sports turf surface, including:

- assessed the site and renovation program to determine the extent of works and required renovation activities
- identified turf grass, materials and resources and calculated quantities required
- collected and tested soil samples and established the soil condition for renovation site
- prepared a schedule of works for renovation activities
- identified hazards and risks, and implemented control measures for personal and site-specific safety
- selected and prepared materials, equipment, machinery and turf propagation materials ready for renovation works
- performed turf renovation activities safely using equipment, machinery and materials according to renovation schedule and workplace procedures, including:
  - coring or spiking
  - top dressing
  - scarifying or grooming
  - shaving or turf cutting or plugging
  - fertilising or adding amendments
- cleaned site and collected waste from renovation works and disposed of
- cleaned, maintained and stored turf renovation machinery and equipment
- assessed renovation activities against schedule of works and implemented remedial action where out-of-specification
- recorded and reported turf renovation activities, faults and issues.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of turf renovation, including:
  - turf renovation programs and their function in maintaining playable surfaces
  - developing a schedule of works for sports turf renovation
- calculations required to determine the quantities required for the renovation program, including:
  - amendments
  - fertiliser
  - seed
  - soil, sand and other growing media
- techniques for conducting field tests for soils, including:
  - pH
  - electrical conductivity
  - infiltration rate
  - organic matter
  - firmness and compaction of the surface
  - traction
  - surface smoothness
- planting, care and renovation scheduling requirements of grass species and cultivars, including:
  - specialist turf renovation practices to achieve high performance turf
  - national and international standards for turf surface appearance and quality
  - turf sward height
- structure of a sports turf soil profile, including:
  - soils and soil preparation for renovation
  - soil aeration and compaction, including, core, solid tyne and water injection
  - impact of soil compaction and thatch on irrigation and infiltration rate
  - levelling turf surfaces
- turf grass species and effect on mat, thatch and dethatching techniques, including:
  - turf grass improvements using top dressing, dusting, shaving, scarifying and grooming
  - effect of adverse weather conditions on renovation activities
- effective and safe use of tools, machinery and equipment commonly used for sports turf renovation programs, including:
  - scarifier
  - sod cutter
  - corer
  - slicer
  - shaver
top-dresser
- drag-mat
- fertiliser spreader
- transporter
- loader, bobcat or similar
- hand tools, tynes, shovels, spades, level lawns and wheelbarrows
- factors for consideration in the selection of tools, machinery and safety equipment
- common pre-operational and post-operational checks of equipment
- adjustments and settings for renovation equipment
- assessment of safety hazards and risks when renovating turf areas, including:
  - public safety
  - barriers and exclusions zones
  - signage
  - personal protection and equipment
  - manual handling techniques for lifting or moving heavy loads and materials
- chemical amendments for renovations, including:
  - fertilisers
  - ameliorants
  - growth regulators
- turf repairs and regeneration procedures, including:
  - over sowing
  - plugging
  - sprigging
  - rolled turf and turf replacement
  - divot replacement
  - top dressing materials and procedures
- waste materials handling and disposal, including environmental considerations
- record keeping and reporting procedures and requirements.

Assessment Conditions
Assessment of skills must take place under the following conditions:
- physical conditions:
  - a sports turf facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - turf renovation machinery and equipment
  - turf renovation hand tools
  - fertiliser, ameliorants and top dressing material
  - turf propagation materials, including seed, sprigs and rolled turf
- specifications:
- turf renovation program
- workplace procedures and instructions related to turf renovation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to develop and document a sports turf maintenance program.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

### Element | Performance criteria
--- | ---
| | action
| 1.3 Present data and readings in a form that can be easily interpreted by the turf manager
| 1.4 Consider seasonal issues affecting test results from information on the turf species and cultivars, historical records and own experience
| 1.5 Determine nutritional status of the turf plant species and cultivars by analysing collected data and comparing with accepted standards
| 2. Identify the requirements of a sports turf maintenance program | 2.1 Define the standards for turf presentation according to client requirements and industry best practice
| 2.2 Identify the different maintenance requirements for a range of conditions over the growing cycle
| 2.3 Select sports turf maintenance procedures to achieve the standards for turf presentation
| 2.4 Identify and confirm availability of resources, tools, equipment and machinery required for the sports turf maintenance program
| 2.5 Determine the most cost-effective approach to maintaining the sports turf playing surface
| 3. Prepare and document the sports turf maintenance program | 3.1 Prepare detailed plan, specifications and quotation based on the requirements of the program
| 3.2 Develop and document on-site procedures and schedules for the sports turf maintenance program
| 4. Monitor the sports turf maintenance program | 4.1 Monitor the program to ensure enterprise standards for presentation of sports turf playing surfaces are achieved
| 4.2 Review the sports turf maintenance program to ensure it remains responsive to changing conditions
| 4.3 Implement appropriate courses of action to overcome shortcomings in the program
| 4.4 Document and report remedial action undertaken to management

### Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare an seasonal/annual program according to the requirements of the enterprise and the grounds maintenance budget
- outline the scheduled activities in the sports turf maintenance program to green keeping staff and their respective roles and responsibilities
- use existing information and records to determine a comprehensive maintenance program
- monitor and review the program to ensure responsiveness to changing conditions
- implement appropriate courses of action to overcome program shortcomings

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of maintaining a range of sports turf playing surfaces
  - growth habits and cultural requirements of specific turf plant species and cultivars under a range of soil and environmental conditions
  - maintenance requirements and practices for specific turf plant species and cultivars after initial establishment
  - nutrients required by specific turf plant species and cultivars and the effects of nutrient deficiency and toxicity on individual plant species and cultivars, including visual symptoms
  - plant diseases, pests and disorders and weeds of specific turf plant species and cultivars
  - site evaluation techniques including analysis of the condition of soils, plants, and the site for turf maintenance activities
- soil ameliorants commonly required to treat the soil problems experienced by the enterprise
- the characteristics of soil and other growth media types, uses and additives to enhance the available nutrition for specific turf plant species and cultivars
- the main simple and compound fertiliser products available to the enterprise

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a sports turf maintenance program for play on at least one of the following:

- a single hole for a golf course with tees and surrounds, rough, fairway and green
- a bowling green
- a cricket ground with wicket surface and outfield
- a sports field for one of Australian Rules football, soccer, rugby, lacrosse or polo
- a horse race track
- a turf farm
- a lawn tennis court
- a croquet lawn
- other natural sports turf surface.

The sports turf maintenance program must:

- include a twelve month cycle for the sports turf playing surface
- specify all maintenance practices, including:
  - irrigation
  - mowing and rolling
  - fertiliser applications
  - pesticide applications to treat pests, diseases and weeds
  - plant growth regulator applications
  - renovation practices
  - surface set-up standards and player expectations
- be implemented for a period of no less than eight weeks to verify the performance outcomes documented in the program.

There must also be evidence that the individual has:
• prepared an annual sports turf maintenance program according to budget
• assessed and incorporated into maintenance program the following: test results, optimum performance characteristics, financial constraints and resource implications
• scheduled activities and informed key stakeholders and work team of their respective roles and responsibilities
• monitored and reviewed the program to ensure program outcomes are achieved
• implemented appropriate course of action to overcome program deficiencies
• documented and reported actions and changes to maintenance program.

**Knowledge Evidence**

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• biological principles and processes of a range of sports turf species for playing surfaces, including:
  • growth habits and cultural requirements of turf grass species and cultivars under varying soil and environmental conditions
  • maintenance requirements and practices for specific turf plant species and cultivars after initial establishment
  • nutrients required by specific turf plant species and cultivars, and the effects of nutrient deficiency and toxicity on individual plant species and cultivars, including symptoms
  • plant diseases, pests and disorders and weeds of specific turf plant species and cultivars
  • site evaluation techniques, including analysis of the condition of soils, plants and the site for turf maintenance activities, including:
    • soil ameliorants required to treat common soil problems
    • the characteristics of soil and other growth media
    • types and functions of additives used to enhance the nutrition available for specific turf plant species and cultivars
    • the main simple and compound fertiliser products available
  • design and development of maintenance programs within turf grass requirements, including:
    • requirements to build healthy turf to meet national or international standards
    • standards and player expectations of the playing surface
    • availability of equipment and materials
    • financial resources
  • soil and plant testing programs and their development, including:
    • types of soil and plant tissue tests used in turf management
    • field testing activities
    • off-site and laboratory testing activities and the role of consultants
    • scheduling and timing of tests for optimum results
• sampling techniques for soils and plant tissue
• interpretation of soil and plant test results, including:
  • impact of the seasons on results
  • expected results for turf species and cultivars
  • importance of using and maintaining historical records
• turf grass species and their cultural requirements and the implication for a maintenance
  program, including:
  • irrigation methods and water budget
  • mowing and rolling methods, including frequency for turf play surface requirements
  • fertiliser and ameliorant application timing and impact on turf health and growth
  • pests and disease control, including pesticide application
  • impact and management of plant growth regulators and their application to turf grass
  • planned maintenance for renovation of worn and damaged surfaces
  • maintenance implications for setting up for sports play
• management of unexpected activities and outcomes, including:
  • developing contingencies to manage unpredictable situations
  • managing adverse climatic conditions
  • adverse or unplanned turf usage
• record keeping and reporting procedures and practices.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • access to a sports turf facility or an environment that accurately represents workplace
    conditions on which to implement and monitor a maintenance program, and at least
    one of the sports turf surfaces stipulated in the performance evidence
• resources, equipment and materials:
  • access to national and international sports turf industry standards
  • access to player and user expectations for playing surface
  • access to soil and plant tissue analysis reports for interpretation
• specifications:
  • workplace documents, including procedures and brief related to development of a
    sports turf maintenance program, including a maintenance budget and list of the
    equipment, machinery and human resources available
• relationships:
  • work team
• timeframe:
  • maintenance program must span 12 months
  • implementation of a minimum of 8 weeks to verify the program outcomes.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to plan and implement sports turf renovation activities, which involves the preparation of procedures, scheduling and coordination of staff, and monitoring and reviewing financial and renovation performance.

The unit applies to greenkeepers and turf managers that use specialist skills to plan, coordinate and supervise the work of others within known parameters. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, prepared and implemented a sports turf renovation plan, including:

- assessed site plans and documentation to establish sports turf purpose
- determined size of sports turf area in need of renovation
- conducted field tests to establish the degree of degradation of sports turf surface
- assessed results and established the scope of renovation works
- identified site health, safety and environmental hazards, assessed risks and established controls for the renovation works
- developed and documented a plan for a sports turf renovation program and prepared a schedule of works and specifications for implementation
- reviewed status of machinery and equipment and conducted pre-operational checks in preparation for renovation works
- selected and coordinated work team and contractors to implement the schedule of works for renovation of sports turf surfaces
- monitored restoration activity, safety and environmental impacts of restoration work against performance targets, and implemented remedial actions where non-compliant
- reconciled completed works against renovation plan
- checked equipment for serviceability, and initiated repairs
- recorded costs of restoration and reviewed against budget
- maintained records and produced reports on renovation outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- enterprise, national and international industry standards for turf surface appearance, performance and quality
- environmental implications of renovation activities, turf and soil treatments, and waste disposal procedures
- safe work practices and procedures applicable to renovation activities, including:
  - safe materials handling
  - equipment and operation
  - public and turf area users
- basic surveying skills to measure the size of renovation site
- methods and purpose of field tests, including:
  - infiltration rate
  - organic fines
  - hardness
  - traction
  - surface smoothness
  - turf sward height
- identification and cultural requirements of turf grass species and cultivars, including:
  - planting and propagating
  - care and maintenance
  - renovation scheduling requirements
- specialist turf renovation practices to achieve high performance turf, including:
  - dethatching
  - top dressing
  - aerating
  - over sowing
  - fertilising and soil conditioning
  - drainage and water holding
- determining resource and material requirements for turf grass renovation program, including:
  - financial and budgetary constraints
  - consumables, including fertilisers, ameliorants and other chemicals
  - labour and contractor requirements and scheduling
  - equipment and machinery
  - turf grass propagation material
  - growing soils and media
  - expectations and specification of work quality outcomes
- tools, equipment and machinery commonly used for sports turf renovation programs, including:
  - effective and safe use of tools and machinery
  - influences on the selection of tools, machinery and safety equipment
  - common pre-operational and post-operational checks of equipment
  - adjustments and settings for renovation equipment
- assessment of safety hazards and risks when renovating turf areas, including:
  - public safety
  - barriers and exclusions zones
  - signage
  - personal protection and equipment
  - manual handling techniques for lifting or moving heavy loads and materials
- coordinating a work team and working with contractors, including:
  - communicating with team members
  - organising and directing labour
  - dealing with performance issues
- preparation of renovation plans, recording and reporting renovation activities.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a sports turf facility or an environment that accurately represents workplace conditions on which to prepare and implement a turf renovation plan
- resources, equipment and materials:
  - turf renovation tools, machinery and equipment
  - fertiliser, ameliorants, top dressing materials
  - turf planting and propagation materials
  - measuring and layout equipment, including levels, tape measures, boning rods, laser level, dumpy level
- specifications:
  - workplace procedures and work instructions for turf area maintenance
  - access to workplace, national and international turf grass industry standards
- relationships:
  - work team and contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to establish sports turf playing surfaces and develop a design for the site, its specifications and work procedures. It applies to the planning processes involved in establishing turf in new constructions and major renovations of existing sports turf surfaces.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- design sectional and elevation plans of the turf establishment works
- develop a schedule and a plan of the scope of works
- develop and interpret construction documentation
- develop specifications and prepare a bill of quantities
- identify and incorporate sub-contracted works into the turf establishment plan
- order and arrange for purchase and delivery of goods and services
- prepare a maintenance program for turf establishment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for establishing and maintaining sports turf playing surfaces
  - construction procedures, plant selection and cultural practices for sports turf playing surfaces
  - growth habits and cultural requirements of specific turf plant species and cultivars under a range of soil and environmental conditions
  - irrigation, drainage and the interrelationship of soil air, water and the physical structure of existing and manufactured soils and sports turf mixes
- legislation and regulations relating to sports turf sites and turf establishment works
- maintenance requirements and practices for specific turf plant species and cultivars prior to and after initial establishment
- site evaluation techniques including analysis of the condition of soils, plants and the site for turf establishment activities
Assessment Requirements for AHC51215C Plan the establishment of sports turf playing surfaces

Date this document was generated: 3 September 2020

- surveying principles and techniques
- the role of project briefs and client consultation processes in planning turf establishment works

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, planned the establishment of a sports turf playing surface taking into consideration the soil profile, including:

- liaised with client to establish the scope of the turf establishment project
- assessed the hydrological, biophysical and chemical characteristics and their impact on turf establishment site and playing surface design
- assessed and evaluated drainage and irrigation requirements for sports turf playing surface
- established a site survey depicting key features, benchmarks, levels and services
- investigated and selected each of the following for inclusion in performance brief:
  - turf area construction technique suitable for client requirements and site characteristics
  - turf grass species and cultivars suitable for the playing surface
- identified conflicts with legislative and regulatory requirements, and proposed solutions to these
- identified environmental impacts of turf establishment and recommended actions for proposed works
- investigated and selected sports turf profile options
- developed a performance brief for a sports turf surface and presented it to client for approval
- sourced, tested and evaluated materials suitable for sports turf profile, including conducting the following tests:
  - saturated infiltration
  - porosity
  - volumetric moisture retention
  - bulk density
  - moisture release curve
  - particle size and distribution
- pH
- selected suitable materials for turf grass profile construction consistent with performance brief and industry best practice
- developed and designed a profile consistent with irrigation and drainage design requirements and performance brief
- documented turf establishment concept design and presented it to client for approval
- determined turf establishment procedures
- confirmed profile, irrigation and drainage concept designs are consistent with performance brief
- produced plans for the design of turf establishment project, including:
  - elevations and views consistent with industry standards
  - section drawings of sports turf profile
- prepared documentation to accompany the turf establishment plan, including:
  - schedule of works
  - details of construction
  - specifications for construction
  - list of materials
  - identified sub-contracted works
- prepared work procedures for turf establishment activities and practices
- prepared maintenance procedures for the turf establishment phase.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- establishing and maintaining sports turf playing surfaces, including:
  - construction procedures, turf species selection and cultural practices for sports turf playing surfaces
  - growth habits and cultural requirements of specific turf plant species and cultivars under a range of soil and environmental conditions
  - crop factor
  - readily available water estimates
- best practices in turf grass profile design, including:
  - United States Golf Association method
  - California method
  - national best practice
  - local practices
- irrigation, drainage and the interrelationship between soil, air, water and the physical structure of existing and manufactured soils and sports turf mixes
- considerations for establishment of type and depth of soil profiles, including:
  - retaining existing soil profile and infrastructure
  - remedial action on existing profile
• full renovation and replacement of soil profile
• sources of irrigation water, including:
  • volume and quality of water supply
  • relative cost
  • irrigation demand and specifications, including flow rate, pressure, water quality testing
• hydrological characteristics of soil profile, materials and tests for root zone profiles, including:
  • saturated infiltration rate and testing procedures
  • sub-soil stability and moisture content
  • perched water table
  • climate and rainfall, including the impact on soil moisture and growth rate
  • factors for establishing ‘drainage design rate’ (drainage modulus)
  • volumetric moisture retention and moisture release
  • precipitation rate
  • infiltration rate and depth of soil profile
• computations for soil profile design and specifications, including:
  • calculating area and volume
  • hydrological calculations, including flow rates, infiltration rate, precipitation rates and Hooghoudt's equation
  • costing and documenting materials
• biophysical environment of the turf establishment site, including:
  • microbial activity (pests, diseases, beneficial organisms)
  • competition with weeds
  • shade trees
• physical and chemical characteristics of the soil for turf grass establishment, including:
  • compaction, porosity and bulk density of profile materials
  • pH, salinity and nutrition and their respective standards for measuring
  • soil profiles, texture, soil type and particle size distribution
  • soil sampling techniques
  • field testing techniques for soils
• legislation and regulations relating to sports turf sites and turf establishment works, including national and international standards for sports turf surfaces
• maintenance requirements and practices for specific turf plant species and cultivars prior to and after initial establishment
• site evaluation techniques, including analysis of the condition of soils, plants and the site for turf establishment activities, including:
  • surveying principles and techniques
  • surveying services
  • basic surveying techniques and equipment for establishing main features, services and levels
• basic geospatial and digital surveying techniques
• basic plan drawing skills
• role of project briefs and client consultation processes in planning turf establishment works, including:
  • client liaison and negotiation skills
  • working with consultants and professional services
• preparation of plans, specifications and list of materials, including:
  • type and functions of drawings, including views, scale, dimensions and documentation
  • calculation of area, volume and rates
  • costing materials
  • documenting a list of materials
  • plan development, including manual and digital drawing principles
  • industry standards for drawing plans
• identifying resource implications, including:
  • availability and use of tools, equipment and machinery used in preparing new turf surfaces
  • turf establishment treatments and costs
  • delivery and management of raw materials during construction
  • accessing specialist consultants and professional services.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  • access to a site suitable for establishing a sports turf surface
• resources, equipment and materials:
  • manual drawing equipment and digital drawing equipment and programs
  • computers and software for searching information and preparing documentation
  • reports, results and testing equipment for soil, plant tissue and biophysical characteristics of the site used in the performance evidence
  • site plans with levels for the site used in the performance evidence
  • meteorological data for the site used in the performance evidence
• specifications:
  • workplace documents, including a client brief, work instructions and turf area construction plans
  • local, national and international standards for turf grass establishment
• relationships:
  • client.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to assess a sports turf surface and develop programs and procedures to implement renovation activities appropriate to the sport and sporting regulations.

It applies to individuals who are responsible for the management of turf renovation programs, who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a renovation management program for at least three sports turf playing surfaces from the following list:

- a single hole for a golf course with tees and surrounds, rough, fairways and green
- a bowling green
- a cricket ground wicket surface and outfield
- a ball sport surface selected from one of Australian Rules football, soccer or rugby
- a horse race track
- a sport turf surface selected from one of lawn tennis, lacrosse, hockey, polo or croquet.

There must also be evidence that the individual has:

- inspected and assessed turf surface for condition
- assessed soil test results and determined corrective action
- assessed water quality tests and determined effect on turf growth
- assessed grass sward cover and identified species and over-sowing requirements
- reviewed historical records and practices and determined a turf renovation technique for current conditions and desired outcomes
- identified work health, safety and environmental hazards, assessed risks and identified control measures to include in plan
- documented a turf renovation plan and schedule of works
- produced and reviewed a cost budget for the project
- determined suitability and operational status of machinery and equipment and specified settings and adjustments
- identified and liaised with team and contractor for expected works
- prepared a schedule of works
- calculated materials and ordered goods, services and contractors required for the renovation
- prepared a post-renovation turf recovery maintenance program
• updated records and reported outcomes for renovation program
• reviewed program outcomes against plan, and recommended future adjustments.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• comparative health, safety and environmental implications of renovation activities, turf and soil treatments and waste disposal
• enterprise and industry standards for turf surface appearance and quality
• field measurement techniques, including infiltration rate, organic fines, hardness, traction, and surface smoothness
• impact of environment on turf recovery, including:
  • climatic conditions
  • soil temperature
  • moisture
• turf grass species and cultivars, including:
  • planting
  • care
  • renovation scheduling
• requirements of the turf's intended use, including intensity and scheduling
• soil physical and chemical properties for imported and existing soils
• specialist turf renovation principles and practices, including:
  • aeration
  • thatch removal
  • topdressing and dusting
  • over-sowing
  • application of soil ameliorants
  • removal of over-sown species
  • turf nutrition and plant growth regulators
• scheduling, program management and time management tools and Gantt charts
• developing and managing budgets, including:
  • direct costs
  • indirect costs
  • fixed or variable costs
• enterprise, national and international industry standards for sports turf surface appearance, performance and quality
• safe work practices and procedures applicable to renovation planned activities, including:
  • materials handling
  • equipment and operation
  • public and turf user safety
- purpose and methods of field measurement tests, including:
  - infiltration rate
  - organic fines
  - hardness
  - traction
  - surface smoothness
  - turf sward height
- identification and cultural requirements of turf grass species and cultivars, including:
  - planting
  - propagating
  - care and maintenance
  - renovation scheduling requirements
- specialist turf renovation practices to achieve high performance turf, including:
  - dethatching
  - topdressing
  - aerating
  - de-compaction
  - over-sowing
  - fertilising and soil conditioning
  - adjusting drainage and water holding
- establishing and estimating resource and material requirements for turf grass renovation programs, including:
  - financial and budgetary considerations
  - consumables
  - labour and contractor requirements and scheduling
- tools, machinery and equipment used in turf renovation, including:
  - log books and operation status
  - adjustments and settings of tynes and blades
  - types of equipment and their purpose
  - effective and safe use of tools and machinery
  - influences on the selection of tools, machinery and safety equipment
  - common pre-operational and post-operational checks of equipment
- managing techniques and working with a work team and contractors, including:
  - communicating with work team
  - organising and directing labour
  - dealing with performance issues
- preparation of renovation plans, recording and reporting renovation activities.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a sports turf facility or an environment that accurately represents workplace conditions with access to at least three sites suitable for sports turf surface renovation stipulated in the performance evidence

- resources, equipment and materials:
  - computer software for documenting plans and preparing schedules
  - reports, results and testing equipment for soil and plant tissue

- specifications:
  - workplace procedures and site plans for sports turf renovation
  - local, national and international standards for sports turf grass conditions

- relationships:
  - work team and contractor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to develop short-term, annual and ongoing sports turf establishment, management and maintenance programs, for the extension, redesign, upgrade and renovation of sports turf surfaces using an organisation’s available resources.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a management program spanning a 12-month period for at least two sports turf surfaces from the following:

- a single hole for a golf course, including tee and surrounds, rough, fairways and green
- a bowling green
- a cricket surface, including the wicket surface and outfield
- a ball sport selected from one of Australian Rules football, soccer or rugby
- a horse race track
- a sport turf surface selected from one of lawn tennis, lacrosse, hockey, polo or croquet.

There must also be evidence that the individual has:

- liaised with key stakeholders and investigated technical requirements for managing a sports turf site
- determined the scope and objectives of management program and documented in a project brief
- researched turf culture, management principles and practices, health and safety and environmental implications of managing sports turf surface
- assessed availability and quality of resources to inform maintenance program design
- assessed the condition, characteristics and usage of existing turf surface to inform maintenance program design
- developed specifications and schedule of works using a Gantt chart
- developed a list of materials and financial budget for turf management program
- communicated turf management program to key stakeholders according to workplace procedures, including:
  - a digital written report
  - a presentation to a group of stakeholders
- reviewed and documented in an electronic format at least one turf management program against actual works
• communicated planned changes and works achieved by the management program with a
  verbal presentation of at least 15 minutes' duration
• recorded and reported activities and changes for maintenance program according to
  workplace procedures.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks
outlined in the elements and performance criteria of this unit. This includes knowledge of:

• management programs structure, design and development
• project management and scheduling, including:
  • project management tools and software
  • creating and using Gantt charts
• maintaining quality of sports turf, including:
  • impact of type of sport and frequency of usage on turf quality
  • turf varieties and characteristics
  • users' expectations
  • sport regulatory requirements
• cultural requirements of sports turf surfaces, including:
  • turf grass species, varieties and cultivars
  • soil type, characteristics, tests and interpreting results
  • nutritional requirements for different stages of turf development
  • impact of climate on turf grass species and varieties
  • sports turf maintenance requirements and techniques
  • turf establishment techniques and requirements
• sources of water supply and measures of quality, including:
  • testing and interpreting results
  • impact of water quality on soils and turf
  • advantages and disadvantages of sources of water
  • volume of water, irrigation performance and water budgets
• key stakeholders and their importance in developing a sports turf management plan,
  including:
  • clients and their needs
  • senior management and relevant authorisations
  • employees and their role in implementation
  • contractors and their role in implementation
• workplace health, safety and environmental constraints on management programs,
  including:
  • legislative requirements
  • storing and use of agricultural chemicals
  • accessing, storing and using hazardous materials
- safety procedures and practices
- strategies to communicate management programs to key stakeholders, including:
  - documentation
  - oral presentations
  - visual presentations
  - electronic presentations
- assets required for sports turf maintenance, including:
  - quality water supply
  - equipment and machinery
  - suitably trained human resources
  - materials and consumables
- record keeping and reporting procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a sports turf facility or an environment that accurately represents workplace conditions
  - access to two sporting venues specified in the performance evidence
- resources, equipment and materials:
  - internet access and computers for researching and documenting a sports turf management program
- specifications:
  - workplace procedures relevant to the development of sports turf management programs
  - sports turf industry standards
  - rules, regulations and standards for two of the sports specified in the performance evidence
- relationships:
  - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, managed sports turf facility assets, including:

- identified sports turf facility assets, categorised them into type and maintenance requirements and recorded in workplace asset register or database
- determined maintenance requirements, resources and timing of maintenance and developed a schedule for sports turf facility, equipment and mechanical assets
- developed and implemented maintenance record keeping procedures for sports turf facility assets
- communicated sports turf facility assets maintenance schedule and procedures to stakeholders
- monitored maintenance work and safety procedures for sports turf facility assets
- reviewed and updated replacement programs and schedules
- assessed and reported status of sports turf facility assets, and recommended action when identified as unserviceable.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- management strategies for managing sports turf facility assets and effect on key stakeholders
- typical sports turf facility assets, including:
  - buildings and structures
  - tools, machinery and equipment
  - water supply, irrigation and drainage equipment
  - office equipment and resources
• gardens and surrounds
• fencing
• sporting hardware
• maintenance requirements of sports turf physical resources and infrastructure, including:
  • repairs
  • manufacturer specifications
  • regular service requirements and scheduling
  • standards and specifications
• recording asset management, including:
  • information to be recorded
  • proprietary software
  • paper or electronic databases
• scheduling and programming of sports turf maintenance works, including replacement plans and depreciation
• workplace health and safety procedures for overseeing asset maintenance programs, including:
  • safe operating procedures and practices
  • designating required personal safety equipment
• communication strategies and methods for informing stakeholders of maintenance programs
• procedures for reporting and recording maintenance activities.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • access to a sports turf facility or an environment that accurately represents workplace conditions with assets on which to develop a maintenance program
• specifications:
  • workplace procedures and instructions for managing sports turf facility
  • manufacturer maintenance instruction for assets
• relationships:
  • stakeholders.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- analyse performance and audit data
- develop and implement enterprise work health and safety and environmental procedures
- evaluate irrigation system performance
- identify adverse environmental impacts of irrigation activities and appropriate remedial action
- strategically manage irrigated production systems

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of water systems management
  - cost or benefit analysis
  - enterprise policies and procedures
  - environmental impacts of irrigation, using water from any ground or underground source
  - plant requirements
  - water quality

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to determine the feasibility of using or up-grading an irrigation system, install or maintain an irrigation or drainage system, monitor and assess water inputs, irrigation system and plant response and evaluate irrigation system performance.

The unit applies to individuals who apply specialised skills and knowledge to the management of water systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

| 2. Determine the feasibility of using or up-grading irrigation system | 2.1 Assess water resources and drainage implications to determine suitability for irrigation  
2.2 Determine water quality and treatment requirements  
2.3 Determine water requirements and most suitable application systems for each crop and plant type and area, and for each soil type  
2.4 Determine other water requirements, such as climate control  
2.5 Determine drainage requirements in relation to each soil and crop and plant type and type of irrigation system  
2.6 Assess performance data, audit reports, environmental and workplace health and safety data for existing systems  
2.7 Obtain information from irrigation specialists on all relevant aspects of irrigation design  
2.8 Assess and cost available irrigation system types and components and make a decision on the particular system to be used or upgrades to existing system |
| 3. Install or maintain an irrigation or drainage system | 3.1 Determine and acquire materials and equipment making up the system  
3.2 Install irrigation system using advice, as necessary, from irrigation specialists  
3.3 Check that irrigation and drainage systems are supervised to ensure there are no leaks or blockages  
3.4 Confirm that the water is being evenly distributed and that the drainage is effective and the system is in good working order |
| 4. Assess the need for water inputs | 4.1 Assess the need for water inputs at critical growth stages  
4.2 Consider crop value and induce appropriate water regimes including frost protection where appropriate  
4.3 Utilise soil moisture monitoring data  
4.4 Consider weather forecast, seasonal weather outlook, water allocations and water quality  
4.5 Consider energy costs in water application timing |
| 5. Monitor irrigation system and plant | 5.1 Identify volume and quality of water flow  
5.2 Plan scheduled irrigation system maintenance work to ensure |

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed water systems on at least one occasion and has:

- assessed soil and water resources
- analysed performance and audit data
- assessed environmental and workplace health and safety data
- monitored and assessed water inputs
- monitored and evaluated irrigation system performance
- strategically managed irrigated production systems, including:
  - considered energy costs
  - minimised water wastage
  - prevented poor water usage practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of water systems management, including:
  - cost or benefit analysis
  - workplace policies and procedures
  - environmental impacts of irrigation, using water from any ground or underground source
  - plant requirements
  - natural water system retention and storage
  - soil moisture storage
  - use of yeomans keyline or swales
  - assessing water inputs
• strategies for reducing water evaporation and transpiration
• water quality maintenance.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace setting or an environment that accurately represent workplace conditions
• resources, equipment and materials:
  • performance data, audit reports, environmental and workplace health and safety data for existing systems
  • alternative system information
• specifications:
  • irrigation system design information
• timeframes:
  • according to the job requirements.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to develop work health and safety policies and procedures that demonstrate enterprise commitment to work health and safety.

This unit is applicable to the development of management systems and procedures. It is also applicable to the management of the implementation process, which is usually conducted within policy guidelines and procedures that require the use of discretion and judgement.

All work must be conducted in accordance with relevant legislative requirements, Codes of Practice, workplace procedures and safe work practices.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They analyse information and exercise judgement to complete a range of advanced, skilled activities.

NOTE: The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) and occupational safety and health (OSH) are equivalent and generally either can be used in the workplace. In jurisdictions where the Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State and Territory OHS legislative requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

</table>
| 1. Develop work health and safety policies and procedures | 1.1 Develop a work health and safety business plan and program for the enterprise in consultation with designated personnel and management  
1.2 Clearly define and allocate work health and safety responsibilities and duties and include them in job descriptions and duty statements for all relevant positions  
1.3 Identify, seek and provide financial and human resources for implementing work health and safety policies and procedures as required  
1.4 Provide and explain information on the work health and safety system and procedures, for the area of responsibility, in a form which is readily understood by employees |
| 2. Establish and maintain processes to ensure the participation of all employees in the application of work health and safety | 2.1 Establish and maintain consultation processes with employees and their representatives  
2.2 Deal with issues raised through participation and consultation and resolve them promptly and effectively  
2.3 Provide information about the outcomes of participation and consultation in a manner readily accessible to employees |
| 3. Establish and maintain procedures for identifying hazards | 3.1 Identify and confirm existing and potential hazards within the area of responsibility in accordance with trends identified using the work health and safety records system  
3.2 Develop and integrate a procedure for the ongoing identification of hazards within systems of work and procedures  
3.3 Appropriately monitor activities to ensure that the procedure is effectively adopted throughout areas of managerial responsibility  
3.4 Address hazard identification at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created |
| 4. Establish and maintain procedures for assessing risks | 4.1 Assess risks associated with identified hazards using information derived from workplace records and industry-wide information  
4.2 Develop a procedure for ongoing assessment of risks and integrate it within systems of work and procedures  
4.3 Monitor activities to ensure the effective adoption of risk |
<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop work health and safety policies and procedures that demonstrate enterprise commitment to work health and safety
- establish and maintain arrangements to ensure the involvement of all employees in the management of work health and safety
- establish and maintain procedures for identifying hazards
- establish and maintain procedures for assessing risks
- establish and maintain procedures for controlling risks
- establish and maintain enterprise procedures for dealing with hazardous events
- establish and maintain a work health and safety induction and training program
- establish and maintain a system for work health and safety records
- analyse recorded data to determine where the work health and safety program can better meet enterprise and employee needs
- evaluate the enterprise work health and safety system and related policies, procedures and programs

Knowledge Evidence

The candidate must demonstrate knowledge of:

- data and documentation for industry injury statistics
- legislated employer and employee work health and safety responsibilities
- significant hazards and areas of risk in the workplace
- all relevant work health and safety legislation and Codes of Practice consistent with the hierarchy of work health and safety risk control and its implementation for hazards in land-based industries
Assessment Requirements for AHCWHS501 Manage work health and safety processes

- risk control measures
- the hierarchy of risk controls
- relevant management systems and procedures
- public safety issues

Assessment Conditions

Competency is to be assessed in the workplace or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed work health and safety processes for at least one enterprise, including:

- developed health and safety policies and procedures that demonstrate enterprise commitment to health and safety
- established and maintained arrangements to ensure the involvement of all employees in the management of health and safety in the workplace
- established and maintained procedures for identifying hazards, assessing risks, controlling risks, and dealing with emergency events
- established and maintained a health and safety induction and training program
- established and maintained a system for health and safety records
- analysed and recorded health and safety data
- evaluated the enterprise health and safety system and related policies, procedures and programs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- data and documentation for industry injury statistics
- legislated employer and employee health and safety responsibilities
- significant hazards and areas of risk in the workplace
- all relevant health and safety legislation and codes of practice consistent with the hierarchy of health and safety risk control and its implementation for hazards in land-based industries
- requirements of workplace discrimination, harassment and bullying legislation
- risk control measures
- the hierarchy of risk controls
- systems to manage health and safety data and procedures
• public safety issues
• local emergency response organisations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • access to health and safety data for an enterprise
• specifications:
  • health and safety legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan and prepare for operating in remote environments
- prepare for emergency situations
- source and interpret maps of the area
- operate in remote environments
- implement workplace procedures to notify location, activities and travel
- prepare provisions to cover essential and emergency needs
- preparing communication equipment
- use bushcraft skills to modify the living environment and reduce the risk of mishap
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- map reading and navigation skills including direction finding (including GPS, use of compass, stars or watch)
- local topography, nearby inhabitants and locations within that area
- survival techniques and human needs relating to survival situations
- clothing requirements for sun or heat protection
- first aid procedures for common injuries
- bushcraft including making a fire, cooking and wild food gathering
- water supplies, sources and generation methods
- emergency vehicle and mechanical equipment repair
• the operation of communication equipment (including field communications by two-way, satellite telephony or HF radio), and distress signalling including use of signalling mirrors
• weather patterns and indicators
• work health and safety in the context of work in isolated and remote situations
• environmental impacts of work in isolated and remote situations
• rope skills including useful knots including: reef, clove hitch, truckie’s hitch, and bowline; simple lashings and tying down of loads.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

2.4 Document required processes and practices in the quality assurance program manual and prepare an implementation plan |
| 3. Implement the quality assurance program | 3.1 Document instructions defining task and process requirements  
3.2 Implement contractor and staff training  
3.3 Confirm communication takes account of social, cultural and ethnic backgrounds  
3.4 Introduce changes to processes and practices  
3.5 Establish processes to monitor and verify product quality  
3.6 Introduce recording systems  
3.7 Validate operating instructions under conditions to verify their suitability  
3.8 Analyse problems and issues and resolve appropriately, promptly and decisively  
3.9 Conduct system analysis, HAACCP or related processes |
| 4. Review the quality assurance program | 4.1 Establish reporting formats  
4.2 Implement mechanisms for gaining feedback information  
4.3 Make preparations for quality assurance audits |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

**Unit Mapping Information**

This unit is equivalent to AHCWRK501A Plan, implement and review a quality assurance program.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- determine quality assurance objectives for the enterprise
- plan the quality assurance program and develop implementation strategies
- implement the quality assurance program
- review the quality assurance program
- maintain required records to support quality assurance
- use industry standard terminology.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- market projections and customer requirements
- cost/benefit of quality assurance implementation
- system analysis, HAACCP or related processes
- enterprise culture and values
- leadership and administrative skills
- human resources induction practices
- human resources performance monitoring practices.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to determine workplace quality assurance objectives and plan, implement and review a quality assurance program.

The unit applies to individuals who apply specialised skills and knowledge to the planning, implementing and reviewing of a quality assurance program, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has planned, implemented and reviewed a quality assurance program on at least one occasion and has:

- determined quality assurance objectives for the workplace
- selected a quality assurance program using a cost benefit analysis
- planned the quality assurance program and developed implementation strategies
- implement the quality assurance program
- maintained required records to support quality assurance
- reviewed the quality assurance program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- market projections and customer requirements
- cost/benefit of quality assurance implementation
- leadership and administrative skills including change management
- human resources induction practices
- organisational objectives
- quality standards
- audit processes
- quality assurance recording procedures
- workplace culture and values
- human resources performance monitoring practices
- system analysis, hazard analysis and critical control points (HACCP) or related processes.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace setting or an environment that accurately represent workplace conditions

- **resources, equipment and materials:**
  - operating instructions relevant to quality assurance program

- **timeframes:**
  - according to the job requirements

- **relationships:**
  - between managers and staff, contractors and those under the banner of the quality assurance program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to identify, safely catch, control and handle calm, consistent and obedient horses educated for the relevant activity. It covers knowledge of potential risks working with and around horses and following industry guidelines and procedures to ensure the welfare and safety of the individual, other workers and the horse.

The unit applies to individuals who have no experience, limited experience or no recent experience working in the relevant horse industry sector. They undertake defined routine activities under supervision and have limited responsibility for their own work. Working environments may include stables, paddocks, yards, tracks, exercise arenas and public areas.

No licensing or certification requirements apply to this unit at the time of publication, except for the racing industry, where requirements vary between states and territories. Users working in the racing industry are advised to contact the relevant Principal Racing Authority for advice on current requirements.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- ACMEQU205 Apply knowledge of horse behaviour.

<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual safely handled at least three different calm, consistent and obedient horses educated for the activity being performed including:

- carrying out a basic risk assessment prior to each activity, including observing and identifying horse body language
- communicating clearly with supervisor, including raising safety risks or concerns
- approaching, catching, controlling, leading, standing and tying up horses safely in at least one public space and one confined space, under supervision, including:
  - following work health and safety (WHS) procedures in the context of own work
  - applying safe horse handling techniques according to animal welfare requirements
  - fitting and correctly using horse handling gear and personal protective equipment (PPE)
- loading and unloading horses to a horse transport vehicle under supervision in a calm and humane manner.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- common features of a horse, including points, colour, markings, gender, and common breeds
- basic characteristics of common horse behaviour and social traits
- features of horse body language
- communication protocols with supervisor, and procedures within the work environment
- potential hazards and risks when dealing with horses in open and confined spaces
- common types of injuries sustained by horses, handlers and others during handling activities
- safe horse handling zones
- purpose and use of PPE and gear for handling horses
- features of defective equipment and the implications to safety
- quick release knots and methods of securing horses
- types of horse transport and common loading configurations
- difficult situations that may occur when loading and unloading horses and procedures for dealing with difficulties.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - a workplace or an environment that accurately represents workplace conditions, including open and confined spaces in suitable environments
- **resources, equipment and materials:**
  - various calm, consistent and obedient horses educated for the activity and assessed as suitable for the experience and skill of the individual
  - appropriate tack for individual, horse and activity
  - horse transport vehicle
  - PPE that is appropriate for activity and correctly fitted for individual
  - other people and horses in the vicinity of the assessment activity
- **specifications:**
  - work instructions
- **relationships with others:**
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to develop basic knowledge of horse behaviour, read horse body language and minimise risk to self and others when interacting with horses.

The unit applies to individuals who are new or inexperienced in handling, working with and/or riding horses. Individuals at this level work under supervision.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. As requirements vary between industry sectors and state/territory jurisdictions, users must check with the relevant authority for specific requirements.

NOTE: The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has:

- observed and interpreted horse behaviour and body language of at least three different horses on separate occasions
- identified hazards and determined how to minimise risk to self and others when interacting with horses in at least three different workplace areas, environments or scenarios.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- features of horse instinct and behaviour, including:
  - social organisation, need for space and companions
  - attachment, separation anxiety
  - flight and fear responses, arousal
- features of horse senses, including vision, touch, smell, hearing and vocalisation
- how to read horse body language, including posture and body position, facial features, ears, legs and tail
- how to read horse body language to identify:
  - flight response
  - threatened or defensive behaviour
  - stress, agitation or unsettled behaviour
- situations where horse behaviour may cause harm to handlers or other horses, including:
  - approaching from a horse’s blind spot
  - around other horses
• leading through gateways or restricted spaces
• safe handling zones when interacting with horses
• basic features of how horses learn:
  • cues
  • repetition and reward
  • exposure to new situations and activities
• basic handling and/or riding cues that assist in the control of horses
• types of rewards used for horses, including pressure release, food, scratch and rub, and rest
• potential hazards and risks associated with interacting with horses
• strategies to minimise and control common risks associated with interacting with horses.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a safe workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • opportunities to observe and interpret live horses displaying different behavioural states and body language in different environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ACMEQU206 Perform horse riding skills at walk, trot and canter

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ACM Animal Care and Management Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to control a horse under saddle that is suitably educated for a beginner rider. It focuses on walking, trotting and cantering calm, obedient and consistent horses that are suitable for the level of rider experience, during controlled, supervised horse riding activities.

It covers knowledge of potential risks when working with and around horses, and the application of industry guidelines and procedures to ensure the welfare and safety of the individual, other participants and horses.

The unit applies to individuals who have limited or no horse riding experience, and who are developing skills needed to ride horses for work tasks. They undertake defined routine activities under supervision with limited responsibility for their own work. Working environments may include exercise yards and fenced horse riding areas or arenas.

No licensing, legislative or certification requirements apply to this unit at the time of publication, except for the racing industry, where licensing or registration varies between states and territories. Users working in the racing industry are advised to contact the relevant Principal Racing Authority for advice on current requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

The prerequisite units of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

| 1. Prepare for horse riding activity | 1.1 Discuss current skill level, riding skill development goals and horse suitability with riding instructor  
1.2 Identify potential hazards and risks associated with the specific location, environment and horse riding activity, and apply control measures as directed  
1.3 Select and correctly fit personal protective equipment (PPE) required for preparing and riding the horse according to WHS requirements  
1.4 Catch, groom and tack-up assigned horse as directed using tack appropriate for rider, horse and discipline  
1.5 Present horse to instructor appropriately tacked up for riding for gear check prior to mounting |

| 2. Demonstrate controlled riding skills | 2.1 Mount horse in a safe and balanced manner as instructed  
2.2 Ride horse through gaits in a balanced and controlled manner  
2.3 Use recognised aids including legs, weight, hands and voice to control movement, speed and direction of horse at halt, walk, trot and canter  
2.4 Cue horse through a range of movements and direction, maintaining control of horse  
2.5 Control horse under saddle among other horse and rider combinations, maintaining safe group riding practices while performing a variety of required movements  
2.6 Negotiate potential hazards appropriately to minimise risks  
2.7 Dismount safely and lead horse in a controlled manner |
### Elements

*Elements describe the essential outcomes.*

### Performance Criteria

*Performance criteria describe the performance needed to demonstrate achievement of the element.*

| 3. Complete and report post-riding activities | 3.1 Perform post-riding cool down of horse as directed  
3.2 Remove tack safely and check condition  
3.3 Report to riding instructor on condition of gear and horse post-exercise  
3.4 Discuss with riding instructor, using objective and positive language, personal performance and goals for future riding skill development |

---

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual performed horse riding skills at walk, trot and canter, on at least two different horses assessed as suitable for rider skills and experience. The individual must have ridden each horse on at least three different occasions, with and without other horses and riders in the immediate vicinity, during which the individual has:

- discussed with instructor current skill level and suitability of chosen horse prior to riding
- used and correctly fitted personal protective equipment (PPE)
- fitted gear and equipment for nominated horses, including:
  - saddle
  - saddle cloth
  - bridle
  - accessory gear
- mounted horse using a stirrup mount, mounting block, leg-up assisted mount
- controlled horse under saddle at all times in the following tasks:
  - demonstrating an effective riding position at walk, trot (or jog) and canter (or lope) according to chosen discipline
  - using hand, seat and leg aids according to discipline
  - using transitions or increasing and decreasing speed within a gait according to chosen discipline
  - following arena figures of circles, straight and diagonal lines and changes of direction
  - cantering for a continuous distance of a minimum of 200 metres
- dismounted using a stirrup dismount and a vault dismount
- dealt with risks associated with riding horses around others
- accepted and applied feedback from riding instructor
- reported progress and discussed future personal riding skills needs with riding instructor.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic process for assessing horse suitability and matching to own skills
- purpose and use of different items of gear, including accessory tack and equipment and personal protective equipment (PPE)
- purpose of appropriate aids to communicate with a horse
- safe group riding techniques
- safe horse handling techniques
- key animal welfare principles and practices for handling horses
- basic work health and safety (WHS) risk assessment and control principles relating to interacting with horses, riding in an arena and with others
- how to address common undesirable horse behaviours including:
  - travelling too fast
  - reefing and pulling
  - jogging sideways
  - running backwards
- risk factors that influence riding horse behaviour, including:
  - other horses
  - vehicles, fences and equipment
  - other people or animals
  - wind, noise and environmental hazards
  - riding with others
- factors that influence horse ability to respond to rider position and application of the natural and artificial aids.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - confined arena in a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - various calm, consistent and obedient horses assessed as suitable for the experience and skill of the individual
  - other riders
  - appropriate tack for walk, trot and canter riding activities suitable for horse, rider and discipline
  - correctly fitted PPE for the individual, including riding boots, safety vest and Australian standard or equivalent compliant helmet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

The following specific assessor requirements apply to this unit. The assessor must:

- hold a current, recognised qualification for instructing or coaching horse riding and handling skills (refer to User Guide for details), and
- have three years of experience organising groups and responding to different types of riders and horses in order to prevent incidents that could lead to injury of rider or horse.

Application

This unit of competency describes the skills and knowledge required to follow animal health management practices to monitor animal health via daily observations of behaviour and condition.

This unit is applicable to those working in animal care industry sectors where it may be necessary to care for a range of animal species and to monitor the wellbeing of healthy, ill or injured animals by observing and measuring indicators of ideal and poor development or response to treatments. These animals may be being kept long-term in the workplace or being raised or prepared for sale, rehousing or release to their native habitat.

This unit applies to individuals who work under broad supervision and provide and communicate solutions to a range of predictable problems.

Regulatory requirements apply to this unit but vary according to state/territory jurisdictions. Users are advised to check with the relevant regulatory authority.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained and monitored the health and wellbeing of a minimum of three different animals and, on each occasion, the individual must have:

- applied work practices for personal safety and personal hygiene standards
- monitored and tested indicators of animal health
- assessed the physical environment of animals for evidence of problems that may have affected the physical wellbeing and welfare of animals
- maintained records of quarantine, observations, monitoring activities and samples
- administered treatments under supervision.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- anatomical and physiological structures and functions related to animal health and wellbeing
- anatomical and physiological terminology and glossary of terms
- broad categories of parasitic infestations
- common infectious diseases, including:
  - bacteria
  - fungi
  - internal and external parasites
  - virus
  - zoonoses
- common non-infectious diseases, including:
  - allergies
• chemical toxicities
• genetic
• metabolic
• neoplastic
• nutritional
• indicators of animal health
• observing and reporting unusual behaviour for nominated animal:
  • aggression or docility (depending on animal)
  • disinterest in surroundings, other animals, people or usual stimuli
  • excessive licking, scratching and rubbing
  • lethargy
  • nest building
  • self-mutilation
  • trembling
  • vocalising
• observing and reporting indicators of illness or injury:
  • bleeding
  • changes in drinking or eating patterns
  • lameness or reluctance to move and vocalising when attempting to move
  • swelling
  • unusual amounts, colour or texture of faeces
• indicators of poor response to treatment or management of young, ill, injured or compromised animals
• indicators of recovery from illness or injury
• quarantine protocols
• safe work practices
• the methods used to measure, interpret and record animals' weight and other objective measures of animal health
• the principles of animal welfare and ethics.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • a range of animals
  • equipment and resources typically available in an animal care environment
• specifications:
  • access to organisational policies and procedures, current legislation and relevant codes of practice
• relationships (internal and/or external):
  • interactions with supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to calculate rations based on animal species needs and availability of foodstuffs.

The unit applies to individuals working under supervision in the animal care industry where it may be necessary to plan nutritional requirements for animals, including but not restricted to companion animals in pet shops, boarding kennels and catteries, dog and cat breeding establishments, research technology animals, native and exotic animals in zoos, wildlife parks and animal rescue and rehabilitation facilities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned for and provided a diet that provided the appropriate nutritional requirements for a minimum of three different animals, covering two species, including:

- developing diets for animals in consultation with others
- preparing, storing and distributing food according to animal needs, workplace protocols and procedures, whilst maintaining quality control and hygiene practices
- monitoring response to feeding program and modifying diets as required in consultation with supervisor.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- animal classifications that influence dietary needs and styles of eating
- behavioural features related to feeding styles and unsuitable responses to diets
- methods used to monitor nutritional uptake:
  - blood and faecal tests to check nutritional uptake
  - comparing food distributed and food not eaten
  - estimating condition scores
  - weighing animals
- principles of contamination and cross-contamination
- feedstuffs available and approved in Australia for animals, their availability, cost, shelf life, method of storage, preparation and presentation to animals
- feeding methods of different animals
- appropriate containers for food for different animals
• common nutrition-related health problems
• protein, carbohydrate, vitamin and mineral supplement and fibre needs for a range of animal groups
• sources of nutrients for particular animal classes and groups
• the potential causes of poor response to diets
• safe and humane animal handling techniques.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • an environment that accurately reflects a real workplace setting
• resources, equipment and materials:
  • a range of animals
  • equipment and resources appropriate to work undertaken in an animal care environment
• specifications:
  • access to organisational policies and procedures
• relationships (internal and/or external):
  • interactions with supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to rescue and restrain animals, and to provide basic first aid.

The unit applies to individuals working as animal keepers and carers, where it may be necessary to identify where assistance is required in the rescue of animals and the management of animal stress and injuries. These individuals work under broad supervision and use discretion and judgement in the selection and use of available resources. Work routines must meet industry standards and compliance requirements for ethical handling and welfare of animals, work health and safety, and biosecurity appropriate to the work role.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

NOTE: The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual, on two different animals, has:

- planned and rescued according to WHS requirements
- applied basic first aid and care
- gathered information and accurately recorded and maintained records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the animal emergency network, including animal welfare bodies and support facilities
- animal first aid techniques
- examination techniques for health status
- first aid casualty management principles
- methods used to capture, restrain and examine animals, including equipment commonly used
- methods used to identify animals
- personal protective clothing and equipment and when and how it should be used
- safe animal handling techniques and procedures
- organisation policies and procedures, including WHS and emergency procedures.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live or simulated animals for capture
  - PPE for handling animals
  - first aid equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence
An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:
- communicated effectively on a minimum of three different occasions, including each of the following:
  - interacting appropriately with clients in writing using digital media
  - interacting appropriately with a client or industry representative by telephone
  - actively participating in a team meeting.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
- models of effective communication across a range of modes, including written, verbal, electronic and digital
- the role of non-verbal communication
- effective communication principles for working in a team
- conflict resolution techniques
- social media platforms used for business
- ways to show empathy and support those in distress
- appropriate industry language and terminology
- communication systems, procedures and technology commonly used in workplaces
- confidentiality and privacy legislation, regulations and protocols.

Assessment Conditions
Assessment of skills must take place under the following conditions:
- physical conditions:
Assessment Requirements for ACMGAS308 Communicate effectively with clients

- a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - communication equipment and resources appropriate to work undertaken
- specifications:
  - access to organisational policies and procedures
- relationships (internal and/or external):
  - interactions with team members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to carry out routine checks on horses, provide treatments under direction and assist with veterinary procedures when required.

The unit applies to workers who carry out work under routine supervision within organisation guidelines, while exercising limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

<table>
<thead>
<tr>

<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

### 1. Carry out routine horse checks

1.1 Identify and minimise risks relating to safe handling of horses in open and confined spaces
1.2 Observe signs of good health and condition in horses
1.3 Check horses for signs of lameness or soreness
1.4 Check horses for signs of heat or swelling in legs
1.5 Check horses for signs of distress
1.6 Report all abnormalities according to organisational guidelines

### 2. Carry out horse treatments

2.1 Check safety controls or required support and assistance are in place prior to treating horses
2.2 Ensure all horse restraints are suitable for the task
2.3 Provide routine medications and treatments, and record in workplace forms according to instructions
2.4 Clean hooves and examine shoes for wear and damage
2.5 Report faulty, broken or loose shoes

### 3. Support veterinary procedures

3.1 Report life-threatening ailments promptly to supervisor
3.2 Carry out basic emergency or first aid procedures
3.3 Report serious cuts and abrasions
3.4 Provide assistance during veterinary treatment
3.5 Treat cuts, abrasions and bruises
3.6 Report and record treatments and procedures
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has checked and treated at least two horses. Each horse must be checked on three separate occasions and include:

- identifying and minimising risks while handling each horse
- performing duties around each horse in a firm but calm, gentle and unhurried manner
- monitoring basic horse health and observing and identifying signs of:
  - ill health, injury or lameness
  - abnormal or depressed appetite
  - non-routine behaviour
- cleaning hooves and examining each horse for loose or broken shoes
- reporting signs of illness or injury
- controlling, leading and handling each horse in an open and a confined space.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic horse husbandry techniques
- animal welfare requirements, including ethical and humane treatment
- key horse breeds and characteristics
- indicators and signs of:
  - lameness or soreness
  - heat or swelling in legs
  - distress in horses
- detecting signs of illness
- recordkeeping systems
- hazard identification and actions to minimise risks working with horses in open and confined areas
- safe horse handling techniques.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - various live horses assessed as suitable for the experience and skill of the individual
  - materials and equipment for checking and treating horses
  - appropriate tack for horse and activity
  - personal protective equipment (PPE) correctly fitted and appropriate for checking and treating horses
  - workplace recording forms
- specifications:
  - work instruction and organisation guidelines for checking and treating horses.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to provide daily care for horses.

The unit applies to individuals who carry out work under routine supervision within organisation guidelines and with limited autonomy for their own work. They undertake defined activities and work in a structured context within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- ACMEQU205 Apply knowledge of horse behaviour.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out daily care for at least two calm, consistent and obedient horses. Prior to carrying out tasks with horses there must be evidence that the individual has:

- checked and confirmed safety requirements, stable routines and instructions
- identified and reported safety concerns
- acquired required tools, equipment and personal protective equipment (PPE)

There must be evidence that the individual has carried out the following tasks for each horse:

- handling horses safely and ethically
- cleaning and caring for saddlery and equipment
- completing basic hoof care procedures
- grooming and rugging horses
- measuring quantities required for feed
- exercising horses according to instructions
- monitoring horse health and welfare
- reporting signs of illness or injury.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of horse behaviour and psychology
- indicators of horse health
- common feed stuffs
- care and maintenance of hooves and the lower limbs
• organisational procedures for care of horses:
  • cleaning of stables, yards and gear
  • safe work practices, including safe handling of horses
  • types and purpose of personal protective equipment (PPE).

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions

• resources, equipment or materials:
  • a range of calm, consistent and obedient horses assessed as suitable for the experience and skill of the individual
  • appropriate tack for horses and activity
  • personal protective equipment (PPE) correctly fitted and applicable for task for handler
  • materials and equipment for providing daily care of horses
  • workplace recording or reporting forms

• specifications:
  • work instruction and stable routine or program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to maintain horse hooves in premium condition.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They complete routine activities and work in a range of known contexts within horse breeding and other horse industry environments.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

NOTE: The terms 'occupational health and safety' (OHS) and 'work health and safety' (WHS) generally have the same meaning in the workplace. In jurisdictions where the national model WHS legislation has not been implemented, RTOs must contextualise the unit of competency by referring to current OHS legislative requirements.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- ACMEQU202 Handle horses safely.

Note the following chain of prerequisites that also applies to this unit.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has carried out basic hoof procedures on at least two compliant and manageable horses, including:

- identifying hazards, assessing risks and implementing suitable controls related to hoof procedures
- checking horse body language and behaviour prior to handling each horse, as part of risk assessment
- handling and restraining each horse safely for hoof procedures working around them in a firm, calm and unhurried manner
- using and maintaining farriery tools and personal protective equipment (PPE) to perform basic hoof care
- providing basic hoof care for each horse, including administration of hoof treatment medications
- completing maintenance and administrative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and purpose of items of farriery equipment
- hoof care procedures
- hoof injuries
- hygiene practices and awareness
- structure of the hoof and associated problems
- common horse behaviour and reactions to hoof care
- safe work practices:
• safe horse handling techniques
• hazard and risk identification and minimisation
• key requirements of work health and safety legislation
• types and purpose of personal protective equipment (PPE).

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • various compliant and manageable horses requiring basic foot care, assessed as suitable for the experience and skill of the individual
  • appropriate tack for horse and activity
  • farrier equipment and materials
  • personal protective equipment (PPE) correctly fitted and applicable to tasks for individual
  • workplace recording and reporting forms or systems

• specifications:
  • work instructions or program for carrying out basic hoof procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has implemented disease or injury prevention measures including performing each of the following points at least once:

- performing stable hygiene practices procedures
- disease and ailment prevention procedures
- quarantine procedures.

There must also be evidence that the individual has treated equine injury or disease for at least two horses including:

- assessing and recording vital signs of horses, including temperature, pulse, respiration and capillary refill
- handling and restraining horses for observation and treatment
- detecting and reporting signs of common ailments, ill health and injury
- treating equine injury and disease according to instructions.

When performing all of the above points there must be evidence that the individual has:

- assessed and controlled risks handling horses and in work area
- handled horses safely and ethically in a firm but calm, gentle and unhurried manner
- completed horse health and medication records in accordance with requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and signs of common horse injuries
- types and signs of common ailments that affect horses
• indicators that can be used to assess horse health
• signs and symptoms of:
  • abnormal or depressed appetite
  • life threatening conditions
• range of treatments that must be applied under veterinary supervision
• common horse behavioural problems
• safe and ethical horse handling techniques and restraints
• animal health and welfare principles and practices
• hygiene and environmental practices relevant to maintaining healthy horse environments
• work health and safety practices:
  • assessing and controlling risks
  • use of personal protective equipment
  • safe horse handling techniques
  • safe areas to carry out procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a workplace or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • various compliant and manageable horses assessed as suitable for the experience and skill of the individual
  • materials and equipment for treating horses
  • appropriate tack for individual, horse and activity
  • personal protective equipment (PPE) correctly fitted and applicable to activity for the individual
• specifications:
  • work instructions and treatment and prevention program for individual horses
  • workplace recording or reporting forms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to assist with artificial insemination procedures.

This unit applies to those who provide technical support to a registered veterinarian or licensed inseminator.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Artificial Insemination (AIS)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assist with preparation of animals for insemination
- support insemination procedure
- clean work area and equipment
- follow work health and safety policies
- follow animal welfare practices
- follow enterprise environmental policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- resource and manpower requirements, biosecurity requirements, industry standards, codes of practice and procedures for artificial insemination of the livestock species
- reproductive anatomy and reproductive physiology in the livestock species
- signs of heat, methods for detection of oestrus and management of animals on heat
- techniques and methods for humane handling and restraint of the livestock species
- relevant animal welfare practices for the conduct of artificial insemination in the livestock species
- types, uses, maintenance, servicing and storage of equipment
- methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
- procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
- relevant work health and safety requirements
- relevant documentation and records that are required
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes and debris
• requirements and procedures for cleaning and maintaining work areas.

**Assessment Conditions**

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be observed artificially inseminating livestock.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for insemination
- observe animals on heat to detect correct insemination timing
- prepare equipment and work sites
- correctly select and thaw semen for insemination
- restrain and inseminate animals using recognised methods that reduce stress
- complete documentation and records
- clean work area and equipment
- follow enterprise work health and safety, biosecurity and animal welfare policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- working knowledge of enterprises herd improvement or animal production plan
- basic breeding principles, including the oestrus cycle and its significance
- pregnancy testing
- animal health and abnormalities
- preparation techniques such as puberty stimulation
- semen thawing and storage techniques
- preparation requirements for artificial insemination of animals
- animal movement and behavioural characteristics
- harness and restraint equipment, components and functions
• handling techniques, restraint methods and when to use them
• enterprise and industry identification system for animals
• personal protective equipment and when and how it should be used
• relevant State/Territory legislation, regulations and codes of practice with regard to workplace OHS and animal welfare
• legislative and regulatory controls with regard to artificial insemination
• enterprise and industry policies with regard to artificial insemination and recording and reporting routines.

Assessment Conditions

The candidate must demonstrate knowledge of:
• resource and manpower requirements, biosecurity requirements, industry standards, codes of practice and procedures for artificial insemination of the livestock species
• hygiene procedures for artificial insemination
• requirements, methods and procedures for sourcing, acquiring, transporting and storing semen
• requirements and procedures for preparation of artificial insemination
• types, uses and maintenance of personal protective equipment
• requirements and procedures for selection, preparation and thawing of semen
• methods and procedures for cleaning and sterilisation of equipment used for artificial insemination
• procedures for handling, measurement and usage of cleaning chemicals, disinfectants and sanitisers
• relevant anatomy and physiology of female livestock
• reproductive physiology and behaviour of female livestock
• techniques and methods for humane handling and restraint of the livestock species
• relevant animal welfare practices for the conduct of artificial insemination in the livestock species
• relevant documentation and records that are required
• relationship, cause and effect between herd performance and artificial insemination programs
• criteria and methods for determining conception rates
• requirements, methods and procedures for improving the success of artificial insemination and its impacts on herd performance
• relevant environmental and sustainability requirements, and procedures for disposal and management of wastes and debris
• requirements and procedures for cleaning and maintaining work areas and equipment
• enterprise work health and safety policies

Application

This unit of competency describes the skills and knowledge required to supervise artificial breeding and embryo transfer programs.

This unit also applies to artificial breeding technicians who provide advice to farmers.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They use discretion and judgement in the selection, allocation and use of available resources and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine breeding method
- implement breeding method
- monitor and maintain program
- apply work health and safety requirements in the context of own work
- apply biosecurity requirements in the context of own work
- apply animal welfare practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- legislative requirements, biosecurity requirements, codes of practice, industry standards and procedures for artificial insemination and embryo transfer
- resources requirements, types and characteristics of artificial breeding methods and programs
- advantages, disadvantages and cost-benefit analysis of artificial breeding programs for the livestock enterprise
- types, uses and maintenance of personal protective equipment
- requirements, methods and procedures for sourcing, acquiring, transporting and storing genetic material
- relevant anatomy and physiology of female livestock
- reproductive physiology, reproductive behaviour and pregnancy development of female livestock
- requirements and procedures for artificial insemination
- requirements and procedures for embryo transfer
Assessment Requirements for AIHCAIS401 Supervise artificial breeding and embryo transfer programs

- causes, signs, treatment and management of reproductive diseases and complications in female livestock
- requirements, methods and procedures for improving the success of artificial breeding programs and their impacts on herd performance
- relevant documentation and records that are required
- relevant work health and safety and animal welfare requirements.

Assessment Conditions

Competency is to be assessed in the workplace and/or a simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

<th>TP Version</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Application

This unit of competency describes the skills and knowledge required to protect places of cultural significance to Aboriginal people. It requires following Aboriginal cultural protocols and details the specific cultural, gender and kinship sensitivities of working in Aboriginal communities and on Country with diverse cultural requirements.

This unit applies to those whose work on Country and in cultural keeping places and includes protecting cultural places, sites and objects often in co-operation with a range of stakeholders and with reference to Aboriginal communities and/or line management. The unit involves and requires a high level of awareness and experience with Aboriginal culture and communities and the need to observe Aboriginal cultural protocols. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit, due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols

Unit Sector

Aboriginal Sites Work (ASW)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate cultural authorities for a Community, place or for a site
- develop working relationships with Aboriginal and non-Aboriginal stakeholders in cultural sites
- canvass views in determining the cultural significance and heritage value and preservation issues of an Aboriginal cultural site
- contribute to planning for the protection of an Aboriginal cultural site including identifying resources required and submissions to be completed
- observe Aboriginal cultural protocols when working with stakeholders and land managers
- identify threats to Aboriginal site and measures to mitigate and manage the risk of damaging incidents or loss of cultural integrity
- identify natural resources and how they relate to cultural protocol, spirituality, art, environment, values, beliefs and lore/law
- identify cultural rights and responsibilities when using Community knowledge, information and material
- identify groups to be consulted in relation to owners or custodians of cultural and Community knowledge, information and material
- use Aboriginal names and standard industry terminology appropriate to the task
- apply work health and safety practices in the context of own work
- apply appropriate sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• Community’s history, cultural values and interpersonal and Community protocols related to the place
• authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
• industry, organisational and enterprise policies and procedures for conservation of places of cultural significance
• key concepts of Burra Charter and Guidelines
• key concepts of Cultural and Heritage Legislation and National Parks and Wildlife Service (NPWS) legislation relevant to the protection of Aboriginal significant places.

Assessment Conditions
Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to understand cultural landscapes from Aboriginal perspectives. The unit introduces overarching belief systems that operate where Aboriginal sites work takes place. It provides a conceptual foundation for understanding Aboriginal cultural protocols, cultural customs and cultural practices that the Aboriginal sites worker is likely to encounter in daily work routines.

This unit applies to Aboriginal worldviews and beliefs as they impact and affect Aboriginal sites work on Country. The unit applies to working either as an autonomous sites worker or under the supervision and cultural authority of Traditional owners or Elders for specific Country and is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge and materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols

Unit Sector

Aboriginal Sites Work (ASW)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- explain traditional Aboriginal belief systems of the Community
- identify examples and impacts of disintegration and disconnection with Aboriginal culture
- describe the relationship between the land and environment and Aboriginal peoples in culturally relevant ways
- explain the relationship between Dreaming, traditional beliefs, Ceremony and sites
- use Aboriginal names and standard industry terminology appropriate to the task.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- how to source appropriate cultural and lore/law authority for specific Country and/or sites
- protocols and customs relating to disclosure of knowledge about Country
- Aboriginal cultural and social frameworks
- Community’s ancestral beliefs
- kinship names, sections and networks
- totems, moieties, skin names
- relationship of Community’s Dreaming to the site and how it is evolving
- rules and limitations to access to cultural knowledge
- different social structures of various Indigenous Communities
- Indigenous cultural customs and heritage of the Community
- recording and documentation procedures used by organisation.
Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can record information and knowledge on Country from both an Aboriginal and non-Aboriginal perspective.

The candidate must provide evidence that they can:
- record details of Aboriginal sites, objects and cultural landscapes consistent with the requirements of the relevant Information Management System
- record and collate information on Aboriginal culture and history for Country whilst following Aboriginal cultural protocols
- follow Community guidelines and Aboriginal cultural protocols regarding the use of information on sites, objects and cultural landscapes
- identify appropriate cultural authorities for a Community, site, story or Ceremony
- apply Community protocols and permissions to determine cultural information, material and cultural expression that is appropriate to be shared
- identify groups to be consulted in relation to owners and custodians of cultural and Community knowledge, information or material
- use Aboriginal names and standard industry terminology appropriate to the task
- apply work health and safety practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- Community Aboriginal history, cultural values and interpersonal and Community protocols related to the site
- cultural rights and responsibilities when using Community knowledge, information and material
Assessment Requirements for AHCASW303 Identify and record Aboriginal sites, objects and cultural landscapes

- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- designated cultural areas and features, boundaries and extent of Country
- protocols and customs relating to disclosure of knowledge about Country.

Assessment Conditions
Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to observe, record and report on the presence of plants of Indigenous cultural significance against criteria provided by a supervisor or as required under legislation, regulations, and or community protocols.

This unit involves the recognition of plants of Indigenous significance that are commonly encountered in land management situations and covers knowledge of Indigenous plant identification techniques, Indigenous plant names, community and organisational procedures for obtaining and supplying advice and information about Indigenous plants, and community or organisational expectations about the range and number of Indigenous plants to be recognised.

This unit has a particular focus on culturally significant Indigenous plants, management and conservation.

This unit applies to the identification and recording of Indigenous plants, local bushland and bush foods on Country. The unit applies to working with lore/law men and women either as an autonomous worker or under the supervision and cultural authority of Traditional Owners or Elders for specific Country.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify Indigenous culturally significant plants
- observe and accurately identify species of Indigenous plants
- document observations in required format, according to Community and organisational needs
- apply environmentally sustainable practices to carry out survey activities in a natural area in order to minimise disruption to the environment
- explain and/or demonstrate uses of plants for food and medicine
- utilise available resources and equipment to identify Indigenous plants accurately
- read map and grid references to identify locations of plants
- use standard industry terminology and local Community names for Indigenous plants
- apply work health and safety practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- criteria used to categorise plant species
- common and scientific names of Indigenous plants
- biological species occurring in the study area
- the importance, value or potential impact of the species in a designated area
- rare and endangered species
- plant identification techniques and plant names used by enterprise
- organisational expectations relating to the range and number of Indigenous plants to be recognised in the survey
- cultural protocols for obtaining and utilising information about Indigenous plants
- nutritional and medicinal purposes of bushland and/or bush foods
- land management and conservation techniques applicable to Aboriginal sites work.

**Assessment Conditions**

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to develop an awareness of the protocols involved in Aboriginal culture as they relate to individuals and communities, specifically in relation to materials with restrictions on access for cultural reasons.

The unit covers Community cultural processes including the need to identify the appropriate persons when approaching a Community and the cultural and social rules associated with that task.

This unit applies to following Aboriginal cultural protocols when coming into contact and working with cultural materials defined as Aboriginal ceremonial secret sacred objects. The unit applies to working with this material on Country and off Country where rules apply to limited access to the material for cultural and ceremonial reasons. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify cultural authority for ceremony in a particular area or site
- consult effectively with Traditional Owners and relevant Community representatives about the handling, access to and display of cultural material
- observe Aboriginal cultural protocols and follow collection management practices and industry cultural requirements when moving, storing, displaying and maintaining cultural material
- select and use handling, storage and transport systems in accordance with Aboriginal cultural protocols
- create, maintain and store records of the process, guidelines and timeframes for handover of ownership, control and access to secret sacred materials
- use standard industry terminology and Aboriginal names for sites and materials, as appropriate
- apply work health and safety practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- issues that frame the development of cultural protocols
- Community Aboriginal history, cultural values and interpersonal and Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- ownership relationships for secret, sacred material
Assessment Requirements for AHCASW305 Work with Aboriginal ceremonial secret sacred materials

Date this document was generated: 3 September 2020

- content of contracts and confidentiality agreements applicable to working with ceremonial secret sacred materials
- organisational procedures and guidelines for working with ceremonial secret sacred materials
- Burra Charter guidelines appropriate to working with Aboriginal secret sacred materials
- key concepts of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to working with ceremonial secret sacred materials.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- use digital devices, including computers, smart phones, tablets, radios, GPS (Global Positioning System) or PDAs (Personal Data Assistants)
- use menu features and navigate around the device and IMS functions
- use device features, software and applications to perform tasks to enterprise requirements
- save work in a format and location according to enterprise requirements
- transfer saved files to a computer for long term storage and printing
- use compass and maps to move around site and map site coordinates
- use audio visual devices to enterprise requirements.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- basic security functions
- basic software operation and associated applications
- map reading (including topographical maps) and longitudinal and latitudinal coordinates
- digital device functions used in own role
- how to use internal and external computer storage devices.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.
Assessors must satisfy the current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to identify and assist with the documentation of an Aboriginal cultural landscape on Country from an Aboriginal perspective.

This unit applies to Aboriginal sites workers who are working with experts to identify and record Aboriginal cultural landscapes on and off Country.

The unit applies to working with lore/law men and women either as an autonomous Sites worker or under the supervision and cultural authority of Traditional Owners and Elders for specific Country and is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols
## Unit Sector

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- discuss Aboriginal cultural landscapes in ecological and archaeological terms, Aboriginal cultural, language and spiritual terms and traditional Aboriginal economic terms
- relate Creation stories, oral histories, kinship and totemic relationships to the cultural landscape
- follow Community guidelines and Aboriginal cultural protocols when using information on sites, objects and cultural landscapes
- identify appropriate cultural authorities for a Community, site, story or Ceremony
- describe the range and interrelationship of Aboriginal cultural and ceremonial practices undertaken to maintain connection with the culture
- use Aboriginal names and archaeological terminology to describe landscapes and cultural connections.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the Community’s Aboriginal history and cultural values
- Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- designated cultural areas and features of Country, boundaries and extent of Country
- Aboriginal cultural values of landform types
- archaeological evidence of landform types
- types of land features that have high possibility of cultural heritage being present
- creation stories, oral histories, kinship and totemic relationships to the cultural landscape
- key principles, values and practices of Aboriginal cultural knowledge
- lore/laws, customs and speaking rights
- connection to Country through stories, song, dance and art
- protocols and customs relating to disclosure of knowledge about Country
- key concepts of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to own role
- key concepts of the Burra Charter.

**Assessment Conditions**

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to determine theoretical and practical concepts of cultural significance in relation to Aboriginal cultural sites and landscapes. It uses the Burra Charter as the industry benchmark in assessing significance for culture and heritage work.

This unit applies to those who are working on Country finding Aboriginal sites and working to assess significance in landscapes on Country. The unit applies to working with lore/law men and women either as an autonomous Sites worker or under the supervision and cultural authority of Traditional Owners and Elders for specific Country. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal-sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must demonstrate that they can:

- determine theoretical and practical concepts of cultural significance in relation to Aboriginal cultural sites and landscapes
- identify appropriate cultural authorities for a Community, place or for a site
- collaborate with relevant experts to complete an assessment of cultural significance
- adhere to Burra Charter process and guidelines
- identify cultural information, material and expression appropriate to be shared
- identify groups and individuals to be consulted in relation to owners or custodians of cultural and Community knowledge, information and material
- recognise factors that may impact on the assessment, including artefacts and stone objects on site and geological and geographical features of the landscape.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Aboriginal history, cultural values and interpersonal and Community protocols
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- the role and prominence of the Burra Charter in the culture and heritage sector in Australia
- the Burra Charter definition of significance
- geographic and geological identification features of the cultural landscape
- artefacts and stone objects identification
- key concepts of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to own role.
Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret cultural landscapes from an Aboriginal cultural and spiritual perspective
- identify details of plant and animal species on Country, their Aboriginal names and their roles and place in the cultural landscape
- collate information on Aboriginal culture and history for Country in culturally appropriate ways
- collect and use information according to Community guidelines and cultural protocols
- follow community lore/laws, customs on accessing and sharing cultural knowledge
- identify landscape features and sites on Country in accordance with their place and role in Dreaming, Aboriginal spirituality and local cultural practices and ceremony
- use Aboriginal names and standard industry terminology appropriate to the task
- apply work health and safety practices in the context of own work
- apply appropriate sustainability practices to minimise disturbance and degradation to park or reserve and surrounding environments.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- Aboriginal history, cultural values and interpersonal and Community protocols associated with area
- Aboriginal cultural customs and heritage related to area
- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- designated cultural areas and features of Country, boundaries and extent of Country
- key principles, values and practices of Aboriginal cultural knowledge
Assessment Requirements for AHCASW309 Interpret Aboriginal cultural landscape

- connection to Country through stories, song, dance and art
- role of Community lore and customs in matters of land, family, marriage, kinship, totem, clan and obligation
- protocols and customs relating to disclosure of knowledge about Country
- when and how to relate and document information and when it is not appropriate according to cultural protocols
- Aboriginal names for plants, animals and landscape features
- cultural knowledge about plant and animals relating to a particular Community, group or region
- role and rights of Indigenous people in maintaining and controlling cultural knowledge
- individuals who are authorised to possess cultural knowledge.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Application

This unit of competency describes the skills and knowledge required to handle, pack and unpack Aboriginal cultural material for movement and storage.

This unit applies particularly to working around and with Aboriginal cultural materials and objects and focuses on the specific cultural and consultative requirements for sourcing, handling, and possibly interpreting Aboriginal cultural material. This unit is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCILM306 Follow Aboriginal cultural protocols

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate cultural authorities for a Community, place or site
- consult effectively with Traditional Owners, Cultural Managers and relevant Community representatives about the handling, access to and display of cultural material
- handle, move and store cultural materials according to cultural protocols
- seek permissions from cultural authorities for being on site and handling, moving, storing and recording cultural material, according to Community protocols
- observe Aboriginal cultural protocols, follow collection management practices and industry requirements when moving, storing, displaying and maintaining cultural material
- record details of transporting and storing of cultural material
- report damage or faults with cultural material to appropriate persons
- select and use handling, storage and transport equipment
- apply work health and safety practices in the context of own work
- apply appropriate sustainability practices to minimise environmental disturbance and degradation when moving cultural objects from Aboriginal sites.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- cultural authority for ceremony on the site
- ownership relationships for secret, sacred material
- record-keeping techniques
- organisational procedures and guidelines.
Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate cultural authorities for a Community, place or for a cultural site
- consult with appropriate cultural authorities and obtain informed approval for works and access of specific persons
- assess the level of work required to maintain the cultural place
- carry out maintenance activities in accordance with organisational, environmental sustainability and Aboriginal cultural requirements
- report deterioration or damage to place according to Community protocols and requirements
- report incidents of breaches of legislation including vandalism
- determine the cultural rights and responsibilities when using Community knowledge, information and material
- apply work health and safety practices in the context of own work
- ensure sustainability practices are applied by all workers and contractors on site to minimise environmental degradation and deterioration of site.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- workplace health and safety requirements and responsibilities of own role
- sustainable environmental practices applicable to maintaining site
- traditional and Western modern techniques of site protection appropriate to the site
- range of maintenance works undertaken on cultural sites
- enterprise procedures for reporting deterioration or damage to place or reporting incidents
- site recording systems used by the enterprise or Community
- relevant archaeological practices and procedures
- Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to maintenance of an Aboriginal site.

**Assessment Conditions**

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to work within the constructs of relevant legislation when working with Aboriginal sites, cultural materials and cultural landscapes.

This unit applies to Aboriginal sites workers working on Country or in other cultural and heritage contexts where legislative requirements are in place. The unit applies to working either as an autonomous sites worker or under the supervision and cultural authority of Traditional owners or Elders for specific Country.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Research the relevant legislation
   1.1 Identify the legislative requirements that relate to Aboriginal sites work
   1.2 Identify the purpose of legislation and environmental and sustainability requirements which apply to own work context

2. Identify relevant legislative provisions
   2.1 Identify the laws that protect Aboriginal sites
   2.2 Clarify compliance requirements with supervisor to confirm understanding and to ensure consistency of application across the organisation
   2.3 Consult with experts to address any competing interests arising from different pieces of legislation with jurisdiction over the one Aboriginal cultural site, landscape or material
   2.4 Carry out Aboriginal sites work within the constructs of relevant legislation

3. Identify stakeholder requirements
   3.1 Communicate with clients and stakeholders to identify their needs in relation to relevant legislation
   3.2 Provide referrals for stakeholders to expert advisors or advisory organisations
   3.3 Recognise own limitations and professional boundaries
   3.4 Conduct own Aboriginal sites work in accordance with legislative requirements and following Aboriginal cultural protocols and values

### Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

### Unit Mapping Information

This unit is not equivalent to AHCASW311A Apply relevant legislation in Aboriginal-sites work.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- work within the constructs of relevant legislation in their work with Aboriginal sites, cultural materials and cultural landscapes
- identify and apply relevant legislation to the circumstances appropriately and accurately
- identify relevant compliance requirements affecting Aboriginal sites work in a specified jurisdiction
- use referral options and other expertise to assist in interpreting and applying legislative requirements
- communicate basic legal concepts and legislative language to Aboriginal clients and stakeholders in culturally appropriate way.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- how Cultural and Heritage Legislation or relevant National Parks and Wildlife Service (NPWS) legislation applies to Aboriginal sites work
- other legislation that may impact on Aboriginal sites work
- organisations to which appropriate referrals can be made.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

The assessor must satisfy the current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to survey and report on Aboriginal cultural sites.

This unit applies to those working in Aboriginal communities and on Country in cultural landscapes and with cultural sites and objects. The unit applies to working with lore/law men and women either as an autonomous sites worker or under the supervision and cultural authority of Traditional Owners or Elders for specific Country and is also applicable to the work of repatriation workers and anthropologists.

This unit applies to all Aboriginal sites workers. However, cultural beliefs and practices vary across locations and communities however and in some situations non-Aboriginal learners may not be able to access the cultural knowledge or materials required to achieve competency in this unit due to restrictions that are applied to non-Aboriginal people gaining access to cultural knowledge, material or sites. In these situations the Registered Training Organisation will be required to make alternative arrangements for learners that are still consistent with the delivery and assessment requirements for this unit.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify appropriate Aboriginal cultural authorities for a Community, place or site
- identify key stakeholders to be consulted in relation to owners and custodians of cultural and Community knowledge, information or material and cultural significance
- develop and implement consultation processes
- survey and assess Aboriginal cultural sites using appropriate techniques, tools and relevant archaeological practices
- incorporate the cultural significance, heritage values and conservation issues of an Aboriginal cultural site into report documentation
- identify threats and develop controls to mitigate and manage the risk of deterioration, damaging incidents or loss of cultural integrity
- prepare a site survey report to meet Community and enterprise needs
- complete submissions required to carry out a site survey
- observe Aboriginal cultural protocols in dealing with stakeholders and land managers.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- authentic and authoritative sources for Aboriginal cultural information, material and expression able to be accessed and shared
- site survey techniques, procedures and processes
- archaeological and scientific research techniques relevant to survey Aboriginal cultural site
- monitoring of site including fabric deterioration, damage and likely causes of deterioration and damage
• cultural rights and responsibilities when using Community knowledge, information and material
• general understanding of impacts of natural resources, such as geological settings, ecological processes, and interaction between natural and cultural processes
• provisions in the Australian Natural Heritage Charter and the Burra Charter and Guidelines and how they relate to surveying and reporting on Aboriginal sites
• design and methodology of consultation processes
• policy analysis and development of impact statements
• the range of conservation strategies for cultural areas
• data submission systems and reporting requirements
• components of Cultural and Heritage Legislation or National Parks and Wildlife Service (NPWS) legislation relevant to surveying Aboriginal cultural sites.

Assessment Conditions

Assessment must comply with Community protocols and be supported by Elders and Custodians of Country.

Assessors must satisfy the current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- communicate with supervisor and team members
- carry out ground preparation of the area for planting
- read and follow planting plan
- apply pre-planting soil treatments
- calibrate the planting equipment
- treat and plant seed
- apply fertiliser with seed at sowing or as a separate operation
- apply herbicides under supervision
- record all details of sowing
- operate a range of crop establishment machinery
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- importance of correct timing and procedures for crop planting
- field hygiene and quality control in regard to crop establishment
- a range of pre-planting soil treatments and their importance
- methods of waste disposal causing minimal impact on the environment
- hazards and follow safety directions
- communication with team members and supervisor
- equipment calibration
• measurement of quantities of treatment
• determination of spacing’s and planting patterns
• machinery operation to manufacturers specifications and enterprise procedures
• safe application of appropriate agricultural chemicals
• enterprise work health and safety and biosecurity polices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare machinery, equipment and tools to maintain crops
- conduct scheduled routine checks on machinery and vehicles for oil levels, tyre pressures, water levels and greasing points
- assist with cropping duties including weed control, pest and disease control, crop nutrition and paddock maintenance
- report the presence of weeds, pests and disease in crops
- record the details of crop maintenance
- identify hazards and follow safety directions at work
- read and interpret a range of workplace information
- calibrate equipment
- measure quantities of treatment
- operate machinery to manufacturer’s specifications and enterprise procedures
- safely apply under supervision appropriate agricultural chemicals in weed and pest control programs
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- operations of a range of cropping machinery
- importance of correct timing and procedures for crop maintenance
- weed control in crops
• pest and disease control
• crop nutrition
• methods of waste disposal causing minimal impact on the environment
• enterprise work health and safety and biosecurity policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to assist agricultural crop harvesting.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Elements and Performance Criteria

### Element | Performance criteria
--- | ---
**operations** | 1. Select and prepare machinery, equipment and tools  
2. Identify work health and safety hazards in crop harvesting, assess risks and report to the supervisor  
3. Select, use and maintain appropriate personal protective equipment

2. Prepare harvesting machinery and vehicles for crop harvesting operations | 1. Ensure harvesting machinery and vehicles are fuelled  
2. Conduct routine checks for oil levels, tyre pressures, and water levels and greasing points  
3. Confirm instructions regarding location of the day's harvesting program, special operating instructions or work procedures

3. Assist with harvesting of crops | 1. Assist the operation of harvesting machinery and ancillary equipment appropriately and to suit crop conditions  
2. Maintain the hygiene of all surfaces that come into contact with the crop  
3. Assist in regularly checking and adjusting harvester and ancillary equipment where required

4 Complete harvesting operation | 1. Clean harvesting machinery and vehicles appropriately  
2. Dispose of all containers, leftover fluids, waste and debris according to enterprise polices and minimising the impact on the environment  
3. Apply enterprise biosecurity policies  
4. Complete all required workplace records appropriately

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify hazards and follow safety directions
- communicate with supervisor
- calibrate equipment
- measure quantities of treatment
- operate machinery to manufacturer’s specifications and enterprise procedures
- prepare harvesting machinery and equipment to harvest crops
- operate vehicles and machinery safely and as directed to support the harvesting team
- carry out routine checks and refuelling of harvesting vehicles and machinery
- dispose of waste liquids and harvest debris according to environmental procedures
- record information as requested
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- harvesting machinery operation and equipment basic maintenance
- harvesting machinery and equipment servicing
- hazard identification and safe work practices in harvesting
- types of crops and their characteristics
- crop hygiene requirements
- enterprise work health and safety and biosecurity polices.
Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to safely prepare storages, surrounding areas and equipment in readiness for receiving grain at an acceptable level of hygiene. This unit applies to workers in specialist grain storages or on grain farms.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all work in confined spaces must comply with state and federal legislation requirements.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and follow safe work procedures
- erect simple temporary bulk material storages
- check equipment and storage facilities, and identify current or impending faults
- perform pre-operational checks and routine safety, service and maintenance procedures on tools, equipment and machinery
- operate hand and independently powered tools and cleaning equipment to industry standards
- clean, secure and store machinery and equipment
- handle hazardous substances (fuels) safely
- read and interpret manufacturer's specifications, work and maintenance programs, and Safety Data Sheets (SDS)
- prepare the storage area for access by grain carriers
- prepare grain storages by removing all residues and checking structure
- work in confined spaces in accordance with State/Territory legislation, where required
- prepare and test grain handling machinery
- communicate with supervisor
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- range of construction methods, potential hazards, safety and structural requirements for storage
• erection and dismantling for types of temporary storage used by organisation
• organisation and commodity quality requirements for grain storage
• grain storage hygiene requirements
• typical signs of structural damage to be documented and reported
• pre-operational and safety checks, servicing and maintenance procedures for tools and equipment
• machinery maintenance procedures and operating principles
• machinery and equipment cleaning, storage and protection methods
• appropriate action in contingency situations
• organisation requirements for protective equipment and safe practices in relation to work health and safety
• State/Territory legislation in respect to working in confined spaces
• potential hazards associated with the operation of basic tools and equipment
• regulations and codes of practice with regard to work health and safety, environment and the use and control of machinery and equipment
• personal protective clothing and equipment and when and how it should be used
• organisational recording and reporting procedures.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to conserve forage. This includes controlling risks associated with conservation of forage activities such as risk of fire from moisture content creating excessive temperature of hay stacks, potential contact with overhead power lines and exposure to noise and dust.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices. All machinery is operated to manufacturer’s specifications.

This unit applies to individuals who work under broad direction and take responsibility for own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- prepare paddocks for forage conservation
- apply forage conservation methods
- harvest, prepare and store forage
- record work activities
- interpret and implement forage conservation requirements
- operate and maintain forage harvesting equipment
- assess risks and implement work health and safety procedures for forage conservation
- correct use of technology to improve efficiency
- perform harvesting operations
- follow enterprise workplace health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work
- follow enterprise sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- silage and hay conservation systems and methods
- factors affecting the quality of silage and hay
- dry matter content, quality and hygiene requirements
- range and functions of silage and haymaking machinery and equipment
- common weeds, pests and diseases associated with crops and pastures
- role of technology in improving efficiency
- types and application of personal protective equipment
• legislation and regulations including licensing requirements in relation to forage operations
• risks associated with conservation of forage activities including risk of fire from moisture content creating excessive temperature of hay stacks; potential contact with overhead power lines; and exposure to noise and dust
• risk factors including animal health and weather
• environmental risks and impacts of forage conservation.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- operate machinery and equipment
- calibrate boom spray and drill and fertiliser spreader
- identify pests and diseases
- identify pasture and crop species (both seed and seedlings)
- identify and control weeds
- handle chemicals safely
- mix and inoculate seed
- interpret and implement crop and pasture production plans
- assess existing pastures and crops to maximise livestock production
- sow and monitor new pastures and crops
- select pasture species, sowing method and application appropriate for optimal yield
- manage grazing systems including weed and stubble control
- control pests and weeds without damage to the crop or pasture
- demonstrate correct use of technology to improve efficiency
- follow enterprise work health and safety policies
- follow enterprise sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- types of grasses, legumes and crops
- types of seed inoculants and fertilizers
- seed and fertilizer placement for optimal germination and growth
• integrated weed control including chemical application, cultural practices and grazing management
• safe use of chemicals and machinery
• role of technology in improving efficiency
• advantages and disadvantages of pasture and crop establishment programs
• timing of pasture and crop establishment
• enterprise work health and safety policies
• procedures for minimising environmental impacts.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

3.4 Collect and maintain appropriate sample information records |
| 4 Perform initial tests on samples | 4.1 Follow handling procedures to prevent mixing or contamination of samples  
4.2 Operate testing equipment to perform required tests in accordance with manufacturer's instructions, enterprise and industry practice  
4.3 Record results of initial testing appropriately  
4.4 Use visual recognition and industry reference material to determine the level of defects and contaminants  
4.5 Compare test results with specifications to determine the grade or reject the sample  
4.6 Observe appropriate policies and procedures with regard to rejection of product |
| 5 Despatch samples to testing facilities | 5.1 Pack and label samples appropriately  
5.2 Prepare appropriate records of testing requirements  
5.3 Despatch samples to testing facility |
| 6. Prepare for storage of grains and seed | 6.1 Conduct appropriate segregation arrangements of grain and seed  
6.2 Complete required site transfer arrangements  
6.3 Inspect conveying equipment and identify and report items requiring maintenance or repair  
6.4 Apply enterprise biosecurity policies as required |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit is equivalent to AHCBAC304A Test grains and seeds on receival.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify work health and safety hazards and implement safe operating procedures
- identify grain and seed types
- take consistent samples
- identify defects such as split grains and seeds, undersize, chaff, weed seeds, damage
- read and interpret commodity standards
- store and dispatch grains and seeds samples and maintain hygiene
- conduct sampling and initial testing
- operate electronic and non-electronic testing equipment
- record samples for further testing
- communicate with customers and maintain records
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- safe operating procedures for handling and storing grain
- grain/seed testing processes
- industry standards and codes of practice
- testing parameters for grains such as protein, weight, oil content, moisture, defects, sprouts etc
- testing parameters for seed such as genetic purity, cultivar, dead, abnormal and hard seed, germination potential, foreign matter
- analysis and consequence of test result
- segregation strategies/methods, traceability and hygiene
- impact of residues including chemical
- industry practice, standards and quality assurance requirements in relation to grains sampling and testing
- workplace health and safety, company, industry and regulatory requirements
- sampling and testing protocols
- enterprise biosecurity policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to prepare land for agricultural crop production.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources and complete routine activities.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret production and planting plans, produce standards, quality specifications and work procedure documents
- measure materials and site plan specifications
- operate, adjust and calibrate cultivation equipment safely
- complete pre- and post-operational checks on tools, vehicles and equipment
- perform routine safety, service and maintenance procedures on tools, cultivator and equipment
- demonstrate correct use of technology to improve efficiency
- read and interpret manufacturer specifications, work and maintenance plans, and Safety Data Sheets (SDS)
- communicate effectively with supervisor
- follow enterprise work health and safety policies in the context of own work
- follow enterprise biosecurity policies in the context of own work
- follow enterprise sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- methods of cultivating a range of soil types
- environmental issues of cultivating soil for planting, such as drainage and irrigation systems, soil amelioration and waste disposal procedures
- a range of pre-planting treatments, their purpose and method of application
- operation and maintenance of planting equipment
- role of technology in improving efficiency
- work health and safety guidelines, procedures and principles, including manual handling and exposure to hazardous substances
- enterprise biosecurity and sustainability policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and implement safe operating procedures
- sow seed and apply fertiliser at the required placement and rate
- identify types of weeds and insects harmful to crop establishment
- perform pre-operational and safety checks, servicing and maintenance on machinery and equipment
- calibrate, operate machinery and attach/detach equipment
- demonstrate emergency operating procedures in normal and adverse conditions
- recognise and report machinery damage, faults or malfunctions and perform minor repairs
- demonstrate safe, environmentally responsible and sustainable land management practices
- monitor and minimise impacts to the environment associated with sowing operations
- correct use of technology to improve efficiency
- read and interpret manufacturer specifications, work and maintenance plans, and MSDS
- obtain relevant licences and permits
- clean, secure and store machinery and equipment
- record and report equipment faults, workplace hazards and accidents
- assess and calculate the application of fertiliser/pesticide requirements and application rates
- calibrate equipment and calculate volumes, consumption and servicing requirements
- prepare and service machinery and equipment
- carry out tillage and apply pre-planting treatments
- carry out sowing operation and fertiliser application
- monitor the environmental impacts of establishing the crop
- clean, secure and store machinery and equipment
- keep records of the sowing operation
- follow enterprise work health and safety policies in the context of own work
- follow sustainability practices in the context of own work
- follow enterprise biosecurity policies in the context of own work.

**Knowledge Evidence**

The candidate must demonstrate knowledge of:

- crop types, preparation of seeds, seeding methods and application techniques
- fertiliser types, rates of application and crop nutrient requirements
- effects of weather conditions (normal and adverse) on seeding and fertilising applications
- operating principles and operating methods for machinery and equipment
- pre-operational and safety checks, servicing and maintenance procedures for seeding machinery and equipment
- principles of weight distribution with regard to load shifting and vehicle movement
- role of technology in improving efficiency
- sustainable land management and soil conservation techniques
- positive environmental practices, negative environmental impacts and minimisation measures associated with seeding operations
- procedures for cleaning, securing and storing machinery, equipment and materials
- enterprise policies with regard to seeding operations, and recording and reporting routines
- relevant state/territory legislation, regulations and codes of practice with regard to workplace health and safety and the use and control of pesticides and fertilizers
- Personal Protective Equipment and when and how it should be used
- relevant state/territory legislation and regulations with regard to licensing requirements and the use and control of machinery and equipment
- enterprise biosecurity and sustainability policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

1. **Monitor & assess agricultural crop condition, growth and requirements**
   - 1.1 Monitor crop health regularly and record observations
   - 1.2 Report deviation from expected growth and vigour
   - 1.3 Identify, monitor and report weeds, pests and diseases
   - 1.4 Follow directions to establish sites for regular measurement of soil moisture
   - 1.5 Measure moisture levels and calculate soil water percentage using soil probe
   - 1.6 Report observations of crop ripening to manager to determine the timing of harvest

2. **Undertake crop health operations**
   - 2.1 Identify hazards and implement appropriate controls
   - 2.2 Select, use and maintain appropriate personal protective equipment
   - 2.3 Follow label instructions and any specialist advice
   - 2.4 Apply specialist sprays appropriately for growth stages
   - 2.5 Apply technology to ensure most efficient performance of operations
   - 2.6 Conduct any required chipping or spot spraying
   - 2.7 Assess, record and report crop growth stages and keys
   - 2.8 Apply water as required
   - 2.9 Consider adverse environmental impacts when performing all applications

3. **Complete cleaning and hygiene operations**
   - 3.1 Clean and maintain equipment appropriately
   - 3.2 Dispose of all containers, leftover fluids, waste and debris from the maintenance and servicing work according to enterprise polices and minimising the impact on the environment
   - 3.3 Complete all required records and documentation appropriately

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- detect differences and variations in crop growth
- report/communicate such differences to the supervisor/farm owner
- observe and report on health and growth of the crop
- monitor pests and disease in crops
- assess crop maturity
- apply sprays and fertilizers as directed
- measure soil moisture and relate data to crop requirements
- apply technology to ensure most efficient performance of operations
- follow enterprise work health and safety policies in the context of own work
- follow sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- appropriate legislative requirements, manufacturer’s instructions and organisation procedures/instructions
- potential hazards associated with the operation of basic tools and equipment
- general machine maintenance procedures
- machinery operating principles and safe operating methods
- environmental impacts associated with the operation of machinery and equipment in a harvesting context
- organisation recording and reporting procedures
- symptoms of crop lacking health and vigour
• signs of pest and disease infestation, moisture stress and nutrient deficiencies
• hygiene requirements for agricultural crops and equipment that comes into contact with the crop
• types and uses of herbicides, insecticides and other pesticides and alternative pest control methods (non-chemical)
• role of technology in improving efficiency
• work health and safety and pesticides legislative and enterprise policies.

Assessment Conditions
Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- handle and manoeuvre harvesting equipment
- operate crop harvesting machinery and equipment
- implement correct use of technology to improve efficiency
- implement procedures for seed handling and hygiene
- identify hazards and implement work health and safety procedures for all harvest tasks
- complete pre- and post-operational checks on tools, harvesting machinery and equipment
- perform routine, service and maintenance procedures on tools, harvesting machinery and equipment
- sample crops to assess moisture content and maturity/ripeness of the crop
- monitor efficiency of harvesting equipment and make adjustments to height and other settings
- transport, clean and store harvesting equipment
- use of industry standard terminology to describe agricultural harvesting activities
- follow work health and safety policies in the context of own work
- follow biosecurity policies in the context of own work
- follow sustainability practices in the context of own work.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- handling and manoeuvring of harvesting equipment
- operation of crop harvesting machinery and equipment
- role of technology in improving efficiency

- assess pastures and crop maturity
- apply sprays and fertilizers as directed
- measure soil moisture and relate data to crop requirements
- apply technology to ensure most efficient performance of operations
- monitor the productivity and feed intake of grazing livestock
- assess the impact of grazing on pasture and crop productivity
- follow enterprise work health and safety and animal welfare policies and procedures.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- potential hazards associated with the operation of basic tools, equipment and machinery
- general machine maintenance procedures
- machinery operating principles and safe operating methods
- role of technology in improving efficiency
- environmental impacts associated with the operation of machinery and equipment
- organisation recording and reporting procedures
- symptoms of pasture and crop lacking health and vigour
- signs of pest and disease infestation, moisture stress and nutrient deficiencies
Assessment Requirements for AHCBAC310 Maintain pastures and crops for livestock production

- hygiene requirements for equipment that comes into contact with the pastures and crops
- types and uses of herbicides, insecticides and other pesticides and alternative pest control methods (non-chemical)
- work health and safety and pesticides, legislation
- different livestock grazing habits
- enterprise sustainability practices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage pastures for livestock production.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Elements and Performance Criteria

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine fertiliser, soil ameliorants and biological inputs required to support production
- set objectives and milestones for pasture production
- calculate costs
- determine soil quality and land use capability
- monitor the productivity and feed intake of grazing livestock
- develop grazing strategies and plan infrastructure required
- assess the impact of grazing on pasture productivity and resilience
- identify pasture species and estimate dry matter production of pasture
- assess options to control weed infestation
- identify strategies for pest and disease control
- establish production targets for each pasture type in an enterprise
- develop a pasture management program to meet production targets and enterprise objectives
- carry out strategic grazing to reduce or eradicate areas of weed infestation
- monitor soil health and grazing management to ensure sustainable pasture and optimal livestock production levels
- monitor pasture yields and evaluate against forecast production levels
- correct use of technology to improve efficiency
- maintain relevant physical and financial records for pasture and livestock production
- implement work health and safety policies and procedures
- implement enterprise environmental management and sustainability practices.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- land and soil conditions
- pasture species and growing requirements
- pasture grazing strategies
- nutrient requirements and soil fertility
- environmental management strategies in land use
- safe handling processes for fertilisers
- infestation patterns for different types of weed
- role of technology in improving efficiency
- work health and safety legislative and enterprise requirements
- relevant environmental codes of practice, legislation and regulations relating to farm production.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine requirements of the pasture establishment program
- research suitable pasture species for the site and proposed land use
- prepare and document the pasture establishment program
- develop strategies for weed, pest and disease control
- assess pastures for production potential
- assess site factors
- select suitable pasture species and cultivars
- identify threats to pasture establishment including weeds, pests and diseases
- determine resources and equipment for planting and post-planting care
- prepare pasture establishment plans to meet livestock production plans and schedules
- demonstrate correct use of technology to improve efficiency
- implement enterprise work health and safety policies in the context of the work team
- implement sustainability practices in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- pasture varieties and their characteristics, requirements and production potential
- establishment techniques of specific pasture species and cultivars
- advantages and disadvantages of a range of pasture establishment procedures
- maintenance requirements and practices for specific pasture species and cultivars after initial establishment
- livestock production systems and their integration with pasture production
Assessment Requirements for AHCAC402 Plan a pasture establishment program

- planning process, including costing and scheduling of works
- plant identification of pasture and weed species
- role of pasture in sustainable land use
- role of technology in improving efficiency
- environmental impacts of pasture establishment.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and oversee safe operating procedures
- identify the seasonal conditions which affect crop establishment
- plan and schedule planting including amending plans during the operations
- recognise poor growth and lack of vigour caused by nutrient deficiency and incorrect planting depth
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- plan the planting operation including timing and resources required
- correct use of technology to improve efficiency
- carry out pest, weed and disease control either pre or post planting if required
- supervise staff and monitor the planting operation
- implement work health and safety policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- equipment that is required for a range of tillage methods, and pest and weed control prior to planting
- crop establishment requirements
- equipment servicing requirements
- role of technology in improving efficiency
- integrated pest and weed management techniques
- environmental controls and codes of practice applicable to the enterprise
• legislation, codes of practice and enterprise procedures for work health and safety and environmental management
• management practices and processes to minimise environmental impacts such as noise, soil degradation, and debris from planting operations.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- refer to records of, and assess, soil health and nutrient status
- dispatch soil samples to laboratories
- carry out a soil health appraisal
- identify likely threats to crop from pests, weeds and diseases
- recognise damage to crop caused by weeds, pests or diseases
- recognise poor growth and lack of vigour in crop caused by nutrient deficiency
- record monitoring results
- plan and implement integrated control strategies to address nutrient deficiencies, disease outbreaks, pest and weed infestations
- accurately measure soil moisture and estimate irrigation needs if required
- apply pesticides or fertility treatments as required
- apply correct use of technology to improve efficiency
- communicate with industry, suppliers and other personnel
- read and interpret Safety Data Sheets (SDSs), production plans and analysis results
- estimate and measure pest control treatments
- assess crop needs accurately
- carry out crop cultural practices and treatments
- monitor and assess crop maturity
- ascertain water requirements from survey advice and weather forecasts
- measure soil moisture and interpret data accurately
- determine time of harvest with specialist advice
- implement work health and safety policies in the context of the work team
- implement enterprise sustainability practices.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- crop growth stages and keys
- crop growth requirements compared to soil nutrient status
- fertiliser and soil ameliorant types and application times, methods and rates
- chemical use if applicable
- factors leading to development of chemical resistance
- role of technology in improving efficiency
- integrated pest management strategies
- life-cycles of pest, diseases and weeds
- work health and safety legislative requirements
- relevant codes of practice with regard to the use and control of agricultural chemicals
- legislation and codes of practice with regard to environmental protection.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

1.4 Assess insurance requirements and plan and implement required risk management strategies  
1.5 Identify work health and safety hazards and assess risks in crop harvesting                                                                                     |
| 2. Determine harvest strategy                           | 2.1 Estimate and calculate optimum timing to carry out harvest according to crop maturity assessment  
2.2 Assess resource requirements appropriate to the size of the crop and estimated timing of harvest  
2.3 Assess technology to ensure most efficient performance of operations  
2.4 Arrange and confirm required labour and equipment to carry out harvesting operations within budgetary constraints  
2.5 Identify and arrange appropriate requirements for fire prevention and control                                                                                   |
| 3. Coordinate the harvest strategy                     | 3.1 Implement work health and safety controls  
3.2 Implement appropriate communication strategies  
3.3 Implement harvesting operations and adjust as required according to weather, equipment and staff requirements  
3.4 Coordinate and monitor equipment operation  
3.5 Identify and control existing and potential biosecurity hazards appropriately                                                                                     |
| 4. Complete harvest operation                          | 4.1 Identify appropriate storage resources and strategies for drying grain  
4.2 Segregate grain quality of grain to marketing grades and monitor for moisture content according to classification standards  
4.3 Evaluate harvesting operations and outcomes against harvest strategy  
4.4 Document and record information for continual analysis and effective planning management                                                                           |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.
Range of Conditions

Unit Mapping Information
This unit is equivalent to AHCBAC405A Supervise agricultural crop harvesting.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- organise and schedule the maintenance of plant and equipment
- establish strategies, procedures and controls for crop harvesting
- negotiate and arrange contracts and agreements
- implement safe workplace and positive environmental practices
- deal with weather and other contingencies
- establish strategies, procedures and controls for crop harvesting, including fire prevention and control plans
- correct use of technology to improve efficiency
- negotiate and arrange contracts and agreements
- estimate crop yields
- maintain budgetary controls
- assess crop maturity and quality in readiness for harvesting
- arrange storage and delivery requirements
- segregate grain for quality and monitor for moisture content
- implement work health and safety policies in the context of the work team
- implement biosecurity policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- crop maturity and yield potential
- grain or seed quality
- functions and limitations of harvesting equipment
Assessment Requirements for AHCBA05 Supervise agricultural crop harvesting. Date this document was generated: 3 September 2020

- role of technology in improving efficiency
- crop measurement techniques and parameters
- grain market information and sources
- location and relative skills and abilities of available contractors
- weather conditions which may affect the harvest
- relevant legislation, codes of practice and enterprise requirements for Work Health and Safety, contractor engagement, environment and pesticides
- environmental controls and codes of practice applicable to harvesting operations
- enterprise biosecurity policies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to maintain grain quality in storage and includes assessing and maintaining hygiene in grain storage areas, as well as monitoring the grain for deterioration or pests and contaminants.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

This unit applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

Participants must check state and federal training requirements before using fumigants in grain storages.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Maintain hygiene in storage areas
   - 1.1 Test storage conditions and facilities to maintain the standard of hygiene in stored grain
   - 1.2 Identify, report and carry out repairs and maintenance
   - 1.3 Apply treatments to storage facilities to maintain hygiene standards and in line with the grain storage program
   - 1.4 Implement enterprise biosecurity policies
   - 1.5 Record application of all treatments appropriately

2. Monitor grain from arrival to dispatch
   - 2.1 Take samples and refer for testing before storing grain
   - 2.2 Take regular samples to ensure purity standards of the grain
   - 2.3 Check the grain quality at dispatch against the records taken at the point of storage
   - 2.4 Take, prepare and forward test samples for analysis according to prescribed guidelines
   - 2.5 Maintain and store records of grain movements in and out of storage as prescribed in the grain storage program
   - 2.6 Research and recommend new technology, systems or practices that will improve or maintain grain quality in storage
   - 2.7 Implement work health and safety policies for activities around the grain storage facilities

3. Monitor and maintain grain condition in storage
   - 3.1 Conduct regular checks of grain in storage to maintain continued freedom from contaminants and deterioration
   - 3.2 Conduct appropriate periodical checks of grain in long-term storage for quality factors and viability
   - 3.3 Take, prepare and send samples of grain for testing in a laboratory setting appropriate to industry quality assurance and laboratory requirements
   - 3.4 Create, maintain and keep records of grain tests and inspections appropriate to the grain storage program.
   - 3.5 Use the schedule and methods outlined in the grain storage program to monitor condition of storage facilities
   - 3.6 Take appropriate corrective action to maintain grain quality
   - 3.7 Ensure that all activities around the grain storage facilities are undertaken appropriate to the grain storage program

4. Control weeds and pests in storage area
   - 4.1 Monitor grain according to the monitoring points, targets and methods outlined in the grain storage program
   - 4.2 Take samples of the grain to test for pest infestation

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- setup and operate fumigation and pesticide application equipment
- sample loads and grain in storage, and conduct a simple analysis
- create, maintain, use and keep clear and trackable records
- use a range of communication equipment, including in emergency situations
- inspect and test silos
- identify insects, pests and other factors that affect grain quality
- set up and operate inert atmosphere equipment
- handle and mix chemicals for baiting, fumigation, spraying, and other forms of application
- interpret monitored information on pests
- plan and schedule weed, pest and disease control including amending plans during the operations
- calculate mass and volumes of grain and grain storages
- implement pre-determined integrated pest management strategies
- monitor and maintain hygiene
- monitor and control pests and contaminants
- investigate and recommend options for technology, systems or practices that will improve grain quality
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• types, levels and control methods for a range of pests and contaminants
• silo and temporary storage configuration and operation
• chemical handling and dangerous goods requirements
• range of applicable pesticides, their uses, application methods and handling requirements
• grain commodity types, varieties and grades, marketing requirements and options for grain growers
• handling requirements for gas cylinders
• insect life cycles and optimum conditions for development
• Integrated Pest Management (IPM) principles and the procedures used within the organisation
• legislative requirements, codes of practice and enterprise procedures relating to the purchase, transport, storage, use and disposal of pesticides and fumigants, work health and safety and environment
• client’s sampling and classification requirements
• common grain pests and their general control methods
• equipment used in grain storage facilities
• site hazards and sound management practices and processes to minimise noise, odours, and debris from grain storage operations
• chemical handling and dangerous goods requirements
• developments and options available for maintaining or improving the quality of grain during storage
• enterprise biosecurity policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select appropriate seed tests
- apply pre and post-harvest treatments for seed
- identify varieties from growth patterns
- identify weed seeds and contaminants
- identify pests in stored grain and initiate control measures
- calculate volumes, capacities, areas, ratios for seed, storages, and chemicals
- keep, update and maintain records relating to test results, provenance, varieties, pest control measures, and other relevant information about the seed
- calculate the quantity of seed required for the following season
- grade and test seed and interpret the results
- store the seed for use in the following season
- maintain grain in storage to ensure maximum quality and yield when used
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies in the context of the work team
- implement enterprise environmental sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- identification of varieties
- seed treatment and cleaning measures
- sources of purchased seed
- inoculation treatments and seed dressings used within the organisation
- records and documentation required for tracking and handling of seed
- storage techniques and requirements for seed and grain
- environmental controls and codes of practice applicable to the enterprise
- relevant legislation and regulations relating to WHS, contractor engagement, chemical use and application, vehicle and plant use, and to the use, handling and sale of seed
- sound management practices and processes to minimise noise, odours, and debris from sowing operations
- enterprise biosecurity policies.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply environmental protection strategies in land use
- set objectives and milestones for a cropping program
- determine soil quality and land use capability
- determine crop nutrient requirements and fertiliser requirements
- measure and assess quantities of fertiliser to meet plant requirements
- predict patterns of weed infestation
- manage irrigation processes to avoid soil degradation if applicable
- demonstrate use of technology to improve efficiency
- prepare budgets
- develop a cropping program for an enterprise
- plan for crop establishment
- monitor growing crops, provide inputs and carry out cultural practices as required
- develop a plan for the crop harvest
- monitor crop yields and evaluate production performance
- implement work health and safety policies in the context of the work team
- implement enterprise environmental sustainability practices in the context of the work team.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- land and soil conditions
- effects of soil characteristics on nutrient availability
Assessment Requirements for AHCBAC408 Manage agricultural crop production

- role of technology in improving efficiency
- budgeting and financial analysis techniques
- environmental protection strategies
- cultivation requirements for different types of crop
- safe handling processes for fertilisers
- infestation patterns for different types of weed
- integrated strategies for the management of pests, weeds and diseases
- work health and safety legislative requirements
- environmental legislation and codes of practice, relating to farm production.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess the need for and implications of forage conservation in the farming system
- select and implement a forage conservation system
- perform harvesting operations
- assess cost benefit and forage conservation options
- select appropriate forage conservation method
- select suitable forage conservation machinery
- apply correct use of technology to improve efficiency
- oversee harvest, forage preparation and storage
- record work activities
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies in the context of the work team
- implement enterprise environmentally sustainability practices.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- forage conservation options and cost benefit economic analysis
- silage and hay conservation systems
- factors affecting the quality of silage and hay
- dry matter content, quality and hygiene requirements
- range and functions of silage and haymaking machinery and equipment
- role of technology in improving efficiency
- common weeds, pests and diseases associated with crops and pastures
- types and application of personal protective equipment
- work health and safety legislation and regulations including licensing requirements in relation to forage operations
- risk factors including human and animal health, weather, harvesting and environmental
- enterprise biosecurity policies and environmental sustainability practices.

**Assessment Conditions**

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- measure and assess quantities of fertiliser
- apply environmental protection strategies in land use
- set objectives and milestones
- determine soil quality and land use capability
- predict patterns of weed infestation
- design irrigation processes to avoid soil degradation
- apply correct use of technology to improve efficiency
- assess financial strategies and prepare budgets
- develop a pasture and crop program to meet production targets and enterprise objectives
- maintain the productivity of crops and pastures in a farming system
- monitor soil structure and erosion and make required changes to cultural practices and grazing management
- implement grazing strategies to optimise pasture and livestock production levels and support the cropping program
- evaluate grazing and cropping programs for efficiency and effectiveness
- use physical and financial records of production to evaluate production performance
- implement work health and safety policies in the context of the work team.

Knowledge Evidence
The candidate must demonstrate knowledge of:
- land and soil conditions
- effects of nutrients of soil types
Assessment Requirements for AHCBAC503 Manage integrated crop and pasture production

September 2020

- crop and pasture production financial analysis techniques
- environmental standards
- cultivation requirements for different types of crop
- safe handling processes for fertilisers
- role of technology in improving efficiency
- infestation patterns for different types of weed
- work health and safety legislation Codes of practice and enterprise procedures.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- cost benefit analysis of grain storage
- establish procedures and controls for implementation by others
- plan, schedule, monitor and amend plans for operations
- administer and co-ordinate operations on a site
- explain, and deliver instructions about the plans and scheduling of the grain storage operations to both staff and contractors
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- plan for storage needs based on grain production estimates
- implement an integrated pest management (IPM) program for grain storage
- supervise procedures to manage work health and safety risk for the storage site
- schedule the storage and transport of grain
- supervise staff to monitor transport, storage, sampling and pest control procedures
- maintain records of grain storage to meet quality requirements
- implement work health and safety policies
- implement enterprise biosecurity policies.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- silo layout and operations, configuration, and maintenance procedures
- safe working practices, especially in confined spaces and at heights
• organisational priorities and policies in relation to production planning, work health and safety and chemical use
• organisational priorities and policies in relation to quality, personnel and operations
• pest control principles
• reporting and recording requirements within the organisation and as required by external authorities
• grain marketing and commodity prices
• use of technology in grain storage operations
• integrated pest and weed management techniques
• relevant legislation and regulations relating to work health and safety, contractor engagement, chemical use and application, site management, and vehicle and plant use
• sound management practices and processes to minimise noise, odours, and debris from grain storage operations
• enterprise biosecurity policies.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage the harvest of crops.

All work must be carried out to comply with workplace procedures, work health and safety and biosecurity legislation and codes, and sustainability practices.

Harvesting crops carries risk of fire. All harvesting activities shall be conducted appropriate to relevant regulations, legislation and guidelines as determined by the relevant fire authority.

This unit applies to individuals who demonstrate deep knowledge in a specific technical area, take personal responsibility and exercise autonomy in undertaking complex work. They organise the work of self and others and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan and implement harvesting operations, including amendment of these during the operation itself
- organise and schedule the maintenance of plant and equipment
- establish processes or strategies, procedures and controls for crop harvesting
- demonstrate correct use of technology to improve efficiency
- interpret, analyse and extract information from a range of sources and discussions
- assess potential yields
- negotiate and arrange contracts and agreements
- explain, and deliver instructions about the plans and scheduling of the harvest operations to both staff and contractors, as well as suppliers, customers, and neighbours
- observe, identify and react appropriately to environmental implications and work health and safety hazards
- estimate crop yield and value and monitor for harvest readiness
- plan for the resources that will be required for harvest
- negotiate insurance and equipment supply contracts
- develop risk management procedures for work health and safety, climate and fire risk
- organise for the logistics of the harvesting operation including harvesting, storage and delivery
- keep grain batches separate and monitor for pests or spoilage
- implement work health and safety policies in the context of the work team
- implement enterprise biosecurity policies
- implement enterprise environmental sustainability practices.
Knowledge Evidence

The candidate must demonstrate knowledge of:

- capability and use of harvesting equipment
- role of technology in improving efficiency
- crop measurement techniques and parameters
- market information and sources
- contracting requirements for crop insurance
- management of the moisture content of crops, including drying and aeration
- storage options and local storage availability
- bushfire prevention and control legislation
- bushfire prevention and control strategies and equipment
- contact details for local fire services
- weather conditions which may affect the harvest
- relevant legislation and regulations relating to WHS, contractor engagement, chemical use and application, and vehicle and plant use
- environmental controls and codes of practice applicable to the business and to the harvesting operations
- sound management practices and processes to minimise noise, odours, and debris from the harvesting operations
- enterprise biosecurity policies and environmental sustainability practices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare budgets and gross margins
- source and interpret relevant benchmark information from consultants or peers
- assess proposed crop land areas for nutrient status by sampling and testing soils and plant tissue
- analyse past production records
- select crop species and variety
- source and interpret relevant benchmark information
- select crop species and variety and determine yield potential for crop
- demonstrate correct use of technology to improve efficiency
- prepare crop programs
- review, amend and document the production plan
- prepare budgets and gross margins
- source and interpret relevant benchmark information
- prepare individual paddock plans and a whole farm cropping plan
- assess work health and safety implications of the plan.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- determinants of crop yield
- cultural practices related to cropping
- role of technology in improving efficiency
- market prices, gross margins, cash flow budgets
Assessment Requirements for AHCBAC507 Develop production plans for crops

- benchmark performance indicators
- disease and pest management for relevant crops
- machinery and equipment requirements for cropping
- record keeping systems.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency covers the application of introductory plant biology (plant taxonomy, plant morphology and plant physiology) to a wide range of agronomic practices including crop/pasture establishment, fertiliser use, irrigation, Integrated Pest Management (IPM), crop harvesting, grazing management and the provision of specialist agronomic advice.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit applies to work as an agronomist. Work is normally undertaken without supervision.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Broad acre cropping (BAC)

Elements and Performance Criteria

| to agronomic practices          | divisions, major plant families and genera) for plant classification  
1.2 Apply the rules of plant nomenclature when naming plants  
1.3 Describe the external features of plants – leaves, stems, flowers and fruits using botanical terminology  
1.4 Identify a range of plants used in agronomy to species level, using plant keys and/or other references where required  
1.5 Use correct botanical terminology to discuss plant taxonomy in agronomic practices |
| 2. Identify plant functions and their impact on growth | 2.1 Investigate and identify plant cell structures, their functions and the organisation of cells into primary tissues  
2.2 Research the structure and functions of leaves, stems, root and flowers in relation to agronomic practices  
2.3 Describe the processes and outcomes of photosynthesis, respiration and transpiration |
| 3. Apply plant morphology to agronomic practices | 3.1 Research, analyse and document specialist botanical knowledge of plant morphology (leaf, root, stem, flower and seed characteristics from development to maturity) for crop and pasture management  
3.2 Use correct botanical terminology when discussing plant morphology and identifying growth stages of plants  
3.3 Identify critical growth stages for crop/pasture monitoring, nutrient assessment and spray applications |

**Foundation Skills**

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- use appropriate authoritative references and resources for plant classification
- apply scientific concepts of plant biology to agronomic practices
- identify plants according to accepted taxonomic classifications.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- plant morphology
- plant taxonomy
- plant physiology
- plant nomenclature according to the rules and recommendations of the International Code of Botanical Nomenclature (ICBN) and the International Code of Nomenclature for Cultivated Plants (ICNCP)
- broad knowledge of agronomic practices.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to open and reassemble a beehive to carry out routine bee husbandry and related tasks.

The unit applies to individuals that undertake routine beekeeping tasks. This includes identifying and providing solutions to a limited range of predictable problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

Pre-requisite Unit

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least two occasions the individual has demonstrated that they have safely opened and reassembled a hive, including:

- identified health and safety hazards and risks and applied appropriate controls
- selected, checked serviceability, fitted and used appropriate personal protective equipment (PPE)
- selected appropriate tools and equipment, and checked serviceability
- complied with hive quarantine and biosecurity requirements
- assessed the weather and other factors to minimise the risk of robbing and stress to bees
- worked from a safe position and used smoker, tools and equipment to move, open and dismantle a hive according to workplace procedures
- ensured hive components were kept clean and free from dirt
- replaced hive components and brood, reassembled the hive according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of opening and reassembling beehives
- bee behaviour when manipulating and dismantling a beehive
- the use of smoke to control bee behaviour
- hive components, location and purpose
- beekeeping tools and their application for dismantling a hive
- basic principles of hive hygiene, biosecurity and quarantine
- safety hazards, risks and controls when working bees including:
• PPE
• manual and mechanical handling techniques
• effect of weather and nectar flow on bee behaviour.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • an active apiary with live bees
• resources, equipment and materials:
  • live bees
  • hive tools
  • hive components
  • PPE
  • mechanical handling equipment
• specifications:
  • workplace procedures related to opening and reassembling beehives
  • access to specific bee related quarantine regulations and biosecurity codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have operated a bee smoker including:

- confirmed work activity with supervisor
- identified and confirmed that the conditions are appropriate for using a bee smoker
- checked bee smoker equipment is available and serviceable
- identified hazards and risks and used personal protective equipment (PPE) and safe work practices to minimise risk
- ensured fire prevention procedures were carried out
- anticipated defensive behaviour of bees and monitored and applied smoke to control bee behaviour
- selected and ignited suitable fuel for smoker keeping it alight and functioning while carrying out bee husbandry tasks
- used and shut down bee smoker safely after completing operations according to regulations and workplace fire prevention procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of using smoke on bees to pacify behaviour
- types of bee smokers and their use and advantages/disadvantages, including:
  - bellows (traditional)
  - electric fan operated
  - electric ignition
- types of smoke and the effect on bees and hive products
- suitable bee safe fuel and ignition procedures
• operation of bee smokers and the effect of weather and environmental conditions on the safe use of smoker including fire prevention activities
• fire restrictions and regulations that impact on use of bee smokers, including:
  • permits and exemptions
  • applications for exemptions
• health and safety hazards and risks and their controls when using smokers.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a functioning apiary with live bees or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • bee smoker and apiary tools for manipulating hives
  • access to live bees
  • PPE

• specifications:
  • access to specific regulations and permits relevant to the lighting and operating bee smokers within work area.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have assembled and maintained beekeeping components including:

- identified hive components for assembly or repair
- identified materials, equipment and tools required for assembly work
- identified health and safety hazards and risks and applied relevant actions
- checked components for suitability and biosecurity risk to the environment or apiculture products
- removed, repaired or replaced unsuitable materials from the store
- constructed and repaired hive components according to workplace procedures, including correct selection and safe use of tools
- applied biosecurity and preservation treatments according to product labels, safety data sheets and workplace procedures
- marked hive components according to legislative requirements
- disposed of waste materials according to workplace biosecurity and waste management procedures
- cleaned and maintained and stored equipment and unused materials after completion of work
- maintained workplace records and reporting procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, materials and properties of hive components
- principles and techniques for construction, repair and preservation of hive components
- tools and equipment used for assembly work, including:
  - safe use
  - appropriate personal protection equipment
- maintenance and storage
- biosecurity issues with used hive components and treatments including:
  - pests and diseases and treatment options
  - sanitising new and used components
- hive components preservation materials and techniques, including:
  - plastic components
  - timber components
  - paints
  - chemical dips
  - wax dips
- interpretation of chemical labels and safety data sheets for treatments and preservatives
- legislative requirements for identifying hive ownership
- mandatory and workplace record keeping systems.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- **resources, equipment and materials:**
  - hand tools and equipment
  - new and used hive components
  - preservatives and treatments relevant to the type of materials used in the hive
  - use of appropriate personal protective equipment
- **specifications:**
  - workplace procedures relating to assembly and maintenance of beehives
  - manufacturer’s operating instructions for tools and equipment used in beehive construction, assembly and preservation
  - product labels and safety data sheets for preservatives and treatments
  - access to specific legislation/codes of practice for hive identification and bee biosecurity
  - construction plans showing hive components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to collect and establish bee swarms, determine the health of bee swarm and manage swarming behaviour in hives according to quarantine and biosecurity procedures.

The unit applies to beekeepers who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory regulations and local government by-laws apply in some jurisdictions to beehive ownership and biosecurity.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have managed a honey bee swarm including:

- assessed swarm for condition and viable and safe options for collection, and determined resources and equipment required
- identified the hazards and risks and selected, fitted and used appropriate personal protective equipment
- identified and prepared equipment required for swarm collection
- interpreted behaviour and handling of bees and applied appropriate management strategies while following quarantine and biosecurity requirements
- collected a swarm of honey bees using appropriate equipment and techniques while following quarantine and biosecurity requirements
- assessed captured swarm for health and need for re-queening
- selected and implemented control options to manage swarming behaviour in honey bees
- updated and maintained workplace and statutory records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of managing swarms, including:
  - causes and timing of honey bees swarm activity
  - why swarms are collected including environmental and social impacts
  - signs of colony swarming activity
  - management techniques that can be used to manage a colony showing signs of potential swarm activity
  - setting up swarm catch boxes to capture swarming bees
biosecurity considerations, including:
  - pests and diseases that occur in honey bees
  - signs of pests and diseases in swarms
  - quarantine procedures to prevent cross contamination of apiaries
  - sampling procedures for pests and disease for confirmation
  - signs and purpose for re-queening collected swarms

swarm collecting and boxing techniques, including:
  - tools and equipment used for capturing swarms
  - hive components

hazards and risks when collecting swarms and control strategies, including:
  - safety aspects of swarm collection and location
  - personal protective clothing
  - public safety

workplace and statutory apiary records and notifications.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary
  - access to bee swarm

- resources, equipment and materials:
  - live bees or hive preparing to swarm
  - safety equipment for handling bees
  - tools and equipment appropriate for managing swarms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have manipulated a honey bee brood including:

- established the purpose for manipulating brood and determined appropriate actions and sequencing of a honey bee brood to achieve a desired outcome
- identified hazards, assessed the risks and implemented safe work procedures for handling bees
- selected, checked serviceability, fitted and used appropriate personal protective equipment
- selected and used tools, materials and equipment for manipulating bee brood
- complied with apiary biosecurity and quarantine procedures during the activity
- opened hives, removed frames and set aside with minimal disturbance to brood and queen
- repositioned frames safely according to plan with minimal damage or unintended disturbance to brood
- monitored the hive after manipulation
- cleaned up work area and disposed of waste appropriately
- updated and maintained workplace and statutory records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of honeybee brood manipulation
- biosecurity and quarantine requirements when manipulating bees
- bee behaviour and handling techniques
- different types of manipulation that may be used to achieve desired results, including:
  - hive expansion
Assessment Requirements for AHCBEK302 Manipulate honey bee brood

- splitting and nucleus development (nucs)
- pests and disease inspection and control
- increasing honey production
- swarm control
- re-queening and queen rearing
- seasonal preparations
- frame rotation
- tools and equipment and their safe use for opening hives and manipulating brood
- types of hive waste and processes for disposal
- workplace and statutory records and reporting.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary
- resources, equipment and materials:
  - hives with live bees with brood comb
  - specific hive tools
  - personal protective equipment
- specifications:
  - workplace procedures and instructions for manipulating brood
  - access to beekeeping legislation and biosecurity code of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated that they have re-queued a honey bee colony for at least one hive including:

- monitored colony performance, assessed the queen against specifications and determined the need and method for re-queening
- identified hazards and risks and implement control measures for re-queening operations
- selected, fitted and used suitable personal protective equipment
- selected and ensured serviceability of tools and equipment required for re-queening operations
- obtained, assessed the condition and stored the new queen according to workplace and biosecurity requirements
- monitored conditions to ensure optimum time for re-queening operations
- assessed the health and condition of the parent colony
- conducted hive operations to locate old queen and replace with new queen according to selected method
- monitored hives for colony acceptance of new queen and queen brood development performance
- updated and maintained apiary records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of re-queening honey bee hives
- common manipulations, methods and techniques used to re-queen colonies
• tools and equipment required for hive operations and re-queening, including:
  • maintenance
  • safe operation
  • hygiene and biosecurity
• natural processes for queen replacement and their signs, including:
  • supersedure
  • swarming
  • emergency queen replacement
• hive monitoring techniques and assessing the performance of queen bee in the colony, including:
  • behaviour
  • colony traits
  • brood and egg laying
  • honey bee brood production
• selection criteria for queen bees
• assessing the health of queen bees
• handling queen bees, including:
  • transport and storage requirements
  • handling cages
  • handling live queen bee
  • identifying, removing and destroying old queen
  • introducing new queen
• sources of queen bees their advantages and disadvantages, including:
  • commercial suppliers
  • apiary breeding stock
  • supersedure
• health and safety hazards and risks when handling bees and personal protection equipment
• biosecurity considerations when selecting queen bees and suppliers
• workplace and statutory records and reporting procedures for re-queening operations.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • an active apiary
• resources, equipment and materials:
  • live bees
  • live queen bee as supplied by commercial supplier or own apiary breeding program
  • tools for hive and queen bee manipulation
  • personal protective equipment
- specifications:
  - workplace procedures related to re-queening a bee colony
  - workplace queen bee specifications
  - access to biosecurity code of practice
- timeframes:
  - within a specific time period according to queen bee replacement method.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to separate bees from ripe honey comb and remove the full comb from the hive for transport to the extracting facility.

The unit applies to beekeepers who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

Harvesting honey is subject to state and territory food safety legislation and regulations.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated that they have removed a ripe honey crop from a hive including:

- selected and ensured serviceability of tools and equipment for harvesting a honey crop
- identified work safety hazards and risks and implemented control measures when working around bees
- selected and used appropriate personal protective equipment (PPE)
- performed honey harvest activities according to food safety, quarantine and biosecurity procedures
- determined the ripeness and volume of honey comb and its readiness for harvest
- checked treatment records and ensured honey is harvested according to treatment withholding periods
- determined the factors affecting quality and quantity of honey and planned the time and location to harvest
- handled comb filled with honey to prevent contamination and maintain quality
- selected and used appropriate method to remove ripe honey comb from hives and loaded and secured for transport
- used safe handling and loading techniques
- transported and stored ripe honey comb in a pest and bee secure environment protected from damage and contamination
- updated and maintained apiary records according to workplace procedures.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of removing honey filled frames from hives
- impact on colony, type of honey and apiary site on the quality of honey, planning and timing of removal
- methods of removing bees from ripe honey comb and supers, including:
  - fume boards
  - brushing
  - blowers
  - escape boards
- food safety and handling requirements of honey comb
- indicators of ripe honey and adequately filled comb
- honey quality and factors that impact on quality
- calculations for estimating volume of harvest
- hive medications and treatments and their effect on honey harvesting and withholding periods
- tools and equipment required for honey harvest operations, including:
  - maintenance
  - safe operation
  - hygiene and biosecurity
- potential contaminants of ripe honey and the effect on honey quality
- loading, securing, protecting, transporting and storing ripe honey comb to minimise contamination, and comply with biosecurity requirements
- biosecurity standards and practices, barrier system and traceability of hive components when harvesting ripe honey
- hazards and risks when harvesting honey and control measures to apply including PPE
- planning a harvest and factors and conditions that impact on timing and location
- records and record keeping systems when harvesting honey crop.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - bee hives with ripe honey
  - live bees
  - PPE
  - equipment, resources and tools used for removing bees from ripe honey comb
- specifications:
• workplace procedures for honey removal
• safety data sheets for fume boards used
• access to specific food safety regulations, biosecurity code of practice and transport regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to collect propolis from bee hives and store propolis according to food safety standards.

The unit applies to beekeepers who work under broad direction and take responsibility for their own work in the specialist production of propolis according to food safety and quality assurance requirements. They use discretion and judgement in the selection, allocation and use of available resources to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have collected and stored propolis including:

- assessed safety hazards, risks and applied appropriate controls
- selected, fitted and used personal protective equipment (PPE) while handling and working safely around bees
- identified and prepared hives suitable for producing propolis
- determined a propolis production strategy and manipulated hive to stimulate propolis production
- applied quality assurance and food safety and quality procedures
- cleaned and sanitised tools and removed propolis from the hive
- remove propolis ensuring minimal colony disturbance
- used appropriate propolis extraction and storage methods.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- honey bees and their behaviours for propolis and its production including types of flora
- recognition of propolis and distinguishing features from other substances collected by honey bees
- propolis production and collection strategies and hive manipulations to increase propolis production
- suitable extraction methods, conditions and constraints when collecting propolis
- methods, procedures and conditions for storing propolis
- food safety requirements when collecting propolis and working with hives
- honey industry quality assurance and biosecurity requirements specific to propolis production.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active apiary or an environment that accurately represents workplace conditions

- resources, equipment and materials:
  - live honey bees
  - tools for manipulating a hive and collecting propolis
  - cleaning products that comply with food safety standards
  - PPE

- specifications:
  - workplace procedures for propolis production
  - safety data sheets for cleaning products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to manipulate a honey bee hive to encourage the production, collection and storage of royal jelly.

The unit applies to beekeepers who work under broad direction to analyse information and complete a range of specialised beekeeping activities and who demonstrate a thorough understanding of the development of queens in hives and the production of royal jelly. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

State and Territory food safety legislation, regulations and standards apply to royal jelly that is used in food for human consumption.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated that they have manipulated a hive to produce and harvest royal jelly including:

- assessed safety hazards, risks and applied appropriate controls
- selected, fitted and used appropriate personal protective equipment (PPE)
- assessed the suitability of hives for the production of royal jelly
- introduced queen cells, grafted larvae and stimulated the colony for royal jelly production
- handled bees and hive components while preparing the hive
- prepared and sanitised equipment ready for royal jelly harvest
- maintained a hygienic environment according to food safety requirements
- removed and discarded larvae according to workplace procedures
- collected and stored royal jelly according to workplace and food safety procedures
- checked, cleaned and stored production equipment used in royal jelly harvesting
- maintained records of royal jelly production for food safety and quality assurance requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of royal jelly production in honey bee hives including biological processes and role of nurse bees
- queen bee cells and their development, larvae grafting techniques and methods of stimulating royal jelly production
- safety and safe practices when handling bees
- cleaning and sanitation methods and procedures for royal jelly production tools and equipment
Assessment Requirements for AHCBEK308 Produce and harvest royal jelly

- food safety requirements for collecting and storage of royal jelly
- quality assurance and record keeping requirements
- procedures and practices for removing and discarding larvae
- identification, use, maintenance and storage of tools and equipment required for production, harvesting, preparation and storage of royal jelly.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in hives suitable for royal jelly production or an environment that accurately represents workplace conditions

- resources, equipment and materials:
  - live bees
  - tools and equipment required to prepare hives and harvest royal jelly
  - PPE
  - consumables and equipment required to store and preserve royal jelly

- specifications:
  - workplace procedures and specifications for royal jelly production
  - access to food safety and beekeeping legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to obtain and install a suitable pollen trapping mechanism to collect and store pollen according to its intended use. The unit applies to beekeepers who work under broad direction and take responsibility for their own work in the collection of pollen according to food safety and quality assurance requirements. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice. State and territory food safety legislation, regulations and standards apply to pollen that is used in food for human consumption.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have trapped and stored pollen including:

- identified flora and assessed suitability of colonies for pollen collection
- selected a pollen trap and used according to manufacturer instructions
- assessed health and safety and food handling hazards and risks, and applied controls
- fitted and used appropriate personal protective equipment (PPE)
- collected, stored and processed pollen according to food safety and handling and workplace procedures
- assessed colony health, pests and contamination and rectified according to hive management procedures
- maintained records according to workplace procedures
- handled bees safely
- cleaned and sanitised equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of trapping and storing pollen
- pollen traps, their construction and operation
- colony pollen requirements and impact of harvesting on colony development including signs and symptoms of colony decline
- bee and hive handling techniques for collecting pollen
- flora resources and impact on pollen productivity
- quality assurance requirements for pollen collection including food safety and handling
- health and safety in the workplace and equipment requirements when working with hives
- commercial processing practices for pollen including, cleaning and treatments to prevent deterioration
- storage techniques for pollen for pre and post processing
• pests and contamination of pollen and corrective actions
• record keeping requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

• physical conditions:
  • an active apiary
• resources, equipment and materials:
  • live bees
  • tools and equipment to trap and store pollen, including pollen traps
  • PPE
  • cleaning and sanitising products
• specifications:
  • workplace procedures and specifications for pollen capture and storage
  • manufacturer’s instructions for construction/operation of pollen traps
  • safety data sheets for cleaning and sanitising products
  • access to food safety and beekeeping legislation and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has processed raw wax into moulds, on at least one occasion including:

- received and stored wax, ensuring no cross contamination with operational hive components
- prepared the raw wax for loading into processing equipment
- identified hazards and risks and implemented controls, including fitting and use of personal protective equipment (PPE) and safe work practices
- selected tools, equipment and moulds required for the wax processing
- ensured wax processing equipment is clean and ready for service, conducted pre start checks and identified, rectified or reported faults
- loaded raw wax into processing equipment, started equipment and monitored temperature, time and equipment operation during processing
- separated residual honey and slum gum from wax and transferred molten wax to moulds
- stored or disposed of residual honey and slum gum according to workplace, biosecurity and food safety and handling procedures
- removed wax from moulds, labelled and placed into storage according to workplace procedures
- shut down and cleaned processing equipment according to operating instructions
- cleaned work area and disposed of all waste material according to workplace waste management procedures and environmental procedures
- updated records and reports according to workplace, biosecurity and legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• principles and practices of processing honey bee wax
• sources of raw wax used for processing and its preparation, including:
  • cappings from honey extraction
  • bur comb
  • damaged or rotated brood and honey comb
  • slum gum
• bees wax properties and impact on processing
• types and uses of residual materials in unprocessed and processed bees wax, including:
  • burned or cooked honey
  • slum gum
• wax processing equipment, their maintenance and operation, including:
  • types of wax processing equipment and their operation, solar, hot water, steam, direct heat
  • signs of faults in equipment operation and reporting procedures
  • repairs and maintenance requirements
  • cleaning procedures
• wax processing temperatures and timing
• types of moulds
• hygiene and biosecurity requirements and procedures for processing wax
• cleaning procedures and disposal of waste
• storage requirements for unprocessed and processed bees wax
• health and safety, hazards and risks and their controls when using wax processing equipment, including:
  • working with hot materials and equipment
  • PPE
  • manual handling
  • processing equipment safety
  • safe use of tools and equipment
• stock control records, labelling and mandatory records and reporting requirements for processing wax.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a wax processing plant or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • raw bees wax
  • tools for processing wax
  • PPE
• specifications:
  • workplace procedures and specifications for processing raw wax
  • manufacturer’s operating instructions for wax processing equipment
  • access to specific biosecurity codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare, load and transport live bee colonies (hives) by road transport between apiary sites.

The unit applies to beekeepers who operate apiaries under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership.

The transport, siting and cross border movement of livestock including bee hives and must comply with state and territory transport, quarantine and biosecurity legislation, regulations and codes of practice.

No vehicle licensing is required for individuals undertaking the work described in this unit. Where an individual is the nominated transport vehicle owner or driver, state and territory legislation, regulations, licencing and registration apply.

| of hives to new apiary site | vehicle capability, job specifications, welfare of bees and health and safety in the workplace procedures  
1.2 Calculate travel time and estimate time of arrival  
1.3 Identify environmental hazards and assess environmental risks that impact on hive health during transport  
1.4 Identify and assess health and safety risks for other road users  
1.5 Prepare a hive transport plan and management strategy to address identified environmental risks to bee health and safety of people that may contact bees on route  
1.6 Complete documentation for permits according to workplace procedures and regulations |
| 2. Prepare bee colonies for transport. | 2.1 Assess each hive for health and suitability for transport according to biosecurity procedures  
2.2 Check hive structural stability in preparation for transport  
2.3 Secure hive components according to workplace procedures  
2.4 Secure the bees according to transport plan and hive management strategy  
2.5 Clean hives of soil and weed contaminants according to biosecurity procedures |
| 3. Prepare vehicle for transport | 3.1 Conduct vehicle operational checks according to workplace procedures  
3.2 Prepare vehicle for transport conditions according to terrain, route and workplace procedures  
3.3 Select and stow equipment and resources required for hive transport activities according to workplace procedures  
3.4 Conduct biosecurity activities on vehicle, tools and equipment according to workplace procedures |
| 4. Load and secure bee colonies | 4.1 Load the hives onto transport vehicle according to health and safety in the workplace requirements and hive handling procedures  
4.2 Orient the hive on vehicle according to transport plan and hive management strategy  
4.3 Secure the load according to workplace procedures and transport regulations |
| 5. Transport and | 5.1 Transport bee hives to new apiary site according to workplace procedures |
### Elements

**Elements describe the essential outcomes.**

**Performance Criteria**

- *Performance criteria describe the performance needed to demonstrate achievement of the element.*

| Monitor bee colonies | procedures and traffic regulations  
|---------------------|---------------------------------|
|                     | 5.2 Implement safety procedures to protect other road users according to hive transport plan  
|                     | 5.3 Monitor bee activity during scheduled transport breaks and take appropriate action according to management strategy  
|                     | 5.4 Check load stability and rectify according to road conditions and workplace procedures  

| 6. Unload and reinstate hives | 6.1 Release the load safely according to hive transport procedures  
|-------------------------------|------------------------------------------------|
|                               | 6.2 Remove hives from transport vehicle according to health and safety in the workplace requirements, hive handling procedures and hive transport plan  
|                               | 6.3 Place hives according to apiary requirements and workplace procedures  
|                               | 6.4 Reinstate hives according to hive management strategy  

| 7. Record and report on transport activity | 7.1 Assess and review the performance of the transport plan and hive management strategy  
|--------------------------------------------|------------------------------------------------|
|                                            | 7.2 Report on performance elements according to workplace procedures  
|                                            | 7.3 Update records for transport activity according to workplace procedures  

### Foundation Skills

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated that they have transported hives by road to an apiary site, including:

- prepared a hive transport plan, determined hazards to bees and people and prepared a hive management strategy for transporting bees to a new apiary site
- assessed suitability and condition of hives for road transport and secured hives and components ready for transport
- selected equipment and resources required for transit of bee hives and prepared vehicle according to workplace procedures and biosecurity requirements
- loaded and secured hives according to workplace procedures and transport regulations
- transported hives according to public safety and traffic regulations
- monitored load security and bee health during transport
- removed bee hives safely according to workplace procedures and positioned and reinstated hives according to apiary site plan
- completed documentation and permits and complied with biosecurity and regulatory requirements
- updated records, assessed, reviewed and reported on the transport plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic map reading and navigation skills to determine route parameters and transport plan, including:
  - road conditions
  - route efficiencies
  - journey duration and estimated time of arrival
• access to transport vehicle services e.g. fuel, water, air

• critical factors that affect hive health during transit, including:
  • weather and other environmental factors
  • travel time
  • road conditions
  • vibration
  • distance from previous apiary

• vehicle preparation for bee safety and vehicle operation, including:
  • tyre pressure for bee health, terrain and road conditions
  • exhaust fumes
  • pre-start checks

• transport methods for hives, including:
  • open hives
  • closed hives
  • covers and netting
  • barrier system

• transporting bee colonies and effect on heath and biosecurity, including:
  • ventilation
  • water
  • loose frames
  • recognising bee disorders and distress during transport and remedial actions required

• techniques and equipment for securing hives for transport, including:
  • moving and handling hives for transport vehicle and safety
  • hive orientation on transport vehicle and impact on hive management
  • securing load techniques, load restraint procedures and transport regulations
  • vehicle load limits
  • unloading procedures

• managing live bee loads during stops, including:
  • fuel stops
  • mandatory rest periods
  • checking load movement and stability

• other road users safety when transporting live bees, including:
  • night road workers and work lights
  • police and road transport authority checks
  • weigh bridges
  • accidents and emergencies
  • emergency services
  • quarantine checkpoints
  • ferry crossings
  • urban areas
• general public approaching the transporting vehicle
• strategies to mitigate safety concerns for other road users, including:
  • signage and placarding
  • accident emergency procedures
  • communication and notification procedures
• hive manipulations to prepare for transport and restore hives to operational conditions after arrival
• assessing and reviewing transport plan and hive management strategies
• permits and regulations for transporting live bees, including:
  • biosecurity requirements
  • health certification
• record keeping and reporting procedures for bee transport
• health and safety procedures and requirements for transporting and handling hives.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • an active apiary with hives to be transported or an environment that accurately represents workplace conditions
  • an apiary site prepared and ready to receive hives
• resources, equipment and materials:
  • health and safety equipment for transporting and handling bees
  • hives with live bees
  • hive tools and equipment used for transporting hives
  • vehicle for loading and transporting bee hives
  • loading and unloading tools and equipment
  • resources to secure bee hive loads to vehicles
• specifications:
  • work procedures for transporting bee hives, including safe work practices, bee handling and management, environmental requirements
  • information on equipment and vehicle carrying capacity and operating parameters
  • specifications, control points and parameters for handling and assessing bee health
  • documentation and recording requirements and procedures
  • access to biosecurity codes of practice, quarantine and transport regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare comb and safely operate equipment used to extract honey fit for human consumption. The work may be carried out on hive, in a mobile processing facility or a purpose built fixed facility.

The unit applies to beekeepers who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and to solve problems.

Honey extraction for human consumption is subject to state and territory food safety legislation and regulations.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have extracted honey from mature honey comb, including:

- identified and selected appropriate extraction method for honey production process
- identified hazards and risks and implemented control measures and used equipment safely
- selected, fitted and used appropriate personal protective equipment (PPE) and complied with workplace personal hygiene practices
- identified, selected and prepared tools and equipment required for extraction process and ensured appropriate food hygiene procedures were performed on them
- identified, selected, prepared and stored unprocessed comb according to workplace product requirements
- identified and complied with quality assurance and food safety and handling requirements while extracting honey
- safely extracted honey using extraction equipment in compliance with quality assurance and food safety requirements
- prepared the comb for extraction avoiding brood comb according to the extraction method and equipment being used
- organised frames from the extraction process stored, returned to apiary or retained for repair or future wax processing in compliance with pest management, biosecurity and barrier system requirements
- ensured extracted honey was maintained at specified temperature to assist removal of wax, air, pollen and detritus
- tested moisture content of honey and took action to maintain appropriate condition
- monitored conditions conducive to honey fermentation and implemented procedures to reduce risk
- stored honey in containers and obtained a reference sample following to meet quality assurance standards, food health regulations and customer requirements
- identified comb suitable for wax processing, collected, removed residual honey and stored wax cappings following workplace, quarantine and biosecurity procedures
- cleaned and sanitised honey extraction equipment
- maintained appropriate records.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of honey extraction
- recognition of different types of bee comb and maturity, including:
  - brood worker and drones
  - queen cells
  - mature and immature honey comb
  - pollen cells
- biosecurity protocols for honey extraction and transport of supers and hive components to extraction site
- processing of raw honey comb, including:
  - sections
  - cutting/slicing comb from frames
- honey extraction processes, including:
  - pressing
  - centrifugal/spinning
  - gravity draining or drip method
- equipment commonly used to extract honey and the safe operation and maintenance requirements
- hygiene and sanitation procedures and materials used for tools, equipment and storage of extracted honey
- storage requirements of honey, honey comb, extracted frames and supers including bulk storage and pest management
- food safety systems and requirements relevant to honey extraction
- quality assurance tests and standards for extracted honey
- temperature and the effect of heat on the extraction processes and quality of honey
- health and safety in the workplace issues associated with extraction and extraction technologies
- record keeping systems and labelling for extracted honey
- preparation and storage procedures for comb at time of extraction for later wax processing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - either a portable honey extraction unit or a permanent extraction facility
- resources, equipment and materials:
  - mature honey comb ready for extraction
• specific tools and equipment for the type of extraction method employed
• PPE
• sanitising chemicals and equipment

• specifications:
  • workplace procedures related to honey extraction
  • manufacturer’s operating instructions for honey extraction equipment
  • safety data sheets for chemical sanitisers
  • access to specific legislation/codes of practice related to honey extraction and food safety.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has demonstrated an ability to manage pests and diseases that affect brood and adult bees including:

- selected and ensured serviceability of tools and equipment for opening and checking hives
- identified health and safety in the workplace hazards and risks and implemented control measures when working around bees
- selected, fitted and used appropriate personal protective equipment (PPE)
- conducted inspections to hive to assess general health and condition of brood and adult honey bees and identified signs and symptoms of disease and pests that affect brood or adult honey bees
- collected samples and conducted field diagnosis following workplace procedures and industry standards
- labelled and secured samples for dispatch to specialist and confirmed diagnosis and reported notifiable diseases
- identified and implemented appropriate treatments and biosecurity measures to control pests and diseases
- monitored, reviewed and recorded outcomes of treatments for future beekeeping operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of disease management within a honey bee colony
- pests and diseases of bees including common and notifiable species, including:
  - mechanism for infection/infestation
  - level of risk to bees and beekeeping industry
Assessment Requirements for AHCBEK313 Manage pests and disease within a honey bee colony

- biological processes relevant to infection and control
- hive inspection procedures and recording pests and disease observations
- identification of pests diseases, including:
  - signs and symptoms
  - field diagnosis techniques
  - collecting, labelling and sending samples for specialist diagnosis
  - immune detection kits
- types of samples and procedures, including:
  - adults
  - brood
  - honey
  - comb
- legislative and biosecurity standards for pests and diseases control and notification for Australian apiaries including procedures for reporting
- tools, equipment, materials and safe handling procedures when manipulating hive components and taking samples
- hazards and risks when working with bees and collecting pests and disease samples
- hygiene and sanitation practices for tools and equipment
- biosecurity procedures for pests and diseases of honey bees, including:
  - barrier systems
  - isolation
  - quarantine
  - frame rotation
- treatment of contaminated hive components, including:
  - burning and burial
  - sterilisation and irradiation
  - dipping treatments (e.g. hot wax or caustic dips)
  - scorching
- hive health, pests and disease control
- treatments for specific pest and diseases, including:
  - chemicals, types and application methods
  - antibiotics and prescription treatments
  - environmental treatments
- procedures for monitoring and reviewing treatments
- record keeping for pests and diseases including mandatory and workplace documents.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an active aviary or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live bees
  • hive management tools
  • treatments appropriate to pests or diseases
  • equipment and materials required for field diagnosis activities
  • PPE
  • inert samples or representations of bee pests and diseases
• specifications:
  • workplace procedures for managing pests and diseases within a honey bee colony
  • safety data sheets for pest and disease treatments
  • access to specific legislation and codes of practice relevant to biosecurity and mandatory reporting
• relationships:
  • specialists in honey bee pest and disease diagnosis.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to determine suitable method for artificial breeding objectives and develop a program to collect semen from drone honey bees and artificially inseminate a queen bee.

The unit applies to advanced beekeepers who analyse information and exercise judgement to complete specialised bee breeding activities. They work autonomously and have accountability for the work of others. They research, analyse, design and communicate solutions to a range of complex problems.

State and territory legislation, regulations and local government by-laws apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated artificial insemination on at least one occasion including:

- reviewed options and developed artificial breeding objectives
- selected and scheduled an artificial breeding option for breeding program
- obtained resources and determined artificial insemination activities
- identified hazards and risks and implemented control measures
- selected, fitted and used appropriate personal protective equipment (PPE)
- obtained and ensured genetic material complied with breeding characteristics and objectives
- received, checked and stored genetic materials to ensure maximum viability
- ensured queen and drone maturity and breeding cycles aligned
- prepared queen and drone honey bees for artificial insemination
- used appropriate techniques to extract semen from drones and inseminate queens
- complied with required hygiene practices
- introduced inseminated queen bees to new hive and monitored progress and success
- reviewed and documented genetic material transfer and management practices
- determined the success of artificial insemination program by calculating success rates
- maintained records in relation to an artificial insemination program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of artificial insemination of queen honey bees
• anatomy and physiology of reproductive organs and reproductive process in queen and drone honey bees
• genetics and inheritance for bee characteristics required in genetic material, including:
  • honey bee health
  • abnormalities
  • productivity
  • habit
• artificial breeding methods and the benefits and limitations
• identification systems for queen and drone honey bees and semen
• physical resource requirements for artificial insemination practices
• safe handling and transportation of bees and genetic material
• artificial insemination policies and recording and reporting requirements
• preparation requirements for artificial insemination
• semen collection and preparation processes
• reviewing and maintaining effective insemination procedures.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • a laboratory or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • live queen bees and donor drones
  • tools and equipment for collecting sperm and inseminating queens
  • PPE for hygiene and safety
• specifications:
  • workplace procedures for laboratory operations
  • workplace specifications for bee breeding.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to evaluate and analyse potential honey production sites and select, establish and evaluate an apiary site.

The unit applies to experienced beekeepers with thorough understanding in honey production who analyse nectar flow and likely honey production to complete a range of specialist apiary site selection and establishment activities. They work autonomously and have accountability for the work of others. They research, analyse, design and communicate solutions to a range of complex problems.

All work must be carried out to comply with workplace procedures, state/territory legislation, regulations and local government by-laws which may apply in some jurisdictions to beehive ownership and compliance with biosecurity codes of practice. The transport, siting and cross border movement of livestock including beehives must comply with state/territory transport, quarantine and biosecurity legislation, regulations and codes of practice.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has demonstrated site selection and establishment of an apiary site including:

- established and prioritised selection criteria for apiary site
- identified suitable localities and appropriate permits and certificates required
- analysed site options and selected site according to selection criteria
- determined apiary capacity, orientation and layout, and prepared an establishment plan
- selected actual site and ensured appropriate permissions and certificates were obtained
- identified health and safety, food safety and biosecurity hazards and risks and implemented control measures
- selected serviceable tools and equipment required for site establishment
- transported hives to site safely, and located hives according to establishment plan and legislative and biosecurity requirements
- observed, monitored and recorded apiary performance and implemented corrective action according to apiary plan
- maintained apiary records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of apiary site selection
- sources of information for selecting potential sites
- site selection criteria for strategic and regulatory purposes, including:
  - legislation, regulations and biosecurity codes of practice relevant to the establishment of apiary sites
Assessment Requirements for AHCBEK405 Select and establish an apiary site

- relevant planning and land use regulations and permissions
- proximity to flora, water, general public, animals, gates, stockyards and movement of the sun
- accessibility of the site for beekeeper and security
- nearby land use
- protection from extreme environmental conditions
- fire risk
- site selection criteria for different bee management purposes, including:
  - honey
  - pollen
  - propolis
  - royal jelly
  - queen rearing
  - pollination services
  - over wintering
- nutritional and other requirements of a bee colony
- hazards, risks and controls associated with establishing apiaries, including:
  - personal protective equipment
  - safe handling procedures
  - barriers and distances from sensitive areas and public space
  - hive densities
  - elevated hives
- tools and equipment and their safe use for handling bees and hives when establishing an apiary site
- types of flora for the production of pollen and nectar flow
- apiary records and recording systems
- bee keeping legislation and biosecurity codes of practice for apiary sites, including:
  - weeds
  - diseases
  - pests
  - genetically modified organisms
  - certified organic produce.

Assessment Conditions

Assessment of skills must take place under the following conditions:
- physical conditions:
  - an active apiary or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live bees in hives
• tools and equipment for working with and re-locating hives
• personal protective equipment
• maps showing site access and available resources

specifications:
• workplace procedures related to selecting and establishing an apiary site
• workplace specifications for apiary site layout and orientation
• access to legislation, permit requirements and biosecurity codes of practice related to establishing an apiary site.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have provided bee pollination services, including:

- discussed and confirmed pollination service requirements with a client
- assessed number, types and hive condition required for pollination outcomes
- assessed the risks of pollination services and provided technical advice to client
- identified resources and calculated costs associated with providing the pollination service and confirmed with client
- prepared and implemented an agreement after confirmation with client
- identified suitable locations within crop or site for hive placement and established, delivered and managed an apiary for pollination services
- liaised with the client to protect apiary from chemical use
- monitored and managed hive activity according to industry practice and agreed service outcomes
- obtained requisite certificates and permits and complied with relevant legislation, regulations and biosecurity codes of practice.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of pollination services
- crop chemicals and alternatives when managing hives
- environmental and climatic factors affecting bee foraging behaviour and pollination
- health and performance of bee colonies, including:
  - pests and diseases
  - swarm management
- hive management strategies, including effects of:
Assessment Requirements for AHCBEK408 Provide bee pollination services

- weather
- nutrition
- water requirements
- basic negotiation skills and essential elements of valid agreements and service contracts
- pollination requirements of major crops targeted, including:
  - hive numbers, strength and densities
  - locality conditions of operation
  - competing crops and plants
  - timing to maximise crop pollination
- measuring and assessing pollination performance and success and readiness to remove
- site selection and impact of location on colonies to maximise pollination
- calculations and pricing techniques for service industry
- legislation, regulations and biosecurity requirements affecting pollination services.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - an apiary or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - live bees in hives
  - tools and equipment required to locate and manage hives
  - access to crop requiring pollination
- specifications:
  - client specifications for pollination service
  - access to legislation/codes of practice related to pollination services
- relationships:
  - client with pollination requirement.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have reared queen bees including:

- obtained queen bee breeding stock according to breeding program
- assessed safety hazards, risks and implemented controls
- obtained tools, equipment and personal protective equipment (PPE) required for breeding manipulations and ensured serviceable for use
- conducted all bee manipulations and activity according to biosecurity and quarantine protocols
- ensured hives used for queen rearing are clean and healthy
- prepared queen using desired method and assessed, selected and grafted larvae into queen cells according to workplace procedures
- assessed and maintained nurse bee population to support developing queens
- monitored and maintained hive nutrition and health
- transferred ripe queen cells into nucleus
- monitored the queen mating process and provided drones according to workplace procedures
- maintained records according to workplace and industry procedures
- selected queen bee cage type and packaging requirements and ensured adequate food and escort bees for transport
- prepared package for transport according to workplace procedures and transport company requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of rearing queen bees
- basic genetics, breeding and evaluation for selecting queen bee stock
- techniques and timing for queen cell production including queenright and queen less starter and finishers
- grafting techniques including the use of kits
- making, placement and use of nucleus hives (nucs) for queen rearing
- capturing and handling techniques for queen bees
- holding and securing queen bees, including:
  - queen cages
  - queen banks
- transport, postage and handling queen bees
- labelling and identifying queens including international colour codes
- monitoring and recognising brood and adult bee health, diseases, pests and other disorders and required action
- optimum conditions and timing for queen rearing activities
- required number of mature, healthy and genetically suitable drones
- standards and protocols for selecting and manipulating bees and larvae for queen bee production.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in an active apiary
- resources, equipment and materials:
  - live bees and queen bee stock
  - hive manipulation and larvae grafting tools
  - PPE
- specifications:
  - workplace procedures and specifications for rearing queen bees
  - access to legislation and codes of practice for biosecurity and queen bee breeding.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency covers the skills and knowledge required to work effectively within own area of responsibility while responding to an emergency disease or plant pest incursion.

The unit applies to personnel who have been appointed or engaged to undertake a role within an emergency disease or plant pest incursion response.

This unit applies to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They provide and communicate solutions to a range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and use information to determine appropriate response, work needs, and information and resources to be accessed from stakeholders
- carry out work activities to conform with national plan
- communicate with stakeholders
- identify hazards and risks
- manage own work load and priorities
- interpret work instructions and seek clarification as needed
- recognise and respond to personal stress
- promote cooperation and respect within work team
- communicate the need for physical and human resources
- comply with biosecurity requirements for personal protective equipment and fomites, reporting biosecurity breaches and completing records
- adapt to and monitor change
- complete biosecurity records.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- AUSVETPLAN or PLANTPLAN, relevant standards, guidelines and protocols, and Nationally Agreed Standard Operating Procedures (NASOP) relating to an emergency disease or plant pest incursion response
- organisational procedures for communication in an emergency response
- common physical and human resources needed in an emergency response
- common work health and safety, and biosecurity hazards in an emergency response
• personal protective equipment, and fomites relevant to emergency response
• signs of personal stress and potential impact on response
• techniques for prioritising work activities and time management
• techniques for managing own responses to change, and to personal stress
• communication principles for working effectively in teams, and reporting information
• records required to be kept during an emergency response.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Element | Performance criteria
--- | ---
1. Prepare for emergency disease or plant pest control activities | 1.1 Clarify work instructions received from infected premises (IP) site supervisor in preparation for carrying out control procedures
1.2 Select and prepare appropriate equipment and materials to undertake control activities in line with IP site supervisor’s work instructions and associated safety requirements
1.3 Select and prepare personal protective equipment (PPE)
1.4 Identify animal welfare considerations if dealing with an emergency disease

2. Carry out emergency disease or plant pest control activities | 2.1 Implement control activities in line with work instructions, work health and safety requirements and standards and protocols
2.2 Maintain a log of activities carried out on the IP in accordance with instructions from IP site supervisor
2.3 Use PPE as instructed by IP site supervisor
2.4 Give and receive work instructions within own area of responsibility

3. Check and adjust emergency disease or plant pest control activities | 3.1 Check control activities within own area of responsibility regularly to ensure compliance with work instructions, work health and safety requirements and standards and protocols
3.2 Provide reports to IP site supervisor as required
3.3 Report any variations from work instructions and standards and protocols, or failure to achieve objectives to IP site supervisor and undertake remedial action within own scope of authority
3.4 Communicate any recommendations for adjusting work instructions to IP site supervisor

Foundation Skills
Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for control activities
- follow infected premises (IP) site supervisor instructions
- identify animal welfare concerns
- select, prepare and use personal protective equipment (PPE)
- apply biosecurity principles and work health and safety practices in implementing, monitoring and reporting on variations to control activities
- implement control activities
- monitor, review and report on control activities within area of own responsibility, for compliance and effectiveness
- undertake remedial action within own scope of authority
- provide reports to IP site supervisor on variations to activities, failure to meet objectives and recommendations for adjustments to work instructions
- communicate effectively with IP site supervisor and when giving and receiving work instructions to others
- maintain log of activities as required.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- common control activities associated with emergency disease and plant pest control procedures at infected premises (IP)
- objectives and work instructions commonly associated with IP control responses
- own work role and responsibilities within an IP control response
Assessment Requirements for AHCBER303 Carry out emergency disease or plant pest control procedures at infected premises

- animal welfare guidelines relevant to the species, disease and IP environment if animals are under control procedures
- PPE gear commonly used in IP control response
- biosecurity principles commonly associated with an IP control response
- safe work practices applicable to work role and responsibilities in an IP environment
- reporting templates and requirements for logging control activities
- communication principles used in giving, receiving and clarifying instructions, and reporting on control activities.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>TP Version</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>AHCv1.0</td>
<td>Initial release</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must undertake movement and security procedures including establishing a traffic check point and monitoring the movement of vehicles and issuing permits.

The candidate must demonstrate that they can:

- determine logistics and required documentation applicable to specific movement and security operations
- obtain and check any resources and personal protective equipment (PPE)
- establish and operate traffic checkpoint
- issue and check permits
- respond to vehicles without valid permit for load being transported as appropriate to standards and protocols
- liaise with external security providers
- use PPE and decontaminate resources as required
- monitor, review and report on application of movement and security procedures within area of own responsibility
- undertake remedial action within own scope of authority
- provide reports on variations to appropriate authorities in consistency, currency and ongoing effectiveness or failure to achieve objectives
- communicate recommendations on adjusting movement and security procedures to supervisor and appropriate authorities.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- movement and security procedures commonly associated with movement and security controls during a disease or plant pest incursion
- AUSVETPLAN or PLANTPLAN, and other relevant standards and protocols to determine:
• permits and documentation associated with implementing movement and security procedures
• action required for any vehicle without a valid permit
• biosecurity principles associated with movement and security procedures, use of PPE gear, and need for decontamination
• safe work practices
• objectives and work instructions associated with movement and security procedures
• own work role, responsibilities and scope of authority in implementing movement and security procedures
• decontamination procedures for PPE and resources
• reporting templates
• communication principles used in operating a traffic control point, issuing permits and documentation, and reporting to supervisor and appropriate authorities.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- consult with infected premises (IP) manager and property owner or manager on planning and implementation matters
- plan control activities for emergency disease or plant pest control response
- schedule implementation of control activities
- identify IP procedures required, and confirm with IP manager
- request resources required for planned activities
- establish reporting processes
- establish staff rosters
- communicate with property owner or manager on IP procedures
- supervise and motivate personnel to carry out control activities to standards and protocols required, and confirm with on-site inspections of teams
- monitor supplies of materials and resources and maintain to meet needs of control activities
- monitor all IP service provision for adherence to standards, protocols and contractual arrangements
- maintain incident log, and records of control activities
- monitor control activities for value for money, and minimal impact on property, effectiveness and progress against planned objectives
- report on progress of control activities against plan to IP operations manager
- revise control activities as required to address relevant protocols whilst maintaining cost effectiveness and wider impacts
- communicate revisions to control activities to Local Control Centre (LCC).
Knowledge Evidence

The candidate must demonstrate knowledge of:

- AUSVETPLAN or PLANTPLAN, relevant standards, guidelines and protocols, and Nationally Agreed Standard Operating Procedures (NASOP) that guide development and implementation of IP control plan, contractual arrangements and control procedures
- planning processes
- communication principles used for consultation, providing information, reporting, and in interacting with personnel
- supervisory and monitoring practices used with personnel
- techniques for motivating personnel
- contractual arrangements
- reporting requirements
- processes for planning, scheduling, monitoring progress and costs.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- undertake field surveillance for specific disease or plant pest as directed
- report findings of specific disease or plant pest along with samples and evidence to support find
- follow relevant standards and protocols to identify and report findings
- use appropriate available expertise to assist in identification and diagnosis
- follow relevant standards and protocols in collection, handling, packaging and despatch of samples
- contain emergency disease of plant pest as directed by control centre and relevant guidelines
- collect and report information relevant to management of outbreak to surveillance coordinator
- give directions and warnings to property owners or person in charge re the suspected presence of emergency disease or plant pest
- decontaminate self and where appropriate equipment and vehicles.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- standards, guidelines and protocols for the emergency disease or plant pest
- signs of specific disease or plant pest which is the subject to surveillance
- emergency disease or plant pest surveillance procedures for:
  - collecting and handling samples and supporting evidence of diagnosis
  - reporting findings and information that may help in control response
  - containment of outbreak
Assessment Requirements for AHCBER402 Carry out field surveillance for a specific emergency disease or plant pest

- personal and general decontamination
- process for locating expertise
- communication principles for providing direction and warnings to property owners and managers, liaising with disease or plant pest experts, and reporting to surveillance coordinator.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to manage active operational emergency disease or plant pest sites.

The unit applies to personnel who have been appointed or engaged to undertake a role within an emergency disease or plant pest incursion response.

This unit applies to individuals who take personal responsibility for their own work and exercise autonomy in undertaking complex work. They analyse information and demonstrate deep knowledge in a specific technical area. They analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- apply standards, guidelines, protocols and legislation in:
  - planning control procedures
  - resourcing the control plan
  - addressing work health and safety requirements
  - determining criteria for implementing control procedures
  - contracting services
  - monitoring implementation of control procedures for cost effectiveness
  - monitoring, reviewing control operations and revising priorities as part of managing active emergency disease or plant pest sites
  - plan and resource control procedures, and contingency plans
  - engage with stakeholders and field personnel in planning process
  - engage with stakeholders, field staff, property owners/managers and others in control centre throughout the control period
  - manage and monitor implementation of control procedures
  - monitor personnel against specified objectives
  - monitor supply of resources
  - review priorities and revise as appropriate after consultation
  - review control activities as required and communicate to stakeholders and personnel.

Knowledge Evidence

The candidate must demonstrate knowledge of:
• AUSVETPLAN or PLANTPLAN, and relevant standards, guidelines and protocols, and Nationally Agreed Standard Operating Procedures (NASOP)
• incident control management procedures
• the requirements of relevant commonwealth, state and territory legislation
• relevant public sector policies, practices and constraints in relation to emergency disease or plant pest management
• techniques for monitoring and reviewing control procedures, and resource expenditure
• advanced communication principles to consult and communicate with a range of stakeholders and the control centre
• project management principles.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply standards, guidelines and protocols in:
  - setting up and implementing control procedures
  - monitoring the status of properties and effectiveness of operational or control plan as part of an emergency disease or plant pest control response
  - contribute to other plans and strategies, and develop operational plan within own area of responsibility
  - source resources for control program
  - direct implementation of the control plan and procedures utilising reporting and information management system
  - monitor appropriateness and effectiveness of emergency disease or plant pest control procedures and review against and relevant guidelines, and operational or control plan
  - monitor effectiveness of emergency disease or plant pest and information management system and revise procedures as necessary to ensure completeness of records
  - monitor resource expenditure and availability against requirements of the operational or control plan and reallocate resources as required.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- AUSVETPLAN or PLANTPLAN, and relevant standards, guidelines and protocols, and Nationally Agreed Standard Operating Procedures (NASOP)
- incident control management procedures
- the requirements of relevant commonwealth, state and territory legislation
- relevant public sector policies, practices and constraints in relation to emergency disease or plant pest management
- information management systems and procedures for use and reporting
- techniques for monitoring and reviewing operational or control plans, and resource expenditure and allocation
- communication principles to liaise with other agencies, and direct implementation of the operation or control plan
- project management principles.

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in an emergency disease or plant pest setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply standards, guidelines, protocols, and legislation in:
  - planning and amending a control program
  - recording information and disseminating
  - disseminating reports
  - identifying appropriate personnel along lines of communication as part of planning and overseeing an emergency disease or plant pest control program
- plan a control program around identified strategies with input of experts and submit to for approval
- identify declared areas that are within the jurisdiction of the control program
- brief appropriate personnel and organisations/agencies on developments and consequences of emergency disease or plant pest outbreak, and its ongoing management
- implement and monitor control plans utilising information management system and reporting as set out in standards and protocols
- monitor control strategies in use against the intended outcomes, and amend control plans as appropriate
- monitor resource requirements are sufficient to ensure strategies are achieved
- communicate revisions to control strategies and/or plans to appropriate personnel.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- AUSVETPLAN or PLANTPLAN, and other Nationally Agreed Standard Operating Procedures (NASOP), relevant standards, guidelines and protocols and associated manuals
- incident management functions
Assessment Requirements for AHCBER601 Plan and oversee an emergency disease or plant pest control program

<tbody>
<tr>
<td>Reading</td>
<td>- Interprets and consolidates information from workplace procedures for application to the cleaning process</td>
</tr>
</tbody>
</table>
### Skill Description

**Writing**
- Prepares records and documentation using clear and accurate terminology

**Numeracy**
- Performs basic mathematical calculations to prepare and dilute products used for cleaning

**Oral Communication**
- Uses clear language, concepts, tone and pace appropriate when reporting to supervisor

**Navigate the world of work**
- Complies with explicit policies and procedures seeking clarification or assistance when required

**Get the work done**
- Responds to highly obvious routine problems by using step by step instruction and procedures

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have inspected and cleaned machinery of contaminations, including:

- confirmed work activity with supervisor and identified hazards and risks and applied controls for work practices
- selected cleaning tools, equipment and materials for the cleaning activity
- identified and checked equipment, materials and suitable location for cleaning activity
- made the machinery safe for inspection and exposed contamination according to workplace procedures
- cleaned machinery of contamination according to workplace biosecurity procedures
- reinstated machinery to operational condition and disposed of waste materials according to workplace and environmental procedures
- maintained and presented records of inspection and cleaning according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- biosecurity protocols for contaminants relevant to industry and location
- types of equipment and contamination that can occur
- contaminants and how they are disseminated by machinery and equipment including, weeds, pests and diseases
- cleaning techniques appropriate to machinery, vehicles and types of contaminant including cleaning agents and safety data sheets
- operating features of machinery and equipment relevant to inspection and cleaning
• safe work practices associated with inspecting and cleaning machinery
• safe and environmental methods of disposing of cleaning waste
• records and reporting procedures for biosecurity.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • horticultural or agricultural machinery and equipment relevant to workplace context
  • cleaning tools and equipment
  • appropriate cleaning agents

• specifications:
  • workplace documents including policies, procedures and processes relevant to cleaning practices
  • manufacturers' operating instructions for equipment and machinery
  • cleaning agents' safety data sheets
  • specific legislation/codes of practice relevant to biosecurity and environmental waste.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to follow the organisation’s procedures that reduce the likelihood of pathogenic organisms entering a quarantine site.

It applies to any personnel entering and leaving the quarantine area.

This unit applies to individuals who work under general supervision and exercise limited autonomy. They undertake defined activities and work in a structured context.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some states and territories in relation to use of farm chemicals in quarantine situations, national vendor declarations, and movement of livestock and plant material. Therefore, it will be necessary to check with the relevant state or territory regulators for current licensing, legislative or regulatory requirements before undertaking this unit.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- meet site security and entry/exit requirements for vehicles, apparel and personal hygiene and safety
- follow procedures and biosecurity protocols for handling and storing chemicals, medications, feed mixes, soils, growing media and other products
- report disease/pest infestation, breaches of quarantine procedures and work health and safety hazards to supervisor
- dispose of waste products, deceased livestock, unwanted biological material, damaged or infected plant stock, contaminated stock and contaminated material as instructed
- record information related to work in quarantine area, including any breach or problem
- maintain security of quarantine site, any site identified as a quarantine breach and any site considered a problem area
- direct visitors in their obligations to follow quarantine procedures
- control site deliveries to ensure quarantine procedures are followed
- follow quarantine procedure and biosecurity protocols in responding to a site quarantine breach or problem
- clean and disinfect any quarantine breach sites
- isolate and monitor livestock, plant stock or other items suspected of being exposed to contaminants.

Knowledge Evidence

The participant must demonstrate knowledge of:

- site quarantine procedures and biosecurity protocols for:
Assessment Requirements for AHCBIO202 Follow site quarantine procedures

- disposal of waste products, diseased livestock, unwanted biological material, damaged or infected plant stock, contaminated stock or contaminated material
- directing visitors at the quarantine site
- reporting diseases and pest infestations problem, work health and safety hazards
- handling and storing chemicals, medications, feed mixes, soil, growing media
- controlling entry of deliveries to a quarantine site
- isolating livestock and monitoring livestock
- cleaning and disinfecting quarantine area
- maintaining security for the quarantine site
- recording information about own work and any quarantine breaches
- personal protective equipment appropriate to site quarantine procedures and biosecurity protocols
- work health and safety hazards
- methods for cleaning and disinfecting quarantine site or area of quarantine breach
- biosecurity protocols and how they apply to the work site, industry and in the context of a work role.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to recognise unusual disease or plant pest signs during day-to-day work and take appropriate reporting action.

The unit is typically performed by those who have daily contact with plants, birds, animals or fish. It would usually be carried out in conjunction with routine animal or plant husbandry tasks.

This unit applied to individuals who work under broad direction and take responsibility for their own work including limited responsibility for the work of others. They provide and communicate solutions to a range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify unusual disease or pest signs
- assess the severity and extent of problem in the disease or pest species
- seek advice from supervisors or professionals
- notify appropriate authorities
- implement appropriate biosecurity measures.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- signs of common endemic diseases or plant pests in the species
- signs indicating unusual disease or plant pests
- methods for assessing severity and extent of problem
- biosecurity measures associated with enterprise biosecurity plans
- the process of reporting any unusual findings to appropriate authorities.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has applied biosecurity measures, including:

- located and interpreted farm biosecurity plans and biosecurity information to inform control measures
- identified biosecurity threats for the property and determined control measures
- determined responsibilities for applying control measures
- incorporated and applied biosecurity control measures into work routines according to the biosecurity plan
- maintained records for traceability of farm inputs and farm outputs, and monitoring and surveillance data
- monitored control measures for effectiveness
- monitored workplace personnel for compliance with biosecurity control measures
- reported biosecurity issues and concerns according to procedures
- maintained currency in biosecurity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of biosecurity on farms
- sources of farm biosecurity information, including:
  - government and industry websites
  - technical and research papers
  - journals
  - training
Assessment Requirements for AHCBI0305 Apply biosecurity measures

- farm/enterprise biosecurity plans and their function
- farm biosecurity threats, including:
  - pests animals vertebrate
  - plants
  - diseases
  - invertebrate pests
- control measures to minimise the threats entering or spreading into, or from, the farm production and resources, including:
  - farm inputs
  - farm outputs
  - movement of people
  - movement of animals
  - vehicles and equipment
  - production practices
  - feral and wild animals, pests and weeds
- record keeping for traceability (both trace back and trace forward) of farm inputs and outputs
- record keeping for retention of monitoring and surveillance data
- processes for monitoring effectiveness of control measures
- process for reporting biosecurity concerns and issues.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated on a farm or rural property or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - computers and websites to access current biosecurity information
  - tools and equipment required to implement control measures
  - recording system relevant to biosecurity
- specifications:
  - workplace documents including farm biosecurity plans, procedures, records,
  - workplace instructions, job specifications or work routines
  - regulations, legislation, codes of practice relevant to biosecurity
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to plan and implement a farm or enterprise biosecurity plan which includes a set of measures designed to protect a property from the entry and spread of pests and diseases.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some states and territories in relation to use of farm chemicals in quarantine situations, national vendor declarations, and movement of livestock and plant material. Therefore, it will be necessary to check with the relevant state or territory regulators for current licensing, legislative or regulatory requirements before undertaking this unit.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine biosecurity threats to farm or enterprise and control measures using standards and protocols
- identify sources of current biosecurity best practice
- identify current access points to property
- establish control measures and procedures for:
  - controlling farm inputs including:
    - new plants or animals
    - the quality of water sources
    - bee hives coming onto the property
    - bedding material
    - records of source, and use of organic and inorganic fertiliser
  - measures to support biosecurity for farm outputs including:
    - harvest bins
    - packaging operations
    - transport and movement of plants, produce, livestock and livestock products, and plant waste
    - intensive rearing of young animals
    - animal breeding facilities
    - animal milking facilities
    - maintaining records
  - movement of people including:
    - controlled access points and production areas
• visitors, their vehicles, and risk profile
• general hygiene
• vehicles and equipment including:
  • equipment hygiene
  • dedicated equipment use
  • storage areas
  • vehicle entry points
  • vehicle movement and parking
  • vehicle hygiene and washes
  • run off from wash areas
  • roads and tracks
• production practices including:
  • water management
  • plant byproducts and waste
  • animal manure and waste effluent
  • feed storage, feed spills and disposal of unwanted feed
  • feed and water troughs
  • product storage
  • resistance to chemicals
  • animal disease control
  • monitoring and surveillance
  • monitoring frequency
  • fencing
• control of feral animals, plant pests and weeds including:
  • wild and feral animals
  • boundary fences
  • property cleanliness
  • weeds
  • volunteer plants
  • straying animals
  • agisted or other visiting animals
  • property and land destruction
• training staff and keeping records including:
  • staff training
  • traceability (both trace back and trace forward)
  • animal health assurance
  • vendor declarations and animal health and product statements
  • monitoring and surveillance data
• seek vendor declarations or animal health statements for:
• quality and disease free assurance status of animals, animal feed and compliance with national, state and territory standards and regulations and industry health assurance programs
• disease and weed free status of organic fertilisers and compliance with Industry Purchasing Code of Practice or equivalent quality controls
• purchased animal bedding material being fit for purpose
• provide and retain supporting documentation for:
  • moving plants, or animals on and off the property
  • appropriate chemical usage and storage in accordance with industry best practice
• develop, document, and induct and train staff in control measures for:
  • controlling farm inputs
  • biosecurity for farm outputs
  • movement of people
  • vehicles and equipment
  • production practices
  • control of feral animals, plant pests and weeds
  • training staff
  • keeping records
• develop a plan for implementing biosecurity
• monitor staff performance
• monitor effectiveness of control measures, and identify improvements
• revise and amend control measures as needed
• review staff training and induction records.

Knowledge Evidence
The candidate must demonstrate knowledge of:
• national industry standards and guidelines relevant to farm or enterprise biosecurity
• Nationally Agreed Standard Operating Procedures (NASOP) relevant to farm or enterprise biosecurity plan
• diseases, pests and weeds that pose a threat and potential causes of spread
• principles of risk management applied to biosecurity
• biosecurity practices for:
  • farm inputs
  • farm outputs
  • people, vehicles and equipment
  • production
  • feral animals, pests and weeds
• training staff, biosecurity planning, and maintaining records
• planning processes for costing, allocating resources and establishing timelines
• processes for improving staff performance.
Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare hand held e-business technology
- use relevant technology such as computers, handheld scanners, and barcoding equipment
- enter and process data according to technical and business requirements
- generate data in the format required by the e-business supply chain.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- features and operating procedures of relevant business tools
- relevant protocols for electronic data interchange
- personal identification and password for online access between businesses for access to inventory data and purchasing, payment or supply processes.

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- collate the documentation for the background and aims, budget, timelines, and resources allocated for the project
- prepare a report format that complies with organisational and funding organisation’s requirements
- apply drafting and editing techniques in report writing
- implement consultation processes to determine report conclusions
- respond to feedback on draft report and finalise the version to be published and distributed
- develop project reports to organisational and funding organisation’s standards
- finalise report within approved timeframe.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- program objectives and guidelines
- project report formats
- contractual requirements for reporting
- project background, processes and outcomes
- agency procedures for drafting, consultation and finalising project reports.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence
The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- identify sponsorship opportunities with companies that have common values to the program
- identify the mutual benefits the sponsorship arrangement could provide to both organisations
- develop and present a sponsorship pitch that creates a professional and honest image
- negotiate an appropriate sponsorship arrangement to support a project
- document a sponsorship arrangement, detailing all agreements and responsibilities
- meet legal, financial, cultural, ethical, equity and other requirements for the duration of the sponsorship arrangement
- review a sponsorship arrangement and plan its renegotiation.

Knowledge Evidence
The candidate must demonstrate knowledge of:
- strategy, goals, ethics, program and activities of community group or agency
- effective marketing techniques
- acts, policies and guidelines governing programs and activities
- sources of legal and financial advice
- operation of contracts and agreements.

Assessment Conditions
Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- contribute to committee assessment processes for project submissions
- participate in committee meetings according to meeting rules and processes
- rank competing projects based on suitability to policies and program requirements
- interpret and follow organisational policies and program information and legislative requirements
- apply procedures to maintain confidentiality requirements of assessment processes
- conduct assessments according to ethical and legislative standards and procedures.

Knowledge Evidence

The candidate must demonstrate knowledge of:
- policy and program information, including purpose, values and goals
- scope of programs
- legislative and program guidelines at appropriate local, regional and State levels
- project assessment processes
- program integrity requirements
- funding program principles, guidelines and eligibility requirements.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess the resource management change and its potential impact on individuals and affected families and businesses
- predict issues that are likely to arise from change, based on community feedback and statistical information
- provide information and support to individuals facing resource management changes in a sensitive manner
- review the methodology and effectiveness of support to improve support services for resource management change.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- local natural resource management issues
- relevant approaches to different cultures
- change management principles and practices
- networks of assistance.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify range of cultural and social groups in land management area
- negotiate and maintain cultural protocols for dealing with people from a range of cultures
- develop working relationships with representatives of cultural groups
- facilitate the involvement of culturally diverse groups in community issues related to land management
- communicate and work with individuals and groups in a culturally sensitive way.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- sources of culturally relevant materials and verbal information
- cultural protocols and perspectives
- relevant legislation and guidelines
- current relationships between culturally diverse groups in the area
- understanding of the role of various sections of the community in historical and relationship terms.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop solutions or appropriate courses of action on own or in small groups
- present recommendations to a meeting, including analysis of suitability of course of action

Knowledge Evidence

The candidate must demonstrate knowledge of:

- sources of knowledge and advice appropriate to submission
- legislation and regulations related to proposed course of action
- structure for presenting reasoned submissions

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- facilitate development of group goals and projects
- identify and discuss land management issues with local groups
- work with groups to identify local actions that they can become involved in to promote improved land management outcomes
- provide support to a group in developing project plans and preparing project proposals and submissions
- facilitate group to reach consensus in planning decisions
- facilitate group to allow all group members the opportunity to contribute to discussions

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the range of group facilitation styles
- previous group history
- local, regional and national environmental issues
- regional community, groups and cultures
- strategic planning principles
- national, State and regional funding priorities
- community and sector perspectives on land management and environmental issues
- project planning, budgeting and costing techniques
- mediation and facilitation strategies
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to coordinate the development of regional plans in the context of natural resource management.

This unit applies to individuals who take responsibility for teams and exercise autonomy in undertaking complex work and analyse, design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Community Coordination and Facilitation (CCF)

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- review existing planning documents and sources of information to inform the plan
- identify land management issues and potential solutions
- identify stakeholders to form discussion groups and seek individual input to planning
- organise for the collection and analysis of data to inform planning and monitor progress
- work with stakeholders and technical advisers to develop goals and performance criteria
- develop a draft plan for widespread consultation and feedback
- finalise the regional resource management plan

Knowledge Evidence

The candidate must demonstrate knowledge of:
- broad geographic indicators with particular emphasis on the region
- regional and rural planning concepts from town planning, rural industry planning, and natural resource planning perspectives
- impact of government processes and industry activities in social and economic terms
- consultative techniques
- National, State and Local policies, procedures and legislation that applies to regional planning
- natural resource management and issues

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have followed basic rules relevant to chemical safety, including:

- confirmed work requirements and equipment for chemical use with supervisor
- located and followed information on chemical labels and relevant safety data sheets according to supervisors' instructions
- recognised the use of chemicals and complied with chemical safety signs and symbols in the workplace
- recognised chemical hazards and risks and reported to supervisor and applied risk controls
- used, maintained and stored personal protective equipment (PPE)
- maintained and stored chemical application equipment according to supervisors' instructions
- located chemical store, handled, transported, stored and worked with chemicals according to supervisors' instructions
- followed emergency procedures for accidents or chemical spillage and reported to supervisor
- maintained records according to supervisor instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- rules and instructions for working with and around chemicals
- common types of chemicals used in the workplace
- common types of chemical application equipment to be maintained and stored
- the structure and purpose of chemical labels and safety data sheets
- basics of hazards and risks of chemical use
- safety signage and symbols for chemical use in the workplace
- level of hazard and risks associated with common chemicals used in the workplace and methods of control
- PPE, when and how it should be worn, stored and maintained
- methods of reporting to supervisors' chemical hazards and risks
- safe methods of transporting, handling and storage of chemicals
- types of emergencies and the procedures for accidents and spills of chemicals
- records commonly kept for chemical use.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  - access to chemicals and chemical store

- **resources, equipment and materials:**
  - PPE

- **specifications:**
  - workplace instructions and procedures
  - chemical safety data sheets
  - common chemical labels

- **relationships:**
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion demonstrated that chemicals have been applied under supervision, ensuring they have:

- identified hazards and risks and adopted safe work practices and used appropriate personal protective equipment (PPE) according to supervisors’ instructions
- confirmed activity with supervisor and identified and selected tools and equipment necessary for the application of chemical treatment
- carried out pre-operational checks of application equipment and made it ready for operation
- handled and transported chemicals to be used according to chemical labels and supervisors’ instructions
- followed directions on chemical labels and relevant safety data sheets to safely mix and prepare chemicals
- selected appropriate measuring equipment and measured, mixed and loaded application equipment with chemicals safely and correctly
- ensured chemical spills were cleared according to chemical label instruction and supervisor instructions
- checked the application equipment for output against plan and applied chemical safely complying with weather conditions
- monitored and recorded weather and applied chemical appropriate to prevailing conditions
- maintained a healthy and safe condition for the environment and others while applying and following chemical application
- cleaned application equipment and PPE and disposed of waste according to equipment manufacturer instructions, chemical label and supervisor instructions
- complied with equipment manufacturer instructions, chemical label and supervisor instructions
• maintained chemical application records and incident reports according to workplace procedures
• stored protection equipment, application equipment and unused chemicals according to workplace procedures.

Knowledge Evidence
An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• various handling and transport techniques and requirements for chemicals
• structure and content of chemical labels and safety data sheets and their use and purpose for safe chemical application
• principles and methods of measuring, mixing and applying chemicals
• features and functions of a range of application equipment relevant to the workplace their operations, and maintenance requirements
• risk factors to be taken into account for human and animal health, spillage and environmental impact relevant to chemical use before, during and following chemical application
• basic chemical groupings and types used in the workplace, including:
  • the of mode of action
  • the impact on chemical safety
  • application methods
• paths of entry of poisons into the body and the methods of limiting exposure through practices and personal protective clothing
• maintenance practices for chemical application related equipment and PPE and disposal procedures for chemical contaminants and containers
• assessing weather conditions and the impact on safe application of chemicals
• components of a workplace chemical application plan
• chemical related records and reports and their purpose.

Assessment Conditions
Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  • access to chemical store
• resources, equipment and materials:
  • common chemicals
  • PPE
  • chemical application equipment
  • chemical measuring and mixing equipment
• specifications:
• workplace documents, including work instructions and procedures
• chemical labels and safety data sheets
• chemical application plan and relevant chemical application rates
• manufacturers’ operation and maintenance instructions for chemical measuring and application equipment
• relationships:
  • supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have safely transported and stored chemicals, including:

- identified health and safety hazards, assessed risks and implemented controls
- ensured emergency services contact details are available
- ensured transport vehicle meets regulations and that chemicals were loaded, secured and protected according to regulations and procedures
- ensured emergency equipment and procedures were available
- handled, transported and stored chemicals safely
- carried out emergency procedures safely and according to procedures
- maintained a chemical storage manifest and safety data sheets (SDS) according to legislative and regulatory requirements
- complied with chemical label instructions and SDS for transporting and storage of chemicals and legislative and regulatory requirements
- maintained inventory and records according to workplace procedures and legislative and regulatory requirements
- monitored chemical expiration and disposed of chemicals and waste according to workplace procedures and legislative and regulatory requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- chemical labels and SDS their purpose, use and terminology, including:
- chemical signs, symbols and coding
- basic chemical properties and reactivity related to SDS and labels
- legislation and regulations that apply to transporting and storing chemicals, including:
  - transport vehicle requirements
  - information and documentation
  - dangerous and hazardous chemicals
  - placarding requirements
- risk factors including human and animal health and environmental
- processes and procedures for the disposal of excess, unwanted, expired chemicals and chemical waste including industry disposal programs
- health and safety in the workplace requirements including personal protective equipment (PPE) and manual handling
- emergency procedures for spills and accidents
- recording and monitoring of chemical stores including, expiration and disposal procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  - access to storage facility for chemicals
  - access to vehicle for transporting chemicals
- resources, equipment and materials:
  - chemicals
  - PPE
  - materials and equipment to handle, secure and protect chemical loads
- specifications:
  - specific workplace documents, including work instructions and procedures for chemical handling, storage and transport
  - chemical labels and safety data
  - legislation and regulations about handling, storage and transport of chemicals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to safely prepare and apply chemicals for the control of pests, weeds and diseases, using general application equipment.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion demonstrated the ability to safely prepare and apply chemicals ensuring they have:

- determined and confirmed the need for chemical application by assessing the infestation, off target risk, and environmental risks
- developed an application plan for chemical application
- identified health and safety hazards, risk and implemented control procedures according to chemical label
- notified stakeholders of planned chemical application
- used personal protective equipment (PPE) according to workplace procedures
- interpreted chemical labels and applied chemical according to safety data sheets (SDS) and application plan
- identified and selected the chemical required for the target and calculated the amount and rates required according to chemical label
- identified and selected application equipment and suitable location, and determined the set up parameters according to application plan and operator instructions
- monitored and assessed weather conditions and equipment performance to ensure effective chemical application
- selected, conducted pre-operational checks according to operator and maintenance manual
- completed at least one calibration activity for application equipment
- prepared and loaded chemicals and returned unused chemicals to store in accordance with label, application plan and workplace procedures
- applied chemicals safely according to chemical labels, regulations and workplace procedures
- complied with chemical labels, SDS, regulations, maintenance manual, environmental procedures, operator instructions and application plan
- cleaned equipment and spills, and disposed of waste according to workplace and environmental procedures
• maintained records and reported incidents according to workplace procedures and regulatory requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

• control options when selecting chemicals for pests, diseases and weeds infestations, including:
  • chemical
  • mechanical
  • cultural
  • biological
  • integrated pest management including resistance management principles
• types of pest, diseases and weed their treatment and resistance
• legal implications and requirements of chemical labels and SDS
• stakeholders and required notifications including, neighbours, staff and statutory notifications
• impact of weather factors on the safe and effective application of chemicals
• characteristics of chemicals, their mode of action and relevance to chemical selection and use, including:
  • translocated/systemic
  • contact
  • ingested poison
  • protectant
  • eradicant
  • knock-down
  • residual
  • selective/non selective
• factors that contribute to off target damage, including:
  • physical movement of chemicals (e.g. animals moving baits or soil movement)
  • chemical formulation
  • wind speed and direction
  • temperature and relative humidity
  • temperature inversions
  • controlling off target damage
  • rainfall
  • buffer zones and barriers
• hazards of chemical application, including:
  • human and animal health
  • environmental contamination
Assessment Requirements for AHCCHM307 Prepare and apply chemicals to control pest, weeds and diseases

- residues in environment, plants and animals
- withholding/re-entry periods
- safety requirements when applying chemicals, including:
  - procedures
  - PPE
  - signage
- safe handling, transporting and storage of chemicals
- preparing chemicals including preparation, compatibility, adjuvants and water quality
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- selecting and operating suitable application equipment
- features, functions and calibration techniques for powered and hand held application equipment, including:
  - pressure and volume of chemical
  - travel speed
  - nozzle identification, selection, operation
- legislation, regulations and licensing requirements in relation to chemical use.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - chemicals
  - PPE
  - application equipment
  - chemical measuring and mixing equipment
- specifications:
  - specific workplace documents, including work instructions and procedures for chemical application
  - chemical labels and SDS
  - regulations about use of chemicals
  - manufacturers' operation and maintenance instructions for equipment
  - access to weather forecasts or means to measure local weather.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion demonstrated the ability to safely apply a fumigant on materials housed in an enclosure, ensuring they have:

- determined need, appropriateness and method for fumigating a storage facility
- determined hazards and risks and established safety and security resources and control measures required
- prepared facility for safe fumigation
- determined fumigant requirements and prepared the fumigant and equipment for treatment according to chemical label instructions and safety data sheets (SDS)
- ensured personal safety by using appropriate personal protective equipment (PPE)
- applied fumigant and monitored the safety and integrity of the fumigation process, responding appropriately to emergencies
- rendered the storage facility safe through ventilation, conducted tests to establish safe air quality notifying personnel of residual risks
- removed fumigation materials, waste and temporary resources from storage facility and disposed of waste according to workplace and environmental procedures
- complied with workplace and environmental procedures and chemical label instructions and SDS
- checked, decontaminated, cleaned and stored equipment used in the fumigation process according to workplace procedures
- maintained records of fumigation activities and incidents and reported according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
Assessment Requirements for AHCCHM308 Use application equipment to apply fumigant in confined spaces

- pests relevant to materials to be treated and factors and considerations in relation to the use of fumigation
- pest management strategies and relation to the use and selection of fumigation methods, including:
  - chemical
  - mechanical
  - biological
  - cultural
  - integrated pest management including resistance management principles
- types of fumigant used for treating storage facilities, their mode of action, methods of application, transport, storage and handling
- fumigant labels and SDS and how to interpret and apply label requirements for specific crops and facilities
- equipment used in fumigation, their setup, calibration, operation, shutdown, care and maintenance
- storage facilities and their suitability for fumigation, techniques used to seal a facility, and methods and calculations required to determine fumigant rates of application
- monitoring procedures during a fumigation process and methods of assessing leakage
- safety requirements including signage, equipment, PPE for use when handling fumigants and conducting fumigation activities
- legislation, regulations, licensing and codes of practice relevant to fumigant use
- risks associated with working near confined spaces including signage, gas detection and relevant entry and exit procedures
- chemical hazards and risk factors including human and animal health, leakage, spillage, environment damage and control measures required to mitigate risk
- methods for ventilating storage facilities and the equipment required
- how to assess for residual gas and safe re-entry periods including the consequence of fumigant residues and maximum residue limits
- requirements for disposal of excess fumigants, clearing spillages and equipment clean up
- procedures and processes for rendering a storage facility safe and operational after fumigation
- records required when conducting fumigation activities and related safety reporting procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  - access to storage facility and materials for fumigation
- resources, equipment and materials:
  - fumigants
Assessment Requirements for AHCCHM308 Use application equipment to apply fumigant in confined spaces

- PPE
- fumigation and ventilation equipment
- fumigation measuring and mixing equipment
- gas testing equipment
- materials required to seal facilities for fumigation

specifications:
- workplace documents, including work instructions and procedures for fumigation
- fumigant labels and SDS
- legislation, regulations, codes of practice relevant to handling, storage, transport and use of fumigants
- manufacturers’ operation and maintenance instructions for fumigation equipment
- relevant standards for air quality for test results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

- determined hazards and risks and established safety and security resources and control measures required
- prepared soil for safe fumigation
- determined fumigant requirements and prepared the fumigant and equipment for treatment according to fumigant label instructions and safety data sheets (SDS)
- transported, handled and stored fumigants according to safety procedures, label and legislative requirements
- ensured personal safety by selecting, fitting and using appropriate personal protective equipment (PPE)
- applied fumigant and monitored the safety and integrity of the fumigation process, responding appropriately to emergencies
- rendered the soil and surrounding area safe through aeration and conducted tests to establish safe soil and air quality notifying personnel of residual risks
- removed fumigation materials, waste and temporary resources from treatment area and disposed of waste according to workplace and environmental procedures
- complied with fumigant label instructions and SDS
- checked, decontaminated, cleaned and stored equipment used in the fumigation process according to workplace procedures
- maintained records of fumigation activities and incidents and reported according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
• primary and secondary soil pests, diseases and weeds to be treated and factors and considerations in relation to the use of fumigation including threshold pest levels and cost benefit
• pest management strategies and relation to the use and selection of fumigation methods, including:
  • chemical
  • mechanical
  • biological
  • cultural
  • integrated pest management including resistance management principles
• soil, media type, moisture and temperature factors relative to fumigation and methods employed to "seal" soils during fumigation
• types of fumigant used for treating soils, their mode of action, methods of application, transport, storage and handling
• fumigant labels and SDS and how to interpret and apply label requirements for specific soil and media situations
• equipment used in fumigation, their setup, calibration, operation, shutdown, care and maintenance
• calculations required to determine fumigant rates of application
• monitoring procedures during a fumigation process and methods of assessing escape
• safety requirements including signage, equipment, PPE for use when handling fumigants and conducting fumigation activities
• legislation, regulations, codes of practice and licensing requirements relevant to fumigant use, transport, storage and handling
• chemical hazards and risks factors including human and animal health, leakage, spillage, environment damage and control measures required to mitigate risk
• methods for aerating treated soils and assessment of residual fumigants including testing fumigant residues and maximum residue limits
• requirements for disposal of excess fumigants, clearing spillages and equipment clean up
• records required when conducting fumigation activities and related safety reporting procedures.

**Assessment Conditions**

Assessment of skills must take place under the following conditions:

• **physical conditions:**
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions

• **resources, equipment and materials:**
  • soil requiring fumigation
  • fumigants
  • PPE
  • fumigation and soil aeration equipment
Assessment Requirements for AHCCHM309 Fumigate soil

- fumigant measuring and mixing equipment
- fumigant testing equipment
- materials required to seal soil for fumigation
- specifications:
  - specific workplace documents, including work instructions and procedures for fumigation
  - fumigant labels and SDS
  - legislation, regulations, codes of practice relevant to handling, storage, transport and use of fumigants
  - manufacturers' operation and maintenance instructions for fumigation equipment
  - relevant standards for fumigation test results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to determine, apply, monitor and clean up fumigants for the control of vertebrate and invertebrate pests.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have fumigated vertebrate and invertebrate pests manually, including:

- selected the appropriate fumigant option for the pest characteristics and infestation
- determined fumigation parameters according to manufacturer instructions and safety data sheets (SDS)
- prepared fumigant according to chemical manufacturers instructions
- identified health and safety hazards, risks and implemented controls for fumigation activities
- transported, handled and stored fumigants according to safety procedures, fumigant label and legislative requirements
- maintained the fumigant inventory and disposed of waste fumigant and materials according to workplace and environmental procedures
- implemented emergency response procedures to maintain a safe site
- prepared site for fumigation and erected exclusion barriers and signage
- checked weather conditions and forecasts to decide on fumigation progression
- sealed treatment area, applied the fumigant, monitored fumigation activity and ventilated sites
- checked for residual fumigant according to workplace procedures
- restored the treatment area, cleaned and decontaminated the equipment
- complied with chemical manufacturers’ instructions, workplace and legislative and regulatory requirements, safety procedures, fumigant label and legislative requirements, and environmental procedures
- maintained records, stock inventories and reported on work activities and incidents, according to workplace and legislative and regulatory requirements.
Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pests and their characteristics for fumigation control
- primary vertebrate and invertebrate pests that can be controlled by manual fumigation methods
- pest control strategies and the role of fumigation, including:
  - chemical
  - cultural
  - biological
  - mechanical
  - Integrated Pest Management
- fumigants their use and action
- fumigant selection criteria to consider, including:
  - size of area
  - weather conditions
  - type of material concentration
  - safety implications
- interpretation and use of labels and SDS
- techniques to seal fumigation treatment sites
- site characteristics and conditions for suitable for fumigation
- relevant legislation and regulatory requirements for fumigant use
- risk factors including human and animal health, weather, leakage, spillage and environment
- safety and environmental requirements for disposal of fumigant, spills and waste materials
- clean-up procedures and decontamination
- pre and post fumigation safety procedures
- transporting and storage requirements of fumigants, including:
  - legislation and regulations that apply to transporting and storing chemicals including:
    - transport vehicle requirements
    - dangerous and hazardous chemicals
    - placarding requirements
- processes and procedures for the disposal of excess, unwanted, expired fumigants and waste including industry disposal programs
- health and safety in the workplace requirements including personal protective equipment (PPE) and manual handling
- record keeping procedures and practices for workplaces and regulations
- tests and testing for residual fumigants
- inventory and stock records and procedures for fumigants.
Assessment Conditions

Assessment of skills must take place under the following conditions:

- **physical conditions:**
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  - access to storage facilities for fumigants
- **resources, equipment and materials:**
  - site requiring fumigation
  - fumigants
  - PPE
  - fumigation aeration equipment
  - fumigant measuring and mixing equipment
  - fumigant testing equipment
  - materials required to seal treatment area
- **specifications:**
  - specific workplace documents, including work instructions and procedures for fumigation
  - chemical labels and SDS
  - legislation and regulations relevant to handling, storage, transport and use of fumigants
  - manufacturers' and maintenance instructions for hand fumigation equipment
  - relevant standards for residual fumigation test results.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to prepare workplace procedures for the calibration of equipment used in the application of pest, weed and disease control chemicals and bio-agents.

The unit applies to individuals who take responsibility for their own work and may provide direction to others. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have prepared safe operating procedures for calibration of equipment, including:

- identified and analysed the need for equipment calibration
- analysed and confirmed equipment calibration requirements and operator capability
- performed a risk assessment of the calibration activity and incorporated risk controls into the calibration procedure
- documented procedures for calibration according to intended use and workplace protocols.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, codes of practice and enterprise procedures relevant to pesticides, the environment and health and safety in the workplace
- sources of chemical safety information, including:
  - codes of practice
  - legislation and regulations
  - chemical manufacturer labels
  - safety data sheets
- chemical handling and application
- mechanical and electronic controls on application equipment
- calibration techniques
- hazards, risks and controls including use of personal protective equipment (PPE).
Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - chemical application equipment
  - specific tools for calibration and adjustments
  - PPE
- specifications:
  - workplace documents including policies, procedures and processes
  - manufacturers' operating instructions for equipment to be calibrated
  - workplace instructions and specifications for calibration
- relationships:
  - access to supervisors and operators.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have developed procedures to minimise risks in the use of chemicals, including:

- sourced information and analysed its content for safe chemical use
- identified steps in the chemical use process and identified hazards and risks
- assessed the risks and developed risk control procedures to mitigate the risk for chemical use
- implemented procedures, monitored and evaluated personnel using procedures
- developed a continuous improvement strategy for risk control procedures
- implemented, monitored and evaluated a chemical risk control procedure
- developed and maintained records for risk assessment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- sources of chemical safety information, including:
  - codes of practice
  - legislation and regulations
  - chemical manufacturer labels
  - safety data sheets (SDS)
- industry best practice requirements relating to chemical use
- strategies for identifying hazards, risks and controls
- risk factors, including:
  - human
  - animal health
  - product integrity
• weather
• residues and maximum residue levels
• spray drift, spillage and environment
• requirements for the disposal of excess chemicals, clearing spillages and equipment clean up
• chemical application equipment capabilities and limitations
• principles and practices of chemical handling, transporting and storage of chemicals and fumigants
• principles and practices of chemical application strategies and equipment including integrated pest management
• operational factors to consider in procedures, including:
  • transport, handling and storage
  • application methods, equipment and personal protective equipment (PPE)
  • cleaning and decontamination
  • disposal of waste
• strategies for instructing personnel, and monitoring and assessing personnel performance
• mandatory and workplace record keeping requirements for chemical storage, disposal, application and safety.

Assessment Conditions

Assessment of skills must take place under the following conditions:
• physical conditions:
  • skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • tools and equipment required to implement the chemical use procedure
  • PPE
• specifications:
  • specific workplace documents including policies and processes
  • manufacturers' operating instructions for equipment and machinery
  • SDS
  • workplace instructions and job specifications
  • chemical information including legislation, codes of practice, manufacturer instructions
• relationships:
  • team member(s).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
Assessment Requirements for AHCCHM404 Develop procedures to minimise risks in the use of chemicals

Application

This unit of competency describes the skills and knowledge required to assess and control the risks associated with chemical use and to plan and implement a program for chemical use.

The unit applies to individuals who take responsibility for their own work and provide direction to others. All work must be carried out to comply with workplace procedures, in accordance with applicable state/territory health and safety in the workplace, pesticide and environmental legislation and codes of practice.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have planned and implemented a chemical use program, including:

- sourced information and analysed its content for chemical application
- assessed the need for chemical use and ensured personnel are adequately trained in chemical use according to workplace procedures
- identified hazards, risks and provided controls, including personal protective equipment (PPE) for chemical application and off target impact
- assessed weather conditions and environmental sensitivity of the site
- documented chemical application and maintenance procedures according to workplace protocols
- determined chemicals required and mixing requirements according to workplace procedures and chemical label instructions
- develop a continuous improvement strategy to minimise risk
- communicated chemical application plan to personnel
- implemented procedures and monitored and evaluated personnel according to chemical application plan
- developed a continuous improvement strategy for chemical application plan
- implemented, monitored and evaluated a chemical application plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- source of information for developing plans, including:
  - legislation and regulations
  - codes of practice
  - chemical labels
• safety data sheets (SDS)
• industry requirements relating to chemical use
• strategies for identifying hazard, risks and controls
• risk factors, including:
  • human
  • animal health
  • product integrity
  • weather
  • residues and maximum residue levels
  • off target damage, spillage and environment
• principles of transport, handling and storing chemicals
• requirements for the disposal of excess chemicals, clearing spillages and equipment clean up
• chemical application equipment capabilities, limitations and calibration
• mixing chemicals, including:
  • rates
  • mixing order if more than one chemical
  • adjuvants
  • water quality
• life cycle of a variety of pests and the target stages
• implications of pest resistance to chemicals
• principles and practices of chemical application strategies and equipment including, integrated pest management and animal health strategies
• preparation and documentation of strategic plans and procedures
• signs of pest damage and signs of beneficial organisms
• operational factors to consider in a procedures, including:
  • transport, handling and storage
  • application methods, equipment and PPE
  • cleaning and decontamination
  • disposal of waste
• emergency procedures including first aid
• strategies for instructing personnel, and monitoring and assessing personnel performance
• mandatory and workplace record keeping requirements for chemical storage, disposal, application and safety.

**Assessment Conditions**

Competency is to be assessed in the workplace OR simulated environment that accurately reflects performance in a real workplace setting.

Assessment of skills must take place under the following conditions:

• physical conditions:
• skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions

• resources, equipment and materials:
  • tools and equipment required to implement the chemical application program
  • PPE
  • chemicals and relevant weighing and mixing equipment

• specifications:
  • specific workplace documents including policies and processes
  • manufacturers' operating instructions for chemicals, equipment and machinery
  • SDS
  • workplace instructions and job specifications
  • chemical information including legislation, codes of practice, chemical label instructions

• relationships:
  • team member(s) or work crew

• timeframes:
  • schedules and planned completion dates for a chemical application plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have developed and managed a chemical use strategy, including:

- evaluated pest control strategies for workplace requirements
- identified, assessed and incorporated external factors, legislation, codes of practice and industry requirements into chemical use strategy
- reviewed available chemicals and their method of application and assessed their relevance to the workplace
- identified and assessed hazards and risks and developed control measures for a risk management strategy according to legislation and workplace guidelines
- researched and documented insurance cover for chemical use in the workplace
- developed procedures for management and use of chemicals according to workplace guidelines, including:
  - risk control measures
  - communication strategy to inform stakeholders of the chemical use strategy
- developed procedures that comply with legislation and workplace guidelines
- distributed information on procedures for chemical management to stakeholders
- developed and implemented a strategy for upskilling and supervising personnel for chemical use
- monitored the implementation of the chemical use strategy and evaluated and rectified underperformances, according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:
Assessment Requirements for AHCCHMS01 Develop and manage a chemical use strategy

Date this document was generated: 3 September 2020

- principles of a chemical control strategies, including:
  - relevant legislation, codes of practice and industry requirements covering health and safety in the workplace, hazardous substances, environment and food safety
  - workplace and regulatory requirements and options for the keeping of records
  - documentation

- hazards to human health, agricultural produce, and all aspects of the environment and non-target species of flora and fauna associated with the transport, storage, handling, application and disposal of chemicals, including:
  - routes of entry of chemicals into the body and the implications of this on chemical use management strategies
  - safety procedures including the maintenance, use, fit and decontamination of personal protective equipment (PPE)
  - monitoring of staff health exposed to chemicals according to regulatory requirements
  - emergency procedures for safety incidents involving chemicals
  - purpose and role of chemical labels and safety data sheets (SDS) in determining chemical transport, storage, handling, application and disposal procedures and practices to all staff

- external factors that affect chemical use, including:
  - influence of meteorological factors (wind, temperature, humidity, rain) on quality of chemical application, drift potential, effectiveness and efficacy of use
  - elements of a spray drift management strategy including measures to assess the potential for spray drift and prevent or control its occurrence

- pest control strategies and their benefits in terms of risk management and evaluation, including:
  - chemical
  - biological
  - cultural
  - Integrated Pest Management
  - Integrated Resistance Management
  - Integrated Animal Health Management
  - off-label chemical application and procedures

- equipment required, calibration and operation

- principles of residue effects and their management, including:
  - persistence in soil and water
  - accumulation in agricultural produce
  - rate of breakdown of residues in produce and in the environment
  - withholding periods
  - ways in which residues can occur
  - maximum residue levels
  - movement of and persistence and degradation of different types of chemicals
  - industry waste agreements

- source and purpose of insurance for use, transportation and storage of chemicals
• communication and negotiation strategies with stakeholders including community, workers and management, including informing on:
  • staff responsibilities
  • how to act in an emergency
  • neighbours when chemical spraying is planned
  • make agencies aware when accidents occur
• types of training needs including internal and external
• monitoring methods and procedures including periodical reviews of procedures, workplace records.

Assessment Conditions
Assessment of skills must take place under the following conditions:

• physical conditions:
  • skills must be demonstrated in a workplace with pest control requirements personnel and physical resources to implement and monitor chemical use strategy or an environment that accurately represents workplace conditions
• resources, equipment and materials:
  • chemicals and spray equipment appropriate to control strategy
  • PPE
• specifications:
  • workplace documents including policies, procedures and processes to help formulate the chemical use strategy
  • manufacturers' operating and calibration instructions for equipment used in implementation to inform the procedures within the strategy
  • SDS
  • workplace instructions and procedures for implementing chemical use strategy
• specific legislation, regulations and codes of practice
• relationships:
  • work team tasked with chemical control activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:
- inspect raw materials for contamination and acceptability against established criteria
- measure quantity for billing
- operate a weighbridge
- provide clear directions to drivers entering site
- receive raw material for processing at a compost facility
- record raw material quantity and calculate fee

Knowledge Evidence

The candidate must demonstrate knowledge of:
- principles and practices of composting raw material assessment
- characteristics of a range of raw green waste
- enterprise policies and procedures including workplace health and safety procedures
- safety risks to self and product posed by contaminants in raw materials and products
- standard risk control measures used in the industry to minimise risk associated with handling raw materials and products

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- follow emergency procedures
- operate pumps and set up water delivery system
- read and interpret site operation plans or maps
- recognise and report fire risks and incidents

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for recognising fire emergencies
- characteristics and operation of joints, hoses, valves and sprinkler components
- work health and safety and emergency management plans as part of enterprise operating procedures
- fire behaviour, extinguishing media and operating firefighting equipment
- fire control tactics and techniques, fire hazards and safety techniques
- operation of pumps
- pile size, moisture and porosity as causes of combustion
- procedures for safely using power and hand tools
- standard risk control measures used in the industry to minimise risk associated with fire response

Assessment Conditions

Assessors must satisfy current standards for RTOs.

This unit of competency describes the skills and knowledge required to recognise raw materials and products. It applies to the employee of an enterprise engaged in commercial-scale composting operations.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify, confirm, locate, handle and maintain raw materials, products and physical contaminants on site
- implement site machinery and traffic management plans
- maintain site and machinery security requirements
- maintain site arrangement and segregation of materials and products to avoid contamination
- read and follow batch numbers and codes, and site operating plan
- recognise and locate key process control stages of production cycle and associated machinery on site

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for raw material recognition
- characteristics of a range of raw materials
- company policies and procedures, including workplace health and safety requirements
- key process control stages critical to consistent quality in compost production
- overview of systems and technologies used in compost production, particularly as relevant to workplace
- range and characteristics of products
- safety risks associated with vehicles and machinery movement on site
- safety risks to self and product posed by contaminants in raw materials and products
- standard operating procedures to minimise risk associated with handling raw materials and products
Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine appropriate operating methods
- implement work and equipment maintenance plans
- monitor input materials and report non-conformances
- monitor outputs and report out-of-specification product
- perform shutdown procedures and maintain records
- select and use a range of compost processing plant, machinery and equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for operating compost processing plant
- enterprise guidelines associated with operation of plant, machinery and equipment
- environmental licenses, impacts and procedures identification of contaminants
- legislation, regulations and codes of practice with regard to operator licensing, roads and traffic requirements
- legislation, regulations and codes of practice with regard to workplace health and safety and the use and control of hazardous substances, such as fuel and recipe inputs
- lock-out and tag-out procedures for plant, machinery and equipment
- manufacturer specifications for servicing of plant, machinery and equipment
- operating principles and operating methods for plant, machinery and equipment
- potential risks and hazards associated with operation of plant, machinery and equipment
- principles of weight distribution with regard to load-shifting and machinery movement
- procedures for cleaning, securing and storing machinery, equipment and materials
- product types and characteristics
- raw material types and characteristics
- workplace health and safety legislation, codes of practice and specific hazards such as hazardous substances and exposure to organic micro particles

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out routine maintenance on plant and equipment
- organise bagging operations
- prepare, start, operate and shut down a bagging plant
- monitor compost inputs
- monitor compost production against compost specifications
- monitor the temperature of bagged compost
- select and use various features and controls of a range of bagging plant
- ensure product readiness for distribution

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for operating a bagging process
- characteristics of product that is fit for bagging
- effect of variation in inputs which may include ingredient quality and condition, packaging components and consumables, and/or services on process performance
- emergency and routine shutdowns and procedures to follow in the event of a power outage
- environmental legislative and enterprise requirements
- equipment cleaning requirements
- flow of this process and effect on downstream processes
- hazards and controls
- inspection or test points in the process and related procedures and recording requirements
- lock-out and tag-out procedures and responsibilities
• methods used to monitor the process
• operating principles of the equipment which may include:
  • operational understanding of main equipment components, status and purpose of guards, equipment operating capacities and applications
• packaging quality and seal integrity
• principles of the bagging process
• product and batch changeover procedures
• product quality and hygiene
• purpose and location of sensors and related feedback instrumentation
• purpose of packaging, coding requirements and related legal requirements, including product weight

**Assessment Conditions**

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- calculate a compost recipe that is consistent with the technology and method available from combinations of raw materials
- document compost production plan consistent with plant capabilities and site constraints
- produce a compost recipe that will achieve defined product specifications

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of compost recipes
- control of hazards in handling raw materials and composting materials
- processing duration required for various raw materials
- range of commercial compost-based products
- raw materials and their characteristics
- relationship between key compost recipe variables and compost production
- systems, technologies and methods in compost production

Assessment Conditions

Assessors must satisfy current standards for RTOs.
