2. Analyse existing land use, land management plans and strategies	2.1 Assess trends and threats against the objectives of the land use land management plans and strategies 2.2 Identify and assess existing management plans and strategies relevant to the issue under consideration, for effectiveness, relevance, and impact on resource management 2.3 Analyse land use, land management plans and strategies, taking account of the relevant historical, social, cultural, political, ecological, biodiversity and economic contexts in which they apply 2.4 Identify and prioritise gaps in management plans and strategies 2.5 Consult with stakeholders to ensure support for potential changes in land management plans 2.6 Identify and resolve problems taking into consideration the views of stakeholders
3. Modify land use and management plans and strategies	3.1 Evaluate feedback from stakeholders on existing land use, land management plans and strategies 3.2 Prepare modified land management plans and strategies covering revised outcomes, in a standardised format 3.3 Ensure modified land use and management plans and strategies comply with relevant legislation 3.4 Incorporate outcomes of the consultative process in amended land use and management plans and strategies, and seek agreement from stakeholders where appropriate 3.5 Ensure revised land management plans are consistent with the overall business plan and adjust as required
4. Implement modified land use and management plans and strategies	4.1 Modify operational processes to obtain additional key data and monitor changes to conservation strategies and plans 4.2 Provide education and training to employees to ensure effective

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	implementation 4.3 Provide education and training to stakeholders to promote implementation 4.4 Implement modifications in a timely manner to reflect the need for changes confirmed through the review process

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Develop management plans using clear and concise language
Oral communication	<ul style="list-style-type: none"> Interact effectively with stakeholders when views differ

Assessment Requirements for AHCBUS612 Review land management plans and strategies

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has reviewed land management plans and strategies of at least one designated plot of land, including:

- established clear criteria for reviewing land usage, land management plans and strategies
- analysed existing land usage, land management plans and strategies
- modified land management plans and strategies to match required outcomes
- implemented modified land management plans and strategies
- monitored land management plans to ensure required outcomes are achieved.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ecosystems including the interrelationship of geophysical, hydrological, biological and meteorological factors
- effects of climate change on the environment and on soil
- advantages of improved biodiversity above and below ground
- common land management practices that reduce greenhouse gas emissions, including:
 - crop stubble retention
 - no till cropping
 - mulching
 - improved water management
 - use of organic fertilisers
 - composting
 - protecting vegetation from stock grazing
 - reducing emissions from cattle and dairy cows through controlled grazing
- monitoring parameters and techniques utilised in biological monitoring
- threats, both natural and from human activity, to places of natural significance

- international, national and local standards and codes of practice for land management
- land management assessment and monitoring processes
- scientific processes for evaluating land management
- general understanding of a range of cultural issues.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - access to a plot of land.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCBUS613 Manage human resources

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to manage human resources in an agricultural, horticultural or land management enterprise.

This unit applies to individuals who take personal responsibility for their own work and exercise autonomy in undertaking complex work. They must analyse information and exercise judgement to complete a range of advanced skilled activities in relation to managing human resources. They analyse, design and communicate solutions to a range of complex problems.

All work must be carried out to comply with organisational requirements, workplace health and safety legislation and codes, sustainability practices and in consultation with the management team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Business (BUS)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Implement strategies for personal development and appropriate	1.1 Audit own management strengths and weaknesses and address through training and professional support 1.2 Determine priorities in management and operations and allocate

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
self-management	time to achieve effective outcomes 1.3 Implement strategies for managing conflicting demands and pressure
2. Identify skill requirements and prepare task descriptions	2.1 Identify and describe tasks along with the range of conditions under which performance may need to occur 2.2 Determine most appropriate employment arrangements based on employer and employee needs, responsibilities and rights 2.3 Prepare task descriptions with due regard to equal opportunity employment legislation, workplace health and safety and work-based harassment regulations 2.4 Explore and use opportunities to use government-supported employment and training programs
3. Arrange employment of workforce members	3.1 Assess options for filling job vacancies 3.2 Prepare resources and materials for recruitment and place with media and employment agencies 3.3 Determine criteria for assessing job applicants and prepare applicant evaluation processes and procedures 3.4 Assess applicants against the criteria and finalise selection decision 3.5 Advise all applicants of outcome 3.6 Negotiate terms of employment and ensure adherence to relevant award conditions
4. Manage workforce performance	4.1 Design induction programs for each employee consistent with legislative requirements and effective management 4.2 Establish terms of engagement for consultants and contractors 4.3 Conduct induction programs for new internal and external appointees and establish appropriate records 4.4 Develop work plans for all members of the workforce 4.5 Design and implement strategies for communicating with workers 4.6 Design and implement performance management strategies 4.7 Follow processes for terminating non-performing staff
5. Support personal development, training	5.1 Design and implement strategies to identify skill and knowledge gaps with workers

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
and career development of workers	<p>5.2 Provide on-job training to optimise worker performance and to ensure safety and fairness in the workplace</p> <p>5.3 Identify off-job training requirements and source and support training</p> <p>5.4 Identify and provide opportunities for career development and design and implement strategies for succession</p> <p>5.5 Recognise and reward prior learning, experience and training</p>
6. Manage administrative support	<p>6.1 Design and implement processes and procedures for the administration of staff records</p> <p>6.2 Design and implement administrative procedures and processes to meet legislated requirements</p> <p>6.3 Monitor adherence to awards, enterprise agreements and contracts of employment, and resolve disputes and conflicts</p>
7. Implement work health and safety priorities and procedures	<p>7.1 Communicate and enforce safe work practices among all members of the workforce</p> <p>7.2 Involve all members of staff in hazard identification and risk assessment</p> <p>7.3 Induct new staff into the workplace health and safety system</p>
8. Review labour productivity	<p>8.1 Establish strategies for monitoring labour costs</p> <p>8.2 Review the performance of the enterprise using labour productivity benchmarks</p> <p>8.3 Establish opportunities to develop more efficient work practices by consulting peers, staff and consultants</p> <p>8.4 Implement strategies for improving labour productivity</p>

Assessment Requirements for AHCBUS613 Manage human resources

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed human resources for at least one staff member in one enterprise, including:

- identified skill requirements and prepared at least one task description
- arranged employment of at least one permanent workforce member
- supported career and professional development of at least one workforce member
- implemented workplace health and safety priorities and procedures
- managed administration of staff records
- reviewed labour productivity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- process to develop job descriptions
- relevant industrial awards
- employee induction programs
- interviewing strategies and protocols
- legislation, regulations and codes of conduct relevant to employers, including:
 - WorkCover insurance
 - superannuation
 - taxation
 - equal employment opportunity
 - anti-discrimination and anti-harassment
 - workplace health and safety
 - privacy
 - unfair dismissal

- contracts of employment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- relationships:
 - access to potential employees and contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCBUS614 Develop a monitoring, evaluation and reporting program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to develop a monitoring, evaluation and reporting program for a project or production process.

This unit applies to individuals who take personal responsibility for their own work and exercise autonomy in undertaking complex work. At this level workers analyse information and exercise judgement to complete a range of advanced skilled activities especially in relation to developing the program. They also analyse, design and communicate solutions to a range of complex problems.

All work must be carried out to comply with organisational requirements, work health and safety legislation and codes, sustainability practices and in consultation with the management team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCBUS614 Develop a monitoring, evaluation and reporting program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed a monitoring, evaluation and reporting program for at least one enterprise, including:

- clarified the context and terms of reference
- identified key stages and outcomes
- assessed and defined data collection requirements
- collected and managed data
- designed and costed an evaluation strategy
- presented strategy, along with costings, to management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- program design considerations (cost, equality, technically valid, ethics)
- approaches to monitoring and evaluating business processes
- secure data storage
- data analysis processes
- quantitative and qualitative data collection methods for monitoring and evaluation
- data management.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- access to an enterprise conducting activities to be monitored, evaluated and reported.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented a monitoring, evaluation and reporting program for at least one enterprise, or enterprise activity, including:

- collected and managed data
- analysed production or project data
- prepared reports and presented information to stakeholders
- evaluated the effectiveness, efficiency and appropriateness of investment in a project or program
- made recommendations for improvement
- reviewed the evaluation process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- quantitative and qualitative methods for monitoring and evaluation
- communication and consultation skills to present findings and recommendations
- data management processes and systems
- policy and program management processes
- adaptive management and review cycles.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- enterprise process or project to be monitored and evaluated.

AHCCFP301 Identify the effects of climate change as a factor in land management

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify climate change as a factor in land management. It incorporates knowledge of climate, climate change and the impacts of a range of land management practices on the production of greenhouse gases.

The unit applies to individuals who participate in land management activities, who require knowledge and skills to make decisions around activities that reduce greenhouse gas emissions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Carbon Farming (CFP)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify the climate system and climate change as they relate to land management	1.1 Identify the components of the climate system 1.2 Identify the role of the main greenhouse gases in the climate system

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify and describe the natural factors that contribute to climate change</p> <p>1.4 Identify and describe the factors that contribute to human-induced climate change</p> <p>1.5 Identify the potential impacts of climate change on local natural and agricultural environments</p>
2. Identify the roles of vegetation, animals and carbon in greenhouse gas production	<p>2.1 Research the role of land, vegetation and animal management in greenhouse gas production</p> <p>2.2 Identify carbon cycle processes in relation to own work role</p> <p>2.3 Identify the forms of carbon in the carbon cycle and where they are stored</p> <p>2.4 Research the role of vegetation and soil carbon in the mitigation of carbon dioxide levels in the atmosphere</p>
3. Identify and contribute to land management practices that reduce greenhouse gas emissions	<p>3.1 Identify and contribute to land management practices to reduce methane production</p> <p>3.2 Identify and contribute to land management practices to reduce nitrous oxide production</p> <p>3.3 Identify and contribute to land management practices to reduce carbon dioxide production</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCCFP301 Identify the effects of climate change as a factor in land management

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified the impacts of climate change on land management and land management techniques that reduce greenhouse gas emissions, including:

- identified at least three effects that climate change has had on a designated site
- identified three land management practices that would reduce greenhouse gas emissions, for a designated site
- identified at least one environmental, one social and one economic benefit that implementing new land management practices could have on a designated site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the climate system
- the main greenhouse gases and their role in the climate system
- climate change both natural and human-induced
- factors that contribute to human-induced climate change
- common land and agricultural management practices that reduce greenhouse gas emissions, including:
 - vegetation methods: including regenerating native forests, protecting native forests by reducing land clearing, and planting trees to grow carbon stocks
 - savanna burning: including managing bushfires in Australia's savannas to avoid harmful, high-temperature fires
 - agricultural practices: including building soil carbon through changed farming practices such as crop stubble retention, no till cropping, mulching, improved water management, use of organic fertilisers, composting and use of soil conditioners including biochar

- other agricultural practices: including protecting vegetation from stock grazing, reducing emissions from cattle, controlled grazing practices, or other industry-specific practices
- Australia's commitment to global emissions reduction targets
- environmental benefits of changed land management practices, including improved biodiversity above and below ground, improved air, water and soil quality, reduced greenhouse gas emissions, improved movement of water across landscape, increased resilience to drought, and increased land versatility
- social benefits of changed land management practices, including potential for increased social capital, Indigenous community empowerment, and increased resilience to drought
- economic benefits of changed land management practices, including potential for diversified income streams and potential increased farm productivity.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - access to information about climate, climate change and carbon farming practices
 - access to details and history of a designated site.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCFP401 Increase soil organic carbon using land management practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify the benefits of increasing soil organic carbon for soil condition or soil health, and to implement a project to increase soil carbon.

The unit applies to individuals who participate in farming and/or land management activities. It may lead to participation in an approved carbon farming project to generate carbon credits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Carbon Farming (CFP)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify benefits of increasing soil organic carbon	1.1 Identify the role, and forms, of soil organic carbon in soil 1.2 Identify carbon as a component of soil organic matter 1.3 Analyse the benefits of increasing soil organic carbon in soil 1.4 Identify the role of photosynthesis in increasing soil organic

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	carbon 1.5 Determine land management practices that store or sequester carbon 1.6 Identify other interactions of ecosystem processes in increasing soil organic carbon
2. Identify co-benefits of increasing soil organic carbon	2.1 Identify land management practices to increase soil organic carbon 2.2 Consider the social and cultural, environmental and economic benefits of increasing soil organic carbon
3. Plan project to increase soil organic carbon	3.1 Identify site for soil carbon project 3.2 Identify and select a strategy or method to increase soil organic carbon 3.3 Identify equipment and resources required 3.4 Carry out cost-benefit analysis of implementing the project 3.5 Plan strategy to measure soil organic matter in soil, and record results
4. Implement project	4.1 Measure and record soil carbon as baseline for project 4.2 Implement project in line with selected method and document results 4.3 Monitor and maintain soil to preserve soil health through changing conditions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret written material focused on increasing carbon in soil
Numeracy	<ul style="list-style-type: none"> Uses formulae to calculate soil organic matter (SOM)

Assessment Requirements for AHCCFP401 Increase soil organic carbon using land management practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has increased carbon in soil for a designated plot of land, including:

- identified the benefits and co-benefits of increasing carbon in soil
- planned and implemented a project to increase soil organic matter in soil.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how land use and management practices impact on soil health
- physical, chemical and biological properties of healthy soil
- opportunities presented by degraded soil (or soil that has less soil carbon than normally expected under standard, normal or common land management practices for the local area)
- land management practices that have the potential to increase soil health and agricultural productivity, dependent on local climate and soil type, including:
 - no till or conservation tillage and controlled traffic
 - cover crops
 - pasture cropping
 - crop rotation (depending on rotation and crop)
 - perennial-based systems
 - integrated pest management and weed management
 - managed movement of water
- co-benefits of increased carbon in soil, including:

- environmental benefits: improved biodiversity above and below ground, improved air, water and soil quality, reduced greenhouse gas emissions, improved movement of water across landscape, reduced salinity/erosion/acidification/compaction, increased resilience to drought, and increased land versatility
- social benefits: including increased resilience to drought, more stable and diverse income, healthier people and communities, and improved succession planning
- economic benefits: including potential for diversified income streams, increased farm productivity, access to finance, increased land versatility, new skills and career development, and less income spent on supplements and fertilisers.
- reasons for measuring soil organic carbon, including as a measure of soil health and as an estimate of stocks of soil organic carbon for carbon trading
- informal methods for measuring soil carbon, including percentage tests across a paddock
- using baseline measurements to estimate potential additional soil carbon
- approved methods for soil-based carbon farming projects
- soil quality calculators at soilquality.org.au.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - designated plot of land that has potential for increasing soil organic carbon
 - equipment and resources relevant to method
 - access to information about soil land management methods and practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCFP402 Prepare to comply with measuring and modelling requirements of carbon farming methods

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to comply with the reporting guidelines for measuring and modelling methods of land-based carbon farming projects. It covers the requirement to collect project data and information requirements.

The unit applies to farmers and land managers who intend to earn carbon credits by storing carbon or reducing greenhouse gas emissions. To be eligible, projects must comply with a project methodology (or method) approved for use under the carbon program or fund.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Carbon Farming (CFP)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine compliance obligations of carbon farming method	1.1 Identify carbon farming method 1.2 Access compliance requirements of method 1.3 Interpret requirements of method and prepare to meet requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Establish project area	2.1 Determine requirement for collection and reporting of geographic information, specific to method and guidelines 2.2 Use geospatial data to define project area 2.3 Define activity areas including exclusions areas, as required by the method
3. Collect and input data	3.1 Identify data collection procedure associated with method 3.2 Collect data according to project methodology 3.3 Input and save data as specified by method or technical guidance documentation
4. Analyse data for submission to carbon market regulator	4.1 Calculate carbon abatement or storage for reporting period 4.2 Generate report on carbon abatement or storage using approved tool or procedure 4.3 Submit report to the carbon market regulator 4.4 Follow regulator procedures to receive carbon credits
5. Comply with audit requirements	5.1 Ensure records are secure and backed-up 5.2 Ascertain audit requirements of method 5.3 Choose an auditor approved by carbon market regulator 5.4 Participate in audit process in line with auditor's directions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Get the job done	<ul style="list-style-type: none"> Research and manage complex information
Reading	<ul style="list-style-type: none"> Interpret documentation from a variety of sources
Numeracy	<ul style="list-style-type: none"> Interpret data in maps, tables, charts and/or graphs

Assessment Requirements for AHCCFP402 Prepare to comply with measuring and modelling requirements of carbon farming methods

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared to comply with the measuring and modelling requirements of one approved, carbon farming method, including:

- established the project area utilising geospatial data
- collected, inputted and analysed carbon data
- followed approved carbon farming method procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant carbon farming legislation, rules, method, technical guidance documentation and related procedures
- contemporary sources of geospatial data:
 - Global Positioning Systems (GPS) and Global Navigation Satellite System (GNSS)
 - field surveys and sampling
 - orthorectified aerial photographs
 - orthorectified satellite imagery
 - cadastral database
 - publicly available datasets
- criteria used to assess fitness for purpose of datasets
- approved methods to reduce emissions or increase carbon storage
- formats used to report to the regulator.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources:
 - GPS tools, approved modelling tools and calculators
- specifications:
 - access to legislation, regulations and information about carbon farming methods and markets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCFP403 Identify opportunities and risks in carbon farming projects

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify the opportunities and risks involved in undertaking a carbon farming project for a given site/s.

The unit applies to individual land owners, land managers or members of a community, or other entity, who assess the opportunities and feasibility of starting up, or taking part in, a land-based carbon farming project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Carbon Farming (CFP)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify carbon farming opportunities	1.1 Identify potential site/s for carbon farming project 1.2 Consider land type, land use, local climate and investment 1.3 Consider carbon farming methods that may apply to selected site/s and associated social, cultural and economic benefits 1.4 Determine rights to lands, eligible interest holder groups and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	project boundaries 1.5 Investigate markets that offer carbon credits for approved carbon farming projects
2. Consider feasibility of the carbon farming project	2.1 Estimate total costs of project 2.2 Consider technological systems required to monitor project and collect, collate and record relevant data 2.3 Identify the management, governance and technical skills required to implement a carbon farming project 2.4 Assess requirement to contract suitably qualified or experienced personnel 2.5 Consider services that may be offered by carbon project developers, agents, aggregators and advisors
3. Consider financial aspects of the carbon farming project	3.1 Identify stakeholders and consultation processes 3.2 Estimate ongoing project costs 3.3 Roughly estimate anticipated carbon abatement 3.4 Investigate benefits of working with an agent or advisor who holds an Australian Financial Services Licence (AFSL) to identify financial risks 3.5 Assess risks of working with an agent or advisor who does not hold an AFSL
4. Analyse overall benefits and risks associated with carbon farming project	4.1 Analyse direct benefits and ancillary benefits of potential carbon farming project 4.2 Analyse risks associated with the implementation of the carbon farming project 4.3 Present a summary risk analysis document to stakeholders and make recommendations that provide options for carbon farming

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interpret material focussed on carbon farming funds and methods

Assessment Requirements for AHCCFP403 Identify opportunities and risks in carbon farming projects

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has identified the benefits and risks associated with a carbon farming project for a designated site, utilising at least one land-based method. This includes:

- identifying appropriate method for land type
- conducting a feasibility assessment
- assessing financial viability
- documenting and developing a summary analysis

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- carbon farming project methods to store carbon or avoid emissions from agricultural or land management activities
- implementation costs of a land-based carbon farming project method, including equipment, technology, preparation of land, service providers such as soil testing services, legal advice, engineering services, carbon advisor or agent
- ownership/leasing arrangements for site (that may need to be in place for up to 25 years)
- key questions to ask a carbon farming advisor or agent
- markets for carbon credits, including the Emissions Reduction Fund (ERF).

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources:

- designated site
- specifications:
 - access to information about carbon farming methods and markets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCFP404 Plan a land-based carbon farming project

Modification History

Release	Comments
Release 1	This version released with Agriculture Horticulture and Conservation and Land Management Training Package 4.0.

Application

This unit of competency describes the skills and knowledge required to plan a carbon farming project based on a land-based project method, to earn carbon credits through any carbon market.

The unit applies to individuals who may own or manage land and who wish to participate in an emissions reduction or carbon farming project. The unit may also apply to carbon project advisers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Carbon Farming (CFP)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Carry out preliminary planning activities	1.1 Establish eligibility to participate in the target carbon market method 1.2 Identify the project site/s including elements and features that will influence the project 1.3 Ascertain determined rights to land and project boundaries

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify the approved carbon farming method</p> <p>1.5 Identify how reductions in emissions and/or carbon storage will be measured for the method</p> <p>1.6 Determine the regulatory requirements of the method</p> <p>1.7 Seek free, prior and informed consent of people or organisations who hold an eligible interest in site/s</p> <p>1.8 Undertake preliminary cost-benefit analysis</p>
2. Prepare and develop the plan	<p>2.1 Identify responsibilities of owning and managing a carbon farming project</p> <p>2.2 Identify advisory services, management, governance and technical services required to implement project</p> <p>2.3 Identify equipment, tools and labour required to implement project</p> <p>2.4 Identify project risks and establish controls</p> <p>2.5 Prepare project timelines and key work tasks, taking seasonal factors and interdependencies into account</p> <p>2.6 Plan reporting and auditing schedules to comply with requirements of method</p> <p>2.7 Identify circumstances under which the market regulator will issue carbon credits or offsets</p>
3. Cost implementation of project	<p>3.1 Obtain current prices for equipment, technology, labour and advisory services to implement method</p> <p>3.2 Calculate overall costs to implement project</p> <p>3.3 Prepare an abatement estimate utilising method calculation, approved tool or expert advice</p> <p>3.4 Prepare return on investment analysis</p>
4. Present project plan	<p>4.1 Finalise project plan according to audit requirements of method</p> <p>4.2 Present plan to stakeholder for approval to participate in the targeted carbon market</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret carbon market planning and implementation guidelines
Numeracy	<ul style="list-style-type: none"> Estimate return on investment
Writing	<ul style="list-style-type: none"> Develop and document project plan

Assessment Requirements for AHCCFP404 Plan a land-based carbon farming project

Modification History

Release	Comments
Release 1	This version released with Agriculture Horticulture and Conservation and Land Management Training Package 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned a carbon farming project for one site, utilising one land-based method approved by the target market, including preparing a project plan that specifies:

- implementation costs
- anticipated return on investment
- project risks and risk management controls
- regulatory requirements of the fund in which to sell carbon credits.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation and regulations that guide the carbon fund
- latest version of the *Native Title Act 1993*
- dealing with multiple land interest holders (e.g. Indigenous groups, pastoralists and the Crown)
- carbon rights protocols for exclusive and non-exclusive native title holders
- consent rights for native title, Crown land and mining leases
- details of relevant approved carbon farming method including eligibility requirements, project area requirements, net abatement calculation requirements, monitoring, reporting and auditing requirements and further information sources
- how to plan and implement large scale projects relevant to method
- requirements for measuring emissions from land-based sources relevant to the method
- formats for organising and presenting financial, qualitative and quantitative information
- personal and professional liability
- duty of care

- managing environmental risk
- tools to estimate carbon abatement
- certification requirements of auditors and technical advisors, as specified by method
- benefits of working with an agent or advisor who holds an Australian Financial Services Licence (AFSL).

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources:
 - approved modelling tools and calculators
- specifications:
 - access to legislation, regulations and information about carbon farming methods and markets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCFP405 Increase carbon using vegetation and/or agricultural methods

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify the benefits of increasing carbon in the biosphere, using vegetation and agricultural methods, and to implement a project to reduce emissions or store carbon.

This unit does not cover increasing carbon in soil (refer to AHCCFP401 Increase soil organic carbon using land management practices).

The unit applies to individuals who participate in farming and/or land management activities. It may lead to participation in an approved carbon farming project to generate carbon credits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Carbon Farming (CFP)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify benefits of increasing carbon	1.1 Identify the role, and forms, of carbon in the environment 1.2 Analyse the benefits of increasing carbon

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Analyse the benefits of reducing greenhouse emissions 1.4 Determine vegetation and/or agricultural practices that increase carbon or reduce greenhouse emissions 1.5 Consider the associated social and cultural, environmental and economic benefits of increasing carbon
2. Identify co-benefits of increasing carbon in the biosphere	2.1 Identify land management practices to increase carbon using vegetation and agricultural methods 2.2 Consider the social and cultural, environmental and economic benefits of increasing carbon in the biosphere
3. Plan project to increase carbon	3.1 Identify appropriate site/s for project methodology 3.2 Choose strategy or method to increase carbon or reduce emissions 3.3 Identify equipment and resources required 3.4 Identify risks associated with undertaking the project 3.5 Carry out cost-benefit analysis of implementing the project 3.6 Plan strategy to measure or model carbon and record results
4. Implement and monitor project	4.1 Measure carbon as baseline for project and document 4.2 Implement project in line with selected method 4.3 Monitor project to maintain carbon storage or reduced emissions through changing conditions and document

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret written material focused on vegetation and/or agricultural carbon farming methods
Numeracy	<ul style="list-style-type: none"> Measure or model carbon specific to chosen method

Assessment Requirements for AHCCFP405 Increase carbon using vegetation and/or agricultural methods

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has increased carbon using vegetation and/or agricultural methods for a designated plot of land, including:

- identified the direct and associated benefits of increasing carbon
- identified method appropriate to plot of land
- assessed risks associated with project methodology
- calculated costs of carbon project
- planned and implemented a project to increase carbon or reduce greenhouse emissions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how land use and management practices impact on carbon
- land management vegetation practices that can increase carbon, such as avoiding clearing of native growth, farm forestry, plantations, controlled burning of savanna, and human-induced regeneration of native forest
- agricultural practices that can increase carbon and/or reduce emissions, such as changes to beef cattle herd management, destruction of methane, feeding dietary additives to cows, changed grazing regimes, and improved herd management
- co-benefits of increased carbon, including:
 - environmental benefits: improved biodiversity above and below ground, improved air, water and soil quality, reduced greenhouse gas emissions, improved movement of water across landscape, reduced salinity/erosion/acidification/compaction, increased resilience to drought, and increased land versatility
 - social benefits: including increased resilience to drought, more stable and diverse income, healthier people and communities, and improved succession planning

- economic benefits: including diversified income streams, increased farm productivity, access to finance, increased land versatility, new skills and career development, and less income spent on supplements and fertilisers
- informal methods for measuring carbon, including use of plots, and vegetation datasets
- industry-specific carbon calculators
- baseline measurements that allow scope for improvement
- approved methods for vegetation and agriculture-based carbon farming projects
- payments available for increasing carbon levels.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - designated plot of land or animal group
 - equipment and resources relevant to method
 - access to information about vegetation or agricultural carbon farming methods and practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCFP501 Advise on carbon farming project planning and implementation

Modification History

Release	Comments
Release 1	This version released with Agriculture Horticulture and Conservation and Land Management Training Package 4.0.

Application

This unit of competency describes the skills and knowledge required to provide advice on the processes involved in planning, implementing and monitoring carbon farming projects that utilise approved methods.

The unit applies to individuals who provide advice to land owners, eligible interest holder groups and land managers about implementing projects to earn carbon credits. This unit applies in the context of at least one approved carbon farming method to increase carbon storage or reduce emissions.

Note the term 'advice' referred to in this unit does not relate to financial advice which requires an Australian Financial Services License (AFSL). This unit does not address the skills or the generic knowledge requirements in 'ASIC Regulatory Guide 146 Licensing: Training of financial product advisors'.

Refer to FMSFMK512 Apply knowledge of emissions markets for skills and knowledge to engage with carbon funds.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCCFP501 Advise on carbon farming project planning and implementation

Modification History

Release	Comments
Release 1	This version released with Agriculture Horticulture and Conservation and Land Management Training Package 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has advised at least one potential client on carbon farming project planning and implementation, following the requirements of at least one approved carbon farming method. This includes:

- compliance requirements
- phases of project
- data collection requirements
- administrative requirements

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- requirements of approved methods, including:
 - project eligibility and scope
 - identifying the baseline scenario
 - project area
 - estimating abatement and/or carbon storage
 - data collection methods relevant to emissions avoidance and carbon storage
 - monitoring, record keeping and reporting
 - audit requirements
 - providers of audit services
 - commissioning audits
- legal requirements, regulations relating to project proponent requirements and project requirements, including:
 - creating and using a carbon credit account
 - applying for project registration

- implementing the project in accordance with the approved method
- writing and submitting reports and arranging audit reports
- applying for, and receiving, carbon credits
- closing and/or withdrawing from a project
- varying a project
- relinquishing carbon credits if required
- scheme oversight, institutions and governance
- equipment, specialist services and service providers required to plan and implement the project
- impact of differing crediting and reporting periods on project planning and implementation
- stakeholder responsibilities of owning and managing a project
- procedures for maintaining records
- project audit requirements and the providers of audit services
- role of carbon industry associations, carbon farming support networks and related codes of practice.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources:
 - access to carbon fund website and approved modelling tools and calculators
- specifications:
 - access to legislation, regulations and information about carbon farming methods and markets
- relationships:
 - access to clients.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCHM303 Prepare and apply chemicals

Modification History

Release	Comments
Release 3	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 2.0.
Release 2	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 1.1.
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to prepare and apply chemicals for the control of pests across a range of industry sectors.

This unit covers the use of general application equipment used across a variety of industries including; boom sprays, orchard air-blast sprayers, handheld spray equipment, wipers, dry chemical applicators, dips, pour-on, spot-on, vaccination and drenching equipment.

All work must be carried out to comply with workplace procedures, work hand safety and pesticide legislation and codes.

All work must be carried out to comply with chemical label instructions, Safety Data Sheets (SDS's), the organisation's application plan and relevant legislation.

This unit applies to individuals who work under broad direction and take responsibility for their own work and use discretion and judgement in the selection and use of available resources.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates should confirm the regulatory requirements that apply in their relevant State or Territory before undertaking this unit.

This unit may be deemed to have a time limit when used as part of an accreditation or licence process.

Pre-requisite Unit

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine the need for chemical use and prepare an application plan	1.1 Identify the nature and level of the pest, weed infestation or disease, assess the need for control 1.2 Assess the requirement for chemical use as an option within an integrated pest management strategy 1.3 Undertake a hazard and risk analysis of different chemical options 1.4 Confirm requirement for chemical application 1.5 Assess the spray drift risk of various application options 1.6 Assess the risk to sensitive areas and environmentally sensitive organisms 1.7 Prepare application/spray plan where required
2. Prepare chemical mixes	2.1 Access the workplace application or spray plan to determine chemical and target, application rate or dose, type of application equipment, set-up requirements and amount to be applied as per the label instructions 2.2 Identify potential hazards, assess risks and implement control measures 2.3 Interpret and apply requirements from chemical labels 2.4 Select appropriate personal protective equipment (PPE) for each stage of work and ensure correct fit 2.5 Select appropriate mixing equipment and a suitable location for mixing and loading 2.6 Mix chemicals in accordance with registered use and clean

Element	Performance criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	equipment when finished task 2.7 Follow label instructions in the event of a spill 2.8 Confirm that neighbours have been notified of chemical application as appropriate
3. Calibrate application equipment	3.1 Select application equipment to be used to minimise spray drift risk and maximise efficacy 3.2 Carry out pre-operational checks of application equipment 3.3 Calibrate equipment in accordance with manufacturers' specifications and application/spray plan. 3.4 Safely load chemical mix wearing appropriate Personal Protective Equipment (PPE) and controlling risks to human health and the environment
4. Apply chemicals	4.1 Monitor meteorological conditions and forecasts prior to and during application to minimise spray drift and other off target movement of chemicals 4.2 Select and use appropriate PPE in accordance with chemical label and SDS's 4.3 Apply chemical in accordance with the label and application/spray plan 4.4 Assess and minimise risks to others, product integrity and the environment 4.5 Follow chemical spill or accident procedures in the event of a spill
5. Clean up equipment and complete records	5.1 Dispose of excess chemicals and containers as per label and SDS instructions 5.2 Clean and decontaminate application equipment in appropriate location 5.3 Clean and store personal protective equipment in appropriate location 5.4 Report incidents 5.5 Complete all records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Release 2	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 1.1.
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 1.0.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine the need for chemical application
- develop an application/spray plan
- identify hazards and implement risk control procedures to ensure a safe workplace
- interpret and apply chemical label requirements included in the application or spray plan
- identify weather conditions that impact on spray drift risk and implement control measures
- conduct pre-operational checks of application equipment
- calibrate handheld and/or powered application equipment relevant to the industry sector
- mix and load chemicals in accordance with label requirements
- measure and record weather conditions before and during and after application
- apply chemicals safely in compliance with labels, legislation and codes of practice
- dispose of surplus chemicals and empty containers
- record relevant information including amount of chemical applied
- use appropriate personal protective equipment
- follow emergency procedures during an accident or spillage.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- options for pest control based on the Integrated Pest and Resistance Management Plan
- pest and/or disease resistance management
- various chemical labels and SDS formats
- impact of meteorological factors on the safe and effective application of chemicals
- factors that determine spray drift risk including droplet size, wind speed, temperature and temperature inversions and approaches to controlling spray drift risk
- risk factors including human and animal health, weather prior to, during and after application, spillage, residues in plants and animals consumed as food and environmental
- how to mix chemicals including mixing order, adjuvants and water quality
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- how to select, operate and use a variety of application equipment including boom sprays
- features, functions and calibration techniques for a range of powered and hand held application equipment relevant to the industry sector
- spray nozzle identification, selection, operation and use
- pests, weeds and/or diseases relevant to the industry sector
- legislation, regulations and licensing requirements in relation to chemical use
- APVMA policy on spray drift management.

Assessment Conditions

Competency is to be assessed in the workplace OR simulated environment that accurately reflects performance in a real workplace setting.

The candidate must be assessed at least once calibrating application equipment.

Assessors must satisfy current standards for RTOs.

Application

This unit of competency describes the skills and knowledge required to prepare a basic application plan, prepare chemicals and equipment and apply chemicals for the control of identified pests, weeds or diseases using hand held application equipment.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

Assessment Requirements for AHCCHM306 Prepare and apply chemicals for hand held application equipment

Modification History

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have prepared and applied chemicals using hand held application equipment, including:

- determined the need for chemical application by assessing the specific infestation
- developed an application plan according to workplace procedures
- identified health and safety hazards, risk and implemented control procedures and used personal protective equipment (PPE) according to workplace procedures
- notified stakeholders of planned chemical application
- interpreted chemical labels and applied chemical according to manufacturer requirements, safety data sheets (SDS) and application plan
- determined the chemical application parameters according to workplace and
- complied with manufacturer requirements, regulations and environmental factors
- monitored and assessed weather conditions for application
- selected and conducted pre-operational checks of equipment according to operator instructions
- completed at least one calibration activity for hand held application equipment
- mixed and loaded chemicals in accordance with label and application plan
- cleaned equipment, spills and disposed of waste according to procedures
- maintained records and reported incidents according to workplace procedures and regulations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- control options when selecting chemicals for pest, disease and weed control, including:
 - chemical
 - cultural
 - biological
 - Integrated Pest Management
- parameters affecting the selection of chemical and equipment for application, including:
 - common pests, weeds and diseases
 - rate of application
 - type of application equipment
 - set-up requirements
 - pest and disease resistance
- chemical labels, SDS reading and interpretation
- impact of weather factors on the safe and effective application of chemicals
- factors that determine off target contamination, including:
 - physical movement of chemicals (e.g. animals moving baits or soil movement)
 - chemical formulation
 - droplet size
 - wind speed
 - temperature
 - temperature inversions
 - controlling spray drift and air concentrations
- risk factors of chemical application, including:
 - human and animal health
 - spillage
 - residues in environment, plants and animals
 - withholding periods
- preparing chemicals including mixing order, compatibility, adjuvants and water quality
- requirements for disposal of excess chemicals, clearing spillages and equipment clean up
- selecting and operating suitable hand held application equipment, including:
 - operation and use
 - features, functions
 - calibration techniques
 - nozzle identification and selection
- legislation, regulations and licensing requirements in relation to chemical use
- stakeholders and required notifications including, neighbours, staff and statutory notifications
- health and safety in the workplace hazards, risks and controls including PPE
- regulatory and industry policies on off target management.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - chemicals
 - PPE
 - application equipment
 - chemical measuring and mixing equipment
- specifications:
 - specific workplace documents, including work instructions and procedures for chemical application
 - chemical labels and SDS
 - legislation and regulations about use of chemicals
 - manufacturers' operation and maintenance instructions for equipment
 - access to weather reports.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCHM406 Provide advice and sell farm chemicals

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify customer needs, provide advice, sell, handle and maintain farm chemicals.

The unit applies to individuals who apply specialist skills and knowledge to providing advice and selling farm chemicals. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Chemicals (CHM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish customer needs	1.1 Use interpersonal skills to engage customer and identify needs 1.2 Handle customer enquiries courteously and promptly according to workplace procedures and legislative requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Match available products to customer needs and environmental considerations
2. Research and provide product advice	<p>2.1 Research and update knowledge and understanding of farm chemicals and related products from authoritative sources</p> <p>2.2 Research local workplace and district requirements for farm chemical products</p> <p>2.3 Provide advice to customer in a timely and professional manner according to workplace procedures and legislative requirements</p> <p>2.4 Consider and discuss environmental considerations, non-chemical alternatives and additional products</p> <p>2.5 Address customer concerns and questions</p> <p>2.6 Check that information and directions on the product label are understood by the customer</p> <p>2.7 Provide safety information to the customer for recommended products</p> <p>2.8 Prepare and supply quotations according to workplace procedures</p>
3. Sell products	<p>3.1 Check relevant licences or accreditation regarding the sale and handling of farm chemicals are held by salesperson and workplace</p> <p>3.2 Complete sales to maximise potential for customer satisfaction according to workplace procedures and legislative requirements</p> <p>3.3 Supply Safety Data Sheets (SDS) to customers purchasing registered chemicals</p> <p>3.4 Identify and respond to opportunities for add-on and repeat sales</p>
4. Complete sales documentation and maintain products	<p>4.1 Handle and store farm chemical products safely and efficiently according to workplace health and safety and manufacturer requirements, and chemical legislation and regulations</p> <p>4.2 Complete sales documentation according to workplace procedures</p> <p>4.3 Monitor sales results against specified criteria</p> <p>4.4 Review sales techniques to enhance future sales results</p> <p>4.5 Monitor stock levels and follow reordering procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about farm chemicals, non-chemical alternatives and related product range, and legislative requirements Interpret product labels and SDS for farm chemicals
Writing	<ul style="list-style-type: none"> Record product sales and reordering
Oral communication	<ul style="list-style-type: none"> Use clear language with customers to gather information and match products to customer needs, explain products and suggest non-chemical alternatives and additional products and services
Numeracy	<ul style="list-style-type: none"> Calculate farm chemical product formulations

Assessment Requirements for AHCCHM406 Provide advice and sell farm chemicals

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided advice and sold farm chemicals on at least three occasions, and has:

- engaged with and advised customer on the range of products available, received information and created additional sales opportunities
- complied with relevant legislative requirements in sales environments, including; fair trading, trade practices and sale of goods legislation and public liability
- represented the workplace in a professional manner when dealing with customers
- researched farm chemical supplier information to retain technical currency in all aspects of farm chemicals relevant to local district requirements
- applied workplace procedures for providing advice on farm chemicals and related products
- discussed benefits of products and non-chemical alternatives
- supplied Safety Data Sheets (SDS) with all registered chemicals
- encouraged add on sales and repeat sales
- applied workplace health and safety procedures for the safe handling of farm chemicals and related products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of customer service and sales techniques
- requirements of local or specific customers for farm chemicals
- legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- workplace procedures for providing advice on farm chemicals and related products
- potential environmental impact of chemicals

- chemical formulations, available proprietary products and their applications
- the content and legal status of registered chemical labels
- hazardous chemical (HAZCHEM) code, Australian Dangerous Goods Code, pesticides and environmental legislation, chemical safety legislation and regulations, and workplace health and safety procedures relevant to the safe handling of farm chemicals and related products
- licences or accreditation relevant to the sale and handling of farm chemicals.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - farm chemicals
 - SDS for registered chemicals
- specifications:
 - legislative requirements relevant to sales environments, including fair trading, trade practices and sale of goods legislation and public liability
 - workplace procedures for providing advice on farm chemicals and related products
 - HAZCHEM code, Australian Dangerous Goods Code, pesticides and environmental legislation, chemical safety legislation and regulations, and workplace health and safety procedures relevant to the safe handling of farm chemicals and related products
- relationships:
 - customers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCCMN102 Apply effective work practices

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to plan and complete tasks effectively within a workplace environment, including working with others, using technologies and solving simple work problems.

This unit is designed for use in a Pathway qualification or skills set. It should not be used in a qualification that has a direct job outcome.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common (CMN)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Plan, organise and complete daily work	1.1 Identify and interpret work instructions and priorities in consultation with supervisor 1.2 Determine and map out appropriate work plan or daily routine 1.3 Determine, collect and organise materials, resources and information needed to complete work

Element	Performance criteria
	1.4 Complete work tasks within designated timelines and in line with quality standards and instructions 1.5 Follow work health and safety policies 1.6 Deal with problems that arise in a practical, timely and appropriate manner and seek assistance when required 1.7 Seek feedback on work performance and make improvements as required
2. Communicate effectively	2.1 Identify appropriate lines of communication with supervisors, colleagues and customers 2.2 Use effective communication skills as well as literacy and numeracy skills, to gather and convey information 2.3 Demonstrate appropriate non-verbal behaviour
3. Work with others	3.1 Identify work roles of self and others in the workplace 3.2 Contribute to team outcomes in a manner that fulfils own work responsibilities and promotes cooperation and good relationships 3.3 Interact respectfully with customers and colleagues from diverse backgrounds
4. Use workplace technology	4.1 Select appropriate workplace technology to complete work tasks and use according to workplace and manufacturer guidelines and instructions 4.2 Inspect workplace technology to ensure it is working properly and take precautions to reduce risks to technology and self 4.3 Take appropriate action to address or report problems with workplace technology 4.4 Care for workplace technology according to workplace and manufacturer guidelines and instructions
5. Solve work problems	5.1 Identify problems and determine practical or creative solutions within scope of individual responsibility 5.2 Seek assistance from key personnel when required 5.3 Report workplace problems as required using workplace procedures
6. Adapt to change	6.1 Identify, clarify and accommodate new work requirements or situations 6.2 Identify possible practical or creative options to deal with workplace challenges, and discuss with supervisor

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AGFCMN102A Apply effective work practices.

Assessment Requirements for AHCCMN102 Apply effective work practices

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret responsibilities and plan own work activities
- follow work health and safety policies
- apply relevant ethical practices and codes of practice in the course of work activities
- recognise simple numerical information relating to work activity
- communicate effectively in the course of work activities
- complete work activities in collaboration with others according to instructions, procedures and applicable regulations
- identify, report and address problems according to workplace procedures
- complete work activities with required attention to detail and without damage to goods, equipment or personnel
- use a range of workplace technologies
- use industry standard terminology

Knowledge Evidence

The candidate must demonstrate knowledge of:

- procedures for identifying and using relevant workplace technology
- systems and equipment used in the workplace and instructions, processes and precautions for their use
- typical problems in the workplace and appropriate action and solutions
- workplace procedures, policies and instructions
- workplace structures and roles and responsibilities of individuals, and team and group members
- basic principles of teamwork in the workplace

- verbal and non verbal communication techniques appropriate to receive and convey workplace information
- basic concepts of time management to meet daily planning and scheduled timelines
- industry and enterprise work health and safety policies

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCCMN201 Contribute to animal care through work activities

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to identify what 'animal care' means in a workplace and how one's own individual responsibilities contribute to animal care as a whole within a specific workplace or industry.

It may or may not include hands-on animal care but more importantly includes being part of a whole system that supports and contributes to animal care.

The unit also includes contributing to animal care through the use of an appropriate mix of technical skills, handling unexpected contingencies in relation to animal care, and reflecting on animal care procedures in order to make improvements to one's own work. All activities are carried out under supervision.

This unit is designed for use in a Pathway qualification or skills set. It should not be used in a qualification that has a direct job outcome.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common (CMN)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify and plan appropriate animal care approach	1.1 Identify workplace approach to working with animals, and describe in relation to work activity 1.2 Identify individual responsibilities in contributing to animal care 1.3 Identify workplace products, services, operations and customers 1.4 Identify safe work practices relevant to work activity 1.5 Identify appropriate capture and restraint requirements and equipment, where required 1.6 Map out animal care strategy based on workplace requirements and individual responsibility, and apply to work activity
2. Contribute to animal care using a mix of technical skills	2.1 Organise food preparation equipment according to task needs 2.2 Recognise common animal behaviours for the species and take appropriate action 2.3 Care for animals and feed and water according to animal welfare standards and health and safety procedures and standards 2.4 Identify tools and equipment and use safely and according to enterprise requirements 2.5 Accurately count stock levels as required 2.6 Groom animals according to enterprise and animal welfare policy as required
3. Work with others and handle unexpected contingencies	3.1 Respond to requests that effect work activity and animal care courteously, clearly, professionally and efficiently 3.2 Seek assistance with issues relating to animal care from other staff when required and in a timely manner 3.3 Keep key personnel informed of progress of animal care activity and provide clear explanations regarding issues in regards to animal care 3.4 Identify and report on physical and behavioural hazards
4. Reflect on animal care procedures	4.1 Reflect on personal performance in relation to working with animals and discuss possible improvements with supervisor 4.2 Apply improvements to work practice 4.3 Identify possible improvements to animal care procedures and discuss with key personnel

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AGFCMN201A Contribute to animal care through work activities.

Assessment Requirements for AHCCMN201 Contribute to animal care through work activities

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply basic principles of animal ethics and welfare
- adapt and modify activities depending on differing workplace contexts and environment
- apply animal-observation skills
- apply relevant industrial or legislative requirements
- identify and use equipment, tools and other technology required to complete workplace tasks
- follow relevant work health and safety and environmental protection procedures and requirements
- identify species using common names
- interpret and follow a designated work plan or set of instructions for a job
- keep required records of workplace activities
- plan a daily routine to complete required workplace tasks
- applying technical skills in animal care including:
 - preparing and providing food and water
 - grooming
 - counting stock
- recognising common animal behaviours and determining required response
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with staff and others
- recognise limitations, ask for help and seek clarification or information about work requirements and procedures
- demonstrate appropriate initiative to deal with problems or refer them where appropriate to relevant person, and complete tasks
- apply time-management skills

- use basic interpersonal and communication skills, including listening, questioning and receiving feedback
- use routine capture and restraint procedures
- work cooperatively and collaboratively with others to complete tasks

Knowledge Evidence

The candidate must demonstrate knowledge of:

- basic principles of animal ethics and welfare
- codes of practice relating to work requirements
- diseases and pests, disease prevention and routine health care
- feeding and watering procedures
- hazards in the workplace
- health and safety requirements relating to care of animals
- capture and restraint procedures
- techniques for grooming animals
- common animal behaviours and appropriate responses
- quarantine requirements
- terminology relevant to animal care

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

AHCCMN202 Contribute to work activities to produce food

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit covers the skills and knowledge needed to contribute to work activities that help to produce food. Food in this context refers to product from animal, seafood and plant sources. Producing food may involve hands-on activities, such as seeding, weeding, hoeing and feeding stock (fish or animals), as well as post-harvest activities. It includes being part of a whole system that supports and contributes to producing food.

This unit is designed for use in a Pathway qualification or skills set. It should not be used in a qualification that has a direct job outcome.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Common (CMN)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify and plan appropriate activities	1.1 Identify workplace approach to producing food and describe in relation to work activity 1.2 Identify individual responsibilities in contributing to producing

Element	Performance criteria
	food 1.3 Identify workplace products, services, operations and customers 1.4 Identify safe work practices relevant to work activity 1.5 Plan and implement activities to meet workplace requirements
2. Use an appropriate mix of technical skills	2.1 Prepare machinery, equipment and tools required to conduct work, and use safely and in accordance with work procedures 2.2 Apply technical skills to support food production and supply 2.3 Handle produce in a way that minimises damage 2.4 Maintain temperature of produce at appropriate levels 2.5 Clean, maintain and sort machine and equipment according to manufacturer or workplace specifications 2.6 Apply safe work practices to food production activities 2.7 Conduct housekeeping in work area 2.8 Complete workplace documentation
3. Contribute to postharvest treatment of produce where required	3.1 Apply post-harvest treatments where relevant 3.2 Grade and label produce where relevant 3.3 Deal with waste material produced during post-harvest handling process, according to supervisor instructions
4. Handle unexpected contingencies	4.1 Respond to requests that effect work activity courteously, clearly, professionally and efficiently 4.2 Seek assistance with issues relating to work from other staff when required and in a timely manner 4.3 Keep key personnel informed of work progress and provide clear explanations regarding issues 4.4 Identify and report on physical and behavioural hazards
5. Reflect on procedures used to produce food or plants	5.1 Reflect on personal performance and discuss possible improvements with supervisor 5.2 Apply improvements to work practice 5.3 Identify possible improvements to food production procedures and discuss with key personnel

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AGFCMN202A Contribute to work activities to produce food.

Assessment Requirements for AHCCMN202 Contribute to work activities to produce food

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- adapt and modify activities depending on differing workplace contexts and environments
- apply relevant industrial or legislative requirements
- apply technical skills to support food production, including one or more of:
 - seeding
 - weeding
 - hoeing
 - feeding stock (fish or animals)
 - packing produce
- handle produce safely and according to workplace requirements
- follow enterprise requirements for market specification of products
- follow relevant food safety, work health and safety and environmental protection procedures and requirements
- grade, label and treat produce according to enterprise and customer specifications
- identify and use equipment, tools and other technology required to complete workplace tasks
- interpret and follow a designated work plan or set of instructions for a job
- maintain required records of workplace activities
- maintain work area housekeeping standards
- monitor environment of storage facility
- plan a daily routine to complete required workplace tasks
- recognise and adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with staff and others

- recognise limitations, ask for help and seek clarification or information about work requirements and procedures
- demonstrate appropriate initiative to deal with problems or refer them where appropriate to relevant person
- use appropriate techniques to solve or report problems identified when completing work tasks
- use basic interpersonal and communication skills, such as listening, questioning and receiving feedback
- use required machinery and equipment appropriately
- work cooperatively and collaboratively with others to complete tasks

Knowledge Evidence

The candidate must demonstrate knowledge of:

- handling requirements for produce
- enterprise storage facilities and their maintenance
- enterprise quality procedures
- food safety regulations
- humidity levels and their effect on quality of produce
- hygiene issues in handling and storing horticultural, agricultural and seafood products intended for human consumption
- industry standards for grading and labelling
- post-harvest treatments for various horticultural, agricultural and seafood products
- temperature settings within storage facilities
- relevant storage methods
- correct storage temperatures for a range of produce
- safe work practices relevant to work activities
- housekeeping standards and practices
- procedures for one or more of:
 - seeding
 - weeding
 - hoeing
 - feeding stock (fish or animals)
 - packing produce
- operating and cleaning procedures for required machinery, equipment and tools

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCDES401 Apply construction techniques to landscape design

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to incorporate constructed elements into landscape designs, within site and budgetary requirements, and seek technical and specialist expertise.

The unit applies to individuals who apply specialist skills and knowledge to the application of construction techniques to landscape design. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Design (DES)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Incorporate structures and features into a landscape design	1.1 Identify and locate design structures and features to maximise efficient use of the space 1.2 Identify and source any required preliminary specialist expertise 1.3 Select materials that reflect the style and aesthetic of overall design concept

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Assess suitability of constructed elements in relation to physical properties of soils on site</p> <p>1.5 Assess effects of surface and subsurface water and drainage patterns on constructed elements</p> <p>1.6 Assess drainage requirements to ensure integrity of constructed elements in design</p>
2. Determine construction requirements	<p>2.1 Evaluate factors that impact on selection and construction of elements in the design</p> <p>2.2 Select materials according to properties and application within the design</p> <p>2.3 Determine construction techniques that support design, fit timelines and meet budget requirements</p> <p>2.4 Identify surface treatments appropriate for selected materials and design</p>
3. Assess the need for supplementary water in a landscape design	<p>3.1 Identify available water in the landscape</p> <p>3.2 Determine the feasibility of using available water in the landscape</p> <p>3.3 Identify appropriate irrigation methods to support the design</p> <p>3.4 Incorporate irrigation requirements into the design or design documentation</p>
4. Source technical services and expertise	<p>4.1 Determine construction requirements beyond the scope of own expertise</p> <p>4.2 Determine and consult with technical and specialist services beyond own scope of expertise as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding design concept requirements

Skill	Description
Oral communication	<ul style="list-style-type: none"> Initiate discussions, using clear language and standard industry terminology to discuss and determine construction requirements
Numeracy	<ul style="list-style-type: none"> Estimate construction budget and timelines Take and record measurements Calculate quantities and cost of construction materials

Assessment Requirements for AHCDES401 Apply construction techniques to landscape design

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied construction techniques to landscape designs on at least one occasion, and has:

- selected, in consultation with appropriate specialist representatives, appropriate construction methods for structures and features to suit site specific soil properties
- identified and modified natural drainage patterns
- determined appropriate drainage systems for the landscape design
- incorporated into a landscape design constructed elements and drainage that meet the aesthetic and physical requirements of the site
- assessed the need for supplementary water and suitability of available water on site to support landscape design
- identified and specified where required appropriate waterwise irrigation systems
- recognised limits of own expertise and sourced providers of technical services and specialist expertise when required.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- landscape features and elements commonly used in landscape design projects
- specialist and technical services commonly involved in the construction of landscape design projects
- physical soil properties and their impact on constructed features
- natural drainage patterns and modification methods
- movement of water through soil
- purpose and application of drainage systems
- properties of construction materials commonly used in landscape design projects

- construction techniques commonly required for landscape design projects
- purpose and application of hydro zoning
- different methods of irrigation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - design concepts, construction drawings, site plans and specifications
 - software and hardware to source and document information
- specifications:
 - construction material manufacturer specifications
- relationships:
 - technical and specialist representatives
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCDES402 Apply sustainability principles to landscape design

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied sustainability principles to landscape design on at least one occasion, and has:

- analysed and applied the principles of sustainability in landscape design to evaluate designs and make recommendations on improving sustainability
- applied relevant workplace health and safety and environmental legislation, regulations and workplace procedures
- interpreted specifications and plans
- evaluated landscape designs and made recommendations for improvements
- sought, analysed and applied feedback from key stakeholders on recommendations to improve sustainability.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of sustainability and their application to landscape design, including:
 - environmental, ecological, economic and social resources relevant to sustainable design
 - sustainable use of resources in the landscape
 - materials commonly used in landscape design
 - systems-based thinking
 - cradle-to-cradle design, including life cycle mapping and assessment
 - alternative design strategies
- workplace health and safety and environmental legislation and regulations and workplace procedures relevant to sustainable landscape design
- sustainable design principles, including ensuring that natural and built landscape:

- preserves, improves and protects existing water catchments
- harvests water if appropriate
- minimises the depletion of materials and resources
- minimises the use of energy
- minimises land degradation
- attaches value to and preserves in-situ soils
- allows for carbon sequestration
- uses plants that contribute to and enhance the future environment
- maintains biodiversity through healthy ecosystems
- designs for habitat
- improves the wellbeing of humankind and all living organisms
- minimises waste.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - landscape designs
 - site information, documentation and data applicable to sustainable landscape design
- specifications:
 - legislation, standards, policies and procedures relevant to sustainable landscape design
 - workplace health and safety and environmental legislation and regulations and workplace procedures applicable to sustainable landscape design
- relationships:
 - key stakeholders
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCDES403 Develop landscape designs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed a landscape design on at least one occasion, and has:

- developed a design brief in consultation with client to determine their requirements
- negotiated and established design timelines and budget
- applied relevant workplace health and safety and environmental legislation, regulations and workplace procedures
- assessed landscape sites
- analysed the impact of soils, topography, aspect, existing vegetation, neighbouring elements, levels and climatic factors on individual landscape designs
- researched, interpreted and applied local council, legislative and regulatory requirements relevant to landscape design
- consulted with clients to negotiate and confirm any modifications or changes to design concept
- assessed design against client budget
- selected plants for the landscape design that meet the brief and are appropriate for the site conditions
- developed scaled designs that meet client regulatory and site requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of developing landscape designs, including:
 - landscape design costing and budgeting practices
 - Australian standards relevant to landscape design

- drafting techniques for landscape plans and drawings, including conventional symbols and notations
- site functional analysis techniques relevant to landscape design
- scaled concept drawings and landscape plans
- format and layout of landscape designs
- available materials and their applications and restrictions relevant to landscape design
- plant selection and culture, and planting schedule relevant to landscape design
- design principles relevant to landscape design
- workplace health and safety and environmental legislation, regulations and workplace procedures relevant to landscape design and construction
- local council, legislative and regulatory requirements relevant to landscape design, including:
 - heritage overlays
 - building covenants
 - easements and underground cables
 - landscape and vegetation preservation orders and overlays
 - flood and fire overlays.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - client brief and budget
 - landscape site
 - site information applicable to landscape design
 - computer software and hardware to source and document information
- specifications:
 - Australian standards relevant to landscape design
 - local council, legislative and regulatory requirements applicable to landscape design
 - workplace health and safety and environmental legislation, regulations and workplace procedures applicable to landscape design
- relationships:
 - client
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDES404 Prepare simple landscape drawings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to produce simple drawings that communicate landscape design ideas, options and concepts to clients.

The unit applies to individuals who apply specialist skills and knowledge to prepare simple landscape drawings. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Design (DES)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine simple landscape requirements	1.1 Identify type of drawing required to describe design according to scope and complexity of job being undertaken 1.2 Identify existing key features to be recorded 1.3 Identify and assemble required tools and equipment 1.4 Identify and interpret site surveys, architectural drawings and statutory requirements relevant to site

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Produce simple landscape draft sketches and drawings	2.1 Determine workplace health and safety requirements applicable to worksite 2.2 Inspect worksite as required to take and record measurements 2.3 Select appropriate scale for drawing 2.4 Create simple two and three-dimensional drawings using standard drawing conventions and incorporating relevant codes and standards 2.5 Create drawings of simple elements including plan view and site analysis plans using standard drawing conventions 2.6 Create elevation drawings of simple landscape elements using standard drawing conventions
3. Notate and process drawings	3.1 Record essential information on drawing with symbols and abbreviations according to standard drawing conventions 3.2 Label, date and process drawings according to workplace administration and quality procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret and evaluate detailed technical information to prepare simple landscape drawings
Writing	<ul style="list-style-type: none"> Record essential drawing information and notations using correct conventions and terminology
Numeracy	<ul style="list-style-type: none"> Identify and record scales, dimensions, measurements, symbols and other numerically expressed information required for simple landscape drawings

Assessment Requirements for AHCDES404 Prepare simple landscape drawings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared simple landscape drawings on at least one occasion and has:

- identified and confirmed scope of drafting works
- interpreted site surveys and architectural drawings
- produced two and three-dimensional and sectional drawings appropriate to the job being undertaken
- applied standard landscape drawing conventions to produce clear and accurate drawings, including:
 - annotation styles
 - drawing types
 - key features
 - drawing tools and equipment
- applied numeracy skills to calculate and record scales, dimensions, measurements and symbols
- processed completed drawings according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- standard landscape drawing conventions, principles and practices, including:
 - annotation styles
 - types of drawings, including; orthographic drawings, site analysis plans, concept plans, plan view, and elevation drawings
 - key features, including: levels and variations, gates, lighting, power and water supplies, services, walls, existing vegetation, existing structures and footings

- hardware, software, tools and equipment used for preparing simple landscape drawings.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - site surveys, architectural drawings and statutory information applicable to producing simple landscape drawings
 - drawing tools and equipment
- specifications:
 - calculation and drawing requirements applicable to producing simple landscape drawings
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDES405 Produce 2-D landscape drawings using CAD software

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to produce two-dimensional (2-D) drawings for landscape designs using computer-aided design (CAD) software for residential, commercial or public open space projects.

The unit applies to individuals who apply specialist skills and knowledge to produce 2-D landscape drawings using CAD software. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced two-dimensional (2-D) landscape drawings using computer-aided drawing (CAD) software on at least one occasion and has:

- used features and functions of CAD software to produce 2-D landscape drawings
- applied creative design, drawing and drafting skills, including:
 - characteristics and annotated styles
 - drafting methods
 - drafting technologies
 - drafting equipment
- clarified drawing requirements with client or relevant project personnel
- applied Australian standards and design drawing requirements relevant to producing 2-D landscape drawings
- followed CAD operating instructions and workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of drawing 2-D landscape drawings using CAD software, including:
 - drawing requirements, protocols and features relevant to landscape drawings
 - CAD hardware, software, tools and equipment used for drawing 2-D landscape drawings
 - CAD operating instructions
 - CAD software program features and functions, including; drawing tools, view displays, edit functions, working with layers, plotting, printing and file save functions
 - workplace digital file management procedures

- Australian standards, workplace procedures and design drawing requirements relevant to producing 2-D landscape drawings.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plans specifications and design briefs applicable to producing 2-D landscape drawings using CAD software
 - CAD software, hardware, printers and peripheral equipment
- specifications:
 - CAD operating instructions
 - Australian standards, workplace procedures and design drawing requirements relevant to producing 2-D landscape drawings
- relationships:
 - client or relevant project personnel
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDES505 Prepare a landscape design

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to develop a design brief, assess the site, prepare a concept of design, revise and amend design, and produce final landscape design for a large project on residential, commercial or public open spaces.

The unit applies to individuals who apply specialist skills and knowledge to surveying and establishing site levels, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Design (DES)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a design brief	1.1 Consult with client to establish purpose and requirements of design

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Interpret and incorporate architectural designs, styles and details into design brief</p> <p>1.3 Develop design criteria and design brief, and consult with client to finalise agreement of brief and construction budget</p> <p>1.4 Negotiate cost structures of design development and timelines with client</p>
2. Assess the project site	<p>2.1 Inspect site of the landscape project</p> <p>2.2 Record physical elements and features of site on base plan</p> <p>2.3 Assess soil conditions, topography, aspect, existing vegetation and climatic factors and record on site analysis</p> <p>2.4 Complete functional analysis of existing site and record on base plan</p> <p>2.5 Assess any other relevant information and record on site analysis or base plan</p> <p>2.6 Research and identify opportunities and constraints on development including local council, legislative and regulatory requirements</p>
3. Prepare a concept design	<p>3.1 Prepare concept to illustrate location and layout of proposed landscape works according to design brief</p> <p>3.2 Specify hard landscaping requirements, including irrigation, demolition and removal of existing features and installation of new works</p> <p>3.3 Compile planting schedules for incorporation into design plan</p> <p>3.4 Apply industry practice and consistent graphic styles to concept design</p> <p>3.5 Consult with client to establish agreement on options and approaches for design development</p>
4. Revise and amend design development documentation	<p>4.1 Select materials, surface treatments and plants</p> <p>4.2 Identify construction and drainage requirements, and seek specialist advice where required</p> <p>4.3 Research and apply appropriate landscape construction principles to landscape design according to national construction code and Australian standards</p> <p>4.4 Assess design development documentation against design brief</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and budget 4.5 Discuss design development documentation with client and seek agreement
5. Produce a final design	5.1 Include specifications, detail drawings and notes on design to assist interpretation 5.2 Finalise and document detailed design plan according to design brief, concept design and client consultations using industry standard graphic, text and layout styles 5.3 Present final design to client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding local council, legislative and regulatory requirements

Assessment Requirements for AHCDES505 Prepare a landscape design

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a landscape design on at least one occasion and has:

- developed a design brief in consultation with client to establish design purpose and requirements
- consulted with clients
- interpreted architectural designs and details
- negotiated and established design budget
- assessed landscape sites
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- researched, interpreted and applied local council, legislative and regulatory requirements relevant to landscape design and construction
- designed scaled concept drawing and construction plans
- specified hard landscaping requirements
- used industry standard graphic techniques to illustrate landscape design components
- identified and selected plants for the landscape design
- identified dimensions and qualities of materials
- applied national construction code and Australian standards relevant to landscape design and construction
- determined survey levels, site grading and drainage requirements
- implemented professional landscape design practices
- assessed design against client budget
- operated Computer-Aided Design (CAD) software
- drafted plans by hand.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of preparing a landscape project design, including:
 - interpreting client budget and design requirements
 - an understanding of own role and the use of specialist advice, including structural engineers and hydrologists
 - landscape construction and design costing and budgeting principles
 - landscape construction and engineering principles relevant to landscape design
 - hard landscaping requirements, including irrigation
 - national construction code and Australian standards relevant to landscape design and construction
 - drafting techniques for landscape plans and drawings
 - functional analysis techniques relevant to landscape design
 - scaled concept drawings, landscape plans and construction drawings
 - determining survey levels, site grading and drainage requirements
 - environmental implications of landscape project works
 - products and materials relevant to landscape design and construction
 - botany, plant physiology, taxonomy and nomenclature relevant to landscape design
 - how to identify and treat soils for application in landscape works
 - plant identification, selection and culture, and planting schedule
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to landscape design and construction
- local council, legislative and regulatory requirements relevant to landscape design and construction.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - client brief and budget
 - landscape site
 - site information and data applicable to sustainable landscape design and construction
 - computer hardware and CAD software
- specifications:
 - national construction code and Australian standards relevant to landscape design and construction

- local council, legislative and regulatory requirements applicable to landscape design and construction
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures applicable to landscape design and construction
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCDES506 Design for construction of landscape features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed for construction of landscape features on at least three occasions and including a minimum of five different construction features, and has:

- consulted with client
- identified and recorded survey levels, site gradients, elevations, existing site structures and vegetation
- drawn plans to construction standards, client requirements and budget
- drawn drainage plans according to national construction codes (NCC) and landscape design concept
- selected appropriate landscape construction materials
- specified dimensions, footings, quantity and quality of materials
- documented and presented project timelines, final design, project budget and project report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of designing for construction of landscape features, including:
 - NCC relevant to designing for construction of landscape features
 - drainage issues and the available resources to resolve problems
 - how to select appropriate plants and materials
 - materials available in the marketplace and their quality
 - plant specifications for a range of plants appropriate to the design
 - principles of surveying and determining site levels
 - site services, including electrical and water provision

- landscape construction techniques and materials.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - landscape construction materials
 - landscape construction site
 - site information and data applicable to designing for landscape features
- specifications:
 - NCC applicable to designing for construction of landscape features
- relationships:
 - client and stakeholders
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for landscape design CAD drawing work	1.1 Interpret concept and project information 1.2 Identify and confirm design drawing requirements with client or relevant project personnel 1.3 Identify CAD hardware, software, tools and equipment requirements for design project 1.4 Set up CAD hardware and software according to operating instructions and workplace procedures 1.5 Identify and retrieve digitised information relevant to project
2. Create landscape design drawing template files	2.1 Establish and record critical dimensions and data for required designs 2.2 Identify requirements in relation to accuracy, tolerances and other key information 2.3 Create layering strategy according to design drawing requirements 2.4 Create text and dimension styles according to design drawing requirements 2.5 Create line types and styles according to design drawing requirements 2.6 Create title box and page numbering system according to design drawing requirements
3. Create landscape design CAD drawings	3.1 Produce drawings using CAD software programs and functions 3.2 Add layers and drawing notations according to Australian standards and design drawing requirements 3.3 Add drawing scales and dimensions to drawing according to Australian standards and design drawing requirements 3.4 Hatch and render or fill selected areas
4. Import files	4.1 Import digital text, drawing and image files into CAD drawings as required 4.2 Insert external drawing files into CAD drawings as required 4.3 Scan, save and import hard copy documents into CAD drawings as required
5. Edit landscape design drawing components	5.1 Remove unnecessary elements and text from drawings as required 5.2 Use editing commands to modify drawing elements and text

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.3 Use tools to measure lengths and areas of specific elements of drawing
6. Print CAD drawings	6.1 Setup drawing file page layout to suit printing requirements 6.2 Setup printing parameters for printer 6.3 Select correct print media for drawings 6.4 Print, monitor and collate printed drawings
7. Save and back up files	7.1 Create drawing project file directory 7.2 Save and retrieve drawing files 7.3 Backup project files according to workplace procedures
8. Export files	8.1 Copy and send drawing files to client or relevant project personnel 8.2 Create PDF files for client or relevant project personnel 8.3 Review design drawings with client or relevant project personnel
9. Finalise landscape design drawings	9.1 Check design drawings against concept and project information 9.2 Identify and make adjustments to design drawings according to client or relevant project personnel review feedback 9.3 Store drawing files according to workplace procedures 9.4 Submit final design drawings according to agreed time requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

AHCDES508 Design sustainable landscapes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to design sustainable landscapes, including assessing requirements for sustainable land use, preparing an integrated design, planning implementation into design, and auditing implementation for improvement of long-term ecological sustainability of landscapes.

The unit applies to individuals who apply specialist skills and knowledge to design sustainable landscapes, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCDES508 Design sustainable landscapes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed sustainable landscapes on at least one occasion, and has:

- consulted with clients
- developed a design brief in consultation with client to establish design purpose and requirements
- researched, interpreted and applied legislation and regulations relevant to sustainable landscape design
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- assessed land area for sustainable use
- designed for the health and sustainability of soils and plants
- interpreted specifications and plans
- selected plants and soils for their integrated functional roles
- used graphic techniques for illustrating landscape design components
- prepared a detailed plan or design for sustainable land improvement
- implemented sustainable practices
- outlined an integrated approach to land and water management
- designed for integrated protection of water resources, riparian zones or storm water drainage systems (SUDS) and vegetation in a development area
- assessed soil and water quality tests where applicable to site
- applied relevant Environmental Protection Authority (EPA) legislation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation and regulations relevant to sustainable landscape design
- workplace health and safety and environmental and biosecurity legislation and regulations and workplace procedures relevant to sustainable landscape design
- EPA legislation relevant to sustainable landscape design
- principles and practices of designing sustainable landscapes, including:
 - sustainable landscape design principles
 - assessment techniques
 - environmental controls and codes of practice applicable to the business and to the improvement works
 - biophysical factors, biodiversity, historical, heritage and cultural attributes, services, site modifications and threats to sustainability
 - botany, plant physiology, taxonomy and nomenclature
 - identification and selection of soils, growing media, plants, shrubs and trees
 - irrigation practices
 - legislation and regulations relating to soil and water degradation issues and construction
 - surface and subsurface hydrology
 - storm water drainage systems (SUDS)
 - sustainable land and water use principles and practices applicable in the region
 - types, properties and characteristics of a wide range of soils, soil amelioration techniques and growing media.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - landscape site
 - site information, documentation and data applicable to sustainable landscape design
- specifications:
 - legislation and regulations relating to soil and water degradation issues and construction, and sustainable landscape design
 - workplace health and safety and environmental and biosecurity legislation and regulations and workplace procedures applicable to sustainable landscape design
 - EPA legislation applicable to sustainable landscape design
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to collect and collate initial information, conduct a landscape site assessment and document a site report.

The unit applies to individuals who apply specialist skills and knowledge to assess landscape sites, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Design (DES)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collect and collate initial information	1.1 Consult with client to confirm objectives of assessment 1.2 Source and verify site plans and maps

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Identify and collect resources for site assessment 1.4 Prepare base plan of site and relevant surrounds 1.5 Verify location, ownership and site boundaries 1.6 Identify and record protected flora and fauna, current land use and environmental threats and problems 1.7 Identify and record covenants, legislative and regulatory requirements that could affect the project, design or report 1.8 Determine climate and weather conditions from historical data
2. Undertake initial site visit	2.1 Meet site entry conditions and obtain approval where required 2.2 Identify hazards and risks associated with site visit according to workplace health and safety procedures 2.3 Undertake site orientation 2.4 Identify and record existing on-site and adjacent site features that may impact upon the project, plan or report objectives 2.5 Identify, measure, and record or confirm site dimensions, levels and gradients
3. Compile a site inventory	3.1 Sample and identify soil types, properties and relevant physical characteristics and record on-site inventory 3.2 Record and identify vegetation species, health, age and location, and impact on surrounding environment 3.3 Geolocate or triangulate the position of structural elements and confirm existing services and facilities 3.4 Record presence, location and extent of site constraints 3.5 Record offsite elements including microclimates, trees, buildings and terrain that may affect project design
4. Determine the impact of development for trees on site	4.1 Obtain consulting arborist report to assess trees on site 4.2 Determine and record tree protection zones and structural root zones 4.3 Document impact of proposed development on each tree 4.4 Identify trees exempt from approval requirements 4.5 Identify and locate on site plan trees impacted by development, according to regulations applying in the local jurisdiction 4.6 Include trees identified by consulting arborist report requiring

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	pruning or removal in development application
5. Document a site assessment report	5.1 Interpret soil test results and analyse for further testing requirements 5.2 Record specific recommendations of remedial action for site problems 5.3 Formulate recommendations for appropriate risk controls of site hazards according to workplace health and safety procedures 5.4 Document site information 5.5 Incorporate all relevant data into assessment report according to client brief and local, state and federal regulatory requirements 5.6 Document and present assessment report to the client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Initiate discussions with client, using clear language to discuss and confirm assessment objectives and present assessment report
Numeracy	<ul style="list-style-type: none"> Survey and calculate locations of existing features using geolocation or triangulation

Assessment Requirements for AHCDES509 Assess landscape sites

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed two separate and varying landscape sites and has:

- consulted and advised clients
- collected and collated information on site features
- interpreted and produced plans
- verified existing site details
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- identified protected flora and fauna, current land use and environmental threats and problems
- applied local, state and federal regulations relevant to assessing landscape sites
- identified site entry conditions and approval requirements where applicable
- sampled soils and growing media
- identified and recorded vegetation species, health, age and location, and impact on surrounding environment
- documented assessment and recommendations in a site plan and assessment report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of assessing landscape sites, including:
 - current land use and environmental threats, and problems with site
 - interpretation of results from assessment and testing
 - local, state and federal regulations relevant to assessing landscape sites
 - accessing survey and regulatory information online
 - measurement and surveying techniques

- protected flora and fauna and environmental threats and problems
- vegetation species, including health and age
- impact of vegetation species on surrounding environment
- plant nutrition
- protocols of site access
- soil types, structure, texture and pH
- soil chemical and physical properties
- soil field tests and soil sampling techniques
- techniques to ameliorate soil properties
- vegetation common within the region, using botanical and regionally accepted common names, age, health and conditions of vegetation
- workplace health and safety and environmental and biosecurity legislation and regulations and workplace procedures relevant to assessing landscape sites.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - landscape sites
 - site information and data applicable to sustainable landscape design
 - arborist report
 - software and hardware for accessing survey and regulatory information
 - resources for assessing site, including soil testing tools and equipment
- specifications:
 - workplace health and safety and environmental and biosecurity legislation and regulations and workplace procedures applicable to assessing landscape sites
 - local, state and federal regulations relevant to assessing landscape sites
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRG202 Maintain drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to inspect and carry out routine cleaning and maintenance of draining systems.

The unit applies to individuals who maintain drainage systems under general supervision with limited autonomy and accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Drainage (DRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Inspect drainage systems	<p>1.1 Confirm with supervisor activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to minimise risks to self and others</p> <p>1.2 Select, fit and use personal protective equipment applicable to the task</p> <p>1.3 Inspect drainage system visually for blockages, leaks and operating faults</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Assist with system component maintenance	2.1 Inspect components for wear or blockage 2.2 Service mechanical equipment as directed 2.3 Replace simple components as directed
3. Remove silt and weed growth	3.1 Clean silt from channels, drains, sumps and crossings 3.2 Remove weed growth 3.3 Flush drainage system 3.4 Observe water flow through channels and from outlets to confirm it is unobstructed
4. Record and report maintenance activities	4.1 Record blockage or leakage by type and location of the section of the system affected 4.2 Record and report damaged or faulty equipment 4.3 Record and report all routine maintenance activities 4.4 Check drainage system regularly

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Oral communication	<ul style="list-style-type: none"> Use clear language to report drainage system damaged or faulty equipment and routine maintenance activities
Numeracy skills	<ul style="list-style-type: none"> Identify replacement component part numbers
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

Assessment Requirements for AHCDRG202 Maintain drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has maintained drainage systems on at least two occasions and has:

- inspected and maintained simple drainage system components
- inspected components for wear
- monitored and removed weeds and silt build up
- recorded and reported damage, blockages and leakages.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of drainage system maintenance, including:
 - drainage system cleaning procedures
 - equipment used to clean and maintain drainage systems
 - manual and mechanical weed removal methods
 - types of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to maintaining drainage systems
 - drainage system maintenance tools and equipment
 - personal protective equipment applicable to maintaining drainage systems

- specifications:
 - work instructions
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRG305 Install drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare, coordinate, undertake and complete surface and subsurface drainage system installation.

The unit applies to individuals who install drainage systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Drainage (DRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for drainage system installation activities	1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks 1.2 Identify drainage system construction site 1.3 Select required materials, tools, equipment and machinery and complete safe operation and pre-operation checks 1.4 Select, fit, use and maintain personal protective equipment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	applicable to the task
2. Coordinate installation work	2.1 Schedule work tasks in a sequential, timely and effective manner 2.2 Identify environmental considerations of drainage installation activities 2.3 Maintain a clean and safe work area throughout work
3. Prepare the site for installation of drainage system	3.1 Interpret symbols and terminology to ensure drainage system plan is clearly understood 3.2 Identify layout of services, check depths and report discrepancies 3.3 Complete survey, measurement and marking out of site and confirm soil characteristics relevant to the system
4. Undertake installation of drainage system	4.1 Complete excavations without damage to services, facilities, features and established plants 4.2 Install drainage system to plan specifications 4.3 Test drainage system configuration, flow rates and capacity 4.4 Confirm remedial action to be taken when the drainage system operation does not meet the plan specifications
5. Complete installation of drainage system	5.1 Finish earthworks to the required specifications 5.2 Restore site and remove and dispose of waste material 5.3 Clean, maintain and store tools, equipment and machinery 5.4 Record work outcomes and report works as per the executed drawings, including adjustments

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations

Assessment Requirements for AHCDRG305 Install drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has installed drainage systems on at least one occasion and has:

- applied workplace health and safety requirements
- prepared for installation activities
- selected materials, tools, equipment and machinery appropriate to the scope of works
- interpreted drainage system plans and drawings
- interpreted site specifications, soil types and drainage system plans
- measured materials required to install drainage systems
- set out drainage system works
- set out, surveyed, tested and excavated the installation site
- levelled and aligned earthworks
- installed drainage system works
- tested the drainage system
- restored site and removed and disposed of waste material.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for installing drainage systems
- principles and practices of drainage installation
- drain types, components and installation techniques
- purposes of drainage systems and the application of drainage system plans
- soil characteristics and their impact on drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work specifications and workplace procedures applicable to installing drainage systems
 - drainage system installation equipment
 - drainage system installation tools and equipment and procedures
 - personal protective equipment applicable to installing drainage systems
- specifications:
 - workplace requirements applicable to health and safety in the workplace and installing drainage system
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCDRG306 Measure drainage system performance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has measured drainage system performance on at least one occasion and has:

- selected materials, tools, equipment and machinery appropriate to the scope of works
- applied workplace health and safety requirements
- identified and minimised adverse environmental impacts of drainage systems
- recorded and reported drainage system data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for measuring drainage system performance
- measuring and monitoring procedures for factors contributing to drainage system performance
- water quality monitoring methods and techniques
- how to measure a water table and salinity
- soil moisture measurement procedures
- positive and negative environmental impacts of drainage systems
- the environmental role of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- drainage system equipment
- drainage system performance measuring tools and equipment
- personal protective equipment applicable to measuring drainage system performance
- specifications:
 - workplace requirements applicable to health and safety in the workplace and measuring drainage system performance
 - measuring procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has troubleshoot and repaired a drainage system on at least one occasion and has:

- identified a range of drainage system issues, including surface and sub-surface issues
- planned and prepared for the work
- inspected the site to determine access to drainage system
- completed a range of rectification works for drainage systems
- tested the system and cleaned up after rectifying identified issues.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- drainage system repair work instructions and procedures
- types and operational parameters of drainage systems
- types of drainage systems and issues common these systems
- principles and practices of drainage system troubleshooting
- components used in drainage systems
- safe working practices applicable to troubleshooting and repairing drainage systems
- environmental impacts of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- drainage system repair work instructions and workplace procedures
- drainage system equipment
- drainage system repair tools, equipment and machinery
- personal protective equipment applicable to repairing drainage systems

Unit Sector

Drainage (DRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to carry out irrigation drainage system maintenance	1.1 Inspect site and assess drainage system 1.2 Confirm necessity for repair and notify appropriate people 1.3 Determine work requirements from plans, drawings, specifications or instructions 1.4 Identify potential hazards and assess risks and implement safe working practices to manage risks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select required tools and equipment and check for safe operation 1.6 Select, fit and use personal protective equipment applicable to the task 1.7 Confirm excavation methods meet safety requirements of the task and site 1.8 Make appropriate drainage and inflow diversion arrangements 1.9 Minimise environmental impacts of irrigation drainage maintenance activities
2. Digging to access drainage lines	2.1 Access plan of irrigation system and locate access points 2.2 Gain access to drainage lines to allow blockage to be cleared 2.3 Carry out digging without unnecessary damage to buildings, site, environment or existing fixtures and fittings
3. Carry out repairs on an irrigation drainage system	3.1 Conduct routine inspections of designated work areas 3.2 Identify system faults and take corrective actions with consideration of structure type, location and specifications 3.3 Use mechanical equipment to open and close drains 3.4 Repair or replace components and associated fittings as required 3.5 Construct cast in situ components 3.6 Document irrigation drainage repair and maintenance activities
4. Clear blockages in an irrigation drainage system	4.1 Perform clearing blockages procedures 4.2 Test drainage lines to confirm blockages have been cleared from pipe system 4.3 Repair and reseal drainage lines to permit normal use 4.4 Clean and align work area and dispose of debris and waste
5. Maintain drainage earthworks and equipment and carry out vegetation clearing procedures	5.1 Confirm that earthworks and embankments meet system requirements 5.2 Manage and maintain drainage area vegetation 5.3 Control weeds within drainage area 5.4 Implement and record a maintenance program for drainage equipment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCDRG308 Maintain and repair irrigation drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has maintained and repaired an irrigation drainage system on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- isolated appliances, fixtures, fittings and related assemblies
- identified and minimised adverse environmental impacts of drainage systems
- gained access and carried out repairs
- used manual and mechanical drain clearing equipment
- removed blockages
- levelled and aligned the site
- implemented and recorded a drainage and equipment maintenance program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for maintaining irrigation drainage systems
- principles and practices for maintaining irrigation drainage systems, including:
 - components used in irrigation drainage systems
 - isolation processes and procedures
 - levelling and alignment processes
 - types and operational parameters of irrigation drains
 - environmental impacts of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation drainage system maintenance and repair equipment and tools
 - personal protective equipment applicable to maintaining irrigation drainage systems
- specifications:
 - workplace requirements applicable to health and safety in the workplace and maintaining irrigation drainage systems
 - work instructions and workplace procedures applicable to maintaining irrigation drainage systems
 - irrigation drainage system principles and practices
 - recording procedures
- relationships:
 - appropriate people, supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRG403 Coordinate and supervise installation of an irrigation drainage system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to develop and implement irrigation drainage system construction procedures, coordinate, supervise and commission irrigation drainage system installation and supervise work area rehabilitation.

The unit applies to individuals who apply specialised skills and knowledge in coordinating and supervising the installation of irrigation drainage systems and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Drainage (DRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop and implement construction and environmental procedures	1.1 Develop employment and contract management procedures for contractors 1.2 Develop procedures for controlling and recording site deliveries

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Develop procedures for recording the hire of plant and equipment 1.4 Determine workplace health and safety procedures, including risk assessment for installation works 1.5 Develop procedures for dealing with and minimising environmental impacts associated with construction work 1.6 Notify client, authorities and agencies of the scheduled works
2. Interpret the irrigation drainage system design for the site	2.1 Determine the purpose, scale and required output of the irrigation system 2.2 Assess the landscape of the site 2.3 Determine construction requirements and verify with designer 2.4 Select components to meet design specifications and site requirements
3. Organise resource requirements	3.1 Nominate tasks and timelines for the scheduled works, including the coordination of required resources 3.2 Organise and coordinate labour requirements 3.3 Verify the correct parts and equipment have been delivered to the site and checked 3.4 Select and check equipment and machinery 3.5 Allocate tasks to the work team 3.6 Carry out safety induction for the task and site
4. Supervise preparatory work	4.1 Interpret construction plan to confirm works to be carried out 4.2 Take levels and plan earth works based on irrigation drainage design 4.3 Confirm site is cleaned and marked out 4.4 Confirm drainage structures are pegged out
5. Supervise construction and testing of the drainage system	5.1 Interpret plan and supervise construction work 5.2 Confirm trenches are excavated to specification 5.3 Confirm earth works are carried out appropriately 5.4 Confirm construction of drainage structures are to specifications 5.5 Inspect the lay out and joining of pipes 5.6 Check fitting and adjustment of fittings and valves and confirm all

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	joints are secured 5.7 Supervise the installation and testing of pumping system
6. Commission the irrigation drainage system	6.1 Start up the system according to operating instructions 6.2 Identify operating faults and take corrective actions as required 6.3 Use testing and monitoring equipment to monitor system performance 6.4 Make adjustments as required
7. Supervise the rehabilitation of the works area	7.1 Monitor the resurfacing and sealing earthworks 7.2 Confirm the planting and maintenance of vegetation areas have been carried out 7.3 Confirm disposal of waste and surplus materials has been carried out according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding installation requirements for irrigation drainage system
Oral communication	<ul style="list-style-type: none"> Initiate discussions with staff, contractors, suppliers and designer using clear language to communicate installation requirements, tasks, timelines, and procedures
Numeracy	<ul style="list-style-type: none"> Calculate soil quantity and volume to be removed Confirm trench excavation against design specifications
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements, including safety requirements, associated with own role and area of responsibility Monitor self and others adherence to workplace requirements including safety requirements
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information about installation timelines and procedures

Assessment Requirements for AHCDRG403 Coordinate and supervise installation of an irrigation drainage system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has coordinated and supervised the installation of an irrigation drainage system on at least one occasion and has:

- developed operational procedures
- conducted a workplace health and safety risk assessment
- interpreted irrigation designs
- documented requirements for structures
- estimated quantities and volumes of soil to be moved.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts and role of drainage systems
- regulatory requirements, codes of practice and relevant workplace service standards relating to blockage removal, disconnection and reconnection activities
- water authority standards and procedures
- principles and practices of irrigation drainage system installation, including:
 - components used in drainage systems
 - drainage appliances, fixtures and fittings
 - isolation processes and procedures
 - levelling and alignment processes
 - types and operational parameters of drains
- soil moisture measurement procedures
- water quality monitoring methods and techniques
- water table and salinity measures
- development of procedures
- supervision of task allocation, coordination of resources and induction procedures

- trench excavation and earth works procedures
- measuring and monitoring procedures for factors contributing to drainage system performance.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - irrigation drainage system design specifications
 - workplace procedures applicable to health and safety in the workplace and installation of an irrigation drainage system
 - water authority standards and procedures
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRG404 Monitor and control irrigation drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assess drainage and collection systems, monitor, control, and troubleshoot irrigation drainage systems, clear drainage system blockage or replace blocked section and record and report system performance status.

The unit applies to individuals who apply specialised skills and knowledge to the monitoring and controlling of irrigation drainage systems and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Drainage (DRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess irrigation drainage and collection systems	1.1 Measure drainage performance according to current industry standards 1.2 Measure drainage and tail water quality according to current industry standards

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Measure water table depth where required according to current industry standards</p> <p>1.4 Measure soil salinity where required according to current industry standards</p> <p>1.5 Record results according to current industry standards</p> <p>1.6 Identify and record factors external to the system which may cause interference</p> <p>1.7 Analyse drainage system data and compare to the performance specified in the irrigation drainage plan</p>
2. Regulate flows	<p>2.1 Inspect flow regulating systems and apply adjustments to achieve specified discharge requirements</p> <p>2.2 Monitor discharge flows and apply diversions to facilitate repair or emergency</p>
3. Control and operate drainage system structures and processes	<p>3.1 Identify processes to maintain specified performance</p> <p>3.2 Develop and implement maintenance procedures</p> <p>3.3 Identify, address and report operational conditions of the drainage system</p> <p>3.4 Integrate processes to improve drainage network performance</p>
4. Troubleshoot drainage problems	<p>4.1 Identify potential hazards and risks and implement safe working practices to manage risks</p> <p>4.2 Minimise environmental impacts of drainage system troubleshooting activities</p> <p>4.3 Select, fit and use personal protective equipment applicable to the task</p> <p>4.4 Conduct a visual inspection to determine damaged or broken components and record results</p> <p>4.5 Inspect drained areas for signs of water pooling and record problems</p>
5. Clear drainage blockage or replace blocked section	<p>5.1 Access drainage lines to allow blockage to be cleared</p> <p>5.2 Clear blockage or replace blocked section</p> <p>5.3 Test drainage line to confirm blockage is cleared from pipe system</p> <p>5.4 Repair or reseal drainage line to permit normal use</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.5 Rehabilitate drainage site according to current industry standards
6. Record and report system performance status	6.1 Record and report water quality 6.2 Record and report water table depth, soil moisture and salinity 6.3 Document strategies for dealing with and minimising environmental impacts and maximising positive impacts of the drainage system

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding monitoring and controlling irrigation drainage systems

Assessment Requirements for AHCDRG404 Monitor and control irrigation drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored and controlled an irrigation drainage system on at least one occasion and has:

- applied soil moisture testing techniques
- measured, recorded and reported water table depth, soil moisture and salinity
- calculated water volumes from rate and depth
- analysed drainage system data
- isolated drainage lines
- controlled and operated drainage system structures and processes
- applied workplace health and safety requirements
- identified and minimised adverse environmental impacts of drainage systems
- cleared and refilled drainage lines
- cleared blockages from drainage systems.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- measuring and monitoring procedures for factors contributing to drainage system performance
- water quality monitoring methods and techniques
- soil moisture measurement procedures
- principles and practices for monitoring irrigation drainage systems, including:
 - components used in drainage systems
 - isolation processes and procedures
 - levelling and alignment processes
 - types and operational parameters of drains

- safe working practices applicable to troubleshooting and clearing irrigation drainage systems and replacing blocked sections of irrigation drainage systems
- workplace requirements applicable to health and safety in the workplace for monitoring and controlling irrigation drainage systems
- environmental impacts of drainage systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation drainage system troubleshooting and clearing tools and equipment
 - personal protective equipment applicable to troubleshooting and clearing irrigation drainage systems
- specifications:
 - workplace requirements applicable to health and safety in the workplace and monitoring and controlling irrigation drainage systems
 - irrigation drainage system water and soil testing equipment and procedures
 - workplace procedures applicable to health and safety in the workplace and monitoring, controlling, troubleshooting and clearing an irrigation drainage systems
 - irrigation drainage plan
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRG502 Design drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify design requirements, determine specifications, capital expense and operating expense budgets and design the drainage system.

The unit applies to individuals who apply specialised skills and knowledge to the design of drainage systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Drainage (DRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine design requirements	1.1 Determine water transfer, recharge, reuse and harvesting system needs 1.2 Identify processes of collecting, disposing and storing drainage water to avoid degrading water quality 1.3 Investigate regional geology and geography to predict drainage

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>parameters</p> <p>1.4 Apply hydrological calculations to predict volumes and rates of surface run-off</p> <p>1.5 Conduct site investigations to assess depth of clay, depth of ground water, soil and water salinity, and structural or chemical impediments</p> <p>1.6 Determine the most cost effective drainage system</p> <p>1.7 Document predictions of leaching fractions and salt movements, and develop soil amelioration and drainage management plans</p> <p>1.8 Determine the need for leachate interception and dewatering system and if required prepare construction specification for interception and collection, disposal, reuse or recycle</p> <p>1.9 Confirm drains and structures are capable of carrying the design water volumes and intensities according to workplace standards</p> <p>1.10 Identify construction specifications required to make drainage systems according to environmental and workplace health and safety requirements</p> <p>1.11 Identify and protect environmentally sensitive areas according to local, state and federal legislation and regulations</p>
2. Design a drainage system	<p>2.1 Select systems, including relevant equipment, to move water efficiently to water storage or treatment and at the flow and pressure required in design specifications</p> <p>2.2 Select system combinations that are efficient, reliable, functional, serviceable and flexible for the intended application</p> <p>2.3 Determine energy requirements and check layout of electricity lines with local authority if electrical pumps and motors are used in the system</p> <p>2.4 Select and integrate structures, pipes, valves and accessories into a functional system that can be monitored and maintained</p> <p>2.5 Define the work required to make suitable drainage systems available to the workplace in the design specifications</p> <p>2.6 Confirm power supply design specification with power authorities if electrical pumps and motors are used in the system</p> <p>2.7 Minimise drainage system design damage based on current industry practice</p> <p>2.8 Document drainage system design based on current industry</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	practice 2.9 Confirm design output with an appropriately experienced and qualified person
3. Determine capital expense budget	3.1 Estimate materials required from plans and specifications 3.2 Estimate labour requirements based on documented work schedule with reasonable allowance for variances in work schedules 3.3 Base costing for each component on quoted information from suppliers, or sound analysis of individual elements 3.4 Document design calculations, performance indicators and decisions and relevant information in plans, specifications and manuals 3.5 Document capital expense budget based on current industry practice 3.6 Confirm capital expense budget output with an appropriately experienced and qualified person
4. Determine operating expense budget	4.1 Optimise the relationship between capital and operational costs including a comparison of energy sources 4.2 Collate all operating expense applicable to the completed drainage system and calculate an operating expense budget 4.3 Document operating expense budget based on current industry practice

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Initiate discussions with local authorities, using clear language to communicate energy requirements and check layout of electricity lines, and confirm power supply design specification with power authorities Use clear communications with appropriately experienced and qualified person to discuss design output and capital expense

Assessment Requirements for AHCDRG502 Design drainage systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has designed at least one drainage system on at least one occasion and has:

- developed specifications for water transfer, recharge, reuse and harvesting systems
- identified design requirements
- completed hydrological calculations
- identified performance indicators for the drainage system
- predicted volumes and rates of surface run-off and system leakage
- identified adverse environmental impacts of drainage and appropriate remedial action
- assessed the requirements for pumping capacity in a drainage system and power requirements
- developed capital and operating budgets.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of drainage design, including:
 - developments in drainage technology
 - leachate interception and dewatering systems
 - leaching fractions and salt movements prediction
 - monitoring systems
 - the design processes
 - water transfer, recharge, reuse and harvesting systems
- local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to drainage system design
- budgeting, contract development and obligations

- cost/benefit analysis.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - regional geology and geography information
 - drainage system site
 - industry energy and water efficiency benchmarks
 - local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to drainage system design
 - drainage system water and soil testing equipment and procedures
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRY202 Milk livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to extract milk from a range of livestock. It requires the ability to prepare site and equipment for milking, move and handle livestock, identify and report on abnormal livestock conditions and complete tasks after milking operations.

This unit applies to individuals who undertake routine tasks to support milking operations on a dairy farm under the direction of a supervisor. They may work independently or as part of a team.

All work is carried out to comply with workplace procedures, according to state/territory work health and safety, food safety, animal welfare, environmental and biosecurity legislation, regulations and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCDRY202 Milk livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supported at least two milking operations, including:

- prepared and maintained self and dairy facilities and equipment to industry safety, hygiene and food safety standards
- prepared and applied teat spray solutions according to instructions
- operated milking equipment to carry out milking in functional and safe manner
- handled livestock in a safe, low stress and humane manner in moving herd to and from dairy
- recognised and isolated unsuitable milk
- identified and reported signs of sickness or abnormal behaviour in livestock
- responded to equipment faults during milking
- disposed waste
- completed records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, functions, cleaning and maintenance of dairy facilities, machinery and equipment
- basic anatomy and physiology and key aspects of reproduction cycle, lactation and behaviour of animal species applicable to milking operations
- work health and safety requirements for milking operations
- personal and workplace hygiene and food safety requirements and practices used during milking operations
- animal welfare practices and requirements for handling and moving livestock for milking operations
- work routines and procedures for milking operations
- workplace criteria and methods for determining milk quality

- types, characteristics, signs of common health issues and prevention in the livestock species
- types, handling, use and disposal of cleaning and sanitising chemicals used for milking operations and work health and safety and environmental practices for these agents.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a dairy milking facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - livestock
 - machinery and equipment used for milking operations
 - personal protective equipment suitable for milking and handling cleaning and sanitising chemicals
- specifications:
 - work instructions and workplace policies and procedures for milking operations, including advice on health and safety, food safety, hygiene, animal welfare and environmental requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRY303 Coordinate and monitor milking operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to coordinate and monitor the milking operations of a dairy facility. It requires the ability to determine requirements and procedures for milking operations, implement livestock health program and monitor operations.

This unit applies to individuals who work as farm hands on a dairy facility and are responsible for coordinating, implementing and monitoring milking operations on a daily basis. They may work independently or lead a team.

All work is carried out to comply with workplace policies and procedures, according to state/territory work health and safety, food safety, animal welfare, environmental and biosecurity legislation, regulations and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCDRY303 Coordinate and monitor milking operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated and monitored milking operations on at least one occasion, including:

- determined requirements for the milking operation, and:
- identified hazards and safe operating procedures
- identified criteria for monitoring milk quality
- identified cleaning and hygiene requirements
- Identified personal protective equipment requirements (PPE)
- monitored the milking operation, and:
- recognised and rectified machinery malfunctions
- monitored health, condition and welfare of livestock
- conducted milk sampling and testing
- maintained dairy records
- monitored cleanliness of work areas and milking equipment according to work health and safety, hygiene and food safety requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, functions, cleaning, monitoring and maintenance of milking facilities, machinery and equipment
- workplace and industry requirements for resources, manpower and equipment used for milking operations
- criteria, methods and industry food safety standards for determining milk quality
- factors affecting milk quality, and their impacts on production targets and viability
- workplace routines and procedures for milking operations

- work health and safety legislation, regulations and codes of practice relevant to milking operations
- hygiene, biosecurity and food safety practices and requirements for milking operations
- reproduction cycle, lactation and behaviour of the animal species applicable to milking operations
- animal welfare practices and requirements for milking operations
- livestock health testing and sampling, treatment and preventive medicine applicable to milking operations
- types, characteristics, signs of ill health, prevention and treatment of relevant diseases in the livestock species
- types and maintenance of required documentation used to record milking operations
- types, handling, use and disposal of detergents and cleaning agents, work health and safety and environmental practices for these agents
- waste and debris storage and disposal requirements and methods.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a dairy milking facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - livestock
 - machinery and equipment used for milking operations
 - sampling and testing equipment, including personal protective equipment (PPE)
- specifications:
 - workplace policies and procedures for milking operations, including advice on health and safety, hygiene, and animal welfare requirements
 - workplace food safety plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRY304 Carry out routine service of milking equipment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to identify faults that do not require the services of qualified tradespeople and carry out routine service, adjustment and maintenance of milking equipment.

This unit applies to individuals who work as farm hands or milking machine technicians and carry out routine servicing and maintenance of milking machine components on a dairy facility.

All work is carried out to comply with workplace policies and procedures, according to state/territory work health and safety, animal welfare, environmental and biosecurity legislation, regulations and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Dairy Production (DRY)

Assessment Requirements for AHCDRY304 Carry out routine service of milking equipment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out the following routine servicing and maintenance of milking equipment, on at least two occasions:

- identified faults in milking equipment and those that need to be referred to qualified tradesperson through observations during milking operations and further fault diagnosis and made minor adjustments
- completed a routine service and maintenance of equipment

In completing the above, there must also be evidence that individual has for each occasion:

- applied work health and safety requirements and risk control
- applied manufacturer specifications
- observed animal behaviour during milking and recorded abnormalities
- fitted and used personal protective equipment (PPE)
- communicated activities related to maintenance coordination with other workers
- recorded servicing and maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- work health and safety and risk assessment requirements and practices used for servicing milking equipment
- types, functions and manufacturers specifications for cleaning, monitoring and maintenance of milking machines and components
- criteria and methods for assessing optimal performance of milking machines and their components
- signs and methods for assessing livestock health and welfare relevant to milking operations

- possible faults, problems and sub-optimal performance with milking machines and their components, impact on milking operations and manufacturer specifications and corrective actions for these faults and problems
- possible electrical faults of milking machines and requirement to refer these to qualified electricians.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a dairy milking facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - milking equipment and components
 - tools and equipment used to service and maintain equipment
 - personal protective equipment (PPE)
- specifications:
 - workplace procedures for servicing and maintaining milking equipment, including advice on health and safety requirements
 - manufacturer specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRY305 Conduct mechanical tests on milking machines

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to mechanically test and make recommendations on the performance of milking machines used on dairy farms.

This unit applies to individuals who conduct mechanical tests as part of service and maintenance of milking machines for dairy facilities.

All work is carried out to comply with workplace policies and procedures, according to state/territory work health and safety, animal welfare, environmental and biosecurity legislation, regulations and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Dairy (DRY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for testing of milking machine	1.1 Identify and confirm testing requirements with facility records and personnel 1.2 Identify facility health and safety hazards, assess risks and determine control measures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Select testing tools and equipment and check for serviceability 1.4 Prepare and fit required personal protective equipment (PPE)
2. Establish milking machine specifications	2.1 Establish herd details and health status 2.2 Determine expected performance from machine specifications, testing procedures and performance criteria 2.3 Assess and record condition of components
3. Calculate required milking machine performance	3.1 Calculate effective reserve based on facility specifications 3.2 Calculate vacuum pump capacity from effective reserve 3.3 Record manufacturer recommended component specification and matching
4. Measure milking machine performance	4.1 Measure working vacuum levels against required performance 4.2 Adjust vacuum to optimise milking facility performance 4.3 Measure and report air consumption of component groups and pipeline leakage 4.4 Test pulsators according to procedures and report results relative to manufacturer performance recommendations 4.5 Establish recommended air consumption of components and measure consumption according to testing procedures
5. Make recommendations to optimise machine performance	5.1 Interpret test results against desired performance and herd details 5.2 Provide recommendations and written report on safety considerations for specific installation tested 5.3 Provide recommendations on milking facility performance 5.4 Complete report on component condition according to manufacturer requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCDRY305 Conduct mechanical tests on milking machines

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted mechanical testing of milking machines on at least five occasions, including for each:

- identified and recorded milking machine specifications
- calculated and measured milking machine performance
- developed a report describing machine conditions and made recommendations to optimise machine performance
- applied work health and safety requirements, including using personal protective equipment (PPE).

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types, functions, cleaning, monitoring and maintenance of milking machines and their components and milking facility equipment
- relevant work health and safety requirements related to testing milking machines and their components
- requirements, criteria and assessment methods for optimal performance of milking machines and their components
- udder physiology, invasive pathogens and the interaction between the milking machine and the lactating animal
- information required, criteria and methods for assessing herd health status
- requirements and methods for determining the performance targets of a milking facility from the herd status and milking installations
- possible faults, problems and poor performance with milking machines and their components, impacts on milking operations and corrective actions for these faults and problems

- key aspects and components of reports and recommendations to a milking facility.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a dairy milking facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - milking machines, their components and associated equipment as specified in performance evidence
 - tools, equipment and materials used to test milking machines
 - personal protective equipment
- specifications:
 - workplace policies and procedures for testing milking machines, including advice on health and safety, hygiene, and animal welfare requirements
 - manufacturer specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCDRY306 Operate a dairy waste utilisation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to prepare, operate, maintain and monitor a dairy waste utilisation system.

This unit applies to individuals who work as farm hands and are responsible for managing the solid and effluent waste generated in a dairy facility.

All work is carried out to comply with workplace procedures, according to state/territory work health and safety, food safety, environmental and biosecurity legislation, regulations and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Dairy (DRY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for dairy waste utilisation operations	1.1 Confirm maintenance requirements for dairy waste utilisation operations to be undertaken from work program and food safety plan 1.2 Communicate and coordinate activities with other workers who may be affected by maintenance activities

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify work health and safety hazards, assess risks and determine control measures</p> <p>1.4 Select, check and prepare personal protective equipment (PPE)</p> <p>1.5 Select, check and prepare tools and equipment according to work requirements</p>
2. Maintain and operate system	<p>2.1 Service and maintain dairy waste removal and disposal equipment according to manufacturer specifications</p> <p>2.2 Use dairy waste disposal system according to system design and regulatory requirements</p> <p>2.3 Carry out irrigation from dairy waste storages</p> <p>2.4 Remove litter, flush and drain in-shed dairy waste pits</p> <p>2.5 Maintain tools' condition and storage location</p>
3. Monitor waste utilisation system	<p>3.1 Check flow rates, pit levels and equipment to maintain effective operation of the system</p> <p>3.2 Carry out cleaning procedures and hygiene practices</p> <p>3.3 Identify environmental impact of dairy waste disposal, assess likely outcomes and take responsive action in line with workplace environmental, legislative and regulatory requirements</p>
4. Conduct post operation activities	<p>4.1 Clean equipment according to manufacturer specifications</p> <p>4.2 Clean and store attachments and other ancillary equipment as required</p> <p>4.3 Dispose of containers, leftover fluids, waste and debris according to workplace and environmental requirements</p> <p>4.4 Complete required records and documentation according to workplace and regulatory requirements</p>

Assessment Requirements for AHCDRY306 Operate a dairy waste utilisation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained and operated a dairy waste utilisation system according to work health and safety, food safety and environmental legislation and regulations on at least two occasions, including for each occasion:

- made preparations for dairy waste disposal and recycling operations, consisting of having identified safety requirements, prepared tools and equipment and coordinated work activities with others
- selected, checked and used personal protection equipment (PPE)
- serviced both the dairy waste storage and disposal system
- conducted a check on the system for effective operation and hygiene
- carried out irrigation from dairy waste storages
- cleaned and stored equipment, disposed of waste and maintained records post operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of waste generated in dairy industry
- legislation, regulations and industry requirements for dairy waste disposal operations, including biosecurity requirements and environmentally sustainable practices
- environmental impacts of dairy waste disposal operations and dairy waste irrigation, and strategies to mitigate negative impacts
- organisational work program and food safety program requirements for dairy waste disposal operations
- work health and safety requirements for operating a dairy waste utilisation system
- tools, equipment and systems used for dairy waste disposal operations (dairy waste handling, removal and disposal) and their functions, cleaning, maintenance, servicing and storage of such tools, equipment and systems

- irrigation techniques for dairy waste
- functions, maintenance and service of effluent pits
- methods for safe and appropriate disposal of containers, leftover fluids, waste and debris from effluent operations
- documentation and type of records that need to be completed for effluent operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a dairy facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - dairy waste utilisation system and associated tools and equipment
 - personal protective equipment (PPE)
 - record system
- specifications:
 - work program
 - food safety plan
 - manufacturer specifications
 - workplace policies and procedures for dairy waste disposal and recycling operations, including advice on health and safety, food safety, hygiene, and biosecurity and environmental regulatory requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCDRY402 Manage milking shed operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively developed and managed the operations of a milking shed, including:

- conducted a review of milking shed policies and procedures for compliance with regulations and quality standards
- overseen the routine maintenance and service of milking equipment or replacement of consumables on at least one occasion
- managed the conduct of at least two milking operations, including:
 - determined and communicated the milking schedule
 - maintained practices for milk quality in co-operation with relevant personnel
 - identified possible causes of decline in milk quantity and quality and managed the segregation of unsuitable milk from livestock with health problems
 - identified any faults in milking equipment and taken action to have rectified
 - overseen cleaning and disinfection of milk collection area and equipment after milking
 - maintained records of the food safety components of the milking operation
 - implemented and monitored work health and safety, food safety, animal welfare and environmental policies and procedures throughout the operation

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industry legislation, regulations and standards relevant to milking operations, milk quality assurance and milking shed operations:
 - work health and safety
 - food safety plan and practices
 - animal welfare

- environmental impacts of milking operations and strategies to mitigate negative impacts
- hygiene and biosecurity
- production targets and requirements for milking operations, including required resources, both human and equipment
- types, functions, cleaning, monitoring and maintenance of milking facilities, machinery, equipment and consumables
- types, characteristics, signs of ill health, prevention and treatment of relevant diseases in the livestock species and their impact on milking operations and milk quality
- criteria, methods and industry standards for determining milk quality
- reproduction cycle, lactation and behaviour of the animal species applicable to milking operations
- livestock health testing and sampling, health treatment and preventive medicine applicable to milking operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a dairy facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - machinery and equipment used for milking operations
- specifications:
 - facility maintenance plans and schedules
 - food safety plan
 - supplier specifications
 - workplace policies and procedures, quality standards relevant to managing milking operations and milking shed routines
- relationships:
 - staff.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR101 Support ecological restoration

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to support natural area conservation work in parks, natural areas, agricultural lands or areas undergoing restoration.

The unit applies to individuals who assist others undertaking conservation works and who undertake defined routine activities under close supervision and undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare materials, tools and equipment for conservation work	1.1 Interpret instructions and directions from supervisor 1.2 Identify materials, tools and equipment required for job 1.3 Conduct checks on materials, tools and equipment, and report insufficient or faulty items 1.4 Demonstrate manual handling techniques when loading and unloading materials

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select and use relevant personal protective equipment 1.6 Identify workplace health and safety hazards, and report to supervisor
2. Undertake conservation and restoration work as directed	2.1 Conduct conservation and restoration work according to work instructions and workplace health and safety procedures 2.2 Interact with others in a positive and professional manner 2.3 Handle materials and dispose of waste according to instruction 2.4 Report difficulties in completing work to required standards to supervisor
3. Store and stockpile materials	3.1 Store debris and waste material according to instructions 3.2 Prepare and process debris and waste materials 3.3 Stockpile surplus materials for removal 3.4 Maintain a clean and safe work site while completing conservation activities
4. Clean up on completion of conservation work	4.1 Store materials according to instructions 4.2 Clean, maintain and store tools and equipment according to instructions 4.3 Report work outcomes to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCECR101 Support ecological restoration

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, supported natural area conservation work, and has:

- interpreted supervisor instructions and prepared tools and equipment
- provided support for natural area conservation work
- stockpiled waste and surplus materials for removal or storage according to supervisor instructions
- cleaned site, tools and equipment
- conducted all work according to workplace health and safety requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- recognition of the purpose and value of conservation management projects
- tools and equipment used in conservation work, including:
 - safe operation and use
 - basic maintenance
 - cleaning and storing
- basic restoration techniques, including:
 - planting
 - basic plant protection installation
 - direct seeding
 - assisted natural regeneration
 - protection of remnant vegetation
- basic manual weed control techniques and their purpose, including:

- recognition of target species
- deseeding
- crowning
- digging out
- workplace health and safety requirements, including:
 - basic hazard recognition and reporting
 - workplace health and safety procedures
 - personal protective equipment required for conservation work
- basic principles of biosecurity and sustainability practices related to work instructions
- basic ecological principles for conservation work related to work instruction, including:
 - recognition of basic ecosystems, their aspect, and simple structure required for locating planting and conservation work areas
 - recognition of plant types and positioning in the ecosystem when planting or seeding.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a conservation work site or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools and equipment
 - materials required for ecological restoration works
 - specific items of personal protective equipment
- specifications:
 - workplace instructions
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR102 Support native seed collection

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to support native seed collection across a range of landscapes and environments.

The unit applies to individuals who work under close supervision and undertake defined routine conservation activities and work in a structured context.

Legislation, regulations and by-laws relating to the collection and removal of plant materials from public and private land apply nationally and in some states, territories and jurisdictions. Users are advised to check with the local, relevant authority.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare materials, tools and equipment for native seed collection	1.1 Interpret instructions and directions from supervisor 1.2 Identify materials, tools and equipment required 1.3 Check materials, tools and equipment, and report identified problems to supervisor 1.4 Load and unload transported materials according to workplace health and safety manual handling techniques

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Select, check and use personal protective equipment 1.6 Identify workplace health and safety hazards, and report identified hazards to supervisor
2. Support native seed collection	2.1 Undertake seed collection activities according to supervisor instructions, biosecurity and sustainable seed collection procedures and workplace health and safety procedures 2.2 Provide assistance to support the activities of others 2.3 Provide support to collect seeds 2.4 Provide assistance to separate viable seed and check seed quality 2.5 Provide assistance to weigh, label and store seeds 2.6 Record seed information according to instructions
3. Clean up on completion of seed collection work	3.1 Collect seed waste and plant materials and dispose of according to instructions 3.2 Clean, maintain and store tools and equipment 3.3 Report work outcomes to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Prepare labels for seed following instructions and ensuring accuracy and legibility of information
Oral communication	<ul style="list-style-type: none"> Listen to work instructions and clarify both written and oral instructions as required Report on own work to supervisor

Assessment Requirements for AHCECR102 Support native seed collection

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has followed directions from supervisor to collect, extract, weigh, label and store at least ten species of native seeds from at least three of the following types of plants or plant environments:

- grasses and sedges
- herbaceous plants
- woody shrubs below four metres high
- trees above four metres high
- freshwater aquatic plants
- marine plants
- marshland or intertidal plants.

There must also be evidence that the individual has:

- applied safe work practices while collecting seed
- provided seed collecting support
- prepared, used and cleaned tools and equipment used during seed collection
- conducted seed collection work and maintained biosecurity and sustainable seed collection practices specified in instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- laws governing seed collecting from public and private land, including:
 - basics of commonwealth, state or territory laws
 - licensing requirements
- basic ecological principles for seed collection related to work instruction, including:

- recognising plants and range of seed species required for collection
- recognition of broad ecological systems for locating seed collection target species
- range of processes for collecting, treating and storing seed, including:
 - recognising mature seed ready for collection
 - identifying seed and where to locate it on plants
 - methods to separate viable seed from waste materials
 - recognising common seed disorders that affect the health and viability of seed
 - labelling seed and the need for accuracy and completeness in documentation
 - seed treatments and storage requirements for seed species collected
- organisational and site standards, requirements, policies and procedures for collecting seed, including:
 - collecting seed sustainably, minimising seed collection impact on the environment
 - collecting seed hygienically using biosecurity principles to prevent the spread of pests and disease
- seed collecting resources and equipment, including:
 - safe use and operation
 - basic maintenance
 - cleaning and storing
- recording and reporting requirements
- workplace health and safety requirements, including:
 - safety and environmental hazards and controls associated with the collection, treatment and storage of seed
 - personal protective equipment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field while collecting native seed from a range of plants as specified in the Performance Evidence
- resources, equipment and materials:
 - seed collecting tools and equipment specific to the seed type and location
 - items of personal protective equipment relevant to the seed collection site, including sun protection
- specifications:
 - workplace instructions with seed collection specifications
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR201 Capture digital media for fieldwork

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to use compact cameras, mobile phones and tablets to capture and record basic digital media in the field, store media and perform basic digital editing.

The unit applies to individuals who work in conservation and ecosystem management under supervision, and exercise limited autonomy with some accountability for own work. This includes undertaking defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to take digital media	1.1 Determine the intended purpose of digital media 1.2 Confirm imagery and audio specification for subject, purpose and workplace requirements 1.3 Source and follow workplace health and safety policies and procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Obtain permits and releases have been obtained according to workplace procedures and copyright requirements
2. Identify and select equipment	2.1 Select digital capture device suitable for the intended purpose 2.2 Select and prepare accessories to use with digital capture device 2.3 Select, install and check digital capture equipment for power and correct operation 2.4 Transport and store equipment and accessories to prevent damage
3. Record digital media	3.1 Implement safety controls and safe work practices 3.2 Set up digital capture device according to operator instructions 3.3 Select digital capture device settings to suit conditions and subject 3.4 Compose and sequence imagery and audio according to the subject, situation and purpose of the shoot 3.5 Capture digital media according to operator instructions and intended purpose 3.6 Check captured digital media is fit for purpose 3.7 Use capture techniques for subject, environment and purpose 3.8 Record field notes according to workplace procedures
4. Perform basic editing, store and catalogue digital media files	4.1 Transfer digital media from camera to storage device according to workplace procedures 4.2 Edit digital media using basic software according to intended purpose 4.3 Name digital image files according to workplace naming convention 4.4 Check, edit and enter metadata according to workplace procedures 4.5 Maintain imagery records and filing system according to workplace procedures and copyright requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret digital media equipment operating instructions to ensure correct operation Interpret policies and procedures for permission and model release forms
Writing	<ul style="list-style-type: none"> Complete model release and permission forms accurately

Assessment Requirements for AHCECR201 Capture digital media for fieldwork

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has captured digital media in the field using compact camera, smartphone or tablet for any two of the following media types:

- still photographs
- video
- video with audio
- audio.

There must also be evidence that the individual has:

- determined the purpose and requirements of the imagery
- ensured that permissions and releases have been obtained for planned work
- followed work health and safety policies and procedures
- selected, transported and stored the digital capture devices and accessories for work
- set up and adjusted digital capture device settings to obtain planned outcomes
- recorded field notes according to purpose and workplace procedures
- transferred digital media from capture device to storage/editing device
- edited digital media to achieve performance required
- named and stored digital media and metadata according to workplace procedures and copyright requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic digital capture devices used in the field, including:
 - compact cameras

- mobile smartphones
- wireless touch screen personal computers (tablets)
- simple digital media and its use in conservation and land management, including:
 - still photographs
 - video and video with audio
 - audio
- basic methods of photography, photographic techniques and audio capture applicable to fieldwork
- legal requirements for capturing and using digital images and audio, including:
 - copyright
 - privacy and model releases
 - site access and permission to use images and audio
 - releases
 - environmental protection relating to taking photos for fieldwork
- work health and safety hazards, risks and controls
- purpose, setting up and operation of digital capture devices used in fieldwork
- principles of digital photography
- principles of video
- principles of audio capture
- media and methods used for documenting conservation activities
- managing digital media files, including:
 - file names
 - storing and transferring files
 - managing image metadata
- use of basic software applications to manipulate digital images and audio files.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital capture device and accessories
- specifications:
 - specific workplace procedures and forms for permissions and releases
 - manufacturer operating instructions for specific digital devices
 - workplace specifications for media purpose.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR202 Maintain wildlife habitat refuges

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to maintain wildlife habitats and refuges to protect desirable animal species from invasive species.

The unit applies to individuals who work under supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Assess the scope of the refuge maintenance job	1.1 Identify target species to be protected from invasive pests and recognise their behaviour pattern 1.2 Identify characteristics of refuges required for target species according to supervisor instructions 1.3 Determine locations of refuges from supervisor instructions and site plan

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	1.4 Estimate time to complete the work 1.5 Identify environmental risks associated with the work 1.6 Determine vehicles, equipment and materials required to complete the work
2. Prepare for the refuge maintenance job	2.1 Determine location and boundaries for the wildlife habitat refuge work according to supervisor instructions 2.2 Identify hazards, assess risk and implement controls according to workplace health and safety procedures 2.3 Control environmental and biosecurity risks associated with work 2.4 Check and prepare vehicles, equipment and materials for serviceability according to manufacturer instructions and workplace biosecurity procedures
3. Monitor upkeep of wildlife habitat refuges for protection of desirable species from invasive pests	3.1 Operate vehicles and equipment according to manufacturer instructions and workplace procedures 3.2 Monitor upkeep of wildlife habitat refuges according to supervisor instructions and industry practices 3.3 Implement strategies to control invasive pests in a wildlife habitat according to supervisor instructions 3.4 Identify harbours used by pest animals and report to supervisor 3.5 Collect and dispose of waste from site according to industry and environmental practices and workplace health and safety procedures
4. Clean and store equipment and material	4.1 Clean and store equipment and materials according to workplace and biosecurity procedures 4.2 Record job completion according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
--------------	--------------------

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret wildlife habitat maintenance plans, and use the information to comply with the standards and requirements of maintenance works

Assessment Requirements for AHCECR202 Maintain wildlife habitat refuges

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified the scope of work and implemented maintenance practices for wildlife habitat refuges in one of the following environments:

- terrestrial
- marine or aquatic
- arboreal.

There must also be evidence that the individual has:

- maintained wildlife habitats and refuges to protect desirable fauna
- identified native species that are present in the wildlife refuge
- confirmed the features required for a wildlife habitat refuge
- provided harbours and modified habitat according to plan to provide refuge for native species
- conducted a health and safety risk assessment and implemented controls for the site
- implemented strategies to control invasive pests in a wildlife habitat according to maintenance plan
- applied biosecurity and sustainable practices during maintenance work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- appearance of fauna and common names of native fauna, predators and vertebrate pests for a specified site
- ecological principles for habitat and refuges, including:
 - recognition of basic ecosystems and animal behaviour and habitat
 - interactions between flora and fauna and impact on success of habitat and refuges

- types and positioning of habitat refuges for best protection from elements and predators
- importance of biodiversity in an ecological community, and impact on wildlife management practices and habitat refuge, including:
 - terrestrial plant communities and relation to animal habitat and refuges
 - marine and water refuges for aquatic species
- invasive vertebrate pests and their impact on other fauna and habitat, including:
 - harbours and refuges used by vertebrate pests
 - basic control strategies for vertebrate pests in natural ecosystems
 - impact of control strategies on native fauna
- invasive plants pests and their impact on fauna and habitat
- work health and safety requirements, risk assessment processes and personal protective equipment (PPE)
- wildlife habitat and refuges used by desirable marine, aquatic or terrestrial animal species, including:
 - tree hollows
 - ground burrows
 - ground and arboreal nests
 - coral and coral outcrops
 - rock outcrops, ledges and crevices
 - thickets and dense vegetation and forests
 - tall vegetation, grass and grasslands
- wildlife habitat modification techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field in one of the environments specified in the Performance Evidence
- resources, equipment and materials:
 - specific tools and vehicles used in maintaining habitat refuges
 - personal protective equipment
- specifications:
 - specific workplace procedures for maintaining habitat refuges
 - workplace instructions/job specifications
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR203 Perform basic ecological restoration works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out basic ecological restoration works following a restoration plan and instructions.

The unit applies to individuals engaged in conservation and land and water management programs and who undertake defined routine activities under supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify activities and inspect site for required works	1.1 Locate work site from plans, and interpret goals for project from supervisor instructions 1.2 Locate elements within site that are intact and require protecting 1.3 Identify areas on site that have potential for natural or assisted regeneration

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify or confirm areas requiring reintroduction of biota</p> <p>1.5 Identify treatments for specific locations on site according to supervisor instructions</p> <p>1.6 Confirm site works to be performed with supervisor</p>

Assessment Requirements for AHCECR203 Perform basic ecological restoration works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed ecological restoration works for at least two different ecological environments.

There must also be evidence that the individual has:

- established activities for works from the supervisor instructions and confirmed with supervisor
- confirmed project goal, approaches, methods and treatments from plans and supervisor instructions
- inspected site for intact elements, including:
 - biota
 - soil profiles
 - other substrates
- identified treatments from instructions, including:
 - substrate
 - hydrological
 - habitat
 - competition
 - reintroduction
- protected existing biota, habitat features and substrates
- prepared and carried out at least two of the following assisted regeneration treatments:
 - removal of competing biota
 - installation of habitat features
 - applied disturbance to trigger recovery
- transported tools and materials to site
- carried out biological reintroduction treatments according to instructions, including two of the following methods:

- transplanted stock from natural area
- planted nursery stock
- sown seed or other propagules
- secured and protected the restored area
- removed waste and cleaned the site according to workplace environmental procedures
- carried out work according to instructions and workplace health and safety requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of ecological restoration, and the application of industry standards
- the concept of ecosystem resilience and its application in areas of different degradation level
- basic mechanisms of natural recovery, including:
 - re-sprouting
 - clonal division
 - seed and propagule banks
- basic ecological restoration approaches suited to different degrees of degradation
- basic ecological restoration techniques suited to different species and degrees of degradation
- common names of key native plants, animals and other organisms present in restoration area
- native plant and animal growth and habitat requirements specific to the ecosystems in a restoration area
- safety data sheets for types of chemicals that can be used in ecological restoration
- work health and safety requirements and biosecurity requirements of ecological restoration
- common names of weeds, pest animals and other undesirable organisms present in restoration area
- key physiological characteristics of undesirable species relevant to their control
- the role of genetic diversity and integrity in fragmented ecosystems, with a basic consideration of implications of climate change.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field as specified in the Performance Evidence
- resources, equipment and materials:
 - tools and equipment required for ecological restoration works
 - materials required for treatments

- specifications:
 - specific workplace procedures and processes
 - specific safety data sheets for chemical treatments
 - workplace instructions and project brief
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR301 Maintain native ecosystem areas

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan and implement maintenance work within native ecosystem areas.

The unit applies to individuals who work on land management projects under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan maintenance works	1.1 Plan access to site to minimise disturbance and degradation 1.2 Identify legislative requirements, codes of practice and relevant management strategy and plan 1.3 Identify relevant environmental factors in maintenance works 1.4 Consult stakeholders about pending maintenance works 1.5 Determine and obtain equipment, machinery and materials for

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	maintenance works 1.6 Conduct pre-operational machinery checks according to environmental, biosecurity and safety requirements 1.7 Identify hazards, assess risk and implement controls according to workplace health and safety procedures
2. Undertake maintenance	2.1 Follow environmental sustainability and biosecurity policies and procedures when undertaking maintenance work 2.2 Undertake ecological restoration site maintenance works according to plans 2.3 Confirm maintenance works conform to relevant risk control measures and practices 2.4 Implement interim protective measures to avoid degradation and disturbance during maintenance works 2.5 Monitor activities of personnel and visitors to reduce risks to the significance of site
3. Complete activities	3.1 Clean and restore site on completion of works 3.2 Clean and store equipment and machinery 3.3 Remove and store or dispose of excess materials from site according to workplace requirements 3.4 Report completed maintenance works to supervisor according to workplace and legislative requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret plans, specifications and legislative requirements, and consolidate information to determine maintenance tasks and performance standards
Oral communication	<ul style="list-style-type: none"> Participate in verbal exchanges with stakeholders using appropriate collaborative and inclusive techniques relevant to the

Assessment Requirements for AHCECR301 Maintain native ecosystem areas

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and prepared resources to maintain a natural area, as well as maintained a natural area in any two different ecological environments.

There must also be evidence that the individual has:

- accessed site and minimised damaging impact
- consulted with stakeholders, including traditional owners, about pending maintenance works
- carried out planned maintenance works with minimal damaging impacts to environment, and according to workplace health and safety practices
- selected and applied protective structures, devices and signs
- cleaned site and removed surplus materials and waste
- reported completion of activities to supervisor
- applied biosecurity measures and sustainable practices during work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ecological principles related to maintaining natural areas, including:
 - recognition of fundamental ecosystem structures and required maintenance
 - interactions between flora and fauna and impact on ecological stability when poorly maintained
 - vegetation types and their general characteristics for replication in maintenance activities
- importance of biodiversity in an ecologically stable community:
 - terrestrial plants and basic plant community structures

- marine and water plants and interaction with marine creatures
- contribution of maintenance works on preserving biodiversity
- intricate relationships between microbiota, including insects, molluscs, worms and microbes, and impact on maintenance practices
- environmental factors to be considered in maintenance works, including:
 - ecology in land based, coastal zones or marine parks
 - marine, shore and terrestrial species
 - natural and human threats to places of natural significance
 - pollution sources and damage potential
 - soil type and geology for access and performing maintenance activities
- basic protection/restoration or rehabilitation methods
- protocols of engaging with traditional owners and the consultation process
- seeding techniques, including:
 - hand seeding
 - broadcast sowing
 - ripping trailed machinery
- vegetation replacement methods and their application in restoration programs, including:
 - assisted natural regeneration
 - planting
 - seeding
 - transplanting
- recognition of common weeds and pests and their impact on natural areas, including:
 - weed control methods and application, including use of herbicides
 - basic plant protection, fences and guards from impact of animals
 - damaging effects on natural areas caused from pests
- purpose and processes for natural area restoration, including implementing biosecurity procedures to minimise the transfer of pests and diseases into natural areas, including weed seed, plants, animals and microbial organisms
- standards and procedures for planting nursery stock and transplants into natural areas, including:
 - basic soil or substrate identification
 - soil or substrate preparation and amelioration
 - soil or substrate and plant root contact
 - irrigation methods and procedures for watering in planted materials
- workplace health and safety procedures, including:
 - safety hazards and associated risks on restoration sites
 - personal protective equipment
 - mixing and using herbicides
 - sun protection

- requirements of traditional land owners, government and non-government agencies, special interest groups and other stakeholders about diversity of natural area usage, including:
 - natural areas on private land
 - natural areas on public land
 - commercial use
- applicable state or territory and commonwealth legislation covering parks, conservation, environmental protection and heritage.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a natural area as specified in the Performance Evidence
- resources, equipment and materials:
 - use of tools appropriate to the maintenance tasks identified in the maintenance plan
 - use of personal protective equipment
- specifications:
 - workplace policies and procedures for safety, biosecurity and maintenance tasks
 - workplace instructions, and natural area maintenance plan with specifications specific to the site
 - legislative requirements for records
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR302 Collect and preserve biological samples

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify sampling method, and collect and preserve biological samples for later processing and/or analysis.

The unit applies to individuals who work in an environment where biological tests are required, and who work under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

Legislation, regulations and by-laws relating to the collection and removal of plant materials from public and private land apply nationally and in some states, territories and local jurisdictions. Users are advised to check with the local, relevant authority.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for collection	1.1 Confirm the purpose and schedule for sampling with manager 1.2 Identify sampling site location and obtain approval for site access from stakeholders 1.3 Identify samples to be collected and preserved

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify and comply with legislative and regulatory requirements governing biological samples and sampling methods 1.5 Organise equipment required for biological sampling and preserving 1.6 Assess range of likely operating conditions, hazards and sensitive environments for impact on sampling and testing 1.7 Identify hazards, assess risk and implement controls according to workplace health and safety policies and procedures
2. Prepare equipment and resources	2.1 Obtain equipment required for sampling and preserving 2.2 Check equipment for availability and serviceability 2.3 Clean and sanitise equipment to maintain integrity of samples and biosecurity conditions 2.4 Collect record sheets necessary for task 2.5 Transport resources and personnel safely to sampling sites and prepare for use
3. Carry out biological sampling and preserving procedures	3.1 Collect samples according to sampling plan 3.2 Apply environmental sustainability and biosecurity practices to collection processes 3.3 Preserve and record samples in accordance with sampling standards and guidelines 3.4 Prepare, package and dispatch samples for external analysis in accordance with sampling schedule and laboratory standards 3.5 Observe and record ambient and antecedent environmental conditions 3.6 Operate equipment and undertake work according to workplace health and safety requirements 3.7 Report and deliver presentable sample collection according to workplace procedures
4. Complete collection of biological sampling activities	4.1 Clean, sanitise and store equipment and clothing 4.2 Repair damaged or malfunctioning equipment 4.3 Record site sampling results and observations according to workplace recording procedures 4.4 Report changes in field conditions and equipment to manager

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Accurately complete workplace sampling records and reports using clear language and industry terminology
Numeracy	<ul style="list-style-type: none"> Use appropriate measurement techniques to ensure accuracy when collecting weights and volumes of biological samples

Unit Mapping Information

Assessment Requirements for AHCECR302 Collect and preserve biological samples

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected and preserved at least ten biological samples from at least two different monitoring sites.

There must also be evidence that the individual has:

- established the sampling purpose and schedule
- planned and arranged the collection with stakeholders
- prepared equipment and facilities
- carried out biological sampling according to monitoring program and enterprise procedures
- preserved and recorded samples and forwarded for testing according to monitoring program requirements
- recorded sampling data and observations
- reported outcomes of collection
- applied workplace health and safety and biosecurity procedures throughout collection process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of biological samples that may be included in the plan, including:
 - water
 - microorganisms
 - fungi
 - micro and macro invertebrates
 - plants
 - animals including fish

- industry biological sampling and preserving guidelines and protocols
- identifying and selecting representative sampling sites
- field procedures for collecting and preserving biological samples for different environments and conditions, including:
 - random sampling
 - stratified sampling
 - systematic sampling
- collecting equipment and methods for specific environments and biological specimens, including:
 - marine and aquatic
 - terrestrial
 - arboreal
- preservation equipment and processes, including:
 - storage containers
 - labels and labelling information
 - preserving techniques and materials
- recognition of fauna and flora to be sampled
- health and safety considerations when sampling, including:
 - weather conditions and impact on site safety
 - personal protective equipment
 - toxicological and other personal health risks
 - physical site conditions and hazards.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated at a sampling site as specified in the Performance Evidence
- resources, equipment and materials:
 - specific tools and equipment required for the specified biological sampling to be performed
 - personal protective equipment
 - preservatives and cleaning agents
- specifications:
 - workplace procedures and processes for sample collection preservation and storage
 - specific safety data sheets for preservatives and cleaning agents
 - workplace sampling plan
 - standards and protocols for biological sampling.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR303 Implement biological reintroduction works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement biological reintroduction works for ecological restoration areas with plants, other biota and animals not subject to animal ethics and animal welfare requirements.

The unit applies to individuals who work in conservation and ecosystem management in terrestrial, marine or aquatic environments under broad direction. They use discretion and judgement in the selection and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for biological reintroduction works	1.1 Identify goal and objectives for biological reintroduction project from restoration plan 1.2 Identify method and timing of biological reintroduction work 1.3 Identify the need for habitat features 1.4 Select tools and materials required and check functionality and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	cleanliness 1.5 Identify, obtain and store biological materials required for reintroduction 1.6 Determine and organise labour and machinery requirements 1.7 Prepare a works schedule and provide to management or client
2. Prepare the biological reintroduction site	2.1 Identify site health and safety hazards, assess risks and implement controls according to workplace procedures 2.2 Define boundaries of biological reintroduction site according to site plan 2.3 Undertake site preparation according to biological reintroduction plan 2.4 Assess site for conditions that will inhibit biological reintroduction performance outcomes 2.5 Select and apply treatments to rectify inhibiting conditions 2.6 Use substrate nutrients and amelioration according to biological reintroduction plan specifications 2.7 Install protective structures according to site safety controls
3. Undertake biological reintroduction works	3.1 Select, check and use personal protective equipment 3.2 Carry out biological reintroduction works according to biological reintroduction plan using sustainable practices 3.3 Inspect biological stock before works and discard defective materials according to restoration plan and biosecurity procedures 3.4 Reintroduce biological stock and treat with required nutrients/ameliorants according to biological reintroduction plan 3.5 Install plant protection systems for protecting, securing or anchoring new plants 3.6 Confirm the biological reintroduction program outcomes have been achieved 3.7 Identify and report potential threats to biological reintroduction works 3.8 Select and implement retention or addition of habitat features to restoration plan 3.9 Maintain records and reporting according to workplace requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
4. Maintain revegetated site	4.1 Monitor biological reintroduction site and identify factors detrimental to plant growth 4.2 Undertake remedial action and plant protection to rectify identified detrimental factors 4.3 Apply site maintenance procedures according to biological reintroduction plan 4.4 Clean, maintain and store tools and equipment according to workplace and biosecurity procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret biological reintroduction plans and use the information to comply with the standards and requirements of biological reintroduction works
Numeracy	<ul style="list-style-type: none"> Transpose dimensions from scale drawings to define the site boundaries using basic survey techniques

Assessment Requirements for AHCECR303 Implement biological reintroduction works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared and implemented biological reintroduction works on two different ecological environments.

There must also be evidence that the individual has:

- conducted biological reintroduction works according to biological reintroduction plan, sustainable practices and biosecurity procedures
- prepared the site for biological reintroduction works
- conducted a site hazard assessment and implemented controls
- assessed the site for inhibitors to biological reintroduction works, and implemented treatments
- treated weeds and competing plants
- cleaned and maintained the revegetated site
- used, cleaned, maintained and stored machinery and equipment according to manufacturer instructions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- biological reintroduction techniques
- ecological principles related to biological reintroduction including:
 - locations on the revegetation site where natural regeneration can be facilitated
 - recognition of fundamental ecosystem structures
 - interactions between flora and fauna and impact on ecological stability
 - vegetation types and their general characteristics relevant to biological reintroduction activities
 - ecological environments and their fundamental differences

- importance of biodiversity when revegetating for an ecologically stable community, including:
 - terrestrial plants and basic plant community structures
 - marine and water plants and interaction with marine creatures
 - contribution of biological reintroduction works on preserving biodiversity
 - intricate relationships between microbiota, including insects, molluscs, worms and microbes and impact on biological reintroduction practices
- genetic principles for ecological restoration, including genetic integrity and genetic diversity
- environmental factors to be considered in biological reintroduction works, including:
 - ecology in land based, coastal zones or marine parks
 - existing boundaries of regeneration potential
 - marine, shore and terrestrial species
 - natural and human threats to places of natural significance
 - pollution sources and damage potential
 - substrate factors for accessing sites and conducting biological reintroduction work
- defining the biological reintroduction site boundaries, including:
 - ecosystem and habitat boundaries
 - basic surveying techniques
 - tools and equipment for marking out site boundaries
- factors affecting the timing and method of planting, including:
 - weather
 - climate
 - tidal influences
 - soil/substrate type and condition
 - access to site
 - impact on fauna natural cycles
 - impact of plant growth cycles
- assessing site condition requiring rectification/treatment prior to biological reintroduction, including:
 - accumulated waste
 - polluting materials
 - weeds, including staging site preparations to accommodate weed invasion
 - pests and diseases affecting vegetation
- maintenance activities and practices to support revegetated plant growth, including:
 - controlling plant competition from weeds and vigorous regrowth
 - erosion control strategies
 - animal grazing and damage
- workplace health and safety procedures, including:
 - safety hazards and associated risks on biological reintroduction sites

- personal protective equipment
- handling, mixing and using hazardous treatments
- sun protection
- materials handling safety
- exclusion fencing
- identification and control of weeds, and pests and diseases
- basic plant physiology of plant growth, including:
 - detrimental effects from pollution
 - competition from weeds
 - nutrients and ameliorants used for planting and their impact on plant health
- techniques for protecting, securing or anchoring plantings.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on ecological environments requiring biological reintroduction works
- resources, equipment and materials:
 - tools, materials and equipment required by the biological reintroduction plan
 - personal protective equipment
- specifications:
 - workplace policies and procedures for safety, biosecurity and biological reintroduction activities
 - ecological biological reintroduction plan with specifications specific to a site.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCECR304 Undertake direct seeding

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared at least one revegetation site for direct seeding and used techniques and equipment to distribute seed according to planned specifications.

There must also be evidence that the individual has:

- conducted work according to workplace health and safety and biosecurity procedures
- prepared the site for seeding with consideration to environmental impacts
- conducted seeding to maximise germination response
- completed seeding operations with no damage to the environment
- operated, cleaned, maintained and stored equipment safely and according to manufacturer instructions and workplace requirements.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- seeding techniques used on natural area and revegetation sites
- ecological principles related to revegetation and seeding of sites, including:
 - recognition of fundamental ecosystem structures
 - interactions between flora and fauna and impact on ecological stability
 - vegetation types and their general characteristics relevant to seeding operations
- importance of biodiversity when restoring a site for ecological stability:
 - terrestrial plants and basic plant community structures
 - marine and water plants and interaction with marine creatures
 - contribution of revegetation and seeding work for promoting biodiversity

- relationships between microbiota and seed germination
- basic genetic principles for ecological restoration, including:
 - protecting the genetic integrity of local genotypes
 - ensuring sufficient genetic diversity for survival and adaptation
- identifying ecological areas with natural regeneration potential
- operation, maintenance and safety of seeding equipment
- environmental factors to be considered for direct seeding operations, including:
 - ecology in land based, coastal zones or marine parks
 - marine, coastal shore and terrestrial species
 - pollution and potential damage to seed germination
 - soil type and geology for accessing sites and conducting seeding operations
- factors affecting the timing and method of seeding, including:
 - weather
 - climate
 - tidal influences
 - soil/substrate type and condition
 - access to site
 - impact of plant growth cycles
- workplace health and safety procedures, including:
 - safety hazards and associated risks on revegetation sites
 - personal protective equipment
 - handling, mixing and using hazardous treatments
 - sun protection
 - materials handling safety
 - exclusion fencing
- basic plant physiology of seeds and seed germination, including:
 - process of seed germination
 - environmental conditions supporting seed germination
 - soil conditions supporting seed germination
 - inhibitor to seed germination
 - seed treatments to promote germination and success
 - viable and non-viable seed.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a revegetation site or in an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - seed specified in revegetation plan
 - tools and equipment for preparing site and dispersing seed
 - personal protective equipment
- specifications:
 - specific workplace procedures and processes
 - manufacturer operating instructions for equipment and machinery used
 - revegetation plans and specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCECR305 Collect native seed

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected and stored native seed from at least ten different species. The collected seeds must have at least one representative from each of the following seed types:

- fleshy fruits
- dry dehiscent seed
- dry indehiscent seed.

There must also be evidence that the individual has:

- sought and obtained permission and approval to collect seed from at least one of the following protected environments or people, including:
 - local government or roadside
 - state forest
 - national park
 - Indigenous elders or custodians on country
 - private property
- used and maintained materials, equipment and resources efficiently and safely
- identified seed species accurately
- followed workplace policies and procedures for collecting seed
- assessed the seed against quality standards for seed collection
- accurately recorded seed collection information and results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental protection requirements and procedures for minimising environmental impact

- laws governing seed collecting from public and private land, including:
 - basics of commonwealth, state or territory laws
 - licensing requirements and application procedures for seed collection on public land
 - permits and access to Indigenous lands
 - negotiating access to private land
- ecological principles for seed collection, including:
 - identifying plants and range of seed species required for collection
 - basic ecological ecosystems for locating seed collection targets
 - native plant and seed characteristics of revegetation site
- assessing seed quality characteristics, including:
 - types of diseases and pests likely to infect seed species
 - seed size, viability and stage for collection
 - provenance
- ethical considerations for collecting seed, including plant scarcity and impact of seed collection on natural regeneration
- procedures for collecting, treating, storing and labelling seed, including:
 - recognising seed ready for collection
 - weather and environmental conditions
 - location on plants to collect seed
 - extracting seed from plant receptacles
 - winnowing and separating seed waste
 - labelling seed and the need for accuracy in documentation
 - seed treatments and storage requirements for seed species
 - seed storage life expectancy
- organisational and site standards, requirements, policies and procedures for collecting seed, including:
 - collecting seed sustainably, minimising seed collection impact on the environment
 - collecting seed hygienically using biosecurity principles to prevent the spread of pests and disease
- seed collecting resources and equipment, including:
 - safe use and operation
 - basic maintenance
 - cleaning and storing
- recording and reporting requirements
- seed collecting timeframes, including availability and viability
- workplace health and safety requirements, including:
 - safety and environmental hazards associated with the collection, treatment and storage of seed
 - personal protective equipment
 - collecting seed from height.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field collecting a range of seed specified in the Performance Evidence, from an area requiring approvals, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - live plants with accessible seeds
 - tools and equipment required to collect seed or seed receptacles and for extracting, cleaning seed
 - seed storage containers and storage environment
 - specific items of personal protective equipment when collecting seed
- specifications:
 - workplace procedures and processes for seed collection
 - forms and procedures for applying for permission and approval for site access and seed collection
 - workplace instructions and specifications for seeds to collect
 - legislation and regulations for flora protection and biosecurity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR306 Conduct photography for fieldwork

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to set up and use photographic equipment and techniques to take photographs in the field.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to take photographs	1.1 Determine the purpose and intended use of photographs 1.2 Prepare a photograph specification for subject, purpose and requirements 1.3 Assess workplace health and safety hazards and risks for fieldwork photography, and apply controls according to workplace procedures 1.4 Confirm permits and releases have been obtained according to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	workplace procedures and copyright requirements
2. Identify and select appropriate equipment	2.1 Select camera suitability for the intended use 2.2 Select and prepare photographic equipment and accessories required to capture intended images 2.3 Transport and store photographic equipment and accessories to prevent damage
3. Take photos using correct methods and techniques	3.1 Implement safety controls and safe work practices 3.2 Select and set up camera in position to take photographs 3.3 Select camera settings to suit conditions and subject 3.4 Select the perspective, framing and sequencing of photographs according to subject and purpose of photographs 3.5 Capture photograph and check image according to selected camera type to ensure fit for purpose 3.6 Apply specialist photography techniques appropriate to subject, environment and purpose 3.7 Record field notes according to workplace procedures
4. Store and catalogue photographs	4.1 Transfer photographs from camera for storage according to workplace procedures 4.2 Maintain photograph records and filing system according to workplace procedures and copyright requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and interpret documents for preparing permits and camera settings to determine photographic outcomes
Writing	<ul style="list-style-type: none"> Accurately prepare applications and update records using clear language and appropriate terminology

Skill	Description
Numeracy	<ul style="list-style-type: none"> Perform basic calculations when interpreting and setting camera settings

Assessment Requirements for AHCECR306 Conduct photography for fieldwork

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has conducted photography fieldwork, including:

- determined the purpose of the photograph and prepared a specification
- ensured that appropriate permits and releases have been obtained for planned photographs
- assessed work health and safety risks and applied suitable controls
- selected, transported and stored the appropriate camera and equipment for specified photographs
- set up and adjusted camera settings to obtain planned photograph outcomes
- used at least three specialised photography techniques according to plan and industry standards, including:
 - macro photography
 - photo points
 - evidentiary photography
- captured photographs and checked against the photograph specification
- recorded field notes according to purpose and workplace procedures
- transferred photographs from camera, recorded and stored images according to workplace procedures and copyright requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic types of photography and photographic techniques applicable to fieldwork
- legal requirements of copyright, privacy, permission, releases and environmental protection relating to taking photos for fieldwork
- work health and safety hazards, risks and controls

- purpose, setting up and operation of photographic equipment used in fieldwork
- principles of photography, including aperture, shutter speed, depth of field, ISO, white balance, exposure compensation and dynamic range
- purpose and technique for specialist photography in land management, including:
 - identifying flora and fauna
 - vegetation communities and landscapes
 - photo-point surveys
 - photography for compliance evidentiary purposes
 - photography for publications
 - project monitoring and reporting
 - underwater
- media and methods used for documenting, labelling and storing photographs for analogue and digital photography.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an accessible field environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - camera, lens, equipment and media for capturing photographs
 - personal protective equipment
- specifications:
 - workplace documents, including policies, procedures, processes, instructions and forms
 - manufacturer operating instructions for specific cameras and equipment
 - photographic specifications or briefs
 - copyright legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan a route using a map	1.1 Select maps, equipment and navigation aids and check for accuracy, currency and operational effectiveness for intended use 1.2 Identify relevant symbols, information and navigation on map 1.3 Identify and locate current position in the field on map using geographical features 1.4 Identify and locate required destination on map

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Assess and select route to destination using map data 1.6 Plan a safe route to destination 1.7 Measure and estimate distance to destination using map scale for selected route
2. Navigate using a map	2.1 Navigate and traverse a route according to plan 2.2 Orient the map or plan to surroundings and planned route 2.3 Use navigation aids to assist progress according to manufacturer instructions 2.4 Plan and navigate alternative routes to avoid inefficient route progress
3. Plot sites and locations using maps and Global Positioning System (GPS)	3.1 Identify and locate point on map using landmarks and key geographical features 3.2 Use GPS in conjunction with paper maps and charts according to workplace procedures 3.3 Adjust GPS settings to required datum and measurement units 3.4 Use GPS data to precisely record locations 3.5 Document navigation activity

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Read and interpret symbols and features on maps to assist in navigating routes
Numeracy	<ul style="list-style-type: none"> Perform mathematical calculations to interpret map spatial measurements and determine navigation routes and distances

Assessment Requirements for AHCECR307 Read and interpret maps

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has read and interpreted maps, including:

- identified, selected and checked maps and equipment suitable for the navigation activity
- interpreted map data, symbols, lines and features on maps to identify locations
- assessed and selected routes to a location using a map
- navigated and traversed a route of at least 2km using maps and navigational aids
- identified current position by comparing nearby geographic features on maps, and recorded details with datum in coordinate system
- identified impediments to efficient navigation, and planned alternative routes
- interpreted map scale and estimated route distances
- marked location points on a map using map geographical features
- transferred information between Global Positioning System (GPS) and paper maps/charts, including:
 - adjusted GPS settings to required datum and measurement units
 - used GPS data to precisely record locations
 - entered point data from map/chart to GPS
- documented navigation activity.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of maps and map reading
- types of maps and their use
- symbols and representations of topographical and geographical information used on maps, including:

- date of information
- common scales used on maps, and their purpose
- datums
- geographic coordinate system
- horizontal and vertical datum and production information dates
- features and use of common navigational aids, including:
 - map distance meter (analogue and digital)
 - compasses and dividers
 - rulers and protractors
- operation and functions of GPS navigation equipment
- transferring geographic information between paper maps and charts, and GPS systems
- advantages and disadvantages of different map and chart types, and sources of error
- techniques for determining routes and estimating distances.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an outdoor setting suitable for map reading and navigational purposes or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - maps and navigational charts
 - navigational aids for map reading
 - GPS
- specifications:
 - manufacturer instructions for navigation aids.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR308 Conduct a site inspection for ecological restoration

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to conduct a site inspection, including verification of the location, ownership, orientation and boundaries of a site, and assess the condition and recovery potential of the site's native ecosystem.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collect information	1.1 Obtain site location and details of proposed works 1.2 Source and review available maps and plans for site 1.3 Source and review available documents relevant to historical and current land use 1.4 Identify scope of inspection according to stakeholder requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>and local regulations</p> <p>1.5 Determine biophysical, climate and weather conditions for site from historical data and climate change prediction tools</p> <p>1.6 Seek approval to visit site</p> <p>1.7 Identify and record covenants affecting the site</p> <p>1.8 Check availability of remote sensing tools relevant to the site</p>
2. Prepare for a site visit	<p>2.1 Identify and prepare resources required for site inspection</p> <p>2.2 Plan methods for recording inspection, and confirm record-keeping procedures according to industry requirements</p> <p>2.3 Evaluate scope of proposed works and prepare field notes to checklist specific concerns</p> <p>2.4 Evaluate environmental factors to determine likely site conditions and risks</p> <p>2.5 Consider access and traffic management requirements for site</p>
3. Visit site and confirm site parameters	<p>3.1 Carry out site orientation and verify ownership and site boundaries according to maps and plans</p> <p>3.2 Identify site hazards, assess risks and implement control measures for site inspection according to workplace health and safety procedures</p> <p>3.3 Identify, estimate and record site dimensions, gradients and ecological features</p> <p>3.4 Identify and record existing on-site services</p> <p>3.5 Identify and record impact of features and characteristics of properties adjacent to site</p> <p>3.6 Identify substrate types from reference charts and texts</p>
4. Inspect site for biotic and abiotic elements	<p>4.1 Collect substrate samples, conduct and record field tests according to workplace procedures</p> <p>4.2 Identify hydrological elements affecting site ecology</p> <p>4.3 Identify the specific ecological communities on site</p> <p>4.4 Identify ecosystem functions and processes occurring on site</p> <p>4.5 Determine condition and recovery potential of natural areas within the site</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.6 Identify threatening processes affecting site conditions 4.7 Investigate and record signs of fauna on site
5. Document information	5.1 Assess site information and determine reference ecosystem relevant to site restoration 5.2 Prepare a base plan of site, including zones of varying condition 5.3 Document site inspection according to stakeholder requirements and workplace procedures 5.4 Complete documents and submit to stakeholder or supervisor according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret plans, maps, guides and texts from a variety of sources and consolidate information
Writing	<ul style="list-style-type: none"> Accurately record results of inspections and investigations and prepare documentation using industry standard terminology and formatting

Assessment Requirements for AHCECR308 Conduct a site inspection for ecological restoration

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted a site inspection for at least two different ecological restoration sites.

There must also be evidence that the individual has:

- identified biota and ecological communities of the site
- identified abiotic elements and ecological processes for the site
- identified threatening processes affecting the site
- identified a reference ecosystem relevant to the restoration
- recognised symptoms of ecosystem degradation and potential for recovery
- recognised recovery potential of site, including:
 - zones of high recovery potential
 - zones of low recovery potential
- identified hazards, assessed risk and identified controls
- collected samples and conducted substrate field tests according to site conditions and stakeholder requirements
- estimated dimensions and gradients of site
- identified anticipated effects of climate change on site
- reported findings to stakeholder or supervisor according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic ecological principles relevant to site inspections for restoration works
- basic ecological restoration principles
- biotic elements and ecosystem functions and processes, including resilience and succession after disturbance

- plan and map interpretation
- substrate type and condition and relevant field tests for soils and/or aquatic environments, including:
 - substrate type and structure
 - pH
 - soluble salts
- hydrological conditions for site and impact on ecosystem restoration
- native and non-native species identification and biology
- habitat conditions for plants and animals for restoration activities
- ecosystem resilience and recovery mechanisms of plants and animals
- threatening processes to native ecosystems
- anticipated effects of climate change on ecosystems
- measuring and estimating methods for linear measurements and gradients
- current ecosystems and their use and environmental threats
- site hazards, risks and control strategies associated with undertaking site inspections
- protocols for accessing and visiting ecological site
- legislative and regulatory requirements, including environmental protection legislation
- government regulations relating to the site components and access
- documenting site inspections using industry standard language, including:
 - inspection reports
 - site inventory reports
 - base plans
- codes of practice and current industry standards for ecological site inspections, reporting and terminology.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on at least two different ecological sites
- resources, equipment and materials:
 - equipment for performing substrate tests
 - equipment or forms for maintaining records and reporting
 - items of personal protective equipment when accessing site
 - maps and plans for site orientation and boundary establishment
- specifications:
 - workplace documents such as policies, procedures and forms
 - workplace instructions and job specifications for inspection
 - relevant legislation/codes of practice
- relationships:

- stakeholder
- supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Companion Volumes, including Implementation Guides, are available at VETNet: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

AHCECR309 Conduct an ecological and cultural site inspection prior to works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to inspect a site for ecological, biosecurity, cultural and heritage risk and report discrepancies in planned works prior to commencing works.

The unit applies to individuals who work in conservation and land management under broad supervision. They take responsibility for their own work and use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define and confirm location and setting	1.1 Confirm location and proposed activities/works with supervisor, plans and specifications 1.2 Identify legislation, regulations and agreements that affect aspects of the location and planned work

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Identify key stakeholders, partners and other stakeholders 1.4 Confirm permits and licences required with supervisor
2. Determine impact of work on ecosystem and landscape	2.1 Inspect location and identify biotic and abiotic elements impacted by planned work 2.2 Identify and locate communities and species that are subject to legal protection 2.3 Identify biotic and abiotic elements, and ecological functions and processes that vary from plans 2.4 Identify threats to biotic and abiotic elements 2.5 Identify risks of activity/work breaching legislative requirements 2.6 Identify risk to ecosystem and landscape elements, functions, processes, and legal obligations, and report concerns to supervisor for direction 2.7 Record changed conditions and risk
3. Determine impact of work on culture and heritage	3.1 Identify known cultural and heritage considerations from plans and other documentation, and confirm these with supervisor or cultural advisor 3.2 Confirm workplace procedure for responding to new cultural and heritage discoveries during work 3.3 Locate known cultural and heritage features and boundaries in the field 3.4 Confirm field observations against plans and specifications 3.5 Identify and record potential threat to culture and heritage from work, and report this to supervisor
4. Determine biosecurity implications of work	4.1 Identify biosecurity hazards and threats for site 4.2 Inspect site and identify and record previously reported biosecurity hazards and threats 4.3 Identify and record new or unreported biosecurity threats 4.4 Identify and locate species on site that are subject to legislative requirements 4.5 Identify and record actions to mitigate biosecurity risk
5. Report identified risks and threats	5.1 Compile identified risks and threats according to workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.2 Report risks and threats to supervisor for determinations and action

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret site plans and specifications for site works, and reconcile against actual site conditions
Writing	<ul style="list-style-type: none"> Prepare records and reports accurately and succinctly using standard industry terminology

Assessment Requirements for AHCECR309 Conduct an ecological and cultural site inspection prior to works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, conducted a site inspection for impact of works on ecological, cultural or heritage assets on a site, and has:

- confirmed site location and proposed works with supervisor, plans and specifications
- identified key stakeholders, partners and other interested parties
- identified biotic and abiotic elements, including:
 - annual rainfall and dominant weather patterns
 - gradient, drainage, and local base levels
 - landform, soil type and native topsoil condition
 - native vegetation types and classification
 - altered native vegetation and classification systems that apply
 - presence or signs of native fauna
 - apex predators and keystone species
 - key habitat features
- identified and located protected elements, including at least three of the following:
 - threatened rare or priority taxa
 - threatened ecological communities
 - clearing of native vegetation
 - stormwater flows and containment
 - registered cultural or heritage sites
 - declared pest and weed species
- identified and assessed the impact of proposed work on biotic and abiotic elements
- identified previously recorded culture and heritage values
- located known cultural and heritage assets and boundaries on site
- identified and assessed the impact of works on cultural and heritage values
- identified and recorded biosecurity hazards and threats

- inspected site for biosecurity threats
- reconciled landscape, ecological, cultural and biosecurity field observations against recorded or reported documentation
- identified threats posed by works
- compiled risks and threats and reported to supervisor for determination.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maps, plans, Global Positioning System (GPS) and basic spatial methods
- relevant legislation, regulations, agreements, permits and licences relating to:
 - threatened rare or priority taxa
 - threatened ecological communities
 - clearing of native vegetation
 - stormwater flows and containment
 - registered cultural or heritage sites
 - declared pest and weed species
- stakeholder groups and consultation processes
- workplace procedure for interactions with stakeholders and the media
- foundation ecological principles for native ecosystems, including:
 - physical aspects – biotic and abiotic factors
 - ecological functions and processes, including energy transfer and major nutrient flows
 - major ecosystem properties, including trophic levels, resource availability and population dynamics
 - ecosystem services, and the value of terrestrial and aquatic native ecosystems to humans
 - common forms of damage to biotic and abiotic factors, ecosystem functions and processes
 - animal habitat features and impacts on both native and feral species, including water points, thickets, undergrowth, perches and tree hollows
 - altered native vegetation, including regrowth or rangeland
- abiotic elements both physical and chemical affecting ecosystems, including:
 - climate – rainfall, wind, temperature, regular and episodic changes and patterns, including seasons, floods and drought
 - terrain, relief, aspect and altitude
 - drainage principles, including catchments, gradients and base levels
 - geology, soil type and chemical properties, including, salt, nutrients and pH
 - processes of erosion – wind, water, chemical, heat and mass movement
 - pollution of waterbodies
 - long-term changes and trends, including climate change
- biotic elements in the ecosystem, including:

- native and introduced plants and their vegetation classification
- native and introduced animals, both vertebrates and invertebrates
- microorganisms and their role in the environment
- important landscape habitat features for native fauna
- major threats and causes of degradation to native ecosystems, including the role of local industries, (including at least one of primary production, landscaping, mining or tourism)
- sources and effects of pollution on ecosystems
- value of remnant vegetation, topsoil and original soil profiles in ecological restoration system works
- common biosecurity threats from pest animals, pest plants and diseases
- hygiene practices to mitigate biosecurity threats
- principles of prevention and control of pests and diseases
- local cultural and heritage values
- potential incidental cultural and heritage discoveries
- procedures for responding to incidental cultural and heritage discoveries
- evaluating risk for ecosystems, biosecurity, culture and heritage.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field
- specifications:
 - site-specific plans and maps for work
 - work plans detailing current biosecurity threats, and cultural and heritage assets
 - legislation, regulations and agreements
 - correct resources, equipment and materials
- relationships:
 - supervisor
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR310 Implement assisted regeneration works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assist the regeneration of a degraded terrestrial or aquatic ecosystem harnessing potential from on-site components or colonisation from nearby areas, through ecological interventions and treatments specific to site.

The unit applies to individuals who work under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Interpret work requirements for site	1.1 Conduct site inspection to identify intact ecological features and potential threats to regeneration species 1.2 Record the ecosystems and communities present on site 1.3 Identify boundaries of the assisted regeneration zones for site

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify factors preventing natural recovery of biota across site</p> <p>1.5 Identify assisted primary and secondary regeneration treatments to trigger recovery of species for ecosystem</p> <p>1.6 Identify timing of primary and secondary treatments</p>
2. Prepare for assisted regeneration works	<p>2.1 Identify hazards, assess risks and implement controls according to workplace health and safety and environmental procedures</p> <p>2.2 Identify biosecurity and environmental risks and threats</p> <p>2.3 Identify and obtain permits required for specific treatments</p> <p>2.4 Select, check and prepare tools and materials according to project brief and biosecurity requirements</p> <p>2.5 Coordinate work team for regeneration works</p> <p>2.6 Organise and coordinate site activities for regeneration work</p>
3. Undertake initial assisted regeneration works	<p>3.1 Apply biosecurity and environmentally sustainable work practices</p> <p>3.2 Carry out initial assisted regeneration treatments according to project brief</p> <p>3.3 Select, check and use personal protective equipment according to workplace health and safety procedures</p> <p>3.4 Apply techniques for securing, protecting or supporting the recovering species</p> <p>3.5 Update and maintain records and reports according to workplace procedures</p>
4. Undertake follow-up assisted regeneration works	<p>4.1 Record responses of desirable and undesirable biotic and abiotic site elements</p> <p>4.2 Undertake remedial assisted regeneration works to secure the recovery of desirable biota</p> <p>4.3 Clean, maintain and store tools and equipment</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret project briefs and other documentation and consolidate information for administering project works
Writing	<ul style="list-style-type: none"> Accurately record and complete organisational records and reports using standard industry terminology

Assessment Requirements for AHCECR310 Implement assisted regeneration works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed ecological restoration works for at least two different ecological environments.

There must also be evidence that the individual has:

- identified intact ecosystem features of site, including:
 - remaining native organisms
 - intact substrates
 - habitat
- identified boundaries of natural regeneration, assisted regeneration and reconstruction zones on site
- identified assisted regeneration treatments that are appropriate to individual species typical of the ecosystem and type and intensity of the treatment matched to the degradation level of the site, which must include locally applicable treatments for the following:
 - substrate physical treatments, including surface contouring and debris laying
 - substrate chemical treatments, including removal of contaminants, pH correction, saline flushing, nutrient stripping
 - hydrological treatments, including adjusting water chemistry, increasing or reducing water availability to site
 - habitat reinstatement, including rocks, shell, artificial hollows or crevices, debris piles and dispersal perches
 - applied disturbances, including soil disturbance, clearing fire or smoke treatments
 - removal of competition, including any undesirable species
- recognised and minimised threats to regeneration at the restoration site
- conducted a site hazard identification and risk control assessment
- used, cleaned, maintained and stored machinery and equipment according to manufacturer instructions and enterprise standards

- complied with workplace health and safety, biosecurity and environmentally sustainable work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- identification of locally native and non-native plants and animals
- naming of ecosystems and habitats already present on site
- consideration of the effects of climate change on the prior ecosystem and implications for regeneration
- post-disturbance recovery mechanisms of specific relevant organisms and triggers for their recovery
- habitat requirements of locally native biota
- principles and methods for prevention and control of pest or undesirable biota
- common techniques used to assist regeneration for a range of native and non-native biota in damaged ecosystems, including:
 - substrate physical treatments, including surface contouring and debris laying
 - substrate chemical treatments, including removal of contaminants, pH correction, saline flushing, nutrient stripping
 - hydrological treatments, including increasing or reducing water availability
 - habitat reinstatement, including rocks, shell, artificial hollows or crevices, debris piles and dispersal perches
 - applied disturbances, including soil disturbance, clearing fire or smoke treatments
 - removal of competition, including any undesirable species
- factors affecting the timing, method of primary and secondary assisted regeneration treatments and the consequences of insufficient secondary treatments
- safety requirements when handling and using hazardous goods.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field as specified in the Performance Evidence
- resources, equipment and materials:
 - tools and equipment required for ecological restoration works
 - materials required for treatments
 - security guards, pegs
 - workplace procedures and processes
 - safety data sheets for chemical treatments
 - workplace instructions and project brief

- relationships:
 - work team
 - supervisor
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR311 Implement ecosystem reconstruction works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the specialist skills and knowledge required to implement terrestrial or aquatic ecosystem reconstruction works on an ecological restoration site following a plan or brief.

The unit applies to individuals engaged in conservation and land and water management programs and who work under general supervision, exercising limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context to current industry standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine scope of ecosystem reconstruction works	1.1 Determine boundaries between ecosystem reconstruction area and assisted regeneration area according to project brief 1.2 Identify potential for habitat corridors or linkages with adjoining properties from project brief

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify reference model for reconstruction area according to project brief and anticipated climate change</p> <p>1.4 Identify and document potential threats to ecosystem reconstruction works</p> <p>1.5 Identify timing and method of ecosystem reconstruction work</p>
2. Prepare for ecosystem reconstruction works	<p>2.1 Select, check and prepare tools, equipment and materials according to project brief and biosecurity requirements</p> <p>2.2 Identify species for ecosystem reconstruction works from project brief</p> <p>2.3 Obtain and store biological materials for reconstruction works</p> <p>2.4 Identify and ensure required permits have been obtained for reconstruction works</p> <p>2.5 Coordinate work team for reconstruction works</p> <p>2.6 Organise and coordinate site activities for work team for reconstruction works</p> <p>2.7 Identify hazards, assess risks and implement controls according to workplace health and safety procedures</p>
3. Prepare ecosystem reconstruction site	<p>3.1 Identify hazards, assess risks and document controls according to environmental and biosecurity procedures</p> <p>3.2 Select and apply treatments according to environmental and biosecurity risk controls</p> <p>3.3 Identify desirable and undesirable organisms and contamination, and select methods for control</p> <p>3.4 Treat undesirable organisms and contamination according to selected controls</p> <p>3.5 Undertake site and substrate pre-treatments</p> <p>3.6 Install protective measures according to identified environmental risk controls</p>
4. Undertake ecosystem reconstruction works	<p>4.1 Select, check and use personal protective equipment according to workplace health and safety procedures</p> <p>4.2 Inspect biological materials for quality, and discard defective materials</p> <p>4.3 Pre-treat plants, seeds or other propagules according to project brief</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.4 Reintroduce biota according to current industry standards and project brief 4.5 Apply techniques for protecting, securing or anchoring reintroduced biota 4.6 Maintain records and reports according to workplace procedures
5. Maintain ecosystem reconstruction site	5.1 Monitor growth of plants, seeds or other propagules for health and performance 5.2 Maintain site according to ecosystem reconstruction project brief 5.3 Undertake remedial action and protection according to species requirements 5.4 Clean, maintain and store tools and equipment according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret project briefs and other documentation and consolidate information for implementing reconstruction works
Writing	<ul style="list-style-type: none"> Accurately record and complete organisational records and reports using standard industry terminology

Assessment Requirements for AHCECR311 Implement ecosystem reconstruction works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed ecological restoration works for at least two different ecological environments.

There must also be evidence that the individual has:

- recognised boundaries between assisted regeneration areas and reconstruction areas at a restoration site
- identified potential linkages for habitat area and connectivity from project brief
- identified species for an ecosystem reconstruction site from project brief
- conducted a site hazard identification and risk control assessment
- recognised and treated undesirable species for ecosystem restoration site
- prepared site for ecosystem reconstruction works
- prepared site substrates for reconstruction activities
- carried out reintroduction ecosystem reconstruction works according to current industry standards using at least two of following methods:
 - replanting nursery stock
 - direct seeding or introduced propagules
 - translocation
- protected the restored area with guards, barriers or other techniques
- used, cleaned, maintained and stored machinery and equipment according to manufacturer instructions
- complied with workplace health and safety, biosecurity and environmentally sustainable work practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- recognition and common names of native flora, fauna and other key biota of specific restoration areas
- ecological principles, including:
 - recognition of basic ecosystem elements and functions
 - recognition of ecological communities
 - interactions between flora, fauna and other biota and the impact of these on restoration objectives and outcomes
 - importance of biodiversity in an ecological community
 - the role of habitats to reinstating functional ecosystems
 - connectivity principles for expanding area and effective linkages
 - substrates in different ecological environments and their preparation, including terrestrial and aquatic environments
 - physiology of growth of desirable and non-desirable organisms
- ecological restoration principles, including:
 - recognising levels of resilience and recovery potential of species requiring reconstruction intervention for a range of levels and types of degradation
 - role of reference models, including different models for difference zones within the one site
 - impact of potential climate change on reference ecosystems and effect on reconstruction works
 - setting restoration goals and identifying indicators of recovery outcomes
 - the importance and value of genetic integrity and diversity in selecting the provenance of propagules, including under climate change
 - configuration of species with respect to potential for successful breeding and recruitment
 - factors affecting the timing and method of reintroduction
- a range of biological reintroduction techniques, including:
 - reintroduced nursery stock
 - hand seeding, broadcast sowing and mechanical seeding
 - transplanted stock from natural areas
- a range of sector-appropriate tools, equipment and machinery
- concepts and methods for establishment of biota on reconstruction sites, including:
 - species requirement for water on reconstruction site (hydrological requirements)
 - physiology of desirable organisms propagation and growth
 - nutrient requirements and materials and methods for amelioration for site species
 - techniques for protecting, securing or anchoring reintroduced organisms
 - techniques for providing water for reintroduced organisms
- pests and diseases and the principal control strategies for their prevention and control on reconstruction sites, including:
 - methods for minimising the transfer of undesirable organisms (biosecurity)
 - methods for biological, cultural, mechanical and chemical pest control

- safety requirements when handling and using hazardous materials.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field as specified in the Performance Evidence
- resources, equipment and materials:
 - tools and equipment required for ecological reconstruction works
 - live biota for reconstruction works
 - materials required for treatments
- specifications:
 - specific workplace procedures and processes for reconstruction works
 - manufacturer operating instructions for specific equipment and machinery
 - workplace instructions and project brief.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR401 Supervise ecological restoration works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop work programs, organise resources and supervise ecological restoration works for revegetation programs.

The unit applies to individuals who apply specialist skills in ecological restoration and who provide solutions to technical and unpredictable problems. They work autonomously, instruct, and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify scope of ecological restoration works	1.1 Identify nature and scope of works and extent of responsibilities against project brief 1.2 Confirm or create site map for works 1.3 Determine personnel and resources required for project

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Develop a work program to meet scheduled project outcomes</p> <p>1.5 Identify potential environmental impact of proposed restoration work, and implement controls</p> <p>1.6 Identify workplace health and safety hazards, assess risks and implement, monitor and review controls</p>
2. Coordinate the supply of materials and equipment	<p>2.1 Identify and organise materials, equipment and resources required for project</p> <p>2.2 Calculate quantities and order materials according to quality specified in project brief</p> <p>2.3 Confirm delivery requirements with suppliers</p> <p>2.4 Reconcile specified quantity and quality of delivered materials against order and specifications</p> <p>2.5 Return substandard materials for replacement</p> <p>2.6 Store materials ready for use in line with manufacturer's guidelines</p> <p>2.7 Check equipment availability and serviceability for use on site</p>
3. Supervise and monitor restoration works	<p>3.1 Coordinate work team to carry out restoration works</p> <p>3.2 Monitor changes to project brief and adjust program works to meet project outcomes</p> <p>3.3 Provide instructions to supplementary workers according to workplace procedures</p> <p>3.4 Identify, record and report difficulties in meeting project outcomes to stakeholders</p> <p>3.5 Calculate the cost of reported difficulties and forward variations for approval according to workplace procedures</p> <p>3.6 Conduct periodic quality inspection of work against project outcomes and arrange progress payments to contractors</p> <p>3.7 Monitor site for safety and environmental health throughout works, and implement action to rectify concerns</p> <p>3.8 Monitor team to ensure adherence to workplace health and safety, environmental sustainability and biosecurity policies and procedures</p>
4. Prepare site for completion	<p>4.1 Inspect site for completion of works according to project brief</p> <p>4.2 Identify incomplete works and rectify according to the contract specification and workplace procedures</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.3 Report restoration works to stakeholders according to workplace procedures and project brief 4.4 Process documentation for contractors for final payment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyse project plans and specifications and consolidate information into schedules, programs, materials and equipment requirements, and to monitor contractor performance
Writing	<ul style="list-style-type: none"> Develop programs and prepare reports to stakeholders, and prepare reports and documents to administer contractors, using clear and accurate language
Oral communication	<ul style="list-style-type: none"> Use collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey and clarify instruction to workers and contractors and provide reports to stakeholders
Numeracy	<ul style="list-style-type: none"> Interpret and perform calculations to analyse materials and resource requirements and to determine labour costs and quantities to accurately report on progress and determine payments

Assessment Requirements for AHCECR401 Supervise ecological restoration works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has determined resource requirements, acquired resources and supervised restoration work of at least two ecological restoration projects.

The must also be evidence that the individual has:

- conducted a site safety risk assessment and implemented controls during project
- scoped the work requirements against specifications in project brief
- developed a work program and sourced labour, equipment and materials required to undertake the work
- coordinated work team to achieve performance targets
- monitored work program progress and made adjustments to achieve outcomes
- inspected completed work and ensured specifications and environmental targets were met
- reported project completion to stakeholders according to workplace requirements
- monitored the application of sustainability practices, workplace health and safety procedures and biosecurity measures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ecological restoration principles, approaches, strategies, tactics and techniques to avoid negative environmental impacts
- scheduling work, including:
 - work team and contractors
 - availability of consumables and materials
 - availability and operational performance of machinery and equipment
- working with plans and contracts and assessing performance targets
- environmental factors to be considered in restoration works, including:

- the role of native plants and animals in the ecosystem of the site
- vertebrate pests and options for control
- impact of weeds and pests and appropriate control methods
- ability to assess restoration potential of sites
- ecological principles related to restoration of ecological sites, including:
 - recognition of fundamental ecosystem structures
 - interactions between flora and fauna and impact on ecological stability
 - vegetation types and their general characteristics relevant to restoration activities
 - ecology in land based, coastal zones or marine parks
 - marine, shore and terrestrial species
 - inland aquatic systems
 - natural and human threats to places of natural significance
 - environmental threats and damage potential
 - soil type and geology for accessing sites and conducting revegetation work
- supervisory skills and working with work teams and contractors:
 - assessing performance
 - rectifying performance issues
 - reporting procedures
- engagement of contractors and procedures, including:
 - work contracts and specifications
 - work progress reports and progress payments
 - site safety expectations
 - practical completion certification
- workplace health and safety procedures, including:
 - safety hazards and associated risks on restoration sites
 - personal protective equipment required by work teams
 - sun protection
 - materials handling safety.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for an active ecological restoration worksite or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - materials and other resources as specified in project brief
 - specific tools and equipment required to perform restoration activities
- specifications:

- specific workplace policies and procedures for safety and supervision work
- ecological restoration plan and specifications
- relationships:
 - stakeholders
 - work team and contractors
- timeframes:
 - according to timeframes specified in project brief.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCECR402 Plan the implementation of revegetation works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared a plan for implementing revegetation works for at least one natural area site, and has:

- confirmed the scope of the project, including preferences and contract requirements
- assessed site for opportunities and constraints associated with implementation of revegetation works
- established the purpose and client preferences for the site to be revegetated
- carried out a site visit and confirmed any planning requirements
- developed a plan for the site, detailing the resources required and the program of works, which must include:
 - environmental impact and mitigation
 - health and safety risks and mitigation
- developed schedules for the establishment and maintenance phases of the project, which must include:
 - site setup and development
 - revegetation works establishment period
 - maintenance
 - impact of seasons and climate on staging strategy
 - impacts in the staging strategy
- documented the staged implementation plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- role of revegetation works in the restoration of the natural environment
- environmental and biosecurity issues associated with revegetation works, including:

- legislative frameworks that govern revegetation activities
- compliance with legislation
- minimising impact on the natural environment
- preventing pest and disease incursion into revegetation sites
- biophysical environmental and historical aspects of natural areas, including:
 - biotic factors affecting the site
 - abiotic factors and their influence on revegetation and accessing natural areas
 - changes to the physical and biological conditions and impact on revegetation activities
- impact of seasonal effects of weather and climatic conditions on revegetation works planning and scheduling, including:
 - plant species, supply and care
 - site access during inclement weather
 - machinery use
 - fire hazards
 - plant establishment phase
 - site-specific health and safety
- ecological principles related to revegetation of natural areas, including:
 - ecosystem structures and habitat
 - interactions between flora and fauna and impact on ecological stability
 - vegetation types and their general characteristics
- importance of biodiversity when revegetating for an ecologically stable community, including:
 - terrestrial plants and basic plant community structures
 - marine and water plants and interaction with marine fauna
 - contribution of revegetation works on preserving biodiversity
- intricate relationships between microbiota, including insects, molluscs, worms and microbes, and impact on revegetation practices
- environmental factors to be considered in revegetation works, including:
 - revegetation in land based, coastal zones or marine parks
 - marine, shore and terrestrial species
 - natural and human threats to places of natural significance
 - pollution sources and damage potential
 - soil type and geology for accessing sites and conducting revegetation work
- identification, propagation and establishment techniques of specific native plant species, including:
 - maintenance requirements and practices for native plants prior to and after initial establishment
 - growth habits and cultural requirements of specific native plants under a range of soil and environmental conditions
- site evaluation techniques including methods of analysing soils, waterways and their condition

- practical understanding of the advantages and disadvantages of options for revegetation works procedures
- workplace health and safety hazards associated with undertaking revegetation works, and the controls necessary to remove or minimise associated risks
- contract documents including specifications, plans of landscape works, services, supplies and surveyors documents.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an active natural area restoration worksite or in an environment that accurately represents workplace conditions
- specifications:
 - workplace policies and procedures for preparing plans
 - scope of works, specifications and contract requirements
 - legislation and regulations relevant to revegetation works and biosecurity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR501 Manage natural areas on a rural property

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to manage natural areas on privately owned rural properties and enhance the sustainable ecological and economic capacity and outcomes of the land.

The unit applies to individuals who manage land management projects and who analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge in specific technical areas within land management. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine location, size and type of area to be managed	1.1 Confirm location, boundaries and ownership of rural property 1.2 Compile register of native animal and plant species specific to locality

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Determine features, characteristics and topography of site 1.4 Identify and confirm accuracy of vegetation association and conservation value data 1.5 Obtain details of the presence of and threats from weeds and pests 1.6 Assess ecological value of natural areas on property 1.7 Compile documented evidence of physical impacts on area 1.8 Assess the ecological context of the site in the wider region
2. Prepare management strategies	2.1 Identify budgetary constraints for management strategies 2.2 Design boundary control appropriate to natural area protection guidelines 2.3 Develop management strategies according to budget requirements 2.4 Liaise with planning and specialist authorities 2.5 Identify habitat enhancement strategies within regional biodiversity context 2.6 Develop strategies to integrate management of natural areas into land use and production systems for property 2.7 Incorporate biosecurity, environmental sustainability and workplace health and safety procedures into management plan 2.8 Confirm management plan complies with relevant national, state, territory and local legislation or regulations 2.9 Prepare and present management plan to stakeholders
3. Implement management strategies	3.1 Develop work schedules consistent with production requirements and budget constraints 3.2 Organise people, materials and equipment for work according to management strategies 3.3 Schedule works for operational personnel, according to seasonal weather conditions 3.4 Identify permits or licenses required for natural area works 3.5 Inform stakeholders of planning and implementation of work

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and extract relevant planning information from maps, legislation and regulations, and incorporate into planning and implementation documents
Writing	<ul style="list-style-type: none"> Generate detailed written plans and schedules demonstrating control over a broad range of writing styles for a diverse range of purposes and audiences
Oral communication	<ul style="list-style-type: none"> Establish and maintain effective spoken communication in a broad range of contexts and to a diverse audience
Numeracy	<ul style="list-style-type: none"> Interpret complex financial information, perform calculations and translate financial and budgetary data into planning documents

Assessment Requirements for AHCECR501 Manage natural areas on a rural property

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, engaged in a process to manage a natural area located on a rural property, and has:

- determined features and characteristics of natural areas
- sourced topographical and conservation data about a site
- assessed the ecological value of natural areas on a property
- identified the condition of area using a standard condition classification system
- developed management strategies in accordance with workplace procedures and industry best practice
- liaised and consulted with stakeholders
- prepared a coordination program for a work team to carry out work in natural areas according to management strategies
- developed and implemented management strategies according to national, state, territory and local government legislation, regulations and industry standards
- prepared strategies for risk mitigation incorporating health and safety, biosecurity legislative requirements and environmentally sustainable practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- natural area restoration and management principles, including:
 - the planning process
 - site evaluation techniques
 - methods of analysing soils, hydrology, waterways and their condition
 - ecological restoration standards and practices
- sustainable land management strategies, including:

- reducing sources of degrading impacts
- environmental sustainability as a 'whole-system' approach
- economic benefits of sustainable land use
- property planning and enterprise budgeting systems and procedures
- role of different stakeholders and authorities in management, including:
 - property owner
 - consultants and specialists
 - local government and other agencies
 - regional biodiversity management staff
 - rural fire authorities
 - special interest groups
- environmental issues, including:
 - water use and water catchments
 - pollution sources and damage potential, including air and noise pollution
 - waste minimisation
 - natural and human threats to natural areas
 - soil type and geology for accessing sites
 - interactions between production systems and natural areas
- ecological principles related to management of natural areas, including:
 - maintaining ecosystem structures and habitat
 - interactions between flora and fauna and impact on ecosystems
 - disturbance regimes for particular ecosystems
 - natural recovery processes in ecosystems
 - vegetation types and their general characteristics for management
- importance of biodiversity in managing natural areas, including:
 - terrestrial plants and basic plant community structures
 - water plant communities and interaction in freshwater and saline environments
 - methods for maintaining biodiversity
- state/territory legislative requirements related to environmental protection and biosecurity standards
- workplace health and safety hazards and the controls necessary to remove or minimise risk.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a farm property with an area of natural area to be conserved or in an environment that accurately represents workplace conditions
- resources, equipment and materials:

- maps and site plans
- specifications:
 - specific workplace policies, procedures and processes for managing a rural property
 - legislation, regulations and codes of practice relevant to rural property and natural area management
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR502 Conduct biological surveys

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan and conduct biological surveys and produce a biological survey report, according to client requirements and biological components to be surveyed.

The unit applies to individuals working as land restoration managers who analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge in specific technical areas within land management. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Carry out preliminary design activities for the biological survey	1.1 Identify survey scope, objectives and constraints according to client brief 1.2 Source, collate and evaluate current data relevant to survey requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Develop processes for data collection and processing consistent with the survey scope, objectives and constraints</p> <p>1.4 Design survey plan reflecting client requirements and present to client for approval</p> <p>1.5 Incorporate workplace health and safety and environmental sustainability and biosecurity procedures into plan</p>
2. Determine requirements of the biological survey	<p>2.1 Identify biological survey indicators and evaluate constraints and opportunities for data collection</p> <p>2.2 Identify data collection points that are repeatable and statistically representative</p> <p>2.3 Identify hazards associated with a biological survey, assess risks and develop controls, determine costs, and document in the survey design</p> <p>2.4 Secure permits and approvals required for survey according to ethical standards, workplace procedures and legislative requirements</p> <p>2.5 Determine tools, equipment and machinery required for the survey and confirm availability with suppliers</p> <p>2.6 Schedule survey activities and surveyor access according to the survey design</p> <p>2.7 Document survey procedures and schedules and present to stakeholders and client for approval</p>
3. Conduct the biological survey	<p>3.1 Conduct field visit to verify existing data and update information</p> <p>3.2 Conduct the biological survey according to the survey design</p> <p>3.3 Monitor survey activities for accuracy, compliance to the survey design and legislative and ethical standards</p> <p>3.4 Undertake staged data collection according to the survey design, scheduling and surveyor access requirements</p> <p>3.5 Record all monitoring and survey data according to specifications of the survey design</p>
4. Compile a biological survey report	<p>4.1 Analyse data and draw conclusions based on evidence and reasoned arguments</p> <p>4.2 Prepare a biological survey report according to agreed timeframes and client outcomes and workplace standards</p> <p>4.3 Present report to the client</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Draw on a broad range of strategies to interpret, build and maintain understanding from data sets and reference materials when planning, collating and interpreting survey data
Writing	<ul style="list-style-type: none"> Record outcomes of surveys and incorporate into biological survey reports, expressing ideas and exploring complex issues, and ensuring it is constructed logically, succinctly and accurately
Numeracy	<ul style="list-style-type: none"> Capture, record and analyse survey data and use calculations to help formulate conclusions

Assessment Requirements for AHCECR502 Conduct biological surveys

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and conducted at least one biological survey with at least two of the following biological elements:

- flora
- vertebrate fauna
- fungi
- invertebrate fauna
- microorganisms

The survey must also be conducted in at least one of the following environments:

- terrestrial
- marine or aquatic
- arboreal

There must be evidence that the individual has:

- planned, conducted and reported on biological surveys according to client requirements, workplace policies and industry best practice
- identified scope, objectives and constraints for a biological survey
- assessed current data and determined data collection and processing needs
- identified biological indicators that are repeatable and statistically representative
- developed a survey plan that documents survey methods and indicators
- secured permits and approvals
- scheduled survey activities and established access to the site
- conducted a biological survey with data collection staged and recorded according to the survey plan and health and safety requirements, and that must include:
 - species, identified by biological and vernacular name
 - frequency
 - distribution

- condition
- habitat
- produced a biological survey report with analysis and conclusions, including:
 - survey findings according to the survey scope and objectives
 - identified areas requiring remedial action and improvements
 - detailed recommendations for action
 - description and assessment of the specified biological components
- ensured survey plan and activities complied with animal welfare codes of practice and environmental and biosecurity procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- biological classification systems
- plant and animal recognition relevant to survey area
- environmental factors that impact on vegetation and animal populations
- survey equipment, machinery and methods for specific environments, including:
 - marine and aquatic
 - terrestrial
 - arboreal
- survey techniques and methods for different biological elements, including:
 - microorganisms
 - fungi
 - micro and macro invertebrates
 - plants
 - animals including fish
 - methods for obtaining statistically representative sample
- requirements for ensuring the legality of biological surveys, including:
 - animal welfare
 - codes of practice
 - legislative requirements
 - ethical standards and approvals
- ecological principles and terminology, including
 - ecosystem structures and habitat
 - interactions between flora and fauna
 - vegetation types and their characteristics
 - energy flows and trophic structures of communities
- assessment, reporting and client liaison procedures and best practice techniques
- workplace team management procedures
- workplace health and safety legislative requirements and codes of practice, including:

- hazard identification, assessment and control measures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field and according to the conditions specified in the Performance Evidence or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - survey equipment relative to the type of survey undertaken
- specifications:
 - specific workplace policies and procedures for conducting surveys and recording results
 - client brief and specifications for survey
 - specific legislation and codes of practice for ethical surveys
- relationships:
 - client
- timeframes:
 - according to time specified in client brief.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop an ecological restoration project design brief	1.1 Identify client and key stakeholders for the project 1.2 Consult with client and key stakeholders to establish purpose, scope, cultural considerations and budget of design 1.3 Develop and confirm measurable ecological targets, goals and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	objectives for project 1.4 Respond to design brief and agree on extent, scope and scale of project 1.5 Prepare project budget with the client 1.6 Obtain or prepare a site base plan 1.7 Identify legislative and regulatory implications for restoration work for site 1.8 Review existing site data and information before site visit
2. Undertake a site analysis	2.1 Identify the ecosystem and respective reference ecosystem for the project according to current industry standards 2.2 Specify and document reference ecosystem's attributes according to current industry standards 2.3 Inspect project site in preparation for design work 2.4 Quantify, and indicate on base plan, elements and features of site biological condition of attributes and threats 2.5 Record biophysical components of the site in base plan and site report 2.6 Assess ecosystem recovery prospects and record limiting factors 2.7 Determine options for ecological restoration interventions 2.8 Assess and record the impact of surrounding ecosystem, land and hydrology on site 2.9 Assess physical and cultural constraints on restoration work
3. Develop a concept design for the ecological restoration project	3.1 Discuss options and approaches to achieve ecological aims and goals with client 3.2 Prepare concept design and site maps illustrating location of project work zones 3.3 Specify restoration approaches and treatments for each work zone 3.4 Obtain agreement from stakeholders/supervisor on options and approaches for works 3.5 Present concept design with supporting documentation for the proposed actions
4. Design an adaptive management monitoring	4.1 Determine performance indicators for each project goal and objective

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
and reporting program for the project	4.2 Determine methods to measure attainment of project indicators 4.3 Determine monitoring intervals for project 4.4 Determine communication procedures for conveying progress to stakeholders 4.5 Determine the milestones and timelines for project reporting to stakeholders
5. Produce a final design for the ecological restoration project	5.1 Draft a detailed plan according to design brief and concept design 5.2 Develop specifications for materials identified in design brief 5.3 Specify standard and responsibilities of labour contracted for works 5.4 Apply construction and engineering principles to design work identified in design brief 5.5 Complete design documentation according to design brief and workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organise, assess and critique data and information, including legislation and regulations, for incorporation in design
Writing	<ul style="list-style-type: none"> Select conventions and stylistic devices to express precise meaning in design briefs and supporting design documents
Oral communication	<ul style="list-style-type: none"> Establish and maintain complex and effective communications when negotiating and agreeing on design brief and options for design
Numeracy	<ul style="list-style-type: none"> Interpret financial information and costs, and perform calculations to translate estimates of operational costs and budget development for inclusion in ecological restoration designs and plans

Assessment Requirements for AHCECR503 Design an ecological restoration project

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, designed an ecological restoration project according to client brief and workplace and legislative requirements.

There must also be evidence that the individual has:

- established project scope, including:
 - purpose
 - scope
 - extent/scale
 - costs
 - benefits
 - timelines
- conducted an onsite analysis and assessment to determine ecosystem functions and processes, degradation and potential for regeneration
- determined constraints and threatening processes
- identified targets and goals for the ecosystem attributes and indicators that the targets and goals are being attained
- prepared a base plan incorporating the following:
 - landforms
 - hydrology
 - substrates
 - fauna
 - flora
 - habitat
 - presence of threats

- determined options for ecological restoration treatments and incorporated into a concept design
- negotiated the design brief and agreement on options and final design with client
- produced a final design with supporting documentation, including:
 - schedule of works
 - costings
 - planning
 - monitoring
 - annotated plans, maps, drawings or other images
 - specifications
 - quality and standards of materials and work
 - labour and contractor requirements and their responsibilities and qualifications
- used remote sensing, electronic mapping tools and professional graphic formats to present concept design.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- design process
- ecosystem biota, abiotic elements, functions and processes
- ecological restoration theory, principles and standards
- adaptive management principles and practices
- natural regeneration potential and limits
- effective assisted regeneration and reconstruction principles and practices
- landscape level ecosystem processes and connectivity requirements of species
- remote sensing, electronic mapping, graphical presentation and basic drafting techniques
- recognition of species and a range of ecological communities
- biophysical components of site, including:
 - atmosphere – climatic conditions
 - hydrosphere conditions – water, rain
 - lithosphere – geology, soils
 - biosphere – flora, fauna, fungi
- costing projects and developing and managing budgets
- calculations of materials, labour, machinery and equipment
- environmental implications of restoration works
- legislative requirements for ecological restoration works
- industry and workplace standards.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an ecological site requiring restoration or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computers for research and development of plans and documents
- specifications:
 - workplace policies and procedures for design development and documentation
 - legislation, regulations and codes of practice for revegetation works
- relationships:
 - client
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCECR504 Manage implementation of ecological restoration programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, inspected an ecological site and managed the implementation of an ecological restoration program for an ecological restoration design or plan.

There must also be evidence that the individual has:

- identified essential elements of ecological restoration program
- conducted a site assessment for implementing ecological restoration works
- confirmed restoration techniques for the program according to planned objectives
- ensured program complies with relevant legislative and program requirements
- calculated labour and other resources required for program
- recorded, monitored and reported on labour and other resource requirements
- monitored progress and quality of restoration program delivery
- reviewed ecological restoration implementation program against intended outcomes in management plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- biotic and abiotic factors affecting ecological sites, and restoration interventions that can be applied
- principles and methods of prevention and control of weeds and pests
- project management skills, including:
 - work health and safety, environmental and quality hazards associated with restoration works, and controls necessary to remove or ameliorate associated risks
 - calculations for resource requirements, costs and charges
 - preparation of plans, budgets and works reporting

- financial recording, tracking and reporting
- use of project management software
- leading a team
- ecological restoration and management principles, including:
 - planning process, particularly interpreting goals and indicators of success
 - site assessment and evaluation techniques
 - methods of analysing soils, waterways and their condition and threats
 - natural regeneration potential and limits
 - factors affecting the timing and method of plant establishment
- sustainable land and aquatic management strategies, including:
 - reducing degradation of specific ecosystems
 - use of available resources
 - environmental sustainability as a 'whole-system' approach
- environmental issues, including:
 - water use and water catchments
 - pollution sources and damage potential
 - waste minimisation and sustainable disposal
 - natural and human threats to ecological sites
 - soil type and geology for revegetation and site access
 - interactions between production systems and ecological sites
- ecological principles related to management of ecological sites, including:
 - maintaining ecosystem structures and habitat
 - maintaining and reinstating connectivity
 - interactions between flora and fauna and their roles in ecosystems
 - vegetation and other ecosystem types and their general characteristics for management
 - identification of plant and animal threats to treated areas, and appropriate control methods
 - identification of plant and animal assets and their ecological requirements
- importance of biodiversity in managing ecological sites, including:
 - terrestrial plants and basic plant community structures
 - water plant communities and interaction in saline environments
 - methods for conserving biodiversity
- state/territory legislative requirements related to revegetation works, environmental protection and biosecurity standards
- communication skills for various stakeholders, including special interest groups, government agencies, professional bodies and community.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an ecological restoration site
- resources, equipment and materials:
 - equipment, machinery, plants and consumables specified in restoration plan
- specifications:
 - workplace policies and procedures for preparing plans
 - restoration scope and budgetary constraints
 - legislation and regulations relevant to ecological restoration works and biosecurity
- relationships:
 - client
 - stakeholders/groups
 - work team and/or contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, prepared a plan for restoration works of a declining river, and has:

- discussed client expectations for restoration strategies and included in plan
- planned river restoration works according to client, environmental and legislative requirements
- developed erosion and sediment control measures
- followed industry guidelines to establish fauna habitat and vegetation species
- documented strategy for submission to authorising authority
- prepare a detailed works plan.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation and regulations governing river system restoration, including:
 - permits
 - soil and water degradation
 - cultural and heritage sites
 - flora and fauna conservation
- river restoration, principles, techniques and processes
- potential and limits of natural regeneration of vegetation
- assisted regeneration and reconstruction approaches for revegetation
- establishment and maintenance of native vegetation to ensure establishment
- erosion and sediment control techniques and selection criteria
- planning procedure for erosion and sediment control
- erosion control and design principles and factors, including:

- soils and soil formation
- levels and levelling
- earthmoving principles
- total catchment issues
- managing peak water flows
- subsurface and surface drainage principles and systems
- river restoration works and impact on the natural environmental.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field at a river system requiring restoration works
- resources, equipment and materials:
 - digital technology for research and development of plans and documents
- specifications:
 - workplace policies and procedures for design development and documentation
 - legislation, regulations and codes of practice for revegetation works
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCECR506 Develop and implement sustainable land use strategies

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop and implement sustainable land use strategies that lead to improved ecological sustainability of land under production.

The unit applies to individuals who manage agricultural and production horticulture enterprises and who analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge in land management practices. They have accountability for the work of others, and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Ecological Restoration (ECR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess requirements for improved land use	1.1 Audit site natural resources and identify threats to sustainability 1.2 Review production and management plans for sustainable land use

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	principles 1.3 Assess water resources, quality and impact on erosion 1.4 Assess soil health and fertility against production plan requirements 1.5 Assess vegetation types and coverage, and identify required changes 1.6 Plan and prioritise land and water protection measures and structures
2. Carry out structural improvements to address threats to sustainability	2.1 Follow workplace health and safety policies and procedures in field work 2.2 Inspect site, record key features and indicate on the site where improvements are required 2.3 Determine materials for construction from plans and specifications 2.4 Obtain and organise materials, personnel and equipment 2.5 Select and check equipment for safe and environmentally sustainable operation 2.6 Construct structural works, revegetate area and secure area from livestock
3. Treat areas of land degradation	3.1 Assess land classes and align fences and soil conservation works consistent with class 3.2 Protect and maintain contour banks to avoid degradation 3.3 Construct and maintain water carrying structures 3.4 Establish shelter belts for crop and stock protection 3.5 Review and amend soil cultivation and planting practices to prevent erosion 3.6 Plan grazing strategies to avoid localised soil degradation 3.7 Confirm works and plans comply with environmental protection legislation, regulations and codes of practice

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organise, assess and critique data and information from production plans, management plans, maps, images, legislation and regulations for incorporation into designing land use strategies

Assessment Requirements for AHCECR506 Develop and implement sustainable land use strategies

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed at least five sustainable land use strategies for a specified land use and has implemented at least one of the strategies over a period of six months.

There must also be evidence that the individual has:

- identified the threats to sustainable practices for the specified land use area
- managed water resources and impact on riparian zones
- managed vegetation and plant succession
- managed the health and sustainability of soils
- embedded the principles and practices of health, safety and biosecurity legislative requirements into land use strategies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the role of biodiversity in farming systems, including:
 - importance of biodiversity farming systems
 - terrestrial plants and basic plant community structures
 - subsurface water and plant communities and impact on saline environments
 - methods for preserving biodiversity
- sustainable land and water use principles and practices, including:
 - advantages and limitations
 - environmental sustainability as a 'whole-system' approach
- recognition and management of land classes
- sustainable soil management, including:

- causes of land degradation
- soil type and geology and impact for land use and access
- grazing strategies to reduce surface cover on pastures and embankments
- soil appraisal and remediation strategies
- causes of erosion and erosion control strategies
- production practices and soil management
- environmental controls and codes of practice applicable to the business and to the improvement works, including:
 - water use and water catchments
 - sources and damage of pollutants
 - waste minimisation and sustainable disposal
 - natural and human threats to sustainable land use
 - interactions between production systems and natural areas
- legislation and regulations for soil and water degradation, chemical use and structural works
- workplace health and safety and environmental protection legislation, regulations and codes of practice including biosecurity.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field resources, equipment and materials:
 - equipment, machinery, plants and consumables required to implement the specified land use strategies
- specifications:
 - workplace policies and procedures for preparing strategies
 - legislation and regulations relevant to land use and biosecurity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCEXP301 Handle and store explosives

Modification History

Release	Comments
Release 3	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has demonstrated that they have handled and stored explosives, including:

- checked explosives for damage or defects, and implemented corrective action
- conducted risk assessment and implemented safe work procedures
- prepared and displayed placards on vehicles transporting explosives
- loaded and transported components of explosives safely in accordance with legislative and regulatory requirements and workplace procedures
- established and implemented monitoring and recording systems for handling, storing and transporting explosives according to legislative and regulatory requirements
- defined requirements and authorisations for the safe handling and storage of explosives
- implemented security procedures for explosives
- identified and implemented emergency procedures for transporting and storing explosives.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- local conditions and factors in the handling, transporting and storage of explosives
- care and preventive measures required to eliminate risk of fire and deterioration of stored explosive materials
- procedures for buying commercial explosives and blasting agents

- explosive materials and their identification
- defective or damaged explosives
- emergency procedures required when handling explosives
- explosives code of practice, regulations and legislation
- environmental conditions required for safe storage of explosive materials
- loading and storing practices for explosives
- security procedures and best practice
- materials handling procedures
- mandatory and workplace records when handling, storing and transporting explosives.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - explosives or realistic representations of explosives
 - tools and equipment required to handle and transport explosives
 - personal protective equipment
- specifications:
 - workplace instructions, procedures and processes for handling explosives
 - explosive safety data sheets
 - explosives related legislation and codes of practice
- relationships:
 - team member(s) or supervisor to gain approvals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCEXP303 Prepare and use explosives

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- obtained permits and licenses for blasting
- informed neighbours and posted notices for blasting
- prepared blast site to place the explosive
- prepared explosives and initiator device according to best safety practice and regulations
- placed and fired charges according to best safety practice and regulations
- conducted post-firing procedures for misfires, site checks, the disposal of surplus, unserviceable and defective explosives, and recording procedures
- used explosives safely and effectively according to workplace requirements
- disposed of surplus, defective or unwanted detonators or explosives safely
- mixed explosives components correctly and uniformly
- applied regulations relating to explosives used according to workplace requirements
- maintained records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- fire precautions and prevention procedures
- explosives mixing procedures and safe handling
- calculations required for mixing explosives for size of blast
- explosives preparation, placement, firing and post-firing procedures
- prescribed timing and/or practice drills for misfire, including the use of water jets and additional charges
- regulations relating to explosives use in the workplace and applications and permits required

- use, storage and detonation of explosives
- environmental issues and risks to livestock, natural landscape and contamination
- the Australian Standard relating to preparing and using explosives, which includes:
 - operations prior to charging
 - charging
 - preparation for firing
 - firing
 - misfires
 - preparation of primers.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions and that exposes individuals to live detonation conditions
 - safe transport and storage facilities suitable for explosives
- resources, equipment and materials:
 - explosives, detonators and fuses
 - safety equipment
- specifications:
 - policies, procedures, processes for the safe use of explosives
 - explosives safety data sheets
 - workplace instructions/job specifications for a blasting operation
 - legislation and Australian Standards for the use of explosives
- relationships:
 - neighbours and stakeholders
 - supervisor, shot firer.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCEXP304 Identify and select explosive products

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- established with supervisor need to use explosives
- identified components of explosive products
- identified the risks and environmental implications of using explosives, including the effect on:
 - structures
 - personnel
 - livestock and fauna
 - environment
- selected explosives and initiator devices consistent with:
 - blasting operation
 - blast site conditions
 - identified hazards
- used safety fuses appropriate for the explosive charge
- applied workplace health and safety policies and procedures when working with explosives
- applied policies and procedures, legislative requirements and Australian Standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- explosive products, their use and function
- risk assessment and workplace health and safety procedures
- performance of explosive products, including:

- calculating explosive energy
- determining amount of explosive charge required for a given situation
- powder factor
- behaviour of the substrate material when subjected to blasting:
 - sand
 - rock
 - clay
- applications of explosives in the context of own conservation and land management work:
 - stump and tree removal
 - dams
 - soil de-compaction
 - rock removal
 - trenching
- properties of explosives/blasting agents and their suitability for different applications:
 - detonating
 - initiation
 - primary
 - secondary
- features that identify defective or damaged explosives:
 - age
 - physical condition
 - degradation
- key concepts of the Australian Standards relating to:
 - storage
 - transportation
 - use of explosives
- state and territory legislation for the use of explosives.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions and that exposes individuals to live detonation conditions
 - safe transport and storage facilities suitable for explosives
- resources, equipment and materials:
 - explosives, detonators and fuses
 - safety equipment
- specifications:

- policies, procedures, processes for the safe use of explosives
- safety data sheets for explosives
- instructions/job specifications for a blasting operation
- legislation and Australian Standards for the use of explosives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCFAU201 Recognise fauna

Modification History

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to recognise and record fauna that are commonly encountered when undertaking agricultural, horticultural and land management activities.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have recognised fauna in the field, including:

- accessed a natural area in a manner suitable to observe fauna causing minimal disruption and damage to the environment
- identified and selected processes, situations, equipment and resources for observation of fauna
- observed and record the details of observations according to enterprise requirements
- recognise fauna according to characteristics
- followed workplace procedures and supervisor instructions for identifying, recognising and recording fauna
- applied work health and safety policies and procedures to fauna observation activities
- applied animal welfare practices when observing fauna
- prepared documentation relevant to fauna observations and identification.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for identifying fauna, including:
 - identification techniques and resources
 - fauna behaviour
 - fauna habitats
 - tracks, scats and traces
 - typical characteristics of fauna
- nomenclature and naming conventions
- techniques for observing, identifying and reporting fauna

- purposes for observing and monitoring fauna
- workplace health and safety procedures when conducting observations
- procedures for reporting rare, uncommon or notifiable fauna
- animal welfare and environmental codes of practice relevant to the observation of fauna.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated where target fauna species inhabit or an environment that accurately represents these conditions
- resources, equipment and materials:
 - target fauna
 - tools and equipment required for fauna observations
 - personal protective equipment required while conducting observations
- specifications:
 - workplace policies, procedures, processes and instructions
 - specifications for fauna recognition activity
 - legislation/codes of practice relevant to fauna and environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCFAU202 Recognise fauna

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to observe, recognise and record fauna that are encountered when undertaking agricultural, horticultural and land management activities.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Fauna (FAU)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fauna recognition	1.1 Identify and select processes for fauna recognition 1.2 Identify and select resources and equipment required for identification activity 1.3 Record the location for observations of fauna

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Organise and arrange resources for fauna recognition process 1.5 Use surveillance techniques suitable for approaching fauna and reducing environmental impact 1.6 Identify hazards, notify supervisor and follow workplace health and safety procedures
2. Recognise specified fauna	2.1 Recognise and name fauna according to their characteristics 2.2 Record descriptions of fauna habits, characteristics and significant features according to workplace procedures 2.3 Seek advice in the identification process according to workplace procedures 2.4 Ensure observation activities comply with animal welfare codes of practice
3. Complete identification of fauna	3.1 Record fauna sightings in reference collection 3.2 Update field notes for new fauna sightings 3.3 Report notifiable fauna to supervisor according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from sources to identify relevant and key information for fauna recognition
Writing	<ul style="list-style-type: none"> Document outcomes of observations using correct and industry specific terminology

Assessment Requirements for AHCFAU202 Recognise fauna

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recognised at least 20 fauna species in the field, which must include at least five species from three of the following groups:

- mammals
- birds
- reptiles/amphibians
- fish
- invertebrates.

There must also be evidence that the individual has:

- accessed a natural area in a manner suitable to observe fauna causing minimal disruption and damage to the environment
- identified processes, situations, equipment and resources for observation of fauna
- observed and recorded the details of observations according to enterprise requirements
- recognised fauna according to their characteristics
- followed workplace procedures and supervisor instructions for identifying, recognising and recording fauna
- applied work health and safety policies and procedures to fauna observation activities
- applied animal welfare practices when observing fauna
- prepared documentation relevant to fauna observations and identification.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for identifying fauna, including:
 - identification techniques and resources
 - fauna behaviour
 - fauna habitats

- tracks, scats and traces
- typical characteristics of fauna
- basic nomenclature and naming conventions
- techniques for observing, identifying and reporting fauna
- purposes for observing and monitoring fauna
- workplace health and safety procedures when conducting observations
- procedures for reporting rare, uncommon or notifiable fauna
- animal welfare and environmental codes of practice relevant to the observation of fauna.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated where target fauna species inhabit, or in an environment that accurately represents these conditions
- resources, equipment and materials:
 - target fauna
 - tools and equipment required for fauna observations
 - personal protective equipment required while conducting observations
- specifications:
 - workplace policies, procedures, processes and instructions
 - specifications for fauna recognition activity
 - legislation/codes of practice relevant to fauna and environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCFAU301 Respond to wildlife emergencies

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to evaluate and coordinate a response to natural resource emergencies involving fauna.

This unit applies to working within own area of responsibility in a response to a wildlife emergency. These individuals are required to take responsibility for their own work and take limited responsibility for other workers and possibly volunteers.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Pre-requisite Unit

Nil.

Unit Sector

Fauna (FAU)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Evaluate wildlife	1.1 Investigate nature of emergency from eyewitness reports or own

Element	Performance criteria
emergency	inspection 1.2 Make assessment of key factors that may impact on an appropriate response, including public and personal health and safety, animal care, biosecurity and environmental factors 1.3 Notify authorities of incident according to enterprise procedures 1.4 Implement interim care of animals pending instructions from authorities 1.5 Delegate appropriate staff to provide interim care for animals 1.6 Ensure personnel assisting in interim care are equipped and briefed 1.7 Implement care instructions provided by authorities or veterinarians 1.8 Collect information to determine further action 1.9 Interview informants to obtain details of the situation
2. Implement response to emergency	2.1 Establish communications necessary to manage situation 2.2 Transport resources and personnel to site 2.3 Establish site procedures and implement emergency plans according to legislative requirements and enterprise procedures 2.4 Move live fauna 2.5 Remove dead fauna from site and dispose of biological matter in accordance with enterprise procedures and health and safety requirements 2.6 Clean site in accordance with enterprise procedures to maintain public and environmental health and safety 2.7 Implement measures that minimise risk to significant places, area, habitats, species and communities
3. Coordinate response	3.1 Inform general public and media of the nature of the incident and agency decisions 3.2 Brief volunteers and staff on workplace health and safety hazards, preventive measures and reporting requirements 3.3 Coordinate and deploy volunteers according to their skills and available personal protective equipment 3.4 Establish physical barriers to keep public away from animals to minimise their distress and to protect the public 3.5 Manage media until authorities provide instructions 3.6 Use media according to enterprise procedures
4. Care for affected animals	4.1 Assign teams to animals according to incident assessment, care instructions and skills within teams 4.2 Apply animal first aid 4.3 Perform role in wildlife operations team according to the

Element	Performance criteria
	command structure and procedures of the management plan 4.4 Care for animals using a range of skills and according to veterinary instructions and enterprise procedures
5. Determine management options	5.1 Seek veterinary advice where appropriate 5.2 Collect biological and incident data on animals 5.3 Evaluate management options according to advice, condition of animal and risk assessment 5.4 Band or tag released animals where required for scientific purposes 5.5 Source equipment and staff for returning animal to wild or temporary captive management
6. Remove carcass	6.1 Develop inter-agency agreement with local authority for removal of carcasses 6.2 Dispose of carcasses according to authority instructions 6.3 Source equipment and staff for disposal
7. Complete debrief and report	7.1 Follow incident management processes for debrief and wash-up 7.2 Provide report to management to determine what procedures should be implemented

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCFAU301A Respond to wildlife emergencies.

Assessment Requirements for AHCFAU301 Respond to wildlife emergencies

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- evaluate natural resource emergency
- implement and coordinate response to emergency in accordance with enterprise procedures and health and safety requirements
- follow enterprise procedures to ensure the safety of self, other personnel, the general public and the wildlife
- determine management options including returning animal to wild or temporary captive management, according to authority and enterprise policies and procedures
- follow instructions from veterinarians or authorities to care for animal
- remove and dispose of animal carcasses in accordance with authority instructions
- complete debrief and prepare reports to enterprise standards
- apply workplace health and safety policies and procedures when implementing emergency plans
- apply appropriate animal welfare practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- health risks associated with animals
- public relations and media management
- incident management systems
- State/Territory and local wildlife emergency authorities and organisations
- local authorities for wildlife emergencies
- potential biosecurity risks associated with wildlife rescue operations

- basic requirements for ensuring the welfare of animals described in the relevant Codes of Practice

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCFAU302 Identify fauna in the field

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to observe fauna characteristics for identification in the field using reference material. This is not an animal surveying unit; it focuses on observation skills and the identification of fauna from these observations.

The unit applies to individuals who work in the conservation and ecosystem management industry under broad supervision and who take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCFAU302 Identify fauna in the field

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified at least 20 fauna species in the field, which must include at least five species from three of the following groups:

- mammals
- birds
- reptiles/amphibians
- fish
- invertebrates.

There must also be evidence that the individual has:

- accessed a natural area in a manner suitable to observe fauna causing minimal disruption and damage to the environment
- identified and selected processes, ecology, equipment and resources for observation of specific fauna
- applied animal welfare practices when observing fauna
- recorded characteristics of fauna and investigated and recorded supplementary evidence
- used reference material to identify fauna according to their characteristics
- applied workplace health and safety policies and procedures for fauna observation activities
- recorded fauna observations and identification according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for identifying fauna, including:
 - identification techniques and resources
 - fauna behaviour

- fauna habitats
- tracks, scats and traces
- typical characteristics of fauna
- nomenclature and naming conventions for fauna, including:
 - vertebrates
 - invertebrates
- techniques for observing, identifying and recording fauna
- functions and operations of site equipment and tools
- reference materials used in identification process, including:
 - field guides
 - web sites and apps
 - fauna keys
 - digital images, pictures, graphics and other referenced collection to aid identification
- purposes for observing and monitoring fauna
- fauna and their ecological relationships with the location, including:
 - home range
 - breeding/nesting/shelter
 - access to food and water resources
 - movements – nomadic/migratory behaviours
- workplace health and safety procedures when conducting observations and collecting supplementary evidence
- procedures for reporting rare, uncommon or notifiable fauna
- animal welfare and environmental codes of practice relevant to the observation of fauna.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated where target fauna species inhabit or in an environment that accurately represents these conditions
- resources, equipment and materials:
 - fauna
 - tools and equipment required for fauna observations
 - reference materials
 - personal protective equipment required while conducting observations
- specifications:
 - workplace policies, procedures, processes and instructions
 - specifications for fauna recognition activity
 - legislation/codes of practice relevant to fauna and environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCFAU303 Respond to wildlife emergencies

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has:

- evaluated natural resource wildlife emergency
- implemented and coordinated response to emergency in accordance with workplace procedures and health and safety requirements
- followed workplace procedures to ensure the safety of the wildlife, personnel and the general public
- determined management options, including returning animal to wild or temporary captive management, according to authority and workplace policies and procedures
- followed instructions from veterinarians or authorities to care for animal
- removed and disposed of animal carcasses in accordance with authority instructions
- completed debrief and prepared reports to workplace standards
- applied workplace health and safety policies and procedures when implementing emergency plans
- applied appropriate animal welfare practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health risks associated with working near animals, including:
 - personal and public safety
 - handling animals
 - animal care
- public relations and media management for disseminating information on wildlife emergencies
- investigating wildlife emergencies, including:

- assessing and responding to eyewitness accounts
- conducting personal investigations and interviews
- options for managing wildlife emergencies, including:
 - interim captive care
 - permanent captive care
 - return to wild
- incident management systems and their application to wildlife emergencies, including:
 - communication strategies
 - resources and personnel required for effective response
 - methods for relocating living wildlife
 - collection, documentation and disposal of dead animals
 - briefing and coordination with personnel and volunteers
- animal care and first aid
- state/territory and local wildlife emergency authorities and organisations
- roles and responsibilities of veterinary support in wildlife rescue
- methods for banding and tagging of fauna
- potential environmental and biosecurity risks associated with wildlife rescue operations
- basic requirements for ensuring the welfare of animals described in the relevant codes of practice
- legislative and regulatory requirements governing wildlife emergencies and care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - wildlife in an emergency situation
 - personal protective equipment
- specifications:
 - policies, procedures and processes for managing wildlife emergencies
 - access to legislation and codes of practice related to wildlife.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCFIR202 Assist with planned burning

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assist with planned burning for agricultural or natural resource management purposes.

The unit applies to individuals who participate in lighting and undertaking planned burns under direct supervision. They exercise limited autonomy within established and well known parameters, providing solutions to a limited range of predictable problems.

Legislation and regulations apply to planned burns in many jurisdictions. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Assessment Requirements for AHC FIR202 Assist with planned burning

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least two occasions, the individual has assisted with a planned burn, and has:

- interpreted and complied with planned burn instructions
- prepared machinery and equipment to workplace requirements before burning
- monitored weather conditions throughout the burn
- used personal protective equipment during the planned burn, and checked, cleaned and stored on completion
- identified and maintained at least two safe escape routes throughout the burn
- maintained communication with supervisor and other staff at all times
- assisted with clean-up operations according to supervisor instructions to workplace standards
- applied workplace health and safety procedures throughout the burn.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the components of fire and its behaviour
- methods for extinguishing fires, including:
 - media
 - equipment
- methods of communication on the fire ground, including:
 - communication equipment
 - procedures
- controlled burning tactics and techniques
- identification of assets requiring protection during a burn, including:

- life and property
- critical infrastructure and community assets
- assets supporting livelihoods and economic production
- environmental and conservation assets
- community values
- hazards and risk management techniques during planned burns, including:
 - effect of topography
 - vegetation types
 - site-specific hazards
 - control lines
- operating procedures for planned burns, including contingency arrangements and emergency procedures
- purpose and use of personal protective equipment
- workplace health and safety policies and procedures relevant to planned burning
- key concepts of workplace health and safety and environmental legislative and workplace requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an actual fire ground requiring a planned burn
- resources, equipment and materials:
 - fire suppression equipment suited to planned burns
 - use of personal protective measures relevant to working with fire
- specifications:
 - instructions, policies and procedures for conducting planned burns
- relationships:
 - team members
 - supervisor
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCFIR301 Undertake burning for fuel, ecological and cultural resource management

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to undertake planned burning and lead on-ground burn operations for agriculture, conservation and land management purposes.

Planned burning is characterised by low risk, low intensity fire, with low potential impact on assets and values, within a defined objective and area with minimal variation in fuel and terrain.

The unit applies to individuals engaged in community and enterprise based organisations who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources.

Legislation and regulations apply to planned burns in many jurisdictions. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for AHC FIR301 Undertake burning for fuel, ecological and cultural resource management

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least two occasions, coordinated a burn team and implemented a burn according to conditions specified in burn plan.

There must also be evidence that the individual has:

- maintained communication with burn team, stakeholders and burn supervisor throughout the burn
- interpreted burn requirements, including identified conditions and ensured compliance with workplace, legislative and regulatory requirements
- identified and assembled resources with burn team
- coordinated burn-day logistics
- monitored weather conditions and notified supervisor of changed conditions for decision
- recorded weather conditions and burn activities according to workplace requirements
- coordinated on-ground burning activities
- coordinated mop-up and patrol activities
- cleaned, maintained, stored and reported faulty equipment and resources according to workplace procedures
- assessed and reported burn outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- burn planning and burn supervision processes
- planned burning legislation, regulation and process for applying for permits
- methods of weather forecasting, monitoring and recording
- fuel hazard assessments
- fuel conditions prior to ignition

- weather conditions prior to ignition
- topographical considerations
- go/no go decision making
- fire behaviour
- map types and use
- extinguishing media and equipment
- range of firefighting equipment and resources
- communication equipment and operating procedures
- tactics and techniques used for safe planned burning
- techniques for identification and protection of assets and values
- methods for monitoring planned burn operations
- principles and practice for mop-up and patrol
- fire ground hazards and standard techniques for managing risk
- operating procedures for planned burning relevant to the workplace
- contingency planning and emergency procedures
- workplace procedures for reporting on planned burns.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a fire ground during planned burning
- resources, equipment and materials:
 - fire control and mop-up tools and equipment
 - ignition devices
 - communications equipment
 - personal protective clothing and equipment
- specifications:
 - workplace policies, procedures and processes for planned burning
 - workplace instructions and planned burn requirements
 - maps and site plans
 - burn permit for site
- relationships:
 - burn team
 - supervisor/burn coordinator
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCFIR503 Plan and evaluate burning for fuel, ecological and cultural resource management

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan burning in areas associated with fuel management. It requires the planner to identify the advantages and risks from burning and assess the implications on ecological and cultural assets. It includes developing monitoring programs, conducting post-burn assessments for a burn site, evaluation and reporting on burn outcomes and the implementation of monitoring programs to identify response of flora and fauna at a burn site.

The unit applies to individuals whose job roles include wildfire management for ecological and cultural assets at risk in target areas. Work is undertaken without supervision. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

Legislation and regulations apply to planned burns in many jurisdictions. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for AHC FIR503 Plan and evaluate burning for fuel, ecological and cultural resource management

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion:

- planned burning activities of a site according to organisational procedures and legislative requirements
- developed and implemented a program to facilitate post-burn monitoring and evaluation activities for the site
- conducted post-burn assessment of a given site to evaluate and report on burn outcomes, including recommendations for implementing monitoring programs to identify recovery of flora and fauna.

There must also be evidence the individual has:

- identified the history of previous burns on the site, including:
 - frequency
 - season
 - intensity
 - extent
- assessed the overall fuel hazard for a site and determined the risk, likelihood and consequences
- identified likely impact on flora and fauna
- identified ecological and cultural assets that could be affected by preparation and burning activities
- developed planned burn objectives, strategies and tactics, including:
 - maximising asset protection
 - minimising environmental impact
 - minimising impact on cultural and heritage assets
- consulted and liaised with key stakeholders in burn planning process
- researched, considered and applied outcomes of historical fires in target area

- applied workplace health and safety legislative requirements to planned burning
- reported burn outcomes according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- wildfire hazard and risk management strategies
- basic wildfire behaviour:
 - fuel types and fuel hazard levels
 - sources of ignition
 - effects of climate change and impact of weather
 - fire movement and reaction to aspect and terrain
- planned burning strategies:
 - fuel reduction
 - ecological
 - cultural
- legislation relevant to wildfire hazard reduction, cultural heritage and protection of flora and fauna
- effects of fire intensity and behaviour on ecology, including:
 - vegetation and vegetation types
 - frequency and vegetation response
 - fauna and habitat
 - biodiversity
 - fuel accumulation
 - impact on soils and erosion
 - impact on streams and waterways
 - impact on natural vegetation and pest plants
- effects of fire on areas and places of cultural significance:
 - Indigenous culture
 - heritage sites
- resource requirements used to conduct planned burning activities
- risks in burning for fuel management
- pre-fire and post-fire monitoring, evaluation and recording techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated on a site requiring planned burning as part of a fire management plan
- access to a post-burn site to demonstrate monitoring and evaluation activities
- resources, equipment and materials:
 - computer and web-based resources
 - planning guides
 - digital tools and instruments
 - fire intensity and soil temperature information
- specifications:
 - wildfire hazard rating systems
 - vegetation classification systems
 - maps, aerial images and planning overlays
 - workplace policies and procedures for wildfire management
 - legislation, regulations and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHC FIR504 Manage wildfire hazard reduction programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that on at least one occasion the individual has developed and managed a wildfire hazard reduction program in accordance with workplace procedures, local fire agencies, workplace health and safety policies and legislative requirements.

There must also be evidence that the individual has:

- rated the site for wildfire hazards and risks for the following conditions:
 - environment
 - buildings and structures
 - cultural sites
 - fuel loads
 - climate and local weather
 - location
 - accessibility
 - ecology
- developed effective strategies for wildfire hazard reduction that comply with local fire agency and regulatory requirements
- planned wildfire hazard reduction programs that take into account:
 - location and local fire history
 - climate
 - fuel loads
 - accessibility to the site
- reviewed hazard reduction plans, strategies and operational procedures with other agencies
- maintained records for the following:
 - chemical agents used in hazard reduction
 - fire incidents

- activities employed
- date of activity
- location or site where activity occurred
- managed consultation with local community to ensure their support for program
- applied workplace health and safety policies and procedures in the planning and implementation of wildfire hazard reduction strategies
- applied biosecurity measures to wildfire hazard reduction planning
- incorporated sustainability practices in wildfire hazard reduction planning.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- wildfire prevention strategies and their effect on society, economy and the environment
 - mechanical clearing and removal
 - chemical control
 - fire and prescribed burns
- methods for assessing and rating wildfire hazards and risks
- factors affecting the rating of potential hazards and risks of wildfire, including:
 - local fire history
 - fuel loads
 - climate
 - location
 - accessibility
 - geophysical systems
 - ecology
 - environmentally sustainable practices
 - biosecurity
 - workplace and community priorities
 - workplace health and safety
 - local fire agency and legislative requirements
- contacting local emergency services and agencies for emergencies
- land tenure and responsibilities, including:
 - local authorities
 - other government agencies
 - private land
 - other land users
- hazards associated with wildfire prevention strategies
- fire behaviour in a rural/bush environment in known climatic conditions
- equipment applicable to wildfire hazard reduction, including:
 - safe use

- performance
- accessibility and approvals
- safety issues for the environment and public health
- records and recording systems required for hazard reduction activities, including:
- the types and use of chemicals and biological agents, their hazards and how they should be handled
- procedures and priorities for wildfire hazard reduction programs
- workplace health and safety, local fire agencies and legislative requirements that apply to prescribed burns.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - at a site requiring a wildfire hazard reduction program
- resources, equipment and materials:
 - digital technology and web based resources to assist with rating wildfire hazard and prepare management program
- specifications:
 - wildfire hazard rating systems
 - workplace policies and procedures for wildfire management
 - legislation, regulations and codes of practice for wildfire management
- relationships:
 - team to implement fire hazard reduction program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCGRB01 Maintain roof gardens, vertical gardens and green facades

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out maintenance work on green infrastructure.

The unit applies to individuals who carry out maintenance on roof gardens, vertical gardens and green facades.

This unit of competency is suitable for individuals using their own judgment to deal with predictable and unpredictable problems and to decide on solutions to a range of complex problems during the maintenance process.

Licensing, legislative or certification requirements may apply to this unit in some jurisdictions, depending on the location of work and/or plant and equipment used. Users are advised to check with the relevant regulatory authorities.

Pre-requisite Unit

Assessment Requirements for AHCGR1301 Maintain roof gardens, vertical gardens and green facades

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained, on at least three separate occasions for each, and over a period of time consistent with the maintenance schedule:

- one roof garden
- one vertical garden, and
- one green facade.

In completing the above, there must also be evidence that the individual has:

- conducted scheduled interval visual inspection of the infrastructure, systems and plants
- evaluated soil or growing media condition and adjusted as required
- disposed of vegetation and waste according to workplace and environmental requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maintenance requirements of green infrastructure
- site analysis:
- climatic factors of wind, temperature, sunlight and rainfall
- irrigation
- drainage
- infrastructure decay or damage
- terminology of green infrastructure maintenance
- plant maintenance and cultural requirements of plants used for green infrastructure:
- feeding and watering
- weeding and trimming
- pest and diseases

- soil or growing media maintenance including ameliorants and additives
- features, benefits and characteristics of green infrastructure
- current and relevant work health and safety and environmental requirements relevant to green infrastructure maintenance work
- organisational policies and procedures relevant to green infrastructure maintenance work
- sensor devices and equipment, data collection and analysis
- functional and operational features of plant, equipment, hand and power tools, including certification requirements for operation, used for green infrastructure maintenance
- causes and controls of fire hazards in green infrastructure.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a green infrastructure workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - tools, equipment and materials appropriate for carrying out green infrastructure maintenance work
 - personal protective equipment
- specifications:
 - specific organisational policies, procedures and processes including work health and safety and environmental procedures relevant to maintenance work
 - green infrastructure maintenance schedule for a minimum of two months
- relationships:
 - clients or team members to discuss green infrastructure maintenance requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCGR1401 Construct roof gardens

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to construct designed roof gardens to comply with regulatory authorities' building regulations, standards and codes, and meet design plans and specifications.

The unit applies to individuals who build or install roof gardens on new or existing residential or commercial buildings in consultation with architects, engineers and other building and/or landscape and horticultural professionals.

This unit of competency is suitable for individuals dealing with predictable and unpredictable problems and deciding on solutions to a range of complex problems during the building or installation process through research, analysis and consultation.

Roof garden installation or construction must meet all regulatory requirements of national, state, territory and local government authorities and building regulations, standards and codes.

Licensing, legislative or certification requirements may apply to this unit in some jurisdictions depending on the location of the work and/or plant and equipment used. Users are advised to check with the relevant regulatory authorities.

Assessment Requirements for AHCGR1401 Construct roof gardens

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely constructed one roof garden with a minimum area of 4 square metres.

In completing the above, there must be evidence that the individual has:

- sequenced the building and installation process to efficiently and effectively complete the project with minimum disruption to residents and/or the community
- complied with design plans and specifications, relevant building codes and standards, and regulatory requirements
- installed systems and components to manufacturers' specifications and without damage.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- green infrastructure construction requirements for:
- maintaining integrity of waterproofing materials
- drainage systems
- irrigation systems
- storing and recycling water systems
- lighting and/or air flow systems
- anchoring plants and components
- site management and materials handling and storage
- components of roof garden construction
- risks associated with roof garden construction
- professional practice requirements in roof garden construction, including:
 - limitations and boundaries
 - roles and responsibilities of building professionals and authorities

- planting methods that comply with the growing requirements of individual plant species and cultivars
- initial establishment needs of plants used in roof gardens
- national, state, territory and local authority regulations, policies and procedures and permits relevant to roof garden construction
- national building regulations, standards and codes relevant to roof garden construction
- current and relevant work health and safety and environmental requirements relevant to roof garden construction
- plant, equipment, hand and power tools, and operator certification requirements for operation, for construction of roof garden.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a green infrastructure workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plant, equipment and power tools relevant for roof garden construction
 - personal protective equipment
- specifications:
 - specific organisational policies, procedures and processes including work health and safety and environmental documentation relevant to roof garden construction
 - building regulations, standards and codes
- relationships:
 - client or team members, designer or associated specialists to confirm construction requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, framework and/or standards.

AHCGR1402 Construct vertical gardens and green facades

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to construct designed vertical gardens and green facades, to comply with regulatory authorities' building regulations, standards and codes, and meet design plans and specifications.

The unit applies to individuals who build or install vertical gardens and green facades on new or existing residential or commercial buildings in consultation with architects, engineers and other building and/or landscape and horticultural professionals.

This unit of competency is suitable for individuals dealing with predictable and unpredictable problems and deciding on solutions to a range of complex problems during the building or installation process through research, analysis and consultation.

Vertical garden and green facade installation or construction must meet all regulatory requirements of national, state, territory and local government authorities and building regulations, standards and codes.

Licensing, legislative or certification requirements may apply to this unit in some jurisdictions depending on the location of the work and/or plant and equipment used. Users are advised to check with the relevant regulatory authorities.

Pre-requisite Unit

Green Infrastructure (GRI)

Elements and Performance Criteria

Elements	Performance Criteria
----------	----------------------

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare	<p>1.1 Interpret vertical garden and green facade design plans and specifications, check permits and identify and resolve any discrepancies with designer and/or associated specialists if applicable</p> <p>1.2 Complete job safety and environmental analysis (JSEA) or Safe Work Method Statement (SWMS), identify potential hazards and apply control measures</p> <p>1.3 Determine job priorities, and sequence job tasks in consultation with others on site</p> <p>1.4 Calculate material and component quantities and check material availability with suppliers</p> <p>1.5 Schedule delivery and discuss site access and method of locating material onsite with appropriate persons</p> <p>1.6 Select plant, equipment and tools, check for serviceability and rectify and report any faults, and confirm required operator certifications, if applicable</p> <p>1.7 Select, correctly fit and use personal protective equipment (PPE)</p> <p>1.8 Check delivered materials and components for conformity, and report any discrepancies or damage to appropriate person</p>
2. Construct vertical garden	<p>2.1 Set out and mark position, levels and fixing points appropriate for the selected vertical garden configuration</p> <p>2.2 Confirm waterproofing installation to the specified area by specialist waterproofer using approved materials and methods has been inspected and certified</p> <p>2.3 Install irrigation and drip tray system, and check for leaks</p> <p>2.4 Install lighting and/or air flow equipment according to specifications</p> <p>2.5 Fix vertical garden panels according to manufacturers' specifications</p> <p>2.6 Install and finish growing media to specified levels</p> <p>2.7 Plant specified vegetation to meet design patterns according to designer and/or supplier establishment information</p>
3. Construct green facade	<p>3.1 Assemble and fix facade framework in compliance with building codes and standards, and without damage to existing structure</p> <p>3.2 Install garden bed or containers to design specifications</p> <p>3.3 Install, fix and test irrigation and drainage systems</p> <p>3.4 Select and install growing media to specified depth, consolidate</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	and finish height 3.5 Plant or install specified plants following designer and/or supplier establishment information
4. Complete vertical garden and green facade construction	4.1 Clear the work area by disposing of, reusing or recycling materials 4.2 Clean tools and equipment and check for serviceability and report damage or defects to appropriate person 4.3 Store tools and equipment according to workplace and environmental requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCGR1402 Construct vertical gardens and green facades

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely constructed:

- one vertical garden with a minimum of 4 square metres, and
- one green facade with a minimum of 4 square metres.

In completing the above, there must also be evidence that the individual has:

- sequenced the building and installation process to efficiently and effectively complete the project with minimum disruption to residents and/or the community
- complied with design plans and specifications, relevant building codes and standards, and regulatory requirements
- installed systems and components to manufacturers' specifications and without damage.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- green infrastructure construction requirements for:
- maintaining integrity of waterproofing materials
- drainage systems
- irrigation systems
- storing and recycling water systems
- lighting and/or air flow systems
- site management and materials handling and storage
- types of vertical garden construction:
 - hydroponic system
 - substrate based system
- techniques for fixing facade and vertical garden components

- components of vertical garden and green facade construction
- risks associated with construction of vertical gardens and green facades
- planting methods that comply with the growing requirements of individual plant species and cultivars
- initial establishment needs of plants used in vertical gardens and green facades
- professional practice requirements in construction of vertical gardens and green facades, including:
 - limitations and boundaries
 - roles and responsibilities of building professionals and authorities
- national, state, territory and local authority regulations, policies and procedures and permits relevant to vertical garden and green facade construction
- national building regulations, standards and codes relevant to vertical garden and green facade construction
- current and relevant work health and safety and environmental requirements relevant to vertical garden and green facade construction
- plant, equipment, hand and power tools, and operator certification requirements for operation, for construction of vertical garden and green facade.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a green infrastructure workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plant, equipment and power tools relevant for vertical garden and green facade construction
 - proprietary or custom vertical garden and green facade systems
 - personal protective equipment
- specifications:
 - specific organisational policies, procedures and processes including work health and safety and environmental documentation relevant to vertical garden and green facade construction
 - building regulations, standards and codes
- relationships:
 - client or team members, designer or associated specialists to confirm construction requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, framework and/or standards.

AHCGR1501 Design roof gardens

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to design roof gardens in consultation with system/component suppliers, building and landscape design professionals and other landscape and horticultural specialists. It includes the selection of roof garden components based on structural limitations and opportunities, and the application of knowledge of the benefits and risks associated with roof gardens into designs that meet client requirements and comply with applicable building and relevant authorities' regulations and guidelines.

The unit applies to individuals with existing horticultural, landscaping, landscape design and/or construction experience, who research information about roof garden principles and guidelines and consult with green infrastructure and/or building and landscape design specialists to design roof gardens for existing and/or new buildings.

This unit of competency is suitable for individuals dealing with predictable and unpredictable problems and deciding on solutions to a range of complex problems during the design process through research, analysis and consultation.

Roof garden design must meet all requirements of national, state, territory and local government authorities and building regulations, standards and codes.

Licensing, legislative or certification requirements may apply to the work undertaken in this unit in some jurisdictions. Users are advised to check with the relevant regulatory authorities.

Pre-requisite Unit

Green Infrastructure (GRI)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research roof garden design information	1.1 Establish purpose, functions, benefits and risks associated with roof gardens 1.2 Access and interpret building regulations, standards and codes, and relevant national, state, territory and local authority policies, procedures and permits to determine applicable restrictions or limitations relating to roof gardens 1.3 Identify environmental and energy efficiency impacts of green infrastructure design 1.4 Identify factors that will impact roof garden designs
2. Scope project requirements	2.1 Consult with client to clarify type, purpose, features and requirements of roof garden to inform design parameters 2.2 Identify project location and complete site analysis 2.3 Confirm structural requirements relating to roof gardens with architect, engineer and/or other relevant specialists 2.4 Establish constraints and/or opportunities for meeting client expectations and requirements, and clarify design scope with client
3. Design roof gardens	3.1 Acquire engineering plans to determine drainage outlets and weight limits 3.2 Design roof garden to utilise spatial availability, enable access and egress, and comply with building regulations, standards and codes 3.3 Consult growing media and/or horticulture specialist on selection of media and plants based on the location conditions and maintenance requirements 3.4 Document specifications for waterproofing, irrigation and drainage systems and/or lighting, including recommended suppliers 3.5 Calculate total weight of materials, components and water in consultation with suppliers, green infrastructure specialists and/or building professionals to ensure the total weight complies with parameters set by an engineer 3.6 Design plant and component anchoring system appropriate to project location and weather conditions in consultation with engineers and other building and/or landscape professionals 3.7 Prepare a design concept of proposed roof garden, confirm with specialists and/or building professionals, and present to client

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	3.8 Prepare design plans, specifications, maintenance program and estimated costs for roof garden, in consultation with qualified specialist if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Research and analyse researched information to select materials and components for roof gardens
Writing	<ul style="list-style-type: none"> Develop relevant documentation using digital technology
Oral communication	<ul style="list-style-type: none"> Determine stakeholder requirements through open-ended questioning, active listening and summarising
Numeracy	<ul style="list-style-type: none"> Apply decimals and percentages to estimate and calculate project costs Use measurements and formulas to calculate length, area, volume and weight Interpret data and numerical data displayed in graphs, charts and/or tables

Assessment Requirements for AHCGR1501 Design roof gardens

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed one compliant roof garden project with a minimum of 4 square metres and has:

- met design brief and project parameters
- consulted with green infrastructure specialists, building and/or landscape professionals
- complied with relevant regulatory authorities' policies and procedures, building regulations, standards and codes
- complied with the project design parameters set by an engineer or specialist
- used measurements and formulas to calculate material quantities, weights and estimated project costs
- incorporated provision of access and egress for construction and maintenance
- developed and documented a maintenance program to ensure sustainability of the green infrastructure.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- professional practice requirements in roof garden design, including:
 - limitations and boundaries
 - roles and responsibilities of building professionals and authorities
- factors influencing roof garden design for existing and new buildings
- relevant legislation, standards and codes, including the National Construction Code (NCC)
- roof garden recirculating and non-recirculating/flood-drain systems
- site analysis, including:
 - climatic factors of wind, temperature, sunlight, rainfall and irrigation
 - drainage

- site access for construction and installation and ongoing maintenance
- reasons for creating roof gardens, including:
 - environmental
 - economic
 - social
- features, benefits and risks of roof gardens
- characteristics, properties and limitations of materials used for roof gardens, including:
 - water-proofing material
 - substrate
 - root barrier
 - drainage and irrigation systems
 - storing and recycling water systems
 - lighting systems
- characteristics, properties and limitations of plants used for roof gardens
- properties of types of green roofs, including:
 - extensive
 - intensive
- project cost estimating, including:
 - materials and labour
 - build costs, including transporting and storing materials and equipment, and provision of safety and equipment
 - ongoing maintenance.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a design workplace or an environment that accurately represents workplace conditions
- specifications:
 - building regulations, standards and codes relevant to roof garden design
- relationships:
 - clients to discuss roof garden design requirements
 - building and/or landscape/horticultural professionals to consult with on building roof garden and regulatory requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCHYD401 Establish and monitor hydroponic crops

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to establish hydroponic crop nutrient requirements, supervise crop planting activities and monitor nutrient concentrations of hydroponic crops.

The unit applies to individuals who apply specialised skills and knowledge in the establishment and monitoring of hydroponic crops and have the responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Hydroponics (HYD)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish hydroponic crop nutrient requirements	1.1 Determine nutrient solution technique according to crop type and workplace procedures 1.2 Determine growing substrate according to crop type and workplace procedures 1.3 Identify nutrient solution according to crop type and workplace

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	procedures 1.4 Document nutrient solution technique, growing substrate and nutrient solution according to workplace procedures
2. Supervise crop planting activities	2.1 Brief planting staff on crop planting requirements 2.2 Monitor staff activities against planting requirements 2.3 Conduct plant health and quality inspection according to industry standards 2.4 Identify a suitable irrigation strategy according to industry standards 2.5 Check adherence to health and safety in the workplace, environmental and biosecurity practices according to workplace procedures 2.6 Document and record planting activities
3. Monitor nutrient concentrations	3.1 Test nutrient solutions using standard industry testing methods 3.2 Analyse nutrient solution test results for plant health purposes 3.3 Adjust nutrient solution to achieve required concentration 3.4 Document solution adjustments according to industry specifications

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations and products
Oral Communication	<ul style="list-style-type: none"> Initiate discussions with staff, using clear language to communicate planting requirements, health and safety, and environmental practices
Numeracy	<ul style="list-style-type: none"> Measure and calculate nutrient solution

Skill	Description
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility Check self and others adherence to workplace requirements including safety requirements
Get the work done	<ul style="list-style-type: none"> Take responsibility for routine decisions about establishing and monitoring hydroponic crops and reflect on outcomes to identify effectiveness of decisions
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information within work team

Assessment Requirements for AHCHYD401 Establish and monitor hydroponic crops

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has established and monitored hydroponic crops on at least one occasion and has:

- documented hydroponic crop establishment and monitoring activities
- conducted plant health and quality inspection
- identified suitable irrigation strategy
- minimised environmental impacts associated with establishing and monitoring hydroponic crops
- followed industry and workplace biosecurity procedures
- applied workplace health and safety requirements
- tested and analysed nutrient solution
- measured and calculated nutrient solution.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hydroponic crop nutrient solution techniques, including:
 - aeroponics
 - continuous-flow solution culture or nutrient film technique
 - deep water culture
 - drop irrigation
 - ebb and flow
 - fogponics
 - passive sub-irrigation
 - rotary

- run to waste
- static solution culture
- top-fed deep water culture
- types of hydroponic growing substrates, including:
 - clay aggregate
 - coconut coir
 - perlite
 - rockwool
 - vermiculite
- types of hydroponic nutrient solutions, including:
 - inorganic
 - organic
- plant health and quality inspection techniques
- irrigation strategies applicable to hydroponic crops
- workplace requirements applicable to health and safety in the workplace for establishing and monitoring hydroponic crops
- environmental impacts associated with establishing and monitoring hydroponic crops
- industry and workplace biosecurity procedures
- nutrient solution testing and analysis procedures and equipment, including:
 - colorimeters
 - electrical conductivity meters
 - litmus paper
 - ph indicator strips
 - ph meters
- nutrient solution measuring and calculation procedures, tools and equipment, including:
 - graduated cylinders
 - measuring spoons.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - hydroponic crop establishment and monitoring tools, equipment and materials
 - nutrient solution measuring, calculation, testing and analysing tools, equipment and procedures
 - personal protective equipment applicable to establishing and monitoring hydroponic crops
- specifications:

- workplace requirements applicable to health and safety in the workplace and establishing and monitoring hydroponic crops
- industry and workplace biosecurity procedures applicable to establishing and monitoring hydroponic crops
- relationships:
 - team members
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG102 Support irrigation work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge to undertake routine irrigation work under direct supervision and to support the irrigation work of others.

The unit applies to individuals who support routine irrigation work while working alongside a supervisor, exercising limited autonomy within established and well-known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare materials, tools and equipment for irrigation work	1.1 Identify the required materials, tools and equipment according to lists provided and supervisor instructions 1.2 Select and check materials, tools and equipment required to carry out routine irrigation work 1.3 Select, fit and use personal protective equipment (PPE) applicable to job requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Demonstrate correct manual handling techniques when loading and unloading materials</p> <p>1.5 Report faulty or unsafe tools, equipment or PPE to supervisor</p> <p>1.6 Provide irrigation support according to work health and safety requirements and supervisor instruction</p> <p>1.7 Identify and report workplace hazards to supervisor</p>
2. Undertake irrigation work as directed	<p>2.1 Follow instructions and directions provided by supervisor, and seek clarification when necessary</p> <p>2.2 Undertake irrigation work in a safe and environmentally appropriate manner</p> <p>2.3 Interact with other staff and customers in a positive manner</p> <p>2.4 Follow enterprise policy and procedures in relation to workplace practices, handling and disposal of materials</p> <p>2.5 Report problems or difficulties in completing work to required standards or timelines to supervisor</p>
3. Handle materials and equipment	<p>3.1 Store waste material and debris produced during irrigation work in a designated area according to supervisor instructions</p> <p>3.2 Handle and transport materials, equipment and machinery according to supervisor instructions</p> <p>3.3 Maintain a clean and safe work site while undertaking irrigation activities</p>
4. Clean up on completion of irrigation work	<p>4.1 Clean, maintain and store tools according to supervisor instructions</p> <p>4.2 Return materials to store or dispose of according to supervisor instructions</p> <p>4.3 Make good the site according to supervisor instructions</p> <p>4.4 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language to report malfunctions, faults, wear or damage to tools Participate in verbal exchanges to respond to questions and clarify information
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

Assessment Requirements for AHCIRG102 Support irrigation work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supported irrigation work on at least two occasions, and has:

- prepared materials, tools and equipment for irrigation work
- applied safe work practices
- undertaken irrigation work as directed
- cleaned up on completion of work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for supporting irrigation work
- preparing for irrigation work and cleaning up on project completion
- irrigation tools and equipment
- safe work practices used in irrigation work
- basic construction techniques used in irrigation work
- repair and maintenance of irrigation fittings.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to assisting supporting irrigation work
 - irrigation maintenance tools and equipment

- personal protective equipment applicable to supporting irrigation work
- relationships:
 - supervisor, staff and customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG215 Assist with low volume irrigation operations

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency covers the skills and knowledge required to assist with installing, operating and maintaining low volume irrigation systems. These systems use emitters such as drippers and generally use poly pipe.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for work	1.1 Confirm work instructions with supervisor 1.2 Select appropriate materials, tools, equipment and machinery 1.3 Select personal protective equipment and clothing and ensure correct fit

Element	Performance criteria
	1.4 Identify manual handling and other workplace health and safety hazards 1.5 Identify the site for installation of the irrigation system
2. Install irrigation components	2.1 Prepare the site for installation works 2.2 Assemble and connect system components and test joints 2.3 Connect system to water supply 2.4 Flush and commission system 2.5 Identify and report operating and take corrective actions as directed 2.6 Maintain a clean and safe work area
3. Complete installation work	3.1 Remove waste material from the site and dispose of 3.2 Clean, maintain and store tools, equipment and machinery 3.3 Flush and commission system
4. Carry out start up and shutdown procedures as directed	4.1 Follow start-up sequence 4.2 Shut down system components in sequence 4.3 Drain system 4.4 Record irrigation activity
5. Assist with system maintenance	5.1 Check emitters for serviceability and output 5.2 Maintain delivery components 5.3 Check water supply and pumping system periodically, where required 5.4 Keep maintenance records up to date

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

New unit - no equivalent.

Assessment Requirements for AHCIRG215 Assist with low volume irrigation operations

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assemble and join irrigation system components
- carry out basic maintenance tasks
- carry out low volume irrigation operating tasks
- complete installation work
- fix identified faults
- follow directions to operate pumps, filters and valves
- install irrigation components
- look for leaks and faulty emitters
- prepare materials, tools and equipment
- recognise and report faults
- undertake site preparation tasks as directed

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practice of low volume irrigation operation
- characteristics and operation of joints, valves and emitter components
- components in low volume irrigation systems
- emitter spacing, coverage and pressure
- indicators of over and under watering
- installation techniques and procedures
- irrigation controllers
- irrigation pipes, types and sizes

- irrigation times to deliver sufficient volume without over watering
- methods and techniques of low volume irrigation installation
- operation of low volume irrigation system
- set out procedures
- system malfunctions and their likely causes
- use of recycled water and colour coding of pipes
- water requirements of relevant plants

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCIRG219 Assist with low volume irrigation operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with at least one low volume irrigation operation on at least one occasion and has:

- applied workplace health and safety requirements
- selected, cleaned and maintained materials, tools, equipment and machinery appropriate to the scope of works
- prepared materials, tools and equipment
- undertaken site preparation tasks as directed
- assembled and joined irrigation system components
- installed irrigation components
- fixed identified faults
- recognised and reported irrigation component incorrect operation
- completed installation work
- carried out low volume irrigation operating tasks
- followed directions to operate pumps, filters and valves
- carried out basic maintenance tasks
- looked for leaks and faulty emitters.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with low volume irrigation operations
- characteristics and operation of joints, valves and emitter components
- components in low volume irrigation systems
- irrigation controllers
- irrigation pipes, types and sizes

- system malfunctions and their likely causes
- installation techniques and procedures
- methods and techniques of low volume irrigation installation
- operation of low volume irrigation system
- principles and practice of low volume irrigation operation
- emitter spacing, coverage and pressure
- indicators of over and under watering.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - low volume irrigation system maintenance tools and equipment
 - personal protective equipment applicable to assisting with low volume irrigation operations
- specifications:
 - workplace requirements applicable to health and safety in the workplace and assisting with low volume irrigation operations
 - work instructions and workplace procedures applicable to assisting with low volume irrigation operations
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG220 Assist with surface irrigation operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assist with installing, operating and maintaining surface irrigation systems.

The unit applies to individuals who assist with surface irrigation operations under general supervision with limited autonomy and accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for work	<p>1.1 Read work instructions and confirm with supervisor activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to minimise risks to self and others</p> <p>1.2 Select appropriate tools and equipment for the task</p> <p>1.3 Select, fit and use personal protective equipment and clothing applicable to the task</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify site for installation of the irrigation system
2. Set up field for surface irrigation systems as directed	2.1 Check irrigation gates, channels and ditch-ends 2.2 Check pumps, bores and other water delivery mechanisms for correct irrigation set up 2.3 Position and secure tarpaulins or other water control devices as directed
3. Carry out routine maintenance activities on irrigation delivery systems as directed	3.1 Assist with mechanical equipment servicing according to supervisor instructions 3.2 Flush and clean supply and distribution system as directed 3.3 Maintain system inlets, outlets, structures and fittings 3.4 Check system is running smoothly and is free of damage, leaks and blockages in channels, drains and outlets 3.5 Clean irrigation system and ensure there is no disruption to the system
4. Undertake surface irrigation work as directed	4.1 Open and shut gates and valves 4.2 Ensure required head and water levels in head ditch are achieved and maintained to ensure sufficient water flow and availability to crops 4.3 Start or open the required number of siphons 4.4 Monitor progress of water flow in furrows 4.5 Lift siphons where irrigation is complete 4.6 Carry out irrigation change and mark 4.7 Use mechanical equipment to build and repair banks and for weed removal 4.8 Move irrigation equipment according to supervisor instructions
5. Record and report maintenance activities	5.1 Record damage and blockage caused by weeds by damage type, location and the section of the system affected 5.2 Record and report damaged or faulty pumps, valves, electrical components and computer systems 5.3 Record and report routine maintenance activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations

Assessment Requirements for AHCIRG220 Assist with surface irrigation operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with surface irrigation operations on at least one occasion and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- carried out surface irrigation operating tasks as directed
- checked siphons for even water flow
- looked for uneven water distribution or drainage
- opened and closed check valves
- monitored required head and water levels in head ditch
- started and lifted siphons
- used mechanical equipment to build and repair banks and for weed removal
- recorded and reported maintenance activities and faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with surface irrigation operations
- principles and practices of surface irrigation
- channels, furrows, borders, fittings and outlets
- system cleaning procedures
- identification, characteristics and operation of surface irrigation structures and components
- damage and problems that occur with gravity-fed irrigation systems
- weed types encountered in gravity fed irrigation systems and their removal
- system malfunctions and their likely causes.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - surface irrigation system maintenance tools and equipment
 - personal protective equipment applicable to assisting with surface irrigation operations
- specifications:
 - workplace requirements applicable to health and safety in the workplace and assisting with surface irrigation operations
 - work instructions and workplace procedures applicable to assisting with surface irrigation operations
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCIRG221 Assist with pressurised irrigation operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with pressurised irrigation operations on at least one occasion and has:

- applied workplace health and safety requirements
- selected and prepared materials, tools, equipment and machinery appropriate to the scope of works
- undertaken site preparation tasks as directed
- assembled and joined irrigation system components
- completed installation work
- looked for leaks and faulty sprinklers
- recognised, recorded and reported maintenance activities and faults
- followed directions to operate pumps, filters and valves
- carried out basic maintenance tasks
- fixed identified faults.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with pressurised irrigation operations
- principles and practices of pressurised irrigation systems
- irrigation controllers
- irrigation pipes, types and sizes
- sprinkler irrigation components and their function
- set out procedures
- installation techniques and procedures
- operation of pressurised irrigation system

- sprinkler spacing, coverage and pressure
- system malfunctions and their likely causes
- types of sprinklers.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - pressurised irrigation system maintenance tools and equipment
 - personal protective equipment applicable to assisting with pressurised irrigation operations
- specifications:
 - workplace requirements applicable to health and safety in the workplace and assisting with pressurised irrigation operations
 - work instructions and workplace procedures applicable to assisting with pressurised irrigation operations
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG222 Assist with pump and flow control device operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assist with the installation and maintenance of pumps and flow control devices for irrigation.

The unit applies to individuals who assist with pump and flow control device operations under general supervision with limited autonomy and accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for work on pumping and flow control systems	1.1 Read work instructions and confirm with supervisor activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to minimise risks to self and others 1.2 Select appropriate tools and equipment for the task 1.3 Select, fit and use personal protective equipment and clothing applicable to the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Assist with installation and maintenance tasks for pumps and flow control devices	2.1 Carry out installation tasks as directed for pumps and flow control devices 2.2 Carry out routine inspections of flow control and metering facilities in irrigation systems as directed 2.3 Carry out preventative maintenance and service of equipment and facilities as directed
3. Review, record and report activities	3.1 Clean, maintain and store tools, equipment and materials 3.2 Restore work site to meet environmental and workplace requirements 3.3 Record and report installation and maintenance activities

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Use correct terminology to record pump and flow control device installation and maintenance
Oral communication	<ul style="list-style-type: none"> Use clear language to confirm work activity and report pump and flow control device installation and maintenance
Numeracy skills	<ul style="list-style-type: none"> Identify pump and flow control device component part numbers
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

Assessment Requirements for AHCIRG222 Assist with pump and flow control device operations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has assisted with pump and flow control device operations on at least one occasion and has:

- applied workplace health and safety requirements
- interpreted plans, charts and instructions
- selected and organised required tools, equipment and materials for installation and maintenance work, handle materials and use power and hand tools safely
- identified and responded to predictable operational problems
- recorded and reported installation and maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for assisting with pump and flow device operations
- capacity and limitations of equipment used on the site
- lock-out procedures for mechanical and electrical installations
- types of flow control devices and their purpose
- types of pumps and their function and use
- principles and practices of pump and control flow devices
- basic principles of hydraulics and the operation of flows
- layout and performance of pipes and fittings
- flow measurement principles and procedures
- function of control systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - pump and control flow device maintenance tools and equipment
 - personal protective equipment applicable to assisting with pump and control flow device operations
- specifications:
 - work instructions and workplace procedures applicable to assisting with pump and control flow device operations
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG301 Install gravity fed irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to install gravity fed irrigation systems.

The unit applies to individuals who install gravity fed irrigation systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise resources for installation work	1.1 Interpret plan, including identifying potential hazards and risks and implementing safe working practices to manage risks 1.2 Select and use required materials, tools equipment and machinery and check for safe operations 1.3 Select, fit, use and maintain safety and personal protective equipment applicable to the task 1.4 Check water supply is compatible with system specifications

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Set out and prepare site	2.1 Measure and mark out structures and peg earthworks 2.2 Prepare and maintain beds, diversion and conveyancing structures 2.3 Install diversion and conveyancing structures, channels and beds 2.4 Prepare bed surface using roto-buck 2.5 Test structures for configuration, flow rates and capacity
3. Complete water measurement and tail-water works	3.1 Install water measurement structures 3.2 Install channels and tail water storages 3.3 Install pumping equipment, lines and filters 3.4 Confirm that the system configuration and capacity matches the installation plan 3.5 Complete earthworks and structures according to plan
4. Operate pumps and siphons	4.1 Prime pumps and open or close valves and controls 4.2 Position and set up pipes, system equipment and outlets 4.3 Prime and start siphons and other delivery mechanisms 4.4 Implement start up sequence and slowly build up water levels and pressure 4.5 Check pressure at the head-works and control valves 4.6 Distribute water evenly to the targeted areas with minimal wastage and run-off 4.7 Irrigate area and observe time lag between shut down and end of watering to minimise run-off and deep percolation
5. Measure and interpret water levels, flow rates and volume of water used	5.1 Monitor and maintain head water levels 5.2 Confirm that all water outlets are operating correctly 5.3 Replace or clear blocked inlets and outlets 5.4 Measure and record flow rates and water usage 5.5 Implement irrigation changes as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to report installation activities and communicate blockages
Numeracy skills	<ul style="list-style-type: none"> Calculate measurements for structures against specifications Calculate ratios and percentages for water levels, flow rates and usage
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information about system damage and blockages

Assessment Requirements for AHCIRG301 Install gravity fed irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed a gravity fed irrigation system on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- built and maintained irrigation structures, channels and beds
- prepared irrigation beds
- used roto-buck for bed preparation
- measured water usage
- installed pumps and pipelines
- performed system commissioning tasks
- adjusted and monitored check valves
- start and moved siphons and spiles and checked flow
- start up the system
- checked pressure at the head works and control valves
- identified variations in water flow and distribution.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for installing gravity fed irrigation systems
- machinery operation and maintenance manual
- calculations for installing surface irrigation systems
- behaviour of water on varying terrain and soil types
- soil characteristics applicable to water retention and infiltration

- soil water retention testing techniques
- water quality and water filtration techniques
- gravity fed irrigation system components and operation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - gravity fed irrigation system materials, tools equipment and machinery
 - gravity fed irrigation pump system tools and equipment and manual
 - personal protective equipment applicable to installing gravity fed irrigation systems
- specifications:
 - work instructions and workplace procedures applicable to installing gravity fed irrigation systems
 - workplace requirements applicable to health and safety in the workplace and installing gravity fed irrigation systems
 - machinery operation and maintenance manual
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training, legislation, frameworks and/or standards.

AHCIRG303 Measure irrigation delivery system performance

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to measure pressure, flow and distribution uniformity of an irrigation system.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Measure irrigation system performance	1.1 Measure and record system pressures, water flow rates and pump performance parameters 1.2 Measure variations in system pressures, water flow rates and pump performance parameters where relevant and record 1.3 Inspect distribution and delivery systems and identify and fix

Element	Performance criteria
	malfunctions in system and record actions 1.4 Identify and record factors external to the system that may cause interference
2. Monitor supply of equipment and spare parts	2.1 Record supply and part usage 2.2 Monitor spare parts to ensure the supply meets demands 2.3 Make purchases within budget constraints 2.4 Report parts requirements outside of budget constraints 2.5 Record purchases and orders
3. Record and report system performance status	3.1 Record system pressures and variations 3.2 Record system flow rates and variations 3.3 Calculate and record distribution uniformity and mean application rates 3.4 Determine and record watering depth

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCIRG303A Measure irrigation delivery system performance.

Assessment Requirements for AHCIRG303 Measure irrigation delivery system performance

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and prepare data records for both print-based and computer-based data
- apply measuring and testing techniques
- calculate pressure differentials, flow rates, crop yields, estimated water usage and actual water usage
- identify adverse environmental impacts of irrigation activities and take appropriate remedial action
- use computers to record and report data

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental impacts of irrigation, using water from any ground or underground source
- measuring and monitoring procedures for factors contributing to irrigation system delivery
- soil water retention testing techniques
- water authority standards and procedures

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

AHCIRG306 Troubleshoot irrigation systems

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to troubleshoot faults and blockages in irrigation systems.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Locate and identify faulty components and blockages	1.1 Determine irrigation system and component function 1.2 Check and review monitoring and maintenance records 1.3 Carry out operational tests 1.4 Identify and document faulty components and blockages

Element	Performance criteria
2. Shut down and isolate component	2.1 Apply shut down sequence and isolation procedures 2.2 Verify safe shutdown or isolation 2.3 Install safety or security lock off devices and signage
3. Replace faulty components and clear blockages	3.1 Organise access to faulty components and blockages 3.2 Remove faulty components and repair or dispose of 3.3 Select and install replacement components 3.4 Replace faulty components and clear blockages 3.5 Clear blockages or replace blocked sections
4. Return system to normal operating status	4.1 Return isolated or shutdown components to service 4.2 Carry out operational tests 4.3 Return system to normal operational set-up 4.4 Report and record repair activities

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCIRG306A Troubleshoot irrigation systems.

AHCIRG328 Operate irrigation controller and sensor technology

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to operate irrigation controller and sensor technology as part of irrigation installation, construction and operation.

The unit applies to individuals who operate irrigation controller and sensor technology under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	<p>1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks</p> <p>1.2 Select required tools and equipment, and check for safe operation and accuracy</p> <p>1.3 Select, fit and use personal protective equipment applicable to the task</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Operate irrigation controllers	2.1 Link valves to controllers by wiring or radio signals 2.2 Program controllers according to operating procedures 2.3 Operate controller according to site requirements 2.4 Troubleshoot controller and rectify cause of faults
3. Operate irrigation sensors	3.1 Link sensors to controllers by wiring or radio signals 3.2 Program controllers to monitor sensor 3.3 Operate and monitor accuracy and reliability of sensor control equipment, and adjust where necessary 3.4 Collect samples according to sampling techniques 3.5 Record and interpret readings and observations 3.6 Troubleshoot sensors and rectify cause of faults 3.7 Report discrepancies or malfunctions to management

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Complete records of readings and observations legibly and accurately using correct technical terminology
Oral communication	<ul style="list-style-type: none"> Use clear language to report discrepancies or malfunctions
Numeracy	<ul style="list-style-type: none"> Interpret the measurements of sample results Make calculations to check the accuracy of program irrigation controllers and adjust electronic flow equipment
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Controllers must include at least 3 of the following:	<ul style="list-style-type: none"> • stand-alone • Bluetooth • wifi • remote radio controllers • multi-site central controllers.
Sensors must include at least 4 of the following:	<ul style="list-style-type: none"> • water meters • soil moisture and temperature sensors • air temperature sensors • weather stations • pump pressure sensors • rainfall sensors.

Assessment Requirements for AHCIRG328 Operate irrigation controller and sensor technology

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated irrigation controller and sensor technology on at least two occasions, and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- maintained and checked irrigation controller and sensor equipment for accuracy
- operated irrigation controllers and sensors
- checked the accuracy of controller and sensor equipment, and adjusted
- recorded the results of sampling and testing
- recorded observations and data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating irrigation controller and sensor technology, including working with extra low voltage wiring according to Australian Standards
- basic electrical testing procedures and safety practices
- irrigation controller and sensor operating and testing procedures
- environmental procedures for use, storage and recycling of electronic equipment and batteries
- data recording procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation controller and sensor installation and operating equipment
 - irrigation controllers and sensors
 - personal protective equipment applicable to installing and operating irrigation controller and sensor technology
- specifications:
 - work instructions and workplace procedures applicable to operating irrigation controller and sensor technology
 - workplace requirements applicable to health and safety in the workplace for operating irrigation controller and sensor technology
 - Australian Standards applicable to working with extra low voltage wiring
 - irrigation controller and sensor operating and testing procedures
 - data recording procedures
 - environmental procedures for use, storage and recycling of electronic equipment and batteries
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- calibrate testing and monitoring equipment
- commission irrigation system
- complete installation work
- organise resources for installation work
- set out and prepare the site.

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the behaviour of water on varying terrain and soil types
- calculations for installing irrigation systems
- characteristics and operation of joints, valves and sprinkler components
- components of an irrigation system
- methods and techniques of installing irrigation
- operation of pumps and water flow rates
- soil characteristics
- soil water retention testing techniques
- water quality and water filtration techniques.

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCIRG332 Operate pressurised irrigation systems

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess soil moisture levels
- carry out measurements for output and distribution
- measure and interpret flow rates and pressures
- monitor system effectiveness including:
 - application rates
 - depth of irrigation
 - emitter output
 - irrigation times
- pressure variations and blockages
- salinity levels and water quality
- perform shut down procedures
- read and follow operations manual and procedures
- record data
- start up the system and carrying out operational checks

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of pressurised irrigation system operation
- critical measures for moisture availability including:
 - evapotranspiration
 - field capacity
 - infiltration rates

- readily available water
- water holding capacity
- wilting point
- electrical hazards including:
 - contact with pumps, motors, other live components
 - short circuits
 - standing laterals to remove blockages
 - water spray onto power lines
- energy efficiency indicators and benchmarks for low volume irrigation
- environmental impacts of irrigation using water from any ground or underground source
- general irrigation methods for low volume systems
- main components of low volume and sprinkler irrigation systems
- principles of irrigation and the water cycle
- pump types used in irrigation systems and their operation
- shutdown sequence and flushing procedures
- soil characteristics
- soil, plant and water relationships
- water requirements of plants and crops consistent with sound environmental management

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCIRG333 Maintain pressurised irrigation systems

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency covers the skills and knowledge required to implement a low volume or sprinkler irrigation maintenance program.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

Element	Performance criteria
1. Interpret a low volume irrigation maintenance program	1.1 Determine the scope of maintenance 1.2 Determine the frequency of maintenance works 1.3 Establish irrigation maintenance standards 1.4 Plan and prepare maintenance works 1.5 Identify work health and safety hazards, assess risks and implement suitable controls 1.6 Identify environmental considerations of irrigation maintenance activities 1.7 Select and use suitable personal protective equipment
2. Inspect an irrigation system	2.1 Create an inspection checklist and inspect the system regularly 2.2 Identify remedial action required and undertake repairs to restore system to full effectiveness 2.3 Undertake servicing of mechanical equipment 2.4 Assess the results of maintenance works and record to ensure repairs or maintenance standards have been achieved
3. Carry out periodic system maintenance	3.1 Record damage and blockages with contaminants by damage type, location and the section of the system affected 3.2 Record and report damaged or faulty components and computer control systems and take action to effect repairs 3.3 Implement end of season maintenance procedures 3.4 Implement routine and preventative maintenance procedures
4. Record and report maintenance activities	4.1 Restore site and clear materials and equipment from the site on completion of maintenance works 4.2 Complete maintenance and servicing records 4.3 Record parts removed or replaced 4.4 Record or report faults and breakages

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

New unit - no equivalent.

Assessment Requirements for AHCIRG333 Maintain pressurised irrigation systems

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- check connections and controllers
- check sprinkler/emitter output and function
- confirm operational pressures
- ensure proper operation of automatic flush valves
- interpret and apply maintenance procedures
- remove, service and replace valves and filters
- test irrigation equipment

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of irrigation system maintenance
- characteristics and operation of pipes, joints, valves, emitters
- common operational and maintenance problems
- components of an irrigation system
- operation of pumps and water flow rates
- sprinkler/low volume irrigation system components

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCIRG336 Operate and maintain gravity fed irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to operate and maintain gravity fed irrigation systems.

The unit applies to individuals who operate and maintain gravity fed irrigation systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for gravity fed irrigation system operation and maintenance	<p>1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks</p> <p>1.2 Select and use required materials, tools, equipment and machinery, and check for safe operation</p> <p>1.3 Select, fit, use and maintain safety and personal protective equipment applicable to the task</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Operate pumps and delivery mechanisms	<p>2.1 Prime pumps and open or close valves and controls</p> <p>2.2 Position and set up pipes, system equipment and outlets</p> <p>2.3 Set and operate delivery mechanisms</p> <p>2.4 Implement start-up sequence and slowly build up water levels and pressure</p> <p>2.5 Check pressure at the head-works and control valves</p> <p>2.6 Distribute water evenly to the targeted areas with minimal wastage and run-off</p> <p>2.7 Irrigate area and observe time lag between shutdown and end of watering to minimise run-off and deep percolation</p>
3. Monitor drainage and tail-water systems	<p>3.1 Monitor water intake, conveyance and distribution, drainage and tail-water</p> <p>3.2 Check water reuse systems for clearance and freedom from weeds</p> <p>3.3 Monitor pumps, if used, during operation, clear rubbish from outlets and backflush pump</p>
4. Inspect gravity fed irrigation system	<p>4.1 Record damage and blockages with contaminants by damage type, location and the section of the system affected</p> <p>4.2 Record and report damaged or faulty pumps, valves, electrical components and computer control systems, and take action to effect repairs</p>
5. Maintain gravity fed irrigation system	<p>5.1 Service water measuring, diversion and conveyancing, and distribution structures</p> <p>5.2 Carry out vegetation control to keep all system components clear</p> <p>5.3 Service and repair machinery according to operation and maintenance manual</p>
6. Record and report maintenance activities	<p>6.1 Record machinery service and repair according to operation and maintenance manual</p> <p>6.2 Collect, treat and dispose of or recycle waste according to industry procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Complete workplace records legibly and accurately using correct technical terminology
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to communicate damage and blockages
Numeracy skills	<ul style="list-style-type: none"> Measure water levels Calculate water flow rates and water usage
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information about system damage and blockages

Assessment Requirements for AHCIRG336 Operate and maintain gravity fed irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and maintained a gravity fed irrigation system on at least one occasion, and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- adjusted and monitored check valves
- checked the serviceability of delivery mechanisms
- set up and started delivery systems
- checked pressure at the head-works and control valves
- identified variations in water flow and distribution
- measured water usage
- inspected irrigation systems
- carried out running repairs on irrigation delivery and drainage systems
- removed and replaced gates, slides and doors
- removed and replaced valves and filters
- undertaken minor repairs of equipment
- carried out shutdown procedures, cleaned equipment and disposed of waste
- recorded machinery service and repair.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating and maintaining gravity fed irrigation systems
- machinery operation and maintenance manual
- characteristics and operation of components of a gravity fed irrigation system

- common operational and maintenance problems
- routine and end of season maintenance requirements
- weed disposal methods.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - gravity fed irrigation system materials, tools, equipment and machinery
 - gravity fed irrigation pump system tools and equipment and procedures
 - personal protective equipment applicable to operating and maintaining gravity fed irrigation systems
- specifications:
 - work instructions and workplace procedures applicable to operating and maintaining gravity fed irrigation systems
 - workplace requirements applicable to health and safety in the workplace and operating and maintaining gravity fed irrigation systems
 - machinery operation and maintenance manual
 - recording procedures
 - environmental procedures for collection, treatment, disposal or recycling of waste
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training, legislation, frameworks and/or standards.

AHCIRG337 Measure irrigation delivery system performance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to measure pressure, flow and distribution uniformity of an irrigation system, monitor supply of equipment and spare parts, and record system performance.

The unit applies to individuals who measure irrigation delivery system performance under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Measure irrigation system performance	1.1 Measure and record system pressures, water flow rates and pump performance parameters according to measuring and recording procedures 1.2 Record variations where relevant 1.3 Inspect distribution and delivery systems, identify and fix malfunctions in system and record actions

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Identify and record factors external to the system that may cause interference 1.5 Minimise environmental impacts of irrigation system performance measurement activities
2. Check supply of equipment and spare parts	2.1 Record supply and part usage according to recording procedures 2.2 Check spare parts to ensure supply meets demands 2.3 Report parts requirements according to workplace requirements
3. Record and report system performance status	3.1 Record system pressures and variations 3.2 Record system flow rates and variations 3.3 Calculate and record distribution uniformity and mean application rates 3.4 Determine and record watering depth 3.5 Report system performance according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Document equipment purchases and orders, and irrigation delivery system performance clearly and accurately
Oral communication	<ul style="list-style-type: none"> Use clear language to report parts requirements, and irrigation delivery system performance
Numeracy skills	<ul style="list-style-type: none"> Measure pressures, flow rates, pump performance and variations Identify and record part numbers and part usage
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

Assessment Requirements for AHCIRG337 Measure irrigation delivery system performance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has measured irrigation delivery system performance on at least two occasions and has:

- applied measuring and testing techniques
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- accessed and prepared data records for both print-based and computer-based data
- used computers to record and report data
- calculated pressure differentials, flow rates, crop yields, estimated water usage and actual water usage
- used computers to record and report data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- measuring and monitoring procedures for factors contributing to irrigation system delivery
- soil water retention testing techniques
- water authority standards and procedures
- environmental impacts of irrigation, using water from any ground or underground source.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation system equipment

- irrigation delivery system performance measuring tools and equipment
- computer and software for recording and reporting data
- specifications:
 - measuring and recording procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG338 Troubleshoot irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to locate and identify irrigation system faulty components and blockages, shut down and isolate components, replace faulty components, clear blockages and return irrigation system to normal operating status.

The unit applies to individuals who troubleshoot irrigation systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Locate and identify faulty components and blockages	1.1 Determine irrigation system and component function 1.2 Check and review monitoring and maintenance records 1.3 Identify potential hazards and risks and implement safe working practices to manage risks 1.4 Minimise environmental impacts of irrigation maintenance

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	activities 1.5 Select, fit and use personal protective equipment applicable to the task 1.6 Carry out operational tests on components 1.7 Identify and document faulty components and blockages
2. Shut down and isolate component	2.1 Apply shut down sequence and isolation procedures according to irrigation equipment handbook 2.2 Verify safe shutdown or isolation 2.3 Install safety or security lock off devices and signage
3. Replace faulty components and clear blockages	3.1 Organise access to faulty components and blockages 3.2 Remove and repair or dispose of faulty components 3.3 Select and install replacement components 3.4 Clear blockages or replace blocked sections
4. Return system to normal operating status	4.1 Return isolated or shutdown components to service 4.2 Carry out operational tests 4.3 Return system to normal operational set-up 4.4 Report and record repair activities according to workplace requirements

AHCIRG339 Monitor soils under irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to assess physical and moisture properties of soil, monitor soil chemical properties, assess soil health and plant growth under irrigation, and implement strategies to optimise irrigation on the soil plant growing environment.

The unit applies to individuals who monitor soils under irrigation under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess the physical properties of irrigated soil	1.1 Identify the profile of irrigated soil 1.2 Determine soil texture and structure within the soil layers 1.3 Interpret tests for organic matter level in soil 1.4 Test for slaking and dispersion in irrigated soil

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Assess the infiltration rate for irrigated soil 1.6 Measure soil moisture levels 1.7 Assess the environmental impacts of cultivation and watering practices on the physical properties of soil
2. Monitor soil moisture properties	2.1 Identify soil moisture tension and its role in determining water availability to plants 2.2 Assess the field capacity of irrigated soil 2.3 Observe the wilting point for a plant species in irrigated soil 2.4 Calculate the readily available water (RAW) in irrigated soil
3. Monitor soil chemical properties	3.1 Interpret soil test results for salinity and sodicity levels in irrigated soil 3.2 Interpret pH tests and the potential impact of pH on soil structure and nutrient availability
4. Implement strategies to optimise the irrigation growing environment for plants	4.1 Assess the risk of erosion in irrigated soil 4.2 Implement and monitor a watering schedule 4.3 Adjust the frequency of watering based on available moisture, soil properties and plant response 4.4 Record and report soil and plant moisture status and irrigation requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCIRG339 Monitor soils under irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has monitored soils under irrigation on at least one occasion and has:

- conducted soil structure and texture assessment
- used soil moisture monitoring equipment
- calculated moisture holding capacity of plants, including readily available water (RAW)
- applied the results of soil testing to assessing soil properties
- assessed the erosion potential of the irrigated soil
- adjusted watering practices to meet plant needs.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- soil structure and texture
- effect of dispersible soils under irrigation
- critical measures for moisture availability
- adverse environmental impacts of irrigated plant production
- field capacity
- signs of moisture stress & nutrient deficiency in plants
- wilting point
- soil moisture definitions and calculations
- RAW calculations
- interpreting salinity, sodicity and pH tests
- soil moisture monitoring procedures
- types of erosion.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigated soil and water test results
 - irrigation system equipment
 - irrigation system performance measuring tools and equipment
- specifications:
 - measuring and recording procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG340 Install irrigation pumps

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to plan and sequence installation tasks, source, install and commission pump and flow control components, and complete irrigation pump installation.

The unit applies to individuals who install irrigation pumps under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and sequence installation tasks from instructions	1.1 Obtain drawings and specifications 1.2 Plan and sequence tasks 1.3 Select required tools and equipment and check for safe operation
2. Source irrigation system requirements	2.1 Select, fit and use appropriate PPE 2.2 Determine location of pump

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	2.3 Identify pump base requirements 2.4 Identify, order and collect materials and equipment 2.5 Check materials and equipment for acceptable condition and compliance
3. Install and commission pumping and flow control components	3.1 Set out and construct pump base 3.2 Install pump and pump controls 3.3 Connect suction and discharge lines and flow control devices 3.4 Connect delivery and distribution components to pump 3.5 Conduct pressure testing of pumping system 3.6 Adjust and set flow control devices 3.7 Test pump
4. Complete work	4.1 Clear work area and dispose of, reuse or recycle materials 4.2 Clean, check, maintain and store tools and equipment 4.3 Restore work site to meet environmental requirements 4.4 Complete documentation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Document pump installation and commissioning activities
Numeracy skills	<ul style="list-style-type: none"> Measure pump base area
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Flow control devices must include at least two of the following:	<ul style="list-style-type: none"> • pressure switches • constant flow switches • variable speed drives.
--	---

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has installed irrigation pumps on at least one occasion, and has:

- followed drawings and specifications
- performed work-related calculations
- handled materials safely
- organised equipment and materials for installation work
- matched pump output and flow rate to pipe diameter
- set out and prepared the site
- positioned pumps and control devices
- used power tools and hand tools
- primed and operated pumps
- fixing and joining techniques
- identified and responded to operational problems
- monitored the performance of pumps
- adjusted and set pressure switches and air tanks to suit pump performance and site conditions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of hydraulics, flow versus pressure, energy loss due to friction
- discharge and flow rates
- installation procedures for irrigation pumps
- pump components and their principles of operation
- pump gauges and controls
- advantages and disadvantages of each pump type

- servicing requirements for pumps
- types of pumps and their application in irrigation, such as centrifugal, vertical turbine, submersible and propeller
- types of pumps suitable as booster and floating pumps
- characteristics and application of different valves, pipes and fittings, including fixing and joining techniques and methods
- impellers, rotors and stators
- types of valves
- properties of water, including pressure and flow rates
- pump performance and pressure testing
- automatic pump switches, including timers, pressure switches, constant flow switches and variable speed drives.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to installing irrigation pumps
 - irrigation pump operation and maintenance manual
 - irrigation pump installation equipment
 - personal protective equipment applicable to installing irrigation pumps
- specifications:
 - irrigation pump installation tools and equipment and procedures
 - recording procedures
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG341 Operate and maintain irrigation pumping systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare, start up, operate, monitor and shut down an irrigation pumping system and maintain pumps and pumping equipment.

The unit applies to individuals who operate and maintain irrigation pumping equipment under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to maintain pumps	1.1 Obtain and interpret work requirements for the satisfactory completion of operations 1.2 Select and use required materials, tools, equipment and machinery and check for safe operation 1.3 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>risks</p> <p>1.4 Select, fit, use and maintain safety and personal protective equipment applicable to the task</p> <p>1.5 Identify and arrange support required for the safe completion of the servicing and maintenance tasks</p> <p>1.6 Carry out isolation and lock-out of all equipment necessary for the safe execution of tasks</p>
2. Carry out pump maintenance	<p>2.1 Inspect pumps and report any faults</p> <p>2.2 Troubleshoot pump system and rectify cause of faults</p> <p>2.3 Adjust and set pressure switches and air tanks to suit pump performance and site conditions</p> <p>2.4 Service and maintain pumps according to operation and maintenance manual</p> <p>2.5 Dispose of waste according to environmental procedures</p> <p>2.6 Maintain servicing and maintenance records according to servicing and maintenance recording procedures</p>
3. Prepare the pumping system	<p>3.1 Check operation and function of pump and driver</p> <p>3.2 Conduct pumping system pre-start-up checks according to operation and maintenance manual</p> <p>3.3 Ensure pumping system valves are correctly sequenced and filters are clear before commencing pumping operations, and safety requirements are met</p>
4. Start up and shutdown pumping system	<p>4.1 Operate ancillary equipment using safe practices</p> <p>4.2 Start up and shut down pump according to operation and maintenance manual</p> <p>4.3 Implement emergency shutdown procedures when required</p>
5. Operate and monitor pumping and ancillary systems	<p>5.1 Check and maintain flanges, gaskets and seals within operational tolerances to avoid environmental damage</p> <p>5.2 Monitor pump pressures and flows for conformance</p> <p>5.3 Use amperage testing equipment to monitor and identify variations in pumping systems and equipment operating conditions</p> <p>5.4 Monitor pumping systems, equipment and component performance for signs of excessive wear or reduction of performance</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>5.5 Check operational valves and valve assemblies for leaks</p> <p>5.6 Check and clean filter systems periodically and remove any potential blockages or impurities entering the pumping system or equipment which may cause cavitation or malfunction during operation</p> <p>5.7 Inspect and sample lubrication oil to ensure operating levels are correct and to determine if any contamination has taken place which may affect the operational capacity of the pumping system and equipment</p> <p>5.8 Take appropriate action resulting from checks and monitoring</p>
6. Shut down the pumping system	<p>6.1 Shut down injection equipment and pump according to operation and maintenance manual</p> <p>6.2 Clean pumping equipment</p> <p>6.3 Collect, treat and dispose of or recycle waste generated by both the pumping process and cleaning procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCIRG341 Operate and maintain irrigation pumping systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated and maintained irrigation pumping equipment on at least two occasions and has:

- selected tools and equipment appropriate to the scope of works
- applied workplace health and safety requirements
- carried out the following operation and maintenance tasks:
 - inspected and cleaned pumps
 - adjusted pump settings
 - primed a pump
 - checked and cleared or replaced filters
 - replaced worn components, including pump seals, liners and impellers
 - tensioned fasteners and y-belts
 - monitored pressures and flows
 - used amperage testing equipment
 - replaced belts
 - set valves and checked for wear and leakages
 - cleared blockages
 - checked and topped-up fluids, including coolants, lubricants and hydraulic oils
 - checked oil quality and levels
 - lubricated pumps
- performed start up and shutdown procedures
- maintained clean work area and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating and maintaining irrigation pumping systems
- advantages and disadvantages of each pump type
- pump performance and fault finding
- pumps and their application in irrigation, such as centrifugal, vertical turbine, submersible and propeller
- pumps that are suitable as booster and floating pumps
- automatic pump switches, including:
 - timers,
 - pressure switches,
 - irrigation controllers, and
 - flow switches
- properties of water including pressure and flow rates
- irrigation pump system operation and maintenance manual
- reading pump gauges and controls
- amperage testing equipment
- service and maintenance requirements of pumps
- basic principles of hydraulics flow versus pressure
- discharge and flow rates
- impellers, rotors and stators
- pump components and their principles of operation
- valves and their uses.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation pump system operation and maintenance manual
 - irrigation pump system equipment
 - irrigation pump system oil, lubricant, coolant and cleaning agents
 - amperage testing equipment
 - personal protective equipment applicable to operating and maintaining irrigation pumping systems
- specifications:
 - work instructions and workplace procedures applicable to operating and maintaining irrigation pumping systems
 - workplace requirements applicable to health and safety in the workplace and operating and maintaining irrigation pumping systems
 - irrigation pump system tools and equipment and procedures
 - servicing and maintenance recording procedures

- environmental procedures for collection, treatment, disposal or recycling of waste
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training, legislation, frameworks and/or standards.

AHCIRG342 Interpret irrigation plans and drawings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to read and interpret plans and drawings, mark out and peg a site from a plan and identify required components applicable to installing irrigation systems.

The unit applies to individuals who interpret irrigation plans and drawings under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Apply commonly used symbols and abbreviations	1.1 Identify, understand and apply commonly used symbols and abbreviations on plans 1.2 Identify, understand and apply common irrigation terms used on plans 1.3 Identify key features of irrigation plans, elevations and sections 1.4 Identify scale, elevations and sections from drawings

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Locate and identify key features on a site plan	2.1 Identify irrigation site from location drawings 2.2 Identify true north and system orientation from details provided on site plan 2.3 Identify key features of site plan
3. Mark out and peg the site from a plan	3.1 Mark boundaries of the site 3.2 Identify existing irrigation infrastructure on the site 3.3 Identify electricity and communications infrastructure on the site plan, mark out and implement safety procedures 3.4 Peg out pipelines and earthworks identified on the plan
4. Identify required components for installation	4.1 Annotate required pipeline components from plans and drawings 4.2 Annotate water supply, distribution and delivery components from plans and drawings 4.3 Make provision for receipt and storage of materials on site 4.4 Confirm installation requirements and details of plans and drawings with supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations

Assessment Requirements for AHCIRG342 Interpret irrigation plans and drawings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has interpreted irrigation plans and drawings on at least one occasion and has:

- interpreted symbols and abbreviations used on plans
- interpreted scale and specifications from plans and drawings
- recognised and marked out features on a site from a plan
- marked out boundaries and infrastructure position from a plan
- used basic industry calculations
- translated documented requirements into on-site activities and site and structural features from two-dimensional to three-dimensional formats.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- commonly used scales, symbols and abbreviations
- principles and practices of plan and drawing interpretation
- drawings and specifications relevant to the irrigation industry
- measurements, calculations and quantities
- tools, equipment and materials required from the drawings and specifications.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - compass

- on-site marking out and measuring tools and equipment
- specifications:
 - irrigation site plans and drawings
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG343 Operate irrigation injection equipment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare, start up, operate and shut down irrigation injection equipment, monitor impacts of injection process and record information of irrigation injection equipment operation.

The unit applies to individuals who operate irrigation injection equipment under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare equipment for injection operation	1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks 1.2 Select required tools and equipment and check for safe operation 1.3 Select, fit and use suitable personal protective equipment applicable to the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Select materials and services and confirm they are available and ready for operation 1.5 Prepare equipment and materials to meet injection requirements
2. Operate injection equipment process	2.1 Start up injection process according to operation and maintenance manual 2.2 Monitor control points to confirm performance is maintained within specification 2.3 Identify, rectify and report out-of-specification equipment performance 2.4 Deliver injection requirements 2.5 Put emergency procedures in place for spillage or chemical accidents
3. Shut down injection equipment	3.1 Carry out shut down on injection equipment according to operation and maintenance procedure 3.2 Clean injection equipment according to maintenance procedure 3.3 Collect, treat, dispose or recycle waste generated by both the process and cleaning procedures
4. Monitor plant response and environmental impacts of injection	4.1 Monitor plant response to injection 4.2 Record and report environmental hazards of injection process 4.3 Maintain withholding periods for chemical application on food crops 4.4 Restrict access to areas where chemicals have been applied through injection if required
5. Record information	5.1 Record workplace information in the appropriate format 5.2 Record chemical application and storage details according to recording procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations

Assessment Requirements for AHCIRG343 Operate irrigation injection equipment

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated irrigation injection equipment on at least two occasions and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- selected and prepared injection materials
- completed relevant calculations such as dilution rates
- identified injection requirements
- implemented routine maintenance and minor repairs of the system
- reported and recorded corrective action
- taken corrective action in response to out-of-specification results or non-compliance
- handled hazardous chemicals safely
- shut down equipment in response to an emergency situation
- shut down equipment in response to routine shutdown requirements
- implemented routine system cleaning requirements
- monitored usage and dilution rates.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating irrigation injection equipment, including backflow prevention
- purpose and operation of equipment and instrumentation components
- chemicals, cleaning agents and fertilisers used for injection and their purpose
- safety data sheet (SDS) information for substances to be injected
- services required
- irrigation injection equipment operation and maintenance manual

- basic irrigation injection equipment operating principles and process control systems where relevant
- procedures for prevention of backflow
- process specifications, procedures and operating parameters
- control points and significance and methods of monitoring
- common causes of variation and corrective action required
- correct chemical handling techniques
- environmental issues and controls
- shutdown sequence
- lock-out and tag-out procedures
- irrigation injection equipment cleaning requirements and procedures
- recording requirements and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation injection equipment operation and maintenance manual
 - irrigation injection equipment
 - injection chemicals, cleaning agents and fertilisers
 - personal protective equipment applicable to operating irrigation injection equipment
- specifications:
 - work instructions and workplace procedures applicable to operating irrigation injection equipment workplace requirements applicable to health and safety in the workplace and operating irrigation injection equipment
 - irrigation injection tools and equipment and procedures
 - SDS for substances being injected
 - recording procedures
 - environmental procedures for collection, treatment, disposal or recycling of waste
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG344 Implement an irrigation schedule

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to interpret an irrigation schedule, determine irrigation shifts, implement and monitor an irrigation schedule, and record irrigation information and activities.

The unit applies to individuals who implement an irrigation schedule under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Interpret the irrigation schedule	1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks 1.2 Select required tools and equipment and check for safe operation 1.3 Select, fit and use personal protective equipment applicable to the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Access information on plant growing requirements 1.5 Interpret growing season moisture requirements 1.6 Read the predicted seasonal moisture deficit and watering requirements and check with management 1.7 Record parameters for the irrigation system
2. Determine irrigation shifts	2.1 Subdivide irrigated area into units capable of individual irrigation and note area and irrigation equipment characteristics for each 2.2 Define soil irrigation capability for each unit 2.3 Define crop and plant water requirement for each unit 2.4 Combine units requiring similar irrigation into irrigation shifts 2.5 Ensure irrigation shifts do not exceed water delivery capacity of the property irrigation infrastructure 2.6 Determine the water volume required to meet irrigation needs over specified period
3. Implement irrigation schedule	3.1 Coordinate resources and brief personnel to deliver requirements 3.2 Implement watering program
4. Monitor irrigation	4.1 Inspect plants and crops for growth rate and signs of stress 4.2 Record frequency of irrigation 4.3 Measure and record water usage and confirm water allocation is not exceeded for a given period 4.4 Calculate the difference between estimated and actual water use 4.5 Measure water quality 4.6 Assess plant and crop growth and water use efficiency 4.7 Measure soil for readily available water (RAW) 4.8 Record climate and weather conditions 4.9 Adjust watering program in response to rainfall events and changes to evapotranspiration rates
5. Record irrigation information and activities	5.1 Record plant or crop environment data according to workplace recording procedures 5.2 Record water usage 5.3 Record irrigation shifts

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.4 Record system process data

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Oral communication	<ul style="list-style-type: none"> Initiate discussions with personnel using clear language to communicate irrigation schedule delivery requirements
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information about irrigation schedule delivery requirements

Assessment Requirements for AHCIRG344 Implement an irrigation schedule

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented an irrigation schedule on at least one occasion and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- accessed and interpreted the information in an irrigation schedule
- compared plant health and growth to benchmark requirements
- consulted with appropriate senior personnel or consultants
- instructed irrigation system operators
- implemented the irrigation schedule including consideration of:
 - application rates
 - interaction between different irrigation employees or shifts
 - maintenance programs and supplies
 - materials, chemicals, services
 - resources, including operators with appropriate skills
 - timing and length
- liaised with other work areas
- identified irrigation requirements throughout the growing season by monitoring:
 - climatic conditions
 - crop stage and requirements if applicable
 - effective root depth
 - frost risk
 - plant varietal characteristics and requirements
 - signs of plant nutrient deficiencies
 - soil moisture levels
 - soil type and depth
 - symptoms of water stress

- water quality
- water table level
- monitored irrigation activities, including:
 - environmental impact of irrigation activities
 - identified emitter output consistency
 - identified soil moisture content and depth to which water will reach
 - reported and recorded problems and corrective action taken
 - taken corrective action in response to out-of-specification results or non-compliance
- applied sampling techniques
- conducted soil moisture tests
- identified, rectified and reported environmental non-compliance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for implementing an irrigation schedule
- resource requirements and availability
- irrigation strategies
- principles of soil moisture monitoring, including:
 - volumetric soil moisture content
 - percentage compared to soil moisture tension
- consultation requirements and procedures
- effect of irrigation techniques on plant growth
- visual symptoms of plant nutrient deficiencies, water stress and frost
- recording requirements and procedures
- sampling techniques and procedures
- testing techniques and procedures
- interpretation of routine soil moisture tests
- environmental impacts, hazards and controls for irrigation
- water budgeting tools.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation equipment operation and maintenance manual
 - irrigation equipment

- soil and water sampling equipment
- personal protective equipment applicable to implementing an irrigation schedule
- specifications:
 - work instructions and workplace procedures applicable to implementing an irrigation schedule
 - irrigation technology tools and equipment and procedures
 - workplace requirements applicable to health and safety in the workplace and implementing and irrigation schedule
 - soil and water testing equipment and procedures
 - recording procedures
- relationships:
 - personnel
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG345 Install pressurised irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to organise resources, set out and prepare an irrigation installation site and install, commission and complete pressurised irrigation system installation.

The unit applies to individuals who install pressurised irrigation systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise resources for installation work	1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks 1.2 Select required materials, tools, equipment and machinery and check for safe operation 1.3 Check that parts and equipment match system drawings and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	specifications 1.4 Select, fit, use and maintain safety and personal protective equipment applicable to the task 1.5 Carry out pre-operational checks on tools, equipment and machinery 1.6 Identify environmental considerations of irrigation installation activities 1.7 Check water supply to ensure that it is compatible with system specifications
2. Set out and prepare site	2.1 Measure and mark out irrigation lines 2.2 Confirm trenches are at the specified depth without damage to services, facilities, features and established plants 2.3 Observe regulations relevant to the situation 2.4 Use work practices that reflect sustainable horticulture principles and environmental requirements
3. Install irrigation components	3.1 Interpret the irrigation system plan and, where applicable, supervise contractors and monitor work to ensure it conforms to the plan 3.2 Assemble and connect components and complete and test joints 3.3 Fit and adjust fittings and valves and secure all joints 3.4 Maintain a clean and safe work area while installation work is carried out
4. Commission irrigation system	4.1 Calibrate testing and monitoring equipment 4.2 Confirm start-up sequence according to operations manual 4.3 Flush system as required 4.4 Identify operating faults and take corrective where required 4.5 Record work outcomes and report to supervisor
5. Complete installation work	5.1 Finish off earthworks to specifications 5.2 Confirm system configuration and capacity matches installation plan 5.3 Restore site and clear materials and equipment from the site on completion of maintenance works

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.4 Clean and store tools and equipment according workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Use the correct terminology to document irrigation installation activities
Oral communication	<ul style="list-style-type: none"> Use clear language to report irrigation installation activities
Numeracy skills	<ul style="list-style-type: none"> Confirm part numbers

Assessment Requirements for AHCIRG345 Install pressurised irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has installed pressurised irrigation systems on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools, equipment and machinery appropriate to the scope of works
- organised resources for installation work
- set out and prepared the site
- completed installation work
- calibrated testing and monitoring equipment
- commissioned irrigation system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for installing pressurised irrigation systems
- water quality and water filtration techniques
- the behaviour of water on varying terrain and soil types
- soil characteristics
- soil water retention testing techniques
- calculations for installing pressurised irrigation systems
- characteristics and operation of joints, valves and sprinkler components
- components of a pressurised irrigation system
- methods and techniques of installing pressurised irrigation
- operation of pumps and water flow rates.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - pressurised irrigation system operation and maintenance manual
 - pressurised irrigation system installation equipment
 - personal protective equipment applicable to installing pressurised irrigation systems
- specifications:
 - work instructions and workplace procedures applicable to installing pressurised irrigation systems workplace requirements applicable to health and safety in the workplace and installing pressurised irrigation systems
 - pressurised irrigation system installation tools and equipment and procedures
 - recording procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG346 Operate pressurised irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to pre-start check, inspect, start up, operate, monitor and shut down pressurised irrigation systems.

The unit applies to individuals who operate pressurised irrigation systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Carry out pre-start checks	1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks 1.2 Select required tools and equipment and check for safe operation 1.3 Select, fit and use personal protective equipment applicable to the task 1.4 Check water, power, fuel and lubricants to confirm all are

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>available and the control system is operational</p> <p>1.5 Prime pumps, if necessary, and open or close valves and controls as directed</p> <p>1.6 Calibrate pressure and flow testing equipment</p> <p>1.7 Carry out other pre-start system checks</p>
2. Inspect and operate the system	<p>2.1 Implement start up sequence according to operation and maintenance procedures</p> <p>2.2 Check emitter spacing against the irrigation plan</p> <p>2.3 Adjust water pressure as required</p> <p>2.4 Clear and replace filters as required</p> <p>2.5 Correct or repair all malfunctions, leaks and blockages and report</p>
3. Monitor irrigation system performance	<p>3.1 Check emitters for output</p> <p>3.2 Calculate application rate of water</p> <p>3.3 Check the water distribution pattern in the irrigated area</p> <p>3.4 Monitor moisture levels in the root zone</p> <p>3.5 Minimise environmental impacts of the operation</p>
4. Shut down irrigation system	<p>4.1 Apply water for sufficient time to achieve required soil moisture levels and allow for weather conditions</p> <p>4.2 Shut down system components and drain</p> <p>4.3 Record and report irrigation activities according to workplace recording procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations

Assessment Requirements for AHCIRG346 Operate pressurised irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated a pressurised irrigation system on at least two occasions and has:

- applied workplace health and safety requirements
- selected tools and equipment appropriate to the scope of works
- read and followed operations manual and procedures
- started the system and carried out operational checks
- monitored system effectiveness, including:
 - application rates
 - depth of irrigation
 - emitter output
 - irrigation times
 - pressure variations and blockages
 - salinity levels and water quality
- carried out measurements for output and distribution
- measured and interpreted flow rates and pressures
- assessed soil moisture levels
- performed shut down procedures
- recorded data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating pressurised irrigation systems
- electrical hazards, including:
 - contact with pumps, motors, other live components

- short circuits
- standing laterals to remove blockages
- water spray onto power lines
- energy efficiency indicators and benchmarks for pressurised irrigation
- pressurised irrigation equipment operation and maintenance manual
- main components of pressurised irrigation systems
- pump types used in irrigation systems and their operation
- general irrigation methods for low volume systems
- principles of irrigation and the water cycle
- critical measures for moisture availability, including:
 - evapotranspiration
 - field capacity
 - infiltration rates
 - readily available water
 - water holding capacity
 - wilting point
- soil characteristics
- soil, plant and water relationships
- water requirements of plants and crops consistent with sound environmental management
- environmental impacts of irrigation using water from any ground or underground source
- shutdown sequence and flushing procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - pressurised irrigation system operation and maintenance manual
 - pressurised irrigation system equipment
 - personal protective equipment applicable to operating pressurised irrigation systems
- specifications:
 - work instructions and workplace procedures applicable to operating pressurised irrigation systems
 - pressurised irrigation system tools and equipment and procedures
 - workplace requirements applicable to health and safety in the workplace and operating pressurised irrigation systems
 - recording procedures
- relationships:
 - supervisor
- timeframes:

- according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG347 Maintain pressurised irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to interpret a maintenance program, inspect and maintain pressurised irrigation systems, and record and report maintenance activities.

The unit applies to individuals who maintain pressurised irrigation systems under broad direction and take responsibility for their own.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Interpret a pressurised irrigation maintenance program	1.1 Determine the scope of maintenance 1.2 Determine the frequency of maintenance works 1.3 Establish irrigation maintenance standards 1.4 Plan and prepare maintenance works 1.5 Identify potential hazards and risks and implement safe working

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>practices to manage risks</p> <p>1.6 Minimise environmental impacts of irrigation maintenance activities</p> <p>1.7 Select, fit and use personal protective equipment applicable to the task</p>
2. Inspect an irrigation system	<p>2.1 Create an inspection checklist and inspect the system regularly</p> <p>2.2 Identify remedial action required and undertake repairs to restore system to full effectiveness</p> <p>2.3 Undertake servicing of irrigation mechanical equipment according to operation and maintenance manual</p> <p>2.4 Assess the results of maintenance works and record to ensure repairs or maintenance standards have been achieved</p>
3. Carry out periodic system maintenance	<p>3.1 Record damage and blockages with contaminants by damage type, location and the section of the system affected</p> <p>3.2 Record and report damaged or faulty components and computer control systems and take action to effect repairs</p> <p>3.3 Implement end of season maintenance procedures</p> <p>3.4 Implement routine and preventative maintenance procedures</p>
4. Complete and record maintenance activities	<p>4.1 Restore site and clear materials and equipment from the site on completion of maintenance works</p> <p>4.2 Complete maintenance and servicing records according to workplace recording procedures</p> <p>4.3 Record parts removed or replaced</p> <p>4.4 Record and report faults and breakages</p>

Foundation Skills

Assessment Requirements for AHCIRG347 Maintain pressurised irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has maintained a pressurised irrigation system on at least two occasions and has:

- interpreted and applied maintenance procedures
- applied workplace health and safety requirements
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- checked connections and controllers
- checked sprinkler/emitter output and function
- ensured proper operation of automatic flush valves
- removed, serviced and replaced valves and filters
- confirmed operational pressures
- tested irrigation equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for maintaining pressurised irrigation systems
- pressurised irrigation equipment operation and maintenance manual
- characteristics, operation and common operation and maintenance problems of pressurised irrigation system components, including:
 - pipes,
 - joints,
 - valves,
 - emitters, and
 - pumps.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - pressurised irrigation system operation and maintenance manual
 - personal protective equipment applicable to maintaining pressurised irrigation systems
- specifications:
 - work instructions and workplace procedures applicable to maintaining pressurised irrigation systems
 - pressurised irrigation system tools, equipment and procedures
 - workplace requirements applicable to health and safety in the workplace and maintaining pressurised irrigation systems
 - recording procedures
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG348 Operate and maintain moving irrigation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency covers the skills and knowledge required to install, operate and maintain moving irrigation systems.

The unit applies to individuals who operate and maintain moving irrigation systems under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Install a moving sprinkler irrigation system	<p>1.1 Confirm activity to be undertaken, including identifying potential hazards and risks and implementing safe working practices to manage risks</p> <p>1.2 Select and use required materials, tools and equipment and check for safe operations</p> <p>1.3 Select, fit, use and maintain safety and personal protective equipment applicable to the task</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Join span pipes with correctly tensioned bolts to specifications 1.5 Connect V-jack trusses in sequence to bow the span 1.6 Connect goose necks and hose connectors 1.7 Fit pre-cut drop hoses and connect sprinklers
2. Complete assembly of moving sprinkler components	2.1 Assemble sprinklers, pressure regulators and hose directors to specifications 2.2 Fit gear box and control panel 2.3 Fit and tension wheels
3. Commission a moving sprinkler irrigation system	3.1 Connect and start pumping system and flush as required 3.2 Calibrate testing and monitoring equipment according to operation and maintenance manual and manufacturer specifications
4. Operate the system	4.1 Prime pumps, open or close valves and controls and begin the start-up sequence 4.2 Check emitter spacing 4.3 Monitor and service transport mechanism 4.4 Check irrigation controller for programming and efficiency 4.5 Correct or repair all malfunctions, leaks and blockages
5. Monitor irrigation operation	5.1 Implement irrigation schedule and monitor soil profile for wetting 5.2 Measure sprinkler performance using catch cans 5.3 Measure flow rates using containers of known volume 5.4 Measure operating pressures using pressure gauges 5.5 Check irrigated area for wheel ruts and other signs of waterlogging
6. Carry out system maintenance	6.1 Record damage and blockages with contaminants by damage type, location and the section of the system affected 6.2 Record and report damaged or faulty pumps, valves, sprinklers, electrical components and computer control systems and take action to effect repairs 6.3 Measure outlet pressure, flow rate and energy use and record 6.4 Inspect and maintain drive mechanism, frames and trusses 6.5 Implement end of season maintenance procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	6.6 Implement routine and preventative maintenance procedures 6.7 Implement storage procedures for irrigation components
7. Shut down the system in response to irrigation indicators	7.1 Apply water for sufficient time to achieve required soil moisture levels and allowing for weather conditions 7.2 Shut down system components and drain 7.3 Check drainage and treatment systems 7.4 Record and report irrigation activities according to workplace recording procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about workplace operations
Writing	<ul style="list-style-type: none"> Use correct terminology to document moving irrigation system damage and blockages, and irrigation activities
Oral communication	<ul style="list-style-type: none"> Initiate discussions with supervisor using clear language to communicate damage and blockages and report irrigation activities
Numeracy skills	<ul style="list-style-type: none"> Interpret testing equipment estimate of sprinkler performance, water flow rates and pressures Interpret testing equipment estimate of outlet pressure, flow rate and energy use
Navigate the world of work	<ul style="list-style-type: none"> Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information about system damage and blockages

Assessment Requirements for AHCIRG348 Operate and maintain moving irrigation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated and maintained a moving irrigation system on at least one occasion and has:

- applied workplace health and safety requirements
- selected materials, tools and equipment appropriate to the scope of works
- checked all bolts for correct torques
- tensioned span pipes with V-jack trusses
- fitted control panel and wheels
- started-up system and carried out operational checks
- checked injection pump and safety equipment operation
- read and followed operations manuals and irrigation schedules
- used control systems
- monitored system effectiveness
- checked for malfunctioning sprinklers
- measured and interpreted flow rates and pressures
- operated pressure and flow testing equipment
- taken and recorded measurements of output and efficiency
- greased drive shafts on pump and motor
- inspected lift base and arms for any stress marks or cracks
- changed engine oil and filter
- completed regular and end of season maintenance tasks
- shut down, cleaned equipment and disposed of waste
- recorded and reported irrigation activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for operating and maintaining moving irrigation systems
- installation and maintenance requirements of moving sprinkler irrigation systems
- pumps used in moving sprinkler irrigation systems and their operation
- calibration and testing equipment operation and maintenance manual and manufacturer specifications
- behaviour of water on varying terrain and soil types
- monitoring soil compaction and drainage
- soil water retention testing techniques
- soil, plant and water relationships
- water quality and water filtration techniques
- water requirements of plants and crops consistent with sound environmental management
- shutdown sequence.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - moving irrigation system materials, tools and equipment
 - relevant moving irrigation systems equipment
 - personal protective equipment applicable to operating and maintaining moving irrigation systems
- specifications:
 - work instructions and workplace procedures applicable to operating and maintaining moving irrigation systems
 - workplace requirements applicable to health and safety in the workplace and operating and maintaining moving irrigation systems
 - calibration and testing equipment operation and maintenance manual and manufacturer specifications
 - recording procedures
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements of assessors in applicable vocational education and training, legislation, frameworks and/or standards.

AHCIRG349 Recommend irrigation products and services

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to recommend irrigation products and services, including researching product range, estimating product quantities, providing product warranty advice, negotiating price and payment options, and providing advice and arranging product service and repairs, to fulfil the needs of a client.

The unit applies to individuals who recommend irrigation products and services under broad direction, and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research and apply knowledge of store product range	1.1 Access relevant sources of information to develop irrigation product knowledge 1.2 Identify products according to relevant product information 1.3 Operate store products, machinery and equipment safely 1.4 Apply knowledge of irrigation product range when recommending

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	to clients
2. Recommend irrigation products	<p>2.1 Identify client irrigation needs</p> <p>2.2 Provide and explain details of product specifications to client to assist with buying decisions</p> <p>2.3 Explain features and benefits of products to client to create a buying environment</p>
3. Estimate quantities	<p>3.1 Estimate accurate quantities of irrigation products from measurements and information provided, according to product requirements</p> <p>3.2 Provide quotation based on estimated quantities to client</p>
4. Advise on irrigation product warranties	<p>4.1 Provide to client clear explanation of the comparisons between products and manufacturer warranties</p> <p>4.2 Confirm individual product warranty terms and conditions from relevant sources of information</p> <p>4.3 Provide to client written information regarding individual product warranty terms and conditions, including extended or promotional warranties</p>
5. Negotiate price and payment options	<p>5.1 Explain payment options, including store recommended retail pricing for various brand options</p> <p>5.2 Negotiate individual product prices where necessary to achieve sales</p> <p>5.3 Complete sales documentation according to workplace requirements</p>
6. Advise on and arrange product service and repairs	<p>6.1 Question client to determine nature of product service or repair requirements</p> <p>6.2 Identify requirements by accessing manufacturer information</p> <p>6.3 Offer solutions, taking into consideration the nature of the requirements and available product information</p> <p>6.4 Identify and discuss the service or repair process</p> <p>6.5 Quote price and timeline for basic service or repairs</p> <p>6.6 Obtain client details and record on repair form</p> <p>6.7 Label item for repair and store securely according to workplace</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	procedures 6.8 Notify client on completion of service or repair

Assessment Requirements for AHCIRG349 Recommend irrigation products and services

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recommended irrigation products and services on at least two occasions, and has:

- demonstrated and explained a range of irrigation products
- provided advice on irrigation product specifications and warranties
- negotiated individual product prices
- determined product service and repair requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- irrigation product components, controls, features and functions
- store irrigation products range, service and repair policy
- manufacturer specifications and workplace safety requirements for a range of irrigation products
- principles of customer service and sales techniques
- principles and practices for recommending irrigation products and services
- irrigation product characteristics, technical capabilities and limitations
- price negotiation techniques and payment options for the store.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - irrigation products
- specifications:
 - irrigation product warranties, terms, conditions, manufacturer specifications and workplace safety requirements
 - irrigation product recommended retail price
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG435 Determine hydraulic parameters for an irrigation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to determine hydraulic parameters for an irrigation system.

The unit applies to individuals who apply specialised skills and knowledge to determine hydraulic parameters for an irrigation system. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm water delivery specifications for irrigation system	1.1 Confirm soil characteristics and determine hydraulic properties 1.2 Determine plant and crop water requirements for various stages of growth 1.3 Calculate peak water requirements for each area to be irrigated

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Determine pressures required to deliver required amount of water over specified area	2.1 Determine static pressures between water source and delivery points 2.2 Calculate dynamic pressure necessary to achieve required water volume
3. Analyse technical drawings to determine pressure losses through system	3.1 Calculate losses resulting from fittings, laterals and elevation differences 3.2 Determine losses resulting from flow through canals, culverts and pipes of varying sizes and diameters within a system 3.3 Calculate total friction loss 3.4 Determine hydraulic parameters for system
4. Select system components to deliver water efficiently	4.1 Select water delivery components to achieve efficient delivery rate and pressure 4.2 Select compatible flow direction and control components with pipes to achieve minimal friction losses

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding irrigation system hydraulic parameters
Writing	<ul style="list-style-type: none"> Record scheduling system information for each irrigation, significant rainfall events and other appropriate parameters
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements, including safety requirements, associated with own role and area of responsibility

Assessment Requirements for AHCIRG435 Determine hydraulic parameters for an irrigation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has determined hydraulic parameters for an irrigation system on at least one occasion and has:

- read contour maps and interpreted elevations and distances
- applied hydraulic principles to manual and computerised irrigation systems
- calculated pressures, flows, velocities and friction losses
- determined efficiency of the system with varying system components.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- contour maps
- hydraulic principles such as static and dynamic pressure, pressure loss, friction loss, flow rate and velocity, effect of gradient on flow rate, contact time and drainage
- calculate pumping requirements
- irrigation system components
- types and pressure ratings for pipes, fittings and outlets
- calculate pressure loss due to irrigation components.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - contour maps
- specifications:

- irrigation system water delivery specifications
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG436 Implement an irrigation-related environmental protection program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to implement an irrigation related environmental protection program.

The unit applies to individuals who apply specialised skills and knowledge to the implementation of an irrigation related environmental protection program and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Provide information to staff involved in irrigation and related work	1.1 Provide information on the irrigation and drainage environmental protection plan to staff and explain 1.2 Explain relevant environmental protection legislation, regulation, codes of practice and workplace procedures and their application to

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>staff</p> <p>1.3 Explain and demonstrate information about known risks to the environment and work practices associated with irrigation practices and related activities</p> <p>1.4 Explain and demonstrate workplace environmental record system and procedures</p> <p>1.5 Identify environmental protection induction and training needs and arrange training as required</p>
2. Implement and monitor procedures for identifying risks to the environment and maintaining effective control measures	<p>2.1 Identify and report environmental risks so that adequate risk assessment and control measures can be implemented</p> <p>2.2 Implement and monitor irrigation related environmental protection plan and program</p> <p>2.3 Identify and record inadequacies in existing risk control measures or allocation of resources according to environmental issue reporting procedures and processes</p> <p>2.4 Report environmental or resource allocation issues and measures to the owner or manager</p>
3. Implement procedures for responding to potential and actual environmental pollution events	<p>3.1 Implement procedures for responding to potential and actual pollution events to ensure prompt and effective control action is taken</p> <p>3.2 Investigate and report pollution events</p> <p>3.3 Calculate stormwater control requirements</p> <p>3.4 Discuss suitable measures to prevent recurrence and minimise risk of pollution events with the owner or manager, and implement revised procedures where necessary</p>
4. Implement and monitor procedures for maintaining environmental protection record	<p>4.1 Identify and rectify gaps in record keeping systems</p> <p>4.2 Maintain environmental protection records</p> <p>4.3 Monitor record keeping systems to ensure compliance</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCIRG436 Implement an irrigation-related environmental protection program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has implemented an irrigation related environmental protection program on at least one occasion and has:

- provided and explained information on the irrigation and drainage environmental protection plan
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- explained and demonstrated the workplace environmental record system and procedures
- applied and complied with relevant environmental protection legislation, regulation, codes of practice, and workplace procedures
- calculated stormwater control requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts of irrigation, using water from any ground or underground source
- environmental protection legislation, regulation, codes of practice, and workplace procedures relevant to irrigation related environmental protection programs
- workplace health and safety procedures relating to investigation of irrigation related hazards and implementation of an environmental protection plan.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- stormwater measuring equipment and procedures
- specifications:
 - irrigation and drainage environmental protection plan
 - relevant environmental protection legislation, regulation, codes of practice, and workplace procedures
- relationships:
 - property owner, manager and staff
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG437 Schedule irrigations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to monitor water use, apply a measured amount of water, assess efficacy of irrigation and repeat cycles, record irrigation and scheduling parameters, and plan for extremes of weather to determine irrigation scheduling requirements.

The unit applies to individuals who apply specialised skills and knowledge to irrigation scheduling. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Monitor crop and plant water use	1.1 Estimate or measure water use from one or more systems 1.2 Accumulate water as a soil water deficit in the root zone
2. Apply a measured amount of water	2.1 Predict a pre-determined deficit using a scheduling system

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	2.2 Apply irrigation to partly or fully replace the deficit 2.3 Increase water quantities where appropriate to ensure dilution and transport of toxic solutes below the root zone
3. Assess efficacy of irrigation and repeat cycles of irrigation	3.1 Measure effectiveness of irrigation application with in-field equipment 3.2 Adjust estimated soil moisture level in scheduling system to match in-field measurements 3.3 Recalibrate scheduling system where necessary 3.4 Repeat cycles of irrigation until schedule is correctly established
4. Record irrigation and scheduling parameters	4.1 Record each irrigation and significant rainfall event, plus other appropriate parameters used in scheduling system 4.2 Estimate and record drainage amount below root zone at each irrigation 4.3 Record system performance data
5. Plan for extremes of weather	5.1 Modify estimated deficits to cater for prolonged saturation following heavy rainfall 5.2 Alter shift areas, and where applicable, application rates, to suit appropriate irrigation schedules to minimise frost damage where applicable 5.3 Implement strategies involving prioritising of plants and crops and intermittent irrigation at times of extreme heat

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding irrigation schedule
Writing	<ul style="list-style-type: none"> Record scheduling system information for each irrigation, significant rainfall events and other appropriate parameters

Skill	Description

Assessment Requirements for AHCIRG437 Schedule irrigations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has scheduled irrigation on at least one occasion and has:

- monitored crop and plant water use
- applied a measured amount of water
- assessed the efficacy of irrigation and repeat cycles of irrigation
- used and maintained in-field equipment that monitors the plant environment
- incorporated data from in-field equipment and remote monitoring sources into scheduling systems that compute irrigation requirements
- recorded irrigation and scheduling parameters
- planned for extremes of weather.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- inter-relationship between plant, soil and the environment in the determination of water budgets
- plant and crop response to moisture stress at different stages of growth
- recognition of moisture stress effects on plants, including instances where stress may be required
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- water quality monitoring methods and acceptable quality limits
- in-field irrigation reticulation performance and capacity limits
- possible adverse impacts on the crop and environment from inefficient scheduling or unpredictable weather effects
- weather forecasting of extreme weather events such as heat waves, frosts and storms, and appropriate contingency strategy to minimise impacts.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation scheduling equipment
 - irrigation in-field measuring equipment and data
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG438 Select and manage pumping systems for irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify irrigation system requirements, select pump and supervise installation, commissioning and testing of pump system, develop maintenance procedures and troubleshoot irrigation pumping systems.

High voltage electrical work must be carried out by a qualified electrician.

The unit applies to individuals who apply specialised skills and knowledge to the selection and management of irrigation pumping systems and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify irrigation system requirements from the irrigation design	1.1 Identify the components of the irrigation pumping system 1.2 Determine the water source and height of pull for water into the system

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Determine the water output for irrigation 1.4 Calculate the total friction loss of irrigation components
2. Select pump according to type, installation, range of flow rates, operating head and delivery distance	2.1 Select pump type based on pumping task and placement and the power source 2.2 Calculate total operating head requirements 2.3 Calculate pump discharge requirements based on irrigation output requirements and friction losses in the system 2.4 Determine pump motor speed and power requirements 2.5 Determine pump limiting suction lift 2.6 Interpret pump performance curves when selecting an efficient irrigation pump 2.7 Determine the size of the impeller from the pump curve
3. Supervise installation of pumps	3.1 Ensure pump is level and sited as close as possible to water source 3.2 Verify pump is properly anchored and connections are airtight 3.3 Confirm pump and motor connection are correctly aligned and motor is ventilated 3.4 Verify filters and valves are correctly fitted and orientated 3.5 Check pump is connected to the irrigation controller if required
4. Oversee commissioning and testing of pumping system	4.1 Develop pre-start and start up procedures 4.2 Check delivery performance and verify power usage and water output against requirements and pump specifications 4.3 Ensure pumping system is checked for leakages and cavitation 4.4 Confirm pumping system is operating effectively
5. Develop maintenance procedures for the pumping system	5.1 Develop routine maintenance procedures to rectify the effects of normal wear 5.2 Develop periodic inspection checklists to assist in maintenance scheduling 5.3 Carry out pump overhaul or repairs 5.4 Keep pump maintenance records, including details of pump and pumping system components for ordering
6. Carry out	6.1 Investigate lack of discharge or pressure and change settings or

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
troubleshooting on pumping systems	components 6.2 Investigate loss of water suction and make alterations to placement or fix leakages 6.3 Investigate cavitation in pumps and change settings or components 6.4 Investigate excessive power consumption and review design and pump selection and check for mechanical defects

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding selecting and managing irrigation pumping systems
Numeracy	<ul style="list-style-type: none"> Calculate water output, friction loss and operating head requirements Identify and record pump system component numbers

Assessment Requirements for AHCIRG438 Select and manage pumping systems for irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has selected and managed an irrigation pumping system on at least one occasion and has:

- identified irrigation system requirements from the irrigation design
- selected pump according to type, installation, range of flow rates, operating head and delivery distance
- calculated pumping requirements and pressure loss due to irrigation components
- supervised installation of pumps
- monitored the performance of pumps, valves and filters
- developed maintenance procedures for the pumping system
- carried out troubleshooting on the pumping system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- application of mechanical, hydraulic and electrical principles
- automatic pump switches, including:
 - flow switches
 - irrigation controllers
 - pressure switches
 - timers
- sources of information and the processes for the calculation of material requirements and flow rates
- advantages and disadvantages of each pump type
- selection factors for pumps, including:
 - source of water and lift
 - the required pumping flow rate and pressure

- the total dynamic head
- the total suction head
- types of pumps and application in irrigation, including:
 - centrifugal
 - propeller
 - submersible
 - vertical turbine
- types of pumps suitable as booster and floating pumps
- discharge and flow rates
- types of impellers and their use
- environmental procedures for installing and maintaining irrigation pumping systems
- pump installation factors, including:
 - adequate space, head room, ventilation and lighting
 - correct alignment procedures of pump and motor shafts with direct coupled units
 - provision for adjustment and ease of dismantling
 - levelling and alignment processes
 - overhaul or repair operations
 - properties of water including pressure and flow rates
 - pump components and their principles of operation
 - pump efficiency, performance and pressure testing
 - pump positioning (driver alignment and suction length)
 - access for routine preventative maintenance
- types of valves
- pump cavitation, cause and effect.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation pumping system equipment and tools
 - irrigation pumping system measuring, and recording equipment and procedures
- timeframes:
 - according to the job requirements.

Assessors of this must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG439 Interpret and apply irrigation designs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify irrigation design key features, define the placement and function of irrigation system, mark out structures and component locations, estimate earth moving requirements, select pumps and system components, and develop staff instructions for interpretation and application of an irrigation design for an installation site.

The unit applies to individuals who apply specialised skills and knowledge to the interpretation and application of irrigation designs and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify the key features on an irrigation design	1.1 Identify and apply commonly used symbols and abbreviations on plans 1.2 Identify and apply common irrigation terms used on plans

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Identify key features of irrigation plans, elevations and sections 1.4 Identify scale, elevations and sections from drawings
2. Define the placement and function of the irrigation system	2.1 Interpret the plans, drawings and specifications for the irrigation design 2.2 Identify the proposed purpose and capacity of the irrigation system 2.3 Position the designed system in relation to the landscape of the site 2.4 Identify environmental impacts of the irrigation system, and its installation 2.5 Prepare as constructed drawings
3. Mark out structures	3.1 Mark the boundaries of the site 3.2 Identify existing irrigation infrastructure on the site 3.3 Identify electricity and communications infrastructure on the site plan and develop safety procedures 3.4 Mark out on site electricity and communications infrastructure 3.5 Mark out on site remnant vegetation to be retained 3.6 Identify and peg out on site proposed pipelines 3.7 Identify and peg out on site proposed irrigation structures
4. Estimate earth moving requirements for construction	4.1 Interpret earthworks drawings and take site levels 4.2 Estimate the amount of earth to be relocated or removed from the site 4.3 Confirm the sequence of earthworks and communicate to relevant staff 4.4 List and quantify materials required for irrigation structures 4.5 Verify construction requirements with designer
5. Select pumps and system components	5.1 Interpret design specifications for water volume, pressure and delivery pattern required 5.2 Select pumping system based on design specifications 5.3 Select irrigation system components based on design specifications 5.4 Verify component selection with designer

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
6. Mark out locations of all components	6.1 Define the sequence of operations for installation 6.2 Identify the delivery and storage area for components 6.3 Identify the placement of all components
7. Develop instructions for staff	7.1 Identify potential environmental hazards and strategies to minimise risks in instructions 7.2 Document the sequence of activities and work duties 7.3 Discuss workplace health and safety hazards and risks and safe working practices to manage risks with staff 7.4 Provide a construction schedule to staff

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding design requirements for irrigation system
Oral communication	<ul style="list-style-type: none"> Initiate discussions with staff, using clear language to communicate production schedule, design requirements and safety procedures Use clear communications with designer to verify construction requirements and component selection

Assessment Requirements for AHCIRG439 Interpret and apply irrigation designs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has interpreted and applied an irrigation design on at least one occasion and has:

- read contour maps and interpreted elevations and distances
- interpreted technical drawings and site plans
- documented and communicated as constructed drawings, safety procedures and material requirements
- marked out procedures
- interpreted pressures, flows, velocities and friction losses
- determined efficiency of the system with varying system components
- documented and communicated installation sequence of operations, activities, work duties and construction schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- erosion control and design principles
- principles and practices of irrigation design interpretation
- how to interpret plans, and general and technical specifications
- hydraulic calculations
- principles of native topsoil conservation and protection
- relevant work health and safety and environmental requirements
- levels and levelling
- pumps and pumping system components
- selection of water pumping and distribution components delivery based on specifications and requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation system site
 - site measuring, mark out and pegging tools and equipment
- specifications:
 - irrigation design, drawings, plans and specifications
- relationships:
 - designer, staff
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG440 Manage a moving sprinkler irrigation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to prepare a moving sprinkler irrigation system for operation, develop and implement start-up, shutdown and isolation procedures, trouble shoot for faults and blockages, and measure and review moving sprinkler irrigation system performance.

The unit applies to individuals who apply specialised skills and knowledge to the management of moving sprinkler irrigation systems and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Ensure the moving sprinkler irrigation system is prepared for operation	1.1 Assess staff training needs for carrying out pre-start checks and routine servicing and arrange training for those that require it 1.2 Program or adjust the irrigation controller to meet the required schedule

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Develop pre-start procedures for adjusting valves and checking filters and emitters
2. Develop and implement start up and shut down procedures	2.1 Develop start up procedures 2.2 Develop shut down sequence and isolation procedures 2.3 Install safety or security lock off devices and signage 2.4 Provide instructions for flushing the system as required
3. Carry out trouble shooting for faults and blockages	3.1 Arrange access to faulty components and blockages 3.2 Remove faulty system components and repair or dispose of according to operation and maintenance manual and workplace environmental procedures 3.3 Select and install replacement components according to operation and maintenance manual
4. Measure performance of a moving sprinkler irrigation system	4.1 Identify and record variations in pressures 4.2 Measure and record water flow rates according to workplace procedures 4.3 Identify and record variations in water flow and distribution 4.4 Measure and record pump performance parameters as necessary 4.5 Measure and record variations in pump performance parameters where relevant 4.6 Inspect distribution and delivery systems 4.7 Identify and repair system malfunctions and record actions 4.8 Identify and record factors external to the system that may cause interference
5. Review system performance status	5.1 Record system pressures and variations 5.2 Record system flow rates and variations 5.3 Calculate and record distribution uniformity and mean application rates 5.4 Determine and record watering depth 5.5 Calculate and compare energy use and water efficiency to industry benchmarks

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding managing moving sprinkler irrigation systems
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements, including safety requirements, associated with own role and area of responsibility
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to prepare water test results

Assessment Requirements for AHCIRG440 Manage a moving sprinkler irrigation system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed a moving sprinkler irrigation system on at least two occasions and has:

- developed and supervised procedures for moving sprinkler irrigation system, including:
 - pre-start valve adjustment, and filter and emitter checking
 - start up
 - shutdown
 - isolation
 - system flushing
- removed and installed system components according to operation and maintenance manual and workplace environmental procedures
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- measured, interpreted and adjusted flow rates and pressures
- monitored and recorded system effectiveness, including:
 - application rates
 - depth of irrigation
 - infiltration and runoff
 - irrigation times
 - pressure variations and blockages
 - salinity levels and water quality
 - soil moisture levels
 - sprinkler coverage and output
- measured and recorded output and efficiency of an irrigation system
- used records to review an irrigation system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- irrigation schedules
- general irrigation methods for moving sprinkler systems
- main components of moving sprinkler irrigation systems
- best practices for reducing environmental impacts of irrigation
- component specifications
- environmental hazards of runoff and compaction
- environmental impacts of irrigation using water from any ground or underground source
- moving sprinkler irrigation technologies
- moving sprinkler and travelling mechanism operation and maintenance manual servicing and maintenance procedures
- critical measures for moisture availability, including:
 - field capacity
 - readily available water
 - wilting point
- soil compaction and drainage monitoring
- soil moisture testing techniques
- soil, plant and water relationships
- water requirements of plants and crops consistent with sound environmental management
- pump types used in moving sprinkler irrigation systems and their output and efficiency ratings
- pump types used in moving sprinkler irrigation systems and their operation
- energy efficiency indicators and benchmarks for moving sprinkler irrigation, including:
 - application efficiency
 - average application rate
 - instantaneous application rate
- physical soil characteristics, including:
 - infiltration rate
 - water holding capacity
 - wetted volume in the root zone.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - moving sprinkler irrigation system equipment and tools
 - moving sprinkler irrigation system measuring, and recording equipment and manual

- specifications:
 - moving sprinkler and travelling mechanism operation and maintenance manual
 - environmental procedures applicable to moving sprinkler irrigation systems
 - industry energy and water efficiency benchmarks
- timeframes:
 - according to the job requirements
- relationships:
 - staff members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG441 Evaluate water supply for irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to determine irrigation water needs, assess water quality of water source, determine cost and availability of alternative water sources and complete water sourcing or acquisition arrangements.

The unit applies to individuals who apply specialised skills and knowledge to evaluate water supply for irrigation. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine water needs for irrigation	1.1 Determine the water needs of plants to be irrigated 1.2 Calculate the permeability of the soil and deep drainage losses 1.3 Calculate evapotranspiration rates through the growing season 1.4 Calculate soil water deficits throughout the season based on expected rainfall

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Calculate the amount of irrigation water required through the growing season
2. Assess a water source for water quality	2.1 Test and record water source for electrical conductivity and analyse results 2.2 Collect water samples for testing and interpret results
3. Determine cost and availability of alternative water sources	3.1 Evaluate water availability and access requirements for water sources 3.2 Cost capital expenditure requirements 3.3 Cost operating expenditure requirements 3.4 Investigate regulatory requirements for sourcing irrigation water and incorporate into business planning
4. Complete water sourcing or acquisition arrangements	4.1 Make contractual arrangements for sourcing of water 4.2 Plan for short term purchasing or selling of water depending on seasonal conditions if necessary

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding water supply for irrigation
Writing	<ul style="list-style-type: none"> Record scheduling system information for each irrigation, significant rainfall events and other appropriate parameters
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements, including safety requirements, associated with own role and area of responsibility

Unit Mapping Information

Assessment Requirements for AHCIRG441 Evaluate water supply for irrigation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has evaluated water supply for irrigation on at least one occasion and has:

- estimated the irrigation requirements of plants
- calculated water losses in an irrigation system
- interpreted results for electrical conductivity of irrigation water
- taken water samples
- calculated capital and operating expenditure for a water supply system
- compared costs for different water sources.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- plant water requirements in terms of water quality and frequency of supply
- salinity and composition impacts on soil structure and plant growth
- soils and water, soil moisture retention and movement, plant root zones and development, infiltration and leaching
- climatic factors in irrigation development, rainfall, evaporation, evapotranspiration and hydrology
- irrigation drainage, seepage, surface and subsurface drainage systems
- irrigation scheduling, soil moisture measurement
- efficiency of irrigation systems and long-term viability
- management planning and operation of water allocations
- cost benefit analysis
- capital and operating expenditure calculations to source water
- operations and maintenance requirements
- legislation relevant to the supply of water for irrigation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - water source sampling and testing equipment and procedures
 - legislation relevant to the supply of water for irrigation
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG442 Supervise irrigation system installation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to develop construction procedures, interpret irrigation system design, and coordinate and supervise the construction and installation of a range of irrigation systems.

The unit applies to individuals who apply specialised skills and knowledge to the supervision of irrigation system installation and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop and implement construction procedures	1.1 Develop employment and contract management procedures 1.2 Develop procedures for controlling and recording site deliveries 1.3 Develop procedures for recording the hire of plant and equipment 1.4 Assess workplace health and safety risks associated with

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>construction activities and implement suitable controls and procedures to minimise risk</p> <p>1.5 Notify client, authorities and agencies of the schedule of works</p> <p>1.6 Develop procedures to minimise environmental impacts of construction work</p>
2. Interpret the irrigation system design for the site	<p>2.1 Determine the purpose, scale and required output of the irrigation system</p> <p>2.2 Assess the landscape of the site</p> <p>2.3 Determine construction requirements and verify with the designer</p> <p>2.4 Select components to meet design specifications and site requirements</p>
3. Organise resource requirements	<p>3.1 Nominate tasks, timelines and required resources</p> <p>3.2 Organise labour requirements</p> <p>3.3 Verify and check parts and equipment delivered to the site</p> <p>3.4 Select and maintain equipment and machinery according to operation and maintenance manual</p> <p>3.5 Allocate jobs and tasks to the work team</p> <p>3.6 Carry out safety induction for the task and site</p>
4. Supervise construction work	<p>4.1 Interpret plan and supervise construction work</p> <p>4.2 Confirm site is prepared and set out appropriately</p> <p>4.3 Confirm the correct lay out of the main line</p> <p>4.4 Supervise the insertion of sub-mains and flushing manifold</p> <p>4.5 Supervise the installation of risers, emitters and other components</p>
5. Complete installation work and test components	<p>5.1 Connect water supply</p> <p>5.2 Check emitters for optimal coverage and efficiency</p> <p>5.3 Set valves to allow water to targeted areas</p> <p>5.4 Start up and flush the system</p> <p>5.5 Attach measuring devices and controllers to the system</p>
6. Commission system	<p>6.1 Identify operating faults and take corrective action to meet design specifications</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	6.2 Calibrate testing and monitoring equipment 6.3 Carry out testing procedures and record results 6.4 Document irrigation system operating procedures 6.5 Hand over system in operating order

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCIRG442 Supervise irrigation system installation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supervised an irrigation system installation on at least one occasion and has:

- implemented employment procedures
- conducted work health and safety risk assessment
- developed irrigation system construction and installation procedures
- interpreted irrigation designs
- supervised installation tasks including:
 - assembling sprinklers, pressure regulators and hose directors
 - checking operating specifications for pressures and flow rates
 - completing installation work and testing components
 - installing irrigation components
 - installing power and pumping plant
 - laying and joining sprinkler lateral pipelines
 - laying and joining supply and distribution pipeline
 - pressure testing the system
 - setting out and preparing site
 - setting up irrigation controllers
 - undertaking start-up procedures
- developed irrigation system operating procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- employment procedures
- project management principles

- safe work practices for construction
- design interpretation
- volume and pressure requirements
- water quality and water filtration techniques
- behaviour of water on varying terrain and soil types
- calculations for installing low volume irrigation systems
- operating specifications for pressures and flow rates
- pump capacity
- types of pumps and water flow rates
- licensing requirements for electrical work
- equipment and machinery operation and maintenance manual
- principles and practices of irrigation system installation supervision
- characteristics and operation of joints, valves and sprinkler components
- setting up fertigation equipment
- distribution uniformity
- start-up procedures
- setting up irrigation controllers
- commissioning procedures
- soil water retention testing techniques.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation system testing and monitoring equipment and manual specifications:
 - workplace procedures applicable to health and safety in the workplace, environment and irrigation system installation
- relationships
 - client, authorities and agencies
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG443 Supervise irrigation system maintenance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to develop an irrigation system maintenance program, supervise irrigation maintenance, maintain testing equipment, supervise pest and weed control in an irrigated area and complete irrigation system maintenance records.

The unit applies to individuals who apply specialised skills and knowledge to the supervision of irrigation system maintenance and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a maintenance program for an irrigation system	1.1 Establish the maintenance requirements for the irrigation site, components and structures 1.2 Determine the frequency of maintenance activities required and develop a schedule

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify and quantify total maintenance costs</p> <p>1.4 Assess the workplace health and safety risks associated with the maintenance program and implement suitable controls</p> <p>1.5 Minimise environmental impacts of irrigation system maintenance activities</p> <p>1.6 Develop a system for reporting maintenance activities</p>
2. Supervise maintenance of irrigation components	<p>2.1 Develop maintenance checklists for irrigation components</p> <p>2.2 Monitor component operation, identify operating faults and take appropriate action</p> <p>2.3 Identify and investigate abnormal operation or frequent and recurring breakdowns and organise maintenance as required</p> <p>2.4 Identify situations requiring expert advice seek and specialist assistance</p> <p>2.5 Review equipment condition routinely to ensure and maintain efficient operations</p>
3. Carry out maintenance of testing equipment	<p>3.1 Perform preventative maintenance on testing equipment</p> <p>3.2 Identify and report equipment wear and faults</p> <p>3.3 Perform minor repairs within limits of authorisation</p> <p>3.4 Replace defective parts and make adjustments</p> <p>3.5 Seek expert help where difficulties are encountered</p> <p>3.6 Update maintenance and calibration records</p>
4. Identify weed or pest infestation and seek specialist advice	<p>4.1 Identify and report weed or pest infestation</p> <p>4.2 Seek specialist advice on weed or pest infestation</p> <p>4.3 Ensure weed or pest control methods are scheduled at the optimum time that will have minimal damage to the crop</p> <p>4.5 Maintain infestation and treatment records</p>
5. Complete records of irrigation system maintenance	<p>5.1 Maintain maintenance activity records</p> <p>5.2 Assess maintenance work results against the maintenance program</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding supervising irrigation system maintenance
Oral communication	<ul style="list-style-type: none"> Use clear language to consult with specialist technical personnel
Numeracy	<ul style="list-style-type: none"> Estimate and calculate maintenance costs for material requirements, equipment, staff and specialist technical personnel
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements, including safety requirements, associated with own role and area of responsibility
Technology	<ul style="list-style-type: none"> Use of technology to record data electronically

Assessment Requirements for AHCIRG443 Supervise irrigation system maintenance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has supervised irrigation system maintenance on at least one occasion and has:

- developed workplace procedures for pre-season, irrigation and post-season maintenance
- carried out visual checks for blockages or signs of wear in components
- checked connections and controllers
- checked sprinkler output and function
- confirmed operational pressures
- ensured proper operation of automatic flush valves
- inspected irrigation systems
- serviced irrigation equipment
- pressure tested systems
- tested emitter output and function
- tested irrigation equipment
- maintained testing equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of irrigation system maintenance supervision
- operation and maintenance requirements
- workplace procedures for pre-season, irrigation and post-season maintenance
- pre and post-season maintenance procedures
- workplace health and safety hazards and safe work procedures
- environmental impacts of irrigation maintenance
- drainage systems
- system components

- system inspection
- operating pressures and output
- pumping and distribution systems
- distribution uniformity
- visual checks for blockages or signs of wear in components
- equipment testing
- pressure testing procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation system testing equipment and manual specifications:
 - workplace procedures applicable to health and safety in the workplace and irrigation system maintenance
- relationships:
 - specialist technical personnel
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCIRG445 Manage surface irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has managed the operations of a surface irrigation system on at least two occasions and has:

- developed procedures and provided staff training to:
 - perform running repairs on irrigation delivery and drainage systems
 - carry out shut down procedures
 - check pressure at the head works and control valves
 - set up pipes, system equipment and outlets
 - use siphons
- developed procedures for surface irrigation system start up, shutdown and operational checks
- identified and recorded variations in water flow and distribution
- measured and recorded water flow rates.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of surface irrigation management
- main components of surface irrigation systems
- water in soils and plants
- pump types used in surface irrigation systems their operation and operating requirements
- physical soil characteristics such as infiltration rate, water holding capacity and wetted volume in the root zone
- soil moisture testing techniques
- set up of headwater, tail water, channels and beds
- critical measures for moisture availability, including:
 - evapotranspiration

- field capacity
- infiltration rates
- readily available water
- water holding capacity
- wilting point
- calculating irrigation efficiency using records to review an irrigation system.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - surface irrigation system equipment and tools
 - surface irrigation system measuring, and recording equipment and manual
- specifications:
 - industry energy and water efficiency benchmarks
- timeframes:
 - according to the job requirements
- relationships
 - staff interactions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG446 Provide irrigation sales and service

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify customer needs, provide advice, recommend irrigation components and pumps, research irrigation innovations and conduct retail transactions.

The unit applies to individuals who apply specialist skills and knowledge to providing irrigation sales and service. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

	workplace procedures and legislative requirements 1.3 Match available products to customer needs and against ecological considerations
2. Research and provide product advice	2.1 Research and update knowledge and understanding of irrigation products regularly from authoritative sources 2.2 Provide advice to customers on products and/or services in a timely and professional manner according to workplace procedures and legislative requirements 2.3 Explain or showcase product and/or service details to meet customer needs 2.4 Suggest alternative and additional products and services as necessary 2.5 Address customer client concerns and questions
3. Recommend irrigation components and pumps	3.1 Interpret irrigation design 3.2 Confirm pump and component requirements and discuss with customer 3.3 Provide advice on irrigation pumps based on suitability for the task, energy efficiency from pump curves and serviceability 3.4 Provide advice on components based on technically correct and current information
4. Conduct retail transactions with irrigation customers	4.1 Estimate quantities for irrigation installation projects 4.2 Prepare and supply quotes on products and services 4.3 Negotiate price and payment options 4.4 Provide advice on irrigation product warranties 4.5 Organise product service and repairs according to workplace procedures 4.6 Organise delivery of irrigation merchandise in a timely manner to meet customer needs
5. Research irrigation innovations and products	5.1 Maintain contacts in irrigation product development, and review new products regularly 5.2 Study exhibitions and field displays to update technical expertise 5.3 Read and incorporate technical and extension information into advice to customers

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about irrigation product range, including product specifications and warranty terms and conditions, workplace procedures and legislative requirements Interpret textual information from irrigation designs
Oral communication	<ul style="list-style-type: none"> Use clear language with customers to gather information and match products to customer needs, explain products and suggest additional products and services
Numeracy	<ul style="list-style-type: none"> Interpret numerical information from irrigation designs and pump curves Estimate irrigation product quantities and costs

Assessment Requirements for AHCIRG446 Provide irrigation sales and service

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided irrigation sales and service on at least two occasions, and has:

- engaged with and advised customers on the range of irrigation products, and received information on their specific application and environment
- complied with relevant legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- represented the workplace in a professional manner when dealing with customers
- researched irrigation information to retain technical currency in all aspects of irrigation relevant to local district requirements
- interpreted and estimated requirements for materials and components from an irrigation design
- used pump curves to determine energy and water efficiency
- selected irrigation components for a system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of irrigation sales and service
- principles of customer service and sales techniques
- legislative requirements in sales environments, including fair trading, trade practices and sales of goods legislation and public liability
- relevant components of state or territory Acts relating to irrigation use
- irrigation components technical specifications and suitability
- workplace procedures for providing advice on irrigation products
- irrigation products and pump range of store

- demonstration and assembly of irrigation products and components
- pump and irrigation equipment components, controls, features and functions
- determination of pump capacities in relation to proposed application
- pump and irrigation equipment characteristics, technical capabilities and limitations
- price negotiation techniques and payment options for store
- interpretation of manufacturer specifications
- store product and service and repair policy.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - irrigation products and pumps
 - irrigation products and pumps specifications and warranties
 - irrigation design
 - pump curves
- specifications:
 - legislative requirements in sales environments, including fair trading, trade practices and sales of goods legislation and public liability
 - relevant components of state or territory Acts relating to irrigation use
 - workplace procedures for providing advice on irrigation products
- relationships:
 - customers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG506 Design irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to identify design requirements, determine specifications, define pumping and power system requirements, determine capital expense and operating expense budgets, and design irrigation systems.

The unit applies to individuals who apply specialised skills and knowledge to the design of irrigation systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine design requirements	1.1 Analyse water quantity and quality needs for a particular crop or situation so that an estimation can be made for sufficiency and timeliness 1.2 Evaluate water transfer, recharge, reuse and harvesting systems 1.3 Determine water collecting and storing processes that do not

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>degrade the water quality</p> <p>1.4 Determine construction specifications that satisfy organisational and regulatory requirements</p> <p>1.5 Investigate regional geology and geography to predict irrigation system parameters</p> <p>1.6 Conduct a site investigation to assess type of soil, depth of soil, depth of ground water, soil and water salinity, and structural or chemical impediments</p> <p>1.7 Determine the most cost effective irrigation system</p> <p>1.8 Document design calculations and decisions</p> <p>1.9 Identify and protect environmentally sensitive areas according to local, state and federal legislation and regulations</p>
2. Define pumping and power systems	<p>2.1 Identify pumps that can deliver water efficiently when needed, from the water storage at the flow and at the pressure required to operate the distribution system to the design specifications</p> <p>2.2 Select pump motor combinations that are efficient, reliable, functional, serviceable and flexible for the intended application</p> <p>2.3 Determine energy requirements and layout of electricity lines and check with local authorities</p> <p>2.4 Optimise the relationship between capital and operational costs including a comparison of energy sources</p> <p>2.5 Document performance indicators, design calculations and decisions</p> <p>2.6 Design construction specifications that define work required to make suitable pumping and power systems available</p>
3. Design an irrigation distribution system	<p>3.1 Investigate regional geology and geography so that a prediction can be made on the sustainability of irrigation</p> <p>3.2 Evaluate distribution systems and design with respect to a range of key variables</p> <p>3.3 Size pipes, valves and fittings according to design system specifications so that capital cost is balanced against operation costs over the anticipated system life</p> <p>3.4 Calculate and document flows, water levels and pressures so that they are within the acceptable tolerances for optimum performance</p> <p>3.5 Include mechanisms for controlling and adjusting pressure and</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>confirm isolation valves to direct water to areas with different irrigation schedules</p> <p>3.6 Design distribution and monitoring systems to meet industry recommendations and calculate distribution system flow and velocity</p> <p>3.7 Design construction plans and specifications that define the work required to achieve the required standards of uniformity and efficiency of water application</p> <p>3.8 Document irrigation distribution system design</p>
4. Determine capital expense budget	<p>4.1 Document design calculations and decisions and communicate relevant information through plans, specifications and manuals</p> <p>4.2 Determine and document materials requirements from plans and specifications</p> <p>4.3 Estimate labour requirements based upon documented work schedule with reasonable allowance for variances in work schedules</p> <p>4.4 Base costing attributed to each component on quoted information from suppliers, or sound analysis of individual elements</p> <p>4.5 Document capital expense budget</p> <p>4.6 Confirm capital expense budget output with an appropriately experienced and qualified person</p>
5. Determine operating expense budget	<p>5.1 Calculate an operating expense budget that includes all expenses applicable to the completed irrigation system</p> <p>5.2 Document operating expense budget</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding design requirements for irrigation system, including regional geology and geography information and environmentally sensitive areas

Skill	Description

Assessment Requirements for AHCIRG506 Design irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has designed an irrigation system on at least one occasion and has:

- collected and analysed information for the design
- compared costings
- developed system specifications
- documented outcomes
- identified system design requirements
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- developed budgets.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- developments in irrigation technology
- workplace health and safety and environmental protection legislation and regulations, codes of practice and workplace policies and procedures relevant for the irrigation system design
- soil types and their impact on the systems
- design processes
- environmental impacts of irrigation systems
- control and monitoring systems
- cost/benefit analysis.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - regional geology and geography information
 - irrigation system sites
- specifications:
 - irrigation system water and soil testing equipment and procedures
 - local, state and federal workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to irrigation system design
- relationships:
 - local authorities, appropriately experienced and qualified person
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCIRG507 Audit irrigation systems

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Application

This unit of competency describes the skills and knowledge required to collect and collate data, assess data, compile a system evaluation report and recommend alterations to improve irrigation system performance.

The unit applies to individuals who apply specialised skills and knowledge to the audit of irrigation systems, and take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information and analyse, design and communicate solutions to sometimes complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Irrigation (IRG)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Collect and collate all available data	1.1 Collect data on system performance 1.2 Collect data on environmental and workplace health and safety issues 1.3 Collect data on equipment supply and usage

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Collect data on crop production 1.5 Collect data on water use and quality 1.6 Collect data on climatic trends 1.7 Collect data on physical and chemical properties of soil 1.8 Collate and record available data using computer software
2. Assess actual data against benchmarks, specifications and predictions	2.1 Analyse system performance and compare with system specifications and performance predictions 2.2 Analyse supply and stock use and compare with previous and estimated usage and costs 2.3 Analyse crop production and compare with previous and predicted production 2.4 Analyse water usage and quality and compare with past and predicted usage and quality 2.5 Analyse climatic information and compare with predicted trends 2.6 Analyse soil properties and compare with previous and predicted properties 2.7 Analyse production costs related to irrigation system and compare with previous and predicted costs
3. Compile a report of system evaluation	3.1 Examine indicators of good performance 3.2 Examine indicators of poor performance 3.3 Examine causes of deviations from performance specifications and requirements 3.4 Prepare a report that includes discussion of results of data analysis and conclusions reached on irrigation system performance in relation to crop production and business performance
4. Recommend alterations to achieve performance improvement	4.1 Document recommendations to modify or eliminate causes of poor performance, or to enhance current performance 4.2 Report audit findings and recommendations to property owner or manager

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret information regarding irrigation system performance and audit requirements
Oral communication	<ul style="list-style-type: none"> Initiate discussions with property owner or manager, using clear language to communicate audit report findings and recommendations
Navigate the world of work	<ul style="list-style-type: none"> Identify and describe own workplace requirements, including safety requirements, associated with own role and area of responsibility
Interact with others	<ul style="list-style-type: none"> Use appropriate language and communication skills to disseminate information about audit report findings and recommendations

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has audited an irrigation system on at least two occasions and has:

- analysed and organised data
- identified adverse environmental impacts of irrigation system activities and recommended appropriate remedial action
- recommended relevant workplace health and safety and environmental procedures
- used computer software for irrigation auditing
- solved performance problems and recommended solutions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts of irrigation systems using water from any ground or underground source
- relevant workplace health and safety legislation, codes of practice and workplace requirements
- statistical data analysis procedures and software
- evaluation procedures
- irrigation system performance indicators.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- irrigation system performance data related to irrigation system being audited
- system specifications and performance prediction information related to irrigation system being audited
- computer and statistical data analysis procedures and software
- relationships:
 - property owner or manager
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCIRG508 Design irrigation system maintenance and monitoring programs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has designed an irrigation system maintenance and monitoring program on at least one occasion and has:

- identified and scheduled irrigation system maintenance and monitoring activities
- analysed and organised information
- designed scheduling and recording procedures
- developed and included relevant workplace health and safety and environmental procedures
- identified adverse environmental impacts of irrigation, drainage and water treatment activities and taken appropriate remedial action.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maintenance and monitoring design requirements
- drainage and water treatment using water from any ground or underground source
- irrigation, drainage and water treatment maintenance activities
- water quality guidelines for fresh and marine water
- water supply authority constraints
- workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to monitoring and maintenance programs
- environmental impacts of irrigation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

- a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - manufacturer operation manuals relevant to irrigation system maintenance and monitoring program design
 - water quality guidelines for fresh and marine water
 - workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace requirements applicable to monitoring and maintenance programs
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCIRG509 Develop an irrigation and drainage management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has developed an irrigation and drainage management plan on at least one occasion and has:

- compiled and analysed complex information
- used a range of irrigation and information management software
- interpreted statistical data and measurements
- developed plans and reports
- developed and implemented relevant workplace health and safety and environmental procedures
- identified adverse environmental impacts of irrigation system activities and recommended appropriate remedial action.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures relevant to irrigation and drainage management planning
- measuring and monitoring procedures
- readily available water
- water table and salinity
- soil, plant and water relationships
- computerised irrigation systems
- methods and techniques of irrigation
- environmental impacts of irrigation systems using water from any ground or underground source
- irrigation system options.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computer and irrigation and information management software
- specifications:
 - workplace policies and procedures relevant to irrigation and drainage management planning
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCIRG510 Establish and maintain an irrigation-related environmental protection program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture, Conservation and Land Management Training Package Version 4.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has established and maintained an irrigation-related environmental protection program on at least one occasion and has:

- developed environmental protection program, plan, policies and procedures
- used technology to draft documents, develop environmental information and audit data bases
- developed and implemented relevant workplace health and safety and environmental procedures
- identified adverse environmental impacts of irrigation activities and taken appropriate remedial action
- applied and complied with environmental requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environmental impacts of irrigation, using water from any ground or underground source
- environmental protection planning for irrigation and drainage
- external factors that may affect the system
- relevant workplace health and safety and environmental protection legislation, regulation, codes of practice and workplace procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:

- workplace health and safety and environmental protection legislation, regulations, codes of practice and workplace procedures applicable to establishing and maintaining an irrigation-related environmental protection program
- relationships:
 - property owner, manager, staff, environmental protection agency and local government authorities
- timeframes:
 - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW201 Operate a handheld GPS device

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate a handheld Global Positioning System (GPS) device, including tablet and phone-based GPS systems, and record and use spatial information relating to points, tracks and routes.

The unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. This includes undertaking defined activities and work in a structured context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan GPS operations	1.1 Identify purpose and use of the GPS and data collected from supervisor instructions 1.2 Prepare equipment and materials for GPS operations 1.3 Identify key operational parameters, and adjust GPS device settings according to operator manual

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Source and upload support data to GPS device 1.5 Plan power supply strategy for field operations 1.6 Assist with the identification of fieldwork health and safety hazards, and apply controls according to supervisor instructions and workplace procedures
2. Collect, use and store GPS information in the field	2.1 Establish accuracy of device for current position 2.2 Clear GPS logs to establish starting point for temporal data sequence 2.3 Operate handheld device to perform basic functions and record spatial and temporal data 2.4 Manage power supply for portable devices for field operations
3. Use basic software to retrieve, manipulate, display and store GPS data	3.1 Select software required for GPS data manipulation 3.2 Upload/sync GPS data from handheld device 3.3 Sort and categorise data for storage according to workplace requirements 3.4 Manipulate and edit data and data sets according to software procedures 3.5 Create simple visual reports for data interpretation and display
4. Shut down, maintain and store handheld GPS equipment	4.1 Turn off GPS device and prepare for storage 4.2 Record GPS use and identified faults according to workplace procedures 4.3 Clean and store GPS device

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret instructions from supervisor and GPS operator's manual to effectively upload required GPS data, operate GPS equipment and download data requested

Skill	Description
Writing	<ul style="list-style-type: none"> Record and upload data using protocols for data transfer

Assessment Requirements for AHCLPW201 Operate a handheld GPS device

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, operated a handheld Global Positioning System (GPS) unit and software-based GPS on handheld portable devices, and has:

- navigated settings on the GPS/tablet to change datum, coordinate system and units
- adjusted display parameters to suit operating conditions
- managed power supply for portable devices
- identified and followed workplace health and safety procedures for fieldwork and reported unsafe situations to supervisor
- collected, used and stored GPS information in the field, including:
 - recorded and labelled points
 - recorded and labelled tracks
 - navigated to points
 - created a route using recorded waypoints
 - navigated a route
- used basic software to retrieve, manipulate, display and store GPS data, including:
 - edited symbols, labels and names
 - added notes and other information
 - created routes from waypoints and tracks
 - created and edited files and datasets of spatial information
 - used data to modify/update support dataset for future work
- used software to create simple visual reports for data interpretation and display
- decommissioned and stored GPS equipment, including:
 - updated retained dataset on device and checked labels/names
 - removed temporary and superfluous data from the device
 - restored settings according to workplace standards

- removed batteries.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic GPS function, principles and limitations of the technology
- a range of portable GPS devices
- a range of supporting devices and software, including:
 - chargers and power banks
 - laptops and tablets
 - memory cards
- mapping and reporting software, including stand-alone and web-based applications
- operational parameters, including:
 - datum
 - coordinate system
 - units
 - naming protocols
- sources of error in GPS
- enterprise procedures and practice for GPS operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - handheld GPS device, phone or tablet with GPS capability
 - software for using a GPS and manipulating data
- specifications:
 - workplace procedures for use, storage and data management of handheld GPS device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Companion Volumes, including Implementation Guides, are available at VETNet: - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

AHCLPW301 Supervise park visitor activities

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to give information and advice, and supervise public access and activities within a park or reserve.

All work is done in accordance with enterprise procedures, legislative and public health and safety requirements.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Provide information on opening and closing	1.1 Operate security systems 1.2 Inform public of opening and closing times

Element	Performance criteria
times	
2. Advise public on park or reserve access and activities	2.1 Communicate with public in a courteous, confident and effective manner 2.2 Inform public of responsibilities and safety requirements when using park facilities 2.3 Check park access and facilities are suitable for access 2.4 Inform public of changes to access to park facilities when these have been affected by severe weather or other event
3. Monitor visitor activities	3.1 Monitor visitor activities to ensure there is no risk of environmental degradation or destruction or to biosecurity 3.2 Monitor visitor activities to ensure the safety of staff and the general public 3.3 Act upon non-compliance with site access conditions 3.4 Report and respond to incidents

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLPW301A Supervise park visitor activities.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCLPW301 Supervise park visitor activities

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- advise public on park or reserve access and activities
- provide information on safety requirements
- monitor visitor activities to ensure compliance with park or reserve conditions of entry, safety and environmental requirements
- act on non-compliance activities promptly
- report incidents according to organisation procedures and legislative requirements
- use standard industry terminology
- follow work health and safety policies and procedures and monitor visitor activities to ensure safety of general public

Knowledge Evidence

The candidate must demonstrate knowledge of:

- limits to personal and legal authority to act on non-compliance with site access conditions
- enterprise procedures, work health and safety and legislative requirements
- enterprise security systems and communication equipment
- conditions for visitors entering park

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLPW302 Implement a biodiversity monitoring plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to conduct fieldwork for the implementation of a biodiversity monitoring plan on a site.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for monitoring biodiversity of a given area	1.1 Confirm site location, purpose and biodiversity monitoring techniques to be used with supervisor 1.2 Identify work team involved for monitoring plan 1.3 Identify site operating conditions and hazards, assess risks and implement controls according to workplace health and safety procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Assemble equipment and materials required for monitoring plan
2. Prepare, transport and install equipment and resources	2.1 Select, check, maintain, and repair or replace equipment according to workplace procedures and monitoring requirements 2.2 Transport equipment and work team to monitoring site safely 2.3 Install and secure equipment according to operating procedures and regulatory requirements 2.4 Test equipment in field conditions
3. Conduct biodiversity work under supervision	3.1 Implement operating procedure to monitor biodiversity under supervision 3.2 Conduct observations according to monitoring plan and ethical and environmentally sensitive work practices 3.3 Record and report incidents and unplanned events to supervisor
4. Record biodiversity data	4.1 Record data according to monitoring plan and supervisor instructions 4.2 Record location and times of observations 4.3 Complete a summary report of activity according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Interact with supervisor using collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey and clarify information for monitoring program
Numeracy	<ul style="list-style-type: none"> Interpret and manipulate numerical information of collected data and timelines during monitoring program

Assessment Requirements for AHCLPW302 Implement a biodiversity monitoring plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, monitored biodiversity for a site over a period of time specified in the monitoring plan, and has:

- interpreted purpose and implemented techniques for monitoring biodiversity on a site
- installed and used monitoring equipment
- secured monitoring equipment from theft, vandalism, damage and weather
- selected, maintained, repaired and transported monitoring equipment for site
- recorded data accurately
- conducted biological observations according to ethical and environmentally sensitive procedures
- reported outcomes of biodiversity monitoring according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relationship of ecosystems and the key processes that support them, and impact on monitoring programs
- basic plant and animal classification
- monitoring techniques for flora, vertebrate and invertebrate fauna and microorganisms
- factors affecting monitoring locations within a site
- condition classifications to track changes over time
- types of monitoring equipment used, including:
 - vertebrate and invertebrate traps and trapping techniques
 - digital imaging
 - audio recording

- sampling and collecting plants and mycological samples
- preparation, calibration and adjustments
- setting up and securing monitoring equipment
- biosecurity and maintenance
- securing, labelling and storage of equipment
- data recording techniques and reporting
- ethical standards required for biodiversity monitoring programs
- environmental impact of biodiversity monitoring programs.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on an actual site over a specified time period
- resources, equipment and materials:
 - monitoring equipment specified in monitoring plan
 - personal protective equipment
- specifications:
 - workplace policies and procedures for biodiversity monitoring
 - state/territory and Commonwealth regulations, guidelines, standard operating procedures for ethical and legal monitoring practices
 - manufacturer operating instructions for monitoring equipment
 - workplace monitoring plan
- relationships:
 - supervisor
 - monitoring team
- timeframes:
 - within a specified time period.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW303 Construct access tracks

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to construct access tracks and clear vegetation on rural land.

This unit applies to workers in land management who are required to implement erosion control principles and apply specialised earthmoving techniques to fine tolerances. Work is often carried out in varied conditions and landscapes that require operators to develop skills that are unique to this sector.

All work is undertaken in accordance with relevant national, State, and local legislation and/or regulations.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

Licenses for vehicles and machinery may be required for this unit. Specific determination should be sought through the relevant State or Territory.

Pre-requisite Unit

Nil.

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for construction of access track	1.1 Confirm construction details and work sequence 1.2 Confirm compliance with relevant regulatory planning and environmental legislation 1.3 Confirm equipment is ready for work 1.4 Match equipment and attachments to tasks and terrain 1.5 Locate survey pegs and site indicators on work site 1.6 Follow organisational work health and safety procedures 1.7 Adhere to site environmental concerns 1.8 Apply principles of erosion and sediment control to the construction of track 1.9 Determine control points, required grades and water crossing points and structures from field observations and any available additional information 1.10 Obtain permits or licences required for the construction 1.11 Schedule and coordinate people, materials and equipment
2. Construct access track	2.1 Use earthworks methods and patterns for specific machines during construction according to job requirements 2.2 Monitor and maintain optimum machine loads to suit prevailing conditions 2.3 Use safe machine operating techniques and procedures to match terrain, site conditions and other operators 2.4 Complete excavation, transport, dumping and compaction of material in line with job sequence and endorsed industry practices 2.5 Clear vegetation according to industry best practice 2.6 Liaise with neighbouring landholders, local authorities and interest groups during the construction activity 2.7 Complete documentation required by organisation 2.8 Communicate with staff, clients and contractors during construction 2.9 Ensure work methods meet environmental sustainability, biosecurity and work health and safety requirements
3. Apply final finish to track	3.1 Use endorsed industry methods to surface track to achieve job specifications 3.2 Retain site features and vegetation in line with work plan 3.3 Clear site and remove debris in line with contract requirements

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLPW303A Construct access tracks.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AHCLPW303 Construct access tracks

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and prepare equipment
- determine control points, required grades and water crossing points and structures from field observations
- confirm that plans comply with legislative requirements by checking with a supervisor or authorised person
- construct tracks to organisational standards
- excavate, transport, dump and compact road material according to job sequence and endorsed industry practices
- finish track surface
- clean worksite to organisational standards
- operate machinery according to manufacturer and safe operating procedures
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- erosion and sediment control standards, principles and issues that apply to the construction of the access track, including:
 - soils and soil formation
 - earthmoving principles
 - total catchment issues
 - how to manage peak water flows

- subsurface and surface drainage principles and systems
- key concepts of the relevant wildlife, environmental, planning, ground water legislation
- biosecurity in the context of own work
- permits and licenses required for the construction of access tracks

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLPW304 Carry out inspection of designated area

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to carry out an inspection of a designated area.

All work is undertaken in accordance with statutory and local authority requirements.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

Vehicle licenses apply to this unit. Specific determination should be sought through the relevant State or Territory.

Pre-requisite Unit

Nil.

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Define area and target of inspection	1.1 Confirm location and size of area to be inspected 1.2 Identify features of natural environment in target area 1.3 Set frequency of inspection according to management strategy

Element	Performance criteria
	1.4 Determine targets of inspection from management strategy 1.5 Confirm characteristics and favoured conditions for targets with management
2. Carry out risk assessment and minimisation	2.1 Check time and duration of inspection and notify relevant personnel 2.2 Identify risks to the environment associated with the inspection 2.3 Take precautions to minimise environmental risks associated with the inspection 2.4 Identify safety hazards associated with the inspection 2.5 Follow work health and safety policies and procedures to minimise safety risks
3. Prepare for inspection	3.1 Identify vehicles, equipment and materials required for the inspection 3.2 Check vehicles, equipment and materials for serviceability
4. Carry out inspection	4.1 Operate vehicles and equipment 4.2 Carry out inspection within the specified area 4.3 Identify and record target occurrence as required by the management strategy 4.4 Follow statutory requirements and enterprise protocols regarding entering private property 4.5 Follow regulatory requirements and enterprise procedures for dealing with landholders or their employees 4.6 Implement precautions to minimise risks to the environment and self 4.7 Note and report incursions of non-targeted threats
5. Establish the impact of the specified target	5.1 Collect information on potential impacts from stakeholders 5.2 Collect and analyse data on environmental hazards resulting from target presence
6. Prepare a report	6.1 Document collated data, inspection records and analysis of findings with appropriate recommendations 6.2 Report targets as required by legislation or regulation 6.3 Submit report to supervisor or other authority 6.4 Ensure samples submitted comply with legislative requirements or regulations 6.5 Clean and store equipment and materials according to industry standards

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLPW304A Carry out inspection of designated area.

Assessment Requirements for AHCLPW304 Carry out inspection of designated area

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- define the scope and criteria on which to base inspection
- define the hazards and risks to work health and safety and the environment associated with the inspection
- conduct inspections, complying with statutory requirements and enterprise protocols for entry to private property
- conduct inspections in a manner that minimises environmental impacts
- operate equipment and vehicles according to organisation procedures
- establish environmental impacts caused by the presence of the target
- document the inspection findings and recommend follow up actions
- apply work health and safety practices in the context of own work
- take precautions to minimise environmental risks during inspection

Knowledge Evidence

The candidate must demonstrate knowledge of:

- risk management processes
- characteristics of inspection targets
- inspection procedures and techniques
- monitoring techniques
- reporting protocols
- relevant legislative and regulatory requirements including environmental protection legislation

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLPW305 Perform diving for scientific purposes

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to dive to support scientific research, monitoring and inspection roles associated with places or areas of significance.

All work is undertaken to legislative, manufacturer, enterprise and code of practice requirements.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

This unit requires compliance with the current Australian Standard for Occupational Diving Operations: Scientific Diving.

Dive certificates and licensing apply for this unit and specific determination should be sought from the relevant State or Territory.

Pre-requisite Unit

Nil.

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the	Performance criteria describe the performance needed to demonstrate

Element	Performance criteria
essential outcomes.	achievement of the element.
1. Plan diving operations	1.1 Determine dive objectives 1.2 Assess number and type of dives to develop a dive program that will meet objectives 1.3 Determine equipment and personnel required for dive operations 1.4 Consult appropriate people about the dive objectives and proposed program
2. Prepare for diving operations	2.1 Obtain equipment and personnel required for dive operations 2.2 Obtain appropriate notification and consents for dive plans 2.3 Check equipment condition 2.4 Send faulty equipment for repair or replacement 2.5 Assess requirements for and source consumables 2.6 Check personnel for competence and possession of a current medical clearance 2.7 Develop safety and emergency procedures for the dive program 2.8 Conduct a safety hazard analysis and risk assessment
3. Conduct dive	3.1 Establish communications procedures for all dives 3.2 Perform pre-dive checks 3.3 Complete assessment of environmental factors before entering the water 3.4 Conduct dives within the parameters of the special dive plan, including entry, descent, working on dive objective and exit 3.5 Amend dive procedures within enterprise requirements, codes of practice and personal authority in light of dive conditions, and any changes to dive objectives 3.6 Monitor dive conditions and suspend or cancel dives where safety or equipment operation considerations warrant 3.7 Suspend dives where personnel have completed allowed number of dives according to no-decompression limit tables 3.8 Remove equipment from site at completion of dives 3.9 Log dives Carry out dives according to Australian Standard
4. Debrief diving team	4.1 Review procedures and outcomes after dive 4.2 Amend procedures and dive plans 4.3 Record dive debriefing
5. Check and store equipment	5.1 Check dive equipment for condition and operation 5.2 Send faulty equipment for repair or replacement 5.3 Test and store equipment

Element	Performance criteria
	5.4 Record equipment use
6. Review diving program	6.1 Review dive plan in light of debriefing, outcomes achieved, risk assessments and safety analysis and future requirements 6.2 Record and report review conclusions
7. Respond to diving incidents	7.1 Monitor dive operations to identify potential or actual incidents 7.2 Suspend or cancel dive operations where potential or actual maladies have been identified 7.3 Ensure a rescue plan has been developed for all dives and that the plan has been communicated to the dive team as part of the pre-dive briefing 7.4 Apply diver first aid to injured or distressed personnel 7.5 Notify emergency authorities where assistance is required 7.6 Review procedures and dive plan in light of risks identified and potential or actual malady 7.7 Record all incidents on the enterprise register

1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan to carry out a dive
- prepare to dive
- carry out pre-dive checks and safety risk assessments
- monitor dive conditions, respond to incidents and amend dive procedures if necessary
- debrief dive team
- store diving equipment
- dive safely and according to organisational policies and procedures

Knowledge Evidence

The candidate must demonstrate knowledge of:

- interpretation of no-decompression limit tables to determine maximum length and number of dives allowed
- the physics of diving
- dive equipment
- safety risks associated with scientific dives
- dive planning
- Australian Standards for occupational diving
- rescue procedures
- oxygen administration procedures
- agency standing orders for notification
- emergency service procedures
- dive communication procedures and equipment

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLPW306 Undertake sampling and testing of water

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to plan and carry out sampling and testing of water quality as part of a monitoring program.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Plan for sampling and testing field work	1.1 Confirm monitoring schedule 1.2 Identify water quality and environmental parameters 1.3 Identify samples to be collected 1.4 Determine and arrange equipment requirements for water sampling and testing 1.5 Assess range of likely operating conditions, hazards and difficult

Element	Performance criteria
	or sensitive environments for impact on sampling and testing
2. Prepare equipment and resources	2.1 Obtain equipment required for sampling and testing 2.2 Check and calibrate equipment for availability and serviceability 2.3 Verify correct and accurate performance of equipment 2.4 Repair and maintain field-based equipment and instruments 2.5 Collect data or record sheets for use 2.6 Install and protect equipment 2.7 Brief staff undertaking sampling and testing on responsibilities
3. Carry out sampling and testing of water	3.1 Undertake tests in accordance with monitoring plan 3.2 Take and test samples in accordance with monitoring standards 3.3 Prepare, package and send samples to laboratory for external analysis 3.4 Make specific and general observations including information on relevant ambient and antecedent environmental conditions 3.5 Inform appropriate person of obvious water quality or environmental issues immediately
4. Complete water sampling and testing activities	4.1 Clean, repair and store equipment and clothing 4.2 Repair damaged or malfunctioning equipment on site or send to manufacturer or specialist 4.3 Record test results and observations on data sheets 4.4 Report changes in field conditions and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLPW306A Undertake sampling and testing of water.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCLPW306 Undertake sampling and testing of water

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan a water sampling program under direction according to regulatory and organisation requirements
- test and calibrate equipment according to regulatory and organisation requirements
- sample and test water according to regulatory and organisation requirements
- record results on data sheets
- record and report water testing results to organisational standards
- report obvious water quality issues observed during sampling to supervisor or manager immediately
- apply work health and safety practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- water monitoring schedules and guidelines
- standards for water quality
- sampling and testing methods

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLPW307 Perform restricted diving for scientific purposes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to support a diving expedition for scientific research, monitoring and inspection using self-contained underwater breathing apparatus (SCUBA) for both air and enriched air nitrox (EAN) breathing gases.

The unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

Dive certificates and licensing apply for this unit and specific determination should be sought from the relevant state or territory authorities. This unit also requires compliance with the current version of the Australian Standard for training and certification of occupational divers for restricted occupational self-contained underwater breathing apparatus (SCUBA).

Pre-requisite Unit

SISOSCB001 SCUBA dive in open water to a maximum depth of 18 metres

SISOSCB006 Perform diver rescues

HLTAID011 Provide First Aid

HLTAID015 Provide advanced resuscitation and oxygen therapy

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

5. Check and store equipment	<p>5.1 Remove and assist others to remove dive attire and equipment according to workplace procedures</p> <p>5.2 Disassemble and remove equipment from dive site on completion of dive</p> <p>5.3 Check and test dive equipment for condition and correct operation</p> <p>5.4 Arrange for repair or replacement of faulty equipment according to workplace procedures</p> <p>5.5 Store equipment according to manufacturer instructions and workplace procedures</p> <p>5.6 Maintain records of equipment use according to workplace procedures</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
6. Debrief diving team	6.1 Review and assess procedures and outcomes of dive plan with dive team 6.2 Identify recommendations to amend procedures and dive plan 6.3 Record dive team debriefing session according to workplace procedures
7. Review diving program	7.1 Compile recommendations for amendments to procedures and dive plans 7.2 Review dive plan and amend as appropriate 7.3 Record and report review conclusions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret dive plans and instructions and consolidates information to determine requirements for dive
Writing	<ul style="list-style-type: none"> Accurately complete organisational records and programs using clear language and industry terminology
Oral Communication	<ul style="list-style-type: none"> Effectively participate in verbal exchanges with dive team using collaborative and inclusive techniques including active listening and questioning and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Interpret numeric information to determine pressures and to assess and calculate dive times based on depth, pressure and no-decompression tables

Assessment Requirements for AHCLPW307 Perform restricted diving for scientific purposes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared for scientific dives and has:

- interpreted dive objectives and planned the equipment, resources, and consumables required to carry out a dive
- prepared resources, equipment and dive team for dive: including:
 - inspected equipment for signs of deterioration, damage or corrosion and tested for proper operation
 - selected equipment for dive and ensured correct storage during transport
- used decompression tables, including Defence and Civil Institute of Environmental Medicine tables (DCIEM) to calculate safe diving profiles, including:
 - depth increments
 - time increments
 - stop time
 - ascent rates
 - total decompression time
 - bottom time
 - total dive time
 - surface interval
- used decompression tables to calculate the following without error:
 - 'No stop' bottom time for a given depth
 - decompression depth/time increments
 - repetitive dive time increments
- prepared compressed air and enriched air nitrox cylinders (EAN) for diving operations according to legislative requirements, including:
 - inspected and maintained compressors
 - determined cylinder pressure for dive

- charged air cylinders using high pressure air compressor according legislative requirements, and workplace health and safety procedures
- charged air cylinders by decanting according legislative requirements, and workplace health and safety procedures
- tested the quality of gas
- analysed oxygen content of dive mix for EAN
- used approved cylinder types for compressed air and EAN according to Industry standards and workplace health and safety procedures
- maintained positive pressure in EAN cylinders to prevent ingress of atmospheric air
- carried out pre-dive checks and performed a safety risk assessments for dive site
- ensured availability of first aid equipment, and oxygen administration kit
- monitored dive conditions, responded to incidents and amended dive procedures according to identified issues.

There must also be evidence that the individual has undertaken dives using compressed air and EAN in open water to a maximum depth of 30 metres which must include the following dives:

- one dive between 27 metres and 30 metres
- two dives with zero visibility in two to nine metres depth of water with a minimum of 20 minutes per dive
- one night dive
- four boat dives
- four dives at depths greater than 20 metres, simulating decompression stops during ascent
- at least three dives must be undertaken using EAN procedures including:
 - selected the blend and equipment to meet industry and safety criteria for EAN operations
 - conducted dive preparation for EAN dives according to industry standards, workplace health and safety policies and equipment manufacturer operating procedures
 - completed EAN dive according to dive plan and EAN procedures

Dives must be undertaken in conformance with statutory work health and safety, Australian Standards and codes of practices, with evidence the individual has:

- fitted and removed dive equipment and assisted other divers to fit and remove dive equipment in correct sequence
- selected water entry and exit methods appropriate to the situation and water conditions
- entered and exited water safely with no damage to equipment and assisted other divers to enter and exit water
- checked and reported dive equipment for leaks on entering water
- conducted dive in open water safety according to dive plan, including:
 - adapted operational techniques according to prevailing conditions
 - used buoyancy control techniques and equipment appropriate to diving conditions
 - demonstrated correct breathing techniques
 - demonstrated decent and ascent techniques appropriate to the dive conditions
- demonstrated safety-critical underwater skills during dive, including:

- monitored gas consumption and gas supply and ascended when predetermined level of gas remained to prevent exhaustion of gas supply
- changed over to reserve gas supply and notified surface
- managed life line to minimise entanglement and facilitate line signals
- followed life line to surface
- monitored depth and time throughout the dive
- conducted dive practices for compressed air and EAN within diving maximum limits to meet industry technical standards and workplace health and safety policies and procedures
- conducted specified dive operations according to objectives of operational dive plan
- used basic non-powered hand tools to complete objectives according to planned dive operations
- checked, cleaned maintained and stored hand tools according to workplace procedures
- communicated with others in the dive team underwater, diver to diver and diver to surface using each of the following:
 - hand signals
 - line signals
 - voice communications
- demonstrated decompression procedures according to dive profile using each of the following:
 - lazy shot rope
 - fixed shot rope
 - lazy shot rope during drift dives
 - lazy shot using a life line
 - float line
 - ascent rate control and depth control at water stops
- performed at least two of the following search techniques during the dive:
 - circular
 - jackstay grid
 - snag line
 - grid mesh
 - semi-circular
 - parallel
- performed at least two of the following survey techniques during the dive:
 - line transect
 - quadrat search
 - photographic quadrat
 - video transect
 - timed swim
 - measured time swim

- used basic rope work and rigging techniques during dive operations using the following knots:
 - reef knot
 - bowline
 - clove hitch
 - rolling hitch
 - round turn and two half hitches
 - sheet bend
 - figure of eight
 - figure of eight on the bite
- established effective working relationships with dive team, including:
 - established communications under water
 - monitored dive team members for compliance with 'no-decompression' requirements
 - debriefed dive team after dive activity
- communicated and activated an emergency management plan and taken action in an emergency situation including:
 - used emergency drills, procedures and methods
 - acted as a surface standby diver
 - acted as an in-water standby diver when divers are near enough to communicate and act as standby diver for each other
 - performed an effective in-water rescue of an unconscious diver to boat or shore
 - acted in a self-rescue emergency situation
- performed first aid on diving casualty which must include:
 - recognised and assessed diver for adverse health conditions
 - determined if emergency services are required and obtain and provide support
 - administer first aid to diving casualty promptly according to workplace procedures
 - used an oxygen administration kit
- performed post dive personnel and equipment checks, including:
 - check and report supporting diver condition
 - read and record cylinder pressure
- reviewed dive plans following debriefing and risk analysis
- disassembled, cleaned, inspected, maintained and stored compressed air and EAN diving equipment according to manufacturer instructions including:
 - ensured EAN compatible parts and processes for elevated oxygen mixture according to industry standards and workplace health and safety procedures
 - reported equipment faults according to workplace procedures following dive
- maintained records according to industry standards and workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- industries associated with underwater work and the type of work performed
- qualifications, legislative and regulatory requirements for occupational divers including restricted occupational SCUBA diving and occupational health and safety legislation as it relates to divers and their employers.
- dive planning processes, including risk assessment, hazard identification and control
- additional planning required for EAN diving, including:
 - requirements of EAN use and associated hazards
 - aspects of dive plan where EAN specific considerations are needed
- use of industry recognised decompression tables and dive computers to plan and carry out safe diving practices
- anatomy, physiology and physics of underwater diving, including:
 - anatomical and physiological systems of the human body including respiratory, circulatory and nervous systems, musculoskeletal, cardiovascular, ears, sinuses, vestibular organs, gastrointestinal, endocrine and immune systems
 - common units of measurement and the relationship between pressure, volume and temperature in the context of diving
 - definitions of atmospheric pressure, hydrostatic pressure, absolute pressure, ambient pressure and gauge pressure
 - Boyles Law and relationship between pressure and volume and the calculations relevant to depth and pressure
 - barotrauma and typical barotrauma injuries
 - use of decompression tables to determine safe diving profiles
 - partial pressure and gas solubility and their effect on the human body including Daltons Law
 - basic relationship between pressure and temperature including Charles Law, and calculating pressure changes with temperature
 - effect of buoyancy and effect on divers and underwater objects including Archimedes Principle including, diffusion, saturation, desaturation, equilibrium
 - behaviour of light and sound underwater and impact on divers, including equipment used to compensate
 - impact of temperature on cylinder pressure
 - heat loss and impact on diver
 - decompression as it relates to partial pressure and solubility of gasses (Henry's Law)
 - inert gas narcosis
- diving equipment, testing, operation and maintenance including:
 - selecting diving equipment for operational activities
 - assembly and disassembly of equipment used in dive operations
 - pre and post dive checks and maintenance

- selection of appropriate diving equipment for required tasks such as masks, fins, cylinders, regulators, buoyancy compensation devices, harnesses, weights and safety devices
- compressors for air and EAN cylinder charging
- safety procedures
- inspecting equipment and signs of disrepair
- gas quality and gas testing standards used in Australia
- record keeping practices for equipment
- correct fitting and removal of dive equipment on divers including assisting others on fitting and removal
- types of ropes used in diving operations their purpose, application, including:
 - care and maintenance
 - basic rigging techniques
 - knots and other rigging devices used in diving operations their purpose and application
- tools and equipment for scientific diving operations, their use and maintenance
- navigation, search and recovery techniques and their application in scientific diving
- survey techniques and their application in scientific diving
- health and safety risks associated with diving, including:
 - statutory health and safety requirements
 - standards and codes of practice
 - roles and responsibilities
 - risk assessment and developing control measures
- emergency procedures and their implementation, including:
 - dive rescue procedures
 - oxygen administration procedures
 - agency standing orders for notification
 - emergency service procedures
 - recognising the need for decompression chamber and support
- first aid for divers, including:
 - recognising signs and symptoms of diving related ill health including, decompression illness, mask and suit squeeze, ear and sinus problems, near drowning, vomiting under water, gas embolism and pulmonary barotrauma, breathing gas contamination, carbon monoxide poisoning, carbon dioxide poisoning, oxygen toxicity, anoxia and hypoxia, hypothermia and hyperthermia, injury/illness from marine organisms
 - assessing when first aid is required
 - administering first aid to divers
 - use of defibrillators in a wet environment
- compression chamber theory
- specialised diving modes including but not limited to zero and low visibility diving, tethered, night and deep diving.
- effective teamwork and team communications, including

- underwater communication procedures and equipment
- statutory and workplace record keeping procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in open water to a depth of no greater than 30 metres
 - conditions must comply with the current version of the Australian Standard for training and certification of occupational divers - restricted occupational SCUBA diver
- resources, equipment and materials:
 - SCUBA equipment
 - safety equipment
 - compressors for filling cylinders with air and enriched air nitrox
 - cylinders for filling and use
 - tools and equipment for conducting dives, searches and surveys
- specifications:
 - workplace documents such as policies, procedures, processes, forms
 - manufacturer's operating instructions for equipment
 - workplace instructions and job specifications including risk assessment requirements
 - legislation, codes of practice and standards for occupational diving
- relationships:
 - dive team member
- timeframes:
 - dives must comply with times specified in no-decompression tables and calculations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

In addition, the following specific assessor requirements apply to this unit:

- assessors must be qualified as occupational SCUBA diving instructor through a recognised diver training organisation.
-

AHCLPW308 Coordinate and report on data collection

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to coordinate the collection and organisation of data, simple treatments and sorting of the data, and its storage in a digital recording system.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm requirements of data collection	1.1 Clarify and confirm data format and collection requirements 1.2 Identify source of errors and expected tolerance in data sets 1.3 Select equipment and materials required to collect and store data 1.4 Prepare data capture equipment according to workplace procedures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Identify and confirm data rights and access arrangements 1.6 Establish data backup and data security arrangements 1.7 Identify reporting requirements
2. Coordinate data collection	2.1 Assemble equipment and materials for data collection 2.2 Brief work team on processes, methodology and requirements 2.3 Coordinate data recording, collection and entry 2.4 Check, sort, transfer and store data 2.5 Apply treatments to data according to workplace data management procedures and level of authority 2.6 Implement data backup and data security arrangements 2.7 Implement access arrangements to data set
3. Report on data collection	3.1 Review data collection activity and identify improvements 3.2 Identify data security risks 3.3 Report on data collection and security risks according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCLPW308 Coordinate and report on data collection

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, coordinated and used data collection equipment to capture, record and manipulate data for conservation and land management work.

There must also be evidence that the individual has:

- clarified and confirmed data collection activity, including:
 - purpose of data collection
 - data verification checks
 - data manipulations required
 - the format data is to be collected and presented in
 - type and nature of data
- identified potential source of errors and tolerances for final data set
- selected equipment and materials required for data collection and transported according to workplace procedures
- briefed work team on recording processes, methodology and requirements
- coordinated data collection and recording
- checked, sorted, transferred and stored data according to data collection requirements
- applied simple manipulations to data, including:
 - identified data with labels or metadata
 - performed calculations for totals and averages
 - selected range and outlying records
 - measured effort
- backed up data and managed access and security arrangements and identified data security risks
- reported on data collection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of data and formats used in conservation work, including ecological, cultural, geographical and resources
- checks and treatments of data used in conservation work: adding labels/metadata, totals, averages, range, outlying records, measure of effort
- sources of error and tolerance in data sets
- equipment and materials used for data recording, including:
 - paper-based records
 - digital technology – tablets, laptops, desktops
 - cameras
 - loggers
 - support equipment – power banks, batteries, cords and connections
 - software
- movement and transport methods for electronic equipment
- data rights and access agreements
- data backup and data security procedures and risks
- reporting methods.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field for specific data collection activities, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - data collection and storage materials, hardware and software
- specifications:
 - workplace policies and procedures for data collection, storage and security
 - workplace instructions and specifications for type of data to collect and required manipulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW309 Operate remotely piloted system for conservation work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate remotely piloted systems (RPS) for support, imaging and management for conservation work.

The unit applies to individuals who work under broad direction and take responsibility for their own work, including limited responsibility for the work of others. They use discretion and judgement in the selection and use of available resources.

Commonwealth, state/territory and local government licensing, legislative or certification requirements may apply to the use of RPS. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine operational plan for use of remotely piloted system	1.1 Clarify and confirm objectives of RPS operations plan 1.2 Confirm location and operational route of system 1.3 Identify operating conditions and hazards, assess risk and implement controls according to workplace health and safety

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	procedures 1.4 Select equipment and materials required for RPS operations 1.5 Confirm workplace operating procedure to be followed with supervisor/controller 1.6 Verify licences, permits and agreements have been approved for operations according to workplace procedures and regulatory requirements
2. Prepare and transport equipment and resources	2.1 Assemble equipment and materials required for RPS operations 2.2 Check equipment for correct operations and functionality according to operator instructions 2.3 Clean and maintain RPS ready for use, and rectify faults 2.4 Transport equipment to site/s and prepare for operation 2.5 Set parameters for RPS according to operations plan and operational route 2.6 Test and calibrate equipment under field conditions in preparation for operation
3. Commence use of piloted system	3.1 Operate RPS according to safe operating procedures (SOP), planned route and regulatory requirements 3.2 Monitor and record operations 3.3 Perform RPS tasks according to RPS operations plan 3.4 Record and report incidents and unplanned events to supervisor/controller
4. Finalise operation of remotely piloted system for conservation work	4.1 Shut down and disassemble RPS according to operator instructions 4.2 Process data files 4.3 Maintain and store RPS according to workplace procedures 4.4 Report results of RPS operations according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret maps, charts and plans for determining operational route of RPS
Numeracy	<ul style="list-style-type: none"> Interpret and manipulate distances, altitude/depth and speed for determining operating parameters of RPS and inputting operational route into devices

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, operated a remotely piloted system for conservation and land management work according to legislative and regulatory requirements.

There must also be evidence that the individual has:

- confirmed operational objectives, parameters and regulatory requirements with supervisor
- interpreted workplace procedures for operation of remotely piloted system (RPS)
- selected and prepared RPS equipment and resources
- maintained and transported RPS equipment to operations site
- checked RPS equipment for correct operation
- adjusted settings on RPS, controller and attachments according to operations plan and operational route objectives, including:
 - lens and camera adjustments for imaging objectives
 - adjustments of attachments
 - operational route perimeter and altitude
 - automated responses
 - safety factors
- operated RPS according to regulations, safe operating procedures and route plan
- monitored, recorded and reported operational information, incidents and unplanned events
- downloaded, sorted, labelled and stored digital and route data
- shut down, disassembled and stored RPS according to operator instructions and workplace procedures
- reported on operation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations and the expectations of stakeholders in the area of operation
- permissions, permits and authorisation required for use of RPS in different land management settings
- workplace procedures and safe operating principles for operation of RPS
- RPS system components, controllers, cameras and other attachments and their safe operation
- calibration of RPS system components
- computing hardware and software to support RPS operation
- planning processes, including:
 - assessments of hazards, risk, and risk control
 - terrain
 - weather conditions
 - operational limitations
- transport and storage of remotely piloted systems equipment, including efficient use, recharge and storage of batteries
- operations for which RPS are commonly used in land management, including:
 - photography and videography
 - collecting samples from inaccessible sites
 - pest and weed control operations
 - monitoring and mapping activities
 - search and rescue operations
- recording, processing and storing data collected by RPS, including:
 - digital photographs and videos
 - operational route information
 - geographic information system (GIS) data
- reporting and recording methods and procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a conservation and ecosystem management site
- resources, equipment and materials:
 - RPS and attachments specified in the operations plan
 - tools and equipment for assembling and maintaining the RPS
 - specific items of personal protective equipment
- specifications:

- workplace policies and procedures for operating and reporting on RPS use
- manufacturer operating instructions for RPS and attachments
- RPS operations plan
- regulations relating to the RPS
- relationships:
 - supervisor/controller
- timeframes:
 - according to times specified in operations plan and permits.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW310 Supervise park visitor activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to provide information and advice, and to supervise public access and activities within a park or reserve.

The unit applies to individuals who work with visitors and the general public in parks or reserves. They operate under broad direction and use discretion and judgement in the selection and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Provide information on opening and closing times	1.1 Operate security systems for entry to parks and facilities 1.2 Inform public of opening and closing times
2. Advise public on park or reserve access and activities	2.1 Communicate with visitors according to workplace procedures and legislative requirements 2.2 Inform public of responsibilities and safety requirements when

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	using park facilities 2.3 Conduct a risk assessment of park and its facilities for suitability for visitor access 2.4 Inform public of changes of access to park and its facilities when conditions are not suitable
3. Monitor visitor activities	3.1 Monitor visitor activities for risk to environmental degradation, or damage and biosecurity risk 3.2 Monitor visitor activities to ensure safety of staff and visitors 3.3 Assess visitor activities and implement control measures for non-compliance with site access conditions 3.4 Report and respond to incidents according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral Communication	Communicate effectively with visitors using appropriate language, tone and pace

Unit Mapping Information

Assessment Requirements for AHCLPW310 Supervise park visitor activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least two occasions, supervised visitor access to a park and its facilities. At least one interaction should represent a difficult parks customer/visitor.

There must also be evidence that the individual has:

- assessed the park and facilities for safe access
- provided information to visitor on access, activities and safety requirements
- monitored visitor activities, ensuring compliance with park requirements, including:
 - conditions of entry
 - safety of visitors and parks staff
 - environmental requirements
- identified issues of non-compliance activities and implemented control measures
- reported incidents according to workplace procedures and legislative requirements
- followed workplace health and safety policies and procedures, and monitored visitor activities to ensure safety of general public.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- strategies for effective communication with visitors, including:
 - methods of communication
 - reading and recognising visual cues
 - dealing with difficult visitors
- policies and procedures for visitors accessing parks site and facilities, including:
 - personal and legal authority to act on non-compliance with site access conditions

- procedures for notifying visitors of changed conditions
- park conditions that may render restricted access, including:
 - road and track degradation
 - environmental and ecological exclusions
 - weather
 - temporary or seasonal closures
 - safety concerns
- enterprise procedures, workplace health and safety and legislative requirements
- enterprise security systems for accessing parks and facilities, including:
 - surveillance and monitoring
 - gates and keyed locking systems
 - locks and keypads
 - surveillance systems
- conditions for visitors entering park.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a park or reserve with relevant security and facilities appropriate for visitor access, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - communications equipment
- specifications:
 - policies and procedures for park access and communications protocols with visitors
- relationships:
 - visitors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW311 Construct access tracks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to construct access tracks and clear vegetation on rural land, and implement erosion control by using specialised earthmoving techniques at fine tolerances.

The unit applies to individuals who work in land management, performing work that is often carried out in varied conditions and landscapes that require operators to develop skills that are unique to this sector. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems

Licenses for heavy vehicles and excavation equipment and machinery may be required in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for construction of access track	1.1 Confirm construction details and work sequence with construction plans and supervisor 1.2 Obtain permits and licences required for construction according to regulatory planning and environmental legislation

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Locate survey pegs and site indicators on work site 1.4 Conduct visual survey of planned track location to determine track construction control points 1.5 Select and prepare equipment and attachments for tasks and terrain 1.6 Follow workplace health and safety procedures and environmental procedures 1.7 Schedule and coordinate work team, materials and equipment
2. Construct access track	2.1 Use earthworks methods and patterns for specific machines during construction 2.2 Monitor and maintain optimum machine loads for prevailing conditions 2.3 Operate machinery safely using techniques and procedures for site conditions and terrain 2.4 Conduct track construction works according to job sequence and industry best practices 2.5 Clear vegetation according to planned earthworks, environmental procedures and industry best practice 2.6 Liaise and communicate with stakeholders during the construction activity 2.7 Complete documentation required by workplace 2.8 Ensure construction work complies with environmental, sustainability, biosecurity and workplace health and safety requirements
3. Apply final finish to track	3.1 Apply surface finish to track according to job specifications and industry best practice 3.2 Retain site features and vegetation according to planned works and specifications 3.3 Clean site and remove construction equipment and waste material according to specifications and workplace environmental and biosecurity procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret basic construction plans and specifications, and consolidate information to determine equipment required, methods and location of track and the tolerances required
Numeracy	<ul style="list-style-type: none"> Make measurements and perform calculations to check site layout against plans for track construction Make basic volumetric calculations for measuring and estimating excavation materials during construction works

Assessment Requirements for AHCLPW311 Construct access tracks

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, demonstrated the ability to construct an access track in a rural or land management context.

There must also be evidence that the individual has:

- selected and prepared equipment suitable for track construction works
- conducted a site survey to determine control points, including identified:
 - required grades
 - water crossing points
 - and structures
- confirmed construction works activities and regulatory compliance with supervisor or project manager
- operated equipment safely to construct track according to job sequence, specifications and workplace procedures and industry standards, including:
 - excavated
 - transported
 - dumped
 - compacted road material
 - finished track surface
- cleaned work site to according to environmental, biosecurity and workplace procedures
- operated machinery according to manufacturer and safe operating procedures
- complied with workplace procedures and policies during construction works, including:
 - workplace health and safety
 - biosecurity
 - environmental
 - and sustainability.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- erosion and sediment control standards, principles and issues that apply to the construction of tracks in land management, including:
 - soils and soil formation
 - total catchment issues
 - how to manage peak water flows
 - subsurface and surface drainage principles and systems
- control points relevant to track construction, including:
 - required grades
 - water crossing points
 - structures
- safety while working on a construction site, including:
 - proximity to machinery
 - personnel
 - impediments
 - terrain
- construction of tracks and sequencing of track construction works, including:
 - excavation and earthmoving principles
 - transport
 - dumping
 - compaction
 - surface finish
- site communications and methods
- recognising the stakeholders and their impact on construction works, including:
 - neighbouring landholders
 - local authorities
 - special interest groups
 - staff
 - clients
 - contractors
- legislative and regulatory requirements and codes of practice relevant to track construction, including:
 - wildlife
 - environmental
 - planning
 - ground water
 - biosecurity
- permits and licenses required for the construction of access tracks.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a surveyed and pegged out track construction site with designated control points
- resources, equipment and materials:
 - machinery and equipment suitable for track construction
 - personal protective equipment
- specifications:
 - policies, procedures and processes for compliance with biosecurity, environmental and legislative requirements
 - manufacturer operating instructions for machinery and equipment
 - workplace track construction plans and specifications
 - legislation and codes of practice relevant to track construction works
- relationships:
 - construction team members and supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW312 Carry out inspection of designated area

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out an inspection of a designated area.

The unit applies to individuals who work under broad direction and use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

Vehicle licenses apply to this unit. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define area and target of inspection	1.1 Confirm location and size of area to be inspected 1.2 Identify features of natural environment in target area 1.3 Set frequency of inspection according to management strategy 1.4 Determine targets of inspection from management strategy 1.5 Confirm characteristics and favoured conditions for targets with management

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Carry out risk assessment and minimisation	<p>2.1 Check time and duration of inspection and notify relevant personnel</p> <p>2.2 Identify risks to the environment associated with the inspection</p> <p>2.3 Take precautions to minimise environmental risks associated with the inspection</p> <p>2.4 Identify safety hazards associated with the inspection</p> <p>2.5 Follow work health and safety policies and procedures to minimise safety risks</p>
3. Prepare for inspection	<p>3.1 Identify vehicles, equipment and materials required for the inspection</p> <p>3.2 Check vehicles, equipment and materials for serviceability</p>
4. Carry out inspection	<p>4.1 Operate vehicles and equipment safely during inspection</p> <p>4.2 Carry out inspection within the specified area</p> <p>4.3 Identify and record target occurrence as required by the management strategy</p> <p>4.4 Enter private property according to statutory requirements and workplace procedures</p> <p>4.5 Communicate with stakeholders according to regulatory requirements and workplace procedures</p> <p>4.6 Implement controls to minimise risk to the environment and personnel</p> <p>4.7 Note and report incursions of non-targeted threats</p>
5. Establish the impact of the specified target	<p>5.1 Collect information on potential impacts from stakeholders</p> <p>5.2 Collect and analyse data on environmental hazards resulting from target presence</p>
6. Prepare a report	<p>6.1 Document collated data, inspection records and analysis of findings with appropriate recommendations</p> <p>6.2 Report targets as required by legislation or regulation</p> <p>6.3 Submit report to supervisor or other authority</p> <p>6.4 Ensure samples submitted comply with legislative requirements or regulations</p> <p>6.5 Clean and store equipment and materials according to industry</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	standards

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Communicate the relationship between collated information and data for inspection objectives into a report in a style appropriate to the audience Select and use vocabulary, grammatical structures and conventions appropriate to the report and reader
Oral Communication	<ul style="list-style-type: none"> Interact with stakeholders using appropriate collaborative and inclusive techniques relevant to the individual, including active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Select and interpret familiar numerical information for calculating areas of site and for determining timing and duration of inspections

Assessment Requirements for AHCLPW312 Carry out inspection of designated area

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted at least one inspection for a designated area for a specified purpose, including:

- defined the scope, criteria and target on which to base inspection
- defined the hazards and risks to work health and safety and the environment associated with inspection
- conducted inspections, complying with statutory requirements and workplace protocols for entry to private property
- conducted inspections in a manner that minimises environmental impacts
- operated equipment and vehicles during the inspection according to workplace procedures
- established environmental impacts caused by target
- produced a report that:
 - documents the inspection findings and results
 - analyses the outcomes of inspection
 - provides recommendations and follow-up actions
- complied with workplace health and safety practices while conducting the inspection
- implemented controls to minimise environmental risks during inspection.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- risk management processes, including:
 - identifying hazards
 - analysing and ranking risk
 - identifying and implementing controls
 - monitoring risk

- types and characteristics of inspection targets
- procedures and techniques for planning and conducting inspections, including:
 - defining the inspection scope and purpose
 - working with stakeholders
 - gathering and collating information and data
- monitoring of designated areas and techniques used
- basic reporting procedures, including:
 - analysing information and data
 - presenting the analysis in a written form
 - decision making and defining recommendations
 - basic report writing skills
- legislative and regulatory requirements, including environmental protection legislation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for an actual inspection on a defined area
- resources, equipment and materials:
 - specific tools and equipment required for the inspection and specified target
 - computer or similar device for collating, analysing and documenting inspection results
- specifications:
 - workplace policies, procedures and processes for conducting inspections
 - workplace instructions and specifications for purpose and scope of inspection
 - legislation and regulations governing access to private premises
- relationships:
 - stakeholder/s.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW313 Undertake sampling and testing of water

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan and carry out sampling and testing of water quality as part of a monitoring program.

The unit applies to individuals who work in the land management sector. They work under broad direction and use discretion and judgement in the selection, allocation and use of available resources and for problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for sampling and testing fieldwork	1.1 Confirm sampling and testing program from supervisor instruction and sampling plan 1.2 Identify parameters for water quality tests 1.3 Identify characteristics and number of samples to be collected 1.4 Identify and select equipment required for water sampling and testing

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Identify hazards, assess risks and implement controls for safe operating conditions and environmental impact of sampling and testing
2. Prepare equipment and resources	2.1 Obtain equipment required for sampling and testing 2.2 Check equipment for availability and serviceability 2.3 Check and calibrate equipment according to workplace procedures and industry standards 2.4 Prepare data or recording documents ready for use 2.5 Secure testing equipment 2.6 Commence use of testing equipment
3. Carry out sampling and testing of water	3.1 Collect and test water samples according to sampling and testing program, industry standards and workplace procedures 3.2 Prepare, package and store samples for transport 3.3 Conduct and record observations for ambient and antecedent environmental conditions 3.4 Report urgent water quality or environmental issues according to workplace procedures
4. Complete water sampling and testing activities	4.1 Clean, check and store equipment 4.2 Consign unserviceable equipment to specialist for repair 4.3 Check data for accuracy and integrity 4.4 Record and report test results and observations according to workplace procedures and traceability requirements 4.5 Report changes in field conditions and equipment

Foundation Skills

Assessment Requirements for AHCLPW313 Undertake sampling and testing of water

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected, tested, prepared and dispatched at least five water samples to a laboratory. The water samples must be from at least three of the following bodies of water:

- fresh water – river or stream
- fresh water – lakes or impoundments
- storm water and drains
- marine – open ocean
- marine – coastal or intertidal
- salt lakes
- water with high turbidity
- farmland dams and impoundments
- bore water.

There must also be evidence that the individual has:

- planned a water testing and sampling program under direction according to regulatory and organisation requirements
- tested, verified accuracy and prepared equipment according to manufacturer instructions and regulatory and workplace requirements
- collected and tested water samples according to regulatory requirements, workplace procedures and industry standards, including tested for at least five of any of the following:
 - pH
 - electrical conductivity
 - dissolved oxygen
 - turbidity
 - nitrate

- phosphorous
- prepared data sheets and recorded results
- reported water testing results according to workplace procedures
- reported urgent water quality and environmental concerns observed during sampling according to workplace procedures
- ensured traceability forms have been completed for environmental protection agencies
- applied workplace health and safety practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- water monitoring in land management, including:
 - purpose for testing water
 - types of water bodies and their related ecological and environmental characteristics
 - scheduling guidelines for testing water quality
 - standards for water quality
- methods and steps involved in collecting water samples, including:
 - water sampling equipment operation and maintenance
 - sampling techniques and procedures
 - storing water samples
 - transporting water samples
 - packaging and labelling for despatch to laboratories
 - packaging and labelling procedures for workplace testing
- purpose of water test, equipment used, methods and procedures, including for:
 - temperature (in situ)
 - pH
 - electrical conductivity
 - dissolved oxygen
 - turbidity
 - nitrate
 - phosphorous
- varied operating conditions, hazards and environmental conditions that may impact sampling and testing in the field.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- skills must be demonstrated in the field, on sites covering a range of environments indicated in the Performance Evidence
- access to a water testing laboratory or an environment that accurately represents a water testing laboratory
- resources, equipment and materials:
 - equipment and resources required for collecting and storing water samples
 - equipment and consumables used for conducting tests on water samples
- specifications:
 - workplace procedures and processes for collecting and testing water samples
 - manufacturer operating instructions for testing equipment
 - safety data sheets for chemical reagents used in testing procedures
 - workplace instructions and specifications for purpose of water sampling
 - legislation, codes of practice and industry standards for conducting tests.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW406 Supervise the monitoring of biodiversity

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to supervise a biodiversity monitoring program in a given area, and record and summarise findings.

The unit applies to individuals who work as natural area managers and seek information on natural systems or areas. These individuals take limited responsibility in known or changing contexts within established guidelines.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for monitoring biodiversity	1.1 Determine aims and goals of monitoring plan 1.2 Select monitoring operations to obtain data required in monitoring plan 1.3 Assess range of likely operating conditions, hazards and difficult or sensitive environments for impact on monitoring 1.4 Consider alternative land, sea and air operations to collect data

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.5 Obtain certificates, licenses and authorisations to conduct monitoring plan</p> <p>1.6 Identify hazards, assess risk and document controls according to workplace health and safety procedures</p>
2. Select and test equipment, resources and data management processes	<p>2.1 Source resources required for monitoring</p> <p>2.2 Pilot monitoring procedures in field conditions to test reliability, timeline and safety</p> <p>2.3 Ensure equipment and process prevents lasting detrimental impact on environment</p> <p>2.4 Develop procedures to capture, maintain, process and store data</p>
3. Oversee biodiversity monitoring	<p>3.1 Oversee observations according to monitoring plan</p> <p>3.2 Coordinate recording, preparation and storage of data</p> <p>3.3 Validate data collection and recording accuracy according to monitoring plan and workplace procedures</p>
4. Collate and assess data, and report on biodiversity monitoring	<p>4.1 Document and submit reporting requirements for certificates, licenses and authorisations</p> <p>4.2 Examine records of monitored data for consistency and accuracy within requirements of the monitoring plan</p> <p>4.3 Process data sets and produce a summary for reporting purposes</p> <p>4.4 Compile and update data storage according to workplace procedures</p> <p>4.5 Report on biodiversity monitoring program according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyse biodiversity monitoring plans and consolidate information for the development of the monitoring program

Assessment Requirements for AHCLPW406 Supervise the monitoring of biodiversity

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, prepared and supervised a biodiversity monitoring program.

There must be evidence that the individual has:

- selected monitoring operations and assessed conditions and data collection methods from the biodiversity monitoring plan
- selected, sourced and tested equipment suitable for monitoring procedures
- identified systems to capture, maintain and analyse data
- supervised monitoring tasks and data collection for biodiversity
- validated, processed and stored data according to workplace procedures
- analysed and compiled data and reported on biodiversity monitoring.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- monitoring biodiversity in different ecosystems and the impact of their structure and interactions for monitoring
- identifying flora and fauna and methods of monitoring, including:
 - plants
 - major groups of fungi
 - mammals, birds, reptiles and amphibians
 - major groups of insects
- monitoring techniques for flora, fauna and microorganism populations
- legislative and regulatory requirements for biodiversity monitoring, including:
 - ethics and ethical standards

- animal welfare
- permits and applications processes
- property access
- protecting the environment
- principles and procedures for monitoring changes over time with respect to project goals
- resource requirements for supervising a biodiversity program, including:
 - personnel
 - monitoring equipment
 - materials
- scientific processes and procedures for monitoring biodiversity
- data recording and data validation techniques.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field for a regional biodiversity monitoring program, or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computer with data management and storage software
- specifications:
 - use of specific workplace policies, procedures, processes and application forms required to administer biodiversity monitoring programs
 - access to legislation relevant to flora and fauna conservation and biodiversity
- relationships:
 - team engaged in biodiversity monitoring.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW407 Process applications for changes in land use

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess the impact of changes in land use and to process applications from landowners for change.

The unit applies to individuals who work in land management roles under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish client requirements	1.1 Discuss and confirm the application for proposed changes with the landholder 1.2 Review the catchment characteristics in view of the proposed land use 1.3 Explain current impacting legislation and policies to the landholder

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Discuss possible strategies with the landholder and confirm the best option
2. Determine scope of the request	2.1 Determine profile of site from survey and aerial photographs 2.2 Undertake initial inspection checks against legislative or agency procedures 2.3 Check native vegetation types against maps and local guidelines 2.4 Check threats to local species against local resources 2.5 Check catchment characteristics of the land 2.6 Determine the impact on soil and water of proposed land use 2.7 Assess cultural heritage issues according to agency guidelines 2.8 Consider the application against eligibility criteria, and according to workplace policies and legislation
3. Present findings	3.1 Provide applicant with technical data following program guidelines 3.2 Report findings relating to the formal application 3.3 Inform applicant of specific requirements relating to submitting a formal application 3.4 Communicate and confirm assessment process 3.5 Communicate potential risks associated with proceeding with the application

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically interpret and analyse application forms from clients, and consolidate information to make determinations and recommendations
Oral Communication	<ul style="list-style-type: none"> Use collaborative and inclusive techniques to elicit and clarify information for clients and present outcomes of assessment of

Assessment Requirements for AHCLPW407 Process applications for changes in land use

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has received and processed at least one application from a landowner to make change to land use, including:

- established client intentions and requirements
- communicated the process, policies and relevant legislation to the applicant
- discussed the scope and application of the submission in light of preliminary discussion
- presented findings and feedback to the applicant
- provided further information and explained the appeal process if application is rejected
- explained provisions within federal and state legislation on relevant land use to landholder
- interpreted aerial photographs, maps and geographical information systems to identify particular landmarks and areas
- undertaken investigations to determine scope and impact of request.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- applications process for changes in land use, including:
 - documentation
 - roles and responsibilities
 - procedure for administering application
 - process for appeals if application is rejected
- relevance and impact of federal and state legislation and regulations related to land use
- catchment characteristics of land in question, including:
 - potential for erosion
 - permeability

- acid potential
- fertility
- potential catchment sediment load
- ecological and environmental impacts of changes to land use, including:
 - vegetation types native to site
 - flora and fauna and habitat conservation
- assessing signs and landmarks of site, including the use of:
 - aerial photographs
 - maps
 - geographic information system (GIS)
- workplace and agency policies and procedures for processing applications
- communicating with stakeholders, including:
 - formats for presenting information to clients
 - oral communication skills
 - negotiation skills
 - managing landholder disputes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a property where there is an application for change in land use, or in an environment that accurately represents workplace conditions
- specifications:
 - - workplace policies, procedures, processes and forms relevant to changes to land use applications
 - change in land use application for client
 - legislation relevant to land use
- relationships:
 - client/s.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW408 Implement land and sea management practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement sustainable land and sea management practices for both Indigenous and non-Indigenous cultural landscapes for a given area according management plans and strategies, community guidelines and cultural protocols

The unit applies to individuals who are responsible for implementing management plans for conservation and land management work, and who apply specialist skills to provide solutions to technical and unpredictable problems. They work autonomously, instruct, and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine Indigenous land and sea management practices	1.1 Identify and follow cultural protocols when discussing and evaluating Indigenous land and sea management practices 1.2 Review Indigenous land and sea management plans and priorities

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Determine Indigenous practices for a specified area</p> <p>1.4 Determine resources for Indigenous management practices for a specific area or practice</p> <p>1.5 Seek advice and direction for Indigenous land and sea management practices</p> <p>1.6 Determine cultural protocols and customs relating to confidentiality of Indigenous land and sea management practices</p>
2. Determine non-Indigenous land and sea management practices	<p>2.1 Identify legislative, workplace and best practice parameters governing non-Indigenous land and sea management practices</p> <p>2.2 Review non-Indigenous land and sea management plans and priorities</p> <p>2.3 Determine non-Indigenous practices for a specified area</p> <p>2.4 Define resources for non-Indigenous land and sea management practices</p> <p>2.5 Seek advice and direction for non-Indigenous land and sea management practices</p>
3. Develop approach to implementation of land and sea management practices	<p>3.1 Contrast and compare Indigenous and non-Indigenous land management practices</p> <p>3.2 Develop options for land and sea management practices based on comparison</p> <p>3.3 Consult with stakeholders to confirm preferred options</p> <p>3.4 Prepare staging strategy for preferred option within budget</p> <p>3.5 Consult stakeholders of specified area in setting priorities for management work and practices</p>
4. Undertake land and sea management practices	<p>4.1 Undertake land and sea management practices according to agreed approach</p> <p>4.2 Undertake work according to workplace procedures, industry standards, community expectations and workplace health and safety policies and procedures</p> <p>4.3 Follow and respect cultural customs and protocols</p> <p>4.4 Ensure practices are carried out by authorised personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral Communication	<ul style="list-style-type: none"> Negotiate and confirm stakeholder needs using collaborative, inclusive and culturally appropriate techniques, including active listening and questioning and reading of verbal and non-verbal signals

Unit Mapping Information

Assessment Requirements for AHCLPW408 Implement land and sea management practices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, reviewed Indigenous and non-Indigenous land and sea management practices and determined and implemented an approach.

There must also be evidence that the individual has:

- consulted with key Indigenous and non-Indigenous stakeholders to determine land and sea management practices
- developed preferred options for land and sea management practices
- implemented land and sea management practices according to agreed approach and cultural customs and protocols
- applied workplace health and safety practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- cultural protocols of local Indigenous communities that relate to land and sea management activities, including:
 - cultural privacy, secrecy and confidentiality
 - land and sea rights and ownership
 - sacred and significant cultural sites
 - Indigenous artefacts
- Indigenous land and sea management practices
- non-Indigenous land and sea management practices
- planning and prioritising work activities, including:
 - sequencing and staging works
 - working within a budget

- resource requirements for land management practices, including:
 - human
 - technology
 - budget and financial constraints
 - equipment
 - materials
- strategies for implementing land and sea management practices
- workplace health and safety, environmental legislation and codes of practice.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a natural land and sea environment, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - resources relevant to the land and sea management strategy
- specifications:
 - specific workplace documents such as policies, procedures, processes, forms
 - workplace plans and priorities for land and sea management
 - legislation/codes of practice
- relationships:
 - Indigenous and non-Indigenous stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW409 Inspect and monitor culturally significant places

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to inspect and monitor the fabric and setting of heritage or culturally significant places to identify inconsistencies with conservation and management plans.

The unit applies to individuals who work in an environment requiring a high level of cultural awareness and the need to observe cultural protocols. They provide solutions to technical and unpredictable problems, work autonomously, instruct, and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for inspection	1.1 Determine significance of place from cultural and/or heritage management plans 1.2 Determine specific facilities and equipment required for inspection according to operational request

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Obtain charters and specifications for evaluating the condition of cultural place
2. Carry out comprehensive inspection	<p>2.1 Follow work health and safety policies and procedures for carrying out inspections</p> <p>2.2 Inspect condition of cultural place for deterioration and damage</p> <p>2.3 Assess and record non-conformity with conservation and management plans</p> <p>2.4 Evaluate deterioration and damage to the cultural place to determine impact on the significance</p> <p>2.5 Determine threats to cultural place</p> <p>2.6 Determine and schedule maintenance works for the cultural place</p> <p>2.7 Identify potential hazards, assess risk, and document controls for cultural place according to workplace safety procedures</p>
3. Submit report and recommendations	<p>3.1 Action urgent substandard cultural conditions in accordance with conservation management plan</p> <p>3.2 Document inspection into a draft report and submit to stakeholders for feedback</p> <p>3.3 Review frequency and scope of inspection requirements in management systems</p> <p>3.4 Develop recommendations for future action according to conservation management plan, industry best practice, legislative requirements and international environmental standards</p> <p>3.5 Prepare final report incorporating feedback and recommendations, and submit to management</p> <p>3.6 Update information management system with inspection results according to workplace procedures</p>
4. Monitor cultural area and surrounds	<p>4.1 Monitor cultural area for deterioration and damage</p> <p>4.2 Determine the short-term and long-term deterioration and impact on the significance of cultural place</p> <p>4.3 Plan required restoration or modification of potential deterioration of the cultural area and surrounds</p> <p>4.4 Integrate maintenance, restoration and modification of cultural place</p>
5. Monitor stakeholder	5.1 Seek feedback from stakeholders on the significance and

Elements	Performance Criteria

Assessment Requirements for AHCLPW409 Inspect and monitor culturally significant places

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, inspected and monitored a cultural place, including:

- established the value and significance of cultural place from management plans
- obtained charters and specifications used to evaluate the condition of cultural place
- inspected at least one cultural place to establish:
 - a schedule of maintenance
 - a process to monitor site management
- prepared and submitted report to workplace standards, which must include:
 - results of inspection
 - feedback from stakeholders
 - recommendations based on inspection, feedback and review of existing management plan
- monitored cultural area surroundings to establish restoration, reclamation, modification and protection required for each of the potential causes:
 - biological agents
 - changes to the geophysics of the site
 - biosecurity risks
- conducted safety hazard analysis and risk assessments according to workplace policies and procedures
- monitored stakeholder views for impact on cultural significance, approach to maintenance, restoration and modification, and current and proposed uses of the cultural place
- applied work health and safety practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Australian Heritage Commission legislation and requirements, state or territory heritage requirements and World Heritage requirements for cultural places
- definition of cultural and heritage places with either natural or cultural value or significance, including:
 - aesthetic
 - historic
 - scientific
 - social
- application of national charters and International Charters of the International Council on Monuments and Sites (ICOMOS), including the Burra Charter, to monitoring cultural places
- environmental legislation and codes of practice, including:
 - relevant environmental standards
 - best practice guidelines
- strategies for communicating with, and seeking feedback from, stakeholders, including:
 - Indigenous and other cultural groups
 - visitors
 - agency personnel
 - special interest groups
- processes and causes of environmental and artefact deterioration and damage, including:
 - indigenous and exotic biological agents causing damage and degradation
 - geophysical changes
 - biosecurity risks
- methods for assessing and monitoring cultural places, including:
 - equipment and resources
 - techniques
 - timing and scheduling
- maintenance, restoration and modifications that could be applied to place or area:
 - exclusion zones, fencing and barriers
 - signage
- threats to cultural place or area, including:
 - visitor impact
 - climate and exposure to weather
- report writing skills, including:
 - report structure
 - organising content
 - presenting data

- summarising
- formatting and presenting reports.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated at a culturally significant place, or in an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures and processes
 - workplace conservation and management plans for cultural places
 - national and international charters relevant to Australian cultural places
 - legislation, codes of practice and standards relevant to the maintenance of cultural places
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW410 Produce maps for land management purposes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to access geographical information and incorporate it into maps for use in land management.

The unit applies to individuals whose job role includes preparing maps by hand or by using geographical information systems (GIS) for land management purposes, and applying specialist skills to provide solutions to technical and unpredictable problems. They work autonomously, instruct, and monitor the work of others within a team. They use discretion and judgment in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Obtain information for a specific land management purpose	1.1 Define information required from data sets 1.2 Collect and record information from stakeholders consistent with local area management strategy 1.3 Collect temporal and spatial data

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Review information for relevance and accuracy
2. Assess data availability	2.1 Ascertain availability of data sets 2.2 Establish intellectual property ownership of data and access requirements 2.3 Obtain data in accordance with industry standards, statutory requirements and enterprise policy 2.4 Develop procedures to capture data
3. Assess data quality	3.1 Assess data for integrity and suitability for task 3.2 Investigate and resolve disparities between data sets
4. Format and present data	4.1 Identify compatible formats for data 4.2 Assemble data elements according to proposed map purpose 4.3 Select data formats to meet user's requirements 4.4 Present information using suitable media 4.5 Present information according to workplace requirements and Australian Standards
5. Incorporate data onto maps	5.1 Use computer applications to manipulate data onto maps 5.2 Produce draft maps showing spatial and temporal data according to land management strategy 5.3 Review and edit maps to ensure accuracy 5.4 Develop a key to identify map elements according to purpose 5.5 Analyse map for data required in land management planning
6. Review stakeholder satisfaction	6.1 Seek feedback on suitability for purpose from stakeholders 6.2 Review and modify map to resolve concerns raised in feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically interpret and analyse complex data and information for integration into map of a specific design
Writing	<ul style="list-style-type: none"> Use technology to produce, edit and proofread maps to ensure accuracy, clarity of meaning and consistency of information
Numeracy	<ul style="list-style-type: none"> Extract and manipulate mathematical information from data sets to produce accurate maps for scale and distances

Assessment Requirements for AHCLPW410 Produce maps for land management purposes

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has produced at least one map, for any three of the following land management purposes:

- land use map
- vegetation or fauna survey map
- walking trail
- cultural heritage site map
- fishing or fishing exclusion map or chart
- land or sea navigation map or chart
- fire trail or fire management map
- other map specified by workplace.

There must be evidence that the individual has:

- sourced data sets that provide the required information, ensuring data complies with intellectual property (IP) and copyright legislation
- validated data for currency and compared to ground observations
- presented data according to workplace requirements
- incorporated data onto a map
- used computer software for drafting and editing maps and checking and managing data according to workplace standards
- provided a map key and any supporting information required
- reviewed and assessed maps suitability for purpose and value with stakeholders.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of mapping and mapping styles for use in land management and production systems

- sources of information and data sets required for map development:
 - spatial data
 - temporal data
 - internally generated data
 - external data sets and IP and copyright
 - access and restrictions
- equipment used for obtaining and checking mapping data, including:
 - cameras, scanners and drones for capturing digital images
 - basic survey equipment for checking direction and distances
 - global positioning systems (GPS)
 - computers for accessing satellite and other data sets
- land management processes relevant to map being prepared
- mapping principles and conventions, including:
 - layout
 - keys and legends
 - scale
 - media
 - printing and presentation styles
- use of software and hardware, including:
 - GPS
 - geographic information systems (GIS)
 - computer-aided design (CAD)
 - desktop publishing
 - desktop mapping
 - multimedia and graphic animation
 - plotters and printers
- assessing and evaluating processes for map and map design, including:
 - soliciting feedback from stakeholders
 - analysing and integrating feedback in map editing.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a land management environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - digital technology with mapping and data access software
 - basic survey equipment for verifying mapping data

- specifications:
 - workplace policies, procedures, processes for mapping tasks
 - workplace specifications for mapping requirements
 - specific standards for map making.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW504 Assess land use applications for legislative compliance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to assess formal applications for changes in land use against legislative requirements, and make recommendations to ensure compliance.

The unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge in specific technical areas for the use and management of land. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

Land usage legislation and regulations exist in all states and territories and must be adhered to. Users are advised to check with the relevant authority.

Pre-requisite Unit

Assessment Requirements for AHCLPW504 Assess land use applications for legislative compliance

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assessed at least four applications for change in land use. Each application should represent a different land use scenario, which may have an impact on any one of the following conditions:

- quality of an adjoining water body
- drainage
- soil erosion or slippage
- native flora
- native fauna
- Indigenous cultural site
- heritage site
- construction
- adjoining buildings and structures.

There must also be evidence that the individual has:

- reviewed existing data on land use
- conducted a title search and validated site mapping data
- scheduled site inspection with client
- collected and assessed the validity of evidence from the site and potential impact on:
 - existing biota
 - biodiversity
 - soil
 - water quality
- assessed the application for compliance with legislative requirements and workplace procedures
- recorded evidence of issues with cultural and heritage values for the site

- assessed the evidence and compiled report and recommendations according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant Commonwealth and state/territory legislation and regulations that apply to land use, including:
 - native vegetation
 - agriculture and horticulture
 - mining
 - water
 - forestry
 - conservation
 - residential
- forms, policies and procedures for managing and assessing applications for change in land use
- approaches for investigating and assessing sites and land use
- communications strategies with stakeholders, including:
 - negotiation skills
 - presenting reports and recommendations
- methods of establishing accurate site data, including the use of:
 - site maps
 - aerial photographs
 - geographic information systems (GIS)
- assessing the impact of changes of land use on the site and surrounding area, including:
 - quality of an adjoining water body
 - water drainage
 - soil erosion and slippage
 - native flora and fauna
 - Indigenous cultural sites and heritage values
 - construction, buildings and structures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for sites and applications for change in land use as stated in the Performance Evidence resources, equipment and materials:

- materials and equipment suitable for site visits and assessment
- specifications:
 - workplace policies, procedures, processes for assessing change in land use applications
 - application forms and access to sites for inspection
 - access to legislation and regulations for processing applications
- relationships:
 - stakeholders, clients or their representatives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW506 Develop a management plan for a designated area

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required for the development of a management plan covering the range of biodiversity present in a designated area.

The unit applies to individuals who work in a conservation and land management role and who analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge in specific technical areas. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define the need for a management plan	1.1 Identify management plan objectives for the designated area 1.2 Consult with client to achieve agreement on brief 1.3 Identify planning team, specialists and consultants

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Undertake preliminary planning activities	2.1 Identify stakeholders impacted by management plan 2.2 Identify legislative and regulatory impacts on designated area 2.3 Ascertain availability of specialists to assist in management planning work and preparation of contracts 2.4 Establish timelines for development of the management plan and reporting arrangements 2.5 Identify resources required for the development of management strategies
3. Prepare a site description	3.1 Identify and map landscape values of designated area 3.2 Identify and map physical features and characteristics of designated area 3.3 Identify site use and impact on designated area 3.4 Assess and document physical condition and civil concepts according to client brief 3.5 Document biological characteristics and influences on biota
4. Analyse site information and description	4.1 Assess site description against core principles and objectives in client brief 4.2 Determine priorities and key conservation issues 4.3 Prepare longitudinal projections of continuing impacts 4.4 Assess performance of site for proposed use 4.5 Identify and document opportunities and constraints to meeting planning objectives and goals 4.6 Seek stakeholder feedback and amend planning documentation
5. Identify management strategies	5.1 Identify management options to achieve defined objectives 5.2 Design management strategies to address defined objectives 5.3 Cost and compare management strategies against budget and available resources 5.4 Plan work scheduling to prioritise outcomes and resource allocation 5.5 Consult with stakeholders and incorporate feedback into planning documentation
6. Prepare the	6.1 Consolidate site information and management strategies into draft

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
management plan	management plan 6.2 Seek feedback from stakeholders and clients and amend draft management plan 6.3 Prepare and present a final management plan according to client brief

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Prepare detailed management plan and documentation demonstrating advanced writing skills by selecting appropriate conventions and stylistic devices to express precise meaning for clients and stakeholders
Oral communication	<ul style="list-style-type: none"> Establish and maintain effective communication in a broad range of contexts suited to the client or stakeholder understanding

Assessment Requirements for AHCLPW506 Develop a management plan for a designated area

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, developed a management plan for a designated area.

There must also be evidence that the individual has:

- discussed and defined management plan objectives, deliverables and timeline with client
- prepared a site plan detailing the following:
 - values of designated area
 - physical features and characteristics
 - past and present uses
 - legislative and regulatory implications
 - physical condition
 - biological characteristics
- assessed site performance for proposed use and identified conservation issues for designated site and surrounding area
- analysed site information and description to assess management options to achieve objectives
- developed and costed management strategies according to client brief
- produced a draft management plan and presented to client for feedback
- consulted with stakeholders and incorporated feedback into final management plan
- prepared and presented management plan according to workplace standards and client requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- management planning principles and issues, including civil design concepts
- Indigenous ownership and cultural heritage sensitivities
- non-Indigenous cultural heritage
- municipal zoning and planning
- environmental assessment, survey and analysis techniques and practical application for a range of habitats and landscapes
- biota and biological influence on ecology, including:
 - impact, interactions of native flora and fauna
 - population density
 - seasonal influences and nutritional influences on lifecycle
 - wildlife habitats and local geographic regions and vegetation types
- pest plants, animals and microorganisms and impact on ecology, including:
 - identification and physiology
 - pest management, control techniques and strategies
 - equipment
 - pesticides
 - ecological requirements
- ecosystem management strategies, including:
 - techniques
 - rehabilitation, restoration and regeneration
 - enterprise use of native Australian habitats, species and landscapes
- Indigenous flora regeneration and revegetation techniques, including equipment and methods of application relevant to landscape characteristics
- management and rehabilitation techniques for the wildlife and habitat
- soil, plant and water testing processes and procedures, interpretation and application of results
- levels of stakeholder engagement and engagement strategies, including:
 - negotiation skills for developing client briefs
 - working with special interest groups
 - communication styles for different client and stakeholder groups
- legislation, regulations, standards and codes of practice relevant to management planning.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for at least one designated area resource
 - equipment and materials
 - access to computer or other equipment required for producing written documents to specified standards

- specifications:
 - client brief
 - legislation, regulations, standards and codes of practice skills must be demonstrated for at least one designated area resource
- relationships:
 - client and other stakeholders
- timeframes:
 - within a specific time period as specified in client brief.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW507 Implement natural and cultural resource management plans

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to implement natural and cultural resource management plans.

The unit applies to individuals who are responsible for the management of natural and cultural resources and who analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge in technical areas. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine priorities in management plan	1.1 Identify priorities in natural and/or cultural resource management plan 1.2 Refine priorities in plan into development or maintenance projects

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Develop procedures to address conservation priorities according to legislation, codes of practice and workplace health and safety procedures
2. Develop projects to priorities	2.1 Determine development and maintenance projects according to legislation, current charters and standards, and biosecurity procedures 2.2 Identify outcomes and key project actions 2.3 Identify resource and funding requirements
3. Obtain and manage funds	3.1 Develop budget for operations and project actions 3.2 Apply for funds according to workplace procedures 3.3 Allocate funds and manage budget
4. Brief work team on plan, priorities and project	4.1 Brief work team on plan objectives, priorities, actions and safe implementation 4.2 Train work team to follow new procedures 4.3 Develop project implementation program

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and extract information relevant to operationalising natural and cultural resource management plans, including legislation, regulations, charters and standards
Writing	<ul style="list-style-type: none"> Create detailed procedural documents, including actions, budgets and schedules and for defining the management priorities for the work team, taking into account the needs of a culturally and linguistically diverse workforce
Oral communication	<ul style="list-style-type: none"> Present planning and implementation in an informal or training environment using clear and convincing language, tone and pace appropriate for the audience
Numeracy	<ul style="list-style-type: none"> Interpret financial information and perform calculations to translate operational costings and scheduling for inclusion in

Skill	Description

Assessment Requirements for AHCLPW507 Implement natural and cultural resource management plans

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed the implementation of at least one natural resource management plan and one cultural resource management plan.

There must also be evidence that the individual has:

- determined priorities within the plan, including:
 - areas of high significance
 - level of risk to sensitive areas
 - potential for revenue generation
- identified projects from priorities, including:
 - new or continuing natural and culturally significant works
 - requirement for new procedures
 - new and continuing development or maintenance projects
- included financial management for the project, including:
 - costed the activities
 - applied for funding
 - developed a budget
- briefed and trained work team to implement activities safely according to workplace policies, procedures and management plan
- applied workplace health and safety, biosecurity and sustainability policies to the development of procedures and program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- approaches to management of natural and cultural resource management for parks and reserves, including:
 - assessing and identifying priorities in plans for conservation, places of high significance and threats, managing risks, and generating revenue
 - developing procedures
 - developing schedules and setting timelines
- human resource management, including:
 - communicating with work team
 - training
 - preparing work team for work activity
- financial management for management plan implementation, including:
 - costing project activity
 - preparing budgets
 - monitoring budgets
- project management practice
- legislation and government policies and their purpose for resource managers, including:
 - levels of governance
 - regional specific regulations
 - catchment plans
 - health and safety
 - sustainable practices
 - biosecurity
- national and international charters for cultural and heritage sites, including:
 - Australian Natural Heritage Charter
 - Burra Charter
 - interpretation of charters.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for sites and applications stated in the Performance Evidence and in an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures, processes for implementing management plans
 - natural and cultural resource management plans for a specified region
 - legislation, codes of practice, and heritage and cultural site charters
- relationships:
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLPW602 Coordinate the preparation of a regional resource management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to engage stakeholders and operate at a strategic level to coordinate the development of regional natural resource management plans.

The unit applies to individuals who work at a strategic level within the conservation and land management industry, working with specialists in regional planning. They analyse information and exercise judgement to complete a range of advanced skilled activities demonstrating a deep knowledge of resource management. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements are apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Lands, Parks and Wildlife (LPW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review existing information	1.1 Access and review scoping documents and plans to determine starting point for planning process

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.2 Identify sources of additional information required for input 1.3 Examine previous natural resource management issues to determine current and future impact 1.4 Identify scope and potential solutions from documentation for use in planning process
2. Form groups to support process	2.1 Contact key stakeholders to elicit views on consultative structures and processes 2.2 Develop consultative structure allowing for diversity, and promote engagement 2.3 Organise working groups to elicit stakeholder views and assistance
3. Plan and conduct consultations	3.1 Develop process to ensure stakeholder input 3.3 Organise consultation 3.2 Record formal consultations for reporting
4. Coordinate the collection of data	4.1 Coordinate data collection and surveys 4.2 Develop rules and relationships between various data sets for database structure 4.3 Engage data processing specialists to generate report formats 4.4 Record data in database 4.5 Manage data collection and recording within budgetary constraints
5. Coordinate the development of goals and strategies	5.1 Engage technical advisers to coordinate development of goals and strategies 5.2 Obtain technical advice on issues at regional and local levels for integration into goals and strategies 5.3 Provide advice to stakeholders to assist in development of goals and strategies 5.4 Facilitate groups to provide suggestion for goals and strategies and their formulation at a regional level 5.5 Review original scope and basis for planning process at major developmental stages
6. Coordinate the preparation of a draft plan	6.1 Coordinate preparation of draft plan using technical and stakeholder input 6.2 Coordinate personnel to structure the draft plan

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>6.3 Ensure draft plan is structured according to workplace requirements</p> <p>6.4 Review plan against legislative requirements and government and regional policies and processes</p> <p>6.5 Submit draft plan for editing, review and approval before stakeholder feedback</p>
7. Coordinate the revision of the plan to reflect consultations	<p>7.1 Revise draft plan to reflect stakeholder feedback</p> <p>7.2 Engage technical advisers to develop responses to feedback</p> <p>7.3 Submit revised plan for editing and review</p> <p>7.4 Submit revised plan to regional planning groups</p>
8. Submit plan for approval	<p>8.1 Submit final plan for approval and publication</p> <p>8.2 Evaluate planning process and outcomes for future improvements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organise, evaluate and critique ideas and information from reports, plans and other information, and draw on a broad range of strategies to build and maintain understanding throughout the resource management planning process
Writing	<ul style="list-style-type: none"> Prepare detailed planning documentation demonstrating advanced writing skills by selecting appropriate conventions and stylistic devices and formatting to express precise meaning to the target audience
Oral Communication	<ul style="list-style-type: none"> Establish and maintain complex and effective communication in a consultative contexts

Assessment Requirements for AHCLPW602 Coordinate the preparation of a regional resource management plan

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, coordinated the development of a regional resource management plan.

There must also be evidence that the individual has:

- reviewed existing planning documents and sources of information required for regional planning
- identified land management issues and potential solutions
- identified stakeholders from diverse interest groups, formed consultative groups and elicited input for planning
- organised the collection and analysis of data to inform planning and monitor progress
- worked with stakeholders and technical advisers to develop goals and performance criteria
- developed a draft plan for widespread consultation and feedback, which must include goals, strategies and outcomes that reflect consultation and technical advice
- compiled feedback and amended plan to reflect recommended changes
- finalised the regional resource management plan according to workplace standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regional and rural planning concepts from town planning, rural industry planning, and natural resource planning perspectives
- impact of government processes and industry activities in social and economic terms
- consultative groups and techniques that take into consideration cross-cultural and cultural factors, including:
 - special interest groups
 - Indigenous and cultural

- commercial
- recreational
- social
- local government operations that affect the regional resource management plan
- natural resource management and issues
- sources of technical advice.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - computers and word processing and data management software
 - communications and consultation facilities for working groups
- specifications:
 - workplace policies, procedures, processes and style guides for regional plan development
 - legislation and regulations relevant to regional resources to be managed
- relationships:
 - stakeholders from a diverse range of interest groups.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC101 Support landscape work

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency covers the skills and knowledge required to provide support to others undertaking landscape works in public, commercial and domestic situations

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape [LSC]

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare materials, tools and equipment for landscaping work	1.1 Identify the required materials, tools and equipment according to lists provided or supervisor's instructions 1.2 Conduct checks on materials, tools and equipment with insufficient or faulty items reported to the supervisor 1.3 demonstrate correct manual handling techniques when loading and unloading materials 1.4 Select and check suitable personal protective equipment (PPE) 1.5 Provide landscaping support according to workplace health and safety requirements and workplace information 1.6 Identify and report workplace hazards to the supervisor

Element	Performance criteria
2. Undertake landscape work as directed	2.1 Follow instructions and directions provided by supervisor and seek clarification when necessary 2.2 Undertake landscape work in a safe and environmentally appropriate manner 2.3 Carry out interactions with other staff and customers in a positive manner 2.4 Follow enterprise policy and procedures in relation to workplace practices, handling and disposal of materials 2.5 Report problems or difficulties in completing work to required standards or timelines to supervisor
3. Handle materials and equipment	3.1 Store waste material and debris produced during landscape work in a designated area according to supervisor's instructions 3.2 Handle and transport materials, equipment and machinery according to supervisor's instructions and enterprise guidelines 3.3 Maintain a clean and safe work site while undertaking landscaping activities
4. Clean up on completion of landscaping work	4.1 Return materials to store or dispose of according to supervisor's instructions 4.2 Clean, maintain and store tools and equipment according to manufacturer's specifications and supervisor's instructions 4.3 Make good the site according to supervisor's instructions 4.4 Report work outcomes to the supervisor

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC101A Support landscape work.

Assessment Requirements for AHCLSC101 Support landscape work

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- apply safe work practices in landscape construction and maintenance
- clean up on completion of landscaping work
- prepare materials, tools and equipment for landscaping work
- undertake landscape work as directed

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for supporting landscape work
- safe work practices
- preparing for landscape work and cleaning up on project completion
- basic construction techniques
- landscaping tools and equipment
- maintenance practices for planted areas
- repair and maintenance of landscape features
- workplace health and safety and safe work practices

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCLSC102 Support landscape work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supported landscape work on at least two occasions, and has:

- prepared materials, tools and equipment for landscaping work
- fitted and used personal protective equipment (PPE)
- applied safe and environmentally appropriate work practices in landscape construction and maintenance
- undertaken landscape work as directed
- handled, transported, cleaned and stored materials, tools, equipment and machinery as directed
- reported work outcomes and malfunctioning, faulty, worn or damaged of tools.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- procedures for preparing for landscape work and cleaning up on project completion
- safe work practices used in landscape work
- principles and practices of landscape work, including:
 - basic landscape construction techniques
 - landscaping tools and equipment use, storage and maintenance
 - maintenance practices for planted areas
 - repair and maintenance of landscape features.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to supporting landscape work
 - landscaping materials, tools, equipment and machinery
 - PPE applicable to supporting landscape work
- relationships:
 - supervisor, staff and customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC201 Assist with landscape construction work

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to provide support to others undertaking landscape works in public, commercial and domestic situations.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare materials, tools and equipment for landscaping work	1.1 Identify required materials, tools and equipment according to lists provided and supervisor's instructions 1.2 Check all materials, tools and equipment and tell supervisor if there are insufficient or faulty items 1.3 Use correct manual handling techniques when loading and unloading material to minimise damage to the materials and the vehicle 1.4 Select and maintain suitable personal protective equipment (PPE)

Element	Performance criteria
	1.5 Identify and report any workplace health and safety hazards to supervisor
2. Undertake landscape work as directed	2.1 Follow instructions and directions provided by supervisor and ask for clarification when necessary 2.2 Communicate with other staff and clients in a positive and professional manner 2.3 Handle and dispose of materials as directed 2.4 Tell supervisor if there are problems or difficulties in completing work to required standards or timelines
3. Handle materials and equipment	3.1 Store waste material and debris produced during landscape work in a designated area 3.2 Handle and transport materials, equipment and machinery 3.3 Maintain a clean and safe work site while undertaking landscaping activities
4. Clean up on completion of landscaping work	4.1 Return materials to store or dispose of as directed 4.2 Clean, maintain and store tools and equipment 4.3 Restore site according to supervisor's instructions 4.4 Tell supervisor of work outcomes

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC201A Assist with landscape construction work.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCLSC201 Assist with landscape construction work

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare materials, tools and equipment
- undertake landscape work as directed
- handle materials and equipment
- follow safe work practices and safety directions
- clean up on completion of landscape work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of assisting with landscape construction work
- basic construction techniques
- how to repair and maintain landscape features
- landscaping tools and equipment
- maintenance practices for planted areas
- safe work practices

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

AHCLSC202 Construct low-profile timber or modular retaining walls

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to construct low-profile timber or modular retaining walls in landscape settings.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Plan and prepare work	1.1 Read work instructions relating to constructing the retaining wall and confirm instructions with the supervisor 1.2 Prepare tools and equipment and use according to the supervisor's instructions 1.3 Identify and report to supervisor any manual handling and other work health and safety hazards

Element	Performance criteria
	1.4 Select, use and maintain personal protective equipment (PPE) and clothing 1.5 Check the quantity and quality of materials to make sure they conform to the requirements of the job plans 1.6 Locate and mark out services
2. Mark out site for retaining wall	2.1 Mark out the position of the retaining wall according to site plans 2.2 Determine the location and depth of excavations 2.3 Establish profiles to conform to the designated tolerances 2.4 Establish survey benchmarks
3. Prepare footings according to industry standards	3.1 Excavate foundations for the retaining wall to the required depth and dimensions as designated on the site plans 3.2 Remove soil and waste material and stockpile to ensure a safe working area 3.3 Locate reinforcing or steps in the excavated site and position accordingly 3.4 Position pegs to maintain levels of even depth and horizontal plane to the top of footings 3.5 Place, consolidate and finish footings to determined levels, to ensure coverage of reinforcement as necessary
4. Prepare and install retaining wall components	4.1 Prepare and lay out components for installation 4.2 Mark components to be cut to length and shape, and cut to the requirements of profiles already established 4.3 Install drainage media 4.4 Construct base layer of retaining wall to a point above the top of the drainage media and form weep holes where indicated 4.5 Back-fill and compact fill material behind base of retaining wall 4.6 Construct retaining wall components to required dimensions, profiles and levels as specified on the site plans 4.7 Set capping to top of retaining wall to specified levels with a tolerance appropriate to the style of capping
5. Clean up site and store tools and equipment	5.1 Dispose of or recycle soil and waste material from the site to minimise damage to the environment 5.2 Store and stack unused construction materials for future re-use 5.3 Clean and store all tools and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC202A Construct low-profile timber or modular retaining walls.

Assessment Requirements for AHCLSC202 Construct low-profile timber or modular retaining walls

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting.

The candidate must provide evidence that they can

- read and interpret site and construction plans
- identify work health and safety hazards
- calculate materials required and mark out the area to be retained
- mark out the site and assemble materials
- construct footings and place reinforcing
- construct retaining walls as specified
- clear up the site and dispose of waste

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of low profile retaining walls
- construction approaches and methods
- construction materials for retaining walls
- safe lifting practices for large and heavy components
- methods of disposing soil and waste materials in order to minimise damage to the environment
- the environmental effects of altering water flow when installing retaining walls with or without drainage media
- the environmental impact of soil disturbance when excavating an area to be retained

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCLSC203 Install aggregate paths

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan and prepare for installation and site safety
- read and interpret site plans
- undertake ground preparation for the path
- lay base material and surface aggregate materials
- set the path out
- reinstate site at completion of work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of aggregate path installation
- base and aggregate materials and their performance
- environmental impacts of soil disturbance when installing paths
- types of machinery used in path construction
- types of signs and barriers that need to be erected around the site
- tools and equipment used for installing paths

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCLSC206 Assist with landscape construction work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assisted with landscape construction work on at least two occasions, and has:

- undertaken landscape work as directed
- prepared and used materials, tools and equipment for landscape construction work as directed
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- applied workplace policies and procedures relevant to assisting with landscape construction work
- assisted with clean up on completion of landscape work and disposed of waste
- reported landscape construction work and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of landscape construction work, including:
 - basic landscape construction techniques
 - landscaping tools and equipment
- workplace requirements applicable to health and safety in the workplace for assisting in landscape construction work, including appropriate use of PPE
- workplace policies and procedures relevant to assisting with landscape construction work.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace policies and procedures applicable to assisting with landscape construction work
 - materials, tools, equipment and machinery applicable to landscape construction work
 - PPE applicable to landscape construction work
- relationships:
 - supervisor, staff and customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC207 Construct low-profile timber or modular retaining walls

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has constructed at least one low-profile timber and one modular retaining wall and has:

- read and interpreted site and construction plans
- marked out the site and assembled materials
- calculated materials required and marked out the area to be retained
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- consolidated base material
- constructed retaining walls as specified
- installed protective membrane as specified
- cleared up the site and disposed of waste
- reported low-profile timber or modular retaining wall construction operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of low profile retaining walls, including:
 - construction approaches and methods
 - construction materials for retaining walls
 - drainage media and material use and placement
 - protective membrane installation methods
 - safe lifting practices for large and heavy components
 - soil and waste material disposal methods

- environmental effects of altering water flow when installing retaining walls with or without drainage media
- environmental impact of soil disturbance when excavating an area to be retained
- workplace requirements applicable to health and safety in the workplace for constructing low-profile timber or modular retaining walls, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions applicable to constructing low-profile timber or modular retaining walls
 - materials, tools, equipment and machinery applicable to constructing low-profile timber or modular retaining walls
 - PPE applicable to low-profile timber or modular retaining walls construction work
- specifications:
 - workplace requirements applicable to health and safety in the workplace and constructing low-profile timber or modular retaining walls
 - site plan
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to install aggregate paths in landscape settings, including preparing for installation, setting out the site, ground preparation, laying aggregate surface and cleaning up site.

The unit applies to individuals who install aggregate paths under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for installation	1.1 Read work instructions relating to installation of aggregate path and confirm with supervisor 1.2 Prepare and use tools, equipment and machinery according to supervisor instructions 1.3 Check and confirm quantity and quality of materials 1.4 Identify manual handling and workplace health and safety hazards,

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>assess risks and report to supervisor</p> <p>1.5 Select, fit, use and maintain personal protective equipment (PPE) applicable to the task</p> <p>1.6 Implement measures to avoid environmental impacts before starting work</p>
2. Set out the site for path construction	<p>2.1 Mark out the location of proposed path according to site plan</p> <p>2.2 Implement public risk protection measures</p>
3. Undertake ground preparation	<p>3.1 Clear area of debris and excavate to base level</p> <p>3.2 Relocate or dispose of soil and waste materials</p> <p>3.3 Install drainage structures, where required</p> <p>3.4 Place and compact base material to required finished level</p> <p>3.5 Install edge restraints, where required</p> <p>3.6 Check set out work conforms to site plan with supervisor at regular intervals</p>
4. Lay surface aggregate materials	<p>4.1 Spread surface aggregate materials over area to designated depth</p> <p>4.2 Screed material to ensure consistent depth of materials</p> <p>4.3 Level aggregate materials to designated level and falls</p> <p>4.4 Compact aggregate materials using appropriate machinery</p>
5. Make good the site	<p>5.1 Dispose of or recycle soil and waste material from site</p> <p>5.2 Reinstate areas disturbed by installation works</p> <p>5.3 Clean, maintain and store tools and equipment</p> <p>5.4 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description
Oral communication	<ul style="list-style-type: none"> • Use clear language and standard industry terminology to report malfunctions, faults wear or damage to tools • Participate in verbal exchanges to respond to questions and clarify information

Assessment Requirements for AHCLSC208 Install aggregate paths

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed aggregate paths of at least two metres in length on at least two occasions and has:

- planned and prepared for installation and site safety
- read and interpreted site plans
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- set the path out
- undertaken ground preparation for the path
- laid base material and surface aggregate materials
- reinstated site at completion of work
- reported aggregate path installation operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of aggregate path installation, including:
 - base and aggregate materials and their performance
 - environmental impacts of soil disturbance when installing paths
 - types of machinery used in path construction
 - types of membranes
 - types of edge restraints
 - types of signs and barriers that need to be erected around the site
 - tools and equipment used for installing paths
- workplace requirements applicable to health and safety in the workplace for installing aggregate paths including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions applicable to installing aggregate paths
 - materials, tools, equipment and machinery applicable to installing aggregate paths
 - PPE applicable to aggregate path installation work
- specifications:
 - workplace requirements applicable to health and safety in the workplace and installing aggregate paths
 - site plan
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC209 Lay paving

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to lay modular paving in landscape settings, including preparing for work, setting out paving area, ground preparation, laying bedding material and pavers, and cleaning up site.

The unit applies to individuals who lay paving under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare for paving work	1.1 Read work instructions relating to paving work and confirm with supervisor 1.2 Prepare and use tools and equipment according to supervisor instructions 1.3 Check and confirm quantity and quality of materials according to job plan requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify workplace health and safety hazards, assess risks and report to supervisor</p> <p>1.5 Select, fit, use and maintain personal protective equipment (PPE) applicable to task</p>
2. Set out and prepare paving area	<p>2.1 Mark out area to be paved according to site plan</p> <p>2.2 Assist with pegging reduced levels of proposed paving area according to site plan and supervisor instructions</p> <p>2.3 Maintain clean and safe worksite during paving activities</p>
3. Undertake ground preparation	<p>3.1 Excavate area to shape, depth and dimensions to sub-base level</p> <p>3.2 Trim subbase to designated level and falls to ensure that final level of paving can be achieved</p> <p>3.3 Assist with construction of drainage systems according to site plan</p> <p>3.4 Place and compact base material to required depth according to site plan</p>
4. Lay bedding material	<p>4.1 Establish screed rails to ensure bedding course is maintained</p> <p>4.2 Spread bedding material evenly over area according to supervisor instructions</p> <p>4.3 Level bedding material to designated level and falls</p>
5. Lay pavers to a given pattern	<p>5.1 Set grid string lines to required levels to ensure designated pattern of project is attained and to maintain straight lines of components</p> <p>5.2 Set out pavers to required dimensions and pattern</p> <p>5.3 Lay whole pavers and compact to established finish level</p> <p>5.4 Mark, cut and fit pavers to fill gaps in pattern within nominated tolerances</p> <p>5.5 Install permanent edge constraints to prevent movement of pavers</p> <p>5.6 Spread jointing material over paved area and compact to finished level</p>
6. Clean site and store tools and equipment	<p>6.1 Sweep jointing material evenly over paving</p> <p>6.2 Dispose of or recycle soil and waste material from site</p> <p>6.3 Clean, maintain and store tools and equipment</p> <p>6.4 Report work outcomes, and malfunctions, faults, wear or damage</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	of tools to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHCLSC209 Lay paving

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has laid two different paving patterns on at least two occasions and has:

- prepared the site for paving
- read, interpreted and applied information from a site plan
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- laid bedding material
- laid and cut in pavers to pattern
- used different edge restraints
- cleaned up the site and disposed of waste
- reported paving operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of paving, including:
 - terminology for types of base and bedding material, edge restraints and their function
 - types of pavers
 - paving patterns, styles and methods
 - potential environmental impact of a paving project
 - types of signs and barriers that need to be erected around the site
 - methods of disposing of soil and waste materials
- workplace requirements applicable to health and safety in the workplace for laying pavers including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions applicable to laying pavers
 - materials, tools and equipment applicable to laying pavers
 - PPE applicable to laying pavers
- specifications:
 - workplace requirements applicable to health and safety in the workplace and laying pavers
 - site plan
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC210 Install tree protection devices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to protect trees during construction work by installing protective devices.

The unit applies to individuals who install tree protection devices under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install	1.1 Read work instructions relating to installation of tree protection devices and confirm with supervisor 1.2 Prepare and use tools and equipment according to the supervisor instructions 1.3 Identify manual handling and workplace health and safety hazards, assess risks and report to supervisor 1.4 Select, fit, use and maintain personal protective equipment (PPE)

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>applicable to the task</p> <p>1.5 Identify trees to be protected, and method of protection to be used</p> <p>1.6 Collect protection devices or materials to assemble devices and check requirements according to tree protection plan</p>
2. Install protection devices	<p>2.1 Assemble, fit and secure tree protection devices</p> <p>2.2 Carry out work in a manner that minimises risk of damage to trees and environment</p>
3. Complete installation activities	<p>3.1 Check protection devices for effectiveness</p> <p>3.2 Report damaged and ineffective devices to supervisor</p> <p>3.3 Maintain a clean and safe area throughout and on completion of work</p> <p>3.4 Clean, maintain and store tools and equipment</p> <p>3.5 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCLSC210 Install tree protection devices

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed tree protection devices on at least two occasions and has:

- read and interpreted site and tree protection plans
- selected and operated tools and equipment for:
 - protecting trees
 - constructing and assembling tree protection devices
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- measured materials used in constructing and assembling tree protection devices
- assembled and built protection devices
- cleaned up materials and maintained worksite
- demonstrated use of tools and equipment for installing tree protection devices
- reported tree protection device installation operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of installing tree protection devices, including:
 - how to care for and maintain trees during protection operations
 - techniques for assembling or constructing tree protection devices
 - the application of tree protection devices suitable to the requirements of the tree species
 - the damage that can occur to trees during construction work

- techniques relating to the choice of tools and equipment for installing tree protection devices
- workplace requirements applicable to health and safety in the workplace for installing tree protection devices including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions applicable to installing tree protection devices
 - materials, tools and equipment applicable to installing tree protection devices
 - PPE applicable to tree protection device installation work
- specifications:
 - workplace requirements applicable to health and safety in the workplace and installing tree protection devices
 - site plan and tree protection plan
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC301 Set out site for construction works

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to set out a site for construction works in accordance with site plans and specifications. This may be done in advance of proposed works or in conjunction with construction works already being carried out.

This unit applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Plan and prepare work	1.1 Interpret plans and specifications 1.2 Compare site plan and specifications with other available plans 1.3 Select tools and equipment required for setting out construction

Element	Performance criteria
	works and check for serviceability 1.4 Identify hazards, assess risks and implement controls 1.5 Consider environmental impact of proposed construction works in interpreting site plans
2. Locate and mark out position of construction works	2.1 Locate existing site features from the site plan 2.2 Locate position of proposed construction works 2.3 Using the correct scale transfer scale measurements of lines, shapes, angles and dimensions from the site plan to site 2.4 Mark out the shape of proposed construction works on site
3. Establish datum point and survey benchmarks on site	3.1 Establish datum point to ensure all existing and proposed construction works can be linked by survey equipment 3.2 Select and establish survey benchmarks on positions or structures on site according to site plans or specifications
4. Take and verify site levels	4.1 Set up levelling equipment and check for accuracy of readings 4.2 Adjust instruments which are out of specification 4.3 Take levels and verify and record in accordance with established datum point and survey benchmarks 4.4 Clean, maintain and store tools and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC301A Set out site for construction works.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCLSC301 Set out site for construction works

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret site plans and specifications
- use mathematical and geometrical principles to mark out a site for construction work
- use a range of surveying instruments
- establish datum points and survey benchmarks on site
- take and verify site levels

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of site set out for landscape works
- how other plans may be referred to in assisting setting out a site
- how to determine if other plans may be referred when setting out a site

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLSC302 Construct landscape features using concrete

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to construct concrete structures and features as a component of landscape project works.

This unit applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Plan and prepare work	1.1 Interpret plans and specifications 1.2 Check the quantity and quality of materials 1.3 Select tools and equipment and check for serviceability 1.4 Identify hazards, assess risks and implement controls

Element	Performance criteria
	1.5 Select and use personal protective equipment (PPE) 1.6 Identify and ameliorate environmental impacts of proposed concrete works
2. Set out and prepare the site	2.1 Determine and locate services 2.2 Mark out the position of the structure or feature according to plans 2.3 Establish profiles to conform to the nominated tolerances 2.4 Prepare subsoil by removing all debris, vegetable matter and topsoil to provide a solid foundation for concrete 2.5 Install drainage systems according to plans and specifications 2.6 Install form work to the site in a manner that will ensure it remains rigid during concrete pouring operations 2.7 Place and compact sub-base material to the required finished levels 2.8 Complete preparation of the site according to the type of structure or feature to be constructed 2.9 Place reinforcement as designated in plans and specifications
3. Mix and pour concrete	3.1 Determine proportions for concrete mix according to the strength requirements of the project 3.2 Determine the volume of dry materials necessary to produce final concrete mix 3.3 Mix together all dry ingredients and required additives to ensure a thorough blending of all materials is achieved 3.4 Introduce sufficient water to produce a concrete mix to the required consistency 3.5 Pour concrete to designated levels in a manner to avoid segregation of materials 3.6 Consolidate concrete using an approved vibration method
4. Finish concrete	4.1 Screed concrete to the desired finished level 4.2 Trowel surface to desired finish 4.3 Finish concrete off according to plans and specifications
5. Check quality of work and clean-up site	5.1 Inspect the quality of finished works to ensure the required standard has been achieved 5.2 Remove and clean form work to allow reuse 5.3 Ensure all clean-up works minimise impact to the environment 5.4 Clean, maintain and store tools and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC302A Construct landscape features using concrete.

Assessment Requirements for AHCLSC302 Construct landscape features using concrete

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret site plans and specifications
- set out and prepare a site for concrete
- measure and construct profiles
- establish levels using levelling equipment
- place reinforcement
- pour, consolidate and finish concrete

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of constructing concrete landscape features
- industry standards in relation to reinforcing and consolidating concrete
- MPA testing theory and what affects MPA specifications in a concrete mix
- sub-base and sub-grade materials and preparation
- the comparative environmental implications associated with soil removal and the placement of concrete

Assessment Conditions

Assessors must satisfy current standards for RTOs.

1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- mark out a site for timber structures and features according to design drawings and specifications
- apply a variety of surface finishes
- establish levels and prepare footings where required
- estimate quantities
- use levelling equipment
- excavate footings
- fix, join or assemble timbers using a variety of recognised methods
- use a power tools efficiently and safely

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices for erecting timber structures
- common timber joins
- levelling principles and techniques
- footings for timber structures and their construction methods
- timber fixing methods and products
- timber properties and characteristics

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLSC305 Construct stone structures and features

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency covers the skills and knowledge required to construct stone structures and features as a component of landscape project works.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Plan and prepare work	1.1 Interpret plans and specifications 1.2 Check the quantity and quality of materials to ensure they conform to design drawings and specifications 1.3 Select tools and equipment and check for serviceability 1.4 Identify workplace health and safety hazards, assess risks and

Element	Performance criteria
	implement controls 1.5 Identify and report environmental implications of erecting stone structures
2. Set out and prepare the site	2.1 Locate services from site plans 2.2 Mark out the position of the structure or feature according to design drawings and specifications 2.3 Prepare base by removing all debris, vegetable matter and topsoil to provide a solid foundation for construction 2.4 Install drainage systems according to design drawings and specifications 2.5 Place and compact sub-base material to the finished levels
3. Construct structure or feature	3.1 Mix mortar and add bonding and colouring agents and other admixes as required, in accordance with specifications 3.2 Lay damp proofing and base course of stone work according to design drawings and specifications 3.3 Lay courses of stone work using designated bond/s in a manner that will ensure the viability and stability of the structure and according to design drawings and specifications
4. Install stone paving	4.1 Set out and prepare area to be paved according to the site plan 4.2 Excavate the area to shape, depth and dimensions to sub-base level 4.3 Trim the sub base to the designated level and falls and place and compact base material to the finished level 4.4 Spread bedding material over the area and level to the designated level and falls 4.5 Place stone and fit to accurately fill gaps in the pattern within tolerances nominated within the site plan 4.6 Install edge constraints as required by the site plan
5. Check quality of work and clean-up site	5.1 Inspect finished works to ensure the standard of the finished structure or feature is in accordance with design drawings and specifications 5.2 Clean stone work surfaces in an environmentally safe and sensitive manner 5.3 Clean and store tools and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC305A Construct stone structures and features.

Assessment Requirements for AHCLSC305 Construct stone structures and features

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- interpret plans and specifications
- prepare the site and install drainage systems
- set out base for paving
- use levelling equipment
- construct stone work with correct mortar ratio

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices for constructing stone structures and features
- comparative environmental implications associated with soil disturbance and the establishment of drainage systems
- bonding and colouring agents and other admix components of mortar used in the construction of stone structures and features
- stone structure construction

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLSC309 Install water features

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to install water features. Water features may include waterfalls, ponds, waterways and fountains. They may be prefabricated as supplied by irrigation suppliers and garden centres or formed 'in situ'.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

AHCLSC310 Implement a tree transplanting program

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to implement a tree transplanting program.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for tree transplantation	1.1 Liaise with local authorities and information services to determine location of services and utilities, local by-laws and regulations governing the transplanting and transportation of trees 1.2 Inspect tree to ensure the appropriate transplanting operations are implemented

Element	Performance criteria
	<p>1.3 Identify hazards, assess risks and implement control measures</p> <p>1.4 Select and use personal protective equipment (PPE)</p> <p>1.5 Select, prepare and use tools, equipment and machinery necessary to implement tree transplanting</p> <p>1.6 Select, prepare and use root ball and crown treatments according to the requirements of the species to ensure the tree remains viable throughout the transplanting process</p> <p>1.7 Notify local residents and authorities where necessary as part of preparing site for transplanting activities</p> <p>1.8 Confirm assets, property and vegetation related to work zone activities are protected, relocated, or secured from potential damage during transplanting</p>
2. Implement transplanting operations	<p>2.1 Excavate the soil around the root zone and undercut the root ball with minimum stress to the plant</p> <p>2.2 Prune roots where required to meet the appropriate Australian Standard</p> <p>2.3 Stabilise tree as the root system is undercut and apply anti-transpirants as a root soak or foliar spray to maintain viability of the plant</p> <p>2.4 Bind root ball with appropriate material to ensure adequate soil is retained and keep moist prior to transportation and installation</p> <p>2.5 Lift tree and secure for potential storage or transportation using safe lifting techniques</p> <p>2.6 Prepare and handle tree or shrub to minimise damage during transportation</p> <p>2.7 Implement appropriate drainage and soil improvements</p> <p>2.8 Re-install and stabilise the tree</p>
3. Maintain health and viability of transplanted tree	<p>3.1 Apply water to the transplanted tree over a sustained period to minimise leaf loss and promote new growth</p> <p>3.2 Apply anti-transpirants and provide nutritional requirements of the species</p> <p>3.3 Install tree protection devices to provide adequate support and protection</p> <p>3.4 Monitor tree condition and site to ensure the plant remains healthy</p> <p>3.5 Clean, maintain and store tools, equipment and machinery at completion of work</p> <p>3.6 Record completed transplanting program and report to management or the client</p>

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCLSC310 Implement a tree transplanting program

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- locate existing services and utilities, local by-laws and regulations
- determine tree transplanting requirements from specifications
- prepare tools and equipment, tree and new site for tree transplanting
- calculate tree mass and size for safe removal
- bind and wrap root balls and crowns
- lift, reinstall and stabilise a tree

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of tree transplanting
- causes of stress in trees resulting from transplanting, storage and transportation
- environmental impact of tree removal and transplantation
- principles and methods of operating tree moving equipment
- problems and methods relating to the aftercare of trees during their establishment period
- requirements for securing and signage when transporting trees on road vehicles
- safety procedures and potential hazards of removing and transplanting trees
- the relevant Australian Standards and codes of practice
- tree anatomy and physiology as it relates to transplanting trees
- tree transplanting techniques

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLSC311 Set out site for construction works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to set out a site for construction works, planning, preparing, locating and marking out construction works, establishing survey benchmarks and verifying site levels in accordance with site plans and specifications. This may be done in advance of proposed works or in conjunction with construction works already being carried out.

The unit applies to individuals who set out site for construction works under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare work	1.1 Interpret and compare site plans and specifications with other available plans 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Select tools and equipment required for setting out construction

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	works, and check for safe operation 1.4 Interpret environmental impact of proposed construction works in conjunction with site plans
2. Locate and mark out position of construction works	2.1 Locate existing site features from site plan 2.2 Locate position of proposed construction works 2.3 Using correct scale, transfer scale measurements of lines, shapes, angles and dimensions from site plan to site 2.4 Mark out shape of proposed construction works on site
3. Establish benchmark for construction works	3.1 Identify site datum from plans and specifications to ensure all existing and proposed construction works can be linked by survey equipment 3.2 Find or establish suitable benchmark for site works according to site plans or specifications 3.3 Set out correct reduced levels on site in comparison to benchmark based on plans and specifications 3.4 Interpret reduced levels in relation to benchmark 3.5 Calculate differences in heights on site or between reduced levels provided on plan
4. Take and verify site levels	4.1 Position levelling instrument to take, record and verify levels 4.2 Describe appropriate procedures to follow if a levelling instrument is not accurate 4.3 Take and record site readings, and verify readings are correct according to site plans and specifications
5. Complete work	5.1 Clean, maintain and store tools and equipment in required location 5.2 Identify and report unserviceable tools and equipment according to workplace procedures 5.3 Record site set out work activities according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to complete work records
Oral communication	<ul style="list-style-type: none"> Use clear language and industry standard terminology to report tool and equipment unserviceability
Numeracy	<ul style="list-style-type: none"> Use and interpret scale rulers, read leveling instruments, take and read measurements and calculate differences between levels Set out geometric shapes

Assessment Requirements for AHCLSC311 Set out site for construction works

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set out a site for construction works on at least one occasion and has:

- interpreted site plans and specifications
- identified and reported workplace health and safety hazards
- selected, used and maintained tools and equipment required for setting out construction works
- used mathematical and geometrical principles to mark out a site for construction work
- established a benchmark on site in relation to reduced levels on plans and specifications
- set out site to reduced levels indicated on plan in relation to benchmark
- used at least three types of surveying instruments
- taken and verified site levels compared to site plan
- reported unserviceable tools and equipment and recorded work activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of site set out for landscape works, including:
 - how other plans may be referred to in assisting setting out a site
 - how to determine if other plans may be referred when setting out a site
 - mathematical and geometrical principals relevant to marking out sites
 - tools, equipment and survey instruments relevant to setting out site for sites construction works and their use
- workplace requirements applicable to health and safety in the workplace for setting out site for construction works.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - tools and equipment, and survey instruments applicable to setting out sites for construction work
 - other plans applicable to setting out sites for construction work
- specifications:
 - workplace requirements applicable to health and safety in the workplace for setting out site for construction works
 - site plans and specifications applicable to setting out sites for construction work
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC312 Construct brick and block structures and features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to construct brick structures and features or block structures and features, or both as a component of landscape project works, including preparing for work, setting out and preparing site, constructing structure or feature, checking and cleaning up site.

The unit applies to individuals who construct brick and block structures and features under broad direction, and take responsibility for their own work and for the quality of the work of others.

State/territory licensing, legislative or certification requirements apply in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

AHCLSC317 Construct landscape features using concrete

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare work	1.1 Interpret site plans and specifications 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Check the quantity and quality of materials

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Select tools, equipment and machinery required for construction work and check for safe operation</p> <p>1.5 Select, fit, use and maintain personal protective equipment (PPE) applicable to the task</p> <p>1.6 Implement suitable control strategies for environmental problems relating to brick and block construction work</p>
2. Set out and prepare the site	<p>2.1 Determine, locate and mark out services from site plan where applicable</p> <p>2.2 Mark out position of structure or feature according to site plans</p> <p>2.3 Establish profiles to conform to nominated tolerances</p>
3. Construct structure or feature	<p>3.1 Mix mortar to determined ratio and add bonding, colouring agents and other appropriate admixes if required in accordance with specifications</p> <p>3.2 Lay damp proofing if required</p> <p>3.3 Establish base course of brick or block work to achieve final level heights</p> <p>3.4 Lay courses of brick or block work using designated bonds in a manner that will ensure viability and stability of structure</p> <p>3.5 Cut bricks or blocks using mechanical and hand cut method</p> <p>3.6 Apply finishes to brick or block work</p> <p>3.7 Apply waterproofing according to site plans and specifications</p> <p>3.8 Install drainage systems according to site plans and specifications</p>
4. Check quality of work and clean-up site	<p>4.1 Inspect quality of finished works to ensure standard of finished structure or feature has been achieved</p> <p>4.2 Clean down brick or block work surfaces in an environmentally safe and sensitive manner</p> <p>4.3 Clean, maintain and store tools and equipment</p> <p>4.4 Identify and report unserviceable tools and equipment according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language and industry standard terminology to report tool and equipment unserviceability
Numeracy	<ul style="list-style-type: none"> Calculate quantities of material, take measurements, read and use tape measures and scale rulers Set out right angles using 3:4:5 method

Assessment Requirements for AHCLSC312 Construct brick and block structures and features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has constructed brick and block structures and features, using two different construction methods and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for constructing brick and block structures and features
- setup profiles for brick and block structures and features
- measured and constructed profiles using mathematical techniques
- established levels using levelling equipment
- gauged brickworks to maintain correct spacing
- applied bonding techniques
- cut bricks or blocks
- applied joint treatment
- checked quality of work and cleaned up site
- cleaned brick or block
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of brick and block construction, including:
 - components of mortar, including bonding and colouring agents and ratios, and their importance
 - site plans and specifications

- structural integrity of brick and block structures and features
- Australian standards and codes relevant to constructing brick and block structures and features
- local and State/Territory regulations and legislation applicable to constructing brick and block structures and features
- types of bricks and blocks and their dimensions, tolerances and applications
- types of brick and block structures and features, including single, double and cavity filled walls
- types of brick and block patterns, joint finishing, frogs and holes, and their purpose
- brick and block mechanical and hand cut methods
- types of drainage applicable to brick and block structures and features
- types of waterproofing
- purpose of damp courses
- types of jointing applicable to brick and block structures and features
- types of concrete footings, reinforcement and core filling applicable to brick and block structures and features
- post-construction finishes and applications
- environmental impacts of bricks and block construction works
- workplace requirements applicable to health and safety in the workplace for constructing brick and block structures and features, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
- a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to constructing brick and block structures and features
 - materials, tools and equipment applicable to constructing brick and block structures and features
 - PPE applicable to constructing brick and block structures and features
- specifications:
 - workplace requirements applicable to health and safety in the workplace for constructing brick and block structures and features
 - site plans and specifications applicable to constructing brick and block structures and features
 - local and State/Territory regulations and legislation applicable to constructing brick and block structures and features
 - Australian standards and codes applicable to constructing brick and block structures and features

- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC313 Construct stone structures and features, and install stone cladding

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency covers the skills and knowledge required to construct stone structures and features, and installing stone cladding as a component of landscape project works, including preparing for work, setting out and preparing site, preparing stone for installation, constructing structure or feature, installing stone cladding, checking quality of the work and site clean-up.

The unit applies to individuals who construct stone structures and features under broad direction, and take responsibility for their own work and for the quality of the work of others.

State/territory licensing, legislative or certification requirements apply in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare work	1.1 Interpret site plans and specifications 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Check quantity and quality of materials to ensure conformance to design drawings and specifications 1.4 Identify and select stone according to design specifications 1.5 Select tools and equipment required for construction work and check for safe operation 1.6 Select, fit, use and maintain personal protective equipment (PPE) applicable to the task 1.7 Identify and report environmental impacts of erecting stone structures
2. Set out and prepare the site	2.1 Locate and mark out services from site plans and site investigations 2.2 Set out position and levels of stone structure or feature according to plans and specifications 2.3 Carry out excavations for footings or base layer 2.4 Install drainage system components and feed lines according to design drawings and specifications 2.5 Prepare footings, substrate or base material according to industry standards in preparation for stone structure or feature
3. Prepare stone for installation	3.1 Select tools and equipment for work, ensuring all environmental controls are in place 3.2 Carry out stone cutting, shaping or surface finishing to meet plans, specifications and safety requirements 3.3 Store prepared stone in a safe and practical space ready for installation
4. Construct stone structure or feature	4.1 Prepare mortar, adhesives and other admixes as required according to specifications 4.2 Construct stone structure according to plans and specifications 4.3 Install waterproofing and drainage according to plans and specifications 4.4 Carry out cleaning and sealing of stone according to plans and specifications
5. Install stone cladding	5.1 Prepare mortar, adhesives and other admixes as required according to specifications 5.2 Place and fix prepared stone cladding according to plans and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	specifications 5.3 Fit stone cladding accurately to fill gaps in the pattern within tolerances nominated in site plan and specifications 5.4 Finish gaps between stone cladding with mortar 5.5 Carry out cleaning and sealing of stone cladding according to plans and specifications
6. Check quality of work and clean-up site	6.1 Inspect finished works to ensure standard of finished structure or feature is in accordance with design drawings and specifications 6.2 Clean-up site, remove and dispose of waste in an environmentally safe and sensitive manner according to specifications 6.3 Clean, maintain and store tools and equipment 6.4 Identify and report unserviceable tools and equipment according to workplace procedures

Assessment Requirements for AHCLSC313 Construct stone structures and features, and install stone cladding

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has constructed stone structures and features using two different construction techniques, and installed stone cladding on at least one occasion and has:

- interpreted site plans, design drawings and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for constructing stone structures and features, and installing stone cladding
- set out and prepared the site and installed drainage systems
- used and repositioned hand and power tools relevant to constructing stone structures and features, and installing stone cladding
- shaped and cut stone for installation
- constructed stone structures and features, and installed stone cladding according to plans and specifications
- checked structures features, and cladding according to plans and specifications
- cleaned up site
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for constructing stone structures and features, and installing stone cladding, including:
 - environmental implications associated with the construction of stone structures and features, and installing stone cladding
 - drainage system preparation and installation

- stone types, selection, profiles and surface finishes
- stone construction and cladding installation hand and power tool use
- types of construction techniques, including dry stack, solid wall and veneer
- types of stone cladding and construction techniques
- adhesive, bonding and colouring agents and other admix components of mortar used in the construction of stone structures and features, and installation of stone cladding
- types of stone structures and features
- workplace requirements applicable to health and safety in the workplace for constructing stone structures and features, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to constructing stone structures and features, and installing stone cladding
 - materials, tools and equipment applicable to constructing stone structures and features, and installing stone cladding
 - PPE applicable to constructing stone structures and features, and installing stone cladding
- specifications:
 - workplace requirements applicable to health and safety in the workplace for constructing stone structures and features, and installing stone cladding
 - site plans, design drawings and specifications applicable to constructing stone structures and features, and installing stone cladding
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC314 Implement a tree transplanting program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to implement a tree transplanting program, including preparing and implementing tree transplantation, maintaining transplanted tree health, checking and cleaning up site.

The unit applies to individuals who implement a tree transplanting program under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for tree transplantation	1.1 Interpret site plans and specifications 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Liaise with local authorities and information services to determine location of services and utilities, local by-laws and regulations governing transplanting and transportation of trees

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Inspect tree to ensure appropriate transplanting operations are implemented</p> <p>1.5 Select tools, equipment and machinery required to implement tree transplanting and check for safe operation</p> <p>1.6 Select, fit use and maintain personal protective equipment (PPE) applicable to the task</p> <p>1.7 Select, prepare and use root ball and crown treatments according to requirements of species to ensure tree remains viable throughout transplanting process</p> <p>1.8 Notify local residents and authorities where necessary as part of preparing site for transplanting activities</p> <p>1.9 Confirm assets, property and vegetation related to work zone activities are protected, relocated, or secured from potential damage during transplanting</p>
2. Implement transplanting operations	<p>2.1 Excavate soil around root zone and undercut root ball with minimum stress to plant</p> <p>2.2 Prune roots where required to meet the appropriate Australian standard</p> <p>2.3 Stabilise tree as root system is undercut and apply anti-transpirants as a root soak or foliar spray to maintain viability of the plant</p> <p>2.4 Bind root ball with appropriate material to ensure adequate soil is retained and keep moist prior to transportation and installation</p> <p>2.5 Lift tree and secure for potential storage or transportation using safe lifting techniques</p> <p>2.6 Prepare and handle tree or shrub to minimise damage during transportation</p> <p>2.7 Implement appropriate drainage and soil improvements</p> <p>2.8 Re-install and stabilise the tree</p>
3. Maintain health and viability of transplanted tree	<p>3.1 Apply water to transplanted tree over a sustained period to minimise leaf loss and promote new growth</p> <p>3.2 Apply anti-transpirants and provide nutritional requirements of species</p> <p>3.3 Install tree protection devices to provide adequate support and protection</p> <p>3.4 Monitor tree condition and site to ensure plant remains healthy</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
4. Check quality of work and clean-up site	4.1 Clean, maintain and store tools, equipment and machinery 4.2 Identify and report unserviceable tools, equipment and machinery according to workplace procedures 4.3 Record completed transplanting program and report to management or the client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a tree transplanting program on at least one occasion and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- liaised with local authorities and information services to determine location of services and utilities, local by-laws and regulations governing the transplanting and transportation of trees
- selected, used and maintained tools, equipment and machinery required for implementing a tree transplanting program
- prepared tree and new site for tree transplanting
- bound and wrapped root balls and crowns
- lifted, reinstalled and stabilised a tree
- checked quality of work and cleaned up site
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of tree transplanting, including:
 - causes of stress in trees resulting from transplanting, storage and transportation
 - tree drainage and soil improvements
 - principles and methods of operating tree moving equipment
 - problems and methods relating to the aftercare of trees during their establishment period

- requirements for securing and signage when transporting trees on road vehicles
- Australian standards and codes of practice relevant to tree transplanting
- local by-laws and regulations governing the transplanting and transportation of trees
- tree anatomy and physiology as it relates to transplanting trees
- tree transplanting techniques
- workplace requirements applicable to health and safety in the workplace for implementing a tree transplanting program, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to implementing a tree transplanting program
 - materials, tools, equipment and machinery applicable to implementing a tree transplanting program
 - trees for transplanting
 - PPE applicable to implementing a tree transplanting program
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing a tree transplanting program
 - site plans and specifications applicable to implementing a tree transplanting program
 - Australian standards and codes of practice applicable to implementing a tree transplanting program
 - local by-laws and regulations governing the transplanting and transportation of trees
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC315 Implement an outdoor tiling project

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a tiling project on at least one occasion and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for implementing a tiling project
- calculated material and resource requirements
- used tiling set out techniques
- applied tiling patterns and templating methods
- checked quality of work and cleaned up site
- cleaned up, stored and maintained tools and equipment
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of tiling, including:
 - Australian standards relevant to outdoor tiling
 - environmental impacts applicable to outdoor tiling projects
 - tiling tools and equipment
 - tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, applications, limitations and finishing
 - techniques for setting out and fixing tiles to outdoor surfaces
 - tiling set out techniques

- tiling patterns and templating methods
- workplace requirements applicable to health and safety in the workplace for implementing a tiling project, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to implementing a tiling project
 - materials, tools and equipment applicable to implementing a tiling project
 - tiles
 - PPE applicable to implementing a tiling project
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing a tiling project
 - site plans and specifications applicable to implementing a tiling project
 - Australian standards applicable to outdoor tiling project
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC316 Implement a paving project

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a paving project of at least ten square metres on solid and flexible bases using straight and curved edges, individually or as part of a team on at least one occasion and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools, equipment and machinery required for implementing a paving project
- measured and cut pavers to specified tolerances
- installed edge restraints and drainage if required
- set out and excavated area, and installed stone paving according to site plan
- installed base, bedding material, jointing sand or grout, and pavers according to site plans and specifications
- checked quality of work and cleaned up site
- cleaned up, stored and maintained tools, machinery and equipment
- reported unserviceable tools, equipment and machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of paving, including:
 - landscape paving materials
 - methods and practices for maintaining and repairing paved areas
 - methods of work schedule programming
 - set-out techniques

- paving patterns and techniques, including formal and random
- techniques for laying rigid and flexible paving
- techniques for laying stone paving
- the range and use of required materials, equipment and machinery
- workplace requirements applicable to health and safety in the workplace for implementing a paving project, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to implementing a paving project
 - materials, tools, equipment and machinery applicable to implementing a paving project
 - PPE applicable to implementing a paving project
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing a paving project
 - site plans, design drawings and specifications applicable to implementing a paving project
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC317 Construct landscape features using concrete

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to construct concrete structures and features as a component of landscape project works, including preparing for work, setting out and preparing site, mixing pouring and finishing concrete, checking and cleaning up site.

The unit applies to individuals who construct landscape features using concrete under broad direction, and take responsibility for their own work and for the quality of the work of others.

State/territory licensing, legislative or certification requirements apply in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Pre-requisite Unit

Nil

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare work	1.1 Interpret site plans and specifications 1.2 Identify potential hazards and risks, and implement safe working practices to manage risks 1.3 Check quantity and quality of materials 1.4 Select tools, equipment and machinery required for construction

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>work and check for safe operation</p> <p>1.5 Select, fit, use and maintain personal protective equipment (PPE) applicable to the task</p> <p>1.6 Identify and minimise environmental impacts of proposed concrete works</p>
2. Set out and prepare the site	<p>2.1 Determine, locate and mark out services from site plan</p> <p>2.2 Mark out position of structure or feature according to site plan</p> <p>2.3 Establish profiles to conform to nominated tolerances</p> <p>2.4 Excavate site according to site plan</p> <p>2.5 Prepare subsoil by removing all debris, vegetable matter and topsoil to provide a solid foundation for concrete</p> <p>2.6 Install drainage systems according to plans and specifications</p> <p>2.7 Install form work on site in a manner that will ensure it remains rigid during concrete pouring operations and allow for ease of dismantling without damage to concrete</p> <p>2.8 Place and compact sub-base material to required finished levels</p> <p>2.9 Complete preparation of site according to type of structure or feature to be constructed</p> <p>2.10 Place expansion joints and reinforcement steel according to site plan and specifications</p>
3. Mix and pour concrete	<p>3.1 Determine proportions for concrete mix according to strength requirements of project</p> <p>3.2 Determine volume of dry materials necessary to produce final concrete mix</p> <p>3.3 Mix together all dry ingredients and required additives to ensure a thorough blending of all materials is achieved</p> <p>3.4 Introduce sufficient water to produce a concrete mix to required consistency</p> <p>3.5 Perform concrete slump test</p> <p>3.6 Pour concrete to designated levels in a manner to avoid segregation of materials</p> <p>3.7 Consolidate concrete using an approved vibration method</p>
4. Finish concrete	4.1 Screed concrete to desired finished level

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.2 Apply appropriate trowelling techniques 4.3 Finish concrete off according to site plan and specifications 4.4 Install control joints according to site plan and specifications
5. Check quality of work and clean-up site	5.1 Inspect quality of finished works to ensure required standard has been achieved 5.2 Remove and clean form work to allow reuse 5.3 Ensure all clean-up works minimise impact to environment 5.4 Clean, maintain and store tools and equipment 5.5 Identify and report unserviceable tools and equipment according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Use clear language and standard industry terminology to report tool and equipment unserviceability
Numeracy	<ul style="list-style-type: none"> Calculate quantities of material, take measurements, read and use scale rulers Calculate concrete mix proportions Set out geometric shapes

Assessment Requirements for AHCLSC317 Construct landscape features using concrete

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has constructed landscape features applying two concrete finishes and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for constructing landscape features using concrete
- set out and prepared a site for concrete
- measured and constructed profiles
- established levels using levelling equipment
- installed expansion joints and placed steel reinforcement
- performed concrete slump test
- poured and finished concrete, including consolidation and trowelling techniques
- checked quality of work and cleaned up site
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of constructing concrete landscape features, including:
 - Australian standards and codes relevant to reinforcing and consolidating concrete
 - Megapascal (MPa) testing theory and what affects MPa specifications in a concrete mix
 - industry standard terminology relevant to constructing landscape features using concrete

- sub-base and sub-grade materials and preparation
- expansion joints and steel reinforcement purpose and installation techniques
- slump testing procedures
- concrete pigments and additives use and preparation
- concrete applications and placement techniques
- concrete curing processes and finishing techniques
- the comparative environmental implications associated with soil removal and the placement of concrete
- workplace requirements applicable to health and safety in the workplace for constructing landscape features using concrete, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
 - assessment of this competency can be conducted as part of a team working on a large group project
- resources, equipment and materials:
 - workplace procedures applicable to constructing landscape features using concrete
 - materials, tools and equipment applicable to constructing landscape features using concrete
 - concrete slump test equipment
 - PPE applicable to constructing landscape features using concrete
- specifications:
 - workplace requirements applicable to health and safety in the workplace for constructing landscape features using concrete
 - site plans and specifications applicable to constructing landscape features using concrete
 - Australian standards and codes applicable to constructing landscape features using concrete
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC318 Erect timber structures and features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has erected timber structures and features on at least two occasions and has:

- interpreted site plans, design drawings and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for erecting timber structures and features
- set out and prepared site for timber structures and features
- marked out a site for timber structures and features according to site plans, design drawings and specifications
- established levels and prepared footings where required
- used levelling equipment
- excavated footings
- identified and selected timber according to site plans and specifications
- measured and marked out timber
- selected and used hand and power tools relevant to timber structures and features
- selected hardware according to site plans and specifications
- fixed, joined or assembled timbers
- applied protective treatments
- checked quality of work and cleaned up site
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for erecting timber structures and features, including:
 - Australian standards and codes relevant to timber structures and features
 - industry standard terminology relevant to timber structures and features
 - levelling principles and techniques
 - footings for timber structures and their construction methods
 - timber fixing and joining methods and hardware products
 - timber properties, characteristics and defects
 - use of hand and power tools relevant to timber structures and features
 - protective treatments
- workplace requirements applicable to health and safety in the workplace for erecting timber structures and features, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
 - assessment of this competency can be conducted as part of a team working on a large group project
- resources, equipment and materials:
 - workplace procedures applicable to erecting timber structures and features
 - materials, tools and equipment applicable to erecting timber structures and features
 - PPE applicable to erecting timber structures and features
- specifications:
 - workplace requirements applicable to health and safety in the workplace for erecting timber structures and features
 - site plans, design drawings and specifications applicable to erecting timber structures and features
 - Australian standards and codes relevant to timber structures and features
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC320 Install water features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to install water features, including preparing for work, setting out and preparing site, installing water feature and accessories, checking and cleaning up site. Water features may include waterfalls, ponds, waterways and fountains. They may be prefabricated as supplied by irrigation suppliers and garden centres or formed on site.

The unit applies to individuals who install water features under broad direction, and take responsibility for their own work and for the quality of the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCLSC320 Install water features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed water features on at least two occasions and has:

- interpreted site plans and specifications
- planned set out and prepared a water feature site using site plans and specifications
- applied workplace health and safety requirements, included fitted and used personal protective equipment (PPE)
- selected, used and maintained tools and equipment required for installation of water features
- marked out a site for water features according to design drawing and specifications
- used surveying instruments
- measured and calculated area, depth and volume
- used tools and equipment to excavate and construct a water feature
- checked quality of work and cleaned up the site
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of water feature installation, including:
 - interpretation of site plans, design drawings and specifications relevant to water feature installation
 - pipe sizes, types and applications
 - pumping systems and accessories associated with water features
 - set-out techniques, including use of survey instruments relevant to installing water features
 - use of hand and power tools relevant to installing water features

- water treatment methods
- workplace requirements applicable to health and safety in the workplace for installation of water features, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to installing water features
 - materials, tools and equipment applicable to installing water features
 - PPE applicable to installing water features
- specifications:
 - workplace requirements applicable to health and safety in the workplace for installing water features
 - site plans, design drawings and specifications applicable to installing water features
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC321 Install metal structures and features

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has installed metal structures or features on at least two occasions and has:

- interpreted site plans and specifications
- applied workplace health and safety requirements, including fitted and used personal protective equipment (PPE)
- estimated quantities
- selected, used and maintained tools and equipment required for installation of metal structures and features
- planned and prepared metal structures and features using site plans and specifications
- marked out a site for metal structures and features according to design drawings and specifications
- used surveying instruments
- established levels and prepare footings
- excavated footings
- measured and marked lengths of metal components
- used power tools efficiently and safely
- fixed, joined or assembled metal components
- applied surface finishes
- checked quality of work and cleaned up site
- reported unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of installing metal structures and features, including:

- levelling principles and techniques
- footings for metal structures and their construction methods
- metal structure and component fixing, cutting, joining and assembly methods and hardware products
- use of hand and power tools relevant to metal structures and features
- surface finishes
- workplace requirements applicable to health and safety in the workplace for installation of metal structures and features, including appropriate use of PPE.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - workplace procedures applicable to installing metal structures and features
 - materials, tools and equipment applicable to installing metal structures and features
 - PPE applicable to installing metal structures and features
- specifications:
 - workplace requirements applicable to health and safety in the workplace for installing metal structures and features
 - site plans, design drawings and specifications applicable to installing metal structures and features
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC401 Supervise landscape project works

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to supervise landscape project works.

This unit applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify scope of landscape project works	1.1 Identify the nature of the landscape project work and extent of responsibilities and check against landscape documentation 1.2 Identify personnel and other resources required to undertake landscape works according to scope of project 1.3 Develop a work program to ensure that project outcomes are

Element	Performance criteria
	<p>reached within designated time lines</p> <p>1.4 Identify workplace health and safety hazards, assess risks and implement controls</p> <p>1.5 Identify environmental impact of proposed landscape project works</p> <p>1.6 Select and use personal protective equipment (PPE)</p>
2. Coordinate the supply of materials and equipment	<p>2.1 Calculate material quantities and equipment requirements to ensure an ongoing work program is maintained</p> <p>2.2 Order material and equipment, check for quantity and quality and store as required</p> <p>2.3 Convey and confirm any specific delivery instructions with suppliers to ensure materials are delivered according to work program</p> <p>2.4 Send any rejected material back to supplier and re-order</p>
3. Monitor project works	<p>3.1 Monitor work program and adjust to ensure the site is developed and that project outcomes are reached within designated timelines</p> <p>3.2 Identify, record and report variations to the work program, issues likely to cause delays, and contingencies beyond the scope of the project</p> <p>3.3 Monitor the work site to ensure it remains in a clean, tidy and safe condition throughout and on completion of works</p>
4. Complete site works	<p>4.1 Inspect site prior to practical completion to ensure all works have been undertaken according to client needs and relevant documentation</p> <p>4.2 Note any works not complying and rectify</p> <p>4.3 Produce a completed landscape project works report for client</p>

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCLSC401A Supervise landscape project works.

Assessment Requirements for AHCLSC401 Supervise landscape project works

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify scope of landscape project work
- identify personnel and other resource requirements
- develop a project plan
- calculate materials and equipment
- control the quality of supplied materials
- monitor, record and report on progress of a works program
- complete a landscape works report
- liaise with clients

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of supervising landscape works
- causes of disruption to work programs and their effect on quality and time schedules
- environmental impacts of landscape works
- hazard identification, assessment and control
- how to conduct site assessment and work site establishment
- issuing of instructions, variations and requests for information
- format, frequency and documentation for job reporting requirements
- legislative requirements and legal responsibilities
- contracts, plans and specifications for project documentation
- supervision techniques of staff and sub-contractors

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCLSC402 Apply building codes and standards to the construction process for Class 10 buildings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to access, interpret and apply relevant building codes and standards applicable to the National Construction Code (NCC) Class 10 buildings, to a maximum of one storey. It includes knowledge of the structure of the NCC, as well as the ability to access relevant information from the code as applicable to various NCC Class 10 building projects.

The unit applies to individuals who apply specialist skills and knowledge to ensure compliance with building codes and standards for Class 10 buildings. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements.

State/territory licensing, legislative or certification requirements apply in some jurisdictions. Users are advised to check with the relevant regulatory authority.

Assessment Requirements for AHCLSC402 Apply building codes and standards to the construction process for Class 10 buildings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied codes and standards to the construction process of one Class 10 building project, to a maximum of one storeys, and has:

- determined type of construction and use of building from construction plans and specifications and class of building using National Construction Code (NCC) classifications
- identified current building and construction codes and Australian Standards relevant to the landscape construction projects
- applied NCC performance requirements in relation to the design and construction of the building, including:
 - energy efficiency
 - damp and weatherproofing
 - fire safety
 - health and amenity
 - structure
 - safe movement and access
 - ancillary provisions
- applied performance solutions to ensure construction complies with NCC performance requirements
- identified faults and problems and propose actions to rectify
- completed documentation
- inspected building to determine fire protection compliance with NCC and other legislative requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace policies and procedures, quality systems, best practice approaches, and safety requirements
- processes, procedures and techniques of construction
- basic building design principles and the behaviour of structures under stress, strain, compression, bending or combined actions
- project plans, specifications, working drawings and structural details
- construction terminology
- NCC:
 - performance requirements and general requirements
 - performance solutions and assessment methods
 - performance hierarchy
 - evidence of suitability for building materials and products
 - classes of building and types of construction
- current building and construction codes and Australian Standards relevant to Class 10 building construction
- causes and implications of building defects related to failure of applying building codes and standards to residential and commercial buildings
- extent of remedial work required for various defects caused by inadequate design and incorrect application of building codes and practices
- properties, characteristics and limitations of specified building materials and components.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - construction drawings, site plans and specifications
 - software and hardware to source and document information
- specifications:
 - NCC Volume 2
 - current building and construction codes and Australian Standards relevant to Class 10 building construction projects
 - workplace policies and procedures, and quality procedures relevant to Class 10 building construction projects
- relationships:
 - design and building construction professionals

- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC403 Apply structural principles to Class 10 buildings

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied structural principles to the construction of one National Construction Code (NCC) Class 10 building project, and has:

- assessed the structural integrity of the construction project
- applied technical construction principles and concepts to the selection, integration and building of construction elements and components
- planned and documented the structural principles of the building
- coordinated, planned, implemented and checked construction.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- NCC:
 - performance requirements and general requirements
 - performance solutions and assessment methods
 - performance hierarchy
 - evidence of suitability for building materials and products
 - classes of building and types of construction
- project documentation:
 - approval project plans and specifications
 - structural designs and specifications
 - engineer's footing design and specifications
 - registered plans
 - contour site plan
 - geotechnical report

- underpinning, rock anchors and shoring design and specifications
- retaining wall and tanking design and specifications
- structural, floor, wall and roof systems
- causes and implications of structural defects related to failure of applying structural principles to class 10 buildings
- extent of remedial work required for various defects cause by inadequate design and application of structural principles
- current building and construction codes and Australian Standards relevant to Class 10 building construction
- standards and codes for timber framing
- footing systems:
 - bored pier footings
 - columns or stumps
 - concrete slab floors
 - reinforced piers and beams
 - drilled and driven piles
 - mass concrete piers
 - screw piles
 - waffle pod slabs
 - brick bases
- floor system and components:
 - slab on ground concrete floors
 - engineered floor joists
 - platform floor construction
 - fitted (cut-in) floors
 - compressed sheet wet area flooring
 - sheet flooring
 - autoclaved aerated concrete (AAC) panel systems
- AAC floor and wall systems
- structural principles:
 - behaviour of structural materials
 - dead, live and wind loads
 - section properties
 - solution of force systems
 - wind bracing
- structural wall systems:
 - composite walls featuring tilt-up slab, engineered timber products and lightweight AAC
 - framed walls incorporating timber, engineered timber products and lightweight section steel
 - masonry walls incorporating cavity brick, single-leaf masonry and AAC

- workplace policies and procedures, quality systems, best practice approaches, and safety requirements
- workplace quality documentation:
 - policies and procedures
 - workplace procedures, workplace safety and environmental requirements
 - various construction contracts
- structural roof systems:
 - timber and metal pre-fabricated trusses
 - hand cut timber
- roof types:
 - box gable
 - dual pitch
 - Dutch gable and Dutch hip
 - gable end
 - hip and valley
 - north light
 - skillion
 - rafter and purlin
- accepted industry practices
- roof cladding:
 - concrete, clay and metal tiles
 - shakes and shingles
 - short and long run, various profile and metal sheeting
- wall cladding:
 - weather boards
 - coatings over base materials
 - corrugated metal sheeting
 - fibre cement and compressed wood panelling
 - tilt-up slab
 - unfired and fired AAC masonry.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - construction drawings, site plans and specifications
 - software and hardware to source and document information

- specifications:
 - NCC Volume 2
 - current building and construction codes and Australian Standards relevant to Class 10 building construction
 - workplace policies and procedures, and quality procedures relevant to class 10 building construction
 - construction material manufacturer specifications
- relationships:
 - design and building construction professionals
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supervised landscape project works on at least one occasion, and has:

- identified scope of landscape project work
- identified personnel and resource requirements
- developed and documented a project work program that identifies project outcomes, timelines, labour, materials and equipment
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- fitted, used and maintained personal protective equipment (PPE)
- calculated materials and equipment
- controlled the quality of supplied materials
- supervised and communicated with staff and sub-contractors
- monitored, recorded and reported on progress of a works program
- liaised with clients
- completed a landscape works report.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of supervising landscape works, including:
 - causes of disruption to work programs and their effect on quality and time schedules
 - how to conduct site assessment and work site establishment
 - issuing of instructions, variations and requests for information
 - format, frequency and documentation for job reporting requirements
 - legislative requirements and legal responsibilities relevant to landscape project works

- contracts, plans and specifications for project documentation
- supervision techniques of staff and sub-contractors
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to supervising landscape project works.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - landscape documentation including scope of works
 - PPE applicable to supervising landscape project works
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to supervising landscape project works
 - legislative requirements and legal responsibilities relevant to landscape project works
- relationships:
 - clients, staff and sub-contractors
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC504 Survey and establish site levels

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to undertake site surveys, map levels and issues of levels in gardens, and record site details.

The unit applies to individuals who apply specialist skills and knowledge to surveying and establishing site levels, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCLSC504 Survey and establish site levels

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has surveyed and established site levels on at least one occasion on two different sites, and has:

- performed survey equipment test
- maintained survey equipment and material
- interpreted existing plans and client brief
- produced scale drawings for designs
- liaised with clients
- used survey equipment on a sloping site, including a change point
- recorded levels of survey items and site features
- read maps and plans
- orientated a landscape site
- mapped orientation and levels and issues of levels to scale on a site plan
- analysed surveying and levelling results
- booked and logged results.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of establishing site levels, including:
 - survey equipment testing, calibration and maintenance procedures
 - techniques for surveying differing and unusual garden shapes
 - map and plan reading, and map orientation
 - difference between magnetic and true north
- tools, equipment, and surveying instruments relevant to surveying and establishing site levels for landscape projects and their use.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - tools and equipment, and survey instruments applicable to surveying and establishing site levels for landscape projects
- specifications:
 - site plans, maps and client brief applicable to surveying and establishing site levels for landscape projects
- relationships:
 - clients
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSC505 Manage landscape projects

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to manage landscape projects, including identifying project issues, maintaining effective client liaison, developing work schedules, managing contractors and submitting works for handover.

The unit applies to individuals who apply specialist skills and knowledge to managing landscape projects, take personal responsibility and exercise autonomy in undertaking complex work. They analyse and synthesise information, and analyse, design and communicate solutions to sometimes complex problems.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Landscape (LSC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify issues relating to landscape project	1.1 Discuss and clarify client goals and project objectives 1.2 Analyse landscape documentation to determine nature and scope

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>of project</p> <p>1.3 Identify potential constraints to success of the project</p> <p>1.4 Identify and minimise environmental impact of proposed landscape project works according to environmental and biosecurity legislation, regulations and workplace procedures</p> <p>1.5 Identify hazards and assess risks associated with work activities, and implement control measures according to workplace health and safety procedures</p>
2. Maintain effective client liaison	<p>2.1 Clarify responsibilities of all parties involved in project according to contract</p> <p>2.2 Clarify procedures to vary contract and satisfy all stakeholders</p> <p>2.3 Identify site emergency procedures according to contract terms and conditions</p> <p>2.4 Establish communication obligations in respect of work program according to contractual obligations and sound business principles</p>
3. Develop work schedule	<p>3.1 Identify and document work schedules and timelines of operations</p> <p>3.2 Identify resources required for landscape project according to contract and landscape design</p> <p>3.3 Identify and document quantity, quality, timing and cost of supply of each input and service</p> <p>3.4 Establish key performance outcomes and indicators to measure performance of all operations and personnel</p>
4. Manage contractors	<p>4.1 Prepare standard contracts for specific works in line with landscape design and contract</p> <p>4.2 Monitor progress of works against contract according to industry standards</p> <p>4.3 Identify and solve project, staff and contractor issues as required</p> <p>4.4 Identify, negotiate, implement and record variations</p> <p>4.5 Identify, rectify and record non-conforming elements of contract</p> <p>4.6 Initiate progress payments and final payments according to contract terms</p>
5. Submit works for hand over	5.1 Undertake site inspection with relevant personnel at completion of works and prior to hand over

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	5.2 Note, record and rectify all items below specification 5.3 Document hand over report, and present to client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed landscape projects on at least one occasion and has:

- liaised with clients
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- identified, negotiated and implemented variations to contracts
- identified, organised and managed works program, works team and sub-contracted work
- prepared landscape project documentation
- developed a schedule of works and sub-contracts
- developed a project budget and costed a bill of quantities
- identified and rectified non-conforming elements of contracts
- completed hand over report and presented to client.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of managing landscape projects, including:
 - project management principles
 - project budgeting and costing techniques
 - landscape project documentation and contracting techniques
 - public liability, regulations and legal responsibilities relevant to landscape projects
 - types of landscape machinery and equipment
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing landscape projects.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- resources, equipment and materials:
 - client landscape project documentation
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing landscape project
 - public liability, regulations and legal responsibilities relevant to managing landscape projects
- relationships:
 - clients, staff and sub-contractors
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSC506 Manage a tree transplanting program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed a tree transplanting program on at least one occasion and has:

- determined transplant and transportation requirements and removal methods
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- assessed and controlled risks
- liaised with authorities and information services regarding transplanting and transporting trees
- developed transport plan
- assessed tree viability for transplantation
- assessed crown and root reduction requirements
- calculated root ball and tree mass and size
- documented and communicated transplanting program, contingency planning and after-care plan
- calculated project resources and costs
- developed a budget.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of tree transplanting management, including:
 - causes of stress in trees resulting from resulting from transplanting, storage and transportation
 - current practices and techniques in tree preparation, lifting, transportation and replanting

- local government tree protection and preservation regulations relevant to tree transplanting
- methods of managing tree moving operations
- planning considerations and environmental impacts of transplanting activities
- requirements for securing and signing trees for road transportation
- Australian standards and codes of practice relevant to tree transplanting
- tree anatomy, physiology and biochemistry as it relates to transplanting trees
- tree transplanting techniques appropriate to the specific requirements of the species
- aftercare management
- workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing a tree transplanting program.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represent workplace conditions
- specifications:
 - workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures relevant to managing a tree transplanting program
 - Australian standards and codes of practice relevant to managing a tree transplanting program
 - local government tree protection and preservation regulations a tree transplanting program
- relationships:
 - authorities, staff and specialist sub-contractors
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK219 Carry out birthing duties

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to assist animals and their newborn at birthing, including preparing for birthing, assisting with birthing process and providing post-birthing assistance.

The unit applies to individuals who carry out birthing duties under general supervision with limited autonomy or accountability.

All work is carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCLSK219 Carry out birthing duties

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out birthing duties on at least three separate occasions, and has:

- recognised signs of imminent birthing of animals
- monitored animal condition and recognised abnormal behaviour
- prepared environment, materials and resources to industry standards
- followed relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- maintained a safe and secure environment
- provided due care and handled animals humanely according to workplace animal welfare and hygiene practices
- provided a non-threatening environment and access to appropriate feed and water
- implemented predator control measures
- monitored birthing and provided assistance if required or referred on if birthing difficulties require veterinary assistance
- carried out animal husbandry procedures associated with birthing
- recognised abnormalities in newborn animals
- reported and maintained animal birth records
- selected equipment and materials and checked for safe operation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for carrying out birthing duties, including appropriate use of personal protective equipment (PPE)

- environment and biosecurity legislation and regulations and workplace practices relevant to carrying out birthing duties
- principles and practices of animal birthing duties, including:
 - relevant animal behaviour, basic health and nutritional requirements of animals and newborn
 - birthing environment requirements for animals
 - equipment and materials, their components and functions
 - birthing intervention and non-intervention strategies
 - effects of adverse weather conditions on birthing process and newborn animals
 - workplace policies with regard to treating animals, recording and reporting routines
 - relevant livestock gestation and appropriate birthing and husbandry procedures
 - problems associated with birthing and remedial treatment
 - use of antibiotics and other medicine after birthing, including dosage, delivery routes and contraindications
 - procedures for cleaning and maintaining treatment equipment and materials
 - predator behaviour and control measures
 - animal welfare legislation, codes of practice and procedures and hygiene practices relevant to carrying out birthing duties.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to carrying out birthing duties
 - materials, equipment, and resources applicable to carrying out birthing duties for the animal species
 - pregnant livestock
 - PPE applicable to carrying out birthing duties
- specifications:
 - workplace requirements applicable to health and safety in the workplace for carrying out birthing duties
 - environment and biosecurity legislation and regulations and workplace practices applicable to carrying out birthing duties
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to carrying out birthing duties
 - hygiene practices applicable to carrying out birthing duties
- relationships:
 - supervisor
- timeframes:

- according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSK220 Monitor livestock to parturition

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored livestock throughout pregnancy to parturition, and has:

- followed relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- followed relevant animal welfare policies and practices
- observed livestock health and wellbeing from joining
- recognised and reported abnormalities for remedial action
- administered preventative health treatments under instruction
- provided a safe and secure environment for the promotion of the welfare and wellbeing of pregnant animals through to birthing
- maintained appropriate nutritional and environmental requirements
- calculated animal numbers, measured feed, assessed rate and frequency of feeding, and calculated animal gestation
- handled pregnant animals with due care.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for monitoring livestock to parturition
- environment and biosecurity legislation and regulations and workplace practices relevant to monitoring livestock to parturition
- principles and practices of monitoring livestock parturition, including:
 - effects of adverse weather conditions and inadequate nutrition on pregnant animals and their newborn

- effect of local climatic conditions on the timing of separating and transporting pregnant animals
- environment codes of practice applicable to animal production
- correct livestock handling techniques for dry and pregnant animals
- health and nutritional requirements for pregnant animals
- livestock identification methods
- pregnant animal behaviour and abnormalities
- pregnancy checking and confirmation procedures, including scanning
- livestock health treatments, procedures and methods
- animal welfare legislation, codes of practice and procedures relevant to monitoring livestock to parturition.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to monitoring livestock to parturition
 - materials, equipment, and resources applicable to monitoring livestock to parturition
 - pregnant livestock
 - personal protective equipment applicable to monitoring livestock to parturition
- specifications:
 - workplace requirements applicable to health and safety in the workplace for monitoring livestock to parturition
 - environment and biosecurity legislation and regulations and workplace practices applicable to monitoring livestock to parturition
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to monitoring livestock to parturition
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK330 Implement procedures for calving

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to prepare for calving, observe and support cows at calving and monitor after calf is born.

The unit applies to individuals who implement procedures for calving under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements in particular the risks associated with Q fever, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for calving	1.1 Identify potential hazards and risks, and implement safe working practices to address risks and biosecurity hazards 1.2 Assess and monitor condition and health status of cow prior to calving 1.3 Select required calving equipment, resources and materials and check for safe operation 1.4 Select, fit, use and maintain personal protective equipment applicable to task 1.5 Graze cows at risk of calving difficulty in an area where intervention can be carried out with as little disruption as possible 1.6 Check mating records and confirm anticipated calving date
2. Observe the calving	2.1 Monitor cows for signs of approaching parturition and throughout calving 2.2 Note signs of calf malpresentation or dystocia from the rate of progress in giving birth and initial orientation of the feet and head
3. Support calving	3.1 Handle calving cows calmly and put in a secure environment according to workplace animal welfare practices 3.2 Clean calving equipment according to workplace hygiene procedures 3.3 Use calving ropes and calf pulling equipment where required, without causing undue harm to female and unborn calf 3.4 Seek specialist veterinary support where normal assistance procedures are not adequate to assist the calving
4. Carry out monitoring after calf has been born	4.1 Check that calves have clear airways and commence breathing, and clear airways where required 4.2 Allow cow to rest and encourage cow to lick the calf as an initial bonding 4.3 Leave the placenta for cow to ingest after calving 4.4 Maintain personal safety when monitoring calves and cows 4.5 Clean and maintain the calving environment and facilities using appropriate hygiene procedures 4.6 Clean and return equipment, resources and materials to required location 4.7 Identify and report unserviceable equipment and resources

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	according to workplace procedures 4.8 Complete calving records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret textual information from a range of sources to identify relevant and key information about calving activities
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to prepare calving records
Oral communication	<ul style="list-style-type: none"> Use clear language with specialist veterinary support to provide information on calving assistance requirements Use clear language to report equipment and resources unserviceability

Assessment Requirements for AHCLSK330 Implement procedures for calving

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has successfully implemented procedures for calving on at least two occasions and has:

- prepared calving environment, materials and resources to industry standards
- identified risks and applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures, including Q fever
- carried out cow husbandry procedures and recognised signs of imminent calving
- monitored cow condition and recognised abnormal behaviour and presentations
- applied workplace animal welfare practices
- applied contingency measures for calving in the event of difficulties
- applied calving ropes and chains and used suitable calf pulling equipment
- recognised when normal assistance procedures are not adequate to assist the calving and sought specialist veterinary support is required
- recognised abnormalities and progress of calf immediately after birth
- maintained a safe and secure post calving environment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for implementing procedures for calving, including Q fever and appropriate use of personal protective equipment (PPE)
- environment and biosecurity legislation and regulations and workplace practices relevant to implementing procedures for calving
- principles and practices of implementing procedures for calving, including:
 - pre and post calving health of cow, including clinical and sub-clinical health

- calving behaviour and basic health and nutritional requirements as directed
- calving equipment and materials, their components and functions
- calving intervention and non-intervention strategies
- normal calf presentation, and abnormal presentation that may need assistance
- problems associated with calving and intervention
- workplace policies with regard to calving down, recording and reporting routines
- procedures for cleaning and maintaining treatment equipment and materials
- animal welfare legislation, codes of practice and procedures relevant to calving.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to implementing procedures for calving
 - pregnant cows
 - materials, tools and equipment applicable to implementing procedures for calving
 - PPE applicable to implementing procedures for calving
- specifications:
 - workplace requirements applicable to health and safety in the workplace for implementing procedures for calving, including Q fever
 - environment and biosecurity legislation and regulations and workplace practices applicable to implementing procedures for calving
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to implementing procedures for calving
- relationships:
 - specialist veterinary support
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK338 Conduct dropped ovary technique procedures for spaying cattle

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to plan, prepare and conduct Dropped Ovary Technique (DOT) procedures and post DOT procedures for controlling fertility in females in extensive beef herds.

The unit applies to individuals who conduct DOT procedures for spaying cattle under broad direction, and take responsibility for their own work.

It is essential that individuals who undertake this unit have worked with cattle for at least one year prior to commencing this unit.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Regulatory requirements apply in some jurisdictions restricting the conduct of the DOT procedure to registered veterinarians. Users are advised to check with the relevant State or Territory regulatory authority.

Pre-requisite Unit

Nil

Unit Sector

Livestock (LSK)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Conduct pre-DOT evaluations	1.1 Identify and comply with relevant State or Territory legislation, regulations, codes of practice and animal welfare requirements 1.2 Discuss alternatives to ovariectomy with cattle manager and carefully consider them prior to undertaking DOT procedure 1.3 Confirm pre-operative evaluation of cattle submitted for ovary dropping with cattle manager 1.4 Identify and discuss risks associated with DOT procedure with cattle manager
2. Prepare for DOT operations	2.1 Monitor and determine optimal weather conditions for operation 2.2 Select time of day for operation to minimise animal stress 2.3 Engage adequate numbers of skilled workers 2.4 Select appropriate holding yards, forcing yards, race and settling yards 2.5 Follow low-stress stock mustering, movement and handling procedures 2.6 Allow cattle to settle and cool after yarding
3. Select, maintain and use appropriate equipment	3.1 Select required DOT equipment and check for safe operation, cleanliness and hygienic condition to reduce the risk of infection and cross-infection 3.2 Check cattle crush used for procedure is maintained in good working order and operated to ensure minimal risk to the operator and animal 3.3 Prepare wash-down, soaking and disinfecting containers and position ready for use 3.4 Prepare disinfectant solution according to label and safety data sheet directions 3.5 Sharpen ovariator regularly and disinfect before use and between each procedure 3.6 Clean, disinfect and store all equipment at the end of operations to minimise contamination
4. Conduct DOT procedures	4.1 Conduct procedures according to workplace health and safety, biosecurity and animal welfare requirements

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>4.2 Maintain facilities, hands, handling and equipment hygiene throughout the procedures</p> <p>4.3 Handle cattle quietly in the holding yards, forcing yards and race so that they are relatively calm when they reach the crush</p> <p>4.4 Identify common DOT procedural impediments and plan remedial actions</p> <p>4.5 Provide pain management according to legislative requirements</p> <p>4.6 Perform DOT procedures according to industry best practice standards and processing rates</p> <p>4.7 Apply identification earmarks or ear tags to cattle upon completion of procedures, according to relevant State or Territory legislative requirements</p> <p>4.8 Release and allow ovariectomised animals to settle on to feed and water in the settling yards for several hours, before moving them quietly to pasture</p>
5. Carry out post DOT procedures	<p>5.1 Record cattle identity and date of the procedure, with details of significant observations where required</p> <p>5.2 Inspect cattle regularly with minimal disturbance for signs of post-operative complications during the healing process and take appropriate action where required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identify and interpret textual information from a range of sources to identify relevant and key information about DOT procedures activities
Writing	<ul style="list-style-type: none"> Use clear language, accurate industry terminology and logical structure to prepare DOT records
Oral communication	<ul style="list-style-type: none"> Use clear language with cattle manager to provide information on DOT procedure, discuss alternatives and risks, and confirm pre-operative evaluation

Assessment Requirements for AHCLSK338 Conduct dropped ovary technique procedures for spaying cattle

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has successfully conducted dropped ovary technique (DOT) procedures for spaying cattle on at least ten animals, and has:

- conducted pre-operative evaluation of cattle submitted for ovary dropping and risk assessment in consultation with cattle manager
- complied with relevant State or Territory veterinary surgeons or practitioner's legislation, regulations and codes of conduct
- applied workplace animal welfare practices and procedures
- assessed alternative strategies and confirmed key indicators for the use of DOT procedures in consultation with cattle manager
- communicated post-spay management requirements to cattle manager
- identified optimal conditions for carrying out DOT procedures
- followed low-stress stock mustering, movement and handling procedures
- prepared appropriate sites, facilities and equipment according to infection control and hygiene requirements
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- carried out DOT procedures according to industry recognised best practice DOT procedure and processing rates, and implemented remedial actions
- prepared and applied pain management according to legislative requirements
- maintained DOT records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for conducting DOT procedures for spaying cattle

- environment and biosecurity legislation and regulations and workplace practices relevant to conducting DOT procedures for spaying cattle
- principles and practices of conducting DOT procedures for spaying cattle, including:
 - alternative options available to control fertility in cattle
 - animal welfare practices and procedures for the use of DOT in cattle
 - anatomy and reproductive features of cattle
 - body condition scoring of cattle
 - cattle nutrition and husbandry requirements for the specific cattle management system
 - industry recognised best practice DOT procedure and processing rates
 - use of, and regulatory considerations for the use of disinfectants
 - health and animal welfare implications of post-operative complications of the use of DOT in cattle
 - animal welfare legislation, codes of practice and procedures relevant to DOT
 - State or Territory veterinary surgeons or practitioner's legislation, regulations and codes of conduct relevant to DOT.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to conducting DOT procedures for spaying cattle
 - female cattle
 - materials, tools and equipment applicable to conducting DOT procedures for spaying cattle
- specifications:
 - workplace requirements applicable to health and safety in the workplace for conducting DOT procedures for spaying cattle
 - environment and biosecurity legislation and regulations and workplace practices applicable to conducting DOT procedures for spaying cattle
 - industry standards, codes of practice and procedures for animal welfare and conducting DOT procedures for spaying cattle
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to conducting DOT procedures for spaying cattle
 - State or Territory veterinary surgeons or practitioner's legislation, regulations and codes of conduct relevant to conducting DOT procedures for spaying cattle
- relationships:
 - cattle manager, veterinary surgeon
- timeframes:

- industry processing rates.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK339 Pregnancy test livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to prepare for pregnancy testing, arrange pregnancy testing support, carry out pregnancy testing, and post testing procedures in livestock.

The unit applies to individuals who pregnancy test livestock by rectal palpation or ultrasound under broad direction, and take responsibility for their own work.

This unit is not to be used for pregnancy testing of horses.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Regulatory requirements apply in some jurisdictions. Users are advised to check with the relevant State or Territory regulatory authority.

Assessment Requirements for AHCLSK339 Pregnancy test livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has successfully pregnancy tested livestock during different stages of gestation using ultrasound or manual pregnancy testing techniques on a minimum of twenty animals with an accuracy of 95%, and has:

- planned and prepared for pregnancy testing
- applied workplace animal welfare practices
- identified risks and applied relevant workplace health and safety and environmental and biosecurity legislation, regulations, and workplace procedures
- drafted livestock and sourced information on joining to assist in pregnancy testing
- coordinated and arranged support for pregnancy testing
- restrained livestock for pregnancy testing using humane methods and facilities
- carried out ultrasound or manual pregnancy testing procedures according to animal welfare practices
- maintain records of pregnancy testing and litter size where applicable
- monitored livestock after pregnancy testing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for pregnancy testing livestock, including appropriate use of personal protective equipment (PPE)
- environment and biosecurity legislation and regulations and workplace practices relevant to pregnancy testing livestock
- principles and practices of animal pregnancy testing, including:
 - animal welfare legislation, codes of practice and procedures relevant to pregnancy testing livestock

- anatomy and physiology of the animal species
- reproductive physiology and pregnancy development of the animal species
- husbandry and management strategies for pregnant and non-pregnant livestock
- ultrasound and manual pregnancy testing methods
- recording and reporting systems used in conjunction with pregnancy testing and animal breeding programs.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to pregnancy testing livestock
 - live animals at varying stages of gestation
 - materials, tools and equipment applicable to pregnancy testing livestock
 - ultrasound equipment
 - PPE applicable to pregnancy testing livestock
- specifications:
 - workplace requirements applicable to health and safety in the workplace for pregnancy testing livestock
 - environment and biosecurity legislation and regulations and workplace practices applicable to pregnancy testing livestock
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to pregnancy testing livestock
- relationships:
 - veterinarian
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSK340 Mate and monitor reproduction of alpacas

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has mated and monitored reproduction of alpacas on at least one occasion and has:

- scored alpaca condition
- monitored the condition of female and male alpacas
- recognised ovulation in females
- supervised alpaca mating and assisted as appropriate
- conducted a spit off
- conducted and commissioned pregnancy tests
- identified and implemented action required as a result of pregnancy tests
- applied relevant workplace health and safety, environmental and biosecurity legislation, regulations, and workplace procedures
- followed workplace animal welfare practices and identified hazards and risks.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for mating and monitoring alpacas, including appropriate use of personal protective equipment (PPE)
- environment and biosecurity legislation and regulations and workplace practices relevant to mating and monitoring alpacas
- principles and practices of mating and monitoring alpacas, including:
 - alpaca handling and assisted joining techniques
 - alpaca health and abnormalities
 - alpaca movement and behavioural characteristics
 - workplace and industry identification system for alpaca

- workplace and industry policies regarding recording and reporting routines for mating
- management of female and male body conditions core through nutrition programs
- Johne's disease status mating procedures
- mobile mating procedures
- pregnancy testing techniques, including detection of ovulation
- animal welfare legislation, codes of practice and procedures relevant to mating and monitoring alpacas.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to mating and monitoring alpacas
 - live alpacas
 - materials, tools and equipment applicable to mating and monitoring alpacas
 - PPE applicable to mating and monitoring alpacas
- specifications:
 - workplace requirements applicable to health and safety in the workplace for mating and monitoring alpacas
 - environment and biosecurity legislation and regulations and workplace practices applicable to mating and monitoring alpacas
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to mating and monitoring alpacas
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK341 Coordinate artificial insemination and fertility management of livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to coordinate artificial insemination (AI) and fertility management of livestock, including preparing for and facilitating AI, and carrying out post AI procedures.

The unit applies to individuals who coordinate AI and fertility management of livestock under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

Accreditation requirements apply in some jurisdictions to performing commercial AI. Users are advised to check with the relevant State or Territory regulatory authority.

Pre-requisite Unit

Assessment Requirements for AHCLSK341 Coordinate artificial insemination and fertility management of livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated artificial insemination and fertility management of livestock on at least two occasions and has:

- prepared females for insemination
- followed relevant workplace health and safety and environmental and biosecurity legislation, regulations, and workplace procedures
- followed workplace animal welfare practices
- cleaned equipment and prepared hygienic worksite prior to insemination procedures
- monitored livestock post insemination
- detected signs of early abortion or return to oestrus
- coordinated and recorded the results of pregnancy testing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for coordinating artificial insemination and fertility management of livestock, including appropriate use of personal protective equipment (PPE)
- environment and biosecurity legislation and regulations and workplace practices relevant to coordinating artificial insemination and fertility management of livestock
- principles and practices of artificial insemination and fertility management of livestock, including:
 - body condition scoring
 - husbandry and management practices for pregnant and non-pregnant female livestock
 - anatomy and physiology of female livestock
 - reproductive physiology and pregnancy development of female livestock

- requirements and procedures of artificial insemination
- reproductive diseases and complications in female livestock
- animal welfare legislation, codes of practice and procedures relevant to artificial insemination of livestock.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to coordinating artificial insemination and fertility management of livestock
 - female livestock
 - materials, tools and equipment applicable to coordinating artificial insemination and fertility management of livestock
 - PPE applicable to coordinating artificial insemination and fertility management of livestock
- specifications:
 - workplace requirements applicable to health and safety in the workplace for coordinating AI and fertility management of livestock
 - environment and biosecurity legislation and regulations and workplace practices applicable to coordinating artificial insemination and fertility management of livestock
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to coordinating artificial insemination and fertility management of livestock
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK342 Prepare animals for parturition

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to feed and care for animals through the latter stages of pregnancy to birthing.

The unit applies to individuals who prepare animals for parturition under broad direction, and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements in particular the risks associated with Q fever, and sustainability and biosecurity practices.

In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCLSK342 Prepare animals for parturition

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared animals for parturition on at least two occasions and has:

- matched supply of feed, grazing or predetermined rations to nutritional requirements for pregnant animals
- read and interpreted relevant manufacturers specifications, work and feeding plans, and safety data sheets
- assessed and calculated herd or flock numbers, measured feed, assessed rate and frequency of feeding, and calculated animal gestation
- applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures, including Q fever
- employed safe and environmentally responsible systems and procedures for the handling of animals, feed, hazardous substances and predator control strategies
- monitored animal health and condition and recognised abnormalities
- carried out basic repair work where required
- carried out animal husbandry procedures, provided due care and handled animals humanely according to workplace animal welfare practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for preparing animals for parturition, including Q fever
- environment and biosecurity legislation and regulations and workplace practices relevant to preparing animals for parturition
- principles and practices for preparing animals for parturition, including:
 - physiological and behavioural signs of impending birth

- animal behaviour and nutritional requirements of pregnant animals
- feed, pasture and animal grazing management
- feed and feed supplements for pregnant animals and when to provide them
- effects of weather conditions, and inadequate nutrition on pregnant animals and their newborn
- animal husbandry procedures
- environmental impact of animals on ground cover and minimisation measures
- State or Territory legislation, regulations and codes of practice regarding poisons
- predators and behaviour patterns and control and eradication measures
- relevant firearms licensing and permit requirements
- workplace policies regarding recording and reporting birthing animals
- animal welfare legislation, codes of practice and procedures relevant to handling animals and preparing animals for parturition.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to preparing animals for parturition
 - pregnant animals
 - materials, tools and equipment applicable to preparing animals for parturition
- specifications:
 - workplace requirements applicable to health and safety in the workplace for preparing animals for parturition, including Q fever
 - environment and biosecurity legislation and regulations and workplace practices applicable to preparing animals for parturition
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to handling animals and preparing animals for parturition
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare paddocks or yards	1.1 Identify and confirm livestock mating plan with supervisor 1.2 Select paddocks, yards or stock 1.3 Implement predator control program where applicable 1.4 Identify potential hazards and risks, and implement safe working practices to address risks and biosecurity hazards 1.5 Select, fit, use and maintain personal protective equipment applicable to task
2. Prepare females for joining	2.1 Monitor live weight of females through weighing or condition scoring 2.2 Adjust nutrition levels to achieve targeted joining weights or condition scores 2.3 Implement female health and husbandry operations according to workplace procedures and animal welfare practices 2.4 Draft livestock for joining
3. Prepare sires for joining	3.1 Carry out physical examination of sires prior to joining 3.2 Seek veterinary advice where appropriate 3.3 Determine mating ratios 3.4 Select replacement sires in time to allow adjustment to new environment 3.5 Carry out sire health, handling and husbandry operations according to individual requirements and workplace animal welfare practices 3.6 Monitor sires environment for optimum mating performance
4. Join sires to female groups	4.1 Select dates for joining according to mating plan 4.2 Introduce sires to female groups to ensure good contact 4.3 Remove sires from female groups at scheduled time
5. Monitor mating activity	5.1 Observe livestock mating, complete mating records and take remedial action if required 5.2 Observe distribution of sires within each female group

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Assessment Requirements for AHCLSK343 Prepare for and implement natural mating of livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared for and implemented natural mating of livestock on at least one occasion and has:

- prepared joining paddocks
- identified risks and hazards and applied relevant workplace health and safety and environmental and biosecurity legislation, regulations and workplace procedures
- prepared female livestock and sires for joining
- appraised breeding soundness in animals
- estimated live weights and condition scores
- ensured females are above minimum body weights to exhibit oestrus
- applied workplace animal welfare practices
- used sufficient males for the number of females to be mated in the group
- used back up sires where single sire mating is practised
- managed female livestock and sires during joining
- monitored joining activity
- maintained mating records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for preparing for and implementing natural mating of livestock, including appropriate use of personal protective equipment (PPE)
- environment and biosecurity legislation and regulations and workplace practices relevant to preparing for and implementing natural mating of livestock

- principles and practices for preparing for and implementing natural mating of livestock, including:
 - mating behaviour of sires and female livestock
 - optimum live weights and condition for mating
 - physical abnormalities and mating problems in males and females
 - environmental influences on joining
 - animal welfare legislation, codes of practice and procedures relevant to preparing for and implement natural mating of livestock.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to preparing for and implementing natural mating of livestock
 - female livestock and sires
 - materials, tools and equipment applicable to preparing for and implementing natural mating of livestock
 - PPE applicable to preparing for and implementing natural mating of livestock
- specifications:
 - workplace requirements applicable to health and safety in the workplace for preparing for and implementing natural mating of livestock
 - environment and biosecurity legislation and regulations and workplace practices applicable to preparing for and implementing natural mating of livestock
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to preparing for and implementing natural mating of livestock
- relationships:
 - veterinarian
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK411 Supervise natural mating of livestock

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to supervise the natural mating of livestock.

This unit applies to livestock producers and those with supervisory responsibilities within pastoral production enterprises.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They use discretion and judgement in the selection, allocation and use of available resources and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

All units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Livestock (LSK)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare animals for breeding	1.1 Access and confirm requirements of enterprise breeding program and relevant animal data 1.2 Identify work health and safety hazards, assess risks, and implement, monitor and review risk controls in line with enterprise policies 1.3 Identify and prepare joining areas using a range of selection factors 1.4 Handle animals safely and humanely to minimise stress and discomfort and in line with industry and enterprise animal welfare requirements 1.5 Draft animals according to mating plan and in appropriate ratios to encourage optimum mating 1.6 Determine and meet sire requirements in advance of mating 1.7 Prepare and examine animals for mating
2. Implement breeding program and monitor mating	2.1 Access veterinary advice according to animal's needs, enterprise requirements and industry practice 2.2 Identify and schedule dates and timing of breeding 2.3 Carry out physical examination of animals to evaluate health and welfare status of animals 2.4 Observe behaviour of animals during joining to identify necessity of intervention and assistance 2.5 Provide assistance as required
3. Complete breeding program	3.1 Remove sires from herd, mob or flock where required 3.2 Monitor mating activity to ensure successful joinings have occurred, to identify problems and to effect remedial action as required 3.3 Arrange for pregnancy testing to determine the effectiveness of joining 3.4 Record and document data to develop history of mating performance and outcomes 3.5 Research industry information of emerging and prevailing practices and compare with enterprise practice to recommend future improvements

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCLSK411 Supervise natural mating of livestock

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards, assess risks and implement and monitor of safe operating procedures
- carry out physical examination of sires and females for health and breeding soundness
- prepare animals for joining
- monitor joining activity and returns to oestrus
- access, interpret and record data associated with mating program
- implement relevant animal welfare practices

Knowledge Evidence

The candidate must demonstrate knowledge of:

- mating behaviour
- anatomy and physiology of the reproductive organs and reproductive process in animals
- required live weights and conditions for mating
- environmental influences and their effects on joining
- ovulation stimulation and synchronisation
- enterprise's breeding programs and selection criteria (EBV & ASBV)
- pregnancy testing/ scanning procedures
- animal health and abnormalities
- relevant State/Territory legislation, regulations and Codes of Practice with regard to work health and safety and animal welfare
- enterprise and industry policies with regard to recording and reporting requirements
- identification of veterinary and non-veterinary procedures

Assessment Conditions

Competency is to be assessed in the work place or workplace and simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop selection criteria for a breeding program
- select animals that have defects in conformation and /or productivity
- select animals that display characteristics associated with desirable genetic traits
- select animals according to a breeding program's selection criteria
- assess and record performance information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles of genetic selection for multi traits
- structural abnormalities and their potential impact on production
- correlated traits
- market requirements and related physical and measurable traits
- enterprise animal selection criteria
- strategies for animal selection -including individual traits, measured performance, Estimated Breeding Value (EBVs & ASBVs), and indexes
- use of breeding value percentile tables

Assessment Conditions

Competency is to be assessed in the work place or simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCLSK420 Provide advice on livestock products

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided advice on livestock products and related products on at least three occasions, and has:

- engaged with and advised customer on the range of livestock products available for the customer's purpose, application and environment
- complied with relevant legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- represented the workplace in a professional manner when dealing with customers
- applied workplace procedures for providing advice on livestock products and related products
- complied with animal welfare legislation and relevant components of state or territory Acts relating to livestock products
- advised customers on risks to worker safety or animal welfare from use of the product
- applied workplace health and safety, sustainability and biosecurity procedures for the safe handling of livestock products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- livestock product requirements of local or specific customers
- legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- livestock products, including:
 - industry equipment
 - animal handling systems
 - stock feeds

- animal health products
- workplace procedures for providing advice on livestock products and related products
- animal welfare legislation and relevant components of state or territory Acts relating to livestock products
- workplace health and safety, sustainability and biosecurity procedures for the safe handling of livestock products.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - livestock products, including industry equipment, animal handling systems and stock feeds
- specifications:
 - legislative requirements relevant to sales environments, including fair trading, trade practices and sale of goods legislation and public liability
 - workplace procedures relevant to providing advice on livestock products and related products
 - components of state or territory Acts relevant to livestock products
 - animal welfare legislation and relevant components of state or territory Acts relating to livestock products
 - workplace health and safety, sustainability and biosecurity procedures for the safe handling of livestock products

Assessment Requirements for AHCLSK421 Supervise natural mating of livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supervised natural mating of livestock to successful pregnancy and has:

- prepared animals for joining
- accessed, interpreted and recorded data associated with mating program
- monitored livestock for breeding soundness and fertility
- checked animal fertility
- implemented relevant workplace health and safety and environmental and biosecurity legislation, regulations, and workplace procedures
- implemented relevant animal welfare policies and practices
- monitored joining activity and animal cycles.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for supervising natural mating of livestock
- environment and biosecurity legislation and regulations and workplace practices relevant to supervising natural mating of livestock
- principles and practices for supervising natural mating of livestock, including:
 - mating behaviour
 - anatomy and physiology of the reproductive organs and reproductive process in animals
 - required live weights and conditions for mating
 - environmental influences and their effects on joining
 - ovulation stimulation and synchronisation relevant to animal type

- workplace breeding programs and selection criteria, including relevant breeding values
- pregnancy testing and scanning procedures
- animal health and abnormalities
- animal welfare industry standards, legislation, codes of practice and procedures relevant to supervising natural mating of livestock
- workplace and industry policies regarding mating recording and reporting requirements
- identification of veterinary and non-veterinary procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

AHCLSK422 Identify and select animals for breeding

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Application

This unit of competency describes the skills and knowledge required to identify and select animals for breeding.

The unit applies to individuals who apply specialist skills and knowledge to identify and select animals for breeding. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, animal welfare legislative, regulatory and codes of practice requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCLSK422 Identify and select animals for breeding

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and selected animals for breeding on at least one occasion and has:

- documented a breeding program
- developed selection criteria for a breeding program
- identified animals that have defects in conformation or inadequate productivity
- selected animals that display characteristics associated with desirable genetic traits
- selected animals according to breeding program selection criteria
- assessed and recorded performance information.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for identifying and selecting animals for breeding, including:
 - genetic selection for targeted multi traits
 - structural abnormalities and their potential impact on production
 - market requirements and related physical and measurable traits
 - workplace animal selection criteria
 - strategies for animal selection, including individual traits, measured performance, relevant breeding values, and indexes
 - use of breeding value percentile tables.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to identifying and selecting animals for breeding
- specifications:
 - workplace production records and production goals relevant to identifying and selecting animals for breeding
 - industry standards, codes of practice and procedures for identifying and selecting animals for breeding
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK503 Develop and implement a breeding strategy

Modification History

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 2.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to assess breeding requirements, select livestock for breeding, and monitor and evaluate the breeding program.

The unit applies to managers of livestock properties who are responsible for breeding programs and use of resources appropriate to meet property breeding aims. They take responsibility and exercise autonomy in undertaking complex work analysing, designing and communicating solutions to sometimes complex problems.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Work health and safety and animal welfare legislation relevant to interacting with horses applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with the relevant authority for specific requirements.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has developed and implemented a minimum of one breeding strategy for an operation or property, including:

- identifying genetic information for existing and potential livestock through breed data
- using industry programs to benchmark and identify sources of genetic material
- developing a breeding objective
- implementing selection strategies for livestock
- implementing animal welfare strategies to handle livestock safely and humanely
- monitoring progress in a breeding program and undertaking reviews
- evaluating breeding program
- documenting and reviewing data derived from the breeding strategy
- maintaining a safe and hazard-free workplace environment
- monitoring and minimising impacts to the environment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- difference between genotype and phenotype, the heritability of genetic traits and the basic genetic theory related to genetic correlation of traits
- relevance of generation interval in relation to commercial improvement
- relevance of estimated breeding values in the development of a multi-trait selection strategy
- economic impact of production characteristics

- features of and measurement of production and genetic characteristics used in breeding programs
- relevant work health and safety and biosecurity requirements, and animal welfare and environment sustainability practices
- key requirements of regulations and codes of practice relevant to developing and implementing a breeding strategy, including:
 - work health and safety
 - animal welfare
 - biosecurity
 - sustainability practices.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace or an environment that accurately represents workplace conditions
- specifications:
 - work instructions and workplace procedures relevant to developing and implementing a breeding strategy
 - organisational documentation relating to breeding information and financial arrangements required to develop a breeding strategy.

Training and assessment strategies must show evidence of the use of guidance provided in the *Companion Volume: User Guide: Safety in Equine Training*.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCLSK505 Develop production plans for livestock

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to develop production plans for livestock.

This unit applies to managers of intensive or extensive livestock production systems.

All work must be carried out to comply with workplace procedures, work health and safety, animal welfare and biosecurity legislation and codes of practice and sustainability practices.

This unit applies to individuals who take personal responsibility and exercise autonomy in undertaking complex work. They analyse design and communicate solutions to sometimes complex problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

essential outcomes.	achievement of the element.
1. Determine feasibility of livestock enterprise	1.1 Assess farm environment parameters for their suitability for a range of livestock species 1.2 Assess potential livestock enterprises for their market potential and gross margin returns 1.3 Identify resource requirements 1.4 Identify production risks and strategies to address them 1.5 Select livestock species and breeds/ genetics to suit the production system and the market
2. Identify and define determinants of livestock profitability	2.1 Define production objectives 2.2 Establish strategies for herd/flock sourcing and improvement and determine breeding program as appropriate 2.3 Determine feed requirements for each age/sex/category of herds/flocks 2.4 Determine feeding strategy including grazing management, where appropriate, and develop feeding programs for each livestock category 2.5 Develop health management program to manage/prevent disease in each herd/flock 2.6 Establish environmental controls as required
3. Establish livestock production targets and prepare production plan	3.1 Define performance indicators for the livestock enterprise 3.2 Develop product quality specifications and set production targets 3.3 Establish livestock cash flow budget 3.4 Prepare production plan incorporating a calendar of operations for the enterprise production cycle
4. Review production plans to determine input and service requirement	4.1 Plan logistical arrangements related to harvesting, transportation and marketing and other key operations for the production cycle 4.2 Establish schedules for the purchase of inputs and services used in production 4.3 Establish appropriate physical and financial record keeping system to provide data for the analysis of livestock production performance 4.4 Review production plan

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCLSK505 Develop production plans for livestock

Modification History

Release Number	TP Version	Comments
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- determine feasibility of livestock enterprise
- identify and define determinants of livestock profitability
- establish livestock production targets
- prepare production plans
- review production plans to determine input and service requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- livestock husbandry, production and management practices
- livestock selection, health and grazing strategies
- financial analysis techniques
- livestock marketing
- sustainable land use principles and practices applicable in the region
- environmental controls and codes of practice applicable to the enterprise
- whole farm planning processes

Assessment Conditions

Competency is to be assessed in the work place or simulated environments that accurately reflect performance in a real workplace setting.

Assessors must satisfy current conditions for RTOs.

Assessment Requirements for AHCLSK508 Plan, monitor and evaluate strategies to improve livestock through genetics

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned, monitored and evaluated strategies to improve livestock through genetics on at least one occasion and has:

- selected suitable market specifications for the livestock enterprise
- used relevant breeding values
- analysed profit for the breeding program
- developed selection criteria for a breeding program
- selected livestock for a breeding program on phenotype and genotype
- arranged Artificial Insemination (AI) and Embryo Transfer (ET) programs where applicable
- developed workplace health and safety procedures relevant to the breeding program
- implemented the breeding program
- applied relevant environment and biosecurity legislation, regulations and workplace procedures
- applied relevant workplace animal welfare legislation, codes of practice and procedures
- assessed farm facilities to carry out a breeding program
- kept breeding and production records
- interpreted feedback information.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for planning, monitoring and evaluating strategies to improve livestock through genetics
- environment and biosecurity legislation and regulations and workplace practices relevant to planning, monitoring and evaluating strategies to improve livestock through genetics

- principles and practices for planning, monitoring and evaluating strategies to improve livestock through genetics, including:
 - heritability estimates for the selected characteristics
 - recording and understanding breed pedigrees where applicable
 - dominant genetic traits and genetic correlations
 - accuracy of the genetic potential of the selected breeding trait for the program
 - genetic defects
 - value of hybrid vigour and line breeding in a breeding program
 - impact of generation interval on genetic gain
 - selection criteria
 - market specifications targeted by the breeding program
 - long term breeding aims
 - pregnancy testing procedure
 - sources for genetic information, up to date program design and implementation procedures
 - animal welfare legislation codes of practice and procedures relevant to planning, monitoring and evaluating strategies to improve livestock through genetics

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - workplace requirements applicable to health and safety in the workplace for planning, monitoring and evaluating strategies to improve livestock through genetics
 - environment and biosecurity legislation and regulations and workplace practices applicable to planning, monitoring and evaluating strategies to improve livestock through genetics
 - suitable equipment applicable to work being undertaken on hand for assessment
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to planning, monitoring and evaluating strategies to improve livestock through genetics
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed and implemented a breeding strategy on at least one occasion and has:

- used industry programs to benchmark and identify sources of genetic material
- developed breeding objectives
- implemented selection strategies for livestock
- identified genetic information for existing and potential livestock through breed data
- monitored progress in a breeding program and undertaken reviews
- applied relevant workplace health and safety and environmental and biosecurity legislation regulations and workplace procedures
- implemented animal welfare strategies to handle livestock safely and humanely
- applied animal welfare industry standards, legislation and codes of practice and procedures relevant to livestock production
- evaluated breeding program
- documented and reviewed data derived from the breeding strategy.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for developing and implementing a breeding strategy
- environment and biosecurity legislation and regulations and workplace practices relevant to developing and implementing a breeding strategy
- animal welfare industry standards, legislation and codes of practice and procedures relevant to livestock production
- principles and practices for developing and implementing a breeding strategy, including:

- difference between genotype and phenotype, the heritability of genetic traits and the basic genetic theory related to genetic correlation of traits
- relevance of generation interval in relation to commercial improvement
- relevance of estimated breeding values in the development of a multi-trait selection strategy
- economic impact of production characteristics
- features and measurement of production and genetic characteristics used in breeding programs.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - work instructions and workplace procedures applicable to developing and implementing a breeding strategy
- specifications:
 - workplace documentation relating to breeding information and financial arrangements required to develop a breeding strategy
 - workplace requirements applicable to health and safety in the workplace for developing and implementing a breeding strategy
 - environment and biosecurity legislation and regulations and workplace practices applicable to developing and implementing a breeding strategy
 - industry standards, legislation and codes of practice and procedures for animal welfare applicable to livestock production.
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCLSK510 Develop production plans for livestock

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 7.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has developed production plans for livestock on at least one occasion and has:

- determined feasibility of livestock enterprise
- identified and defined determinants of livestock profitability
- established livestock production targets
- established livestock production plan budget
- prepared production plans
- reviewed production plans to determine input and service requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- environment and biosecurity legislation and regulations and workplace practices relevant to developing production plans for livestock
- workplace requirements applicable to health and safety in the workplace for developing production plans for livestock
- principles and practices for developing production plans for livestock, including:
 - livestock husbandry, production and management practices
 - livestock selection, health and grazing strategies where applicable
 - financial analysis techniques
 - livestock and livestock product marketing
 - sustainable land use principles and practices applicable to the region
 - whole farm planning processes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- specifications:
 - workplace requirements applicable to health and safety in the workplace for developing production plans for livestock
 - environment and biosecurity legislation and regulations and workplace practices applicable to developing production plans for livestock
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMAR301 Conduct a subtidal marine monitoring operation from a vessel or platform

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to conduct a subtidal marine monitoring operation from a vessel or platform associated with scientific research, baseline monitoring or inspection and assessment programs for marine areas. It does not involve diving for scientific purposes.

The unit applies to individuals who work in a marine conservation and management role under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Marine (MAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan subtidal marine monitoring operations	1.1 Identify marine monitoring objectives from monitoring program, and confirm with supervisor and experts 1.2 Determine equipment and personnel required for marine

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	monitoring operations 1.3 Determine timing of monitoring program in consideration of environmental and logistical factors 1.4 Prepare a plan and timeline for a marine monitoring program
2. Prepare for subtidal marine monitoring operations	2.1 Confirm permission for marine monitoring program has been approved, and notify stakeholders 2.2 Assemble required marine monitoring, logistical and support equipment and materials 2.3 Check equipment for compliance with biosecurity requirements 2.4 Check operation of underwater equipment and integrity of waterproof seals 2.5 Lubricate, repair or replace components according to manufacturer instructions 2.6 Prepare equipment and materials for transport 2.7 Identify hazards, assess risks and implement controls according to workplace health and safety procedures 2.8 Review operating and emergency procedures for marine monitoring program, and brief personnel
3. Conduct subtidal marine monitoring operation	3.1 Transport equipment and materials to monitoring location 3.2 Prepare subtidal marine monitoring equipment for deployment according to operator instructions and biosecurity procedures 3.3 Deploy equipment and implement monitoring procedure 3.4 Record marine monitoring data 3.5 Monitor the program and make and record adjustments according to program requirements
4. Conduct post-monitoring operations	4.1 Secure and download recorded data 4.2 Clean, service and maintain marine monitoring equipment according to manufacturer instructions and biosecurity requirements 4.3 Organise repair or replacement of faulty equipment 4.4 Store marine monitoring equipment in line with manufacturer's instructions 4.5 Record incidents, and lead a debrief after marine monitoring operations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Assessment Requirements for AHC MAR301 Conduct a subtidal marine monitoring operation from a vessel or platform

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted at least two subtidal monitoring operations for benthic and fish communities using different techniques selected from the following:

- drop cameras
- baited remote underwater video stations (BRUVS)
- remotely piloted system.

There must also be evidence that the individual has:

- planned a subtidal marine monitoring operation from a vessel or platform for both benthic and fish communities
- obtained and assembled equipment and materials for subtidal marine monitoring operations
- checked the operation of underwater equipment, with particular attention to:
 - tethers, attachments, mounts and retrieval systems
 - seals and O-rings
 - soft pads
 - electrical connections/power supply
 - lenses and protective covers
- lubricated, cleaned, maintained and repaired underwater equipment
- briefed and de-briefed personnel on marine monitoring activity
- transported equipment and materials for subtidal marine monitoring to monitoring site
- stored equipment and consumables for subtidal marine monitoring
- implemented biosecurity measures
- secured and stored recorded data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- interpreting forecasts for marine weather, tides and sea conditions
- basic physics of the underwater environment and the relationships between equipment/monitoring techniques and depth, pressure, flow and light penetration
- computer hardware and software systems that support marine monitoring work
- marine monitoring equipment, including underwater equipment and housings
- risks associated with monitoring equipment, including:
 - condensation
 - pressure
 - water flow
 - retrieval complications
 - maintenance – including age, contamination and corrosion
- planning subtidal marine operations
- drivers of local and regional ocean circulation and conditions, including:
 - ocean current systems
 - weather patterns
 - tides
 - seasonal changes, including freshwater inflows
 - extraordinary storms and temperature events
- maritime regulations and approvals for commercial survey work on vessels
- workplace health and safety assessment for conducting subtidal marine monitoring
- biosecurity measures for subtidal marine monitoring techniques and equipment
- operating and emergency procedures for subtidal marine monitoring work.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field and according to the conditions specified in the Performance Evidence
- resources, equipment and materials:
 - live marine life in situ
 - specific tools and equipment required for a monitoring program
 - specific items of personal protective equipment
 - materials and consumables
- specifications:
 - specific workplace procedures and processes for conducting monitoring programs

- manufacturer operating instructions for monitoring equipment
- workplace instructions for monitoring program
- relationships:
 - experts
 - supervisor
- timeframes:
 - according to timeframes specified in monitoring program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHC MAR302 Conduct intertidal marine monitoring

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated intertidal monitoring techniques that include at least two of the following ecological communities:

- mudflat
- intertidal seagrass
- intertidal reef
- mangrove beds
- salt marsh
- rocky shores.

There must also be evidence that the individual has:

- interpreted, confirmed and followed intertidal marine monitoring fieldwork requirements
- conducted a risk assessment
- selected, prepared and operated equipment and resources for intertidal marine monitoring
- identified marine species, and confirmed identification with supervisor or expert
- applied techniques to minimise impact and applied ethical practices during fieldwork
- recorded marine intertidal monitoring data according to workplace procedures and monitoring instructions
- cleaned, maintained and stored marine monitoring equipment
- implemented biosecurity measures and procedures
- checked and stored data
- updated operational and marine species records
- reported outcomes to supervisor
- disposed of waste materials according to environmental and workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- monitoring methodologies for marine intertidal fieldwork
- equipment and resources used for marine intertidal fieldwork, including:
 - cameras
 - tablets
 - identification resources
 - tape measures
 - quadrat frames
- operational parameters of intertidal areas that affect monitoring work, including:
 - tidal cycles and other inundation effects
 - seasonal variation
 - intertidal wildlife behaviour and life cycle
 - dangerous marine animals in the intertidal zone
- using and maintaining equipment in a saltwater environment
- workplace health and safety and risk assessment for tidal marine work
- impact of sediment mobility in the near shore environments on monitoring
- sources of expertise and advice for marine intertidal fieldwork
- minimising impact of monitoring techniques on the environment
- ethical practices for marine intertidal fieldwork
- biosecurity processes for marine intertidal fieldwork
- recording and storing collected data
- cleaning, maintenance and storage of equipment used for intertidal marine monitoring
- disposal of waste materials and impact on the environment.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated under conditions specified in the Performance Evidence
- resources, equipment and materials:
 - fieldwork and monitoring equipment
 - specific items of personal protective equipment
- specifications:
 - workplace policies, procedures, processes, records for conducting fieldwork
 - manufacturer operating instructions for monitoring equipment
 - workplace instructions and work plan
 - codes of practice for ethical handling of marine life

- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Marine (MAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for marine activities	1.1 Confirm objectives of marine activity with supervisor 1.2 Identify personnel and verify their certification, skills and experience for maritime activities 1.3 Identify vessel, equipment and material resource requirements and availability

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify operational constraints under marine regulations and workplace safety procedures</p> <p>1.5 Identify environmental constraints for marine activity</p> <p>1.6 Prepare a schedule of activities and time allocation in a marine operational plan, and present to supervisor for approval</p> <p>1.7 Identify and confirm operating procedures for vessel, equipment and planned operations</p> <p>1.8 Identify health, safety and environmental hazards, assess risks and implement controls according to workplace health, safety and environmental procedures</p>
2. Organise resources for marine work	<p>2.1 Procure and organise delivery of materials, equipment and machinery according to delegated level of authority</p> <p>2.2 Check materials, equipment and machinery comply with marine and transport regulations</p> <p>2.3 Organise an operational base for logistical and emergency support during the work</p> <p>2.4 Establish and implement a communication plan</p> <p>2.5 Notify search and rescue authorities of operational plan and key contacts</p> <p>2.6 Organise personnel and conduct a marine operations briefing and safety drill for vessel/s involved</p>
3. Coordinate vessel departure	<p>3.1 Conduct pre-departure checks and notifications</p> <p>3.2 Coordinate transport of vessel and equipment</p> <p>3.3 Coordinate loading, launching and/or departure of vessel</p> <p>3.4 Ensure compliance with operating procedures and workplace health and safety procedures</p>
4. Coordinate marine operation	<p>4.1 Direct crew and personnel for marine operation</p> <p>4.2 Monitor and document personnel, activities and compliance with marine operational plan</p> <p>4.3 Maintain communications throughout work according to workplace communications procedures</p> <p>4.4 Manage waste storage and disposal according to workplace and environmental procedures</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	4.5 Record and notify supervisor of changes to operational plan 4.6 Identify contingency situations, report contingencies to supervisor and implement corrective actions according supervisor instructions 4.7 Coordinate landing, retrieval or mooring/docking of vessel 4.8 Coordinate unloading and vessel shutdown procedure
5. Finalise and report on marine activities	5.1 Finalise communication plan, notifications and operational arrangements for marine activity according to plan 5.2 Complete workplace records for marine operation and use of vessel 5.3 Clean and store vessel and equipment 5.4 Organise maintenance or replacement of faulty equipment 5.5 Complete incident reports 5.6 Report marine operation with outcomes and future recommendations according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Accurately record and report marine operations using industry specific language and workplace format and protocols
Oral Communication	<ul style="list-style-type: none"> Interact with supervisor and crew using planned communications strategies and resources Use collaborative and inclusive techniques, including active listening and questioning and reading of non-verbal signals, to convey, clarify and report marine conservation activity

Assessment Requirements for AHC MAR303 Coordinate marine conservation activities on small vessels

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated at least one marine conservation activity for a small vessel of no more than nine metres in length, and has:

- read, interpreted and completed documentation, including:
 - charts/maps
 - operating and emergency procedures
 - logs associated with vessel operation and marine activities
- interpreted marine regulations, identified operational constraints and planned for marine activities
- identified environmental constraints, including:
 - weather
 - sea conditions
 - tides
- identified and prepared vessels, equipment and materials for marine operations
- conducted a marine operations briefing and safety drill
- conducted vessel and safety checks
- coordinated vessel operations, including:
 - loading/unloading
 - launching/retrieving/mooring/docking
 - vessel shutdown
- monitored weather conditions while at sea
- operated two-way radio communications
- responded to contingency situations
- cleaned, maintained and stored vessel and equipment
- recorded marine activities
- performed a workplace health and safety risk assessment for marine operations

- managed waste storage and disposal for a marine operation according to workplace and environmental procedures, including:
 - human waste
 - general waste
 - recyclable waste.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- appropriate techniques and workplace procedures for launching, retrieving, mooring and docking vessels for conservation work
- workplace procedures and marine regulations that relate to marine conservation work
- vessel type, capability and performance for specified marine tasks
- personnel requirements and appropriate skills and experience
- marine weather, sea conditions and forecasting suited for marine conservation work
- logistical and technical requirements of marine conservation work
- the range of equipment used for marine conservation work
- trip planning
- communications and notification requirements specific to marine conservation work
- marine workplace health and safety, hazard identification and risk control measures
- communication equipment, operation and limitations
- cleaning and maintenance techniques for marine vessels and equipment
- storage arrangements for marine vessels and equipment
- marine operation emergency and contingency planning
- environmental waste storage and disposal methods for marine operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a marine environment
- resources, equipment and materials:
 - vessel up to nine metres in length
 - specific tools and equipment for vessel operation and conservation activities
 - specific items of personal protective equipment for marine conservation work
- specifications:
 - workplace procedures and processes for marine conservation work and vessel operation
 - manufacturer operating instructions for vessel, equipment and machinery used in marine operations

-
- workplace instructions
 - relationships:
 - team member/s
 - supervisor/s.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHC MAR304 Identify and collect marine life

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has collected, prepared, preserved and stored 10 marine life specimens, with representative samples from at least two of the following groups:

- marine algae
- marine invertebrates

There must be evidence that the individual has:

- fish identified and selected resources, equipment and materials required for identification, collection and storage of marine life
- identified sources of expertise and advice and followed workplace procedure for identification, collection and storage of marine specimens
- identified marine plants and animals using expertise, advice and workplace-provided resources
- used techniques for collecting and transporting marine life to minimise impact on the marine environment and specimens
- complied with animal ethical standards and biosecurity procedures
- handled preservation equipment and materials according to safety procedures
- applied preservation and storage techniques for small marine specimens according to workplace procedures
- cleaned, maintained and stored equipment and disposed of waste materials according to workplace procedures.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- marine zonation and terminology, including:

- supratidal, intertidal and subtidal
- photic and aphotic
- littoral, benthic, neritic and pelagic
- major marine substrate types, including:
 - mud
 - sand
 - rock
 - coral
 - rubble
- identification resources for marine algae, invertebrates and fish, including computer software
- operational parameters of intertidal areas that affect monitoring work, including:
 - tidal cycles and other inundation effects
 - seasonal variation
 - intertidal wildlife behaviour and life cycle
 - dangerous marine animals in the intertidal zone
- equipment and materials required for collection and short-term to medium-term storage of small marine specimens
- simple techniques and processes for collection and short-term to medium-term storage of small marine specimens, including drying, freezing and ethanol
- minimal impact collection techniques for marine specimens
- ethical and animal welfare practices for collection of marine specimens
- biosecurity measures for collection and transport of marine specimens and collection/transport equipment
- permits and permissions required for collection for short-term to medium-term storage of small marine algae, invertebrates and fish
- sources of expertise and advice for identification of marine life
- workplace procedure for identification, collection and storage of marine specimens, and workplace biosecurity procedure
- workplace procedure and environmental procedures for disposal of waste materials
- workplace health and safety processes and procedures while collecting marine life.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field for the marine species specified in the Performance Evidence
- resources, equipment and materials:
 - live marine life in situ
 - tools and equipment for collecting specimens

- equipment and materials for preparing, preserving and storing marine specimens
- specific items of personal protective equipment required for safe collection
- specifications:
 - specific workplace procedures and processes for ethical collection, preparation and storage of marine specimens
 - manufacturer operating instructions for collection, preserving and storage equipment
 - safety data sheets for materials used in preserving specimens
 - workplace instructions
- relationships:
 - experts
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMAR305 Monitor ocean conditions and marine environmental quality

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to monitor ocean conditions using sensors, sampling and laboratory analysis, and to monitor biological markers in marine environments. It does not include diving for scientific purposes (see AHCLPW307 Perform restricted diving for scientific purposes).

The unit applies to individuals who work in a marine conservation and management role under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for AHC MAR305 Monitor ocean conditions and marine environmental quality

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, planned and implemented an ocean monitoring program for conditions and environmental quality using sensors, sampling and laboratory analysis according to workplace procedures.

There must also be evidence that the individual has:

- scheduled monitoring activity within operating constraints, including:
 - seasonal effects
 - prevailing weather conditions
 - tides and currents
 - human impact
- obtained and assembled equipment and consumables for monitoring ocean conditions and marine environmental quality
- assembled, checked and tested monitoring and support equipment
- conducted a risk assessment prior to monitoring activity
- monitored ocean water quality, including:
 - temperature
 - salinity
 - turbidity
 - contaminants
 - flow
- monitored biological indicators and markers in marine environments, which must include sediment quality and indicator species
- cleaned, maintained, repaired or replaced water monitoring equipment
- briefed and de-briefed personnel on monitoring ocean conditions and marine environmental quality

- transported equipment and consumables for monitoring ocean conditions and marine environmental quality
- stored equipment and consumables for monitoring ocean conditions and marine environmental quality
- recorded, secured and stored data
- secured, labelled and stored samples for transport according to partner organisation requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- drivers of local and regional ocean circulation and conditions, including:
 - ocean current systems
 - weather patterns
 - tides
 - seasonal changes, including freshwater inflows
 - extraordinary storms, temperature events and sources of marine pollution
- factors that impact on local and regional ocean conditions, including:
 - season
 - weather
 - tides
 - currents
 - human impact
- the basic physics of the underwater environment and the interplay of factors such as depth, pressure, temperature, water chemistry, flow and light penetration
- biological markers and indicators of marine system health
- equipment and techniques used for monitoring ocean conditions and marine environmental quality
- techniques and processes used for taking, storing, processing and transporting ocean water samples
- sampling risks associated with contamination and storage
- planning monitoring operations for ocean conditions and marine environmental quality
- computer hardware and software systems that support monitoring
- techniques for cleaning and maintaining marine water monitoring equipment
- maritime regulations for commercial survey work on vessels
- risk assessments and safety considerations for conducting marine monitoring
- biosecurity measures for marine monitoring techniques and equipment
- operating and emergency procedures for marine monitoring work
- types of contaminants affecting water quality, including:
 - hydrocarbons
 - plastics and microplastics.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an ocean environment
- resources, equipment and materials:
 - a vessel for transport to an ocean environment
 - tools and equipment for monitoring
 - personal protective equipment
- specifications:
 - workplace procedures and processes for monitoring in an ocean environment
 - manufacturer operating instructions for monitoring equipment
 - workplace instructions
- relationships:
 - team members
 - supervisor
- timeframes:
 - according to timeframes specified in monitoring program schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC MAR306 Operate mobile underwater vehicles

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to operate mobile underwater equipment such as towed cameras (TC) and remotely operated underwater vehicles (ROUV).

The unit applies to individuals who work in a marine conservation and management role under broad supervision and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Marine (MAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for mobile underwater vehicle operations	1.1 Clarify the aim/objective and precise location/s of the activity with supervisor 1.2 Identify personnel involved and confirm their skills and experience in underwater vehicle operations 1.3 Identify and prepare mobile underwater vehicle

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.4 Identify and check associated equipment and support resources required</p> <p>1.5 Identify and interpret information relating to underwater location</p> <p>1.6 Identify operational constraints under marine regulations and workplace safety procedures</p> <p>1.7 Identify operational threats and contingencies, and mitigate threats to deployment of underwater vehicle</p> <p>1.8 Confirm compliance with operating procedures and ensure a workplace health and safety risk assessment is performed</p>
2. Operate mobile underwater vehicle	<p>2.1 Transport mobile underwater vehicle to location</p> <p>2.2 Assemble and conduct pre-dive checks on mobile underwater vehicle on location according to operator instructions and biosecurity procedures</p> <p>2.3 Deploy and operate mobile underwater vehicle safely according to operational plan and workplace procedures</p> <p>2.4 Monitor operational threats, adjust operating parameters and respond to contingency situations</p> <p>2.5 Retrieve and secure mobile underwater vehicle and associated equipment</p>
3. Complete underwater vehicle operations	<p>3.1 Clean, maintain and store underwater vehicle and equipment according to operator instructions and biosecurity procedures</p> <p>3.2 Retrieve data from mobile underwater vehicle and secure according to data management procedures</p> <p>3.3 Maintain records and report activity and incidents according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret charts, maps, weather reports and other documentation to determine operating conditions for mobile underwater vehicle at a specific location
Writing	<ul style="list-style-type: none"> Record monitoring information accurately using industry language, workplace format and protocols

Assessment Requirements for AHCMAR306 Operate mobile underwater vehicles

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, prepared and operated a mobile underwater vehicle, and has:

- read, interpreted and completed documentation, including:
 - marine charts/maps
 - marine forecasts
 - operating and emergency procedures
 - logs associated with underwater vehicle operation
- identified and prepared mobile underwater vehicle and associated equipment
- transported mobile underwater vehicle to and from location
- assembled mobile underwater vehicle and conducted pre-dive checks on location, with particular attention to:
 - tethers, attachments, mounts and retrieval systems
 - seals and O-rings
 - soft pads
 - electrical connections/power supply
 - lenses and protective covers
- deployed and operated mobile underwater vehicle safely according to operational plan and workplace procedures
- monitored operational threats and adjusted operating parameters as required
- responded to contingency situations
- retrieved and secured mobile underwater vehicle and associated equipment
- cleaned, maintained and stored underwater vehicle and equipment
- retrieved records and data from vehicle/camera
- recorded underwater vehicle operations

- performed a workplace health and safety (WHS) risk assessment for underwater vehicle operations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- appropriate techniques and workplace procedures for the operation of mobile underwater vehicles for conservation work
- identification and names of types and parts of mobile underwater vehicles and associated equipment, including:
 - winches and cables
 - monitors
 - power supply
 - global positioning system (GPS) and sonar
- workplace procedures and marine regulations that relate to mobile underwater vehicles
- marine weather, sea conditions and forecasting
- interpreting marine charts and sonar maps/records
- logistical and technical requirements for operating mobile underwater vehicles
- the basic physics of the underwater environment and the relationships between equipment/monitoring techniques and depth, pressure, flow and light penetration
- computer hardware and software systems that support marine monitoring work
- equipment risks associated with operation of mobile underwater vehicles, including:
 - condensation
 - pressure
 - water flow
 - fouling and retrieval complications
 - maintenance – including age, contamination and corrosion
- biosecurity measures for operation of mobile underwater vehicles
- marine WHS, hazard identification and risk control measures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - mobile underwater vehicle and associated equipment
 - tools for assembling, dismantling and maintaining equipment
 - personal protective equipment

- specifications:
 - workplace procedures and processes for mobile underwater vehicle operations
 - manufacturer operating instructions for mobile underwater vehicle and equipment
 - workplace instructions
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMD201 Assist with propagation of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to provide assistance in propagating medicinal cannabis as part of cultivation processes. It requires the ability to prepare self, tools, equipment and materials for propagation tasks, assist with preparing propagation material, assist with monitoring the health of propagation material and environmental climate conditions, report abnormalities, record and report on propagation activities, and clean up on completion.

The unit applies to individuals who carry out a range of routine propagation tasks on a licensed medicinal cannabis production site under the direction of a supervisor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Medicinal Cannabis (MDC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for medicinal cannabis propagation tasks	1.1 Identify and confirm propagation tasks, workplace procedures and specifications with supervisor 1.2 Recognise health and safety hazards, and report safety concerns

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Collect required tools, equipment and materials for the task, and check for approval and functionality</p> <p>1.4 Fit and use personal protective equipment according to health and safety and hygiene requirements</p> <p>1.5 Apply personal hygiene and tools and equipment sanitation procedures</p> <p>1.6 Check propagation work area is clean and free of waste on entering secured area</p>
2. Assist with propagation of plant material	<p>2.1 Identify propagation material to be used, and confirm quantity and/or weights with supervisor</p> <p>2.2 Prepare media for the propagation process being undertaken according to supervisor instructions</p> <p>2.3 Assist with taking cuttings from mother plant, sowing seed or preparing tissue culture as required</p> <p>2.4 Place cuttings, seed or tissue into prepared media to required level as directed by supervisor</p> <p>2.5 Assist with labelling propagation material according to workplace procedures</p> <p>2.6 Place media in propagation growing system using safe practices</p> <p>2.7 Assist with water and nutrient requirements according to specifications</p> <p>2.8 Assist with temperature, lighting, carbon dioxide and humidity requirements according to specifications</p> <p>2.9 Record required data according to workplace quality procedures, reporting any deviations from quantity and weights</p>
3. Assist with monitoring propagation material health and environmental climate conditions	<p>3.1 Confirm quantity and weights of propagation material to be monitored with supervisor</p> <p>3.2 Assist with monitoring health of propagation material according to monitoring schedule, and report abnormalities</p> <p>3.3 Check for signs of disease or pests, and report presence or potential of disease or pests</p> <p>3.4 Assist with monitoring water and nutrient requirements, applying re-wetting techniques as required</p> <p>3.5 Assist with monitoring climate control levels according to specifications, and report levels that are out of acceptable range</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.6 Keep propagation growing system clean and free from propagation material waste at all times</p> <p>3.7 Maintain records according to workplace quality procedures, reporting any deviations from quantity and weights</p>
4. Clean up after propagation and monitoring activities	<p>4.1 Clean and sanitise propagation work area before safely leaving secured area</p> <p>4.2 Weigh, record and place propagation material waste in designated containers according to workplace and regulatory requirements</p> <p>4.3 Dispose of material waste safely according to workplace procedures</p> <p>4.4 Check, clean and sanitise and store tools and equipment, reporting identified repair requirements to supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about specifications and workplace procedures
Writing	<ul style="list-style-type: none"> Use clear language and industry terminology to complete workplace records and labels
Oral communication	<ul style="list-style-type: none"> Use clear language and industry terminology to report abnormalities of propagation material health and environmental climate conditions, repair requirements, and any deviation from recorded quantities and weights
Numeracy	<ul style="list-style-type: none"> Conduct simple counts and weight calculations of propagation material Interpret numerical data from climate control gauges

Assessment Requirements for AHCMDC201 Assist with propagation of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assisted with propagation tasks of medicinal cannabis for at least two propagation cycles, including:

- prepared, cleaned and applied sanitation procedures to self, the required tools, equipment and materials, and work area
- applied propagation techniques for at least two of the following methods:
 - plant grown by seed
 - cuttings from mother plant
 - tissue culture
- performed regular counts and/or weight checks of propagation material
- checked and monitored health of propagation material and environmental climate conditions during the propagation cycle
- identified common propagation material health issues and signs of disease and pests
- maintained accurate labels and workplace records on propagation activities
- complied with security and waste disposal requirements
- communicated any safety concerns, abnormalities or deviations from quantities and counts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- medicinal cannabis during the propagation cycle, including:
 - plant morphology
 - signs of common health issues, including nutrient deficiencies or excesses, environmental stress such as water, temperature and humidity stress, mould
 - signs of common diseases and pests

- common problems associated with performing propagation activities, and process for reporting these
- principles of Good Agricultural and Collection Practices (GACP) in relation to the propagation of medicinal cannabis plants, including:
 - hygiene and sanitation, including for tools, equipment and the work area, and personal hygiene
 - health and safety, including manual handling
 - quality controls
 - propagation techniques, including cuttings from mother plant, grafting, seed sowing and tissue culture
 - preparation of propagation media, including pre-wetting with appropriate nutrient solutions and draining to avoid excess moisture
 - water and nutrient requirements, including re-wetting techniques used when monitoring
 - environmental climate requirements in controlled growing systems, including ideal target lighting intensity, carbon dioxide, temperature and humidity levels for propagation method and growing media
 - monitoring plant health and environmental climate conditions
 - disposal and destruction of propagation material waste
 - identification and traceability
 - recording and reporting requirements
 - biosecurity measures
- workplace security requirements
- function and operation of tools and equipment used during the propagation of medicinal cannabis plants, including approval and operational checks
- function and operation of propagation growing systems, including their control systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - propagation growing system
 - personal protective equipment
 - cuttings, seeds or tissue culture for propagation
 - tools, equipment and materials required for propagation method
 - tools, equipment and materials for cleaning and sanitation
 - workplace recording and reporting system
- specifications:

- propagation specifications
- workplace procedures relating to the propagation of medicinal cannabis, including health and safety, hygiene and sanitation, recording and reporting, and security requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC MDC202 Assist with care and maintenance of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to provide assistance in the care and maintenance of medicinal cannabis plants during vegetative and flowering stages. It includes the care and maintenance of mother plants that are kept in the vegetative stage. It requires the ability to prepare self, tools, equipment and materials for maintenance tasks, assist with trimming, training and repotting tasks, assist with monitoring plant health and environmental climate conditions and reporting abnormalities, record and report on care and maintenance data, and clean up on completion.

The unit applies to individuals who carry out a range of routine maintenance tasks on a licensed medicinal cannabis production site under the direction of a supervisor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for AHCMDC202 Assist with care and maintenance of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assisted with medicinal cannabis care and maintenance tasks on at least two occasions for a vegetative cycle and at least two occasions for a flowering cycle, including:

- prepared, cleaned and applied sanitation procedures on self and the required tools, equipment and materials, and work area
- applied the required trimming and training techniques as instructed by supervisor
- repotted and safely transferred plants between vegetative and flowering areas
- performed regular counts and weight checks of plants
- checked and monitored plant health and environmental climate conditions during the vegetative and flowering cycle
- identified common plant health issues and signs of disease and pests
- complied with security and plant waste disposal regulatory requirements
- maintained accurate workplace records on care and maintenance activities
- communicated any safety concerns, abnormalities or deviations from quantities and counts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- medicinal cannabis during the vegetative and flowering cycles, including:
- plant morphology
- signs of common plant health issues, including nutrient deficiencies or excesses, environmental stress such as water, temperature and humidity stress, mould
- signs of common diseases and pests
- common problems associated with performing maintenance activities, and process for reporting these

- principles of Good Agricultural and Collection Practices (GACP) in relation to the maintenance of medicinal cannabis plants during the vegetative and flowering cycles, including:
- hygiene and sanitation, including for tools, equipment and the work area and personal hygiene
- health and safety, including manual handling
- quality controls
- trimming and training techniques, including techniques used for preserving mother plants
- repotting techniques
- different water and nutrient requirements for vegetative cycles, including mother plants, and flowering cycles
- different climate requirements, including ideal target lighting intensity, carbon dioxide, temperature and humidity levels for vegetative cycles, including mother plants, and flowering cycles
- monitoring plant health and environmental climate conditions
- disposal and destruction of plant waste
- identification and traceability
- recording and reporting requirements
- biosecurity measures
- regulations and compliance related to the physical security of cannabis
- function and operation of tools and equipment used for maintaining medicinal cannabis plants, including approval and operational checks
- function and operation of growing systems, including their control systems.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - growing system
 - personal protective equipment
 - plants during their vegetative and flowering stages
 - tools, equipment and materials required for care and maintenance tasks
 - tools, equipment and materials for cleaning and sanitation
 - workplace recording and reporting system
- specifications:
 - maintenance specifications and monitoring schedule

- workplace procedures relating to the maintenance of medicinal cannabis, including health and safety, hygiene and sanitation, recording and reporting and security requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for medicinal cannabis harvest and pre-processing tasks	1.1 Identify and confirm harvest and pre-processing tasks, workplace procedures and specifications with supervisor

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Recognise health and safety hazards, and report safety concerns</p> <p>1.3 Collect required tools, equipment and materials for tasks, and check for approval and functionality</p> <p>1.4 Fit and use personal protective equipment according to health and safety and hygiene requirements</p> <p>1.5 Apply personal hygiene and equipment sanitation procedures</p> <p>1.6 Check work area is clean and free of waste on entering secured area</p>
2. Assist with harvest tasks	<p>2.1 Identify and inspect medicinal plants to be harvested, including flowering stems to be cut, and confirm quantity and weights with supervisor</p> <p>2.2 Check plant health prior to commencing harvesting tasks, including signs of disease or pests, and report abnormalities or presence of disease or pests</p> <p>2.3 Check climate control, including temperature, humidity and airflow levels according to specifications, and report levels that are out of acceptable range</p> <p>2.4 Assist with cutting flowering stems and place in harvest containers according to supervisor instructions</p> <p>2.5 Handle harvested stems in a way that minimises damage to flower and avoids contact with growing media</p> <p>2.6 Confirm weight of harvested stems, and transfer to the drying room using safe practices and according to entry and exiting procedures</p> <p>2.7 Remove remaining plant material from growing media and dispose of according to workplace procedures</p> <p>2.8 Record required data according to workplace quality procedures, reporting any deviations from quantity and weights</p>
3. Assist with pre-processing tasks	<p>3.1 Comply with entry and exit procedures when moving in and out of the drying room according to workplace requirements</p> <p>3.2 Apply personal hygiene and equipment sanitation procedures</p> <p>3.3 Check climate control, including temperature, humidity and airflow levels according to specifications, and report levels that are out of acceptable range</p> <p>3.4 Assist with trimming harvested stems according to supervisor</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>instructions</p> <p>3.5 Assist with drying process according to supervisor instructions</p> <p>3.6 Assist with milling for extraction according to supervisor instructions as required</p> <p>3.7 Weigh, record, and remove and dispose of plant material waste according to workplace requirements</p> <p>3.8 Record required data according to workplace quality procedures, reporting any deviations from quantity and weights</p>
4. Assist with packing and storing medicinal cannabis product	<p>4.1 Assist with labelling and packing product according to supervisor instructions and specifications</p> <p>4.2 Transfer and place packaged product safely in secured storage area</p> <p>4.3 Record required data according to workplace quality procedures</p>
5. Clean up post harvest and pre-processing tasks	<p>5.1 Clean and sanitise work areas before safely leaving secured areas</p> <p>5.2 Dispose of material waste according to workplace requirements</p> <p>5.3 Check, clean and sanitise, and store tools and equipment, reporting identified repair requirements to supervisor</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about specifications and workplace procedures
Writing	<ul style="list-style-type: none"> Use clear language and industry terminology to complete workplace records and labels
Oral communication	<ul style="list-style-type: none"> Use clear language and industry terminology to report abnormalities of plant health and environmental climate conditions, equipment repair requirements and any deviation from recorded quantities and weights

Skill	Description
Numeracy	<ul style="list-style-type: none"> Conduct simple counts and weight calculations of plants and pre-processed products Interpret numerical data from climate control gauges

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has assisted with medicinal cannabis harvest and pre-processing tasks for at least one harvest, including:

- prepared, cleaned and followed sanitation procedures on self, the required tools, equipment and materials, and work areas
- checked plant health and for signs of pest and disease prior to harvest
- identified common health issues and signs of disease and pests of plants to be harvested
- checked required climate conditions for each of the harvesting and pre-processing processes
- performed counts and weight checks during each stage of the harvesting and pre-processing process
- completed the following tasks as directed by supervisor:
 - cutting flower stems
 - trimming harvested stems
 - drying
 - packing and labelling
 - transferring packed product to secured storage area
- labelled pre-processed product with the required information and correct terminology
- complied with security and waste disposal requirements
- maintained accurate workplace records on harvesting and pre-processing activities
- communicated any safety concerns, abnormalities or deviations from quantities and counts.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- medicinal cannabis during harvest stage, including:
 - plant morphology
 - signs of common health issues, including mould
 - signs of common diseases and pests
- common problems associated with carrying out harvest and pre-processing tasks, and process for reporting these
- function and operation of tools and equipment used during the harvest and pre-processing operations, including approval and operational checks
- function and operation of climate systems
- workplace security requirements, including secured storage areas
- principles of Good Agricultural and Collection Practices (GACP) in relation to the harvest of medicinal cannabis, including:
 - harvest techniques
 - quality controls
 - health and safety, including manual handling
 - recording and reporting requirements
 - identification and traceability
 - biosecurity
- principles of Good Manufacturing Practices (GMP) in relation to pre-processing of medicinal cannabis, including:
 - ideal environmental climate conditions for each of harvesting, trimming, drying and milling activities
 - disposal and destruction of plant material waste
 - entering and exit procedures
 - hygiene and sanitation, including for tools, equipment and the work area and personal hygiene
 - trimming, drying and milling techniques
 - labelling and packaging requirements, including mandatory data
 - storage of medicinal cannabis material and product
- procedures for entering and exiting drying room.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - personal protective equipment
 - plants ready for harvest
 - tools, equipment and materials required for harvest and pre-processing processes

- tools, equipment and materials for cleaning and sanitation
- drying room
- labelling and packaging material
- secured storage area
- workplace recording and reporting system
- specifications:
 - harvest and pre-processing plan and specifications
 - workplace procedures relating to harvest and pre-processing operations for medicinal cannabis, including security, health and safety, hygiene and sanitation, quality, recording and reporting requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMDC301 Apply security regulatory requirements to work in the medicinal cannabis industry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to apply security and safety requirements in the medicinal cannabis industry. It requires the ability to identify and comply with workplace and regulatory employment obligations, apply security and safety procedures, and respond to security incidents or emergencies on a medicinal cannabis site.

The unit applies to individuals who are employed to perform a range of routine tasks on a medicinal cannabis cultivation and production site under the direction of a supervisor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Medicinal Cannabis (MDC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Comply with employment obligations	1.1 Identify workplace policies and procedures and regulatory requirements in relation to own work responsibilities in medicinal cannabis production processes 1.2 Identify employee obligations and risks around diversion to illicit

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	use 1.3 Maintain suitability for employment according to workplace and regulatory requirements
2. Comply with security and safety procedures	2.1 Apply security procedures across all access controls in relation to work responsibilities according to workplace procedures and regulatory requirements 2.2 Comply with inspections and entry restrictions 2.3 Complete and maintain the sign in/sign out register according to workplace procedures and regulatory requirements 2.4 Maintain confidentiality of cannabis site and operations according to workplace policy and regulatory requirements
3. Respond to security incidents or emergencies	3.1 Report breaches of unauthorised access and intruder suspects according to workplace reporting procedures 3.2 Respond to incidents or emergencies according to training and drills used in preparation for intrusion or emergencies 3.3 Contact appropriate police, security and/or emergency services according to supervisor instructions and workplace procedures 3.4 Support police, security and/or emergency services as requested 3.5 Complete incident reporting requirements according to workplace procedures
4. Comply with cannabis disposal and destruction regulatory requirements	4.1 Weigh and store, dispose of or destroy any parts of cannabis that is not to be manufactured into a medicinal product according to workplace procedures and regulatory requirements 4.2 Clean and sanitise equipment that has been in contact with cannabis to ensure residual cannabis is removed to prevent the risk of diversion 4.3 Record and report completion of disposal and destruction activities, including any discrepancies in recorded cannabis weights, according to workplace procedures and regulatory requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interpret textual information from a range of sources to identify relevant and key information about employment obligations, workplace procedures and regulatory requirements
Writing	<ul style="list-style-type: none">Use clear language and industry terminology to prepare simple records and reports in required format
Oral communication	<ul style="list-style-type: none">Use clear language and industry terminology to report security breaches, incidents or emergencies, and completion of activities

Assessment Requirements for AHCMD301 Apply security regulatory requirements to work in the medicinal cannabis industry

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has complied with security regulatory requirements as an employee in the medicinal cannabis industry, including:

- identified and confirmed obligations as an employee of the medicinal cannabis organisation
- identified implications of diversion to illicit use
- entered and exited at least two site access points according to security procedures
- responded to at least two different simulated incidents or emergencies, including completing the required reports
- applied safe disposal or destruction procedures for cannabis waste on at least two occasions, including completing accurate records on disposal or destruction activities.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- relevant government and local authorities with the responsibility for regulating the production of medicinal cannabis, and their purposes
- regulations and compliance with security of medicinal cannabis, including:
 - persons suitable for employment or engagement in a cannabis operation (Fit and Proper Person)
 - physical security of cannabis
 - reporting and dealing with loss or theft of cannabis
 - safe disposal or destruction of cannabis
- risk of diversion to illicit use

- employee responsibilities in maintaining personal safety, including cyber security
- security systems and procedures, and implications of divergence from procedures
- procedures for reporting and responding to security incidents or emergencies
- procedures for safe and secure disposal or destruction of any parts of cannabis not being manufactured into a medicinal product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - sign in/sign out register
 - plant waste for disposal or destruction
 - equipment to be cleaned
- specifications:
 - employment obligations
 - workplace procedures relating to the security of medicinal cannabis, responding to security incidents or emergencies, and safe and secure disposal or destruction of cannabis.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMDC302 Apply regulatory and quality requirements to the production of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to ensure that medicinal cannabis production processes comply with regulatory requirements and the organisation's quality system and procedures.

The unit applies to individuals who carry out skilled work in medicinal cannabis production processes. They may not be directly responsible for developing procedures for compliance with regulation and quality systems; however, they are required to be aware of the existence of legislation and the Good Practices Standards framework, including the impact it has on the organisation's arrangements in place to ensure compliance and quality of the product.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Medicinal Cannabis (MDC)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify regulatory requirements for medicinal cannabis	1.1 Identify legislation, regulations and standards relevant to the production of medicinal cannabis

Elements	Performance Criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
production	<p>1.2 Investigate purpose and intent of regulatory requirements</p> <p>1.3 Identify roles and responsibilities of authorities responsible for administering requirements</p> <p>1.4 Identify requirements of licensing for medicinal cannabis cultivators and manufacturers</p>
2. Apply regulatory requirements to work practices	<p>2.1 Identify workplace policies and procedures in relation to own work responsibilities in medicinal cannabis production processes</p> <p>2.2 Review work practices to ensure compliance with regulatory requirements</p> <p>2.3 Identify and report instances of non-compliance and potential problems according to workplace procedures</p>
3. Identify and apply quality practices for production of medicinal cannabis	<p>3.1 Identify quality requirements for the production of medicinal cannabis</p> <p>3.2 Determine critical control points for work area</p> <p>3.3 Conduct a safety hazard analysis and risk assessment</p> <p>3.4 Monitor work area, materials, processes and crop to ensure compliance with quality requirements, hygiene and health and safety procedures</p> <p>3.5 Identify and report instances of deviation and potential problems according to workplace procedures</p>
4. Complete records to comply with regulatory and quality requirements	<p>4.1 Record details of cannabis material received at site, stored on site and supplied from the site</p> <p>4.2 Record details of cultivation processes that trace plant batch as it moves through production processes</p> <p>4.3 Record hygiene and sanitation activities</p> <p>4.4 Record health and safety requirements, including incident reports</p> <p>4.5 Record details of plant, pest and disease monitoring, including test methods, results and control</p> <p>4.6 Record details of fertigation and climate, including environmental control data and inputs</p> <p>4.7 Identify and report instances of deviation and non-compliance in record-keeping according to workplace procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Access legal and quality documentation from a variety of sources to determine compliance requirements
Writing	<ul style="list-style-type: none">Complete workplace documentation using accurate and legible data and appropriate terminology, and cross-check for errors
Numeracy	<ul style="list-style-type: none">Interpret numerical data from sampling results and control gauges

Assessment Requirements for AHC MDC302 Apply regulatory and quality requirements to the production of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively monitored the production of medicinal cannabis to ensure compliance with legislation and quality requirements, including:

- identified and applied legal and regulatory requirements and elements of quality standards that apply to production processes in own area of responsibility
- assessed own work area for critical control points, safety and risks
- completed accurate records for production processes in own area of responsibility, including records that cover all of the following on at least **three** occasions:
 - cultivation processes
 - traceability
 - hygiene and sanitation
 - health and safety
 - monitoring, sampling and control
- identified and reported instances of deviation, potential problems or non-compliance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- national, state and territory legislation, regulations and standards relevant to the production of medicinal cannabis
- legislative and regulatory responsibilities required of licensed cultivators and manufacturers of medicinal cannabis
- roles and functions of commonwealth government authorities responsible for administering the legislation, including record requirements
- Good Practices Standards and organisation quality systems relevant to the production of medicinal cannabis, including:

- Good Agricultural and Collection Practices (GACP) in relation to cultivation and harvesting of plants, and quality and consistency of products
- Good Manufacturing Practices (GMP) in relation to pre-processing and quality of products
- principles of GACP and GMP in relation to:
 - cultivation and production processes
 - traceability, including validation of inputs
 - hygiene and sanitation
 - health and safety
 - monitoring, sampling and control
 - documentation processes
- organisational record-keeping requirements.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - workplace quality system
 - workplace recording system
- specifications:
 - access to legislation and regulations related to the production of medicinal cannabis
 - workplace quality procedures
 - workplace procedures relating to the production of medicinal cannabis, including health and safety, hygiene and sanitation, recording and reporting requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMD303 Undertake propagation of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to undertake the propagation of medicinal cannabis according to the propagation plan. It requires the ability to prepare for propagation activities, apply common propagation techniques to establish cannabis plants, monitor and control health and environmental climate conditions of the propagation material, and carry out all recording and reporting requirements throughout the propagation cycle according to regulatory and quality requirements.

The unit applies to individuals who perform skilled propagation work on a licensed medicinal cannabis production site. They may work independently or as part of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Medicinal Cannabis (MDC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for propagation of medicinal cannabis	1.1 Confirm propagation plan, specifications and monitoring schedule with supervisor 1.2 Identify health and safety hazards, assess risks and implement control measures

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Prepare self and required approved tools, equipment and materials, including personal protective equipment, according to hygiene and sanitation and health and safety procedures</p> <p>1.4 Select media for propagation method being used and required quantity of plants</p> <p>1.5 Check propagation work area is clean and free of waste on entering secured area</p>
2. Prepare propagation material	<p>2.1 Identify, check and record type, quantity and/or weight of propagation material to be used against specifications</p> <p>2.2 Prepare propagation material according to propagation plan and method used</p> <p>2.3 Handle propagation material in a way that minimises damage</p> <p>2.4 Label propagation material according to identification requirements</p> <p>2.5 Check water and nutrient requirements according to specifications, and adjust manually or use control system to maintain to required levels</p> <p>2.6 Check temperature, lighting, carbon dioxide and humidity according to specifications, and use control system to adjust and maintain to required levels</p> <p>2.7 Record required data and observations according to workplace quality procedures, including any deviations in recorded quantities and weights</p>
3. Monitor health of propagation material	<p>3.1 Calculate and record quantity and/or weight of propagation material to be monitored</p> <p>3.2 Check propagation material health according to monitoring schedule, and adjust water and nutrients levels as required</p> <p>3.3 Check for signs of disease or pests, and if required, apply treatment according to workplace procedures</p> <p>3.4 Check climate control, including temperature, lighting, carbon dioxide and humidity levels, according to specification and adjust as required</p> <p>3.5 Monitor propagation growing system for safety, hygiene and waste to be removed</p> <p>3.6 Record required data and observations according to workplace quality procedures, including any deviations in recorded quantities and</p>

Elements	Performance Criteria

Assessment Requirements for AHCMDC303 Undertake propagation of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken the propagation of medicinal cannabis to produce at least six plants for at least two propagation cycles, including:

- identified risks and applied control measures
- selected and prepared the required tools, equipment and materials for the propagation method and quality of required plants
- maintained safe, clean and sanitised work area
- applied at least two of following propagation methods:
 - plant grown by seed
 - cuttings from mother plant
 - tissue culture
- monitored and recorded counts and/or weight of propagation material, and checked for deviations
- labelled propagation material with the required information and correct terminology
- monitored health of propagation material by visual inspection and sampling
- applied required treatments and/or remedies to maintain health of propagation material and/or treat any identified common health issues, disease or pests
- monitored, controlled and made required adjustments to water and nutrient needs and environmental climate conditions during the propagation cycle based on specifications and propagation material requirements
- complied with security and waste disposal requirements
- maintained accurate records and reports on propagation data and activities, including any non-compliance and deviations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organisational medicinal cannabis propagation plan and monitoring schedule
- process for conducting health and safety risk assessment, and control measures that may be used for propagation production processes
- medicinal cannabis during the propagation cycle, including:
 - plant morphology
 - signs of common health issues, including nutrient deficiencies or excesses, environmental stress such as water, temperature and humidity stress, and mould, and their remedies
 - signs of common diseases and pests and their control
- regulatory and workplace requirements related to the propagation of medicinal cannabis, including:
 - hygiene and sanitation
 - health and safety, including manual handling
 - physical security of cannabis
 - disposal and destruction of plant waste
 - recording and reporting requirements
 - identification and traceability
 - biosecurity
- principles of Good Agricultural and Collection Practices (GACP) in relation to the propagation of medicinal cannabis, including:
 - propagation techniques, including cuttings from mother plants, grafting, seed sowing and tissue culture
 - preparation of propagation media for method used
 - use of pre-treatments
 - water and nutrient and carbon dioxide requirements
 - climate requirements in controlled growing systems, including lighting, temperature and humidity
 - monitoring plant health and climate conditions
 - disease and pest control
 - quality controls
- function, operation and maintenance of tools and equipment used during the propagation of medicinal cannabis, including operational checks
- function and operation of propagation growing systems, including their control systems.
-

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - personal protective equipment
 - cuttings, seeds or tissue culture for propagation
 - tools, equipment and materials required for propagation method
 - tools, equipment and materials for cleaning and sanitation
 - sampling equipment
 - propagation system, including environmental growing climate controls
 - workplace recording and reporting system
- specifications:
 - propagation plan and specifications
 - monitoring schedule
 - workplace procedures relating to the propagation of medicinal cannabis, including security, health and safety, hygiene and sanitation, quality, recording and reporting requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMD304 Undertake care and maintenance of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to care for and maintain medicinal cannabis plants during their vegetative and flowering cycles according to the care and maintenance plan. It includes the care and maintenance of mother plants that are kept in the vegetative stage. It requires the ability to prepare for care and maintenance activities, assess plant growth for care and maintenance requirements, apply trimming and training techniques to achieve best flower production, monitor and control plant health and environmental climate conditions, and carry out all recording and reporting requirements throughout the vegetative and flowering cycles according to regulatory and quality requirements.

The unit applies to individuals who perform skilled maintenance work on medicinal cannabis plants on a licensed medicinal cannabis production site. They may work independently or as part of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

1. Prepare for care and maintenance of medicinal cannabis	1.1 Confirm maintenance plan and monitoring schedules with supervisor 1.2 Identify health and safety hazards, assess risks and implement control measures 1.3 Prepare self and required approved tools, equipment and materials, including personal protective equipment, according to hygiene and sanitation and health and safety procedures 1.4 Check cultivation work area is clean and free of waste on entering secured area
2. Maintain medicinal cannabis plants	2.1 Check and record quantity and weight of plants to be maintained, including mother plants, against specifications 2.2 Check plant growth to determine maintenance needs 2.3 Trim and shape plants to allow airflow, and set up framework for flowering 2.4 Use trimming and shaping techniques to preserve mother plants in the vegetative stage 2.5 Secure and train plants onto support structures 2.6 Use tools and equipment safely and cautiously around cultivation environment 2.7 Repot and transfer pots between vegetative and flowering areas using safe practices 2.8 Check water and nutrient requirements after pruning and potting, and adjust manually or use control systems to maintain to required levels 2.9 Record required data and observations according to workplace quality procedures, including any deviations in recorded quantities and weights
3. Monitor plant health and climate control during growing and flowering stages	3.1 Calculate and record quantity and weight of plants to be monitored 3.2 Check plant health according to monitoring schedule, and adjust water and nutrients levels as required 3.3 Check for signs of disease or pests, and if required, apply treatments according to workplace procedures 3.4 Check climate control systems, including temperature, lighting, carbon dioxide and humidity levels, according to specification and adjust as required

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.5 Monitor growing system for safety, hygiene and plant waste to be removed</p> <p>3.6 Record required data and observations according to workplace quality procedures, including any deviations in recorded quantities and weights</p>
4. Complete post care and maintenance activities	<p>4.1 Check cultivation work area is clean before safely leaving secured area</p> <p>4.2 Check plant waste is weighed, recorded and placed in designated containers, and material waste is safely disposed of according to workplace and regulatory requirements</p> <p>4.3 Record and report on care and maintenance activities, including any non-compliance or potential problems</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant information about maintenance requirements, monitoring schedule, workplace procedures and regulatory requirements
Writing	<ul style="list-style-type: none"> Use clear language and industry terminology to complete workplace records and reports
Oral communication	<ul style="list-style-type: none"> Use clear language and industry terminology to report on maintenance activities
Numeracy	<ul style="list-style-type: none"> Interpret numerical data from sampling and growing system gauges, and make adjustments to fertigation and climate controls

Assessment Requirements for AHCMDC304 Undertake care and maintenance of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken the care and maintenance of at least six medicinal cannabis plants on at least two occasions for a vegetative cycle and at least two occasions for a flowering cycle, including:

- identified risks and applied control measures
- maintained safe, clean and sanitised work area
- selected and prepared the required tools, equipment and materials
- applied the required hygiene and sanitation and health safety requirements for self and tools and equipment
- monitored and recorded counts and weight of plants, and checked for deviations
- applied trimming and shaping techniques that maintained right balance of growth and flower production and/or preserved mother plants
- applied required training techniques to support plants onto structures
- monitored plant health by visual inspection and sampling
- applied required treatments and/or remedies to maintain plant health and/or treat any identified common health issues, disease or pests
- monitored, controlled and made required adjustments to water and nutrient requirements and environmental climate conditions during the vegetative and flowering cycles based on specifications and plant needs
- complied with security and waste disposal requirements
- maintained accurate records and reports on maintenance data and activities, including any non-compliance and deviations.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organisational care and maintenance plan for medicinal cannabis
- process for conducting health and safety risk assessment, and control measures that may be used during plant maintenance processes
- medicinal cannabis during the vegetative and flowering cycles, including:
 - plant morphology
 - signs of common plant health issues, including nutrient deficiencies or excesses, environmental stress such as water, temperature and humidity stress, and mould, and their remedies
 - signs of common diseases and pests, and their control
- regulatory and workplace requirements related to the care and maintenance of medicinal cannabis plants, including:
 - hygiene and sanitation
 - health and safety, including manual handling
 - physical security of cannabis
 - disposal and destruction of plant waste
 - identification and traceability
 - recording and reporting requirements
 - biosecurity
- principles of Good Agricultural and Collection Practices (GACP) in relation to the care and maintenance of medicinal cannabis plants during vegetative and flowering cycles, including:
 - trimming, shaping and training techniques used for optimum flower production, reducing risk of disease and preserving mother plants
 - different water and nutrient requirements for vegetative cycles, including mother plants, and flowering cycles
 - different climate requirements, including ideal target lighting intensity, carbon dioxide, temperature and humidity levels for vegetative cycles, including mother plants, and flowering cycles
 - monitoring plant health and climate conditions
 - disease and pest control
 - quality controls
- function, operation and maintenance of tools and equipment used during the care and maintenance of medicinal cannabis plants, including approval and operational checks
- function and operation of growing systems, including their control systems.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions

- resources, equipment and materials:
 - personal protective equipment
 - plants during their vegetative and flowering stages
 - tools, equipment and materials required for maintenance tasks
 - tools, equipment and materials for cleaning and sanitation
 - sampling equipment
 - workplace recording and reporting system
- specifications:
 - maintenance specifications
 - monitoring schedule
 - workplace procedures relating to the maintenance of medicinal cannabis, including health and safety, hygiene and sanitation, recording and reporting and security regulatory requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHC/MDC305 Undertake harvest and pre-processing of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to carry out harvest and pre-processing processes for medicinal cannabis according to the harvest and pre-processing plan. It requires the ability to prepare for harvesting and pre-processing activities, assess readiness of medicinal cannabis for harvest, monitor and adjust environmental climate conditions, dispose of plant material waste, and maintain recording and reporting requirements according to regulatory and quality requirements.

The unit applies to individuals who are skilled in carrying out harvest and pre-processing operations on a licensed medicinal cannabis production site. They may work independently or as part of a team.

No licensing, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Medicinal Cannabis (MDC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for harvest and pre-processing of	1.1 Confirm harvest and pre-processing plans and specifications with supervisor

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
medicinal cannabis	<p>1.2 Identify health and safety hazards, assess risks and implement control measures</p> <p>1.3 Prepare self and required approved materials, tools and equipment, including personal protective equipment, according to hygiene and sanitation and health and safety procedures</p> <p>1.4 Check work area is clean and free of waste on entering secured area</p>
2. Harvest medicinal cannabis	<p>2.1 Check and record weights and quantities of plants to be harvested against specifications</p> <p>2.2 Check plant health prior to commencing harvesting tasks, including any signs of disease or pests, and report abnormalities or presence of disease or pests</p> <p>2.3 Check climate control, including temperature, humidity and airflow levels, according to specifications and adjust as required</p> <p>2.4 Cut flowering stems and place in harvest containers according to specifications and workplace procedures</p> <p>2.5 Handle harvested stems in a way that minimises damage to flower and avoids contact with growing media</p> <p>2.6 Calculate weight of harvest stems and transfer to the drying room using safe practices and according to entry and exiting procedures</p> <p>2.7 Remove remaining plant material from growing media and dispose of according to workplace and regulatory requirements</p> <p>2.8 Record required data and observations according to workplace quality procedures, including any deviations in recorded quantities and weights</p>
3. Pre-process medicinal cannabis	<p>3.1 Comply with entry and exit procedures when moving in and out of the drying room according to workplace and quality requirements</p> <p>3.2 Apply personal hygiene and equipment sanitation procedures</p> <p>3.3 Check climate control, including temperature, humidity and airflow levels, according to specifications and adjust as required</p> <p>3.4 De-stem flower using required equipment according to specifications and safe practices</p> <p>3.5 Dry remaining stems and flowers according to specifications and required climate conditions</p> <p>3.6 Apply milling process for extraction as required</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>3.7 Remove and dispose of plant material waste according to workplace and regulatory requirements</p> <p>3.8 Record required data and observations according to workplace quality procedures, including any deviations in recorded quantities and weights</p>
4. Pack and store medicinal cannabis product	<p>4.1 Label and pack product according to specifications and workplace and regulatory requirements</p> <p>4.2 Store product safely and securely in required climate conditions until ready for distribution</p> <p>4.3 Record required data and observations, including reports for compliance according to workplace procedures</p>
5. Complete post harvest and pre-processing activities	<p>5.1 Check work areas are clean and sanitised before safely leaving secured areas</p> <p>5.2 Check material waste is safely disposed of according to workplace and regulatory requirements</p> <p>5.3 Record and report on harvest and pre-processing activities, including any non-compliance or potential problems</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual and numerical information from a range of sources to identify relevant information about harvest and pre-processing requirements, workplace procedures and regulatory requirements
Writing	<ul style="list-style-type: none"> Use clear language and industry terminology to complete workplace records and reports and labels on products
Oral communication	<ul style="list-style-type: none"> Use clear language and industry terminology to report on harvest and pre-processing activities
Numeracy	<ul style="list-style-type: none"> Interpret numerical data from testing and climate control gauges, and make adjustments

Assessment Requirements for AHCMDC305 Undertake harvest and pre-processing of medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken harvesting and pre-processing operations for at least six medicinal plants for at least two harvest stages, including:

- selected and prepared the required tools, equipment and materials for both harvesting and pre-processing operations
- identified risks and applied control measures
- maintained safe, clean and sanitised work area
- checked plants for signs of health issues, disease and pests prior to harvest
- applied the required harvesting, trimming and drying techniques according to specifications
- packaged and labelled product with information and data required by regulations
- transferred and stored packaged product in secured area
- monitored and adjusted climate control against specifications for each process
- monitored and recorded counts and weight for each process, and checked for deviations
- complied with security and waste disposal requirements
- maintained accurate records and reports on harvesting and post-harvesting data and activities, including any non-compliance and deviations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organisational medicinal cannabis harvest and pre-processing plan
- forms of medicinal cannabis product produced by organisation
- process for conducting health and safety risk assessment, and control measures relevant to harvest and pre-processing processes
- medicinal cannabis during harvest stage, including:

- plant morphology
- signs of common health issues, including mould, and their remedies
- signs of common diseases and pests, and their control
- function, operation and maintenance of tools and equipment used during the harvest and pre-processing operations, including approval and operational checks
- function and operation of climate systems, including their control systems
- regulatory and workplace requirements related to harvest and pre-processing processes for medicinal cannabis, including:
 - hygiene and sanitation
 - health and safety, including manual handling
 - physical security of cannabis, including secure storage areas
 - disposal and destruction of plant waste
 - recording and reporting requirements
 - identification and traceability
 - biosecurity
- principles of Good Agricultural and Collection Practices (GACP) in relation to the harvest of medicinal cannabis, including:
 - determining when to harvest for best quality and yield, by using visual and physical signs and/or testing
 - harvesting techniques
 - quality controls
- principles of Good Manufacturing Practices (GMP) in relation to pre-processing of medicinal cannabis, including:
 - climate conditions
 - disposal and destruction of plant material waste
 - entering and exit procedures
 - hygiene and sanitation
 - trimming, drying and milling techniques
 - labelling and packaging requirements, including mandatory data
 - secured storage areas for medicinal cannabis material and product
- procedures for entering and exiting drying room.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - personal protective equipment

- plants for harvesting
- tools, equipment and materials required for harvest and pre-processing processes
- tools, equipment and materials for cleaning and sanitation
- drying room
- labelling and packaging material
- secured storage area
- workplace recording and reporting system
- specifications:
 - harvest and pre-processing plan and specifications
 - workplace procedures relating to harvest and pre-processing operations for medicinal cannabis, including security, health and safety, hygiene and sanitation, quality, recording and reporting requirements
- relationships:
 - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMD401 Apply security measures for medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to apply measures for the security of a controlled growing, licensed medicinal cannabis site.

The unit applies to individuals who are responsible for incorporating security measures in their own work and the work of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Medicinal Cannabis (MDC)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify security control measures	1.1 Identify and access organisation documents relating to security arrangements of medicinal cannabis site 1.2 Identify security threats to the organisation from documents and relevant legislation and regulations 1.3 Assess risks and identify control measures to minimise the risk of diversion
2. Apply security control	2.1 Apply control measures related to the physical security of

Assessment Requirements for AHCMDC401 Apply security measures for medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied security control measures for a medicinal cannabis site on at least one occasion, including:

- identified information from organisation and government on:
 - security threats to the organisation
 - control measures that can minimise the risk of diversion
- assessed risks and applied control measures in work routines for each of the following areas:
 - physical security of cannabis
 - reporting of loss or theft
 - disposal or destruction of cannabis
 - transportation of cannabis
- conducted an assessment on the maintenance of records and surveillance data
- monitored work of self and others for compliance with physical security measures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- regulations and compliance with meeting security standards required for the cultivation, production and manufacture of medicinal cannabis, including:
 - physical security of cannabis
 - reporting and dealing with loss or theft of cannabis
 - safe disposal or destruction of cannabis
 - safe and secure transportation of cannabis
- risk of diversion to illicit use

- processes for conducting a risk analysis
- record-keeping for traceability of cannabis and site monitoring and surveillance data
- processes for monitoring effectiveness of control measures
- process for reporting security concerns and issues.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - workplace records
 - site monitoring and surveillance data
 - government information and guidelines on the security of medicinal cannabis
- specifications:
 - workplace documentation related to security arrangements of a medicinal cannabis site
 - workplace procedures relating to the security of medicinal cannabis
 - legislation and regulations related to the security of medicinal cannabis
- relationships:
 - staff.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCMDC402 Monitor medicinal cannabis production for compliance and quality

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively monitored production processes of medicinal cannabis that apply in own area of responsibility, to ensure compliance with legislation, regulations and quality standards on at least one occasion, including:

- reviewed workplace procedures for compliance with legal and regulatory requirements and elements of Good Practices Standards
- conducted a risk and hazard identification audit and established critical control limits, measures and corrective actions
- instructed staff and contractors in quality procedures
- identified and managed record requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, regulations and standards relevant to the production of medicinal cannabis
- roles and functions of commonwealth government authorities responsible for administering the legislation and standards
- legislative and regulatory responsibilities required of licensed cultivators and manufacturers of medicinal cannabis, including recording and reporting requirements
- Good Practices Standards and organisation quality management systems relevant to the production of medicinal cannabis, including:
 - Good Agricultural and Collection Practices (GACP) in relation to cultivation and harvesting of plants, and quality and consistency of products
 - Good Manufacturing Practices (GMP) in relation to pre-processing and quality of products
- process for conducting risk and hazard identification and determining critical control limits, measures and corrective actions

- processes used to monitor regulatory compliance and quality practices in work operations and procedures
- purpose and process used for conducting and documenting a deviation investigation
- methods used for training staff and contractors on policies and procedures
- function and operations of organisation record system.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - workplace recording system
- specifications:
 - legislation and regulations related to the production of medicinal cannabis
 - workplace quality procedures
 - workplace procedures relating to the production of medicinal cannabis, including recording and reporting requirements
- relationships:
 - staff and/or contractors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHC MDC403 Plan and implement a propagation program for medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and implemented a propagation program for medicinal cannabis for at least one propagation cycle, including:

- documented a plan that incorporates each of the following:
 - propagation methods and required quantities of propagation materials
 - resource requirements
 - identification and quality specifications
 - strategies for monitoring and treating propagation material
 - schedules for propagation activities
 - risk assessment and control measures and actions
 - regulatory requirements
- communicated and provided training on propagation activities
- monitored and evaluated activities against the plan and results of propagated plants
- reported on propagation monitoring activities, including any deviations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for developing a propagation program for medicinal cannabis, including determining:
 - propagation material needs to meet production targets, which may include mother plants, seeds or tissue culture
 - propagation water and nutrient requirements and environmental climate conditions
 - quality specifications
 - identification, propagation and establishment techniques

- application of non-chemical intervention or treatments
- problems performing propagation activities, and preventative action
- hygiene standards required for propagation activities
- preferred types of propagation media
- scheduling for propagation activities
- legal and regulatory requirements required of licensed cultivators of medicinal cannabis, including reporting requirements
- principles of Good Agricultural and Collection Practices (GACP) in relation to the propagation of medicinal cannabis plants, including:
 - propagation methods
 - traceability
 - hygiene and sanitation
 - health and safety
 - monitoring, sampling and control
 - documentation processes, including deviation investigations reports
- methods and systems that may be used for developing, monitoring and evaluating propagation plans, schedules and workplace procedures
- principles of risk assessment, including hazard identification, risk analysis, control limits, control measures and corrective actions and evaluation
- effective training methods used to train staff on workplace procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - software applications/workplace documentation for developing plans and schedules
- specifications:
 - cultivation specifications
 - workplace procedures relating to the propagation of medicinal cannabis, including security, health and safety, hygiene and sanitation, quality, recording and reporting requirements
- relationships:
 - senior personnel and staff.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMDC404 Plan and implement a care and maintenance program for medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan, implement and monitor a program for the care and maintenance of medicinal cannabis plants during their vegetative and flowering cycles. It requires the ability to determine plant care and maintenance requirements, develop the maintenance plan, communicate the plan and procedures to implement the program, and monitor and evaluate the effectiveness of the program. The program may include the care and maintenance of mother plants that are kept in the vegetative stage and used for cuttings and clones.

The unit applies to individuals at the supervisory or managerial level and who are responsible for managing and monitoring the care and maintenance of plants on a licensed medicinal cannabis production site.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHC MDC405 Plan and implement a harvest and pre-processing program for medicinal cannabis

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and implemented a program for the harvest and pre-processing of medicinal cannabis for at least one crop harvest, including:

- documented a plan that incorporates each of the following:
 - harvest and pre-processing requirements
 - resource requirements
 - identification and quality specifications
 - strategies for monitoring and treating plants
 - schedules for harvest and pre-processing activities
 - risk assessment and control measures and actions
 - regulatory requirements
- communicated and provided training on harvest and pre-processing activities
- monitored and evaluated activities against the plan
- reported on harvest and pre-processing activities, including any deviations.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices for developing a harvest and pre-processing program for medicinal cannabis, including determining:
 - harvest and pre-processing requirements, including environmental climate conditions for each process
 - identification and quality specifications
 - problems performing harvest and pre-processing activities, and preventative action
 - health and safety considerations, including manual handling

- hygiene standards required for harvest and pre-processing activities
- scheduling for harvest and pre-processing activities
- legal and regulatory requirements required of licensed cultivators of medicinal cannabis, including reporting requirements
- principles of Good Agricultural and Collection Practices (GACP) in relation to the harvest and pre-processing of medicinal cannabis, including:
 - determining when to harvest for best quality and yield, and based on required active ingredient
 - traceability
 - hygiene and sanitation
 - climate conditions
 - quality controls
 - documentation processes
- principles and regulations for Good Manufacturing Practices (GMP) in relation to pre-processing of medicinal cannabis, including:
 - disposal and destruction of plant material waste
 - entering and exit procedures
 - hygiene and sanitation
 - trimming, drying and milling processes
 - labelling and packaging requirements, including mandatory data
 - secured storage areas for medicinal cannabis material and product
- methods and systems that may be used for developing, monitoring and evaluating harvest and pre-processing plans, schedules and workplace procedures
- principles of risk assessment, including hazard identification, risk analysis, control limits, control measures and corrective actions and evaluation
- effective training methods used to train staff on workplace procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a medicinal cannabis production site or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - software applications/workplace documentation for developing plans and schedules
- specifications:
 - cultivation and production specifications
 - workplace procedures relating to the harvest and pre-processing of medicinal cannabis, including security, health and safety, hygiene and sanitation, quality, recording and reporting requirements
- relationships:

- senior personnel and staff.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCMER303 Sell products and services

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to sell products and services.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes.

This unit applies to individuals who work under broad direction and use discretion and judgement in the selection and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Merchandising and Sales (MER)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Engage customer	1.1 Approach customer in a timely and professional manner 1.2 Use interpersonal skills to engage customer

Element	Performance criteria
	1.3 Present customers with purchase options that address their needs and assist to identify their preferred option 1.4 Identify personal and professional and legal limitations in addressing customer needs and seek assistance from appropriate personnel
2. Sell products and services	2.1 Determine prices and quotations on the advice of appropriate personnel and provide to customer 2.2 Complete sales to maximise potential for customer satisfaction 2.3 Identify and respond to opportunities for up selling and repeat sales
3. Maintain products	3.1 Handle and store products safely and efficiently 3.2 Complete documentation and re-ordering 3.3 Review sales techniques to enhance future sales results

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCMER303A Sell products and services.

Assessment Requirements for AHCMER303 Sell products and services

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- engage customers
- identify the potential for a sale
- present purchase options to the customer
- provide quotations
- complete a sale
- follow enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- customer needs in various merchandising settings
- customer buying signals
- sales techniques
- how to effectively engage and communicate with a range of customers from culturally diverse backgrounds, and of varying physical and mental abilities
- legal requirements in sales environments, particularly Fair Trading, Trade Practices and Sale of Goods legislation, public liability and work health and safety legislation

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

AHC MER304 Recommend irrigation products and services

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to recommend irrigation products and services to fulfil the needs of a client.

It applies to individuals who take responsibility for own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Merchandising and Sales (MER)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Research store product range	1.1 Accessing relevant sources of information to develop product knowledge 1.2 Identify products according to relevant product information 1.3 Operate store products, machinery and equipment safely 1.4 Demonstrate a broad knowledge of irrigation product range

Element	Performance criteria
2. Recommend irrigation products	2.1 Identify client's needs 2.2 Provide details of product specifications and explain to clients to assist buying decisions 2.3 Explain features and benefits of products to clients to create a buying environment
3. Estimate quantities	3.1 Estimate quantities of irrigation products accurately from measurements and information provided according to product requirements 3.2 Provide client with accurate quotation for estimated quantities
4. Advise on irrigation product warranties	4.1 Provide client with clear explanations of the comparisons between products and manufacturer's warranties 4.2 Confirm individual product warranty terms and conditions from relevant sources of information 4.3 Provide client with written information regarding individual product warranty terms and conditions, especially extended or promotional warranties
5. Negotiate price and payment options	5.1 Explain payment options including store recommended retail pricing for various brand options 5.2 Negotiate individual product prices where necessary to achieve sales
6. Advise on and arrange product service and repairs	6.1 Question client to determine nature of problem 6.2 Identify problem by accessing manufacturer's information 6.3 Offer solutions taking in consideration the nature of problem and available product information 6.4 Identify and discuss the service or repair process 6.5 Quote price and timeline for basic service or repairs 6.6 Obtain client details and record on repair form 6.7 Label item for repair and store securely 6.8 Notify client on completion of service or repair

AHCMER401 Coordinate customer service and networking activities

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to coordinate customer service and networking activities.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes.

This unit applies to agricultural or horticultural merchandise or department managers who have responsibility for customer service delivery by others.

This unit applies to individuals who take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Merchandising and Sales (MER)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Contribute to quality customer standards	1.1 Access, interpret, apply and monitor customer service standards in the workplace 1.2 Make contributions to the development, refinement and improvement of service policies, standards and processes 1.3 Ensure customer interactions are consistent with legislation, codes of practice and enterprise policies
2. Implement customer service systems	2.1 Encourage personnel to consistently implement customer service systems 2.2 Review customer feedback in consultation with appropriate personnel and analyse when improving work practices 2.3 Identify customer service complaints and make adjustments to ensure continued service quality 2.4 Communicate adjustments to all those involved in service delivery within appropriate time frames 2.5 Coordinate and manage delivery of services or products to ensure they effectively and efficiently meet agreed quality standards
3. Manage networks to ensure customer needs are addressed	3.1 Establish effective regular communication with customers 3.2 Establish, maintain and expand networks to ensure referral of customers to products or services 3.3 Establish procedures to ensure that decisions about targeting of customer services are based on up-to-date information about the customer and the products/services available 3.4 Establish procedures to ensure that referrals are based on the matching of the assessment of customer needs and availability of products/services 3.5 Maintain records of customer interaction in accordance with organisational guidelines

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCMER401A Coordinate customer service and networking activities.

Assessment Requirements for AHCMER401 Coordinate customer service and networking activities

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- access and apply customer service policies and procedures
- respond to customer feedback and complaints
- develop and use networks to source goods and services
- provide value for the customer in sourcing and supplying goods and services
- maintain records of customer feedback and interactions

Knowledge Evidence

The candidate must demonstrate knowledge of:

- relevant legislation, codes and enterprise policies
- the organisation's business structure, products and services
- customer service systems/procedures including the continuous quality improvement framework, together with some knowledge of the customer population and how the system applies to delivering customer service to that customer population
- the principles of customer service
- the principles of effective communication in relation to listening, questioning and non-verbal communication
- the individual's role in delivering customer service
- techniques for dealing with customers with special needs
- techniques for building relationships of trust and mutually acceptable outcomes
- related organisations, agencies and networks
- the principles and operations of networks

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHC MER404 Provide advice on agronomic products

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- research sources of agronomic information to retain technical currency in all aspects of agronomy relevant to local district requirements
- engage with and give advice to customers
- ensure that the advice and product type are applicable and suitable for the purpose and growing environment of the client
- encourage add on sales
- represent the enterprise in a professional manner when dealing with customers
- follow enterprise of work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- customer service techniques
- systems and procedures for the safe handling of products
- enterprises business values, structure, products and services
- industry terminology for products
- requirements of local or specific customers
- relevant requirements of work health and safety, industry, fair trading, trade practices, sales of goods, environment and public liability legislation
- agronomic products including fertilizers and crop seeds and their uses
- relevant components of State/Territory Acts relating to fertilisers and certified seeds

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting.

Assessors must satisfy current standards for RTOs.

AHCMER407 Provide irrigation sales and service

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to provide irrigation sales and service.

It applies to individuals who analyse information and exercise judgement to complete a range of advanced skilled activities and demonstrate deep knowledge in a specific technical area. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Merchandising and Sales (MER)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify customer needs	1.1 Use appropriate interpersonal skills to accurately identify customer needs 1.2 Handle customer enquiries courteously and promptly

Element	Performance criteria
	1.3 Match available products to customer needs and against ecological considerations 1.4 Research and update knowledge and understanding of irrigation products regularly from authoritative sources
2. Provide advice on products and services	2.1 Provide advice that addresses customer needs to customers in a timely and professional manner 2.2 Explain or show products to customer that may meet needs 2.3 Suggest alternative and additional products and services as necessary 2.4 Address customer concerns and questions sensitively
3. Recommend irrigation components and pumps	3.1 Interpret irrigation design 3.2 Confirm pump and component requirements and discuss with customer 3.3 Provide advice on irrigation pumps based on suitability for the task, energy efficiency from pump curves and serviceability 3.4 Provide advice on components based on technically correct and current information
4. Research irrigation innovations and products	4.1 Maintain contacts in irrigation product development and review new products regularly 4.2 Study exhibitions and field displays to update technical expertise 4.3 Read and incorporate technical information and extension advice to provide advice to customers
5. Conduct retail transactions with irrigation clients	5.1 Estimate quantities for irrigation installation projects 5.2 Provide quotes on products and services 5.3 Negotiate price and payment options 5.4 Provide advice on irrigation product warranties 5.5 Organise product service and repairs 5.6 Organise delivery of irrigation merchandise

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- calculate pressure loss due to irrigation components
- calculate pumping requirements
- conduct research of products
- estimate requirements for materials and components from a plan
- identify adverse environmental impacts of irrigation pumping activities and take appropriate remedial action
- implement and follow work health and safety and environmental requirements
- interpret irrigation plans
- interpret pump curves
- monitor performance of pumps and irrigation components
- pressure testing pumps
- provide customer service
- select irrigation components for a system
- use pressure testing equipment
- use recorded information to review energy and water efficiency for an irrigation system

Knowledge Evidence

The candidate must demonstrate knowledge of:

- principles and practices of irrigation sales and service
- basic irrigation system diagnostic techniques
- demonstration and assembly of irrigation products and components
- determination of pump capacities in relation to proposed application

- interpretation of manufacturers specifications
- irrigation components technical specifications and suitability
- price negotiation and payment options
- pump and irrigation equipment characteristics, technical capabilities and limitations
- pump and irrigation equipment components, controls, features and functions
- store irrigation products and pump range
- store product and service and repair policy

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCMER408 Coordinate customer service and networking activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has coordinated customer service and networking activities on at least two occasions, and has:

- accessed and applied customer service systems, standards and procedures
- complied with relevant legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- responded to customer feedback and complaints
- represented the workplace in a professional manner when dealing with customers
- developed and used networks to source goods and services
- maintained records of customer feedback and interactions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- customer service systems and practice, including:
 - principles of customer service
 - the individual role in delivering customer service
 - techniques for building relationships of trust and mutually acceptable outcomes
 - principles and operations of networks
 - quality improvement
 - customer demographic
 - how the system delivers customer service to target customer demographic
- legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- workplace procedures, legislation and codes of practice requirements applicable to customer service

- the principles of effective communication in relation to listening, questioning and non-verbal communication
- workplace business structure, products and services.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
 - customer service systems
- specifications:
 - customer service standards
 - legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
 - workplace procedures, legislation and codes of practice requirements applicable to customer service
- relationships:
 - appropriate personnel, customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCMOM211 Operate side by side utility vehicles

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and risks associated with side by side utility vehicle use
- conduct pre and post operational checks
- operate side by side utility vehicles in a safe, efficient and controlled manner
- minimise environmental impacts of side by side utility vehicle use
- perform any required minor maintenance
- follow wash-down procedures in line with biosecurity guidelines
- follow enterprise work health and safety policies

Knowledge Evidence

The candidate must demonstrate knowledge of:

- equipment characteristics, technical capabilities and limitations
- safe driving techniques in a range of surface conditions and terrain
- transporting the side by side utility vehicles on a trailer or transportation device
- manufacturer's specifications and workplace requirements for pre-start checks, machinery operation techniques, load carrying operator level servicing and shutdown emergency procedures
- components and controls, features and functions
- enterprise work health and safety policies
- relevant State /Territory legislation in regard to side utility vehicle use

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting. All evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Assessors must satisfy current standards for RTOs.

AHCMOM212 Operate quad bikes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to operate and maintain quad bikes as well as load and unload them onto trailers or other vehicles used for their transport.

All work must be carried out to comply with workplace procedures, work health and safety requirements manufacturer's specifications and operator manuals and sustainability practices.

Working with quad bikes is an inherently dangerous activity. Individuals who work at this level must be thoroughly instructed in all work health and safety aspects of operating quad bikes.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and provide solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Machinery operation and maintenance (MOM)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare a quad bike for operation	1.1 Confirm the activity to be undertaken with supervisor, including potential hazards and implementation of safe working procedures 1.2 Select, fit correctly, use and maintain personal protective equipment including helmets 1.3 Conduct safety pre operational checks on quad bike and report faults or malfunctions for repair 1.4 Identify safe work areas and applications (loads and attachments) from workplace safety plan and operators manual 1.5 Unload quad bike safely from the trailer or transportation device
2. Operate a quad bike	2.1 Recognise and control risks to self and others 2.2 Steer, manoeuvre, position and stop quad bike in a smooth and controlled manner 2.3 Apply hand-eye coordination and transfer of body weight appropriately (active riding) to maintain bike stability 2.4 Identify and avoid riding surfaces, terrains and slopes that are dangerous to safe operation 2.5 Identify environmental implications associated with machinery operation and minimise impact 2.6 Identify and account for biosecurity implications associated with machinery operation
3. Complete and check quad bike operation	3.1 Conduct shut-down procedures 3.2 Perform routine operational servicing and minor maintenance 3.3 Identify and report malfunctions, faults, irregular performance or damage 3.4 Clean, secure and store quad bike 3.5 Follow wash-down procedures in line with biosecurity guidelines where required 3.6 Maintain quad bike use records for servicing purposes 3.7 Load and secure quad bike safely

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

No passengers, no riders under 16 years of age, no towing, helmets must be worn at all times.

Candidates must NOT be under the influence of any alcohol or drugs. Candidates must NOT be taking any medication (prescribed or otherwise) that may impair judgement.

Unit Mapping Information

This unit is equivalent to AHCMOM212A Operate quad bikes.

Assessment Requirements for AHCMOM212 Operate quad bikes

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be observed operating a quad bike using safe work procedures.

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- identify hazards and risks associated with quad bike use
- identify safe work areas
- select, fit correctly, use and maintain personal protective equipment including helmets
- operate quad bikes in a range of riding surface conditions and terrain conditions
- steer, manoeuvre, position and stop the quad bike in a smooth and controlled manner
- apply hand-eye coordination and correctly transfer body weight (active riding) to maintain bike stability including riding on uneven or steep terrain
- follow enterprise work health and safety procedures
- unload and load quad bike safely
- follow wash-down procedures in line with biosecurity guidelines

Knowledge Evidence

The candidate must demonstrate knowledge of:

- hazards and risks associated with quad bike use
- components, controls and features of quad bikes and their functions
- a range of quad bikes and functional applications
- operating principles and operating methods of quad bikes
- manufacturer's instructions, including but not exclusive to the operating manual
- load limits and the principles of weight distribution with regard to load shifting and bike movement including riding on uneven or steep terrain
- loading and unloading safely from a trailer or other transportation device

- effects of different riding surfaces and terrain conditions on the operation of quad bikes

Assessment Conditions

Competency is to be assessed in the workplace or simulated environment that accurately reflects performance in a real workplace setting. All evidence collected must meet minimum requirements including industry standard timeframes for performance of tasks.

Assessment must be conducted in a range of riding surface conditions and in a range of terrains appropriate for the safe use of quad bikes.

Assessors must satisfy current standards for RTOs.

AHCMOM403 Provide advice and sell machinery

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to identify customer needs, provide advice, and sell, handle and maintain agricultural machinery, spare parts and related products.

The unit applies to individuals who apply specialist skills and knowledge to providing advice and selling agricultural machinery, spare parts and related products. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, health and safety in the workplace requirements, legislative and regulatory requirements, and sustainability and biosecurity practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Machinery Operation and Maintenance (MOM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish customer needs	1.1 Use interpersonal skills to engage with customer and identify needs

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.2 Handle customer enquiries courteously and promptly according to workplace procedures and legislative requirements</p> <p>1.3 Match available products to customer needs</p>
2. Research and provide product advice	<p>2.1 Research and update knowledge and understanding of machinery, spare parts and related products from authoritative sources</p> <p>2.2 Research local workplace and district requirements for machinery, spare parts and related products</p> <p>2.3 Provide advice to customer in a timely and professional manner according to workplace procedures and legislative requirements</p> <p>2.4 Exhibit or demonstrate machinery, spare parts and related products safely to customer according to regulatory requirements</p> <p>2.5 Address customer concerns and questions</p> <p>2.6 Provide safety information to the customer for recommended machinery, spare parts and related products</p> <p>2.7 Prepare and supply quotations according to workplace procedures</p>
3. Sell products	<p>3.1 Complete sales to maximise potential for customer satisfaction according to workplace procedures and legislative requirements</p> <p>3.2 Identify and respond to opportunities for add-on and repeat sales</p> <p>3.3 Complete sales documentation according to workplace procedures</p>
4. Complete sales documentation and maintain products	<p>4.1 Handle and store machinery, spare parts and related products safely and efficiently according to manufacturer and workplace health and safety requirements</p> <p>4.2 Monitor sales results against specified criteria</p> <p>4.3 Review sales techniques to enhance future sales results</p> <p>4.4 Monitor stock levels and follow reordering procedures as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
--------------	--------------------

Skill	Description
Reading	<ul style="list-style-type: none"> Interpret textual information from a range of sources to identify relevant and key information about machinery, spare parts and related product range, and legislative requirements
Writing	<ul style="list-style-type: none"> Record machinery, spare parts and related product sales and reordering
Oral communication	<ul style="list-style-type: none"> Use clear language with customers to gather information and match products to customer needs, explain products and suggest additional products and services

Assessment Requirements for AHCMOM403 Provide advice and sell machinery

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has provided advice and sold machinery on at least two occasions, and has:

- engaged with and advised customers on the range of machinery, spare parts and related products, and received information on their specific application and environment, and created additional sales opportunities
- complied with relevant legislative requirements in sales environments, including fair trading, trade practices and sale of goods legislation and public liability
- represented the workplace in a professional manner when dealing with customers
- researched machinery supplier information to retain technical currency in all aspects of machinery relevant to local district requirements
- applied relevant components of state or territory Acts and regulations relating to machinery use
- applied workplace procedures for providing advice on machinery, spare parts and related products
- organised the demonstration of machinery, spare parts and related products
- applied workplace health and safety procedures applicable to machinery, spare parts and related products
- encouraged add-on and repeat sales.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of customer service and sales techniques
- requirements of local or specific customers for machinery, spare parts and related products
- legislative requirements in sales environments, including fair trading, trade practices and sales of goods legislation and public liability

- industry terminology used for machinery, spare parts and related products
- machinery and related products requirements relevant to local district requirements
- industry trends and improved practices in relation to machinery usage and equipment
- manufacturer product recommendations and warranty requirements
- relevant components of state or territory Acts relating to machinery use
- workplace procedures for providing advice on machinery, spare parts and related products
- workplace health and safety procedures for the safe handling of machinery, spare parts and related products.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - agricultural machinery, spare parts and related products
- specifications:
 - legislative requirements relevant to sales environments, including fair trading, trade practices and sales of goods legislation and public liability
 - components of state or territory Acts relevant to machinery use
 - workplace procedures relevant to providing advice on machinery, spare parts and related products
 - workplace health and safety procedures for the safe handling of machinery, spare parts and related products
- relationships:
 - customers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCNAR201 Carry out natural area restoration works

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- establish the task and site with supervisor by referring to a revegetation plan
- carry out weed control and ground preparation as part of a team
- transport tools, plants and planting materials to the site
- carry out planting and regeneration techniques to organisational standards
- protect the restored area with plant guards and fencing
- remove any waste at the end of the job and clean site to pre-work condition
- carry out all work according to organisational standards and work health and safety requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- common names of native plants and animals present in restoration area
- common names of weeds and pest animals present in restoration area
- the importance and value of the local provenance species
- natural area restoration techniques
- enterprise requirements for natural area restoration works

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNAR202 Maintain wildlife habitat refuges

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to maintain wildlife habitats and refuges to protect desirable animal species from predators.

All work is undertaken in accordance with statutory and local authority requirements.

This unit applies to individuals who work under general supervision and exercise limited autonomy with some accountability for own work. They undertake defined activities and work in a structured context.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication. However, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Pre-requisite Unit

Nil.

Assessment Requirements for AHCNAR301 Maintain natural areas

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare to carry out maintenance activities in a manner which minimises damaging impacts to site
- consult with stakeholders, including traditional owners about pending maintenance works
- carry out agreed maintenance works with minimal damaging impacts to environment
- select and apply protective structures, devices and signs
- clean up the site and remove surplus materials and waste
- report completion of activities to supervisor
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- environmental factors to be considered in maintenance works, including:
 - ecology in land based, coastal zones or marine parks
 - marine, shore and land based species
 - natural and human threats to places of natural significance
 - pollution sources and damage potential
- basic protection and rehabilitation methods
- enterprise procedures for reporting maintenance works
- applicable State or Territory and Commonwealth legislation covering parks, conservation, environmental protection and heritage

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCNAR303 Implement revegetation works

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- carry out all revegetation works according to the planting plan or supervisor instructions
- prepare the site for revegetation works
- conduct a site hazard identification and risk control assessment
- recognise and treat plant diseases on a revegetation site
- treat weeds and competing plants
- clean and maintain the revegetated site
- use, clean, maintain and store machinery and equipment according to manufacturer instructions
- apply work health and safety practices in the context of own work
- apply biosecurity measures in the context of own work
- apply appropriate sustainability practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- revegetation techniques
- ecosystems, provenance and habitat requirements
- factors affecting the timing and method of planting
- identification of pests and diseases of trees
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- nutrient requirements of a range of plant species and cultivars
- physiology of plant growth

- techniques for protecting and securing or anchoring trees and shrubs
- soils, nutrients and ameliorants applicable to revegetation program

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNAR305 Collect native seed

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to collect, treat and store seed for native revegetation projects.

This unit applies to workers who work under broad direction and use discretion and judgement in the selection and use of available resources to collect seed in a bush environment.

Licensing conditions and permissions or approvals apply to the collection of native seed. Specific determination should be sought through the relevant State or Territory.

Pre-requisite Unit

Nil.

Unit Sector

Natural Area Restoration (NAR)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to collect seed	1.1 Identify and follow environmental, legislative and organisational requirements to collect seed 1.2 Review work plan for seed collection 1.3 Identify potential locations for seed collection 1.4 Obtain necessary approvals and permissions for access to site and

Element	Performance criteria
	removal of seeds 1.5 Plan seed collecting operations to ensure safe working conditions 1.6 Communicate with others involved in seed collection project 1.7 Select and prepare materials, tools, equipment and personal protective equipment
2. Select and assess seed	2.1 Follow work health and safety policies and procedures when collecting and cleaning seed 2.2 Follow environmental protection and biosecurity measures for the site 2.3 Identify plant species required 2.4 Assess plant species and conditions to ensure seeds are from healthy plants 2.5 Select the appropriate methods of seed collection 2.6 Collect seed from a range of plants and different areas of the plant without causing damage to the parent plant 2.7 Place seed in clean containers and clearly and accurately label according to organisational requirements
3. Clean and store seed	3.1 Separate seed from other materials 3.2 Weigh and store seed in line with species requirements 3.3 Accurately record seed information 3.4 Record and report seed collection information and results

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for AHCNAR305 Collect native seed

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- obtain all necessary permissions and approvals to collect seed in a particular area, including operating in a particular jurisdiction, removal of native seed from a national park and permission from Elders or Custodians to work on Country
- use and maintain relevant material, equipment and resources efficiently and safely
- carry out seed collecting, cleaning and storage procedures efficiently and safely
- identify seed species relevant to plan
- follow organisational policies and procedures relevant to collecting seed
- distinguish between healthy and unhealthy parent plants for seed collection
- accurately record seed collection information and results
- apply work health and safety procedures for seed collection
- apply biosecurity measures in collection and storage of seeds
- apply sustainability practices in the context of own work

Knowledge Evidence

The candidate must explain:

- environmental protection requirements and procedures for minimising environmental impact
- native plant and seed characteristics of revegetation site
- types of diseases and pests likely to infect a range of seed species
- work health and safety requirements for seed collection methods
- procedures for collecting, storing and labelling seed

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNAR306 Conduct photography for fieldwork

Modification History

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to setup and use photographic equipment and techniques to take photographs in the field.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Natural Area Restoration (NAR)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to take photographs	1.1 Determine the purpose and intended use of photographs 1.2 Prepare a photograph specification for subject, purpose and requirements 1.3 Assess work health and safety hazards and risks for fieldwork

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	photography and apply controls according to workplace procedures 1.4 Ensure permits and releases have been obtained according to workplace procedures and copyright requirements
2. Identify and select appropriate equipment	2.1 Select camera suitability for the intended use 2.2 Select and prepare photographic equipment and accessories required to capture intended images 2.3 Transport and store photographic equipment and accessories to prevent damage
3. Take photos using correct methods and techniques	3.1 Implement safety controls and safe work practices 3.2 Select and set up camera in position to take photographs 3.3 Select camera settings to suit conditions and subject 3.4 Select the perspective, framing and sequencing of photographs according to the subject and purpose of photographs 3.5 Capture photograph and check image according to selected camera type to ensure fit for purpose 3.6 Use specialist photography techniques appropriate to subject, environment and purpose 3.7 Record field notes according to workplace procedures
4. Store and catalogue photographs	4.1 Transfer photographs from camera for storage according to workplace procedures 4.2 Maintain photograph records and filing system according to workplace procedures and copyright requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads and interprets documents for preparing permits and camera settings to determine photographic outcomes

Skill	Description
Writing	<ul style="list-style-type: none"> Accurately prepares applications and updates records using clear language and appropriate terminology
Numeracy	<ul style="list-style-type: none"> Performs basic calculations when interpreting and setting camera settings
Navigate the world of work	<ul style="list-style-type: none"> Takes responsibility for following procedures and industry requirements
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and workload. Makes routine decisions and implements procedures and uses formal decision-making processes for more complex situations

Assessment Requirements for AHCNAR306 Conduct photography for fieldwork

Modification History

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have conducted photography fieldwork, including:

- determined the purpose of the photograph and prepared a specification
- ensured that appropriate permits and releases have been obtained for planned photographs
- assessed work health and safety risks and apply suitable controls
- selected, transported and stored the appropriate camera and equipment for specified photographs
- set up and adjusted camera settings to obtain planned photograph outcomes
- used at least 4 specialised photography techniques, including:
 - macro photography
 - photo points
 - evidentiary photography
- capture photographs and check against the photograph specification
- recorded field notes according to purpose and workplace procedures
- transferred photographs from camera, recorded and stored images according to workplace procedures and copyright requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic types of photography and photographic techniques applicable to field work
- legal requirements of copyright, privacy, permission, releases and environmental protection relating to taking photos for fieldwork
- work health and safety hazards, risks and controls

- purpose, setting up and operation of photographic equipment used in fieldwork
- principles of photography including aperture, shutter speed, depth of field, ISO, white balance, exposure compensation and dynamic range
- purpose and technique for specialist photography in land management, including:
 - identifying flora and fauna
 - vegetation communities and landscapes
 - photo-point surveys
 - photography for compliance evidentiary purposes
 - photography for publications
 - project monitoring and reporting
 - underwater
- media and methods used for documenting, labelling and storing photographs for analogue and digital photography.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in accessible field environment or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - camera, lens, equipment and media for capturing photographs
 - personal protective equipment
- specifications:
 - workplace documents including policies, procedures, processes, instructions and forms
 - use of manufacturer's operating instructions for specific cameras and equipment
 - photographic specifications or briefs
 - copyright legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCNAR307 Read and interpret maps

Modification History

Release	Comments
Release 2	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0.
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that on at least one occasion the individual has demonstrated that they have read and interpreted maps, including:

- identified, selected and checked maps and equipment suitable for the navigation activity
- interpreted symbols, lines and features on maps to identify locations
- assessed and selected routes to a location using a map
- navigated and traversed a route of at least 2km long using maps and navigational aids
- identified current position by comparing nearby geographic features on maps
- identified impediments to efficient navigation and planned alternative routes
- interpreted map scale and estimated route distances
- marked location points on a map using map geographical features and Global Positioning Systems (GPS) data.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles and practices of maps and map reading
- types of maps and their use
- symbols and representations of topographical and geographical information used on maps
- common scales used on maps and their purpose
- features and use of common navigational aids, including:
 - compass
 - map distance meter (analogue and digital)
 - GPS

- compasses and dividers
- rulers and protractors
- advantages and disadvantages of different map and chart types and sources of error
- techniques for determining routes and estimating distances.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an outdoor setting suitable for map reading and navigational; purposes or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - maps and navigational charts
 - navigational aids for map reading
- specifications:
 - manufacturers' instructions for navigation aids.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNAR401 Supervise natural area restoration works

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to supervise natural area restoration works on revegetation programs.

All work is undertaken according to enterprise guidelines and contract documents.

This unit applies to individuals who supervise others and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Natural Area Restoration (NAR)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify scope of natural area restoration works	1.1 Identify and check nature and scope of works and extent of responsibilities against relevant contract documentation 1.2 Confirm or create site map for works

Element	Performance criteria
	<p>1.3 Determine personnel and other resources required according to the scope of the project and relevant documentation</p> <p>1.4 Develop a work program to ensure that project outcomes are reached within designated time lines</p> <p>1.5 Determine and advise of potential environmental impacts of the proposed restoration</p> <p>1.6 Identify work health and safety hazards, assess risks and implement, monitor and review risk controls</p>
2. Coordinate the supply of materials and equipment	<p>2.1 Calculate and coordinate material quantities and equipment requirements</p> <p>2.2 Order materials, check for specified quantity and quality, then stockpile</p> <p>2.3 Confirm specific delivery requirements with suppliers</p> <p>2.4 Return rejected materials or products for replacement</p>
3. Monitor restoration works	<p>3.1 Coordinate the team to carry out restoration works</p> <p>3.2 Monitor and adjust the work program to meet client changes or directions and to ensure that project outcomes are reached</p> <p>3.3 Give written instructions to contractors</p> <p>3.4 Identify, record and report issues, likely to cause delays or alter the scope of the works, to management and the client</p> <p>3.5 Cost alterations using agreed unit rates and forward variations for approval by the client in writing</p> <p>3.6 Undertake periodic inspection of work to ensure project outcomes are achieved and to make progress payments</p> <p>3.7 Monitor the work site to ensure it remains in a clean, tidy and safe condition throughout and on completion of works</p> <p>3.8 Monitor team to ensure adherence to work health and safety, environmental sustainability and biosecurity policies and procedures</p>
4. Prepare site for completion	<p>4.1 Inspect site before practical completion to ensure all works have been completed to enterprise and client standards</p> <p>4.2 Note any works not complying and rectify according to the contract specification as outstanding items</p> <p>4.3 Produce and communicate a report to management or client</p> <p>4.4 Forward a practical completion certificate to the contractor</p>

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNAR401A Supervise natural area restoration works.

Assessment Requirements for AHCNAR401 Supervise natural area restoration works

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- supervise natural area restoration works
- identify hazards and ensure safe systems of work are in place
- scope the natural area restoration works required and compare to specifications of work on the contract
- develop a work program and source labour and equipment to undertake the work
- maintain the supply of materials and access to equipment to allow restoration work to proceed
- coordinate team to achieve optimum performance
- monitor the work program and make adjustments to task schedule where required
- monitor work to achieve specified outcomes and to minimise environmental disturbance
- inspect work to ensure specifications are met and environmental impact is minimised
- report project completion to management or client according to enterprise requirements
- monitor the application of appropriate sustainability practices in natural area restoration works
- monitor team to ensure work health and safety policies and procedures are followed
- monitor team to ensure biosecurity measures are applied

Knowledge Evidence

The candidate must demonstrate knowledge of:

- strategies and techniques to avoid negative environmental impacts
- work programming
- natural area restoration techniques to be used in the works

- environmental factors to be considered in restoration works, including:
- the role of native plants and animals in the ecosystem of the area
- vertebrate pests and options for control
- impact of weeds and pests and appropriate control methods
- ability to assess restoration potential of sites
- basic plant and animal ecology
- knowledge of different ecosystems
- team supervision
- strategies for monitoring work quality and progress
- application of work health and safety and environmental legislation, codes of practice and enterprise procedures in natural area restoration works

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNAR402 Plan the implementation of revegetation works

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to plan the implementation of revegetation works.

This unit applies to supervisors of revegetation programs who supervise others and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Natural Area Restoration (NAR)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Carry out preliminary planning activities for revegetation works	1.1 Confirm client preferences and contract requirements including the scope of the work for the revegetation project 1.2 Identify statutory obligations and site responsibilities that may affect the implementation of works 1.3 Conduct an initial site visit to verify the biophysical and other factors of the project area including environmental considerations

Element	Performance criteria
	and historical modifications 1.4 Identify work health and safety obligations, assess hazards and develop controls 1.5 Verify the availability, quantity and costs of plants and other materials listed in the project schedules
2. Prepare a staged plan of work	2.1 Identify, cost and confirm availability of materials, tools and equipment required for revegetation procedures and ongoing maintenance of the site 2.2 Investigate site access and establishment issues 2.3 Prepare a program of works which incorporates a plan to minimise environmental impacts of works and work health and safety practices 2.4 Develop timelines for site establishment, the establishment period and maintenance of works 2.5 Incorporate seasonal factors and impacts in the staging strategy 2.6 Include special project works related to habitat resource development and enhancement in the implementation plan, where required 2.7 Document the staged implementation plan

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNAR402A Plan the implementation of revegetation works.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCNAR402 Plan the implementation of revegetation works

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- plan the implementation of revegetation works
- investigate site access and establishment issues
- plan for environmental impacts of site work practices and minimise safety risks to workers and the public
- assess site for opportunities and constraints associated with implementation of revegetation works
- establish the purpose and client preferences for the site to be revegetated
- carry out a site visit and confirm any planning requirements
- develop a plan for the site, detailing the resources required and the program of works
- develop schedules for the establishment and maintenance phases of the project
- document the staged implementation plan
- incorporate seasonal factors and impacts in the staging strategy to allow for planting, supply and care, wet day access, machinery use, fire hazards and establishment
- include work health and safety practices in plan

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the role of revegetation works in the restoration of the environment
- the environmental issues associated with undertaking revegetation works, how to comply with legislation and ensure that the impact on the environment is minimal, including:
- principles of ecology including specific native plant and animal relationships and habitat requirements
- identification, propagation and establishment techniques of specific native plant species

- chemical, cultural and biological weed and feral animal control techniques
- soil conservation and enhancement techniques and their advantages and disadvantages in reference to specific sites and habitats
- soil erosion control and stormwater management techniques
- maintenance requirements and practices for native plants prior to and after initial establishment
- growth habits and cultural requirements of specific native plants under a range of soil and environmental conditions
- site evaluation techniques including methods of analysing soils, waterways and their condition
- practical understanding of the advantages and disadvantages of options for revegetation procedures
- work health and safety hazards associated with undertaking revegetation works and the controls necessary to remove or minimise risks associated with them
- contract documents including specifications, plans of landscape works, services, supplies and surveyors documents

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNAR506 Develop and implement sustainable land use strategies

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to develop and implement sustainable land use strategies.

This unit applies to managers of agricultural and production horticulture enterprises whose job role includes developing land use strategies that lead to improved ecological sustainability of land under production. These individuals take responsibility for their own work and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Natural Area Restoration (NAR)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Assess requirements for improved land use	1.1 Audit the natural resource base and identify threats to sustainability

Element	Performance criteria
	1.2 Review the production and management plans to incorporate sustainable land use principles 1.3 Assess water resources, quality and impacts of run off for risk of erosion 1.4 Assess soil health and fertility against the requirements of the production plan 1.5 Assess vegetation types and coverage and identify required changes 1.6 Plan and prioritise land and water protection measures and structures
2. Carry out structural improvements to address threats to sustainability	2.1 Follow work health and safety policies and procedures in field work 2.2 Inspect sites, note key features and place pegs for improvements 2.3 Determine materials for the construction from the plans 2.4 Obtain and organise materials, personnel and equipment 2.5 Check equipment to be used 2.6 Construct structural works and revegetate the area and secure from livestock
3. Treat areas of land degradation	3.1 Realign fences to land classes and soil conservation works 3.2 Protect contour banks and repair as necessary 3.3 Construct water carrying structures or repair as necessary 3.4 Establish shelter belts for crop and stock protection 3.5 Review and amend soil cultivation and planting practices to prevent erosion and minimise soil run-off 3.6 Plan grazing strategies to maximise ground cover and avoid damage through foot tracks or damage to banks 3.7 Ensure all works and plans comply with environmental protection legislation, regulations and codes of practice

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNAR506A Develop and implement sustainable land use strategies.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AHCNAR506 Develop and implement sustainable land use strategies

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- develop and implement sustainable land use strategies
- identify the threats to sustainability for an area or region
- manage water resources and riparian zones
- manage vegetation and plant succession for an area
- manage the health and sustainability of soils
- incorporate sustainability principles into land use practices
- apply work health and safety practices in the context of own work

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the role of biodiversity in farming systems
- sustainable land and water use principles and practices applicable to the region
- sustainable soil management
- soil appraisal and remediation strategies
- environmental controls and codes of practice applicable to the business and to the improvement works
- relevant legislation and regulations relating to soil and water degradation issues, chemical use and structural works
- relevant work health and safety and environmental protection legislation, regulations and codes of practice
- causes of land degradation

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNRM507 Manipulate and analyse data within geographic information systems

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to extract, compare and manipulate data within a Geographic Information System (GIS) in response to customer requests.

This unit applies to those who undertake data analysis within a range of geographic information systems for the purpose of managing natural resources. They are likely to undertake a range of specialised skilled activities, exercise autonomy and take responsibility for complex work.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Natural Resource Management (NRM)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Develop procedures for manipulation and	1.1 Specify desired data format based on job requirements 1.2 Specify parameters for the manipulation of data sets

Element	Performance criteria
analysis of data	1.3 Explain the procedure and rationale for development in new documented procedures
2. Establish models required to provide outcome	2.1 Evaluate applicability of existing tools, models, theories, applications and solutions 2.2 Specify feasible parameters, equations and assumptions 2.3 Establish models required to provide specified outcome
3. Analyse data	3.1 Specify steps to be undertaken and computer operating systems and applications to be used to analyse and manipulate data 3.2 Consider restricting factors when selecting techniques for analysis 3.3 Isolate and retrieve data from its source 3.4 Interrogate data to ensure reliability 3.5 Prepare data for presentation media

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNRM507A Manipulate and analyse data within geographic information systems.

Links

AHCNRM509 Develop a coastal rehabilitation strategy

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop, implement and evaluate a rehabilitation strategy for a natural area in a coastal zone.

The unit applies to individuals working in workplaces or groups who are responsible for the management of natural resources within the coastal zone and who analyse information and exercise judgement to complete a range of advanced skilled activities, demonstrating a deep knowledge in specific technical areas within resource management. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Natural Resource Management (NRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine coastal resources and assets	1.1 Source available information and seek advice from current land management stakeholders for coastal site 1.2 Conduct site survey to determine biophysical elements, resources and threats

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify cultural and heritage sites within zone and assess need for an archaeological assessment</p> <p>1.4 Determine resource use, management stakeholders and the requirements and opportunities for consultation</p>
2. Establish condition of coastal area	<p>2.1 Assess current ecological and environmental condition of resources within the coastal area</p> <p>2.2 Assess the impact of threats on the resources and assets in the area</p> <p>2.3 Present preliminary findings on the coastal resource and its condition to stakeholders</p>
3. Develop a strategy to rehabilitate the coastal area	<p>3.1 Analyse findings and identify management options</p> <p>3.2 Present findings to managing authority and seek direction on drafting management actions</p> <p>3.3 Implement processes for consultation with stakeholders according to workplace policies and procedures</p> <p>3.4 Establish strategy, and prioritise activities for asset rehabilitation and improvement in accordance with environmental sustainability practices, legislative and regulatory requirements and industry standards</p> <p>3.5 Design management plan for implementation of strategy</p> <p>3.6 Document management and stakeholder approvals of plan according to workplace procedures</p> <p>3.7 Obtain formal approval from coastal site authority</p>
4. Implement and monitor the strategy and action plan	<p>4.1 Seek funding and labour resources to implement rehabilitation works</p> <p>4.2 Coordinate works with stakeholders</p> <p>4.3 Monitor progress of works according to management plan</p> <p>4.4 Monitor workforce according to workplace health and safety, biosecurity and environmental policies and procedures</p>
5. Evaluate rehabilitation strategy	<p>5.1 Review management plan, consider improvements and recommend changes according to workplace procedures</p> <p>5.2 Monitor changes in coastal resource conditions, and review effectiveness of strategy</p> <p>5.3 Report findings to management and stakeholders with</p>

Assessment Requirements for AHCNRM509 Develop a coastal rehabilitation strategy

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, developed, implemented and evaluated a rehabilitation strategy for a natural area in a coastal zone, and has:

- assessed condition of natural area site:
 - reviewed existing information
 - conducted site surveys
 - consulted with stakeholders, managing authority and experts in the field
 - identified threats
- determined management options and facilitated the development of a strategy and action plan according to workplace health and safety policies, legislative requirements and sustainability practices
- monitored and evaluated the implementation of strategy
- prepared reports to workplace and authority standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- identifying and working with stakeholders, and their importance in building relationships for consultation and formulating agreed strategies, including:
 - coastal area agencies and managing authorities
 - Indigenous land rights and ownership
 - coastal area recreational users
 - special interest groups engaged in conservation activities
 - neighbouring property owners and impact of strategies on their activities
 - historical and cultural interest groups

- education and training users
- coastal zone biophysical environment, including:
 - geological and topographical features
 - soil and hydrological conditions
 - flora and fauna and their ecological impact
- ecological principles and environmental assessment techniques, including:
 - maintaining ecosystem structures and habitat
 - interactions between flora and fauna
 - vegetation types and their general characteristics for management
 - identification of plant and animal threats
- coastal zone information resources, including:
 - native flora and fauna identification
 - habitat requirements
 - vulnerable and endangered species
- sourcing and managing resources to implement strategies, including:
 - sources of funding and application process
 - assessing materials and consumables required for rehabilitation works
 - biosecurity and provenance concerns for plant materials
- management, restoration and rehabilitation techniques and strategies for application within the coastal zone
- environmental degradation processes
- management strategies for cultural and heritage sites
- natural resource management planning process
- state/territory legislative requirements related to revegetation works, environmental protection, biosecurity standards and workplace health and safety.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated on a coastal rehabilitation site
- resources, equipment and materials:
 - equipment, machinery, plants and consumables specified in strategy and action plans
- specifications:
 - workplace policies and procedures for rehabilitation works
 - legislation and regulations relevant to coastal area rehabilitation work and biosecurity
- relationships:
 - stakeholders
 - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNRM510 Develop a water quality monitoring program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to establish requirements for monitoring water quality and developing a program to monitor water quality in a given site. It includes carrying out water monitoring activities and evaluating program effectiveness.

The unit applies to individuals working in the role of manager concerned with gathering information for land or water management purposes, which may include consultation with specialists such as hydrologists and hydrographers. They also analyse information and exercise judgement to complete their duties with a deep knowledge in water management. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Natural Resource Management (NRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine water quality monitoring program requirements	1.1 Consult with client to identify scope, objectives and constraints in a program brief 1.2 Research and evaluate background information relevant to survey

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>type and site</p> <p>1.3 Determine water quality indicators to be measured, frequency and volume of sampling required to meet program brief</p> <p>1.4 Establish procedures for data collection, processing and reporting according to program brief and legislative requirements</p> <p>1.5 Seek estimates of costs and source of funds for the program</p> <p>1.6 Identify and assess workplace health and safety hazards for conducting the sampling program</p> <p>1.7 Provide a survey strategy to stakeholders for discussion and approvals according to program brief</p>
2. Undertake a site analysis	<p>2.1 Identify and record biophysical elements of the site</p> <p>2.2 Identify and record resource management factors contributing to water quality</p> <p>2.3 Survey site biota according to program brief</p> <p>2.4 Identify and evaluate sampling points for safety, accessibility and opportunities for repeatable data collection</p>
3. Plan monitoring program	<p>3.1 Select suitable sites for repeatable monitoring to obtain representative samples</p> <p>3.2 Source laboratory and field equipment for monitoring program, and determine costs</p> <p>3.3 Confirm suitability and availability of laboratory and field equipment</p> <p>3.4 Confirm surveyor access to site for duration of the monitoring program</p> <p>3.5 Document workplace health and safety controls and emergency procedures for the program according to workplace policies</p> <p>3.6 Document environmental sustainability policies and procedures and biosecurity measures</p> <p>3.7 Document sampling techniques to be used</p> <p>3.8 Document methods of data collection, monitoring and field techniques for field operators</p> <p>3.9 Present survey schedules and procedures to stakeholders and client for approval</p>

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
4. Monitor water quality	<p>4.1 Carry out water quality monitoring tasks according to plan</p> <p>4.2 Transport, store and treat samples to preserve the reliability and fidelity of sample results</p> <p>4.3 Monitor surveying process for accuracy, and compliance with the survey plans and procedures</p> <p>4.4 Implement contingency plans when problems arise, whilst continuously assessing and evaluating the plan for errors and inconsistencies</p>
5. Evaluate program	<p>5.1 Record and save data according to plan requirements</p> <p>5.2 Analyse data collected according to industry policies and guidelines and scientific standards</p> <p>5.3 Draw outcomes, conclusions or trends from the monitoring program using industry standards for interpretation of water quality data and appropriate evidence and reasoned arguments</p> <p>5.4 Seek advice from client as to satisfaction with monitoring program in terms of the process and outcomes</p> <p>5.5 Provide report on outcomes to client with recommendations for changes and improvements for any further monitoring activities</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Record outcomes of sampling and incorporate into monitoring program reports and documentation, expressing ideas and exploring complex issues, and ensuring accurate, succinct and logically constructed text
Numeracy	<ul style="list-style-type: none"> Capture, record and analyse monitoring data and use statistical analysis calculations to help formulate conclusions

Assessment Requirements for AHCNRM510 Develop a water quality monitoring program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, developed and implemented a water quality monitoring program according to a specific client brief and legislative and workplace policies and procedures.

There must also be evidence that the individual has:

- consulted with client and established the scope, objectives, constraints and quality monitoring requirements in a program brief
- conducted research and site analysis to select suitable monitoring sites
- developed and implemented a monitoring plan in accordance with program brief
- evaluated the program using data analysis, consultation with client and assessment against program objectives
- collected, transported and treated samples to preserve sample integrity
- analysed data according to scientific standards and workplace policies and procedures
- applied workplace health and safety practices
- incorporated sustainability practices and biosecurity procedures into monitoring program
- developed evidence-based conclusions from analysis and reasoned arguments
- produced written reports to workplace standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- water quality principles and factors, including:
 - hydrological cycle
 - aquatic ecology
 - water quality indicators
 - chemical principles

- catchment and coastal management issues contributing to surface and groundwater quality
- standard techniques to assess ecological health of aquatic sites
- mathematical sampling techniques
- sampling methods for maintaining accuracy and veracity of test results, including:
 - sampling techniques and range
 - storage methods and treatments to preserve sample integrity
 - statistical modelling for sampling
 - location and frequency of sampling
 - sampling methods for different analysis
- analytical techniques appropriate to water quality monitoring, including:
 - statistical analysis
 - comparative analysis
 - chemical
 - physical
 - biological
- data storage and management systems
- accepted scientific processes and standards for data collection and analysis
- health and safety legislative requirements and codes of practice, including hazard identification, assessment and control measures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in the field where water sampling requires regular monitoring, or in an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - sampling equipment relative to the type of study being undertaken
 - computer and software for report writing and statistical analysis
- specifications:
 - workplace policies and procedures for conducting collecting and analysing water samples and for recording results
 - client brief and specifications for water quality monitoring
- relationships:
 - client
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNRM511 Plan and monitor works projects in catchments and waterways

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to plan, implement, monitor and review works projects conducted in catchments and waterways. This includes engaging and working with stakeholders and ensuring works meet environmental and project outcomes and priorities.

The unit applies to individuals who are engaged in contract project works in catchments and waterways who take personal responsibility and exercise autonomy in undertaking work. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for AHCNRM511 Plan and monitor works projects in catchments and waterways

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and monitored at least one catchment and waterways project, and has:

- applied effective consultation techniques to ensure stakeholder contribution to project priorities
- researched and determined environmental conditions of project worksites
- worked with and supported project stakeholders during project implementation
- developed waterway monitoring program that must include:
 - selected representative water quality monitoring sites
 - selected macro invertebrate monitoring sites
 - used data collection guidelines and parameters
 - specified timelines for monitoring
- monitored project to ensure it complied with regulatory requirements
- evaluated impact of projects on sustainable catchment management
- determined the physical and human resources required for project
- determined monitoring procedures sufficient for evaluating and reviewing project
- evaluated environmental benefits of works program using workplace techniques and reporting methods
- completed reporting requirements according to workplace standards and stakeholders outcomes.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- physical characteristics and indicators of health of waterways and catchments
- wetland and floodplain processes and function, including:

- factors that influence stream flow
- stream dynamics
- stream formation
- eutrophication
- impacts of land use on waterways
- indicators of catchment health, including:
 - pest plant and animal infestations
 - vegetation decline
 - soil erosion
 - stream bank erosion
 - water quality decline
- water quality parameters, including:
 - physical and chemical properties of water
 - biological indicators of water quality
- project planning processes
- consulting and negotiating with stakeholders, including:
 - investors
 - partners
 - interest groups
 - agencies
- permits and licences required for on-ground works.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- specifications:
 - workplace policies and procedures for monitoring and reporting
 - legislation and regulations for water catchment management
- relationships:
 - stakeholders
 - work team and/or contractors
- timeframes:
 - according to time specified in program for supporting project.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNRM512 Investigate suspected breaches of natural resource management legislation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to conduct site inspections and collect evidence for investigations into suspected breaches of natural resource management (NRM) legislation.

The unit applies to individuals who act in an official capacity to investigate suspected breaches of NRM legislation. They also analyse information and exercise judgement to complete their duties with a deep knowledge in land use. They have accountability for the work of others and analyse, design and communicate solutions to a range of complex problems.

Natural resource management legislation applies in all states and territories and must be adhered to. Users are advised to check with the relevant regulatory authority

Pre-requisite Unit

Assessment Requirements for AHCNRM512 Investigate suspected breaches of natural resource management legislation

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has conducted at least one site inspection, gathered evidence and interviews, assessed the evidence, and documented recommendations for an investigation into suspected breaches of natural resource management legislation.

There must also be evidence that the individual has:

- conducted all steps of investigation in accordance with legal and workplace protocols and procedures
- conducted a preliminary investigation into a reported or suspected breach of land use legislation
- sought approval to proceed with a full investigation
- sought approval for site visit with landholder and, where rejected, sought support from civil authority
- carried out a site inspection
- interviewed witnesses and land owners
- maintained records of interviews, proceedings and site inspection according to legal requirements and workplace protocols, which must include:
 - time and date of inspection
 - persons in attendance
 - details of current site activities
 - names of persons interviewed
 - details of each interview
 - images, photographs, drawings and measurements captured during the site visit
- validated accuracy of evidence and information collected and ensured it is sufficient to make an informed determination
- assessed evidence against suspected breach in legislation and made recommendations
- compiled outcomes into a report with supporting documentation and submitted to agency authority.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- Commonwealth and state/territory legislation and regulations for natural resource management and basic civil law
- types of breaches of natural resource management legislation
- workplace policies, procedures and codes of practice for conducting investigations and reporting outcomes
- techniques for consulting with stakeholders according to legal and agency policies and procedures
- approaches for accessing land owner properties, including:
 - rights and responsibilities of land holder
 - rights and responsibilities of agency staff
 - civil authorities and their potential role and assistance
- assessment approaches for area of notification
- basic law pertaining to civil cases, including:
 - balance of probabilities
 - rules of evidence
- types and importance of evidence, including:
 - interviews or testimonial evidence can be factual, false or anecdotal
 - visual images, videos, photographs and drawings
 - quantifiable and measurable, dimensions, weights and volumes
 - use of official data and records for testing gathered evidence
 - preserving the validity and security of evidence
- record-keeping processes for maintaining evidence and supporting documentation
- official and supporting documentation used in assessing breaches in NRM legislation, including:
 - maps and charts
 - surveyor plans, for regional, local and site locations
 - vegetation and land use planning and zoning documents
 - environmental protection legislation and regulations
 - site planning overlays, caveats and other specific restrictions
- formats for compiling reports and submitting evidence and recommendations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated for a site where there is a suspected breach in NRM legislation or an environment that accurately represents workplace conditions

- specifications:
 - workplace policies, procedures, processes for handling and reporting investigations
 - reports of suspected breach in NRM legislation
 - relevant legislation and codes of practice
- relationships:
 - potential litigant
 - agency authority.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNRM604 Review ecological management plans and strategies

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to review and assess the effectiveness of management plans and strategies. It includes establishing criteria and review mechanisms as well as modifying plans and strategies as required, in response to review outcomes.

The unit applies to individuals who conduct ecological management work at a paraprofessional and strategic level, with the capacity to devolve responsibilities and tasks. They apply knowledge and skills in land management with autonomy and judgement, and analyse information to complete activities, interpret and transmit solutions to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Natural Resource Management (NRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine mechanisms and criteria for reviewing ecological management plans and	1.1 Establish reasons for review of management plans and strategies 1.2 Examine internal policy and procedural influences impacting on ecological management plans and strategies 1.3 Interpret trends to identify changes occurring in ecological

Assessment Requirements for AHCNRM604 Review ecological management plans and strategies

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has identified the need and reviewed and modified plans and strategies for ecological management.

There must also be evidence that the individual has:

- analysed statistical trends to determine changes occurring in ecological management plans and strategies beyond normal variations
- analysed existing management plans and strategies, including for three of the following contexts:
 - historical
 - social
 - cultural
 - political
 - economic
- implemented modified management plans and strategies according to timeframes
- conducted internal and external consultation during the review process
- implemented training and communications procedures for updating work team and stakeholders of modifications to management plans and strategies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- structure and design of plans and strategies used in ecological management
- mechanisms and criteria for reviewing management plans and strategies, including:
 - trends and development in ecological management practices
 - new materials and technological changes

- historical
- social
- cultural
- political
- economic
- threats, both natural and human activity, to places of natural significance, including:
 - ecosystems, including the interrelationship of geophysical, hydrological, biological and meteorological factors
 - normal and abnormal life cycles of the biodiversity
 - pollution sources and damage potential
- working with stakeholders and work teams during the review process, including:
 - negotiating change
 - capturing feedback
 - working with individuals with a diverse range of backgrounds
- legislation, regulations and local bylaws impacting on ecological management
- national standards for the practice of ecological restoration
- communications strategies for updating and training stakeholders and work teams, including:
 - analysing skills and knowledge of work teams
 - basic skills in training
 - working with property owners and managers
 - different strategies for communication.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures and processes used for the design of plans and strategies
 - existing ecological management plans and strategies for reviewing
 - relevant legislation, codes of practice and standards
- relationships:
 - stakeholders
 - work teams
- timeframes:
 - according to time specified in modified plans and strategies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNRM605 Develop a monitoring, evaluation and reporting program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to develop a monitoring, evaluation and reporting program for a land and water management organisation or project manager to measure progress against targets and reporting responsibilities.

The unit applies to individuals who are land or water managers and use an adaptive management framework to manage human, social, natural, physical and financial assets in natural resource management. They apply knowledge and skills in land and water management with autonomy and judgement and analyse information to complete activities, interpret and transmit solutions to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Natural Resource Management (NRM)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define terms of reference, scope and evaluation context	1.1 Specify the scope of the adaptive management framework activity 1.2 Identify measurable indicators for outcomes

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	<p>1.3 Identify the key stakeholders and consultation process</p> <p>1.4 Select evaluation, data analysis and monitoring methods best suited to size and significance of the program</p> <p>1.5 Define terms of reference</p> <p>1.6 Review existing evidence and literature relevant to the proposed evaluation</p> <p>1.7 Develop an evaluation methodology that supports broader management targets, natural resource management standards, targets and outputs</p>
2. Identify the key stages and outcomes of the program	<p>2.1 Define key stages, milestones and timeframes for the management framework activity</p> <p>2.2 Advise stakeholders of program and delivery timeframe for endorsement</p> <p>2.3 Identify hazards and risks that impact on the proposed program</p> <p>2.4 Refine targets, goals, objectives and indicators</p>
3. Define reporting and record-keeping requirements for data management	<p>3.1 Identify data collection, management and reporting requirements according to identified objectives</p> <p>3.2 Identify existing data sets to be accessed for the program</p> <p>3.3 Design data collection protocols and methodology according to workplace standards and required formats</p> <p>3.4 Identify data formatting, secure storage and data access procedures</p> <p>3.5 Identify information and data analysis products required for stakeholders</p> <p>3.6 Identify summary reports for specific stakeholder requirements</p>
4. Identify the resources needed to implement the program	<p>4.1 Identify human resources and skill sets required to implement the monitoring and evaluation program</p> <p>4.2 Assess the material resources required to undertake the work</p>
5. Design and manage the monitoring, evaluation and reporting program plan	<p>5.1 Produce monitoring program plan to workplace requirements and industry standards</p> <p>5.2 Specify reporting requirements for the program</p> <p>5.3 Incorporate work health and safety, environmental sustainability and biosecurity policies and procedures into the plan</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Conduct literature reviews and other desktop research to establish the scope and objectives of the MERI program
Writing	<ul style="list-style-type: none"> Demonstrate sophisticated writing skills by selecting appropriate conventions and stylistic devices to express precise meaning and understanding when documenting MERI programs

Assessment Requirements for AHCNRM605 Develop a monitoring, evaluation and reporting program

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, on at least one occasion, the individual has developed a monitoring, evaluation and reporting program for a land management organisation in accordance with an adaptive management framework.

There must also be evidence that the individual has:

- scoped a project that included:
 - outcomes sought
 - target audience who will use the information
 - for what purpose the adaptive management framework is to be conducted
- identified key stakeholders and defined terms of reference and context
- identified key stages and outcomes of the project
- assessed and defined data management requirements according to project requirements and objectives
- identified the resources needed to undertake the program, including:
 - financial
 - equipment
 - material
 - human resources
- developed data collection, management and analysis methodology and procedures
- designed and managed a monitoring, evaluation and reporting program
- produced reports and planning documents to current industry standards
- reviewed existing data and information for plan, according to workplace requirements
- incorporated workplace health and safety practices, policies and procedures into the program.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- ecosystem attributes and indicators of their health and decline
- program design considerations, including:
 - equality
 - technical validation
 - ethical standards
- quantitative and qualitative methods for monitoring and evaluation
- experimental design
- data management techniques and data analysis principles and procedures
- conducting a literature review, including sources of existing evidence and literature relevant to the program
- adaptive management frameworks used for ecological management, including Monitoring, Evaluation, Reporting and Improvement (MERI) framework
- data collection protocols
- national standards for the practice of ecological restoration
- stakeholders and their needs for data access, analysis for decision making
- risks assessment of the program, including health and safety.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an environment that accurately represents workplace conditions
- specifications:
 - workplace policies, procedures and processes for formatting and documenting reports, data sets and plans
 - a project on which to employ MERI
 - legislation and codes of practice for conducting MERI projects
- relationships:
 - stakeholders.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNSY102 Support nursery work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to undertake routine nursery work under direct supervision and to support the nursery work of others.

The unit applies to individuals who support nursery work while working alongside a supervisor, exercising limited autonomy within established and well known parameters. They identify and seek help with simple problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for nursery work	1.1 Collect required materials, tools and equipment according to lists provided and supervisor instructions 1.2 Fit and use personal protective equipment (PPE) applicable to job requirements 1.3 Use correct manual handling techniques when loading and unloading materials

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.4 Report faulty or unsafe tools, equipment or PPE to supervisor 1.5 Recognise and report workplace hazards to supervisor
2. Undertake nursery work as directed	2.1 Provide nursery work support according to workplace health and safety requirements and supervisor instruction 2.2 Follow instructions and directions provided by supervisor, and seek clarification when necessary 2.3 Interact with staff and customers in a professional manner 2.4 Follow workplace policies and procedures in relation to workplace practices, handling and disposal of materials 2.5 Maintain a clean and safe work site while undertaking nursery work 2.6 Report problems or difficulties in completing work to required standards or timelines to supervisor
3. Clean up on completion of nursery work	3.1 Store plants and materials according to supervisor instructions 3.2 Clean, maintain and store tools and equipment according to supervisor instructions 3.3 Report work outcomes and malfunctions, faults, wear or damage of tools to supervisor

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> • Use clear language to report malfunctions, faults, wear or damage to tools • Participate in verbal exchanges to respond to questions and clarify information

Unit Mapping Information

Assessment Requirements for AHCNSY102 Support nursery work

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has supported nursery work on at least two occasions, and has:

- prepared materials, tools and equipment for nursery work
- applied safe work practices
- undertaken nursery work as directed
- stored materials as directed
- cleaned up on completion of work.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- procedures for preparing for nursery work and cleaning up on project completion
- safe work practices used in nursery work
- principles and practices of nursery work
- basic nursery plant maintenance activities
- basic stock control procedures
- nursery hygiene and quality control.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- work instructions and workplace procedures applicable to supporting nursery work
- nursery maintenance materials, tools and equipment
- personal protective equipment applicable to supporting nursery work
- relationships:
 - supervisor, staff and customers
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNSY201 Pot up plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to transplant established plants with developed root systems.

It applies to individuals who work under general supervision and exercise limited autonomy with some accountability for their own work. They undertake defined activities and work in a structured context. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for potting up operations	1.1 Clarify work activity instructions with supervisor 1.2 Identify any work health and safety hazards and tell supervisor 1.3 Select and use tools and equipment for potting up 1.4 Clean and disinfect work area 1.5 Collect materials and check that there is sufficient quantity and

Element	Performance criteria
	quality for potting up operations 1.6 Select and use suitable personal protective equipment (PPE)
2. Prepare growing media	2.1 Measure media components and mix as instructed 2.2 Test growing media to ensure the product complies with media specifications
3. Pot up propagated plants	3.1 Prepare plants for potting 3.2 Pot up selected propagated plants 3.3 Grade plants during the potting process to meet quality specifications and report any abnormalities to supervisor 3.4 Adjust media level in pots to produce a well-furnished plant 3.5 Ensure that placement and depth of plants comply with the planting method and plan 3.6 Add fertilisers and other products as directed
4. Complete potting up operation	4.1 Water plants in to eliminate air pockets and prevent dehydration 4.2 Perform cleaning procedures and follow hygiene practices 4.3 Collect waste and dispose of or recycle to minimise damage to the external environment 4.4 Maintain records of potting up operations in the appropriate format 4.5 Clean and store tools and equipment

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNSY201A Pot up plants.

Assessment Requirements for AHCNSY201 Pot up plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare tools, equipment, media and plants
- measure media components
- disinfect work areas
- operate potting machinery (if required)
- pot up propagated plants
- handle plants with care
- treat common problems of plants
- use and maintain tools

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of potting up plants
 - appropriate use of personal protective equipment
 - basic plant physiology
 - common problems in a controlled environment
 - enterprise plants and their characteristics
 - hygiene and quality control
 - methods of disposing of waste
 - properties of relevant potting media

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- select and use appropriate tools and equipment
- maintain nursery hygiene
- Service, repair or replace basic operational irrigation system components and user serviceable parts
- maintain nursery plants as instructed
- check irrigation system performance
- monitor environmental controls
- recognise common problems in nursery plants
- repair or replace user serviceable irrigation components
- record workplace information

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of nursery plant care
 - botany and plant physiology as applies to maintaining nursery plants
 - common problems that may occur with containerised plants in a controlled environment and their treatment
 - daily water requirements of nursery plants
 - hygiene and quality control when tending nursery plants
 - principles and operations of irrigation systems used in nurseries, in basic terms

Assessment Conditions

Assessors must satisfy current standards for RTOs.

Assessment Requirements for AHCNSY205 Pot up plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed plant potting up on at least three occasions, and has:

- applied workplace health and safety requirements
- selected, used and maintained plant potting up tools, equipment, material and plants
- disinfected work areas
- graded and potted up propagated plants as directed
- handled plants with care
- applied plant hygiene, stock movement and placement requirements
- removed and disposed of waste material
- recorded and reported plant potting up operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for potting up plants, including appropriate use of personal protective equipment (PPE)
- the principles and practices of potting up plants, including:
 - plant grading and pot selection
 - plant hygiene, stock movement and placement requirements
 - methods of disposing of waste.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:

- a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - plant potting up tools, equipment and materials
 - PPE applicable to plant potting up
- specifications:
 - workplace requirements applicable to health and safety in the workplace and potting up of plants
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNSY206 Care for nursery plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to maintain and care for containerised nursery plants, including preparing for work, maintaining the nursery environment and plants, and completing plant maintenance operations.

The unit applies to individuals who care for nursery plants under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work	1.1 Confirm care activities to be undertaken with supervisor 1.2 Recognise potential hazards and risks and implement safe working practices to minimise risks to self and others 1.3 Select appropriate tools and equipment for the task 1.4 Select fit, and use personal protective equipment and clothing applicable to the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Maintain nursery plants	2.1 Follow hygiene practices to minimise risk of contamination 2.2 Prepare and apply fertiliser according to work instructions 2.3 Identify weeds and remove from pots as directed 2.4 Block and space plants according to spacing requirements and instructions 2.5 Prune plants using the required tools and safe work practices and according to instructions 2.6 Stake and tie plants using the required materials and according to instructions
3. Complete nursery plant maintenance operations	3.1 Remove and dispose of waste material according to workplace procedures 3.2 Clean, disinfect, maintain and store tools and equipment according to workplace procedures 3.3 Identify and report unserviceable tools and equipment according to workplace procedures 3.4 Record and report nursery plant care and maintenance according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to record plant care and maintenance activity
Oral Communication	<ul style="list-style-type: none"> Use clear language to confirm and report plant care and maintenance operations and report tool and equipment unserviceability to supervisor

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
AHCNSY206 Care for nursery plants	AHCNSY202 Care for nursery plants	Minor changes to application Major changes to performance criteria Foundation skills added Assessment requirements updated	Not equivalent

AHCNSY207 Undertake propagation activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to prepare for plant propagation, assist with plant propagation and complete propagation activities.

The unit applies to individuals who undertake propagation activities under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for plant propagation	1.1 Confirm propagation activities to be undertaken with supervisor 1.2 Recognise potential hazards and risks and implement safe working practices to minimise risk to self and others 1.3 Fit and use personal protective equipment applicable to the task 1.4 Collect and check appropriate tools, equipment and machinery for the task

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.5 Clean and disinfect work area according to workplace procedures 1.6 Organise propagation material for use as directed and in line with workplace procedures 1.7 Prepare and store propagation material and growing media as directed and in line with workplace procedures
2. Propagate plants	2.1 Assist with applying pre-treatment appropriate to the propagation method 2.2 Undertake propagation techniques and monitoring of equipment processes as instructed 2.3 Handle prepared propagation material in a way that minimises damage and maximises viability 2.4 Insert prepared material in the propagation receptacle according to supervisor instructions 2.5 Apply water and treatments according to supervisor instructions 2.6 Apply labels according to workplace requirements 2.7 Maintain propagated plants according to supervisor instructions
3. Complete propagation activities	3.1 Remove and dispose of waste material according to workplace procedures, and perform cleaning procedures 3.2 Clean, maintain and store tools and equipment 3.3 Identify and report unserviceable tools, equipment and machinery according to workplace procedures 3.4 Record and report propagation activities according to workplace procedures and supervisor instructions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	<ul style="list-style-type: none"> Use clear language and accurate industry terminology to record propagation activity and complete plant labels

Assessment Requirements for AHCNSY207 Undertake propagation activities

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken propagation activities on at least three occasions, including both seed and vegetative techniques and has:

- applied workplace health and safety requirements, including use of PPE
- prepared for plant propagation activities according to workplace instructions and procedures
- cleaned, used and maintained propagation tools, equipment and machinery
- collected propagation material as directed
- assisted with applying pre-treatments
- monitored equipment processes as instructed
- filled trays, containers or prepared media suitable for the propagation method as directed by supervisor
- undertaken propagation techniques as directed by supervisor
- minimised damage to and maximised viability of propagated material
- applied water and treatments according to supervisor instructions
- removed and disposed of waste material
- recorded and reported propagation activities and unserviceable tools, equipment and machinery.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to propagation activities and health and safety in the workplace
- the principles and practices of propagation, including:
 - basic plant knowledge as it applies to propagation

- common problems that occur while performing propagation activities
- workplace hygiene and biosecurity requirements
- workplace requirements for handling and disposal of nursery waste
- maintenance requirements of tools, equipment and machinery used for propagation
- basic plant nutrition as it applies to propagation
- basic seed and vegetative propagation techniques, including use of equipment
- quality specifications and characteristics of a range of parent plants and propagation materials
- record-keeping relevant to the work function.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - propagation tools, containers, equipment and machinery
 - seed and vegetative propagation material, growing media and treatments
 - personal protective equipment applicable to propagation activities
- specifications:
 - workplace requirements applicable to health and safety in the workplace and propagation activities
 - work instructions and workplace procedures applicable to propagation activities
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for AHCNSY208 Maintain indoor plants

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has maintained indoor plants on at least three occasions, and has:

- applied workplace health and safety requirements
- prepared for indoor plant maintenance activities according to workplace instructions and procedures
- selected, cleaned, used and maintained plant care tools and equipment
- monitored indoor plant environment
- inspected plant quality
- monitored and maintained health of indoor plants
- recognised common problems in indoor plants
- applied water as directed
- removed and disposed of waste material
- recorded and reported indoor plant maintenance operations and unserviceable tools and equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable for indoor plant maintenance including health and safety requirements
- principles and practices of indoor plant maintenance, including:
 - acclimatisation techniques for indoor plants
 - risks associated with indoor plant maintenance in public spaces
 - common problems that may occur with indoor plants, and their treatment
 - growth requirements of indoor plants

- identification and characteristics of common indoor plants, and their culture
- methods of disposing of waste to minimise damage to the environment
- methods used for watering indoor plants and displays.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - indoor plants
 - indoor plant maintenance tools and equipment
 - personal protective equipment applicable to indoor plant maintenance
- specifications:
 - workplace requirements applicable to health and safety in the workplace and indoor plant maintenance
 - work instructions and workplace procedures applicable to indoor plant maintenance
- relationships:
 - supervisor
- timeframes:
 - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

AHCNSY301 Maintain nursery plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to maintain and care for nursery plants.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to work	1.1 Select and use appropriate materials, tools and equipment 1.2 Identify work health and safety hazards, assess risks and implement suitable controls 1.3 Select, use and maintain suitable safety and personal protective equipment (PPE)

Element	Performance criteria
2. Monitor and maintain the nursery environment	2.1 Monitor environmental parameters against the needs of the plants 2.2 Alter environmental parameters, as required, to meet the needs of nursery plants and market requirements 2.3 Service irrigation system components for basic operational use and repair or replace basic user serviceable parts
3. Determine daily water requirements	3.1 Determine water requirements according to the needs of the plant and environmental parameters 3.2 Apply water to meet the needs of the plant group 3.3 Monitor water requirements of the plant
4. Promote plant growth by intervention	4.1 Test potting media in production areas to ensure quality specifications are met 4.2 Monitor the health of the plant 4.3 Undertake plant interventions as required 4.4 Dispose of waste with full consideration of the environmental implications
5. Complete work	5.1 Clean and store equipment, tools and equipment 5.2 Maintain records on all maintenance activities

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNSY301A Maintain nursery plants.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=c6399549-9c62-4a5e-bf1a-524b2322cf72>

Assessment Requirements for AHCNSY301 Maintain nursery plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- prepare for nursery plant maintenance activities
- calculate daily water needs
- implement a range of plant maintenance activities
- monitor plant health
- operate irrigation systems
- recognise stages of plant growth
- record workplace information
- repair or replace user serviceable irrigation components

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of nursery plant maintenance
 - botany and plant physiology as it applies to plant maintenance
 - characteristics of various types of potting media
 - common problems that occur with nursery plants and their treatment
 - effect of different pruning and intervention methods
 - effects of environmental parameters on plant growth
 - factors affecting the growth of nursery plants
 - methods of calculating daily water needs
 - optimum growing conditions for a range of plants in a nursery
 - principles and operations of a range of irrigation systems used in nurseries

- processes for modifying environmental parameters
- relationship between plant water needs and environmental parameters
- symptoms of unhealthy plants
- treatments required by plants at different stages and environmental parameters

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNSY302 Receive and dispatch nursery products

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to select and collect nursery products for the purpose of dispatch, delivery or pick up by client and the process of receiving and processing of products from suppliers.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Select product for an order	1.1 Select and use materials, equipment and personal protective equipment (PPE) 1.2 Select product from stock batches to match order forms or client request

Element	Performance criteria
	1.3 Assist clients onsite with selection or direct to particular product or display area 1.4 Evaluate quality of product visually to ensure that it meets standard order requirements for quality 1.5 Block up stockholding areas for presentation 1.6 Monitor the amount of remaining product and retain information to inform other clients
2. Maintain the stock inventory	2.1 Collate orders in the sales or dispatch area 2.2 Check orders for quality of product and for accuracy of quantity 2.3 Keep electronic or manual records of outgoing sales in the product inventory 2.4 Adjust the inventory of the quantity of nursery stock available for sale
3. Prepare for dispatch or delivery	3.1 Check product for correct labelling and replace incorrect labelling 3.2 Package product for delivery and presentation to the client 3.3 Pack product into containers for ease of handling 3.4 Assist delivery of product by loading and stacking product according to the configuration of the transportation vehicle 3.5 Check product quality at each stage in the delivery process 3.6 Maintain and tidy sales and dispatch areas and packing and packaging materials
4. Receive products	4.1 Check incoming product for quality and correct quantities 4.2 Transfer product to stock holding areas with appropriate manual handling techniques 4.3 Transfer incoming documentation, receipts of delivery and invoices to administration

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNSY302A Receive and dispatch nursery products.

Assessment Requirements for AHCNSY302 Receive and dispatch nursery products

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- evaluate product quality
- interpret order forms
- maintain product records
- meet client service requirements
- monitor and carry out product dispatch and delivery processes
- select product for order requirements

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of receiving and despatching nursery products
 - best practice guidelines for nursery hygiene
 - common sources of cross contamination from transport vehicles
 - environmental controls necessary for transporting plants
 - quality standards for the packing, packaging and labelling of products
 - quarantine policies and relevant quarantine legislation
 - stock control procedures

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNSY303 Install and maintain plant displays

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to install and maintain plant displays. Plant displays can be permanent, semi-permanent and temporary displays of plant life under a range of gardening, exhibition, visual merchandising, marketing and commercial leasing and hiring activities.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Assess requirements for plantscaping	1.1 Assess access factors impacting plantscaping and record prior to installation 1.2 Assess and record environmental parameters prior to installation

Element	Performance criteria
	1.3 Note light sources in regard to both plant growth and client requirements 1.4 Take light meter readings interior installations and record 1.5 Analyse site conditions and constraints for plant suitability and record findings 1.6 Select plants to meet the requirements of the site
2. Install containerised and direct planted specimens	2.1 Identify and schedule materials, equipment and machinery required for the job 2.2 Identify and schedule personnel required for the job 2.3 Identify work health and safety hazards, assess risks and implement control measures 2.4 Select, use and maintain suitable safety equipment and personal protective equipment (PPE) 2.5 Install plants securely and in a manner that ensures they are presented well, are accessible for routine maintenance and conform to the plan or specifications 2.6 Prune damaged or unnecessary material to enhance the presentation 2.7 Water and fertilise plants as required 2.8 Leave the site in a clean and tidy state
3. Maintain plants	3.1 Identify the symptoms of under and over-watering and rectify 3.2 Identify the symptoms of low and high light intensity and rectify 3.3 Identify the symptoms of low and high fertiliser concentration and measure the pH of the growing medium where required and amend as required 3.4 Identify insects, pests and diseases associated with plants and control as required 3.5 Enhance appearance of plants 3.6 Determine the cost benefit of reviving or replacing plants

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNSY303A Install and maintain plant displays.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for AHCNSY303 Install and maintain plant displays

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- assess site conditions, requirements and constraints impacting plantscaping
- select plants that meet the requirements of the display and chosen site
- determine spatial measurements of a plantscape
- identify and schedule materials, equipment and personnel to install a plant display
- install plants securely to ensure accessibility for maintenance and ascetic requirements
- maintain plants to meet their water, light and fertiliser requirements
- detect and control pests and diseases

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of installing and maintaining plantscapes
 - acclimatisation techniques for plants
 - characteristics and attributes of a range of plants used for plantscaping
 - commonly occurring problems with plantscaping
 - light and moisture tolerance/intolerance for common plant species
 - options for remedial action
 - photosynthesis, respiration, nutrient uptake and growth rate for plants
 - plant growth requirements

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNSY304 Deliver and promote sales of plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to transport and deliver plants to retail outlets and other nurseries and the associated task of maintaining promotional displays.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to provide marketing support	1.1 Identify product list, clients, delivery schedule and transport vehicle 1.2 Select tools, equipment and machinery suitable for delivery requirements

Element	Performance criteria
	1.3 Carry out pre-operational and safety checks on tools, equipment and machinery 1.4 Select and prepare plants identified in orders, sample specifications and delivery schedule and load 1.5 Identify work health and safety hazards, assess risks and implement control measures 1.6 Select, use and maintain suitable personal protective equipment (PPE)
2. Deliver plants	2.1 Maintain stock 2.2 Update and maintain current stock lists 2.3 Maintain regular delivery service 2.4 Supply clients with information about stock availability on request 2.5 Complete delivery documentation
3. Maintain off-site displays	3.1 Check off-site product displays regularly 3.2 Maintain displays 3.3 Provide marketing support with due consideration of environmental implications
4. Promote sales	4.1 Inform retailers of available promotional literature with particular stock lines 4.2 Dispatch regular sales memos 4.3 Prepare advanced lists for seasonal promotions 4.4 Complete sales, promotional and marketing documentation

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNSY304A Deliver and promote sales of plants.

Assessment Requirements for AHCNSY304 Deliver and promote sales of plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- calculate orders, sales figures, ratios, proportions and application rates
- communicate with clients, work team members and supervisors
- coordinate own activities to deliver and maintain plant orders
- estimate treatment and product requirements, material sizes and quantities
- interpret and apply delivery schedules and marketing plans
- maintain mobile and remote displays and samples
- use reporting and work procedure documents

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of delivering and promoting plants
 - botanical, common and trade names, growth habits, and presentation requirements for display of plants
 - industry labelling standards and methods
 - practical understanding of the range of plants available from the enterprise
 - standards and methods for the preparation and dispatch of promotional literature and lists for seasonal promotions
 - standards and methods of packaging, and delivery of plant orders, samples and displays

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNSY305 Prepare specialised plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to prepare specialised, unusual or rare plants in a production nursery or by other organisations, groups and individuals with a wide range of species and cultivars as the specialised plants or individual cultivars under production.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to treat specialised plants	1.1 Analyse customer requirements and clarify by market research or with a supervisor 1.2 Select specialist plants requiring treatment

Element	Performance criteria
	1.3 Select treatments appropriate to the specialised plant as outlined by the production and marketing plan of the organisation, or by the individual entrepreneur 1.4 Determine the timing of the treatments according to the seasonality of the plant species and market considerations 1.5 Identify work health and safety hazards, assess risks and implement control measures
2. Implement treatments	2.1 Select, prepare and use materials, tools and equipment required for implementing treatments 2.2 Select, use and maintain appropriate personal protective equipment (PPE) 2.3 Use treatments that meet the aesthetic requirements of the plan
3. Maintain aesthetic appearance of specialised plants	3.1 Monitor the health and aesthetic appearance of the plant to ensure quality standards are met 3.2 Apply water according to plant requirements 3.3 Modify environmental parameters to ensure optimum growth of plant 3.4 Apply remedial or preventative measures to the plants to ensure they maintain their aesthetic appearance

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

This unit is equivalent to AHCNSY305A Prepare specialised plants.

Assessment Requirements for AHCNSY305 Prepare specialised plants

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Performance Evidence

The candidate must be assessed on their ability to integrate and apply the performance requirements of this unit in a workplace setting. Performance must be demonstrated consistently over time and in a suitable range of contexts.

The candidate must provide evidence that they can:

- estimate treatment and plant requirements, sizes and quantities and calculating ratios, proportions and application rates
- organise and co-ordinate materials and equipment
- implement plant treatments
- meet quality standards for plant health and aesthetic appearance

Knowledge Evidence

The candidate must demonstrate knowledge of:

- the principles and practices of specialised plant preparation
 - aftercare requirements of treated plants
 - characteristics of a range of potted plants commonly treated for special aesthetic purposes
 - different treatments which are applied to specialised plants to achieve desired aesthetic appearance
 - nursery industry best practice
 - optimum timing of treatments

Assessment Conditions

Assessors must satisfy current standards for RTOs.

AHCNSY306 Implement a propagation plan

Modification History

Release	TP Version	Comment
1	AHCv1.0	Initial release

Application

This unit of competency describes the skills and knowledge required to implement a propagation plan for a range of plants using a range of different propagation methods.

It applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources. All work is carried out to comply with workplace procedures.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Nursery (NSY)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare for propagation activities	1.1 Interpret workplace instructions and organise tasks to achieve daily work routine within time constraints 1.2 Select and prepare appropriate tools, equipment and machinery 1.3 Identify work health and safety hazards, assess risks, implement control measures and report to the supervisor

Element	Performance criteria
	1.4 Select, use and maintain appropriate personal protective equipment (PPE) 1.5 Prepare growing environment to suit species and propagation method 1.6 Implement hygiene practices
2. Select propagation material	2.1 Identify parent plant and select according to health, vigour and desired characteristics 2.2 Select and collect propagation material according to the propagation method and species 2.3 Select appropriate conditioning and storage requirements to ensure maximum viability of propagating material
3. Prepare propagating media	3.1 Select media components for propagation mix 3.2 Test propagation media to ensure the product complies with media specifications 3.3 Determine storage requirements for the unused propagation media
4. Propagate plants	4.1 Prepare propagation material safely ensuring risks associated with airborne hazards are reduced 4.2 Perform propagation techniques appropriate for the plant species 4.3 Handle plants to minimise damage 4.4 Provide aftercare to suit the media conditions, plant requirements and propagation techniques employed
